**BEFORE THE NATIONAL GREEN TRIBUNAL
EASTERN ZONE BENCH, KOLKATA
IN
Original Application No. 204/2025/EZ**

IN THE MATTER OF:

M/s Greenzen Bio Private Limited & Another

Applicant(s)

Vs.

The State of West Bengal & Others

Respondent(s)

**REPLY ON BEHALF OF CENTRAL POLLUTION CONTROL BOARD i.e.
RESPONDENT NO. 05**

1. That, the Hon'ble National Green Tribunal (Eastern Zone) [hereinafter referred to as "Hon'ble NGT (EZ)"] vide order dated 15.12.2025 in Original Application (hereinafter referred to as "OA") No. 204/2025/EZ has sought reply from the respondents in the matter. Thereby, the reply is made in succeeding paragraphs.
2. That, CPCB is constituted under Section 3 of the Water (Prevention and Control of Pollution) Act, 1974 (hereinafter referred to as "Water Act, 1974"). It performs the functions under the Water Act, 1974, The Air (Prevention and Control of Pollution) Act, 1981 (hereinafter referred to as "Air Act, 1981"), and The Environment (Protection) Act, 1986 (hereinafter referred to as "E (P) Act, 1986"). State Pollution Control Boards (SPCB)/Pollution Control Committees (PCC) has been constituted in every State/Union Territory under the Water Act, 1974 and the Air Act, 1981 and are responsible for implementation of the provisions of both the Acts in respect of territories falling in their respective territorial jurisdiction.
3. That, at the outset, the Answering Respondent (CPCB) deny all claims, contentions, allegations and averments against the Answering Respondent i.e. CPCB in the above OA contrary to anything stated or submitted in this reply. Nothing in the OA may be deemed to have been accepted or admitted by the Answering Respondent for want of a specific denial or on the ground of non- traverse, save any averment which has been expressly admitted hereinafter.

4. That, the present OA is filed by Applicant No. 1, Greenzen Bio Pvt. Ltd., which is operating a Common Bio-Medical Waste Treatment Facility (CBWTF) at Mouza-Binnaguri, District Jalpaiguri, since 2009 in accordance with the Bio-Medical Waste Management Rules, 2016. The Applicant has submitted in his application that his unit possess valid Authorization and Consent to Operate up to the year 2029 and presently caters to 8,745 operational beds across North Bengal.

It is also alleged that the West Bengal State Pollution Control Board permitted Respondent No. 10, M/s. Unique Universal Bio-Waste LLP, to establish another CBWTF at Kaluabari, Rajganj, situated 16.6 km from the Applicant's existing facility, without conducting the mandatory gap analysis and violation of the 75 km radial distance criterion prescribed under the CPCB Guidelines.

It is further brought out by the applicant that application of the Respondent No. 10 had earlier been rejected on 31.12.2024; however, during the pendency of the Applicants' writ petition, the Respondent was subsequently granted Consent to Operate and Authorization on 06.03.2025.

PRELIMINARY SUBMISSIONS:

5. That, it is humbly submitted that the Biomedical Waste Management Rules, 2016 (hereinafter referred to as "BMWM Rules, 2016") has been notified by the Ministry of Environment, Forest and Climate Change (hereinafter referred to as "MoEF & CC") for management of biomedical waste in environmentally sound manner. As per Rule 9(1) of the BMWM Rules, 2016, the prescribed authority for implementation of the provisions of these rules shall be the SPCBs in respect of States and PCCs in respect of Union territories.
6. That, it is humbly submitted that this Answering Respondent has prepared various Guidelines on bio-medical waste management from time-to-time, including the Guidelines for Common Biomedical Waste Treatment and Disposal Facilities (hereinafter referred to as, "CBWTF") in August 2003, which were revised in December 21, 2016 and as amended in April 12, 2025.
7. That, as per the CPCB guideline issued in August, 2003, the following criteria have been mentioned w.r.t. setting up and operation of CBWTF:

"K. Setting up and Operation of CBWTF"

Setting up and operating a CBWTF requires compliance with a number of regulatory requirements / provisions. The important requirements / provisions are listed below:

1. Municipal Corporations, Municipal Boards or Urban Local Bodies, as the case may be, shall be responsible for providing suitable common disposal/incineration sites for the bio-medical waste generated in the area under their jurisdiction and in areas outside the jurisdiction of any municipal body, it shall be the responsibility of the occupier generating bio-medical waste/operator of a bio-medical waste treatment facility to arrange for suitable sites individually or in association, so as to comply with the provisions of these rules (Bio-medical Waste (Management & Handling) Rules).

2. The local body such as a Municipal Body or any Private Entrepreneur, whoever wishes to set up a CBWTF, shall submit a detailed work-plan of proposed CBWTF to the concerned State Pollution Control Board (SPCB)/Pollution Control Committee (PCC) for evaluation and issue of "Consent To Establish". The work-plan should include complete details of the project such as site details, coverage area, infrastructure set up, transportation of bio-medical waste, operating procedure etc.

3. The SPCB/PCC upon receipt of such work-plan shall, review the proposal and "Consent to establish" shall be issued to the proponent with the required conditions.

4. Once the proponent establishes the necessary infrastructure, the site and the resources shall be inspected by the SPCB/PCC for the adequacy of the facility/equipment. Upon satisfactory recommendation, the authorization under the Bio-medical Waste (Management & Handling) Rules, shall be issued with necessary condition to the proponent.

5. The SPCB/PCC shall ensure the operation of the CBWTF as per the stipulated conditions and work-plan submitted by the proponent. The SPCB/PCC shall also ensure regular inspection of the CBWTF.

....."

8. That, the coverage area of CBWTF as per the CPCB guideline issued in August, 2003 is as follows:

“D. In any area, only one CBWTF may be allowed to cater up to 10,000 beds at the approved rate by the Prescribed Authority. A CBWTF shall not be allowed to cater healthcare units situated beyond a radius of 150 km. However, in an area where 10,000 beds are not available within a radius of 150 km, another CBWTF may be allowed to cater the healthcare units situated outside the said 150 km.”

9. That the Guidelines for Common Biomedical Waste Treatment and Disposal Facilities (hereinafter referred to as, “CBWTF”) was revised by CPCB in December 21, 2016 in the light of BMWM Rules, 2016 notified in 28th March, 2016 and the said guidelines of 2016 have further been amended in April 12, 2025. As per para 2 of the guideline issued in December 21, 2016:

“2) Criteria for development of a new Common Bio-medical Waste Treatment and Disposal Facility for a locality or region.

Prior to allowing any new CBWTF, following criteria or steps may be followed: -

a) Prescribed authority under the BMWM Rules, 2016 [i.e., State Pollution Control Board (SPCB) in the respective State or Pollution Control Committee (PCC) in the respective Union Territory Administration] is required to prepare an inventory or review with regard to the bio-medical waste generation at least once in five years in the coverage areas of the existing bio-medical waste treatment and disposal facility. The prescribed authority is also required to extrapolate the coverage-area wise bio-medical waste generation for the next ten years.

b) SPCB/PCC is required to conduct gap analysis w.r.t coverage area of the bio-medical waste generation and also projected over a period of next ten years, adequacy of existing treatment capacity of the CBWTF in each coverage area of radius 75 KM, as given in Annexure-I.

All the SPCBs and PCCs shall conduct the gap analysis and based on the gap analysis, action plan for development of new CBWTFs is required to be prepared and submitted to MoEF & CC

& CPCB within six months' time. In case of States/UTs, where no CBWTF is available, in such a case, SPCB/PCC being prescribed authority under the BMWM Rules is required to submit the detailed proposal to MoEF & CC/MoH & FW through the respective State Government or UT Administration. Also, the option of forming association by the group of health care facilities (HCFs) to develop their own CBWTF also be encouraged following these guidelines. In case, any coverage area requires additional treatment capacity, in such a case, action may be initiated by the prescribed authority for allowing a new CBWTF in that locality without interfering the coverage area of the existing CBWTF and beds covered by the existing CBWTF.

c) SPCB/PCC shall identify the coverage area, which require additional treatment facility and bring it to the notice of the concerned department in the business allocation of land assignment in the respective State Government or UT Administration. The department in the business allocation of land assignment shall be responsible for providing suitable site in the identified coverage area for setting up of a CBWTF, in consultation with the prescribed authority (i.e., SPCB/PCC), other stakeholders and in accordance with these guidelines issued by CPCB from time to time.

d) Alternately, a CBWTF may also be allowed to be established on a land procured by an entrepreneur in accordance with the location criteria suggested under these guidelines.

..."

The aforesaid guideline has been amended in April 12th, 2025 wherein the aforesaid para 2 remained same except that methodology for conducting gap analysis was also provided in the guidelines vide sub para (b) of the said para 2 of the guideline and the said sub para (b) of para 2 of the said guidelines amended in April 2025 reads as below:

"2) Criteria for development of a new Common Bio-medical Waste Treatment and Disposal Facility for a locality or region."

Prior to allowing any new CBWTF, following criteria or steps may be followed: -

"a)...

b) SPCB/PCC is required to conduct gap analysis w.r.to coverage area of the bio-medical waste generation, its projection over a period of next ten years, adequacy of existing treatment capacity of the CBWTF in each coverage area of radius 75 KM, as given in Annexure-I and as per methodology for conduct of gap analysis given at Appendix-I of the guidelines.

Further, decision may be taken by concerned SPCB/PCC based on gap analysis report to allow new facility or expansion of an existing facility. Adequacy of the existing facility to handle quantum of biomedical waste and/or compliance with the norms prescribed under BMWM Rules, 2016 shall also be taken into account.

All the SPCBs and PCCs shall conduct the gap analysis and based on the gap analysis, action plan for development of new CBWTFs is required to be prepared and submitted to MoEF & CC & CPCB within six months' time. In case of States/UTs, where no CBWTF is available, in such a case, SPCB/PCC being prescribed authority under the BMWM Rules is required to ensure establishment new facilities. SPCB/PCC may submit the detailed proposal to MoEF & CC/MoH & FW through the respective State Government or UT Administration. Association of HCFs may also be encouraged to develop their own CBWTF following these guidelines. In case, any coverage area requires additional treatment capacity, in such a case, action may be initiated by the prescribed authority for allowing a new CBWTF in that locality based on the gap analysis report without interfering the coverage area of the existing CBWTF.

...."

10. Further, the Guidelines also stipulate the coverage area of CBWTF. As per Para 8 of the guideline issued on December 21, 2016:

"B) Coverage area of CBWTF

Suggested coverage area for development of a CBWTF is as follows:

a) A CBWTF located within the respective State/UT shall be allowed to cater healthcare units situated at a radial distance of 75 KM. However, in a coverage area where 10,000 beds are not available within a radial distance of 75 KM, existing CBWTF in the locality (located within the respective State/UT) may be allowed to cater the healthcare units situated up to 150 KM radius w.r.to its location provided the bio-medical waste generated is collected, treated and disposed of within 48 hours as stipulated under the BMW Rules.

b) In case, number of beds is exceeding >10,000 beds in a locality (i.e. coverage area of the CBWTF under reference) and the existing treatment capacity is not adequate, in such a case, a new CBWTF may be allowed in such a locality in compliance to various provisions notified under the Environment (Protection) Act, 1986, to cater services only to such additional bed strength of the HCFs located.

c) In case of hilly areas, considering the geography, only one CBWTF with adequate treatment capacity may be developed covering at least two districts to cater treatment services to the HCFs located in the respective Districts. The selection and allocation of site etc. should be done as per the criteria suggested under these guidelines. The treatment charges to be prescribed by the respective SPCB/PCC in consultation with the State Advisory Committee to be constituted under the BMW Rules by the respective State Government or UT Administration."

The aforesaid Guidelines were amended on April 12, 2025 whereby paragraph 8 was revised. In the amended Guidelines, the provisions relating to coverage area up to 150 km and the number of beds stipulated under sub-paragraphs (a) and (b) of paragraph 8 of the Guidelines dated December 21, 2016, have been amended. Further, provision for conducting gap analysis in cases of capacity shortfall or non-compliance with the Bio-Medical Waste Management Rules, 2016, is added to enable the concerned SPCB/PCC to consider establishment of a new CBWTF or expansion of the existing facility. The revised sub-paragraph (a) of paragraph 8 of the Guidelines, as amended on April 12, 2025, reads as under:

8) Coverage area of CBWTF

Suggested coverage area for development of a CBWTF is as follows:

- X
- a. A CBWTF located within the respective State/ Union Territory may be allowed to cater to healthcare units situated within a radial distance of 75 kilometers, subject to the condition that the facility possesses adequate treatment capacity to handle the biomedical waste generated within the said radius. For the purpose of determining adequacy, 90% of the total treatment capacity as authorized by the concerned State Pollution Control Board (SPCB) or Pollution Control Committee (PCC) shall be considered. It shall further be ensured that bio-medical waste generated is collected, treated and disposed of within 48 hours as stipulated under the BMWM Rules.

The concerned SPCB/PCC shall undertake a gap analysis, as per Appendix-I, to assess the quantum of bio-medical waste generated vis-à-vis the available treatment capacity of the CBWTF (considering 90% of the authorized treatment capacity). In case the analysis indicates a shortfall in treatment capacity or if the existing CBWTF is found to be non-compliant with the provisions of the Bio-Medical Waste Management Rules, 2016, the SPCB/PCC may consider proposals for establishing a new CBWTF or for expansion of an existing facility, ensuring that bio-medical waste generated is collected, treated and disposed of within 48 hours as stipulated under the BMWM Rules.

11. That, it is humbly submitted that the guidelines issued by the Central Pollution Control Board on 21.12.2016 and 12.04.2025 also stipulates about applicability provisions of the guidelines vide para 4 of the guidelines and the same are as below:

"4) Applicability of these guidelines

These guidelines are applicable to all the upcoming or new CBWTFs. In case of the existing CBWTFs, these guidelines shall be applicable

- (a) the existing CBWTFs desires to expand or enhance the existing treatment capacity (or)*
(b) the existing CBWTFs desires to modernize the existing treatment equipment with the new equipment with enhancement in the existing treatment capacity"

12. CPCB communicated to all SPCBs/PCCs vide letters dated 20.02.2017 and 16.04.2025 to ensure implementation of the CPCB guidelines issued on December 21, 2016 and April 12, 2025 respectively; hereto annexed

X

and marked as **Annexure-I** and **Annexure-II** are copies of the said letters dated 20.02.2017 and 16.04.2025.

Hereto annexed and marked as **Annexure-III** are copies of the CPCB guidelines issued on December 21, 2016 and April 12, 2025.

13. That it is humbly submitted, answering respondent had prepared a methodology to conduct gap analysis with respect to the generation and treatment of biomedical waste in order to avoid the ambiguity and maintaining the uniformity for conducting gap analysis. SPCBs/PCCs are required to follow the said criteria which is based on gap analysis with respect to the coverage area of the biomedical waste generation, its projection for a period of the next ten years, and the adequacy of existing treatment capacity for the CBWTF in each coverage area of 75 Km while allowing any new CBWTF. The said methodology is circulated to all SPCBs/PCCs vide letter dated 10/10/2023, with a request to conduct gap analysis w.r.t. generation and treatment of biomedical waste and also to submit a report in this regard to CPCB. Hereto annexed and marked as **Annexure-IV** is a copy of the said letter, dated 10/10/2023.
14. That, it is humbly submitted that in compliance with the CPCB's letter, dated 10/10/2023, some SPCBs/PCCs conducted gap analysis and submitted the report to CPCB. However, the reports submitted by SPCBs/PCCs showed non-uniformity and ambiguity specifically with regard to the method for extrapolating the data on biomedical waste generation and the requirement of adequate treatment capacity. Therefore, this Answering Respondent has prepared the revised methodology titled "Methodology to Conduct gap analysis with respect to generation and treatment of biomedical waste - Revision 1" with an aim to have uniformity in the method for carrying out the gap analysis by SPCBs/PCCs. CPCB vide letter dated 12/12/2024 issued to all SPCBs/PCCs requested to revise/conduct gap analysis w.r.t. generation and treatment of bio-medical waste in the concerned State/UT using the revised methodology and directed to submit a report to CPCB within one month. The same revised methodology has also been included as Appendix-I in the aforesaid CPCB guideline issued in April 2025 which was communicated to all SPCBs/PCCs vide the aforesaid letter on 16.04.2025 to ensure its implementation.

CPCB has not received the revise gap analysis report from WBPCB. Hereto annexed and marked as **Annexure-V** is a copy of the aforesaid letter dated 12/12/2024.

15. That, it is humbly submitted that SPCBs/PCCs are the concerned authorities for granting/rejecting the Consent to Establish (CTE), Consent to Operate (CTO) and Authorization for any applicable industrial establishment(s)/units including CBWTF in the respective State/Union Territory on applications made in this regard to them.
16. That MoEF & CC notified amendment to the EIA Notification 2006 and published vide MoEF & CC Notification of S.O. 1142 (E) dated April 17, 2015. According to this notification, the 'bio-medical waste treatment facility' is categorized under the Item 7 (da) in the schedule, requiring 'environmental clearance' from the State Environment Impact Assessment Authority (SEIAA). Therefore, the CBWTF operator is also required to obtain 'Environmental Clearance (EC)' from the respective SEIAA or MoEF& CC, as the case may be, before any construction work, or preparation of land by the projects management, which include the following: a) All new projects or activities pertaining to the bio-medical waste treatment facility; b) Expansion and modernization with additional treatment capacity of existing biomedical waste treatment facility (excluding augmentation of incineration facility for compliance to the residence time as well as Dioxins and Furans without enhancing the existing treatment capacity). c) Any expansion or modification in the treatment capacity or relocation of the existing CBWTF (requires compliance to the relevant provisions notified under the Environment (Protection) Act, 1986 by the MoEF & CC).

PARAWISE REPLY

17. That, the averments made in Paragraphs No. 1 under the heading of "Facts in brief" of the OA" are introductory in nature and hence require no comment from this Answering Respondent.
18. That, the averments made in Paragraphs No. 2 to 4 under the heading of "Facts in brief" of the OA" states about Rule 3(n) and Rule (5) of BMW Rules, 2016, which does not require any comments from this answering respondent.
19. That, the averments made in Paragraphs No. 5 to 6 under the heading of "Facts in brief" of the OA" is related to the coverage area of applicant CBWTF built to handle Bio-medical waste from nearby hospitals covering an area of 75 km radius extended to 150 km. In this regard, the submissions made in para 8 and 10 above stands re-iterated and are not repeated herein for the sake of brevity.
20. That, the averments made in Paragraphs No. 7 to 12 under the heading of "Facts in brief" of the OA" pertains to procedural details through which the

applicant got permission from different state authorities to establish and operate as CBWTF. Hence, no comments are required from this answering respondent.

21. That, the averments made in Paragraphs No. 13 under the heading of "Facts in brief" of the OA" related to the applicant's assertion that his unit was collecting bio-medical waste from hospitals located within a 75 km radius. It is further submitted by the applicant that at the time of commencement of operations in 2009), the applicant CBWTF was catering to approximately 21,986 beds across the districts of Coochbehar, Siliguri, Jalpaiguri, Darjeeling, Malda, Uttar Dinajpur and Dakshin Dinajpur, a coverage that largely continued till 2024. However, the facility is serving only 8,745 beds (as of 2023), which is much beyond its minimum eligibility. In this regard, the submissions made in para 8 & 10 above stands re-iterated and are not repeated herein for the sake of brevity.
22. That, the averments made in Paragraphs No. 14 under the heading of "Facts in brief" of the Original Application" refers to Bio-medical waste management rule 2016 (hereafter referred to as BMW Rules, 2016). The same is a matter of record hence require no comments from this answering respondent.
23. That, the averments made in Paragraphs No. 15 to 16 under the heading of "Facts in brief" of the OA" is against grant of permission to a CBWTF namely M/s Unique Universal Bio-Waste LLP, Badapara, Jalpaiguri, West Bengal, by West Bengal Pollution Control Board without conducting gap analysis. In this regard, the submissions made in para 9, 13 and 14 above stands re-iterated and are not repeated herein for the sake of brevity.
24. That, the averments made under Paragraphs No. 17 to 19 under the heading of "Facts in brief" of the OA" refers different office order issued by Govt. of West Bengal for allocation of numbers of beds to be catered by applicants CBWTF and finally in 2024 total 8745 beds were allocated. This is a matter of record hence require no comments from this answering respondent.
25. That, the averments made under Paragraphs No. 20 to 27 under the heading of "Facts in brief" of the OA" pertains to detailed procedural steps to obtain EC and CTE. In this regard, the submissions made in para 15 & 16 above stands re-iterated and are not repeated herein for the sake of brevity.
26. That, the averments made under Paragraphs No. 28 to 29 under the heading of "Facts in brief" of the OA" are regarding renewal of authorisation and consent upto 2029. It is humbly submitted that renewal of

authorisation and consent falls under the domain of SPCBs/PCCs hence no comments required from this answering respondent. However, the submissions made in para 15 above stands re-iterated and are not repeated herein for the sake of brevity.

27. That the averments made under Paragraphs No. 30 to 31 under the heading of "Facts in brief" of the OA" is about coverage area of the applicant's CBWTF. In this regard, the submissions made in para 8 & 10 above stands re-iterated and are not repeated herein for the sake of brevity.
28. That the averments made under Paragraphs No. 32 to 34 under the heading of "Facts in brief" of the OA" pertains to Annual Report submitted by the applicant for the year 2019, 2021 and 2023. This is a matter of record hence require no comments from this answering respondent.
29. That, the averments made under Paragraphs No. 35 under the heading of "Facts in brief" of the OA" relates to the number of beds covered by the applicant CBWTF pursuant to the order of the State of West Bengal dated 27.12.2024. The same being a matter of record, no comment is called for from this answering respondent.
30. That, the averments made under Paragraphs No. 36 and 37 under the heading of "Facts in brief" of the OA" are related to the permission of new CBWTF without conducting gap analysis. In this regard, the submissions made in para 9, 13 and 14 above stands re-iterated and are not repeated herein for the sake of brevity.
31. That, the averments made under Paragraphs No. 38, 39 and 40 under the heading of "Facts in brief" of the OA" are related to the CTE issued and rejection of CTO to the respondent no. 10 (erroneously mentioned as Respondent No. 9 in the para by the applicant) by WBPCB. In this regard, the submissions made in para 15 above stands re-iterated and are not repeated herein for the sake of brevity.
32. That, the averments made under Paragraphs No. 41 under the heading of "Facts in brief" of the OA" is related to the order dated 14.10.2022 issued by MoEF&CC to all Principal Secretaries, Department of Environment. This is a matter of record hence it requires no comments from this answering respondent.
33. That, the averments made under Paragraphs No. 42 to 45 under the heading of "Facts in brief" of the OA" refer different provision of BMWM Rules, 2016 regarding CBWTF. This is a matter of record and hence no comments required from this answering respondent.
34. That, the averments made under Paragraphs No. 46 to 47 under the heading of "Facts in brief" of the OA" refer to the provision of Clause 2 and

~~X~~

8 of the Guidelines for Common Biomedical Waste Treatment and Disposal Facilities (hereinafter referred to as, "CBWTF") in December 2016. This is a matter of record and hence no comments required from this answering respondent.

35. That, the averments made under Paragraphs No. 48, 49 and 50 under the heading of "Facts in brief" of the OA" refer to the coverage area decided by WBPCB in consultation with finance department. In this regard, the submissions made in para 8 and 10 above stands re-iterated and are not repeated herein for the sake of brevity.
36. That, the averments made in Paragraphs No. 51 to 60 under the heading of "Facts in brief" of the OA" refers about WPA No.443 of 2025 filed before Hon'ble High Court and about the actions undertaken by WB PCB during the pendency of subject writ petition. Hence no comments are required from this answering respondent.
37. That the averments made in Paragraphs No. 61 to 65 under the heading of "Facts in brief" of the OA" refer to the application filed by Respondent No. 9, being C.A.N. 1 of 2025 dated 30.04.2025, in W.P.A. No. 443 of 2025, wherein it was contended, inter alia, that the applicants had earlier filed a similar writ petition being W.P.A. No. 1374 of 2023 containing substantially the same issues and prayers as in W.P.A. No. 443 of 2025, and on such basis sought dismissal of W.P.A. No. 443 of 2025 as not maintainable. It is humbly submitted that CPCB was impleaded as a respondent in both the matters and had accordingly filed its affidavit(s). Wherein it was stated that the prescribed authority for grant, renewal, or refusal of authorization under the Bio-Medical Waste Management Rules, 2016 is the respective SP/CB/PCC of the concerned State/UT. The answering respondent further referred to the Guidelines for Common Bio-Medical Waste Treatment and Disposal Facilities issued on December 21, 2016 and April 12, 2025.
38. That the averments made in Paragraphs No. 66 under the heading of "Facts in brief" of the OA" mentioned about coverage area and gap analysis for establishment of new CBWTF as described in Revised Guidelines for Common Bio-medical Waste Treatment and Disposal Facilities 2016. In this regard, the submissions made in para 8, 9, 10, 13 and 14 above stands re-iterated and are not repeated herein for the sake of brevity.
39. That the averments made in Paragraphs No. 67 and 68 under the heading of "Facts in brief" of the OA" related to affidavit filed by WBPCB. It requires no comments being matter of records.
40. That the averments made in Paragraphs No. 69 under the heading of "Facts in brief" of the OA" related to coverage area of the petitioner CBWTF.

