(Sub- To look into the public sanitation / health issues arising out of wrong waste disposal ways & subsequent environmental problems)

Respected Sir,

On behalf of the general public residing in the locality of Niali block headquarter in the district of Cuttack, State – Odisha, I would like to draw your attention towards the major environmental issue of the area as follows :-

- 1) The main irrigation canal crossing through Niali town being utilised by many as a sewerage drain and waste disposal site (as there is no other option), leading to massive breeding of mosquitoes, bad odour in the surrounding, ill health of animals feeding from it. This may lead to endemic spread of prevalent mosquito borne diseases like Malaria or Dengue also.
- 2) The Panchayat Pond (Hata Pokhari) is also being utilised as the main solid waste dumping area (as there is no other option). The pond is surrounded by the daily market, the Niali High School, the Community Health Centre and a major residential area of Niali. If this environmental issue is not attended at the earliest, it may give rise to various public health issues.

To mention here, this issue have previously been brought to the notice of appropriate government officials many a time through various mediums but, to see no effective steps yet.

Hence, requesting you to please look into such grave environmental issues and take appropriate steps at the earliest in the betterment of the public at large.

(* Attached herewith are the photographs of the areas mentioned above for ready reference.)

Sincerely Yours,

Prof.Soumya Ranjan Mishra,BHM,MHA,MAHA
