SYNOPSIS

1. **The important law points are listed at the beginning itself. The OA 65/2019 is filed on 19/08/2019**. Hon'ble Tribunal through the Daily Order dated **24/04/2023** had decided to hear the matter completely (limitation and merit) on the next hearing dated 28/07/2023. Therefore Respondent No. 11 (hereafter mentioned as a PP) makes this complete submission related to the merit and fact of the case.

2. PP denied all the allegations made by the applicant in this OA. PP has already submitted the say related to the limitation and preliminary objections to this original application on 24/10/2021 and 09/08/2022.

3. **The project (buildings A, B of 4 wings and C, D and E of 5 wings) started prior to EIA Notification on 14.09.2006.**

4. The PMC had sanctioned the layout on 30/06/2006 for **248 tenements** having an FSI area of **21,177.33 sq.m** whereas PP had constructed a total of **249 tenements** having an FSI area of **21,798.69 sq.m**.

5. **Project Buildings A, B, D & E were completed** in all respect, The Occupancy Certificate was granted to the project on **04/12/2009**. The flats in the premises were sold in the year **2005**. Society registration was done on **29/08/2011**. Subsequently, the possession was handed over to "Occupants" the Society in the year 2012. The total

construction cost of this project was Rs.15 Crore (Year 2009). **There was no challenge to this project construction done before Hon'ble Tribunal, till 19/08/2019.**

6. **The building C (of 5 wings) started on 15/07/2014** (CC/1169/14). **The 'total covered built-up construction area including FSI and non-FSI' (BUA) of the last building C building was 5630.22 sq.m**. As such, it did not need EC. As per the Applicant, the first cause of the action was on **21/06/2017** i.e., when PP received the revised sanction from the PMC for the additional construction area of 5880.16 sq.m. The next project and earlier project have nothing in common environmentally, except that they are on the same plot.

7. PP has implemented the Environmental Management Plan and Environmental Management Systems in the existing project. All the care of environmental issues at the time of the construction phase and operational phase were taken. This is without any compulsion OR prescription of law/rule, but voluntarily on its own.

8. There is no damage caused to the environment or pollution caused. The construction was done in accordance with the approved building plans from PMC as per the valid D.C. Rules under MRTP Act.

* * *

MOST RESPECTFULLY SUBMITTED

IMPORTANT LAW POINTS RAISED

1. The PP hereby raises the following important law points to be adjudicated and determined by the Hon'ble Tribunal. PP respectfully submits, argues and presses all these points and urges with folded hands that the speaking order be passed on all these important law points. These are integral part of pleadings, and please be treated accordingly.

A. Whether Goel Ganga Judgement, can be still valid when thereafter Violation Notification 14/03/2017 has given detailed methodology to assess pollution and EDC?

B. When Notification window expires allowing violation cases, whether the wisdom and methodology expires to determine EDC?

C. When Hon'ble Supreme Court has allowed consideration of post-facto EC, why there would be another non-notified method should be applied, when violation Notification had a procedure?

D. When MoEFCC OM 07/07/2021 and 28/01/2022 is in force giving detailed SoP is not yet set aside by NGT or any higher Court, whether Hon'ble Tribunal can lay down a different method?

E. When there is MoEFCC Notification giving logical, technical, scientific detailed procedure specifying as to how NABL

accredited Lab to take samples, NABET Accredited Consultant to do EIA as per EIA Manual, EMP, EDA, EDC, RP, CRAP, etc. is to be determined AND implemented, can Hon'ble Tribunal adjudicate based on the JCR determine the EDC, bypassing, circumventing and burying above procedure?

F. Whether 'polluter pays principle' can be applied without determining the pollution?

G. When CPCB Classification for Industries in 2012 and 2016 both state that there is air pollution only in construction phase and water pollution in operation phase AND no hazardous waste pollution, whether penalty under 'polluter pays principle' principle can be applied on the entire period?