~~X~~

In this regard, the submissions made in para 8 and 10 above stands re-iterated and are not repeated herein for the sake of brevity.

41. That the averments made in Paragraphs No. 70 under the heading of "Facts in brief" of the OA" pertain to CTO issued by WBPCB to the respondent no. 9. In this regard, the submissions made in para 15 above stands re-iterated and are not repeated herein for the sake of brevity.
42. That the averments made in Paragraphs No. 71 to 72 under the heading of "Facts in brief" of the OA" is about legal procedure that was followed by Hon'ble High Court for conclusion of WPA 443 of 2025 matter. This is a matter of record and hence no comments required from this answering respondent.
43. That under the averments made in Paragraphs No. (I to XXXIX) under the heading of "Grounds" of the OA" are regarding grounds of the present application. In this regard, it is humbly submitted that, the submissions made in preceding para's are re-iterated and are not repeated herein for the sake of brevity.
44. That in light of the above submissions, it is respectfully submitted that this Answering Respondent i.e. CPCB, shall abide by any order(s) or direction(s) passed by this Hon'ble NGT in the instant Application.
45. That it is respectfully submitted before this Hon'ble Tribunal that they may be pleased to pass such orders as may be necessary in the interest of justice.

Respondent(s)

AFFIDAVIT

I, Mrinal Kanti Biswas, S/o Saroj Kumar Biswas, aged about 44 years, having office at the Regional Directorate, Central Pollution Control Board, Southend Conclave' Block No.502, 5th& 6th Floor,1582, Rajdanga Main Road, Kolkata-700107, do hereby solemnly affirm and sincerely state as follows: -

1. That the deponent is authorized representative to represent the Respondent CPCB in the present case, and as such, I am well conversant with the facts and circumstances of the present case on the basis of the information derived from the official records, and hence, I am competent and authorized to verify, sign and swear this affidavit on behalf of the Respondent CPCB.
2. That the accompanying reply may be read part and parcel of the present affidavit as I am competent to swear this affidavit.
3. That the accompanying reply has been drafted and filed under my instructions and authority the contents thereof are true and correct on the basis of the record maintained during ordinary course of business of CPCB and available records and documents and the contents of the same are read over and explained to me and are not repeated herein for the sake of brevity.

Sub: Revised Guidelines for Common Bio-medical Waste Treatment Facilities- reg.

Sir,

This is to inform that the existing guidelines for Common Bio-medical Waste Treatment Facilities (CBWTFs) issued in the year 2003 has been reviewed in consultation with the concerned stakeholders by the Central Pollution Control Board and same has been revised in line with the Bio-medical Waste Management Rules, 2016 notified by the Ministry of Environment, Forest and Climate Change (MoEF & CC) under the Environment (Protection) Act, 1986.

Presently, these revised guidelines entitled "Revised Guidelines for Common Bio-medical Waste Treatment Facilities" are updated in CPCB Website at http://cpcb.nic.in/wast/bioimediawast/Common_Bio_Medical_Waste_treatment_facilities.pdf.

It is therefore requested that your organization may kindly initiate actions for ensuring compliance to the afore-said finalised guidelines and action taken report may please be submitted to CPCB periodically to apprise the MoEF & CC accordingly.

Yours faithfully,

(B. Vinod Babu)
Nodal Officer,

Waste Management Division

To,

The Member Secretary,
(All SPCBs/PCCs)

Subject: Revised guidelines for Common Biomedical Waste Treatment and Disposal Facilities - reg.

Sir/Madam,

This has reference to guidelines for Common Biomedical Waste Treatment and Disposal Facilities prepared by CPCB on 21.12.2016. In this regard, it is to inform that CPCB has reviewed and revised the guidelines for Common Biomedical Waste Treatment and Disposal Facilities. The said guidelines as revised by CPCB is available at following link:

<https://cpcb.nic.in/openpdf.php?id=TGf0ZxN0RmlsZS80NDBfMTc0NDpwMDgzMj9tZWRpYXB0b3RvMTA1MjUucGRm>

It is requested to kindly ensure implementation of the said guidelines.

Yours faithfully,

(V. P. Yadav)

1) Introduction

A Common Bio-medical Waste Treatment and Disposal Facility (CBWTF) is a set up where biomedical waste generated from member health care facilities is imparted necessary *treatment* to reduce adverse effects that this waste may pose on human health and environment. The treated recyclable waste may finally be sent for disposal in a secured landfill or for recycling.

According to the Bio-medical Waste Management Rules, 2016, "*bio-medical waste treatment and disposal facility*" means any facility wherein treatment, disposal of bio-medical waste or processes incidental to such treatment and disposal is carried out, and includes common bio-medical waste treatment facilities and "*operator of a common bio-medical waste treatment facility*" means a person who owns or controls a Common Bio-medical Waste Treatment and Disposal Facility (CBWTF) for the collection, reception, storage, transport, treatment, disposal or any other form of handling of bio-medical waste.

The Bio-medical Waste Management Rules, 2016 (hereafter referred as BMMW Rules) restricts occupier for establishment of on-site or captive bio-medical waste treatment and disposal facility, if a service of common bio- medical waste treatment and disposal facility is available within a distance of seventy-five kilometer, as installation of individual treatment facility by health care facility (HCF) requires comparatively high capital investment. In addition, it requires separate dedicated and trained skilled manpower and infrastructure development for proper operation and maintenance of treatment systems. The concept of *CBWTF* is not only addresses such problems but also prevents proliferation of treatment technologies in a particular town or city. In turn, it reduces the monitoring pressure on regulatory agencies. By running the treatment equipment at CBWTF to its full capacity, the cost of treatment of per kilogram bio-medical waste gets significantly reduced. Its considerable advantages have made CBWTF popular and proven concept in most part of the world.

The CBWTFs are also required to set up based on the need for ensuring environmentally sound management of bio-medical waste keeping in view the techno-economic feasibility and viable operation of the facility with minimal impact on human health and environment.

Since 1998, the CBWTF as an option for treatment of bio-medical waste also been legally introduced in India. Considering the likely impacts that may cause to the patients undergoing treatment because of operation of the captive treatment

equipment within the health care facilities (HCFs), now the Bio-medical Waste Management Rules, 2016 restricts the Occupier (i.e., HCF) for ensuring treatment and disposal of generated bio-medical waste through a CBWTF, located within a distance of 75 KM. Further, these rules eased the bottleneck in upbringing the CBWTF by making department in the business allocation of land assignment in the State or UT administration responsible for providing a suitable site (s) within its jurisdiction.

The concept of CBWTF is also being widely accepted in India among the healthcare units, medical associations and entrepreneurs. In order to set up a CBWTF to its maximum perfection, care shall be taken in choosing the right technology, development of CBWTF area, proper designing of transportation system to achieve optimum results etc. Key features of CBWTF have been addressed in the subsequent sections.

To facilitate the treatment and disposal of bio-medical waste generated from the HCFs, at present (as per Annual Report 2014 submitted by the SPCBs/PCCs), there are 192 no. of CBWTFs in operation and 33 no. of CBWTFs are under construction. Also, the Bio-medical Waste Management Rules, 2016 mandates that the operator of a CBWTF authorised by the prescribed authority is required to take all necessary steps to ensure that the bio-medical waste collected from the occupier is transported, handled, stored, treated and disposed of, without any adverse effect to the human health and the environment, in accordance with the BMWM Rules and the guidelines issued by the Central Government or the Central Pollution Control Board (CPCB) from time to time. Therefore, these guidelines have been prepared with an aim to have uniformity in ensuring site selection, allowing and establishment of a state-of-the-art CBWTF, operation as well as verification of compliance to the BMWM Rules, 2016 throughout the country. However, any other aspects which are not been covered under these guidelines and needs attention, in such a case, the prescribed authority may take suitable action in the interest of protection of the environment in consultation with MoEF & CC/CPCB. Also, it is pertinent to mention here that these guidelines are mandatory henceforth under the Bio-medical Waste Management Rules, 2016

2) Criteria for development of a new Common Bio-medical Waste Treatment and Disposal Facility for a locality or region.

Prior to allowing any new CBWTF, following criteria or steps may be followed:

- a) Prescribed authority under the BMWM Rules, 2016 (i.e., State Pollution Control Board (SPCB) in the respective State or Pollution Control Committee (PCC) in the respective

Union Territory Administration] is required to prepare an inventory or review with regard to the bio-medical waste generation at least once in five years in the coverage areas of the existing bio-medical waste treatment and disposal facility. The prescribed authority is also required to extrapolate the coverage-area wise bio-medical waste generation for the next ten years.

- b) SPCB/PCC is required to conduct gap analysis w.r.to coverage area of the bio-medical waste generation and also projected over a period of next ten years, adequacy of existing treatment capacity of the CBWTF in each coverage area of radius 75 KM, as given in **Annexure-I**.

All the SPCBs and PCCs shall conduct the gap analysis and based on the gap analysis, action plan for development of new CBWTFs is required to be prepared and submitted to MoEF & CC & CPCB within six months' time. In case of States/UTs, where no CBWTF is available, in such a case, SPCB/PCC being prescribed authority under the BMWM Rules is required to submit the detailed proposal to MoEF & CC/MoH & FW through the respective State Government or UT Administration. Also, the option of forming association by the group of health care facilities (HCFs) to develop their own CBWTF also be encouraged following these guideline. In case, any coverage area requires additional treatment capacity, in such a case, action may be initiated by the prescribed authority for allowing a new CBWTF in that locality without interfering the coverage area of the existing CBWTF and beds covered by the existing CBWTF.

- c) SPCB/PCC shall identify the coverage area, which require additional treatment facility and bring it to the notice of the concerned department in the business allocation of land assignment in the respective State Government or UT Administration. The department in the business allocation of land assignment shall be responsible for providing suitable site in the identified coverage area for setting up of a CBWTF, in consultation with the prescribed authority (i.e., SPCB/PCC), other stakeholders and in accordance with these guidelines issued by CPCB from time to time.
- d) Alternately, a CBWTF may also be allowed to be established on a land procured by an entrepreneur in accordance with the location criteria suggested under these guidelines.
- e) The SPCB/PCC or concerned department in the business allocation of land assignment in the respective State Government or UT Administration may seek expression of interest from the proponents for development of new CBWTF (s) in the identified coverage area. Upon allocation of site to the proponent, the proponent is

required to take necessary approvals as required under the Environment (Protection) Act, 1986 for development of the new CBWTF in accordance with these guidelines.

- f) In the absence of expression of interest by any proponent, then SPCB/PCC shall insist health care facilities to form association and to develop its own CBWTF in line with these guidelines or to have captive treatment facilities for ensuring treatment and disposal of generated bio-medical waste as stipulated under the BMW Rules, 2016.
- g) In case of any regulatory action including closure of any existing CBWTF is inevitable, the respective SPCB/PCC may take action under the BMW Rules including for making alternate arrangement to ensure safe disposal of the bio-medical waste generated from the member health care facilities of such default CBWTF through CBWTF located nearby.
- h) In case of hilly areas considering the geography, only one CBWTF with adequate treatment capacity may be developed covering atleast two districts to cater treatment services to the HCFs located in the respective Districts. The selection and allocation of site etc., should be done as per the criteria suggested under these guidelines. The treatment charges to be prescribed by the respective SPCB/PCC in consultation with the State Advisory Committee.

The criteria for development of CBWTFs in any coverage area is also depicted in **Figure 1**.

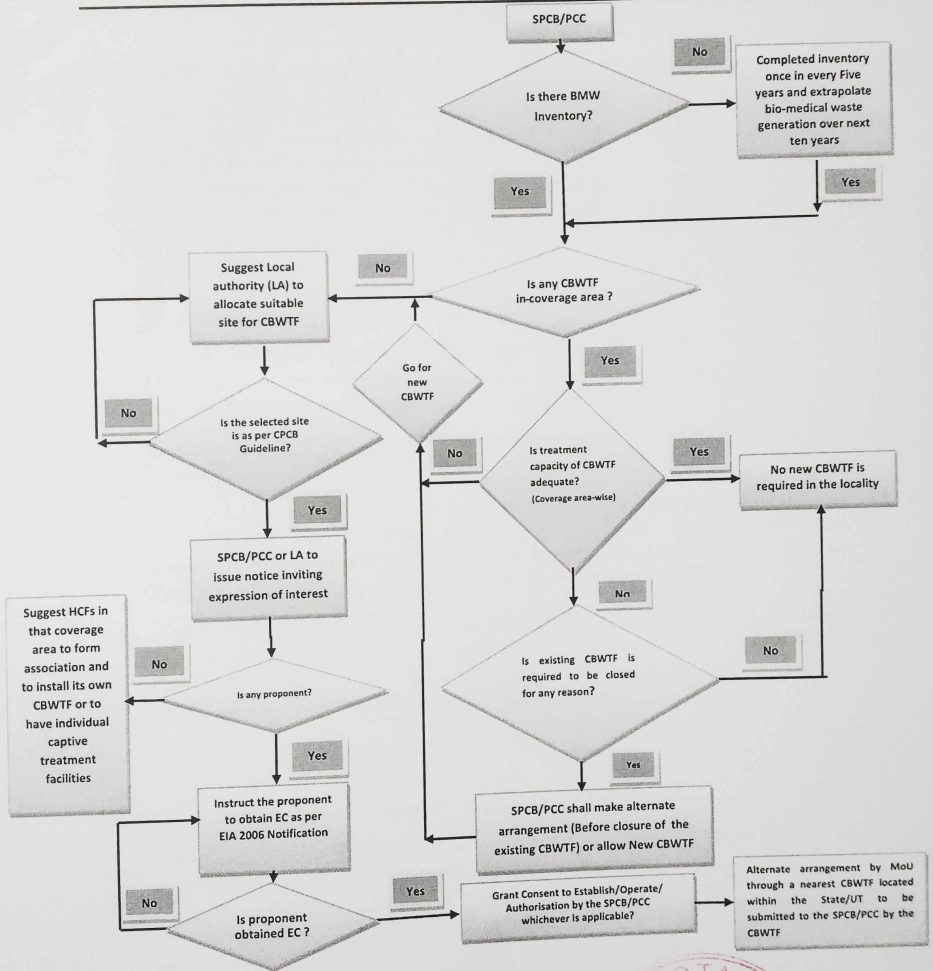

Figure 1. Criteria for Development of a CBWTF in a coverage area

3) Duties of the operator of a common bio-medical waste treatment and disposal facility

The duties of the operator of a common bio-medical waste treatment and disposal facility (CBWTF) as enunciated under Rule 5 of the Bio-medical Waste Management Rules, 2016 shall be ensured and complied with. Also, all the existing CBWTFs shall also complete augmentation of the existing incineration facility so as to comply w.r.to the residence time as well as emission norms including for Dioxins and Furans prescribed under BMWM Rules, 2016 within two years from the date of notification of the BMWM Rules, 2016 (i.e., prior to 27.03.2018). In addition to the above, to ensure proper management of bio-medical waste in the respective coverage area, as a mitigation measure, especially in the event of

- (a) a temporary break down (not more than a week) of a CBWTF especially for rectification of the refractory lining of the incineration chambers or change of requisite APCD due to failure; and
- (b) Closure of a CBWTF for violation of the provisions of the BMWM Rules or any other reason.

Prior to commencement of a new CBWTF as well as all the existing CBWTF Operators are required to submit action plan, to the respective SPCB/PCC, for imposing suitable condition while granting authorisation under the BMWM Rules, 2016. The action plan should also include:

- (a) a MoU made with the nearest CBWTF located within the respective State/UT, as alternate arrangement. In case, if there is no CBWTF located nearby then such CBWTF should have to install stand by treatment equipment (equal to the existing treatment capacity as per consents granted by the SPCB/PCC), and
- (b) decontamination plan of the CBWTF for execution of such plan prior to closure of a CBWTF.

4) Applicability of these guidelines

These guidelines are applicable to all the upcoming or new CBWTFs. In case of the existing CBWTFs, these guidelines shall be applicable in case

- (a) the existing CBWTFs desires to expand or enhance the existing treatment capacity
(or)
- (b) the existing CBWTFs desires to modernize the existing treatment equipment with the new equipment with enhancement in the existing treatment capacity.

5) Environmental laws applicable for commissioning or operation of a CBWTF

Operation of a CBWTF leads to air emissions as well as waste water generation as in case of an industrial operation. Most common sources of waste water generation in CBWTFs are vehicle washing, floor washing, and scrubbed liquid effluent from air pollution control systems attached with the incinerator/plasma pyrolysis. Incineration as well as DG Set is the general source of air emissions.

5.1 Any other approvals (such as Land Use /Change in Land Use as applicable) required from the concerned authorities under various laws have to be complied with by the proponent of the CBWTF prior to development of a CBWTF:

5.2 Consents under Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 as well as Authorization under the BMWM Rules, 2016

The project proponent of the CBWTF is required to obtain 'Consent to Establishment' under Rule 25 of the Water (Prevention and Control of Pollution) Act, 1974 and under Rule 21 of the Air (Prevention and Control of Pollution) Act, 1981, from the respective prescribed authority i.e. SPCB/PCC. Upon installation of the requisite equipment, the CBWTF Operator is also required to obtain authorization under BMWM Rules, 2016 co-terminus with consent to operate under Water (Prevention and Control of Pollution) Act, 1976 & Air (Prevention and Control of Pollution) Act, 1981 from the respective SPCB/PCC prior to commencement of the CBWTF.

5.3 Environmental Clearance under EIA Notification 2006

Ministry of Environment, Forest & Climate Change (MoEF & CC), notified amendment to the EIA Notification 2006 and published vide MoEF & CC Notification of S.O. 1142 (E) dated April 17, 2015. According to this notification, the 'bio-medical waste treatment facility' is categorized under the Item 7 (da) in the schedule, requiring 'environmental clearance' from the State Environment Impact Assessment Authority (SEIAA). Therefore, the CBWTF operator is also required to obtain 'Environmental Clearance (EC)' from the respective SEIAA or Ministry of Environment, Forest & Climate Change (MoEF & CC), as the case may be, before any construction work, or preparation of land by the projects management, which include the following:

- a) All new projects or activities pertaining to the bio-medical waste treatment facility; and
- b) Expansion and modernization with additional treatment capacity of existing bio-medical waste treatment facility (excluding augmentation of incineration facility)

for compliance to the residence time as well as Dioxins and Furans without enhancing the existing treatment capacity).

- c) Any expansion or modification in the treatment capacity or relocation of the existing CBWTF (requires compliance to the relevant provisions notified under the Environment (Protection) Act, 1986 by the MoEF & CC

6) Location criteria

In the context of these guidelines, buffer zone represents a separation distance between the source of pollution in CBWTF and the receptor - following the principle that the degree of impact reduces with increased distance. The following parameters may be considered for ascertaining buffer distance on case-to-case basis:

- (i) potential for spread of infection from wastes stored in the premises.
- (ii) applicable standards for pollution control and the relative efficiency of the existing incinerators and emission control systems,
- (iii) potential of fugitive dust emission from incinerators,
- (iv) potential for discharge of wastewater
- (v) the potential for odour production,
- (vi) the potential for noise pollution,
- (vii) the risk posed to human health and safety due to exposure to emissions from incinerator,
- (viii) the risk of fire and
- (ix) Significance of the residual impacts such as bottom ash and fly ash.

As far as possible, the CBWTF shall be located near to its area of operation in order to minimize the transportation distance in waste collection, thus enhancing its operational flexibility as well as for ensuring compliance to the time limit for treatment and disposal of bio-medical waste as stipulated under the BMWWM Rules (i.e., within 48 hours). Also, the location of the CBWTF should be in conformity to the CRZ Norms and other provisions notified under the Environment (Protection) Act, 1986. The location shall be decided in consultation with the State Pollution Control Board (SPCB)/ Pollution Control Committee (PCC). The location criteria for development of a CBWTF are as follows:

- (a) A CBWTF shall preferably be developed in a notified industrial area without any requirement of buffer zone **(or)**
- (b) A CBWTF can be located at a place reasonably far away from notified residential and sensitive areas and should have a buffer distance of preferably 500 m so that it shall

have minimal impact on these areas. In case of non-availability of such a land, the buffer zone distance from the notified residential area may be reduced to less than 500 m by SPCB/PCC without referring the matter to CPCB by prescribing additional control measures such as (i) adoption of best available technologies (BAT) by the proponent of CBWTF; (ii) prescribing stringent standards for operation of the CBWTF by the SPCB/PCC; (iii) adoption of zero liquid discharge by the CBWTF and (iv) in case of any complaints from the public, then CBWTF should prove that the facility is not causing any adverse impact on environment and habitation in the vicinity. If SPCB/PCC is not in a position to resolve the issue relating to buffer zone while selecting the site for CBWTFs, in such a case, SPCBs/PCCs may refer the matter to CPCB.

- (c) The CBWTF can also be developed as an integral part of the Hazardous Waste Treatment Storage and Disposal Facility (TSDF) subject to obtaining of necessary approvals from the authorities concerned including 'environmental clearance' as per Environmental Impact Assessment 2006 and further amendments notified under the Environment (Protection) Act, 1986, provided there is no CBWTF exist within 150 KM distance from the existing TSDF.

7) Land requirement

Sufficient land shall be allocated to the CBWTF to provide all requisite systems which include dedicated space for storage of waste (both treated and untreated), waste treatment equipment, vehicle washing bay, vehicle parking space, ETP, incineration ash storage provision, administrative room, space for DG Set etc.,.

- (a) Preferably, a CBWTF shall be set up on a plot size of not less than one acre in all the areas. However, a CBWTF can be developed in adjacent plots but cannot be set up in two or more different plots located in different areas. Separate plots can be permitted only for vehicle parking if located in the close vicinity of the proposed CBWTFs or the existing CBWTFs.
- (b) In case of upcoming or new CBWTFs (both in municipal limits with population more than 25 lakhs or in rural areas), the land area requirement may be relaxed (but in any case not less than 0.5 acre) by the SPCB/PCC, with additional control measures such as zero liquid discharge, increase in stack height, stringent emission norms, odour control measures or any other measures felt necessary by the prescribed authority on case-to-case basis, only in consultation with CPCB.

8) Coverage area of CBWTF

Suggested coverage area for development of a CBWTF is as follows:

- a) A CBWTF located within the respective State/UT shall be allowed to cater healthcare units situated at a radial distance of 75 KM. However, in a coverage area where 10,000 beds are not available within a radial distance of 75 KM, existing CBWTF in the locality (located within the respective State/UT) may be allowed to cater the healthcare units situated upto 150 KM radius w.r.to its location provided the bio-medical waste generated is collected, treated and disposed of within 48 hours as stipulated under the BMWM Rules.
- b) In case, number of beds is exceeding >10,000 beds in a locality (i.e. coverage area of the CBWTF under reference) and the existing treatment capacity is not adequate, in such a case, a new CBWTF may be allowed in such a locality in compliance to various provisions notified under the Environment (Protection) Act, 1986, to cater services only to such additional bed strength of the HCFs located.
- c) In case of hilly areas, considering the geography, only one CBWTF with adequate treatment capacity may be developed covering atleast two districts to cater treatment services to the HCFs located in the respective Districts. The selection and allocation of site etc. should be done as per the criteria suggested under these guidelines. The treatment charges to be prescribed by the respective SPCB/PCC in consultation with the State Advisory Committee to be constituted under the BMWM Rules by the respective State Government or UT Administration.

