- State is continuously processing the legacy waste and has given work orders for remediating all dumpsites through 5 clusters. State has already processed 94.12 % of old legacy waste (based on initial survey quantity).
 - State is targeting to remediate old legacy waste by Jan-2025 and newly accumulated legacy waste (due to gap in processing) by Dec. 2026.
5. The state is continuously working towards achieving optimum waste management as is committed to environmental protection and public health protection. The State shall file further updates through another progress report as and when directed to.
 6. It is further respectfully submitted by the State that it hereby undertakes to comply with the any further order/judgment of this Hon'ble Tribunal in its letter and spirit to the best of its capacity at its earliest.

It is bring to this Hon'ble Tribunal's kind knowledge that number of Urban Local Bodies (ULBs) in the State has now been increased from 196 to 309, which has naturally led to a rise in the urban population and, in turn, higher generation of wastewater and municipal solid waste. The planning process for establishment of requisite processing and treatment facilities for the newly added ULBs has already been initiated. The detailed ULB-wise information is under compilation and shall be duly placed before the Hon'ble Court in the the next report, demonstrating the State's continuous and bona fide efforts towards full compliance for which the state is duty bound and seeking liberty of this Hon'ble Tribunal.

[B] Solid Waste Management:

S.No	Observation Raised	Reply to the Observation
1	There is a gap of 1013.49 TPD on account of the slow pace in setting up waste processing plants for which the outer limits of December 2026 has been disclosed.	The earlier gap of 1013.49 TPD has been reduced to 951.93 TPD as on date. This remaining gap is proposed to be addressed through the ongoing and upcoming SWM processing facilities. Of this, 390 TPD is targeted to be covered by March 2026, while 377 TPD is projected to be bridged by June 2026. Additionally, 224.93 TPD of waste processing capacity is expected to be achieved by December 2026.
2	Annexure 5 (page 2766) on operational processing facilities in 19 towns processing 2562 TPD of waste, does not disclose compost produced, its quality and utilisation, and mechanism adopted for management of final compost /recovered material. Further, there is no disclosure on the performance of two WTE plants at Jaipur (350 TPD) and Jaipur Heritage (1000 TPD) in terms of sources of high calorific value waste, Power generation and compliance with Standards as per CTO.	<p><u>Regarding compost utilization, following points are submitted</u></p> <p>The cumulative operational capacity of these operational processing facilities of is 2562 TPD. Out of this the capacity for processing of wet fraction of waste is 567.50 TPD. Approximately, 85.53 TPD of compost are being produced from processing of 567.50 TPD of wet waste at these processing plants. The produced compost are being supplied to local farmers and used by ULB in maintenance of gardens and public parks.</p> <p>The laboratory testing of the produced compost is being done by ULBs through private labs. Copies of some test reports are attached. (Annexure 16)</p> <p>In order to develop a state level compost city utilization plan with stringent monitoring system, direction for testing of compost from government laboratory have been issued. (Copy attached in Annexure 16)</p> <p>The ULB-wise list with compost produced is attached. (Annexure 8)</p> <p><u>Regarding waste to energy plant following points are submitted:-</u></p> <p>WTE plants at Jaipur (350 TPD):- The plant is producing Refuse derived fuel from Municipal Solid waste. This RDF is being used in cement manufacturing for incineration in kiln. The average Calorific value is in range of 3600-4000 Kcal/Kg.</p>