H. When the word 'environment' includes water and air (pollution) whether penalty can be imposed once again by MPCB when EDC is already calculated and imposed by SEIAA?

I. When SEIAA and SEAC are the proper Authorities established u/s.3 of the EPA 1986 for dealing with EC as per EIA Notification 14/09/2006, whether JC appointed by Hon'ble Tribunal be "competent substitute" for this arrangement?

J. When post-facto EC is granted by SEIAA, the statutory Appeal on merit would exclusively come to Hon'ble Tribunal only. Whether Hon'ble Tribunal can adjudicate in matters pending before SEIAA, in advance thereby

frustrating the Appeal provision, having decided the issue already by Hon'ble Tribunal?

K. When Appeal lie before Hon'ble Tribunal against the EC granted by SEIAA, once Hon'ble Tribunal passes altogether different order, can the decision of SEIAA would be really independent on merit?

L. When the EDC is calculated by SEIAA and SEAC after following due scientific procedure is determined, whether Hon'ble Tribunal can impose additional penalty without there being any determination of additional damage to environment OR proper adjudication?

M. Whether Hon'ble Tribunal can enhance the EDC just to make it deterrent, to teach a lesson, make an example, when Hon'ble Tribunal is for resolution of dispute AND giving 'relief, compensation and restitution' to the aggrieved persons and restoration of environment?

N. Whether Hon'ble Tribunal shall impose EDC proportional to 'pollution, damage to environment, cost of restoration' OR impose exemplary heavy penalty without scientific evidence?

O. Whether the violation in respect of the part of the project completed before 5 years before, barred by limitation also can be reopened, when the project subsequently once again extends after 5 years, when there is no

recurring fresh cause of action, after the cause of action first arose?

2. I am Alka Mandar Rege, having Power of Attorney for **Respondent No. 11 M/s. BramhaCorp Limited**, as a **Project Proponent (PP)**, having its registered office at Residency Club, 3, Queen's Garden Road, Pune-411001, Maharashtra. (hereafter referred to as **PP**, as also referred to by Applicant in this OA). I have the knowledge of the facts and authority to file this affidavit, for and on behalf of the respondent, which I hereby do, on solemn affirmation and oath.

3. PP has already raised her concern regarding the limitation and preliminary objection regarding this OA by filing an affidavit in reply on 24/10/2021, 09/08/2022, and 03/03/2023. This affidavit in reply is filed by PP as per the direction of the Hon'ble Tribunal dated 24/04/2023 regarding hearing the matter completely i.e., Limitation and Merit. Therefore, PP filed this reply to produce the facts and present status of the project.

4. This reply is a reiteration of the previous submissions made by the PP Therefore previously discussed or submitted points are not covered in this reply to avoid repetition. But the previously submitted objections like a limitation, maintainability and preliminary objections on the plural cause, substantial questions related to Environment etc. are still alive and yet to decide.

5. PP says and submits that PP hereby denies all the allegations made by the applicant and nothing

shall be construed as accepted merely because it was not specifically denied by PP hereafter. Therefore, PP is not replied to each and every allegation made by the applicant. The main and important allegation in this OA is related to the violation of the 'Environment Clearance', 'Consent to Establish', and 'Consent to Operate' which are addressed by the PP.

6. PP submits that at the initial stage, EC was not applicable to this project as the project was not a new project after the publication of the EIA notification dated 14/09/2006. This project was the same old project as planned and approved on 30/06/2006 and Commencement Certificate was received on 21/09/2005. There were several amendments took place but that doesn't make it a new project.

7. PP states that the major part of this project (Buildings A, B, D & E) was completed in all respect and the Occupancy Certificate was granted to the project on 04/12/2009. Subsequently society registration in 2011 and handover in 2012.

8. All the changes were approved under MRTP Act and DC Rules, for the last building C, which also was started on 15/07/2014. The cause, if at all any, had arisen at that time and not in 2017.