9) Treatment equipment

The Common Bio-medical Waste Treatment Facility should treat the bio-medical waste as per BMWM Rules and as per the authorisation granted by the prescribed authority. The CBWTF should have the following treatment facilities:

a) *Incineration/Plasma Pyrolysis*

Incineration is a controlled combustion process where waste is completely oxidized and harmful microorganisms present in it are destroyed/ denatured under high temperature. The guidelines for "Design & Construction Requirements of Bio-medical Waste Incinerators" by CPCB from time to time shall be followed for selecting/or augmenting the incinerator.

Plasma Pyrolysis is an alternate to incinerator, Plasma Pyrolysis treatment technology can be installed for disposal of bio-medical waste categories as per BMWM Rules wherein destruction of bio-medical waste is similar to incineration can be achieved. In case of plasma pyrolysis, waste is treated at high temperature under controlled condition to form gases like methane, hydrogen and carbon monoxide which are subjected to combustion (oxidation) in secondary chamber. In the plasma pyrolysis process waste is converted into small clinker which can be disposed in secured landfills.

b) Autoclaving/Hydroclaving

- (i) **Autoclaving** is a low-heat thermal process where steam is brought into direct contact with waste in a controlled manner and for sufficient duration to disinfect the wastes as stipulated under the Bio-medical Waste Management Rules. For ease and safety in operation, the system should be horizontal type and exclusively designed for treatment of bio-medical waste. For optimum results, pre-vacuum based system be preferred against the gravity type system. It shall have tamper-proof control panel with efficient display and recording devices for recording critical parameters such as time, temperature, pressure, date and batch number etc. as required under the BMWM Rules.
- (ii) **Hydroclaving** is similar to that of autoclaving except that the waste is subjected to indirect heating by applying steam in the outer jacket. The waste is continuously tumbled in the chamber during the process.
- c) **Microwaving:** In microwaving, microbial inactivation occurs as a result of the thermal effect of electromagnetic radiation spectrum lying between the frequencies 300 and 300,000MHz. Microwave heating is an inter-molecular heating process. The heating occurs inside the waste material in the presence of steam.
- d) **Chemical disinfection:** Though chemical disinfection or alternates as stipulated under the BMWM Rules is also an option for treatment of certain categories of bio-medical waste such as glass waste but looking at the volume of waste to be disinfected at the CBWTF and the pollution load associated with the use of chemical disinfectants, the chemical disinfection for treatment of bio-medical waste as part of a CBWTF may be used sparingly or avoided as far as possible.
- e) **Dry heat sterilization:** This is the additional option for treatment of waste sharps as stipulated under the BMWM Rules. In this method, waste sharps are treated using

dry heat (hot air) at a temperature not less than 185°C, at least for a residence period of 150 minutes in each cycle (with sterilization period of 90 minutes).

- f) **Shredder:** Shredding is a process by which waste are de-shaped or cut into smaller pieces so as to make the wastes unrecognizable. It helps in prevention of reuse of bio-medical waste and also acts as identifier that the wastes have been disinfected and are safe to dispose off. A shredder to be used for shredding bio-medical waste shall confirm to the following minimum requirements:
- (i) The shredder for bio-medical waste shall be of robust design with minimum maintenance requirement;
 - (ii) The shredder should be properly designed and covered to avoid spillage and dust generation. It should be designed such that it has minimum manual handling;
 - (iii) The hopper and cutting chamber of the shredder should be so designed to accommodate the waste bag full of bio-medical waste;
 - (iv) The shredder blade should be highly resistant and should be able to shred waste sharps, syringes, scalpels, blades, plastics, catheters, intravenous sets/ bottles, blood bags, gloves, bandages etc. It should be able to handle/ shred wet waste, especially after microwave/ autoclave/hydroclave;
 - (v) The shredder blade shall be of non-corrosive and hardened steel;
 - (vi) The shredder should be so designed and mounted so as not to generate dust, high noise & vibration;
 - (vii) If hopper lid or door of collection box is opened, the shredder should stop automatically for safety of operator;
 - (viii) In case of shock-loading (non-shreddable material in the hopper), there should be a mechanism to automatically stop the shredder to avoid any emergency/accident;
 - (ix) In case of overload or jamming, the shredder should have mechanism of reverse motion of shaft to avoid any emergency/accident;
 - (x) The motor shall be connected to the shredder shaft through a gear mechanism, to ensure low rpm and safety;
 - (xi) The unit shall be suitably designed for operator safety, mechanical as well as electrical;
 - (xii) The shredder should have low rotational speed (maximum 50 rpm). This will ensure better gripping and cutting of the bio-medical waste;

- (xiii) The discharge height (from discharge point to ground level) shall be sufficient (minimum 3 feet) to accommodate the containers for collection of shredded material. This would avoid spillage of shredded material;
- (xiv) The minimum capacity of the motor attached with the shredder shall be 3 KW for 50 Kg/hr, 5 KW for 100 kg/hr & 7.5 KW for 200 Kg/hr and shall be three phase induction motor. This will ensure efficient cutting of the bio-medical wastes as prescribed in the Bio-medical Waste Management Rules; and
- (xv) The shredder also should be fitted with separate 'energy meter' for recording total energy consumed for operation of this equipment.

- g) Sharp pit/ Encapsulation:** A sharp pit or a facility for sharp encapsulation in a metal container or cement concrete shall be provided for treated sharps (*i.e., treatment by autoclaving or dry heat sterilization followed by shredding or mutilation*). An option may also be worked out for recovery of metal from treated and shredded waste sharps within the CBWTF or iron foundries having consent to operate from the SPCBs/PCCs and located nearby, as per the conditions imposed in authorization granted under BMWM Rules by the SPCB/PCC.

A sharp pit may be of circular or rectangular shape and shall be dug and lined with cement plastered brick masonry or concrete rings. The pit should be covered with a heavy concrete slab with a provision of galvanized steel pipe projecting about 1.5 meters above the slab, with an internal diameter of up to 50 mm or 1.5 times the length of vials, whichever is more. The top opening of the steel pipe shall have a provision of locking after the treated waste sharps are disposed into the sharp pit. When the pit is full, it can be sealed completely, after another pit is prepared. In case of high water table regions (*i.e., where water table is less than 6 metres beneath the bottom of the sharp pit*), a tank with above mentioned arrangements shall be made above the ground.

- h) Deep burial:** Any SPCB/PCC should not allow the 'deep burial' of bio-medical waste as a part of CBWTF. Any existing CBWTF having disposal of bio-medical waste by deep burial should have the requisite treatment equipment as stipulated under the BMWM Rules, *within six months* from the date of finalization of these guidelines.
- i) Non-burn technology:** Non-incineration technologies for disposal of bio-medical waste are adopted in some of the developed countries. Non-incineration technology comprises of shredding and disinfection by autoclaving/microwaving or chemical treatment. The treated waste can be disposed along with municipal solid waste in sanitary landfills or through waste to energy plants. Such option can also be adopted in places where the sanitary landfill or waste to energy plant for disposal of municipal

solid waste is available. Such technology is permitted only after prior approval of MoEF & CC and only after obtaining authorization under the BMWM Rules from the respective SPCB/PCC for the purpose of carrying out trial runs for assessment of efficacy of the treatment equipment.

- j) **Vehicle/Containers washing facility:** Every time a vehicle is unloaded, the vehicle and empty waste containers shall be washed properly and disinfected. Washing can be carried out in an open area but on an impermeable surface and liquid effluent so generated shall be conveyed and treated in an effluent treatment plant. The impermeable area shall be of appropriate size so as to avoid spillage of liquid during washing.
- k) **Effluent Treatment Plant:** A suitable Effluent Treatment Plant (ETP) shall be installed to ensure that liquid effluent generated during the process of washing containers, vehicles, floors etc. is treated and reused after treatment. Proper treatment of waste water shall be ensured in case of zero discharge by recirculation of treated waste water for scrubbing. *ETP may have treatment unit operations* comprising collection tank, O & G trap, chemical dosing cum mixing (Flash and slow), coagulation chamber, primary settling tank (s), biological treatment process, secondary settling tank, pressure filter and activated carbon filter, pH Correction tank (wherever recirculation of treated water is practiced) *so as to comply with the liquid discharge standards stipulated under the Bio-medical Waste Management Rules, 2016.* ETP may also have the following provisions:
- (i) separate 'energy meter' so as to know total consumption of electricity for operation of the machinery attached with the ETP.
 - (ii) pH meter so as to know pH level of treated water as well as pH level of treated water used for recirculated or recycling in APCD attached with the incinerator or any utility within the CBWTF.
 - (iii) A 'magnetic flow meter' should also be fitted at all the water supply extraction points of the CBWTF as well as the outlet to know the total wastewater treated for further end use or discharge in compliance to the BMWM Rules.
 - (iv) Provision of 'press filter' to reduce the moisture content of the ETP Sludge or it may be dried in 'sludge drying bed'. After removal of moisture content or drying, same need to be disposed off in an environmentally sound manner depending upon the hazardous constituents present in it as per Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016.

In case, ETP sludge contains metal contents within the prescribed limits as per Hazardous & Other Waste (Management & Transboundary Movement) Rules, 2016, such ETP sludge shall be given to CBWTF for incineration or to hazardous waste treatment, storage and disposal facility (TSDF) for disposal in secured landfill.

Note:

- a) If any CBWTF desires to adopt any other technology other than referred under Schedule -I of the BMWWM Rules, may adopt new technology only with the prior approval from MoEF & CC and is also required to obtain authorization under the BMWWM Rules from the respective SPCB/PCC for carrying out trial run for assessment of efficacy of the new technology.
- b) All the treatment equipment should be operated and complied with the norms as stipulated under Schedule II of the Bio-medical Waste Management Rules, 2016 published by MoEF & CC vide GSR 343 (E) dated 28th March, 2016.
- c) Incinerator / Plasma Pyrolysis/ Autoclaving/Microwaving/ Hydroclaving/ Shredder/ Dry Heat Sterilization/ ETP should be fitted with separate 'energy meter' for recording total energy consumed for operation of these equipment.
- d) In the event of temporary shutdown (not more than a week) due to any operational problems in the treatment equipment (such as restoration of refractory lining or maintenance or repairs in APCD), to ensure bio-medical waste collected from the member health care facilities is treated within the time limit as stipulated under the BMWWM Rules, each all the CBWTF operators should also be provided with stand by treatment equipment especially incinerator/plasma pyrolysis/autoclave (or) alternately MoU made with the nearby CBWTF (located within the State/UT) shall be submitted to the respective SPCB/PCC, by all the existing CBWTF operators (whereas the upcoming facilities have to make such arrangement prior to commencement of the facility) so as to include such condition while granting authorisation under the BMWWM Rules, 2016 to the concerned CBWTF operators (vice-versa).

(10) Infrastructure set up

The CBWTF shall have enough space within it to install required treatment equipment, untreated and treated waste storage area, vehicle-parking, vehicle and containers washing area, Effluent Treatment Plant (ETP), administration room or staff room etc. The required area for CBWTF would depend upon the projected amount of bio-medical waste to be handled by it. A CBWTF shall have the following infrastructure:

a) Treatment Equipment Room

A separate housing may be provided for each treatment equipment at the CBWTF such as incinerator room, autoclave room, microwave room etc., as applicable. Each room shall have well-designed roof and walls. Such room shall be well ventilated and easy to wash. The floor and interior finishing of the room shall be such that chances of sticking/harboring of microorganisms are minimized. This can be attained by

providing smooth & fine floor and wall surfaces (to a height of 2 meter from floor) preferably of tiles. The number of joints in such surfaces shall be minimal. The equipment room shall also have a separate cabin, to supervise the operation of the equipment and to record the waste handling and equipment operational data attached to each equipment room. There shall be two waste storage rooms, one for storage of untreated waste and another for treated waste and may be located at a distance from each other. The storage room shall have provisions similar to that of equipment room being well-ventilated with easy to wash floors & walls, smooth and fine surfaces etc. All the treatment equipment rooms and waste storage rooms should be provided with 'fly catcher/killing device'. The room shall be washed and cleaned with a suitable disinfectant every day.

b) Main waste storage space

Separate space shall be provided near the entry point of the CBWTF to unload and store all biomedical wastes that have been transported to the CBWTF by its own transportation vehicle. The size of the room shall be adequate to store all wastes transported to the CBWTF. The front portion of the room shall be utilized for unloading the wastes from the vehicle and back or side portion shall be utilized for shifting the wastes to the respective treatment equipment. In the front portion of the room where transportation vehicle is parked for unloading, the floor shall be made impermeable so that any liquid spillage during unloading does not percolates into the ground. The liquid generated during handling of wastes and washing, shall be diverted to the inlet of effluent treatment plant (ETP). In the main storage room, wastes shall be stacked with clear distinction as per the color coding of the containers by providing partitions. From here, the colored containers may be sent to the respective treatment equipment by using suitable closed type of conveyance (trolley etc.,). The main storage room too shall have provisions similar to that of equipment room such as roofing, well ventilated, easy to wash floors & walls, smooth and fine surfaces etc.

Apart from the above, a CBWTF should have separate storage provision for storage of mercury bearing waste collected from the member health care facilities as per the procedure given in CPCB guidelines. Mercury storage provision should be provided as per the guidelines issued by CPCB (refer www.cpcb.nic.in). The capacity of the mercury storage provision should be maximum of 90 days and by which the collected mercury bearing waste shall have to be disposed of through a TSDF located nearby following the manifest as per Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016. The charges for collection and disposal of

mercury bearing waste shall be collected by the CBWTF from the respective member HCF.

c) Treated waste storage room

Separate space should be provided to store the wastes treated in different treatment units. The wastes shall be stored in separate group as per the disposal options. Other provisions in the room shall be similar to the main storage room. Waste such as incineration ash/vitrified ash generated in the process of incineration/plasma pyrolysis respectively shall be stored safely in a separate area under the shed so as to avoid entry of rain water during the monsoon and for easy collection. In case, incineration ash/ vitrified ash is found to be hazardous waste in nature same should be disposed of through any authorized TSDF operator located nearby following the manifest as per Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016. In case of a State/UT where TSDF is not available, all the CBWTF operators have to store incineration ash safely as per these guidelines.

d) Administrative Room

This room shall be utilized for general administration, record keeping, billing etc.

e) Generator set

CBWTF shall have a generator set of adequate capacity as standby arrangement for power, with sufficient capacity to run the treatment equipment during the failure of power supply. The generator set shall comply with the necessary requirement as per DG Set norms notified under the Environment (Protection) Act, 1986.

f) Continuous emission monitoring system (CEMS)

Monitoring provision for continuous monitoring of the incinerator/plasma pyrolysis stack emission shall be installed by the CBWTF operators for the parameters as stipulated by the respective SPCB/PCC as per the authorisation granted under the BMWM Rules, 2016. Other-wise, at present, all the existing CBWTF operators are required to carry out stack emission monitored using continuous emission monitoring system for the flue gas parameters such as CO₂, O₂, CO as well as primary & secondary chamber temperatures, and records maintained. The continuous emission monitoring system for stack emission should be installed as per the guidelines issued by SPCB/PCC/CPCB. Also, the real time continuous stack emission

monitoring data is also required to be transmitted to the servers of the respective SPCB/PCC as well as CPCB, by all the existing CBWTF operators

g) Vehicle Parking

Provision for parking shall be made within the confines of the site for parking of required number of vehicles, loading and unloading of the vehicles meant for transporting waste to and from the facility, etc.. In case of a CBWTF with space constraints, multi-storey parking or a separate provision may be allowed only for parking of vehicles.

h) Display and sign board

An identification board (Display) of durable material and finish shall be displayed at the entrance to the facility. This shall clearly display the name of the facility, owner name, address and telephone number of the operator and the prescribed authority, no. of hours of operation & operational hours, telephone numbers of the personnel to be contacted in the event of an emergency, validity period of authorization as well as total daily waste treated and disposed. Also, sign boards should be provided at all the salient points (untreated waste storage area, treatment equipment, treated waste storage area, ETP, firefighting equipment) within the facility.

i) Washing Room

A washing room shall be provided for eye washing/hand washing/ bathing etc. for the workers.

j) Site Security

High walls, fencing and guarded gates shall be provided at the facility to prevent unauthorized access to the site by humans and livestock.

k) Fire safety

Fire safety equipment such as sand buckets and fire extinguishers should be provided at all the salient points of the CBWTF including at the diesel storage areas, diesel tanks connected with the incinerator etc. Fire alarm also should be provided within the CBWTF to prompt the workers in the event of any fire hazard. Workers should also be trained in First Aid administration.

l) First Aid Box

First Aid Box with necessary provisions need to be provided at all the salient points within the facility.

m) Green Belt

The open area available within the CBWTF shall be developed into green belt.

n) Website: (newly added as per BMWM Rules, 2016)

All the existing CBWTFs shall develop own website by 27.03.2017 whereas the upcoming CBWTF shall develop the website prior to the commencement of the facility. The website should be updated with relevant information periodically (on monthly basis) especially as detailed below:

- (i) A copy of the Environmental Clearance obtained;
- (ii) Copies of the Consents under the Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 as well as the Authorisation under the BMWM Rules obtained from the SPCB/PCC;
- (iii) List of all the member Health Care Facilities with complete address, bedded or non-bedded HCFs, no. of beds, bar code, category-wise average bio-medical waste generation in kg/annum;
- (iv) Charges levied on the member Health Care Facilities (HCFs) for treatment and disposal of bio-medical waste;
- (v) Vehicles connected with a provision of GPS as per BMWM Rules and Vehicle-wise route chart for collection, transportation of bio-medical waste from the member HCFs;
- (vi) Real time continuous online stack emission monitoring data;
- (vii) Daily bio-medical waste collected, received and treated (Member HCF-wise);
- (viii) Monthly details of total waste collected from the member HCFs, total waste treated, and treated recyclable plastic waste or glass waste sold to the parties and final mode of disposal of incineration ash;
- (ix) A copy of the annual report submitted to the respective SPCB/PCC;
- (x) Monitoring results of the stack emissions, treated wastewater and incineration ash, as per the frequency stipulated under the BMWM Rules;
- (xi) List of HCFs (located within the coverage area) with complete address which have not taken membership of the CBWTF for disposal of Bio-medical waste;
- (xii) Contact person, contact telephone number and e-mail addresses of the facility; and.

- (xiii) Provision to have access to the SPCB/PCC/CPCB/MoEF & CC/MoH & FW especially on GPS, online monitoring system and the data.

Besides the provisions suggested in the earlier paras, following important provisions should also be made in a CBWTF:

- (i) A telephone shall be provided and maintained at the facility.
- (ii) A First Aid Box shall be provided and maintained at the CBWTF.
- (iii) Proper lighting shall be provided at the facility.
- (iv) Proper care shall be taken to keep the facility and surroundings free from odors.
- (v) Measures shall be implemented to control pests and insects at the site.
- (vi) Measures shall be implemented to control the escape of litter from the site.
- (vii) Necessary provision shall be made to prevent and control noise generated, if any, due to the activities at the site.
- (viii) Necessary protective gear for the waste handlers shall be provided.
- (ix) Immunization to all the workers of CBWTF against all the diseases including especially Tetanus and Hepatitis -B as stipulated under the BMWM Rules.
- (x) Workers should have provisions such as washing, toilet, and suitable place for eating.
- (xi) Workers should also be provided with N-95 mask besides other PPEs such as hand gloves, gumboots, goggles etc.

Every CBWTF operator shall submit a work-plan to the Prescribed Authority. The work-plan should include the details of facilities at the CBWTF, collection, transportation & storage of the bio-medical wastes, operational details etc.

11) Record keeping

Maintenance of records for all operations carried out at the CBWTF is very important to monitor overall operation of the CBWTF. It also helps in submission of the required information to be submitted to the 'Prescribed Authority' by 30th June of every year as per the format prescribed under the BMWM Rules or provided by the SPCB/PCC. A well-maintained record of all the activities at the CBWTF also enables the facility operator to produce all information of the activities on demand of the concerned prescribed authority. The record should include all information relating to each activity at the CBWTF site as per BMWM Rules which include accidents occurred (spills, injury, fire accident) and the measures taken and also, however, minimum requirement is outlined below:

a) **Records of waste movements**

Daily records shall be maintained for the waste accepted and treated waste removed from the site. This record shall include the following minimum details:

- (i) **Waste accepted:** -Records on day-to-day basis (as per the format given at **Annexure-II**) shall be maintained with respect to the waste collection date, name of the healthcare unit with bar code, waste category as per BMWM Rules, category-wise quantity of waste accepted, vehicle registration number used for collection of bio-medical waste from member health care facilities, time at which waste collected from member HCFs, name of the vehicle driver and his signature and waste receiving date & time (at CBWTF site). Similar information to be acknowledged to the member health care facility by the CBWTF operator on daily basis.
- (ii) **Treated waste to be disposed:-** Date, treated waste type, Quantity, vehicle number, disposal as stipulated under BMWM Rules.

b) **Logbook for the treatment equipment**

A logbook shall be maintained for each treatment equipment installed at the site and shall include the following:

- (i) The weight of each batch.
- (ii) The categories of waste as per the Rules.
- (iii) The time, date and duration of each treatment cycle and total hours of operations.
- (iv) The complete details of all operational parameters during each cycle.

Log book to be maintained for operating the incinerator/plasma pyrolysis as well as the autoclave as per the formats given at **Annexure -III**.

c) **Monitoring and reporting of operations in the CBWTF:**

The monitoring of the key operating parameters of treatment equipment provides several benefits. First, monitoring provides the operator with information needed to make decisions on necessary combustion control adjustments. Second, properly maintained monitoring records can provide useful information for identifying operating trends and potential maintenance problems. Following are the suggested parameters for monitoring of the treatment equipment

(i) **Monitoring of operating parameters of the incinerator/plasma pyrolysis:**

Following operating parameters can be monitored in case of incinerator/plasma pyrolysis:

- Waste charge rate.
- Combustion gas temperature in primary and secondary chamber as well as the temperature of the stack exit gas (flue gas).
- Condition of the draft (negative draft in primary chamber).
- Combustion gas oxygen level in primary and secondary chamber as well as stack exit gas.
- Air flow rate through the incinerator/plasma pyrolysis.
- Carbon-Di-Oxide (CO₂), Oxygen (O₂) and Carbon Monoxide (CO) level in the flue gas.
- Quantity of auxiliary fuel usage as well as the power consumption (in every batch).
- Pressure drop in the primary chamber and APCD attached with the incinerator/plasma pyrolysis and
- Bottom ash or slag quality (for Total Organic Carbon (TOC) as well as loss on ignition and the hazardous constituents (at least once in a quarter).

(ii) **Monitoring of operating parameters of the Autoclave:** Following operating parameters can be monitored during the sterilization using autoclave:

- Time at which sterilization started and time at which sterilization completed.
- Temperature conditions maintained throughout the sterilization
- Conditions of pressure maintained throughout the sterilization
- Duration of sterilization
- Validation test results

Records concerning the above parameters need to be maintained and checked periodically for taking remedial measures during the operation of the incinerator or plasma pyrolysis or autoclave. In case of other treatment processes, the operational conditions as well as the efficacy tests to be complied with as per the standards prescribed under the BMWM Rules.

(iii) **Frequency of monitoring:**

The CBWTF operator shall carry out following tests through a NABL approved laboratory or a laboratory approved under the Environment (Protection) Act, 1986, as

per the frequency stipulated under the BMW Rules or as prescribed by the SPCB/PCC and record of such analysis results shall be maintained and submitted to the prescribed authority (SPCB/PCC), as suggested below:

- **Liquid effluent:** Parameters such as pH, Suspended Solids, Oil & Grease, BOD, COD, Bio-assay for liquid effluent being discharged from the CBWTF be monitored as per the Consent conditions or once in a quarter and such records maintained and submitted to SPCB/PCC.

- **Stack emission monitoring:**

In case of the BMW incinerators which came after 28.03.2016, the Stack Emission shall be monitored (under optimum capacity) for parameters such as Particulate Matter, HCl, NO_x, Hg & compounds and combustion efficiency *once in three months* as required under schedule II of the Bio-medical Waste Management Rules 2016 (All monitored values shall be corrected to 11% Oxygen on dry basis). In case of dioxins and furans, monitoring should be done *once in a year* (monitored values shall be corrected to 11% Oxygen on dry basis). In case of the incinerators (existing prior to the notification of BMW Rules, 2016), new incinerators standards are required to be complied within two years i.e., by 27.03.2018.

- **Validation test of autoclave/microwave/chemical treatment/dry heat sterilization:**

Suggested validation test for treatment of bio-medical waste by autoclave/microwave/chemical treatment/Dry heat sterilization is given in **Table 1**.

