Salem – 636 007

... Respondent(s)

REPORT FILED ON BEHALF OF THE 2nd RESPONDENT

1. I, S. Kumar S/o Thiru. Shanmugam aged 59 currently discharging my duties as Executive Engineer, Water Resources Department, Upper Pennaiyar Basin Division, Dharmapuri do solemnly affirm and sincerely state as follows.

INTRODUCTION:

2. It is submitted that, Mr. Suresh the applicant, filed this Original Application Numbered 47 of 2023 (SZ) before the Honourable National Green Tribunal, Chennai on 21.04.2023 alleging various environmental violations against M/s Varalakshmi Starch Industries, the 6th Respondent, located in survey no 75PT, 77PT, 78PT, 168PT, of Pappireddipatti village and 121PT, 125PT, 128-132PT, 138PT of Alamelupuram Village, Pappireddipatti Taluk of Dharmapuri District. The 6th respondent industry produce starches and modified starches from tapioca and also produces by-products like tapioca thippy (dry), maize germ dry, maize gluten dry and maize husk(fibre dry) with a production capacity of more than 10000 metric tons. The National Green Tribunal, SZ, Chennai, in its order dated 14.09.2023 ordered to submit accordingly, field inspection was carried out inside and surroundings of the M/s Varalakshmi Starch Industries on 19.10.2023.

3. It is humbly submitted that this report is prepared based on the field observations and the data available with this office pertaining, indicating the measurements of the level of this pond and river.

DETAILS OF THE INDUSTRY:

4. It is submitted that, in general, Sago and starch production from tapioca root crop is one of the major food industries in the western districts of Tamil Nadu. Nearly 1000 sago and starch processing factories are operating in Tamil Nadu. The 6th Respondent is located in survey no 75PT, 77PT, 78PT, 168PT, of Pappireddipatti village and 121PT, 125PT, 128-132PT, 138PT of Alamelupuram Village, Pappireddipatti Taluk of Dharmapuri District. It was started in the year 1995 and the commercial production commenced from the year 1997 onwards.
5. The industry produce starches and modified starches from tapioca and also produces by-products like tapioca thippy(dry), maize germ dry, maize gluten dry and maize husk(fibre dry) with a production capacity of more than 10000 metric tons. The Industry discharge 4.3KLD sewage and 500.0KLD of trade effluents into the industry's own land covered by trees as instructed by District Environmental Engineer, Tamil Nadu Pollution control Board, Dharmapuri.
6. In **Para 14** the applicant alleged that *"The industry has illegally dug a tank / well - more than 100 ft in depth, spread over 4.5-5 acres in area. The industry's own description of the tank's dimensions is 175 m x 110 m with 20 m water holding height (depth), in reality it is much deeper. It is also reliably learnt that the industry has sunk bores in this tank"*.

It is observed that 3 open wells are found in the premises. Further, a pond structure with a dimension of 90m x 51.50m, 100.5m x 10m, 109m x 114.50m and it covers an area of approximately around 4.7 acres. The depth was measured in the accessible area as 10.5m, 20m in the eastern side boundary of the pond. In that pond 11 number of side bores are identified by Water Resource Department in the presence of Peniyar farmers association.

7. It is humbly submitted that, the applicant made an allegation that *"The industry has been illegally tapping water from the Peeniyaru River flowing adjacent to the industry. The Peeniyaru River flows adjacent to the deep tank and water from the river drains/ seeps into the tank/well. They had also installed illegal side bore to abstract water and a few illegally laid side-bores have been sealed by the authorities but there are more such bores."*

It is humbly submitted that, the distance between the Peeniyaru River embankment and the pond is 5m. Further, side bores from Peeniyar River have been identified by the Water Resources Department officials in the presence of Peeniyar farmers association and a total of 11 no.s of side bores have been fully closed and no more side bore are certified as of now.

8. The applicant alleged that *"The effluent discharged on land also drains into the Peeniyaru which is located down gradient and effluent is also discharged into the river"*

RESPONSE:

During the visit to the said Industry of the 6th Respondent an RC pipe was observed from the land where the said treat effluent water is drained to the Peeniyar river but no effluent was observed to be discharged during the time of the visit or traces were found to support this allegation

9. In para16 the applicant stated that, *"It is submitted that the area is dry and rainfall is limited to a few months a year. The Peeniyaru is the only sources of water, originating in the Kalvarayan hills with good flow during monsoon season, with flowing water for around 6 months a year. The industry has been drawing water illegally from Peeniyaru as elaborated in the subsequent sections of this application."*

RESPONSE:

The applicant stated the fact that this is a seasonal river and its place of origin but the river does not have good flow to say that such quantum of water could be drawn from such to operate the industry wholly with such water, the rainfall data of this stretch for

the past three years is annexed in the Annexure – I, where it can be noted that it receives marginal rainfall only during the Seasonal rains which spans from late July or early August to late October and Early November.

10. In Para (22) the Applicant alleged that, *“The industry’ s massive well is constructed to the south of the industrial plant and the industry, the ETP area and the 15 hectares with seemakaruvellam are to the north of the massive well/tank that has been constructed. The so called rainwater harvesting pond is up gradient to the entire factory site and other lands. It is a wonder how this massive well they have constructed can serve as a rainwater harvesting pond while gravity will result in the water flowing down gradient towards the north and to the east where the Peeniyaru flows, the 6th respondent industry's claim is completely false. The water from the Tapioca drying yards is not being to the tank / well and the only recording of drain leading to the well / tank is in the context of rainfall along the roads.”*

RESPONSE

As mentioned above the Tank according to the 6th Respondent is a rain water harvesting pond and such has the elements of such and 11 side bore well like connections were identified there and such was closed use concrete by the WRD.

11. It is humbly submitted that, the applicant makes a speculation that the closing of the side bore wells by concrete is not enough measure and the said industry may involve in an act of removing such to use the side bore well but no such was reported to be done by the 6th Respondent. During the inspection the Farmers Association also accompanied the WRD and the identified side bore wells were sealed the allegation that there are ten or more such is not noticed by the Officials are speculative when not substantiated, the numbers reported by the WRD are based on the inspection embarked and action taken.
12. It is humbly submitted that, the sixth respondent here in applied for permission with the WRD to grant consent to draw water from the Peeniyar river and such was categorically rejected by the WRD. Regarding the discharge of trade effluent and sewage The

TNPCB's report is in no odds with the observation made by us in the visit. No effluent was found to be dumped in the river during inspection and no such traces were found during the visit made.

13. In order to prevent the illegal tapping of river water by the way of laying pipeline in the river and to prevent from letting the water in the river, its assured that relevant instructions are passed as to prevent any future violations if this sort.

14. In light of the report submitted the tribunal may be pleased to pass orders which it may deem fit in rendering justice.

Date: 17.10.23