9. PP says and submits that in the present case of last building C, there is no drastic change in the construction activities carried out without an EC or with an EC. This is mainly because there are no specific standards, features, or essential

requirements, issued for building and construction projects, as they are laid down for various other industries. SEAC/SEIAA basically checks for approved building plans, water supply sources, sewer line connection NOC of Corporation, the width of internal roads, NOC from various departments like NA form Revenue, Fire Department, access road, CGWA NOC (if applicable), adequacy of the pollution control measures, etc. All these things can be examined now also if those are being alleged as raising 'substantial questions related to the environment'.

10. PP submits that the first project was started away back in 2005 well before even when the first EIA Notification was not there. It was completed in all respect and the premises were sold; possession was handed over to the buyers. They have formed 285 their gated community and there is no control of the PP on it, as much as even the access to those premises/societies would be legally prohibited.

11. PP says and submits that the last building of the project started thereafter on 15.07.2014 (CC/1169/14). As explained, there was a time gap of 5 years, after the completion of earlier buildings. The last building was started only when it became commercially viable only after a change in rates of saleable spaces, and availability of floating FSI/TDR.

12. PP says and submits that it was not the expansion of the earlier project or modernization of the earlier project as it is in the case of any industry. It was part of the plan as shown and sanctioned in the layout on 30/06/2006. PP says and submits that

Clause 2(ii) and 2(iii) of the EIA Notification, from the reading of it, do not relate to buildings of one pre-sanctioned layout, constructed over a period of time. There was no limit on constructing the sanctioned layout plant.

13. The layout sanctioned on 30/06/2006 was for the FSI area of 21,177.33 sq.m, as against the actual FSI Area construction of 21,798.69 sq.m. Whereas the total built-up area for these buildings A, B, D & E was 33501.49 sq.m (Sanction dated 04/12/2009). There was a total of 248 tenements in the approved layout plan (as against the total of 249 tenements now, 1 tenement extra). **Whereas Plinth completion of buildings A, B, D, and E was of dates 02/02/2006, 20/03/2006, and 17/10/2006. Building Completion Certificates were issued for Buildings A, B, and E on 22/10/2007 and Building D on 05/10/2009 and 04/12/2009**. Earlier refuge areas are shown in one wing of each building, whereas now it is common between the wings. The aforesaid work was carried out strictly as per rules and regulations. The date of EIA Notification is 14th September 2006 contemplating Environmental Clearance. It is thus evident that Environmental Clearance was not attracted and therefore while according to sanction and approval, competent authority, PMC did not ask for the same.

14. As per CC-3954 dated 04/03/2014, Building No. C was constructed and the total built-up area of the C building is 11,510.38 sq.m. The building configuration of the C building was Lower

Parking + Parking +11 Floors & 55 flats. The Commencement Certificate of the last C building was issued on 15/07/2014.

15. PP says and submits that PP had already taken care of the EMP along with other features like powder-coated Al-sliding windows, vitrified tiles, CCTV, concealed copper wiring, PVC or uPVC piping, high-grade pottery for WC-wash basins, lift, fire-fighting system, fire-escape/evacuation area, water geyser, common gas piping, LED lights, solar panels, along with R.G., Tree plantation, Firefighting provisions, fire tender movement, excavation, parking requirement and provision for that, etc.