Table 1: Suggested validation test for treatment of bio-medical waste by autoclave/microwave/chemical treatment/Dry heat sterilization

S. No	Type of equipment used for treatment of bio-medical waste	Type of Validation Test	Frequency
(i)	Autoclave	(i) biological indicator strips or vials Geobacillus stearothermophilus spores with at least 1×10^6 spores),	once in three months
		(ii) chemical indicator strip or tape	each batch of waste treated
(ii)	Microwave	Bacillus atrophaeus spores using vials or spore strips with at least 1×10^4 spores per detachable strip	Recommended: once in three months
(iii)	Chemical treatment followed by shredding	Bacillus Subtilis (ATCC 19659)- 4 Log ₁₀ reduction or greater	Once in a week
(iv)	Dry heat sterilisation	consistently kill the biological indicator Geobacillus Stearothermophilus or Bacillus Atropheaus spores using vials with at least 6 log ₁₀ spores per ml.	Once in three months
		A chemical indicator strip or tape	Once in a week

d) Site Records:

Site records shall include the following:

- (i) All the approvals obtained from other concerned departments other than the prescribed authority;
- (ii) Details of construction or engineering works;
- (iii) Maintenance schedule, breakdowns/trouble shootings and remedial actions;
- (iv) Emergencies;
- (v) Incidents of unacceptable waste received and the action taken; and
- (vi) Details of site inspections by the officials of the regulatory authorities, purpose of visits with date and necessary actions initiated on the observations.

Daily, monthly and annual summary records of all the above shall be maintained and made available at the site for inspection and same submitted whenever required by an authorized official of the concerned regulatory authorities.

12) Collection and transportation of bio-medical waste

The collection and transportation of bio-medical waste shall be carried out in a manner so as to prevent any possible hazard to human health and environment. Collection and transportation are the two operations where the chances of segregated bio-medical waste coming in contact with the public, rag pickers, animals/birds, etc. are high. Therefore, all care shall be taken to ensure that the segregated bio-medical waste handed over by the healthcare units reach CBWTF without any damage, spillage or unauthorized access by public, animals etc. A responsible person from the CBWTF operator shall always accompany the vehicle to supervise the collection and transportation of bio-medical waste. Also, the private transport vehicles should not be authorised by the SPCBs/PCCs only for transportation of the Bio-medical Waste. The CBWTF operator should be made responsible for collection and transportation of bio-medical waste.

a) Collection of bio-medical waste:

Generator of the bio-medical waste is responsible for providing segregated waste in accordance with the provisions of the Bio-medical Waste Management Rules, 2016, to the CBWTF operator. Dedicated temporary storage at healthcare unit shall be designated. The coloured bags handed over by the healthcare units shall be collected in similar coloured containers with proper cover. Each bag shall be labeled as per Schedule IV of the Bio-medical Waste Management Rules as well as with bar coding system (to be complied by the occupier or operator of a CBWTF as per BMWM Rules) so that at any time, the healthcare units can be traced back that are not segregating the bio-medical wastes as per BMWM Rules. The coloured containers should be strong enough to withstand any possible damage that may occur during loading, transportation or unloading of such containers. These containers shall also be labeled as per Schedule IV of the Rules. Sharps shall be collected in puncture resistant container. The person responsible for collection of bio-medical wastes shall also carry a register with him to maintain the records such as name of the healthcare unit, the type and quantity of waste received, time at which waste collected from the member HCF, signature of the authorised person from the healthcare unit etc. During transportation, the containers should be covered in order to prevent exposure of public to odours and contamination.

(b) Transportation of the collected bio-medical waste to the CBWTF:

All the vehicles used by the CBWTF operator shall not be sub-letted or contract vehicles should not be used by the CBWTF operator. All the vehicles owned by the CBWTF operator and intended only for collection of bio-medical waste from the member health care facilities should be registered under the Motor Vehicle Act with the respective RTO/Transport Department and such vehicle numbers should also be registered with the respective SPCB/PCC for the purpose of collection of bio-medical waste from the member health care facilities. The bio-medical waste collected in designated coloured containers shall be transported to the CBWTF in a fully covered vehicle. Such vehicle shall be dedicated for transportation of bio-medical waste only. Depending upon the volume of the wastes to be transported, the vehicle may be a two or three-wheeler, light motor vehicle or heavy duty vehicle. In either case, the vehicle must possess the following:

- (i) Transportation vehicle shall be fitted with GPS to track the movement of the vehicle.
- (ii) Separate cabins shall be provided for driver/staff as well as for placing the designated colour coded bio-medical waste containers.
- (iii) Two wheeler registered under the Motor Vehicle Act shall be permitted for collection of bio-medical waste only from the clinics or dispensaries located in places where the lanes are narrow and not easily accessible to four wheeler vehicles. Such two wheeler vehicle (s) should have a provision of a suitable fixed waste collection box marked with bio-hazard symbol, contact details, proper lid, emergency spill collection procedure, first aid box and manifest record in accordance with the BMW Rules
- (iv) The base of the waste cabin shall be leak proof to avoid pilferage of liquid during transportation.
- (v) The waste cabin may be designed for storing waste containers in tiers and also should be provided with a lighting provision.
- (vi) The waste cabin shall be so designed that it is easy to wash and disinfect.
- (vii) The inner surface of the waste cabin shall be made of smooth surface to minimize water retention.

- (viii) The waste cabin shall have provisions for sufficient openings in the rear and/or sides so that waste containers can be easily loaded and unloaded.
- (ix) The vehicle shall be labeled with the bio-hazard symbol (as per Schedule IV of the BMWM Rules) and should display the name, address and contact telephone and mobile number of the CBWTF.
- (x) The vehicle driver should carry always valid registration of the vehicle obtained from the concerned transport authority and also carry valid 'pollution under control certificate' issued by the authorized certificate issuing agency.

Depending upon the area to be covered under the CBWTF, the route of transportation shall be worked out. The transportation routes of the vehicle shall be designed for optimum travel distance and to cover all member healthcare units of the CBWTF. The CBWTF operator should ensure online and real time tracking & monitoring provisions (GPS provision) should be given access with passwords to the SPCB/PCC and CPCB to cross check the movement of the transportation vehicles on any time by the SPCB/PCC/CPCB. As far as possible, the transportation shall be carried out during non-peak traffic hours. If the area to be covered is very large, a satellite station may be established to store the bio-medical waste collected from the adjoining areas. The wastes so stored at satellite station may then be transported to the CBWTF in a big vehicle. It shall be ensured that the total time taken from generation of bio-medical waste to its treatment, which also includes collection and transportation time, shall not exceed 48 hours.

13) Disposal option of solid waste generated from the CBWTF

Treated plastic waste, incineration ash, treated waste sharps and glass waste, Oil & Grease waste and ETP sludge are generally generated from the CBWTF from the treatment systems such as autoclaving/microwaving, incineration, chemical disinfection and effluent treatment plant respectively. The treated bio-medical waste shall be disposed as per the options suggested in the **Table 2** given below:

Table 2: Suggested Disposal option of solid waste generated from the CBWTF

Sl. No.	Treated Waste Category	Suggested Treatment and Disposal Options
1.	Plastic wastes after disinfection and shredding	Plastic waste should not be sent to landfill sites. Treated plastic waste to be (i) sent to registered or authorized recyclers (or) (ii) for energy recovery (or) (iii) for diesel or fuel oil recovery (or) (iv) for road making, whichever is possible.
2.	Disinfected Sharps (including needles and syringes) (i.e., Treatment by Autoclaving or Dry Heat Sterilization followed by shredding or mutilation combination of shredding cum autoclaving)	Encapsulation in metal container or cements concrete; (or) sent for final disposal to iron foundries (having consent to operate from the SPCBs/PCCs (or) sanitary landfill or designated concrete waste sharp pit.
3.	Incineration ash	Incineration ash (ash from incineration of any bio-medical waste) shall be disposed through hazardous waste treatment, storage and disposal facility (TSDF), if toxic or hazardous constituents are present beyond the prescribed limits as given in Schedule -II of the Hazardous and Other Waste Management & Transboundary Movement Rules or as revised from time to time.
4.	Other treated solid wastes like Glass waste	Disinfection (by soaking the washed glass waste after cleaning with detergent and Sodium Hypochlorite treatment) or through autoclaving or microwaving or hydroplaning and then sent for recycling.
5.	Oil & Grease	By Incineration
6.	ETP Sludge	After drying in sludge drying beds or removal of moisture content using 'Filter Press' and such ETP sludge shall be given to CBWTF for incineration or to the hazardous waste treatment, storage and disposal facility (HWTSDf) for disposal in Secured Landfill
7.	Hazardous Waste	Disposal through a TSDF located nearby following the manifest as per the Hazardous and Other Waste (Management & Transboundary Movement) Rules, 2016

14) Cost to be charged by the CBWTF Operator for the Health Care Facilities

Cost to be charged from the healthcare facilities plays an important role in financial viability and sustainable operation of a CBWTF project, for providing the best treatment services to the Health Care Units and for ensuring compliance to the BMWM Rules. The cost shall be so worked out that neither it becomes a monopoly of the CBWTF operator nor the interest of the CBWTF operator is overlooked. It is recommended that cost to be charged from the healthcare units, depending on the size, no, of beds and the distance from the location of the CBWTF and same shall be worked out in consultation with the concerned SPCB/PCC and the local Medical Association, keeping in view the following options:

- (a) In case of non-bedded health care units, fixed charges depending on the average quantity of waste generation per day, in case of the nursing homes/clinics/sample collection Centres /Dental Centres, dispensary, pathological laboratory, blood banks, and other non-bedded hospitals irrespective of their system of medicine including ayush hospitals.
- (b) In case of bedded hospitals, fixed charges per bed per day basis and based on the no. of beds for which consents under the Water Act, 1974/Air Act, 1981 and authorization granted under the BMWM Rules, by the prescribed authority

Note:

- (i) Rates are required to be revised once in a year based on the Wholesale Price Index (WPI Index) or Consumer Price Index (CPI Index) (considering the prevailing market price especially in respect of the labour expenses, diesel prices, electricity, operating cost etc.,), by the State Advisory Committee in consultation with the concerned SPCB/PCC, local Medical Association and the representatives of the CBWTF Association
- (ii) The Health Care Facilities are required to ensure timely payments to the CBWTFs for ensuring timely treatment services in compliance to the BMWM Rules as well as agreement made with the concerned CBWTF Operator

15) Check list for development of CBWTF

The criteria for development of CBWTF have been discussed in detail in the

Previous sections. However, to have at a glance check in developing CBWTF, checklist is reproduced for convenience and is annexed (**Annexure-IV**).

16) Periodic inspection/monitoring or performance evaluation of the CBWTF

To have uniformity in performance evaluation of the CBWTF throughout the country, a check list for performance evaluation of the CBWTF for carrying out inspection/monitoring/compliance verification has been prepared and is annexed (**Annexure -V**). All the prescribed authority (SPCB/PCC) shall inspect the CBWTF at least once in six months located in the respective State/UT and a copy of the inspection reports shall be submitted to CPCB and MoEF & CC along with a copy of the action taken for ensuring compliance to the BMWWM Rules and CPCB guidelines issued from time to time and also such information is required to be uploaded in SPCB/PCC website. CPCB shall carryout random inspection of the CBWTFs once in a quarter and any violations observed further actions shall be initiated by CPCB if required under the Environment (Protection) Act, 1986.

-- OO --

Annexure-I

Coverage area-wise gap analysis for assessing additional BMW treatment capacity requirement

S. No	Coverage area (pl. indicate areas covered by a CBWTF in the State/UT)	No. of HCFs		No. of Beds covered	Total estimated BMW generation in Kg/day	Total existing treatment capacity in Kg					Total BMW Treated and Disposed in Kg/day	Gap between total BMW Generation and the Existing BMW Treatment Capacity in Kg	Remarks (Whether additional Treatment Capacity required or not)	
		Bedded	Non-bedded			Incineration	Autoclaving/ Hydroclaving /microwaving	Chemical disinfection	Deep burial	Any other mode of disposal			Yes	No
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)	(15)

Note: Above gap analysis coverage area-wise is required to be prepared once in five years and should be shown or depicted in a Map of State/UT.

Annexure- II

Format for maintaining the records by the CBWTF Operator alongwith the transportation Vehicle used for collection of bio-medical waste from the member HCFs

Name of the CBWTF :
 Address of the CBWTF with contact details :
 Vehicle Registration Number (certificate to be carried by the vehicle driver) :
 Route covered (indicate places) by the vehicle :

Date	Vehicle number and the Time of arrival of the vehicle	Vehicle Speedo meter readings in KM		Name of the HCF with address and the bar code number from whom waste collected	Category-wise quantity of bio-medical waste received in kg					Total BMW collected by the CBWTF		Name of the Vehicle driver with	Signatures		
		Initial	Final		Yellow	Red	Blue	Out dated medicines	White-Waste Sharps	Total No. of Bags	Total waste		Vehicle Driver	Representative of the HCF	
															(1)

Note: Above format is required to be maintained in duplicate both by the CBWTF Operator and the member HCF

Annexure - III

Log book for Operating the Incinerator/Plasma Pyrolysis

Date	Time of operation of the Incineration		Quantity of hourly BMW charged in Kg (Total BMW charged in a day in Kg)	Temperature maintained in °C			Negative draft in primary chamber (in mm of water column) (Pl. indicate range i.e. min. to max.)	Pressure drop across APCD (in mm of water column) (Pl. indicate range i.e. min. to max.)	pH level of scrubbed liquid used (Pl. indicate range i.e. min. to max.)	Average values of flue gas analysis results (continuous online) observed during the incineration/plasma pyrolysis process				Consumption of electricity/ Diesel whichever is applicable			Net Quantity of bio-medical waste received in Kg	Net Quantity of bio-medical Waste left over in a day (in Kg) (19) = (18) - (4)
				Primary Chamber	Secondary Chamber	After scrubbing in exit stack gas				CO in mg/Nm ³	O ₂ in %	CO ₂ in %	% combustion Efficiency	Power (indicate electricity meter reading)	Diesel in liters (pl. indicate daily or weekly diesel consumption)			
	Start	End		Initial reading	Final reading													
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)	(15)	(16)	(17)	(18)	(19)

Note: Fill the details whichever is applicable

Log Book for Operating the Autoclave/Hydroclave

Date	Time of operation of the Autoclave or Hydroclave		Batch number	Quantity of waste feeding per batch in Kg (Total waste treated by autoclaving/ hydroclave in Kg)	Temperature and Pressure in-every ten-minutes		Strip test result (pl. paste the strip test for each batch with a proof)	Consumption of electricity (indicate electricity meter reading)		Net Quantity of waste received in Kg	Net Quantity of Waste left over in Kg
					Temperature in °C	Pressure in psi		Initial reading	Final reading		
	Start	End									
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12) = (11) - (5)

Annexure – IV

Check List for Development of a Common Bio-medical Waste Treatment and Disposal Facility & For issuing 'Consent to Establishment under Water & Air Acts

1. Name of the Proponent :
2. Proposed location of the CBWTF :
3. No. of HCFs in the locality :
4. No. beds :
5. Total Bio-medical Waste Generation in kg/day :
 - (i) Incinerable in kg/day :
 - (ii) Autoclavable in kg/day :
 - (iii) Glass waste in kg/day :
 - (iv) Waste sharps in kg/day :

6. **Proposed location of the CBWTF:** located away from
 - a) Residential area : Yes No
 - b) Sensitive area : Yes No
 - c) Industrial area : Yes No
 - d) Is it as a part of TSDF : Yes No
 - e) Is the facility proposed in Hilly areas : Yes No
 - d) Buffer distance of 500 m available : Yes No

7. **Proposed land area for CBWTF:**
 - a) Area about 1 acre : Yes No
 - b) Area less than 1 Acre : Yes No
 - c) Area more than 1 Acre : Yes No

8. **Proposed coverage area of the CBWTF:**
 - a) Any facility located upto a radius of 75 KM from the proposed locality : Yes No
 - b) No. of beds covered by the existing facility/proposed facility:
 - (i) more than 10,000 beds : Yes No
 - (ii) less than 10,000 beds : Yes No
 - c) Is there any CBWTF within the radius of 75 KM : Yes No
 - d) BMW Waste generation in a coverage area under consideration: Kg/day

- e) Existing CBWTF treatment Capacity :
- (a) Incineration/plasma pyrolysis : Kg/day
- (b) Autoclave/hydroclave :Kg/day
- f) Is locality requires any additional capacity (within a radius of 75 KMs)?.
- : Yes No
- (i) If so, indicate reason:.....

9. Requirement of Treatment Facility: Following treatment facilities shall be provided in a CBWTF:

- a) Incineration : Yes No
- b) Autoclave (Pre-vacuum horizontal feeding) / Hydroclave / Microwave. : Yes No
- c) Shredder : Yes No
- d) Sharp pit (with drawing details) : Yes No
- e) Provision for floor washing/vehicle washing: Yes No
- f) Effluent Treatment Plant : Yes No
- g) Secured land fill/Disposal of ash in TSDF : Yes No
- h) Other provisions as per CPCB guidelines : Yes No

10. Segregation

- (i). Segregation shall be as per the Bio-medical Waste Management Rules, 2016 as amended as well as compatible with treatment facilities at CBWTF
- (ii). Occupier/Generator is responsible for providing segregated waste to the operator.

11. Collection

- (i) Respective coloured bags provided with bar code should be kept in similar coloured container i.e. coloured bags shall not be directly kept in vehicle.
- (ii) Sharps shall be collected in puncture resistant, leak proof, rigid containers.
- (iii) Temporary storage at healthcare unit shall be designated.

12. Transport Vehicle

- (I) Dedicated vehicles for collection of Bio-medical waste : Yes No
- (II) Separate cabins shall be provided for driver/staff and the bio-medical waste containers : Yes No

- (III) The base of the waste cabin shall be leak proof to avoid pilferage of liquid during transportation : Yes No
- (I) The waste cabin may be designed for storing waste containers in tiers : Yes No
- (V) The waste cabin shall be so designed that it is easy to wash and disinfect. : Yes No
- (VI) The inner surface of the waste cabin shall be made of smooth surface to minimize water retention : Yes No
- (VII) The waste cabin shall have provisions of sufficient openings in the rear and/or sides so that waste containers can be easily loaded and unloaded : Yes No
- (VIII) The vehicle shall be labeled with the bio-hazard symbol (as per Schedule IV of BMWM Rules) and should display the name, address and telephone number of the CBWTF : Yes No
- (IX) Other provision as per CPCB guidelines : Yes No

13. Storage

- (I) Sufficient ventilated storage space for untreated and treated bio-medical waste shall be provided. : Yes No
- (II) The flooring and walls (to a height of 2M from floor) shall be finished with smooth and fine material. There shall be minimum number of joints. : Yes No

14. Record Keeping

- (I) Documents such as collection advice taken from health care units for each category of waste, records of waste movements, logbook for the equipment and site records shall be maintained. : Yes No
- (II) All the record (five year) shall be available at the CBWTF site for inspection. : Yes No

15. Proposed Treated Waste Disposal method:

- (i). Incineration ash - Secured landfill/near by TSDF : Yes No
- (ii). Plastic waste after disinfection and shredding –Registered Recycling Unit : Yes No
- (iii). Sharps, after disinfection (if encapsulated) - Municipal landfill : Yes No
- (iv). Treated wastewater –Discharge into sewer/drain or recycling in APCD

- (v). Oil & grease –By incineration: : Yes No
- (VI). Any other mode of disposal of recyclable waste: : Yes No
- (If so, pl. indicate)

16. Estimated energy consumption and fuel consumption per month :

- (i) Estimated energy consumption per month
- (a) General lighting in the facility :
- (b) Incinerator :
- (c) Autoclave/microwave :
- (d) Shredder :
- (e) ETP :
- (f) Any other :
- (ii) Estimated fuel consumption:
- (a) Diesel consumption : in KI per month
- (b) No. of hours of operation of DG Set :
- (c) No. of hours of incineration :

17. Whether the proponent obtained necessary approvals from the concerned departments as required : Yes No

(i) If yes, attach details

18. Whether the proponent obtained EC as per EIA 2006 and the amendments made thereof : Yes No

(i) If yes, attach a copy of the EC obtained from the concerned

19. Whether the proposal recommended for issuing consent to establish : Yes No

(Signature of the official verified with date)

Annexure – V

**Check List for Performance Evaluation of the
Common Bio-medical Waste Treatment and Disposal Facility (CBWTF)**

S.No.	Details	Particulars
01.	Name of CBWTF with contact details	:
02.	Date of visit	:
03.	Location details of the CBWTF	: <ul style="list-style-type: none"> a) Near to Residential area: :Yes <input type="checkbox"/> No <input type="checkbox"/> b) In/near Sensitive area: Yes <input type="checkbox"/> No <input type="checkbox"/> c) In Industrial area : Yes <input type="checkbox"/> No <input type="checkbox"/> d) Is there a buffer zone of 500 m: Yes <input type="checkbox"/> No <input type="checkbox"/> Indicate exact distance: _____ in KM e) Is it as a part of TSDF: Yes <input type="checkbox"/> No <input type="checkbox"/> If so, distance of TSDF from the nearest CBWTF:KM.. f) Is the facility proposed in Metropolitan city: Yes <input type="checkbox"/> No <input type="checkbox"/> (i)Name of the City: (ii)Population of the City (as per latest census): g) Is the facility proposed in Hilly area : Yes <input type="checkbox"/> No <input type="checkbox"/> (i)Name of the Town/City:
04	Month / year of establishment and the Consents status	: Establishment Month/Year :
05.	CBWTF set up by	:
06.	CBWTF operated by	:
07.	Total number of healthcare facilities and beds covered (as on date of visit)	: No. of HCFs : No. of Beds : No. of HCFs and beds upto 75 KM radius:
08.	Total BMW Treatment Capacity of CBWTF (in kg / day)	: Incineration : Autoclave : Any other treatment and disposal:

S.No.	Details	Particulars
09.	Consents and Authorization details :	
9.1	Consent under Water (Prevention and Control of Pollution) Act, 1974 :	<input type="checkbox"/> Applied for <input type="checkbox"/> Not Applied for <input type="checkbox"/> Possess Valid Consent <input type="checkbox"/> Not renewed <input type="checkbox"/> No consent If obtained: Consent is valid upto and issued bySPCB/PCC vide letter dated
9.2	Consent under Air (Prevention and Control of Pollution) Act, 1981 :	<input type="checkbox"/> Applied for <input type="checkbox"/> Not Applied for <input type="checkbox"/> Possess Valid Consent <input type="checkbox"/> Not renewed <input type="checkbox"/> No consent If obtained: Consent is valid upto and issued bySPCB/PCC vide letter dated
9.3	Environmental Clearance (EC)	<input type="checkbox"/> Applied for <input type="checkbox"/> Not applied <input type="checkbox"/> Obtained <input type="checkbox"/> Not obtained If obtained: EC issued by SEIAA or MoEF& CC vide letter dated
9.4	Authorization under BMW Rules, 1998 :	<input type="checkbox"/> Applied for <input type="checkbox"/> Not Applied for <input type="checkbox"/> Possess Valid Authorisation <input type="checkbox"/> Not renewed <input type="checkbox"/> No Authorisation If obtained: Authorisation is valid upto and issued bySPCB/PCC vide letter dated
10.	Investment in setting up the CBWTF :	
11.	Area of plot size for CBWTF (Sq. ft.) :	
12	Annual Report submission for the year	Submitted before due date : :Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, provide details of waste collected, received and treated & disposed of:
12.	Coverage area of CBWTF (radius in KM covered)	Coverage area upto 75 km radius: Yes <input type="checkbox"/> No <input type="checkbox"/>
13.	Name of Districts/Cities / places being covered	(Pl. indicate Districts or places covered:..... W.r.to the CBWTF (i) Farthest HCF located at :KM (ii) Nearest HCF located at :KM

