Chennai: Sewage reversal and poor storm water drains are a perennial problems for residents of Shantiniketan Apartments on City Link road at Adambakkam.

Since the apartment is located in zone 12 while the City Link road comes under zone 13, officials from zone 12 and 13 of the Chennai Corporation and Metrowater should work together to provide a lasting solution, say residents, exasperated by the problem that haunts them after every rain.

“We have 70 children in our apartment and once a child contracts a disease it turns a cluster soon. GCC officials visit, clear the sludge and leave whenever we raise a complaint. But what we need is a permanent solution,” said J Raja, joint secretary of Shantiniketan Owners Welfare Association (SOWA).

Every year sewage reversal and related issues leave at least 10% of the residents with diseases like Diarrhoea, he said.

RAISING A STINK: Sewage flows out on City Link Road in Adambakkam

“We want the storm drains to be cleared. We are ready to reconstruct our drainage network. If the Greater Chennai Corporation and Metrowater come up with a plan we could coordinate and put an end to this problem,” said M K Padmanaban, executive member of SOWA.

The road connecting Race View colony, Guindy and Brindavan Nagar is also inundated every monsoon making it difficult for the residents and commuters.

When asked about these complaints, a corporation of-

ficial told TOI: “A proposal to build a storm water drain was given last year and it has been sanctioned. A drain (4×4) linking the City Link road and Velachery Lake will be constructed soon”.

A Metrowater official said that during monsoon there was no flow in storm water drain and hence there was reversal. The issue is been rectified and flow is normal now.

“We are responsible only for the terminal chamber and we’ve been clearing it whenever there is an issue,” she added.