16. Further PP says and submits that for the safer side, PP had applied for the Environmental Clearance through the PARIVESH portal as per MoEFCC Office Memorandum dated 07/07/2021 and 28/01/2022 vide F. No. 22-21/2020-IA.III (E 138949). Whereas No one had directed PP to apply for EC. [Ax. A ■]

17. This fact was admitted by the PP in his submission before Hon'ble Tribunal. Hon'ble NGT through Daily Order dated 09/11/2022 has directed to SEIAA; [Ax. B ■]

> *"11:..... However, we also deem it appropriate that the SEIAA, before which the application dated 14/01/2022 for ex-post facto Environmental Clearance is pending should be directed to decide the same within a period of one month from today, particularly in this matter and direct accordingly."*

18. Accordingly, PP received the ToR in the 165th SEAC 3 meeting and 259th SEIAA meeting

dated 20/04/2023 for a total plot area is 17,433.10 sq.m, proposed FSI area of 21,798.69 sq.m, non-FSI area of 28,749.68 sq.m and the total built-up area is **50,548.37 sq.m** and this is the present constructed area as on date. [Ax. C ■]

19. Further after completing the study of all Environmental factors PP submitted the EIA report on 07/06/2023. Not only this, NABET Accredited consultant has also calculated the violation days which are **4442 days**. The amount calculated for the violation period for the remediation plan is Rs.1.975 Cr. & Cost of penalty is Rs. 51.3 Lakh. The violation period was calculated on the basis of two dates i.e., 20/11/2006 revised sanction and 18/01/2019 for occupancy.

20. On the basis of these violation days the evaluated cost of the remediation plan is Rs.1.975 Cr. & Cost of penalty is Rs. 51.3 Lakh. At present, this application for EC is under consideration and is yet to be heard by SEAC 3.

21. PP say and submits that PP has also applied for the Consent to Establish from the MPCB on 08.03.2023 for the area 50548.37 and capital investment of Rs. 27.33 Cr. This application is also in process. In this application, PP stated that PP has provided 70 KLD of STP, 34 no. of Vermicomposting pits, 2 no. of the recharge well, 2046 sq.m green belt area, Solar PV Panels, firefighting system for the project site. [Ax.D■]

22. PP has already submitted the applicability of the OM dated 07/07/2021 and 28/01/2022 in this

particular case. PP also establish the grounds for the consideration of the Environmental Clearance by the SEIAA on the above-mentioned OM and the violation notification in her last submission.

23. PP submits that the total project cost of the entire project including from A, B, C, D, and E is Rs. 27.33 Crore, which has TBUA 50548.37 sq.m [Flats 249], which is completed in totality as on date. It was started in year 02/02/2006 and completed in year 08/01/2019.

- Out of which TBUA 33501.49 sq.m (Buildings A, B, D, E – EXCEPT Building C) were completed and occupied from 04/12/2009 [Flats 194]. The cost of this portion of the project was Rs.15 Crore (Year 2009].
- The cost of the project up to 20,000 sq.m is Rs.10.81 Crore which was crossed/completed in year 2006.
- The cost of construction done above 20,000 sq.m is Rs.16.52 Crore from year 2006 to 2019 [Ax. E ■]

BUA Area (sq.m)	Cost Rs. (Crore)	Remark
50,548.37	27.33	Total proposed area
50,548.37	27.33	Constructed so far
20,000	10.81	Before violation
30,548.37	16.52	Balance proposed
50,548.37	27.33	Consent to Establish

24. PP had applied for 'Consent to Establish' (CE) on 08/03/2023 and has not received the same

yet. The CTE is applied for TBUA of 50548.37 sq.m. The cost of the **total** project mentioned in it was Rs. 27.33 Crore. At present there is no EC and no CTE or CTO for the project. Both EC and CTE are under process.

25. PP submits that A & B (4 wings each), D, and E (5 wings each) buildings were completed. These buildings were already sold to bonafide buyers and these are occupied since 2009. The Society of the buyers/residents is formed as “occupant” and the total possession of the land, building, along with related amenities is handed over to the bonafide “occupant”, the Society. The Society is now taking care of the operation and maintenance of all mechanical, electrical, and civil maintenance of the property and amenities provided with it, such as lift, pump house, solar heating/power, internal and common lighting, DG set, STP, Vermin composting pits etc. They are paying taxes and charges to the LPA.