S.No.	Details	Particulars
14.	Daily operation schedule (timings)	(i) Collection: ...AM to ... PM. (ii) Incineration:....AM to ...PM (iii) Whether waste from member HCFs collected in holidays: <input type="checkbox"/> Yes <input type="checkbox"/> No
15.	Cost charged to the healthcare facilities	(i) Charges in Rs..... (ii) Is the cost to be levied suggested byOrganisation
16.	Total quantity of bio-medical waste treated: kg/day (avg.)	
16.1	Incinerable	: %
16.2	Autoclaving	:%
16.3	Others (please specify waste type-wise)	:%
17.	Staff involvement in CBWTF operation (number of persons):	
17.1	Managerial Administration /	:
17.2	Equipment operations	:
17.3	Transportation of BMW	: No. of Drivers: No. of Helpers:
17.4	Sanitation and others	:
17.5	Total persons excluding managers	:
18.0	Collection and Transportation of bio-medical waste from member HCFs :	
18.1	No. of Vehicles used for collection of waste from member HCFs	(i) Four Wheelers:Nos and Vehicle Numbers: (ii) Two Wheelers :.....Nos and Vehicle Numbers:.....
18.2	Vehicles are labeled as per BMW Rules, 2016	: <input type="checkbox"/> Satisfactory <input type="checkbox"/> No satisfactory
18.3	Vehicles used are as per CPCB Guidelines	: <input type="checkbox"/> Satisfactory <input type="checkbox"/> No satisfactory
18.4	Vehicles attached with the GPS provision as per BMW Rules 2016	: <input type="checkbox"/> Satisfactory <input type="checkbox"/> No satisfactory
18.5	Whether waste collected from member HCFs adopted Bar coding system ?	: <input type="checkbox"/> Yes <input type="checkbox"/> No

S.No.	Details	Particulars												
19.0	Temporary untreated waste storage area	<input type="checkbox"/> Satisfactory <input type="checkbox"/> No satisfactory												
20.0	Mode of conveyance of bio-medical waste from untreated waste storage area to the treatment equipment within the CBWTF	<input type="checkbox"/> Closed Trolley/Pull cart with bio-hazard symbol <input type="checkbox"/> No Closed Trolley/Pull cart <input type="checkbox"/> Others like												
21.0	Treatment equipment installed at CBWTFD													
21.1	Incinerator/plasma pyrolysis capacity and make	(i) No. of Incinerators including standby: (ii) Incineration capacity: kg /hrKg/day.												
21.2	Daily Operation schedule of the incinerator /plasma pyrolysis (timings)AM toPM (or)PM toAM Whether bio-medical waste collected from member HCFs is treated during holidays: Yes <input type="checkbox"/> No <input type="checkbox"/>												
21.3	Consumption of auxiliary fuels	<table border="1"> <thead> <tr> <th>S. No</th> <th>Type of Fuel</th> <th>Consumption Quantity in liters per day</th> <th>Bill numbers of purchase of fuel</th> </tr> </thead> <tbody> <tr> <td>a)</td> <td></td> <td></td> <td></td> </tr> <tr> <td>b)</td> <td></td> <td></td> <td></td> </tr> </tbody> </table>	S. No	Type of Fuel	Consumption Quantity in liters per day	Bill numbers of purchase of fuel	a)				b)			
S. No	Type of Fuel	Consumption Quantity in liters per day	Bill numbers of purchase of fuel											
a)														
b)														
21.4	Stack attached with the incinerator /plasma pyrolysis	(i) Stack Diameter: m (ii) Stack Height : m above Ground Level												
21.5	Monitoring provision attached with the stack	<input type="checkbox"/> Platform <input type="checkbox"/> Porthole <input type="checkbox"/> access to the platform (Steps/Monkey Ladder/any other.....)												
21.6	Is stack monitoring provision satisfactory and as per CPCB guidelines	<input type="checkbox"/> Yes <input type="checkbox"/> No												
21.7	air pollution control systems attached with the incinerator/plasma pyrolysis	(i) Quenching : <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) Venturi scrubber : <input type="checkbox"/> Yes <input type="checkbox"/> No (iii) Droplet separator : <input type="checkbox"/> Yes <input type="checkbox"/> No (iv) Mist eliminator : <input type="checkbox"/> Yes <input type="checkbox"/> No (v) Filters : <input type="checkbox"/> Yes <input type="checkbox"/> No (vi) Lime and Activated Carbon injection: : <input type="checkbox"/> Yes <input type="checkbox"/> No												

S.No.	Details	Particulars
		(vii) ID Fan : <input type="checkbox"/> Yes <input type="checkbox"/> No (viii) Any other : (Pl. indicate)
21.8	Waste feeding mechanism	(i) Manual feeding : <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) PLC based Automatic feeding : <input type="checkbox"/> Yes <input type="checkbox"/> No
21.9	Is PLC and automatic recording system (for recording operating parameters of the incinerator) attached with the incinerator/plasma pyrolysis	(i) PLC synchronized with waste feeding mechanism & in working condition: <input type="checkbox"/> Yes <input type="checkbox"/> No (I) PLC synchronized and recording system attached with incinerator and in working condition: <input type="checkbox"/> Yes <input type="checkbox"/> No
21.10	Operational conditions of the Incineration/plasma pyrolysis as observed during the visit	(i) Whether burners in working condition: <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) Temperature maintained in Primary Chamber (range) : ^o C (iii) Temperature maintained in Secondary Chamber (range):..... ^o C (iv) Negative draft in Primacy Chamber :mm of water column (v) Pressure drop in the Venturi: mm of water column
21.11	Is continuous on-line monitoring system/Flue gas analyser attached with the incinerator/plasma pyrolysis for flue gas analysis (i.e CO, O ₂ and CO ₂)	(i) Is continuous online monitoring system (COMS) attached with incinerator: <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) Observed values of flue gas parameters: CO ₂ : %; O ₂ : % and CO: % (iii) Observed Combustion Efficiency:% (iv) Observed values of stack emissions as per COMS
21.12	Emergency and Fire safety measures adopted within the facility is adequate	Is Emergency stack attached with the incinerator: <input type="checkbox"/> Yes <input type="checkbox"/> No Whether fire safety measures adopted (Fire Extinguishers, Sand buckets etc.): <input type="checkbox"/> Yes <input type="checkbox"/> No
21.13	Log book for incinerator/ plasma pyrolysis is maintained and satisfactory	Log Book Maintained: <input type="checkbox"/> Yes <input type="checkbox"/> No Log Book Maintained is satisfactory : <input type="checkbox"/> Yes <input type="checkbox"/> No

S.No.	Details	Particulars
21.14	Details of heat recovery system installed with incinerator/plasma pyrolysis	<input type="checkbox"/> Yes <input type="checkbox"/> No
22.0	Capacity of autoclave and-- make	Autoclave of capacitykg/cycle and make installed.
22.1	Operating conditions of autoclave/microwave as observed during the visit	Operating parameters observed: (i) Temperature : in °C (ii) Pressure : in psi (iii) Residence time : in minutes
22.2	Provision made for the autoclave /microwave	Trolley for waste feeding : <input type="checkbox"/> Yes <input type="checkbox"/> No Graphic or computer recording device attached: <input type="checkbox"/> Yes <input type="checkbox"/> No
22.3	Spore test or strip test conducted regularly and records maintained	<input type="checkbox"/> Yes <input type="checkbox"/> No Pl. indicate frequency of Strip test conducted: every batch /once in a week /quarterly /yearly Pl. indicate frequency of Spore test conducted: every batch /once in a week /quarterly /yearly
22.4	Performance of autoclave by spore testing or routine test	<input type="checkbox"/> Satisfactory <input type="checkbox"/> Not satisfactory
22.5	Log book maintained for autoclave is satisfactory	Log Book Maintained: <input type="checkbox"/> Yes <input type="checkbox"/> No Log Book Maintained is satisfactory : <input type="checkbox"/> Yes <input type="checkbox"/> No
23.0	Capacity of shredder and make kg/hr. Self-designed & got fabricated locally.
24.0	Details of sharp pit / Encapsulation facility	(i) Sharp Pit provided : <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) Is it as per CPCB guideline : <input type="checkbox"/> Yes <input type="checkbox"/> No (iii) Records maintained : <input type="checkbox"/> Yes <input type="checkbox"/> No (iv) Total quantity of waste sharps stored: (v) Total quantity of waste sharps treated and disposed:
25.0	Water Balance	
25.1	Source and quantity of water intake per day (cu.m / day)	Water consumption source: Water is drawn at KLD approximately. Is magnetic water flow meter attached to the water source/water storage tank : <input type="checkbox"/> Yes <input type="checkbox"/> No

S.No.	Details	Particulars														
		Magnetic water flow meter readings as per record (for last month): 1 st Day of Month : Last day of month : Magnetic Flow meter as observed during the visit: <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th rowspan="2">S. No</th> <th rowspan="2">Month</th> <th colspan="2">Magnetic flow meter reading</th> </tr> <tr> <th>Initial</th> <th>Final</th> </tr> </thead> <tbody> <tr> <td>(1)</td> <td>Previous month</td> <td></td> <td></td> </tr> <tr> <td>(2)</td> <td>On the date of visit:.....</td> <td></td> <td></td> </tr> </tbody> </table> If water requirement is met from outside through tankers, pl. provide No. of Tankers procured in a previous six months: Total quantity of water consumed during the previous six months : in KLD	S. No	Month	Magnetic flow meter reading		Initial	Final	(1)	Previous month			(2)	On the date of visit:.....		
S. No	Month	Magnetic flow meter reading														
		Initial	Final													
(1)	Previous month															
(2)	On the date of visit:.....															
25.2	Break up of water usage (such as washing, scrubbing etc.)	Scrubber – KL/hr or KLD Washing – KLD Disinfections – KLD Gardening – KLD Domestic – KLD														
26.0	Total wastewater effluent generated per day	AboutKLD generated Quantity of treated water reused/recycled in %: Any other mode of disposal:														
27.	Effluent treatment plant details															
27.1	ETP Capacity	: KL/Cycle														
27.2	Flow Chart of ETP	: ETP comprising of: Unit operations														
27.3	Intake and Discharge of ETP	: <ul style="list-style-type: none"> (i) Magnetic Flow measuring device provided at the outlet of ETP: <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) Energy meter attached to the ETP: <input type="checkbox"/> Yes <input type="checkbox"/> No (iii) Energy consumed over a period of one month: = Units (iv) pH meter attached at the outlet of ETP: <input type="checkbox"/> Yes <input type="checkbox"/> No 														

S.No.	Details	Particulars
27.4	Final mode of disposal of treated water	(i) Is treated wastewater complying with the discharge norms <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) Is Treated water is reused in the scrubber: <input type="checkbox"/> Yes <input type="checkbox"/> No (ii) Is Treated water is reused for gardening: <input type="checkbox"/> Yes <input type="checkbox"/> No (iii) Is Treated water is discharged in drain: <input type="checkbox"/> Yes <input type="checkbox"/> No (iv) Is Treated water is discharged in open area: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.	Status of infrastructure provided (Pl. indicate 'Yes / No' whichever is applicable)	
28.1	Separate treatment equipment room	<input type="checkbox"/> Yes <input type="checkbox"/> No
28.2	Main waste storage room	<input type="checkbox"/> Yes <input type="checkbox"/> No
28.3	Treated waste storage room	<input type="checkbox"/> Yes <input type="checkbox"/> No
28.4	Administrative room	<input type="checkbox"/> Yes <input type="checkbox"/> No
28.5	Generator set	<input type="checkbox"/> Yes <input type="checkbox"/> No
	(i) Capacity	
	(ii) Is Stack attached as per DG Set norms	<input type="checkbox"/> Yes <input type="checkbox"/> No
	(iii) Is Acoustic enclosure provided as per DG Set norms	<input type="checkbox"/> Yes <input type="checkbox"/> No
	(iv) Is DG Set complying to the emissions norms and noise level norms	<input type="checkbox"/> Yes <input type="checkbox"/> No If so, pl. indicate latest monitoring results:
28.6	Site security (high walls, fencing, guarded gates etc.)	High walls on all four sides : <input type="checkbox"/> Yes <input type="checkbox"/> No Fencing on all the sides : <input type="checkbox"/> Yes <input type="checkbox"/> No Guarded Gates : <input type="checkbox"/> Yes <input type="checkbox"/> No Any other observation pl indicate:

S.No.	Details	Particulars
28.7	Parking facility	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.8	Sign board	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.9	Green belt	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.10	Washing room	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.11	First aid box	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.12	Lighting arrangements in the facility	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.13	Odour problem remedial measures	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.14	Fire fighting and emergency facilities	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.15	Measures for control of pests / insects etc.	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.16	Protective gear for waste handlers	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.17	Telephone facility	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.18	Provision of washing, toilets and safe place for eating for the workers	: <input type="checkbox"/> Yes <input type="checkbox"/> No
28.19	Fire alarm system provided in the facility	: <input type="checkbox"/> Yes <input type="checkbox"/> No
29.	Record maintenance and record keeping details (Pl. indicate 'Yes / No' whichever is applicable)	
29.1	Waste Movement /Manifest record	: <input type="checkbox"/> Yes <input type="checkbox"/> No
29.2	Log book for treatment equipment	: <input type="checkbox"/> Yes <input type="checkbox"/> No
29.3	Site records	: <input type="checkbox"/> Yes <input type="checkbox"/> No
29.4	Incineration ash generation and final disposal records	: <input type="checkbox"/> Yes <input type="checkbox"/> No
29.5	Treated plastic waste generation and its sale to the registered recycler	: <input type="checkbox"/> Yes <input type="checkbox"/> No
29.6	Syringes treated and its final disposal record	: <input type="checkbox"/> Yes <input type="checkbox"/> No

S.No.	Details	Particulars
29.7	Workers health status records	<input type="checkbox"/> Yes <input type="checkbox"/> No
29.8	Workers immunization records	<input type="checkbox"/> Yes <input type="checkbox"/> No
29.9	Medical and para-medical workers training records	<input type="checkbox"/> Yes <input type="checkbox"/> No
29.10	Whether records maintained with regard to the accidents (such as fire, spills and injury and measures taken)	<input type="checkbox"/> Yes <input type="checkbox"/> No
30.	Collection and transportation status (Yes / No)*	
30.1	Whether waste collected in a container of similar colour with label as per the Rules?	<input type="checkbox"/> Yes <input type="checkbox"/> No
30.2	Whether the person who collects BMW maintain a register with him / her?	<input type="checkbox"/> Yes <input type="checkbox"/> No
30.3	Has due attention have been given in vehicles to prevent spillage / pilferage/ loading / unloading etc.?	<input type="checkbox"/> Yes <input type="checkbox"/> No
30.4	Is the vehicle labeled with the symbol and display the name, address, telephone number etc.?	<input type="checkbox"/> Yes <input type="checkbox"/> No
30.5	Does the CBWTF operator use satellite station to store the waste?	<input type="checkbox"/> Yes <input type="checkbox"/> No (If yes, give details.....)
30.6	The CBWTF operator collects waste daily or alternate day including	<input type="checkbox"/> Yes <input type="checkbox"/> No

S.No.	Details	Particulars
	holidays?

STATIONARY SOURCE EMISSION MONITORING

MODIFICATIONS TO BE MADE TO SAMPLING PLATFORM AND SAMPLING PORT HOLE

Number of Port Holes : Minimum two numbers of Port Holes at 90° apart from each other at a horizontal plane

Location of Port Holes : Minimum 8 times of Internal Diameters of Stack downstream (upward direction of stack) from any duct confluence, bends and tapering & minimum 2 times of Internal Diameters of Stack upstream (downward direction of stack) from stack exit

Location of Sampling Platform : 5 feet upstream (downward direction of stack) from the Port Hole as determined above

Port Hole Flange : If the internal diameter of the flange is 4 inch or more then there is no need to change, if it is less than 4 inch then it has to be replaced with 4 inch flange. The flange should not protrude out more than 6 inches from the outer wall of the stack (it shall be kept as less as possible)

Sampling Platform Modification : A semi-circular extension of the existing platform (width extending outward by 6 feet from outside wall of the stack and covering at least one third of the circumference) may be provided for access to both the Port Holes. This area can be extended from the existing Platform and if deemed necessary for safety of the personnel a counter extension in opposite direction may also be provided. The extended Platform shall be strengthened with requisite support from the stack

Note: Alternatively, safe access to monitoring platform may be provided with separate scaffolding-cum-staircase arrangement

Sampling Platform Modification / Extension

Fixing of 'L' Pieces on the stack wall : Two 'L' shaped pieces are to be fixed on the stack wall for mounting the Mono-Rail & Chain (part of the Sampling Kit for movement of sampling Train in & out through the Sampling Port Hole). The 'L' pieces shall be made of approximately 6 mm thick galvanized iron to have 5 cm long arms. One arm of the 'L' piece shall be welded on the stack wall and another arm shall have a hole of 14 mm diameter near the open end. Both the 'L' Pieces shall be welded on the stack wall at specified distances (as shown in the diagram on the next page) from the centre of Sampling Port Hole (in a vertical axis on the Stack Wall)

Fixing of 'L' Pieces on the Stack Wall

Appendix I: Methodology to conduct gap analysis with respect to generation and treatment of biomedical waste- Rev.1	32
References	61

1) Introduction

A Common Bio-medical Waste Treatment and Disposal Facility (CBWTF) is a set up where biomedical waste generated from member health care facilities is imparted necessary treatment to reduce adverse effects that this waste may pose on human health and environment. The treated recyclable waste may finally be sent for disposal in a secured landfill or for recycling.

According to the Bio-medical Waste Management Rules, 2016, "bio-medical waste treatment and disposal facility" means any facility wherein treatment, disposal of bio-medical waste or processes incidental to such treatment and disposal is carried out, and includes common bio-medical waste treatment facilities and "operator of a common bio-medical waste treatment facility" means a person who owns or controls a Common Bio-medical Waste Treatment and Disposal Facility (CBWTF) for the collection, reception, storage, transport, treatment, disposal or any other form of handling of bio-medical waste.

The Bio-medical Waste Management Rules, 2016 (BMWM Rules) restricts occupier for establishment of on-site or captive bio-medical waste treatment and disposal facility, if a service of common bio-medical waste treatment and disposal facility is available within a distance of seventy-five kilometer, as installation of individual treatment facility by health care facility (HCF) requires comparatively high capital investment. In addition, it requires separate dedicated and trained skilled manpower and infrastructure development for proper operation and maintenance of treatment systems. The concept of CBWTF not only addresses such problems but also prevents proliferation of captive treatment facilities in a particular area. In turn, it reduces the monitoring pressure on regulatory agencies. By running the treatment equipment at CBWTF to its full capacity, the cost of treatment of per kilogram of bio-medical waste gets significantly reduced. Its considerable advantages have made CBWTF popular and proven concept in most part of the world.

The CBWTFs are also required to set up based on the need for ensuring environmentally sound management of bio-medical waste keeping in view the techno-economic feasibility and viable operation of the facility with minimal impact on human health and environment.

Since 1998, the CBWTF as an option for treatment of bio-medical waste also been legally introduced in India. Considering the likely impacts that may cause to the

patients undergoing treatment because of operation of the captive treatment equipment within the health care facilities (HCFs), now the Bio-medical Waste Management Rules, 2016 recommends the Occupier (i.e., HCF) for ensuring treatment and disposal of generated bio-medical waste through a CBWTF, located within a distance of 75 KM. Further, these rules eased the bottleneck in upbringing the CBWTF by making department in the business allocation of land assignment in the State or UT administration responsible for providing a suitable site (s) within its jurisdiction.

The concept of CBWTF is also being widely accepted in India among the healthcare units, medical associations and entrepreneurs. In order to set up a CBWTF to its maximum perfection, care shall be taken in choosing the right technology, development of CBWTF area, proper designing of transportation system to achieve optimum results etc. Key features of CBWTF have been addressed in the subsequent sections.

To facilitate the treatment and disposal of bio-medical waste generated from the HCFs, at present (as per Annual Report 2023 submitted by the State Pollution Control Boards/Pollution Control Committees), there are 234 no. of CBWTFs in operation and 30 no. of CBWTFs are under construction. Also, the Bio-medical Waste Management Rules, 2016 mandates that the operator of a CBWTF authorised by the prescribed authority is required to take all necessary steps to ensure that the bio-medical waste collected from the occupier is transported, handled, stored, treated and disposed of, without any adverse effect to the human health and the environment, in accordance with the BMW Rules and the guidelines issued by the Central Government or the Central Pollution Control Board (CPCB) from time to time. Therefore, these guidelines have been prepared with an aim to have uniformity in ensuring site selection, allowing and establishment of a state-of-the-art CBWTF, operation as well as verification of compliance to the BMW Rules, 2016 throughout the country. However, any other aspects which are not been covered under these guidelines and needs attention, in such a case, the prescribed authority may take suitable action in the interest of protection of the environment in consultation with MoEF & CC/CPCB. Also, it is pertinent to mention here that these guidelines are mandatory henceforth under the Bio-medical Waste Management Rules, 2016

2) **Criteria for development of a new Common Bio-medical Waste Treatment and Disposal Facility for a locality or region.**

Prior to allowing any new CBWTF, following criteria or steps may be followed:

- a) Prescribed authority under the BMWM Rules, 2016 [i.e., State Pollution Control Board (SPCB) in the respective State or Pollution Control Committee (PCC) in the respective Union Territory Administration] is required to prepare an inventory or review with regard to the bio-medical waste generation at least once in five years in the coverage areas of the existing bio-medical waste treatment and disposal facility. The prescribed authority is also required to extrapolate the coverage-area wise bio-medical waste generation for the next ten years.
- b) SPCB/PCC is required to conduct gap analysis w.r.to coverage area of the bio-medical waste generation, its projection over a period of next ten years, adequacy of existing treatment capacity of the CBWTF in each coverage area of radius 75 KM, as given in **Annexure-I** and as per methodology for conduct of gap analysis given at **Appendix-I**.

Further, decision may be taken by concerned SPCB/PCC based on gap analysis report to allow new facility or expansion of an existing facility. Adequacy of the existing facility to handle quantum of biomedical waste and/or compliance with the norms prescribed under BMWM Rules, 2016 shall also be taken into account.

All the SPCBs and PCCs shall conduct the gap analysis and based on the gap analysis, action plan for development of new CBWTFs is required to be prepared and submitted to MoEF & CC & CPCB within six months' time. In case of States/UTs, where no CBWTF is available, in such a case, SPCB/PCC being prescribed authority under the BMWM Rules is required to ensure establishment new facilities. SPCB/PCC may submit the detailed proposal to MoEF & CC/MoH & FW through the respective State Government or UT Administration. Association of HCFs may also be encouraged to develop their own CBWTF following these guidelines. In case, any coverage area requires additional treatment capacity, in such a case, action may be initiated by the prescribed authority for allowing a new CBWTF in that locality based on the gap analysis report without interfering the coverage area of the existing CBWTF.

- c) SPCB/PCC shall identify the coverage area, which require additional treatment facility and bring it to the notice of the concerned department in the business allocation of land assignment in the respective State Government or UT Administration. The department in the business allocation of land assignment shall be responsible for providing suitable site in the identified coverage area for setting up of a CBWTF, in

consultation with the prescribed authority (i.e., SPCB/PCC), other stakeholders and in accordance with these guidelines issued by CPCB from time to time.

- d) Alternately, a CBWTF may also be allowed to be established on a land procured by an entrepreneur in accordance with the location criteria suggested under these guidelines.
- e) The SPCB/PCC or concerned department in the business allocation of land assignment in the respective State Government or UT Administration may seek expression of interest from the proponents for development of new CBWTF (s) in the identified coverage area. Upon allocation of site to the proponent, the proponent is required to take necessary approvals as required under the Environment (Protection) Act, 1986 for development of the new CBWTF in accordance with these guidelines.
- f) In the absence of expression of interest by any proponent, then SPCB/PCC shall insist health care facilities to form association and to develop its own CBWTF in line with these guidelines or to have captive treatment facilities (Only hilly or remote areas) for ensuring treatment and disposal of generated bio-medical waste as stipulated under the BMWM Rules.
- g) In case of any regulatory action including closure of any existing CBWTF is inevitable, the respective SPCB/PCC may take action under the BMWM Rules including for making alternate arrangement to ensure safe disposal of the bio-medical waste generated from the member health care facilities of such default CBWTF through CBWTF located nearby.
- h) In case of hilly areas considering the geography, only one CBWTF with adequate treatment capacity may be developed covering at least two districts to cater treatment services to the HCFs located in the respective Districts. The selection and allocation of site etc., should be done as per the criteria suggested under these guidelines. The treatment charges to be prescribed by the respective SPCB/PCC in consultation with the State Advisory Committee.

The criteria for development of CBWTFs in any coverage area is also depicted in **Figure 1**.