 (शिव जैन)
 शासन सचिव
 स्थायित्व शासन विभाग

		<p>Jaipur Heritage (1000 TPD):- This plant generates electricity by incineration of MSW supplied. The average calorific value of waste received at this plant is in range of 1500-1600 Kcal/Kg. From Feb-2025 to Oct-2025 total 63145.41 MW of electricity has been produced from incineration of 233396.93 MT of MSW.</p> <p>The compliance report of these plants is being submitted to RSPCB. Copy of latest submitted report is enclosed. (Annexure 16)</p>
3	Annexure 6 (page 2767) does not disclose quantities processed in 115 installed Material Recovery Facilities (MRFs) having a capacity of 1463.2 TPD to process recoverable and processable waste. It has also not been disclosed that, except for some of the plants, no other facilities are generating Revenue.	<p>In reference to previous submitted Annexure-6, the quantity processed and recoverable in the 115 installed Material Recovery Facilities (MRFs) is attached with this report. (Annexure 9)</p> <p>Regarding no revenue generation from MRF facilities it is submitted that O&M of these MRF plants are being done by informal workers/ Ragpickers. The revenues generated are being utilized for the operation and maintenance of the facilities. Hence, the ULBs have not separately reported the revenue figures.</p>
4	We also find after examining Annexure 8 to Annexure 11 that the performance of compost pits in operation, which are processing waste of 1182 TPD, requires a performance audit mechanism, particularly for the quality of inputs and outputs, end residue management, users of Products and due Authorisation under SWM Rules.	Across the 196 ULBs, a total of 1201.6 TPD of waste is being processed through various methods, including pit composting in public gardens, processing by the informal sector, and activities undertaken by bulk waste generators. The attached document provides detailed ULB-wise information on the waste processing being carried out in all 196 ULBs. (Annexure 15).
5	The timelines disclosed in Annexure 9 (page 2836), unless they are monitored through a credible monitoring mechanism, such timelines will have no reliability and will be flouted, and therefore, the next report should cover this aspect.	The timelines are being monitored through a structured and credible monitoring mechanism established at both the State and ULB levels. Regular progress reviews, periodic reporting, and field verifications are being conducted to ensure adherence to these timelines. The timeline extension order has been enclosed along with the annexure for reference. (Annexure 18)
6	We find no clarity concerning the status of waste management in each ULB out of the 196	The detailed status of waste management in all 196 ULBs, including information on waste generation, waste management practices, existing

7	Annexure 12 does not disclose the factual status for 196 ULBs and coverage under the Cluster approach and ULB level. Un-remediated legacy waste is estimated to be 16.52 lakh cubic metres, and the next report should spell out quantified figures ULB-wise on the management of different components and areas reclaimed.	As on date, a total of 82.85 lakh cubic metres of legacy waste across 176 dumping sites, covering 178 ULBs, has been remediated out of the 88.03 lakh cubic metres identified. The un-remediated waste, which was previously assessed as 16.52 lakh cubic metres, has now been reduced to 5.18 lakh cubic metres. In addition, approximately 36.80 lakh cubic metres of legacy waste is estimated to have accumulated between January 2022 and December 2026, and this quantity is planned to be fully treated by December 2026. ULB-wise details of legacy waste, including their coverage under the Cluster approach and ULB-level interventions, have been provided in attached document. (Annexure 14).

	<p style="text-align: center;">PART G</p> <p style="text-align: center;">Impact of the pollution abatement measures taken on conservation of natural resources and on the cost of production.</p> <ul style="list-style-type: none"> • Facilities such as a flue gas cleaning system (FGCS), an enclosed MSW pit with slight negative pressure, a spray system of herbal mist spray etc. have been provided within the plant premises. These measures improve ambient air quality by minimizing the emissions of gaseous pollutants and reducing odor problems in the atmosphere. • A stack with a height of 60 meters has been installed (as per standard), which helps in better mixing and dispersion of pollutants like SO₂ in the air, thereby reducing the ground-level concentration. The SO₂ concentration at ground level is less than the prescribed limit of 80 µg/m³ stipulated by NAAQS, 2009. • Lime dosing and activated carbon treatment in the reaction tower section of the flue gas cleaning system effectively remove pollutants like SO₂, HCl, HF, metals (if any) and dioxins/furans. • Teflon coated PTFE fabric filter bags remove particulate matter from exiting flue gas. Regular checks help maintain their efficiency at full capacity. • An Online Continuous Emission Monitoring System (OCEMS) is installed for real time monitoring of stack emission parameters with analyzers, including SO₂, NO_x, SPM, HCl, HF, TOC and CO. OCEMS is also connected to the Rajasthan Pollution Control Committee/Central Pollution Control Board website. • Rainwater harvesting has been effectively planned and implemented throughout the plant premises. • Transportation tucks are covered during MSW transportation. • Domestic Solid Waste generated are being incinerated In-house. • Trade effluent generated are being treated and reuse for the process. Hence, zero liquid discharge is being maintained.