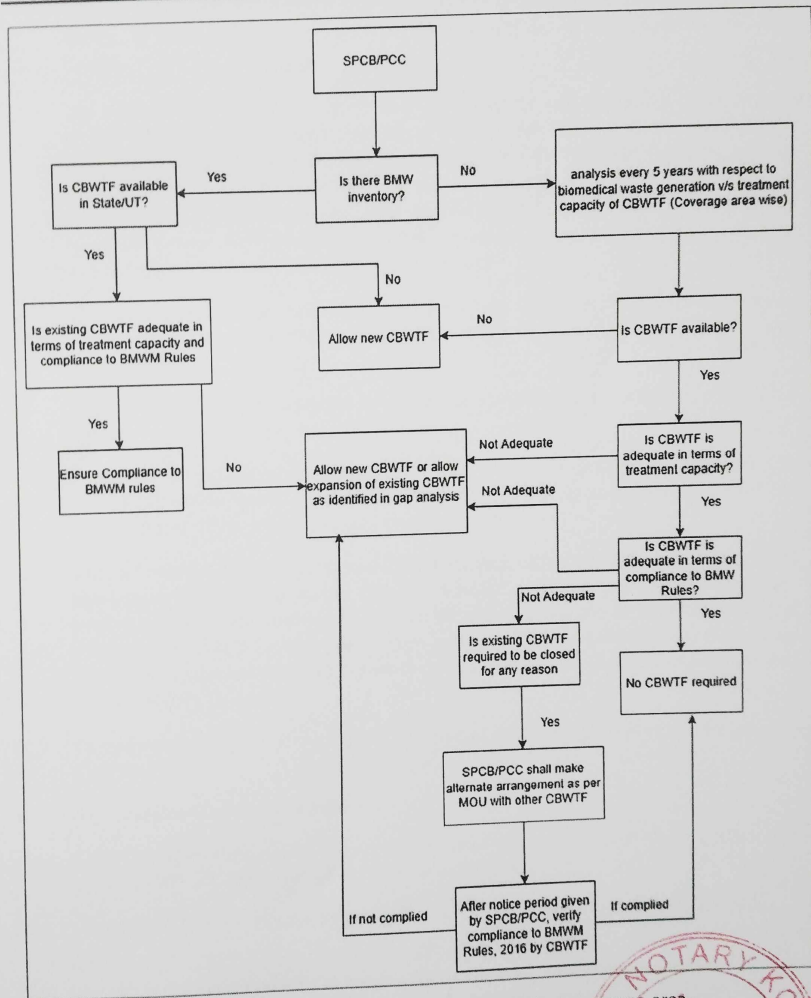

Figure 1. Criteria for Development of a CBWTF in a coverage area

3) Duties of the operator of a common bio-medical waste treatment and disposal facility

The duties of the operator of a common bio-medical waste treatment and disposal facility (CBWTF) as enunciated under Rule 5 of the Bio-medical Waste Management Rules, 2016 shall be ensured and complied with. All CBWTFs shall also comply w.r.to the residence time as well as emission norms including for Dioxins and Furans for incineration facility as prescribed under BMWM Rules, 2016. In addition to the above, to ensure proper management of bio-medical waste in the respective coverage area, as a mitigation measure, especially in the event of

- (a) a temporary break down (not more than a week) of a CBWTF especially for rectification of the refractory lining of the incineration chambers or change of requisite APCD due to failure; and
- (b) Closure of a CBWTF for violation of the provisions of the BMWM Rules or any other reason.

All CBWTFs are required to submit action plan (in case of closure), to the respective SPCB/PCC, for imposing suitable condition while granting authorisation under the BMWM Rules, 2016. The action plan should include:

- (a) an MoU made with the nearest two CBWTF located within the respective State/UT as alternate arrangement ensuring that the bio-medical waste generated is collected, treated and disposed of within 48 hours as stipulated under the BMWM Rules. In case, if there is no CBWTF located nearby then such CBWTF should have to install stand by treatment equipment (equal to the existing treatment capacity as per consents granted by the SPCB/PCC), and
- (a) Decontamination plan of the CBWTF for execution of such plan prior to closure of a CBWTF.

4) Applicability of these guidelines

These guidelines are applicable to all the upcoming or new CBWTFs. In case of the existing CBWTFs, these guidelines shall be applicable

- (a) the existing CBWTFs desires to expand or enhance the existing treatment capacity
- (or)**
- (b) the existing CBWTFs desires to modernize the existing treatment equipment with the new equipment with enhancement in the existing treatment capacity.

5) Environmental laws applicable for commissioning or operation of a CBWTF

Operation of a CBWTF leads to air emissions as well as waste water generation as in case of an industrial operation. Most common sources of waste water generation in CBWTFs are vehicle washing, floor washing, and scrubbed liquid effluent from air pollution control systems attached with the incinerator/plasma pyrolysis. Incineration as well as DG Set is the general source of air emissions.

5.1 Any other approvals (such as Land Use /Change in Land Use as applicable) required from the concerned authorities under various laws have to be complied with by the proponent of the CBWTF prior to development of a CBWTF.

5.2 Consents under Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 as well as Authorization under the BMWM Rules, 2016

The project proponent of the CBWTF is required to obtain 'Consent to Establishment' under Section 25 of the Water (Prevention and Control of Pollution) Act, 1974 and Section 21 of the Air (Prevention and Control of Pollution) Act, 1981, from the respective prescribed authority i.e. SPCB/PCC. Upon installation of the requisite equipment, the CBWTF Operator is also required to obtain authorization under BMWM Rules, 2016 co-terminus with consent to operate under Water (Prevention and Control of Pollution) Act, 1976 & Air (Prevention and Control of Pollution) Act, 1981 from the respective SPCB/PCC prior to commencement of the CBWTF.

5.3 Environmental Clearance under EIA Notification 2006

Ministry of Environment, Forest & Climate Change (MoEF & CC), notified amendment to the EIA Notification 2006 and published vide MoEF & CC Notification of S.O. 1142 (E) dated April 17, 2015. According to this notification, the 'bio-medical waste treatment facility' is categorized under the Item 7 (da) in the schedule, requiring 'environmental clearance' from the State Environment Impact Assessment Authority (SEIAA). Therefore, the CBWTF operator is also required to obtain 'Environmental Clearance (EC)' from the respective SEIAA or Ministry of Environment, Forest & Climate Change (MoEF & CC), as the case may be, before any construction work, or preparation of land by the projects management, which include the following:

a) All new projects or activities pertaining to the bio-medical waste treatment facility; and

- b) Expansion and modernization with additional treatment capacity of existing bio-medical waste treatment facility (excluding augmentation of incineration facility for compliance to the residence time as well as Dioxins and Furans without enhancing the existing treatment capacity).
- c) Any expansion or modification in the treatment capacity or relocation of the existing CBWTF (requires compliance to the relevant provisions notified under the Environment (Protection) Act, 1986 by the MoEF & CC.

6) Location criteria

In the context of these guidelines, buffer zone represents a separation distance between the source of pollution in CBWTF and the receptor - following the principle that the degree of impact reduces with increased distance. The following parameters may be considered for ascertaining buffer distance on case-to-case basis:

- (i) potential for spread of infection from wastes stored in the premises.
- (ii) applicable standards for pollution control and the relative efficiency of the existing incinerators and emission control systems,
- (iii) potential of fugitive dust emission from incinerators,
- (iv) Quantity and quality of wastewater discharged
- (v) the potential for odour production,
- (vi) the potential for noise pollution,
- (vii) the risk posed to human health due to exposure to emissions from incinerator,
- (viii) the risk of fire and
- (ix) significance of the residual impacts such as bottom ash and fly ash.

As far as possible, the CBWTF shall be located near to its area of operation in order to minimize the transportation distance in waste collection, thus enhancing its operational flexibility as well as for ensuring compliance to the time limit for treatment and disposal of bio-medical waste as stipulated under the BMWM Rules (i.e., within 48 hours). Also, the location of the CBWTF should be in conformity to the CRZ Norms and other provisions notified under the Environment (Protection) Act, 1986. The location shall be decided in consultation with the State Pollution Control Board (SPCB)/ Pollution Control Committee (PCC) and SEIAA or MoEF & CC, as the case may be. The location criteria for development of a CBWTF are as follows:

- (a) A CBWTF shall preferably be developed in a notified industrial area without any requirement of buffer zone **(or)**

- (b) A CBWTF can be located at a place reasonably far away from notified residential and sensitive areas and should have a buffer distance of preferably 500 m so that it shall have minimal impact on these areas. In case of non-availability of such a land, the buffer zone distance from the notified residential area may be reduced to less than 500 m by SPCB/PCC without referring the matter to CPCB by prescribing additional control measures such as (i) adoption of best available technologies (BAT) by the proponent of CBWTF; (ii) prescribing stringent standards for operation of the CBWTF by the SPCB/PCC; (iii) adoption of zero liquid discharge by the CBWTF and (iv) in case of any complaints from the public, then CBWTF should prove that the facility is not causing any adverse impact on environment and habitation in the vicinity.
- (c) The CBWTF can also be developed as an integral part of the Hazardous Waste Treatment Storage and Disposal Facility (TSDF) subject to obtaining of necessary approvals from the authorities concerned including 'environmental clearance' as per Environmental Impact Assessment 2006 and further amendments notified under the Environment (Protection) Act, 1986, provided there is no CBWTF exist within 150 KM distance from the existing TSDF.

7) Land requirement

Sufficient land shall be allocated to the CBWTF to provide all requisite systems which include dedicated space for storage of waste (both treated and untreated), waste treatment equipment, vehicle washing bay, vehicle parking space, ETP, incineration ash storage provision, administrative room, space for DG Set etc.,.

- (a) Preferably, a CBWTF shall be set up on a plot size of not less than one acre in all the areas. However, a CBWTF can be developed in adjacent plots but cannot be set up in two or more different plots located in different areas. Separate plots can be permitted only for vehicle parking if located in the close vicinity of the proposed CBWTFs or the existing CBWTFs.
- (b) In case of upcoming or new CBWTFs (where municipal population is more than 25 lakhs), the land area requirement may be relaxed (but in any case not less than 0.5 acre) by the SPCB/PCC, with additional control measures such as zero liquid discharge, increase in stack height, stringent emission norms, odour control measures or any other measures felt necessary by the prescribed authority on case-to-case basis, only in consultation with SEIAA or MoEF &CC, as the case may be.

8) Coverage area of CBWTF

Suggested coverage area for development of a CBWTF is as follows:

- a) A CBWTF located within the respective State/Union Territory may be allowed to cater to healthcare units situated within a radial distance of 75 kilometers, subject to the condition that the facility possesses adequate treatment capacity to handle the bio-medical waste generated within the said radius. For the purpose of determining adequacy, 90% of the total treatment capacity as authorized by the concerned State Pollution Control Board (SPCB) or Pollution Control Committee (PCC) shall be considered. It shall further be ensured that bio-medical waste generated is collected, treated and disposed of within 48 hours as stipulated under the BMWM Rules.

The concerned SPCB/PCC shall undertake a gap analysis, as per **Appendix-I**, to assess the quantum of bio-medical waste generated vis-à-vis the available treatment capacity of the CBWTF (considering 90% of the authorized treatment capacity). In case the analysis indicates a shortfall in treatment capacity or if the existing CBWTF is found to be non-compliant with the provisions of the Bio-Medical Waste Management Rules, 2016, the SPCB/PCC may consider proposals for establishing a new CBWTF or for expansion of an existing facility, ensuring that bio-medical waste generated is collected, treated and disposed of within 48 hours as stipulated under the BMWM Rules.

- b) In case of hilly areas, considering the geography, only one CBWTF with adequate treatment capacity may be developed covering at least two districts to cater treatment services to the HCFs located in the respective Districts. The selection and allocation of site etc. should be done as per the criteria suggested under these guidelines. The treatment charges to be prescribed by the respective SPCB/PCC in consultation with the State Advisory Committee to be constituted under the BMWM Rules by the respective State Government or UT Administration.

9) Treatment equipment

The Common Bio-medical Waste Treatment Facility should treat the bio-medical waste as per BMWM Rules and as per the authorisation granted by the prescribed authority. The CBWTF should have the following treatment facilities:

a) **Incineration/Plasma Pyrolysis**

Incineration is a controlled combustion process where waste is completely oxidized and harmful microorganisms present in it are destroyed/ denatured under high temperature. The guidelines for "Design & Construction Requirements of Bio-medical Waste Incinerators" by CPCB from time to time shall be followed for selecting/or augmenting the incinerator.

Plasma Pyrolysis is an alternate to incinerator, Plasma Pyrolysis treatment technology can be installed for disposal of bio-medical waste categories as per BMWM Rules wherein destruction of bio-medical waste is similar to incineration can be achieved. In case of plasma pyrolysis, waste is treated at high temperature under controlled condition to form gases like methane, hydrogen and carbon monoxide which are subjected to combustion (oxidation) in secondary chamber. In the plasma pyrolysis process waste is converted into small clinker which can be disposed in secured landfills.

b) **Autoclaving/Hydroclaving/Microwaving**

- (i) **Autoclaving** is a low-heat thermal process where steam is brought into direct contact with waste in a controlled manner and for sufficient duration to disinfect the wastes as stipulated under the Bio-medical Waste Management Rules. For ease and safety in operation, the system should be horizontal type and exclusively designed for treatment of bio-medical waste. For optimum results, pre-vacuum based system be preferred against the gravity type system. It shall have tamper-proof control panel with efficient display and recording devices for recording critical parameters such as time, temperature, pressure, date and batch number etc. as required under the BMWM Rules.
- (ii) **Hydroclaving** is similar to that of autoclaving except that the waste is subjected to indirect heating by applying steam in the outer jacket. The waste is continuously tumbled in the chamber during the process.
- (iii) **Microwaving:** In microwaving, microbial inactivation occurs as a result of the thermal effect of electromagnetic radiation spectrum lying between the frequencies 300 and 300,000MHz. Microwave heating is an inter-molecular heating process. The heating occurs inside the waste material in the presence of steam.

- c) **Chemical disinfection:** Though chemical disinfection or alternates as stipulated under the BMWM Rules is also an option for treatment of certain categories of bio-medical waste such as glass waste but looking at the volume of waste to be disinfected at the CBWTF and the pollution load associated with the use of chemical disinfectants, the chemical disinfection for treatment of bio-medical waste as part of a CBWTF may be used sparingly or avoided as far as possible.
- d) **Dry heat sterilization:** This is the additional option for treatment of waste sharps as stipulated under the BMWM Rules. In this method, waste sharps are treated using dry heat (hot air) at a temperature not less than 185°C, at least for a residence period of 150 minutes in each cycle (with sterilization period of 90 minutes).
- e) **Shredder:** Shredding is a process by which waste are de-shaped or cut into smaller pieces so as to make the wastes unrecognizable. It helps in prevention of reuse of bio-medical waste and also acts as identifier that the wastes have been disinfected and are safe to dispose of. A shredder to be used for shredding bio-medical waste shall confirm to the following minimum requirements:
- (i) The shredder for bio-medical waste shall be of robust design with minimum maintenance requirement;
 - (ii) The shredder should be properly designed and covered to avoid spillage and dust generation. It should be designed such that it has minimum manual handling;
 - (iii) The hopper and cutting chamber of the shredder should be so designed to accommodate the waste bag full of bio-medical waste;
 - (iv) The shredder blade should be highly resistant and should be able to shred waste sharps, syringes, scalpels, blades, plastics, catheters, intravenous sets/ bottles, blood bags, gloves, bandages etc. It should be able to handle/ shred wet waste, especially after microwave/ autoclave/hydroclave;
 - (v) The shredder blade shall be of non-corrosive and hardened steel;
 - (vi) The shredder should be so designed and mounted so as not to generate dust, high noise & vibration;
 - (vii) If hopper lid or door of collection box is opened, the shredder should stop automatically for safety of operator;
 - (viii) In case of shock-loading (non-shreddable material in the hopper), there should be a mechanism to automatically stop the shredder to avoid any emergency/accident;

- (ix) In case of overload or jamming, the shredder should have mechanism of reverse motion of shaft to avoid any emergency/accident;
- (x) The motor shall be connected to the shredder shaft through a gear mechanism, to ensure low rpm and safety;
- (xi) The unit shall be suitably designed for operator safety, mechanical as well as electrical;
- (xii) The shredder should have low rotational speed (maximum 50 rpm). This will ensure better gripping and cutting of the bio-medical waste;
- (xiii) The discharge height (from discharge point to ground level) shall be sufficient (minimum 3 feet) to accommodate the containers for collection of shredded material. This would avoid spillage of shredded material;
- (xiv) The minimum capacity of the motor attached with the shredder shall be 3 KW for 50 Kg/hr, 5 KW for 100 kg/hr & 7.5 KW for 200 Kg/hr and shall be three phase induction motor. This will ensure efficient cutting of the bio-medical wastes as prescribed in the Bio-medical Waste Management Rules; and
- (xv) The shredder also should be fitted with separate 'energy meter' for recording total energy consumed for operation of this equipment.

g) Sharp pit/ Encapsulation: A sharp pit or a facility for sharp encapsulation in a metal container or cement concrete shall be provided for treated sharps (*i.e., treatment by autoclaving or dry heat sterilization followed by shredding or mutilation*). An option may also be worked out for recovery of metal from treated and shredded waste sharps within the CBWTF or iron foundries having consent to operate from the SPCBs/PCCs and located nearby, as per the conditions imposed in authorization granted under BMWM Rules by the SPCB/PCC.

A sharp pit may be of circular or rectangular shape and shall be dug and lined with cement plastered brick masonry or concrete rings. The pit should be covered with a heavy concrete slab with a provision of galvanized steel pipe projecting about 1.5 meters above the slab, with an internal diameter of up to 50 mm or 1.5 times the length of vials, whichever is more. The top opening of the steel pipe shall have a provision of locking after the treated waste sharps are disposed into the sharp pit. When the pit is full, it can be sealed completely, after another pit is prepared. In case of high water table regions (*i.e., where water table is less than 6 metres beneath the bottom of the sharp pit*), a tank with above mentioned arrangements shall be made above the ground.

- h) **Deep burial:** SPCB/PCC should not allow the 'deep burial' of bio-medical waste as a part of CBWTF.
- i) **Non-burn technology:** Non-incineration technologies for disposal of bio-medical waste are adopted in some of the developed countries. Non-incineration technology comprises of shredding and disinfection by autoclaving/microwaving or chemical treatment. The treated waste can be disposed along with municipal solid waste in sanitary landfills or through waste to energy plants. Such option can also be adopted in places where the sanitary landfill or waste to energy plant for disposal of municipal solid waste is available. Such technology is permitted only after prior approval of MoEF & CC and only after obtaining authorization under the BMWM Rules from the respective SPCB/PCC for the purpose of carrying out trial runs for assessment of efficacy of the treatment equipment.
- j) **Vehicle/Containers washing facility:** Every time a vehicle is unloaded, the vehicle and empty waste containers shall be washed properly and disinfected. Washing can be carried out in an open area but on an impermeable surface and liquid effluent so generated shall be conveyed and treated in an effluent treatment plant. The impermeable area shall be of appropriate size so as to avoid spillage of liquid during washing.
- k) **Effluent Treatment Plant:** A suitable Effluent Treatment Plant (ETP) shall be installed to ensure that liquid effluent generated during the process of washing containers, vehicles, floors etc. is treated and reused after treatment. Proper treatment of waste water shall be ensured in case of zero discharge by recirculation of treated waste water for scrubbing. ETP may have treatment unit operations comprising collection tank, O & G trap, chemical dosing cum mixing (Flash and slow), coagulation chamber, primary settling tank (s), biological treatment process, secondary settling tank, pressure filter and activated carbon filter, pH Correction tank (wherever recirculation of treated water is practiced) so as to comply with the liquid discharge standards stipulated under the Bio-medical Waste Management Rules, 2016. ETP may also have the following provisions:
- (i) separate 'energy meter' so as to know total consumption of electricity for operation of the machinery attached with the ETP.

- (ii) pH meter so as to know pH level of treated water as well as pH level of treated water used for recirculated or recycling in APCD attached with the incinerator or any utility within the CBWTF.
- (iii) A 'magnetic flow meter' should also be fitted at all the water supply extraction points of the CBWTF as well as the outlet to know the total wastewater treated for further end use or discharge in compliance to the BMWM Rules.
- (iv) Provision of 'press filter' to reduce the moisture content of the ETP Sludge or it may be dried in 'sludge drying bed'. After removal of moisture content or drying, same need to be disposed of in an environmentally sound manner depending upon the hazardous constituents present in it as per Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016. In case, ETP sludge contains metal contents within the prescribed limits as per Hazardous & Other Waste (Management & Transboundary Movement) Rules, 2016, such ETP sludge shall be given to CBWTF for incineration or to hazardous waste treatment, storage and disposal facility (TSDF) for disposal in secured landfill.

Note:

- a) If any CBWTF desires to adopt any other technology other than referred under Schedule –I of the BMWM Rules, may adopt new technology only with the prior approval from MoEF & CC and is also required to obtain authorization under the BMWM Rules from the respective SPCB/PCC for carrying out trial run for assessment of efficacy of the new technology.
- b) All the treatment equipment should be operated and complied with the norms as stipulated under Schedule II of the Bio-medical Waste Management Rules, 2016 published by MoEF & CC vide GSR 343 (E) dated 28th March, 2016.
- c) Incinerator / Plasma Pyrolysis/ Autoclaving/Microwaving/ Hydroclaving/ Shredder/ Dry Heat Sterilization/ ETP should be fitted with separate 'energy meter' for recording total energy consumed for operation of these equipment.
- d) In the event of temporary shutdown (not more than a week) due to any operational problems in the treatment equipment (such as restoration of refractory lining or maintenance or repairs in APCD), to ensure bio-medical waste collected from the member health care facilities is treated within the time limit as stipulated under the BMWM Rules, all CBWTF operators should also be provided with stand by treatment equipment especially incinerator/plasma pyrolysis/autoclave (or) alternately MoU made with the nearby CBWTF (located within the State/UT) shall be submitted to the respective SPCB/PCC, by all the existing CBWTF operators (whereas the upcoming facilities have to make such arrangement prior to commencement of the facility) so as to include such condition while granting authorisation under the BMWM Rules, 2016 to the concerned CBWTF operators (vice-versa).

**(10) Infrastructure set up**

The CBWTF shall have enough space within it to install required treatment equipment, untreated and treated waste storage area, vehicle-parking, vehicle and containers washing area, Effluent Treatment Plant (ETP), administration room or staff room etc. The required area for CBWTF would depend upon the projected amount of bio-medical waste to be handled by it. A CBWTF shall have the following infrastructure:

a) Treatment equipment room

A separate housing may be provided for each treatment equipment at the CBWTF such as incinerator room, autoclave room, microwave room etc., as applicable. Each room shall have well-designed roof and walls. Such room shall be well ventilated and easy to wash. The floor and interior finishing of the room shall be such that chances of sticking/harboring of microorganisms are minimized. This can be attained by providing smooth & fine floor and wall surfaces (to a height of 2 meter from floor) preferably of tiles. The number of joints in such surfaces shall be minimal. The equipment room shall also have a separate cabin, to supervise the operation of the equipment and to record the waste handling and equipment operational data attached to each equipment room. There shall be two waste storage rooms, one for storage of untreated waste and another for treated waste and may be located at a distance from each other. The storage room shall have provisions similar to that of equipment room being well-ventilated with easy to wash floors & walls, smooth and fine surfaces etc. All the treatment equipment rooms and waste storage rooms should be provided with 'fly catcher/killing device'. The room shall be washed and cleaned with a suitable disinfectant every day.

b) Main waste storage space

Separate space shall be provided near the entry point of the CBWTF to unload and store all biomedical wastes that have been transported to the CBWTF by its own transportation vehicle. The size of the room shall be adequate to store all wastes transported to the CBWTF. The front portion of the room shall be utilized for unloading the wastes from the vehicle and back or side portion shall be utilized for shifting the wastes to the respective treatment equipment. In the front portion of the room where transportation vehicle is parked for unloading, the floor shall be made impermeable so that any liquid spillage during unloading does not percolates into the ground. The liquid generated during handling of wastes and washing, shall be diverted to the inlet

of effluent treatment plant (ETP). In the main storage room, wastes shall be stacked with clear distinction as per the color coding of the containers by providing partitions. From here, the colored containers may be sent to the respective treatment equipment by using suitable closed type of conveyance (trolley etc.). The main storage room too shall have provisions similar to that of equipment room such as roofing, well ventilated, easy to wash floors & walls, smooth and fine surfaces etc.

Apart from the above, a CBWTF should have separate storage provision for storage of mercury bearing waste collected from the member health care facilities as per the procedure given in CPCB guidelines. Mercury storage provision should be provided as per the guidelines issued by CPCB (refer www.cpcb.nic.in). The capacity of the mercury storage provision should be maximum of 90 days and by which the collected mercury bearing waste shall have to be disposed of through a TSDF located nearby following the manifest as per Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016. The charges for collection and disposal of mercury bearing waste shall be collected by the CBWTF from the respective member HCF.

c) Treated waste storage room

Separate space should be provided to store the wastes treated in different treatment units. The wastes shall be stored in separate group as per the disposal options. Other provisions in the room shall be similar to the main storage room. Waste such as incineration ash/vitrified ash generated in the process of incineration/plasma pyrolysis respectively shall be stored safely in a separate area under the shed so as to avoid entry of rain water during the monsoon and for easy collection. In case, incineration ash/ vitrified ash is found to be hazardous waste in nature same should be disposed of through any authorized TSDF operator located nearby following the manifest as per Hazardous and Other Waste (Management and Transboundary Movement) Rules, 2016. In case of a State/UT where TSDF is not available, all the CBWTF operators have to store incineration ash safely as per these guidelines.

d) Administrative Room

This room shall be utilized for general administration, record keeping, billing etc.

e) Generator set

CBWTF shall have a generator set of adequate capacity as standby arrangement for power, with sufficient capacity to run the treatment equipment during the failure of power supply. The generator set shall comply with the necessary requirement as per DG Set norms notified under the Environment (Protection) Act, 1986.

f) Continuous emission monitoring system (CEMS)

Monitoring provision for continuous monitoring of the incinerator/plasma pyrolysis stack emission shall be installed by the CBWTF operators for the parameters as stipulated by the respective SPCB/PCC as per the authorisation granted under the BMWM Rules, 2016. Other-wise, at present, all the existing CBWTF operators are required to carry out stack emission monitored using continuous emission monitoring system for the flue gas parameters such as CO₂, O₂, CO as well as primary & secondary chamber temperatures, and records maintained. The continuous emission monitoring system for stack emission should be installed as per the guidelines issued by SPCB/PCC/CPCB. Also, the real time continuous stack emission monitoring data is also required to be transmitted to the servers of the respective SPCB/PCC as well as CPCB, by all the existing CBWTF operators

g) Vehicle Parking

Provision for parking shall be made within the confines of the site for parking of required number of vehicles, loading and unloading of the vehicles meant for transporting waste to and from the facility, etc. In case of a CBWTF with space constraints, multi-storey parking or a separate provision may be allowed only for parking of vehicles.

h) Display and sign board

An identification board (Display) of durable material and finish shall be displayed at the entrance to the facility. This shall clearly display the name of the facility, owner name, address and telephone number of the operator and the prescribed authority, no. of hours of operation & operational hours, telephone numbers of the personnel to be contacted in the event of an emergency, validity period of authorization as well as total daily waste treated and disposed. Also, sign boards should be provided at all the salient points (untreated waste storage area, treatment equipment, treated waste storage area, ETP, firefighting equipment) within the facility.

**i) Washing Room**

A washing room shall be provided for eye washing/hand washing/ bathing etc. for the workers.

j) Site Security

High walls, fencing and guarded gates shall be provided at the facility to prevent unauthorized access to the site by humans and livestock.

k) Fire safety

Fire safety equipment such as sand buckets and fire extinguishers should be provided at all the salient points of the CBWTF including at the diesel storage areas, diesel tanks connected with the incinerator etc. Fire alarm also should be provided within the CBWTF to prompt the workers in the event of any fire hazard. Workers should also be trained in First Aid administration.

l) First Aid Box

First Aid Box with necessary provisions need to be provided at all the salient points within the facility.

m) Green Belt

The open area available within the CBWTF shall be developed into green belt.

n) Website:

All CBWTFs shall develop own website and the upcoming CBWTF shall develop the website prior to the commencement of the facility. The website should be uploaded with relevant information periodically (on monthly basis) especially as detailed below:

- (i) A copy of the Environmental Clearance obtained;
- (ii) Copies of the Consents under the Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 as well as the Authorisation under the BMWM Rules obtained from the SPCB/PCC;

- (iii) List of all the member Health Care Facilities with complete address, bedded or non-bedded HCFs, no. of beds, bar code, category-wise average bio-medical waste generation in kg/annum;
- (iv) Charges levied on the member Health Care Facilities (HCFs) for treatment and disposal of bio-medical waste;
- (v) Vehicles connected with a provision of GPS as per BMWM Rules and Vehicle-wise route chart for collection, transportation of bio-medical waste from the member HCFs;
- (vi) Real time continuous online stack emission monitoring data;
- (vii) Monthly details of total waste collected from the member HCFs, total waste treated, and treated recyclable plastic waste or glass waste sold to the parties and final mode of disposal of incineration ash;
- (viii) A copy of the annual report submitted to the respective SPCB/PCC;
- (ix) Monitoring results of the stack emissions, treated wastewater and incineration ash, as per the frequency stipulated under the BMWM Rules;
- (x) List of HCFs (located within the coverage area) with complete address which have not taken membership of the CBWTF for disposal of Bio-medical waste;
- (xi) Contact person, contact telephone number and e-mail addresses of the facility; and.
- (xii) Provision to have access to the SPCB/PCC/CPCB/MoEF & CC/MoH & FW especially on GPS, online monitoring system and the data.

Besides the provisions suggested in the earlier paras, following important provisions should also be made in a CBWTF:

- (i) A telephone shall be provided and maintained at the facility.
- (ii) A First Aid Box shall be provided and maintained at the CBWTF.
- (iii) Proper lighting shall be provided at the facility.
- (iv) Proper care shall be taken to keep the facility and surroundings free from odors.
- (v) Measures shall be implemented to control pests and insects at the site.
- (vi) Measures shall be implemented to control the escape of litter from the site.
- (vii) Necessary provision shall be made to prevent and control noise generated, if any, due to the activities at the site.
- (viii) Necessary protective gear for the waste handlers shall be provided.
- (ix) Immunization to all the workers of CBWTF against all the diseases including especially Tetanus and Hepatitis -B as stipulated under the BMWM Rules.
- (x) Workers should have provisions such as washing, toilet, and suitable place for eating.

- (xi) Workers should also be provided with N-95 mask besides other PPEs such as hand gloves, gumboots, goggles etc.

Every CBWTF operator shall submit a work-plan to the Prescribed Authority. The work-plan should include the details of facilities at the CBWTF, collection, transportation & storage of the bio-medical wastes, operational details etc.

11) Record keeping

Maintenance of records for all operations carried out at the CBWTF is very important to monitor overall operation of the CBWTF. It also helps in submission of the required information to be submitted to the 'Prescribed Authority' by 30th June of every year as per the format prescribed under the BMWM Rules or provided by the SPCB/PCC. A well-maintained record of all the activities at the CBWTF also enables the facility operator to produce all information of the activities on demand of the concerned prescribed authority. The record should include all information relating to each activity at the CBWTF site as per BMWM Rules which include accidents occurred (spills, injury, fire accident) and the measures taken and also, however, minimum requirement is outlined below:

a) Records of waste movements

Daily records shall be maintained for the waste accepted and treated waste removed from the site. This record shall include the following minimum details:

- (i) **Waste accepted:** -Records on day-to-day basis (as per the format given at **Annexure-II**) shall be maintained with respect to the waste collection date, name of the healthcare unit with bar code, waste category as per BMWM Rules, category-wise quantity of waste accepted, vehicle registration number used for collection of bio-medical waste from member health care facilities, time at which waste collected from member HCFs, name of the vehicle driver and his signature and waste receiving date & time (at CBWTF site). Similar information to be acknowledged to the member health care facility by the CBWTF operator on daily basis.
- (ii) **Treated waste to be disposed :-** Date, treated waste type, Quantity, vehicle number, disposal as stipulated under BMWM Rules.

b) Logbook for the treatment equipment

A logbook shall be maintained for each treatment equipment installed at the site and shall include the following:

- (i) The weight of each batch.
- (ii) The categories of waste as per the Rules.
- (iii) The time, date and duration of each treatment cycle and total hours of operations.
- (iv) The complete details of all operational parameters during each cycle.

Log book to be maintained for operating the incinerator/plasma pyrolysis as well as the autoclave as per the formats given at **Annexure -III**.

c) Monitoring and reporting of operations in the CBWTF:

The monitoring of the key operating parameters of treatment equipment provides several benefits. First, monitoring provides the operator with information needed to make decisions on necessary combustion control adjustments. Second, properly maintained monitoring records can provide useful information for identifying operating trends and potential maintenance problems. Following are the suggested parameters for monitoring of the treatment equipment

(i) Monitoring of operating parameters of the incinerator/plasma pyrolysis:
Following operating parameters can be monitored in case of incinerator/plasma pyrolysis:

- Waste charge rate.
- Combustion gas temperature in primary and secondary chamber as well as the temperature of the stack exit gas (flue gas).
- Condition of the draft (negative draft in primary chamber).
- Combustion gas oxygen level in primary and secondary chamber as well as stack exit gas.
- Air flow rate through the incinerator/plasma pyrolysis.
- Carbon-Di-Oxide (CO₂), Oxygen (O₂) and Carbon Monoxide (CO) level in the flue gas.

- Quantity of auxiliary fuel usage as well as the power consumption (in every batch).
- Pressure drop in the primary chamber and APCD attached with the incinerator/plasma pyrolysis and
- Bottom ash or slag quality (for Total Organic Carbon (TOC) as well as loss on ignition and the hazardous constituents (at least once in a quarter).

(ii) **Monitoring of operating parameters of the Autoclave:** Following operating parameters can be monitored during the sterilization using autoclave:

- Time at which sterilization started and time at which sterilization completed.
- Temperature conditions maintained throughout the sterilization
- Conditions of pressure maintained throughout the sterilization
- Duration of sterilization
- Validation test results

Records concerning the above parameters need to be maintained and checked periodically for taking remedial measures during the operation of the incinerator or plasma pyrolysis or autoclave. In case of other treatment processes, the operational conditions as well as the efficacy tests to be complied with as per the standards prescribed under the BMWM Rules.

(iii) **Frequency of monitoring:**

The CBWTF operator shall carry out following tests through a NABL approved laboratory or a laboratory approved under the Environment (Protection) Act, 1986, as per the frequency stipulated under the BMWM Rules or as prescribed by the SPCB/PCC and record of such analysis results shall be maintained and submitted to the prescribed authority (SPCB/PCC), as suggested below:

- **Liquid effluent:** Parameters such as pH, Suspended Solids, Oil & Grease, BOD, COD, Bio-assay for liquid effluent being discharged from the CBWTF be monitored as per the Consent conditions or once in a quarter and such records maintained and submitted to SPCB/PCC.
- **Stack emission monitoring:**

In case of the BMW incinerators, the Stack Emission shall be monitored (under optimum capacity) for parameters such as Particulate Matter, HCl, NO_x, Hg & compounds and combustion efficiency once in three months as required under schedule II of the Bio-medical Waste Management Rules 2016 (All monitored values shall be corrected to 11% Oxygen on dry basis). In case of dioxins and furans, monitoring should be done once in a year (monitored values shall be corrected to 11% Oxygen on dry basis).

➤ **Validation test of autoclave/microwave/chemical treatment/Dry heat sterilization:**

Suggested validation test for treatment of bio-medical waste by autoclave/microwave/chemical treatment/Dry heat sterilization is given in **Table 1.**

Table 1: Suggested validation test for treatment of bio-medical waste by autoclave/microwave/chemical treatment/Dry heat sterilization

S. No	Type of equipment used for treatment of bio-medical waste	Type of Validation Test	Frequency
(i)	Autoclave	(i) biological indicator strips or vials <i>Geobacillus stearothermophilus</i> spores with at least 1×10^6 spores),	once in three months
		(ii) chemical indicator strip or tape	each batch of waste treated
(ii)	Microwave	<i>Bacillus atrophaeus</i> spores using vials or spore strips with at least 1×10^4 spores per detachable strip	Recommended: once in three months
(iii)	Chemical treatment followed by shredding	<i>Bacillus Subtilis</i> (ATCC 19659)- Log10 reduction or greater	4 Once in a week
(iv)	Dry heat sterilization	consistently kill the biological indicator <i>Geobacillus Stearothermophilus</i> or	Once in three months

S. No	Type of equipment used for treatment of bio-medical waste	Type of Validation Test	Frequency
		Bacillus Atropheaus spores using vials with at least 6 log ₁₀ spores per ml.	
		A chemical indicator strip or tape	Once in a week

d) Site Records:

Site records shall include the following:

- (i) All the approvals obtained from other concerned departments other than the prescribed authority;
- (ii) Details of construction or engineering works;
- (iii) Maintenance schedule, breakdowns/trouble shootings and remedial actions;
- (iv) Emergencies;
- (v) Incidents of unacceptable waste received and the action taken; and
- (vi) Details of site inspections by the officials of the regulatory authorities, purpose of visits with date and necessary actions initiated on the observations.

Daily, monthly and annual summary records of all the above shall be maintained and made available at the site for inspection and same submitted whenever required by an authorized official of the concerned regulatory authorities.

12) Collection and transportation of bio-medical waste

The collection and transportation of bio-medical waste shall be carried out in a manner so as to prevent any possible hazard to human health and environment. Collection and transportation are the two operations where the chances of segregated bio-medical waste coming in contact with the public, rag pickers, animals/birds, etc. are high. Therefore, all care shall be taken to ensure that the segregated bio-medical waste handed over by the healthcare units reach CBWTF without any damage, spillage or unauthorized access by public, animals etc. A responsible person from the CBWTF operator shall always accompany the vehicle to supervise the collection and transportation of bio-medical waste. Also, the private transport vehicles should not be

MS

authorised by the SPCBs/PCCs only for transportation of the Bio-medical Waste. The CBWTF operator should be made responsible for collection and transportation of bio-medical waste.

a) Collection of bio-medical waste:

Generator of the bio-medical waste is responsible for providing segregated waste in accordance with the provisions of the Bio-medical Waste Management Rules, 2016, to the CBWTF operator. Dedicated temporary storage at healthcare unit shall be designated. The coloured bags handed over by the healthcare units shall be collected in similar coloured containers with proper cover. Each bag shall be labeled as per Schedule IV of the Bio-medical Waste Management Rules as well as with bar coding system (to be complied by the occupier or operator of a CBWTF as per BMWM Rules) so that at any time, the healthcare units can be traced back that are not segregating the bio-medical wastes as per BMWM Rules. The coloured containers should be strong enough to withstand any possible damage that may occur during loading, transportation or unloading of such containers. These containers shall also be labeled as per Schedule IV of the Rules. Sharps shall be collected in puncture resistant container. The person responsible for collection of bio-medical wastes shall also carry a register with him to maintain the records such as name of the healthcare unit, the type and quantity of waste received, time at which waste collected from the member HCF, signature of the authorised person from the healthcare unit etc. During transportation, the containers should be covered in order to prevent exposure of public to odours and contamination.

(b) Transportation of the collected bio-medical waste to the CBWTF:

All the vehicles used by the CBWTF operator shall not be sub-letted or contract vehicles should not be used by the CBWTF operator. All the vehicles owned by the CBWTF operator and intended only for collection of bio-medical waste from the member health care facilities should be registered under the Motor Vehicle Act with the respective RTO/Transport Department and such vehicle numbers should also be registered with the respective SPCB/PCC for the purpose of collection of bio-medical waste from the member health care facilities. The bio-medical waste collected in designated coloured containers shall be transported to the CBWTF in a fully covered vehicle. Such vehicle shall be dedicated for transportation of bio-medical waste only. Depending upon the volume of the wastes to be transported, the vehicle may be a

~~126~~

two or three-wheeler, light motor vehicle or heavy duty vehicle. In either case, the vehicle must possess the following:

- (i) Transportation vehicle shall be fitted with GPS to track the movement of the vehicle.
- (ii) Separate cabins shall be provided for driver/staff as well as for placing the designated colour coded bio-medical waste containers.
- (iii) Two wheeler registered under the Motor Vehicle Act shall be permitted for collection of bio-medical waste only from the clinics or dispensaries located in places where the lanes are narrow and not easily accessible to four wheeler vehicles. Such two wheeler vehicle (s) should have a provision of a suitable fixed waste collection box marked with bio-hazard symbol, contact details, proper lid, emergency spill collection procedure, first aid box and manifest record in accordance with the BMWM Rules
- (iv) The base of the waste cabin shall be leak proof to avoid pilferage of liquid during transportation.
- (v) The waste cabin may be designed for storing waste containers in tiers and also should be provided with a lighting provision.
- (vi) The waste cabin shall be so designed that it is easy to wash and disinfect.
- (vii) The inner surface of the waste cabin shall be made of smooth surface to minimize water retention.
- (viii) The waste cabin shall have provisions for sufficient openings in the rear and/or sides so that waste containers can be easily loaded and unloaded.
- (ix) The vehicles used for the purpose of collection and transportation of bio-medical waste must be labelled with the bio-hazard symbol (as per Schedule IV of the BMWM Rules, 2016) in red/black colour and should display the name, address, and contact number of the CBWTF operator in green colour. CBWTF authorized by ("*Name of SPCB/PCC*") shall also be mentioned below name,

address and contact number of the CBWTF operator in green colour, as given in **Annexure-VII**.

- (x) All the existing vehicles used for the purpose of collection and transportation of biomedical waste shall be labelled with the bio-hazard symbol and shall display the name, address, and contact number of the CBWTF operator on white background (as given in **Annexure-VII**). Further, vehicles registered with the respective SPCB/PCC for the purpose of collection and transportation of biomedical waste after June, 2025 shall be white in colour.
- (xi) Bio-hazard symbol size and font size shall be in minimum proportion of 12:3 and 12:1, respectively, with respect to body height of the vehicle used for transportation of biomedical waste. For Example: If body height is 6 feet i.e. 72" then minimum font size will 6" and minimum size of bio-hazard symbol will be 18" as given in **Annexure-VII**.
- (xii) The vehicle driver should carry always valid registration of the vehicle obtained from the concerned transport authority and also carry valid 'pollution under control certificate' issued by the authorized certificate issuing agency.

Depending upon the area to be covered under the CBWTF, the route of transportation shall be worked out. The transportation routes of the vehicle shall be designed for optimum travel distance and to cover all member healthcare units of the CBWTF. The CBWTF operator should ensure online and real time tracking & monitoring provisions (GPS provision) should be given access with passwords to the SPCB/PCC and CPCB to cross check the movement of the transportation vehicles on any time by the SPCB/PCC/CPCB. As far as possible, the transportation shall be carried out during non-peak traffic hours. If the area to be covered is very large, a satellite station may be established to store the bio-medical waste collected from the adjoining areas. The wastes so stored at satellite station may then be transported to the CBWTF in a big vehicle. It shall be ensured that the total time taken from generation of bio-medical waste to its treatment, which also includes collection and transportation time, shall not exceed 48 hours.

13) Disposal option of solid waste generated from the CBWTF

Treated plastic waste, incineration ash, treated waste sharps and glass waste, Oil & Grease waste and ETP sludge are generally generated from the CBWTF from the treatment systems such as autoclaving/microwaving, incineration, chemical disinfection and effluent treatment plant respectively. The treated bio-medical waste shall be disposed as per the options suggested in the **Table 2** given below:

Table 2: Suggested Disposal option of solid waste generated from the CBWTF

Sl. No.	Treated Waste Category	Suggested Treatment and Disposal Options
1.	Plastic wastes	Plastic waste should not be sent to landfill sites. Plastic waste after disinfection and shredding, is required to be (i) sent to registered or authorized recyclers (or) (ii) for energy recovery (or) (iii) diesel or fuel oil recovery (or) (iv) for road making, whichever is possible.
2.	Disinfected Sharps (including needles and syringes)	Treatment by Autoclaving or Dry Heat Sterilization followed by shredding or mutilation or combination of shredding cum autoclaving. Treated sharps need to be disposed of (i) by encapsulation in metal container or cements concrete; (or) (ii) sent for final disposal to iron foundries (having consent to operate from the SPCBs/PCCs) (or) (iii) Disposal in sanitary landfill; (or) (iv) Disposal in designated concrete waste sharp pit.
3.	Incineration ash	Incineration ash from incineration of any bio-medical waste shall be disposed through hazardous waste treatment, storage and disposal facility (TSDF), if toxic or hazardous constituents are present beyond the prescribed limits as given in Schedule -II of the Hazardous and Other Waste Management & Transboundary Movement Rules or as revised from time to time.
4.	Other treated solid wastes like Glass waste	Disinfection (by soaking the washed glass waste after cleaning with detergent and Sodium Hypochlorite

Sl. No.	Treated Waste Category	Suggested Treatment and Disposal Options
		treatment) or through autoclaving or microwaving or hydroplaning and then sent for recycling.
5.	Oil & Grease	By Incineration
6.	ETP Sludge	After drying in sludge drying beds or removal of moisture content using 'Filter Press' and such ETP sludge shall be given to CBWTF for incineration or to the hazardous waste treatment, storage and disposal facility (HWTSDf) for disposal in Secured Landfill
7.	Hazardous Waste	Disposal through a TSDf located nearby following the manifest as per the Hazardous and Other Waste (Management & Transboundary Movement) Rules, 2016

14) Cost to be charged by the CBWTF Operator for the Health Care Facilities

Cost to be charged from the healthcare facilities plays an important role in financial viability and sustainable operation of a CBWTF project, for providing the best treatment services to the Health Care Units and for ensuring compliance to the BMWM Rules. The cost shall be so worked out that neither it becomes a monopoly of the CBWTF operator nor the interest of the CBWTF operator is overlooked. It is recommended that cost to be charged from the healthcare units, depending on the size, no, of beds and the distance from the location of the CBWTF and same shall be worked out in consultation with the concerned SPCB/PCC and the local Medical Association, keeping in view the following options:

- (a) In case of non-bedded health care units, fixed charges depending on the average quantity of waste generation per day, in case of the nursing homes/clinics/sample collection Centres /Dental HCentres, dispensary, pathological laboratory, blood banks, and other non-bedded hospitals irrespective of their system of medicine including ayush hospitals.
- (b) In case of bedded hospitals, fixed charges per bed per day basis and based on the no. of beds for which consents under the Water Act, 1974/Air Act, 1981 and authorization granted under the BMWM Rules, by the prescribed authority

**Note:**

- (i) Rates are required to be revised once in a year based on the Wholesale Price Index (WPI Index) or Consumer Price Index (CPI Index) (considering the prevailing market price especially in respect of the labour expenses, diesel prices, electricity, operating cost etc.,), by the State Advisory Committee in consultation with the concerned SPCB/PCC, local Medical Association and the representatives of the CBWTF Association
- (ii) The Health Care Facilities are required to ensure timely payments to the CBWTFs for ensuring timely treatment services in compliance to the BMWM Rules as well as agreement made with the concerned CBWTF Operator.

15) Check list for development of CBWTF

The criteria for development of CBWTF have been discussed in detail in the Previous sections. However, to have at a glance check in developing CBWTF, checklist is reproduced for convenience and is annexed **(Annexure-IV)**.

16) Periodic inspection/monitoring or performance evaluation of the CBWTF

To have uniformity in performance evaluation of the CBWTF throughout the country, a check list for performance evaluation of the CBWTF for carrying out inspection/monitoring/compliance verification has been prepared and is annexed **(Annexure –V)**. All the prescribed authority (SPCB/PCC) shall inspect the CBWTF at least once in six months located in the respective State/UT and a copy of the inspection reports shall be submitted to CPCB and MoEF & CC along with a copy of the action taken for ensuring compliance to the BMWM Rules and CPCB guidelines issued from time to time and also such information is required to be uploaded in SPCB/PCC website. CPCB shall carryout random inspection of the CBWTFs once in a quarter and any violations observed further actions shall be initiated by CPCB if required under the Environment (Protection) Act, 1986.

-- OO --

**Appendix-I****Methodology to Conduct gap analysis with respect to generation and treatment of biomedical waste - Revision 1**

Guidelines for Common Biomedical Waste Treatment Facilities was prepared by CPCB with an aim to have uniformity in ensuring site selection, allowing and establishment of a state-of-the-art Common Biomedical Waste Treatment Facilities (CBWTFs), operation as well as verification of compliance to the BMWM Rules, 2016 throughout the country. As per the said guideline, SPCB/PCC is required to prepare an inventory or review with regard to the bio-medical waste generation at least once in five years in the coverage areas of the existing CBWTF and conduct gap analysis as per format given in Annexure-I of the guideline.

Further, methodology for conducting gap analysis with respect to generation and treatment of biomedical waste prepared by CPCB and circulated to all SPCBs/PCCs. Accordingly, 12 SPCBs/PCCs have conducted gap analysis and submitted the report to CPCB. However, non-uniformity and ambiguity was observed specifically with regard to the method for extrapolating the data on biomedical waste generation and requirement of adequate treatment capacity in the gap analysis reports submitted by SPCBs/PCCs. Therefore, revised methodology have been prepared with an aim to have uniformity in the method for carrying out the gap analysis by State Pollution Control Boards/Pollution Control Committees.

The methodology for conducting gap analysis may be based on following parameters:

S. No.	Parameters	Details
1.	Coverage area of CBWTF	Mention farthest distance covered by CBWTF
2.	No. of HCFs (Bedded and non-bedded)	In Number
3.	No. of Beds covered	In Number
4.	Total biomedical waste generation (in Kg/day)	The generation of biomedical waste may be calculated by considering following aspects: a) Generation from bedded HCFs: The biomedical waste generation rate may be considered as 277* grams per bed per day

		<p>b) Generation from non-bedded HCFs: The biomedical waste generation may be considered as 274** grams per day</p> <p>c) Biomedical waste generated from occasional waste generators such as health camps, institutions, vaccination camps etc as defined under CPCB guidelines may also be considered.</p> <p>* Reference: Report on Health-care Waste Management status in countries of the South-East Asia Region by WHO which is also nearly equal to the average biomedical waste generation per day per bed as per AR information received from States/UTs.</p> <p>**The value is taken based on the data given by CBWTF Associations regarding current average biomedical waste generation from non-bedded HCFs.</p>
5.	Extrapolate the biomedical waste generation for next 10 years	Linear method may be adopted for extrapolation of biomedical waste generation
6.	Total existing treatment capacity (in Kg/day) (Sum of Incineration Capacity and Autoclave/Microwave/Hydroclave Capacity)	For calculation of existing treatment capacity, maintenance time (not more than 12-18 hrs/month) may be considered for calculating operational hours of equipment as below: a) Operational Hours for static incinerator 20 hrs/day b) Operational hours for Rotary incinerator 22 hrs/day c) 18 cycle per day for autoclave

		The actual capacity may also be considered as 90% of available capacity keeping 10% margin for diverted/extra waste etc.
7.	Total Biomedical Waste treated and disposed (Kg/day)	Sum of all categories of biomedical waste treated and disposal.
8.	Gap between total extrapolated biomedical waste generation (for next 10 years) and existing biomedical waste treatment capacity	Extrapolated biomedical waste generation minus total existing treatment capacity

Annexure-I

Coverage area-wise gap analysis for assessing additional BMW treatment capacity requirement

S. No	Coverage area (pl. Indicate areas covered by a CBWTF in the State/UT)	No. of HCFs		No. of Beds covered	Total estimated BMW generation in Kg/day	Total existing treatment capacity in Kg					Total BMW Treated and Disposed in Kg/day	Gap between total BMW Generation and the Existing BMW Treatment Capacity in Kg	Remarks (Whether additional Treatment Capacity required or not)						
		Bedded	Non-bedded			Incineration	Autoclaving/Hydroclaving/microwaving	Chemical disinfection	Deep burial	Any other mode of disposal			Yes	No					
															(1)	(2)	(3)	(4)	(5)

Note: Above gap analysis coverage area-wise is required to be prepared once in five years and should be shown or depicted in a Map of State/UT.

Annexure- II

Format for maintaining the records by the CBWTF Operator alongwith the transportation Vehicle used for collection of bio-medical waste from the member HCFs

Name of the CBWTF :
 Address of the CBWTF with contact details :
 Vehicle Registration Number (certificate to be carried by the vehicle driver) :
 Route covered (indicate places) by the vehicle :

Note: Above format is required to be maintained in duplicate both by the CBWTF Operator and the member HCF

Date	Vehicle number and the Time of arrival of the vehicle	Vehicle Speedo meter readings in KM		Name of the HCF with address and the bar code number from whom waste collected	Category-wise quantity of bio-medical waste received in kg					Total BMW collected by the CBWTF		Name of the Vehicle driver with	Signatures		
		Initial	Final		Yellow	Red	Blue	Out dated medicines	White - waste sharps	Total No. of Bags	Total waste		Vehicle Driver	Representative of the HCF	
															(3)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)		

Annexure - III

Log book for Operating the Incinerator/Plasma Pyrolysis

Date	Time of operation of the Incineration		Quantity of hourly BMW charged in Kg (Total BMW charged in a day in Kg)	Temperature maintained in °C			Negative draft primary chamber (in mm of water column) (Pl. indicate range i.e. min. to max)	Pressure drop across APCD (in mm of water column) (Pl. indicate range i.e. min. to max)	p ^H level of scrubbed liquid used (Pl. indicate range - min. to max.)	Average values of flue gas analysis results (continuous online) observed during the incineration/plasma pyrolysis process				Consumption of electricity/ Diesel whichever is applicable			Net Quantity of bio-medical waste received in Kg	Net Quantity of bio-medical Waste left over in a day (in Kg)
	Start	End		Primary Chamber	Secondary Chamber	After scrubbing in exit stack gas				CO in mg/Nm ³	O ₂ in %	CO ₂ in %	% combustion Efficiency	Power (Indicate meter reading)	electricity meter reading	Diesel in liters (pl. indicate daily or weekly diesel consumption)		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)	(15)	(16)	(17)	(18)	(19)

Note: Fill the details whichever is applicable

Log Book for Operating the Autoclave/Hydroclave

Date	Time of operation of the Autoclave or Hydroclave		Batch number	Quantity of waste feeding per batch in Kg (Total waste treated by autoclaving/ hydroclave in Kg)	Temperature and Pressure in every ten minutes		Strip test result (pl. paste the strip test for each batch with a proof)	Consumption of electricity (Indicate electricity meter reading)		Net Quantity of waste received in Kg	Net Quantity of Waste left over in Kg
	Start	End			Temperature in °C	Pressure in psi		Initial reading	Final reading		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)=(11)-(5)

Annexure – IV

Check List for Development of a Common Bio-medical Waste Treatment and Disposal Facility & For issuing 'Consent to Establishment under Water & Air Acts

1. Name of the Proponent :
2. Proposed location of the CBWTF :
3. No. of HCFs in the locality :
4. No. beds :
5. Total Bio-medical Waste Generation in kg/day :
 - (i) Incinerable in kg/day :
 - (ii) Autoclavable in kg/day :
 - (iii) Glass waste in kg/day :
 - (iv) Waste sharps in kg/day :
6. **Proposed location of the CBWTF:** located away from
 - a) Residential area : Yes No
 - b) Sensitive area : Yes No
 - c) Industrial area : Yes No
 - d) Is it as a part of TSDF : Yes No
 - e) Is the facility proposed in Hilly areas: Yes No
 - d) Buffer distance of 500 m available : Yes No
7. **Proposed land area for CBWTF:**
 - a) Area about 1 acre : Yes No
 - b) Area less than 1 Acre : Yes No
 - c) Area more than 1 Acre : Yes No
8. **Proposed coverage area of the CBWTF:**
 - a) Any facility located upto a radius of 75 KM from the proposed locality : Yes No
 - b) No. of beds covered by the existing facility/proposed facility:
 - (i) more than 10,000 beds : Yes No
 - (ii) less than 10,000 beds : Yes No
 - c) Is there any CBWTF within the radius of 75 KM : Yes No
 - d) BMW Waste generation in a coverage area under consideration: Kg/day

- e) Existing CBWTF treatment Capacity :
- (a) Incineration/plasma pyrolysis : Kg/day
- (b) Autoclave/hydroclave :Kg/day
- (c) Chemical Disinfection : Kg/day
- f) Is locality requires any additional capacity (within a radius of 75 KMs)?.
- : Yes No
- (i) If so, indicate reason:.....

9. **Requirement of Treatment Facility:** Following treatment facilities shall be provided in a CBWTF:

- a) Incineration : Yes No
- b) Autoclave (Pre-vacuum horizontal feeding) / Hydroclave / Microwave. : Yes No
- c) Shredder : Yes No
- d) Sharp pit (with drawing details) : Yes No
- e) Provision for floor washing/vehicle washing: Yes No
- f) Effluent Treatment Plant : Yes No
- g) Secured land fill/Disposal of ash in TSDF : Yes No
- h) Other provisions as per CPCB guidelines : Yes No

10. **Segregation**

- (i). Segregation shall be as per the Bio-medical Waste Management Rules, 2016 as amended as well as compatible with treatment facilities at CBWTF
- (ii). Occupier/Generator is responsible for providing segregated waste to the operator.

11. **Collection**

- (i) Respective coloured bags provided with bar code should be kept in similar coloured container i.e. coloured bags shall not be directly kept in vehicle.
- (ii) Sharps shall be collected in puncture resistant, leak proof, rigid containers.
- (iii) Temporary storage at healthcare unit shall be designated.

12. **Transport Vehicle**

- (I) Dedicated vehicles for collection of Bio-medical waste : Yes No
- (II) Separate cabins shall be provided for driver/staff and the bio-medical waste containers : Yes No
- (III) The base of the waste cabin shall be leak proof to avoid pilferage of liquid during transportation : Yes No
- (I) The waste cabin may be designed for storing waste containers in tiers : Yes No
- (V) The waste cabin shall be so designed that it is easy to wash and disinfect. : Yes No
- (VI) The inner surface of the waste cabin shall be made of smooth surface to minimize water retention : Yes No
- (VII) The waste cabin shall have provisions of sufficient openings in the rear and/or sides so that waste containers can be easily loaded and unloaded : Yes No
- (VIII) The vehicle shall be labeled with the bio-hazard symbol (as per Schedule IV of BMWM Rules) and should display the name, address and telephone number of the CBWTF : Yes No
- (IX) Other provision as per CPCB guidelines : Yes No

13. Storage

- (I) Sufficient ventilated storage space for untreated and treated bio-medical waste shall be provided. : Yes No
- (II) The flooring and walls (to a height of 2M from floor) shall be finished with smooth and fine material. There shall be minimum number of joints. : Yes No

14. Record Keeping

- (I) Documents such as collection advice taken from health care units for each category of waste, records of waste movements, logbook for the equipment and site records shall be maintained. : Yes No
- (II) All the record (five year) shall be available at the CBWTF site for inspection. : Yes No

15. Proposed Treated Waste Disposal method:

- (i). Incineration ash - Secured landfill/near by TSDF : Yes No

- (ii). Plastic waste after disinfection and shredding –Registered Recycling Unit : Yes No
- (iii). Sharps, after disinfection (if encapsulated) - Municipal landfill : Yes No
- (iv). Treated wastewater –Discharge into sewer/drain or recycling in APCD : Yes No
- (v). Oil & grease –By incineration: Yes No
- (VI). Any other mode of disposal of recyclable waste: (If so, pl. indicate)

16. Estimated energy consumption and fuel consumption per month :

- (i) Estimated energy consumption per month
- (a) General lighting in the facility :
- (b) Incinerator :
- (c) Autoclave/microwave :
- (d) Shredder :
- (e) ETP :
- (f) Any other :
- (ii) Estimated fuel consumption:
- (a) Diesel consumption :..... in Kl per month
- (b) No. of hours of operation of DG Set :
- (c) No. of hours of incineration :

17. Whether the proponent obtained necessary approvals from the concerned departments as required : Yes No

(i) If yes, attach details

18. Whether the proponent obtained EC as per EIA 2006 and the amendments made thereof : Yes No

(i) If yes, attach a copy of the EC obtained from the concerned

19. Whether the proposal recommended for issuing consent to establish

: Yes No

(Signature of the official verified with date)

Annexure – V

**Check List for Performance Evaluation of the
Common Bio-medical Waste Treatment and Disposal Facility (CBWTF)**

S.No.	Details	Particulars
01.	Name of CBWTF with contact details :	
02.	Date of visit :	
03.	Location details of the CBWTF :	a) Near to Residential area: :Yes <input type="checkbox"/> No <input type="checkbox"/> b) In/near Sensitive area: Yes <input type="checkbox"/> No <input type="checkbox"/> c) In Industrial area : Yes <input type="checkbox"/> No <input type="checkbox"/> d) Is there a buffer zone of 500 m: Yes <input type="checkbox"/> No <input type="checkbox"/> Indicate exact distance: _____ in KM e) Is it as a part of TSDF: Yes <input type="checkbox"/> No <input type="checkbox"/> If so, distance of TSDF from the nearest CBWTF:KM.. f) Is the facility proposed in Metropolitan city: Yes <input type="checkbox"/> No <input type="checkbox"/> (i)Name of the City: (ii)Population of the City (as per latest census): g) Is the facility proposed in Hilly area : Yes <input type="checkbox"/> No <input type="checkbox"/> (i)Name of the Town/City:
04	Month / year of establishment and the Consents status :	Establishment Month/Year :
05.	CBWTF set up by :	
06.	CBWTF operated by :	
07.	Total number of healthcare facilities and beds covered (as on date of visit) :	No. of HCFs : No. of Beds : No. of HCFs and beds upto 75 KM radius:

X

S.No.	Details	Particulars
08.	Total BMW Treatment Capacity of CBWTF (in kg / day)	Incineration : Autoclave : Chemical Disinfection: Any other treatment and disposal:
09.	Consents and Authorization details :	
9.1	Consent under Water (Prevention and Control of Pollution) Act, 1974	<input type="checkbox"/> Applied for <input type="checkbox"/> Not Applied for <input type="checkbox"/> Possess Valid Consent <input type="checkbox"/> Not renewed <input type="checkbox"/> No consent If obtained: Consent is valid upto and issued bySPCB/PCC vide letter dated
9.2	Consent under Air (Prevention and Control of Pollution) Act, 1981	<input type="checkbox"/> Applied for <input type="checkbox"/> Not Applied for <input type="checkbox"/> Possess Valid Consent <input type="checkbox"/> Not renewed <input type="checkbox"/> No consent If obtained: Consent is valid upto and issued bySPCB/PCC vide letter dated

Annexure-VI

STATIONARY SOURCE EMISSION MONITORING

MODIFICATIONS TO BE MADE TO SAMPLING PLATFORM AND SAMPLING PORT HOLE

Number of Port Holes : Minimum two numbers of Port Holes at 90° apart from each other at a horizontal plane

Location of Port Holes : Minimum 8 times of Internal Diameters of Stack downstream (upward direction of stack) from any duct confluence, bends and tapering & minimum 2 times of Internal Diameters of Stack upstream (downward direction of stack) from stack exit

Location of Sampling Platform : 5 feet upstream (downward direction of stack) from the Port Hole as determined above

Port Hole Flange : If the internal diameter of the flange is 4 inch or more then there is no need to change, if it is less than 4 inch than it has to be replaced with 4 inch flange. The flange should not protrude out more than 6 inches from the outer wall of the stack (it shall be kept as less as possible)

Sampling Platform Modification : A semi-circular extension of the existing platform (width extending outward by 6 feet from outside wall of the stack and covering at least one third of the circumference) may be provided for access to both the Port Holes. This area can be extended from the existing Platform and if deemed necessary for safety of the personnel a counter extension in opposite direction may also be provided. The extended Platform shall be strengthened with requisite support from the stack.

Note: Alternatively, safe access to monitoring platform may be provided with separate scaffolding-cum-staircase arrangement

Sampling Platform Modification / Extension

Fixing of 'L' Pieces on the stack wall : Two 'L' shaped pieces are to be fixed on the stack wall for mounting the Mono-Rail & Chain (part of the Sampling Kit for movement of sampling Train in & out through the Sampling Port Hole). The 'L' pieces shall be made of approximately 6 mm thick galvanized iron to have 5 cm long arms. One arm of the 'L' piece shall be welded on the stack wall and another arm shall have a hole of 14 mm diameter near the open end. Both the 'L' Pieces shall be welded on the stack wall at specified distances (as shown in the diagram on the next page) from the centre of Sampling Port Hole (in a vertical axis on the Stack Wall)

Fixing of 'L' Pieces on the Stack Wall

ANNEXURE – VII

The vehicle shall be labeled with the bio-hazard symbol (as per Schedule IV of the BMWM Rules) and should display the name, address and contact telephone and mobile number of the CBWTF.

Bio Medical Waste Vehicle

Name and address of CBWTF with Contact number of CBWTF operator

Authorized by *(Name of)* State Pollution Control Board/Pollution Control Committee

Vehicle Side-1

Bio Medical Waste Vehicle

Name and address of CBWTF with Contact number of CBWTF operator

Authorized by *(Name of)* State Pollution Control Board/Pollution Control Committee

Vehicle Side-2

Bio- Hazard symbol at back side of the vehicle

Note: Proportion of Font size with respect to body height of the vehicle-12:1 (Minimum)

Proportion of Bio-hazard symbol with respect to body height of the vehicle-12:3 (Minimum)

Example: If body height is 6 feet i.e. 72" then minimum font size will be 6" and minimum size of bio-hazard symbol will be 18".

Sub: Regarding methodology to conduct gap analysis with respect to generation and treatment of biomedical waste -reg.

Sir/Madam,

It is to inform that State Pollution Control Boards/Pollution Control Committees are required to conduct gap analysis with respect to generation and treatment of biomedical waste in respective State/UT. A format for conducting gap analysis is given in CPCB guidelines for Common Bio-medical Waste Treatment Facilities. Few State Boards have prepared gap analysis report adopting their own methodology. The matter was also discussed in Central Monitoring Committee meeting on 18.07.2023 wherein need for adopting uniform methodology was emphasised. Hence, to avoid the ambiguity and to adopt uniform procedure, CPCB has prepared a methodology to conduct gap analysis (Copy attached herewith for ready reference).

In view of above, it is requested to kindly conduct gap analysis with respect to generation and treatment of biomedical waste in your State/UT using the aforesaid methodology and report may be submitted to CPCB within one month.

Yours faithfully,

(V. P. Yadav)

Director & Head

Waste Management -I Division

Methodology to Conduct gap analysis with respect to generation and treatment of biomedical waste

Guidelines for Common Biomedical Waste Treatment Facilities was prepared by CPCB with an aim to have uniformity in ensuring site selection, allowing and establishment of a state-of-the-art Common Biomedical Waste Treatment Facilities (CBWTFs), operation as well as verification of compliance to the BMWM Rules, 2016 throughout the country. As per the said guideline, SPCB/PCC is required to prepare an inventory or review with regard to the bio-medical waste generation at least once in five years in the coverage areas of the existing CBWTF and conduct gap analysis as per format given in Annexure-I of the guideline.

To avoid the ambiguity and maintaining the uniformity for conducting gap analysis a methodology is suggested for estimating generation, treatment of biomedical waste and its extrapolation in the State and coverage area of CBMWTF. It is elaborated in following table.

S. No.	Parameters	Details
1.	Coverage area of CBWTF	Up to 75 km
2.	No. of HCFs (Bedded and non-bedded)	In Number
3.	No. of Beds covered	In Number
4.	Total biomedical waste generation (in Kg/day)	The generation may be calculated considering following factors: a) Generation from Bedded hospital (in absence of availability of required information biomedical waste generation may be taken as 274 grams per bed) b) Biomedical waste generated from non-bedded HCFs and other sources also be considered
5.	Extrapolate the biomedical waste generation for next years	Extrapolation may be based on factors such as population growth of the districts/cities covered by CBWTF, Rate of increase in number of HCFs/beds in past years etc. as decided by SPCB in consultation with Health department and CBMWTF associations.
6.	Total existing treatment capacity (in Kg/day) (Sum of Incineration Capacity and Autoclave/Microwave/Hydroclave Capacity)	For calculation of existing treatment capacity, maintenance time may be considered for calculating operational hours of equipment as below: a) Operational Hours for static incinerator 20 hrs/day b) Operational hours for Rotary incinerator 22 hrs/day

~~14/8~~

		c) 18 cycle per day for autoclave The actual capacity may be considered as 90% of available capacity keeping 10% margin for diverted/extra waste etc.
7.	Total Biomedical Waste treated and disposed (Kg/day)	Sum of all categories of biomedical waste treated and disposal.
8.	Gap between total extrapolated biomedical waste generation (for next 10 years) and existing biomedical waste treatment capacity	Extrapolate the biomedical waste generation minus total existing treatment capacity

Based on the above data, the gap between existing treatment capacity and need of additional treatment capacity should be examined after carrying out gap analysis at coverage area/city level and State level.

December 12, 2024

To,
The Member Secretary,
All SPCBs and PCCs

Sub: Regarding methodology to conduct gap analysis with respect to generation and treatment of biomedical waste- Revision 1.

Sir/Madam,

This has reference to CPCB letter dated 10.10.2023 wherein methodology to conduct gap analysis with respect to generation and treatment of biomedical waste was forwarded to SPCBs/PCCs and requested to conduct gap analysis in line with the said methodology. (Name of State/UT) have submitted/ Not submitted the gap analysis report wherein gaps has been observed by CPCB. It was also observed that there is non-uniformity in the data and approach followed for conducting the gap analysis while extrapolating the data on biomedical waste generation. Therefore, the methodology has been revised and copy of the same is attached herewith for ready reference.

In view of above, it is requested to kindly revise / conduct gap analysis with respect to generation and treatment of biomedical waste in your State/UT using the aforesaid methodology and report may be submitted to CPCB within one month.

Yours faithfully,

(V. P. Yadav)

Director & Head

Waste Management -I Division

Methodology to Conduct gap analysis with respect to generation and treatment of biomedical waste - Revision 1

Guidelines for Common Biomedical Waste Treatment Facilities was prepared by CPCB with an aim to have uniformity in ensuring site selection, allowing and establishment of a state-of-the-art Common Biomedical Waste Treatment Facilities (CBWTFs), operation as well as verification of compliance to the BMW Rules, 2016 throughout the country. As per the said guideline, SPCB/PCC is required to prepare an inventory or review with regard to the bio-medical waste generation at least once in five years in the coverage areas of the existing CBWTF and conduct gap analysis as per format given in Annexure-I of the guideline.

Further, methodology for conducting gap analysis with respect to generation and treatment of biomedical waste prepared by CPCB and circulated to all SPCBs/PCCs. Accordingly, 12 SPCBs/PCCs have conducted gap analysis and submitted the report to CPCB. However, non-uniformity and ambiguity was observed specifically with regard to the method for extrapolating the data on biomedical waste generation and requirement of adequate treatment capacity in the gap analysis reports submitted by SPCBs/PCCs. Therefore, revised methodology have been prepared with an aim to have uniformity in the method for carrying out the gap analysis by State Pollution Control Boards/Pollution Control Committees.

The methodology for conducting gap analysis may be based on following parameters:

S. No.	Parameters	Details
1.	Coverage area of CBWTF	Mention farthest distance covered by CBWTF
2.	No. of HCFs (Bedded and non-bedded)	In Number
3.	No. of Beds covered	In Number
4.	Total biomedical waste generation (in Kg/day)	<p>The generation of biomedical waste may be calculated by considering following aspects:</p> <p>a) Generation from bedded HCFs: The biomedical waste generation rate may be considered as 277* grams per bed per day</p> <p>b) Generation from non-bedded HCFs: The biomedical waste generation may be considered as 274** grams per day</p> <p>c) Biomedical waste generated from occasional waste generators such as health camps, institutions, vaccination camps etc as defined under CPCB guidelines may also be considered.</p> <p>* Reference: Report on Health-care Waste Management status in countries of the</p>

~~1X6~~

540

		<p>South-East Asia Region by WHO which is also nearly equal to the average biomedical waste generation per day per bed as per AR information received from States/UTs.</p> <p>**The value is taken based on the data given by CBWTF Associations regarding current average biomedical waste generation from non-bedded HCFs.</p>
5.	Extrapolate the biomedical waste generation for next 10 years	Linear method may be adopted for extrapolation of biomedical waste generation
6.	Total existing treatment capacity (in Kg/day) (Sum of Incineration Capacity and Autoclave/Microwave/Hydroclave Capacity)	<p>For calculation of existing treatment capacity, maintenance time (not more than 12-18 hrs/month) may be considered for calculating operational hours of equipment as below:</p> <p>a) Operational Hours for static incinerator 20 hrs/day b) Operational hours for Rotary incinerator 22 hrs/day c) 18 cycle per day for autoclave</p> <p>The actual capacity may also be considered as 90% of available capacity keeping 10% margin for diverted/extra waste etc.</p>
7.	Total Biomedical Waste treated and disposed (Kg/day)	Sum of all categories of biomedical waste treated and disposal.
8.	Gap between total extrapolated biomedical waste generation (for next 10 years) and existing biomedical waste treatment capacity	Extrapolated biomedical waste generation minus total existing treatment capacity