26. PP has reported that the construction work started in the year 2005 & was completed in the year 2009.

27. PP has obtained the first plinth check certificate for buildings A, B, D, and E were issued on dates 02/02/2006, 20/03/2006, and 17/10/2006 respectively. which is as per the layout sanctioned plan vide no. CC/2342/05 dated 21/9/2005 and CC/3387/05 dated 30/12/2005 with TBUA of 28,653.05 sq.m granted by PMC.

28. PP has completed A, B D & E buildings

having the configuration of Lower Parking + Parking + 11 floors. PP has handed over the occupancy to the flat owners. PP stopped the construction thereafter in 2009. There is absolutely no construction going on at the site from that date till today for over the last 5 years (i.e., 04/03/2014). PP has proposed to construct an additional 1 number of buildings (i.e., Building No. C) having proposed BUA of 11,510.38 sq.m which does not require EC. [Ax. F ■]

29. PP submits that construction doesn't violate any other construction-related laws under MRTP and DC Rules. It has not encroached on any public space or amenity causing inconvenience to society.

30. PP submits that it is residential project is in strict compliance with other laws. The plans sanctioned by the LPA, as per MRTP Act and DC Rules framed thereunder, are by following National Building Code (NBC). All the environmental features as per NBC and conditions of the sanctioned plan are implemented, irrespective of whether EC and Consent were granted and these conditions were contained in it.

31. PP submits that There is no violation happened so far. But for the safer side, PP applied for the EC as per the Om dated 07/07/2021 and 28/01/2022. The violation application has been submitted on the following counts,

i. EC not obtained when proposed construction was planned beyond 20,000 sq.m 'total

covered built-up construction area including FSI and non-FSI' (TBUA)

ii. Construction has crossed beyond 20,000 sq.m on date 14/9/2006 and now is 50548.37 sq.m.

iii. 'Consent to Establish' not obtained before starting the work

iv. 'Consent to Operate' was not obtained before granting the occupation

32. PP submit that as guided in the Violation Notification 14/03/2017, the following steps have been already taken.

i. Proposed project was checked for compliance with LPA DC Rules

ii. The project is otherwise sustainable and compliant with other laws

iii. Terms of Reference (ToR) were granted for the EIA Study

iv. Environmental Impact Assessment Report is in process through NABET accredited consultants by deploying Field Area Experts (FAE) and Environmental Coordinator for EIA Study, as per EIA Manual published by MoEFCC

v. Environment Management Plan (EMP) is prepared and implemented

vi. Environment Damage Assessment (EDA) Report was prepared with identification and quantification of damage to the environment

vii. Remediation Plan (RP) has been prepared

viii. Community and Resource Augmentation Plan (CRAP) has been prepared

ix. The cost towards all above has been calculated and needs to submit to SEAC for appraisal

33. This cost may be finally approved by SEIAA after confirmation. The Environment Damages may be calculated by approach paper by SEIAA with their expertise team as done in violation cases previously. [Ax. G ■]

34. PP submits that the present project is a fit case for consideration and grant of EC as per the Om dated 07/07/2021 and 28/01/2022. The MoEFCC OM 07/07/2021 and 21/08/2022 have allowed post facto EC based on the same methodology for consideration of violation cases. No irreversible damage and harm have been caused to the environment. The continuation of the project and the completed project is sustainable to the surrounding environment.

35. **PP submits that there is no provision for EDC in Water / Air Act.** Methodology evolved by CPCB in a specific matter of OA 593 of Paryavaran Suraksha, categorically specifies situations in which compensation can be imposed. These situations are non-existent in the present case. As such that formula can't be applied here.

36. MPCB has Notified in the Gazette of the 'Enforcement Policy' on the calculation of

penalty/compensation for violation of consent conditions, in 2019. The same was laid down before Hon'ble Tribunal. Hence, in the cases where EDC is calculated in keeping with the 2017 Notification, MPCB can assess damage only for specific violations of consent conditions and cannot apply the methodology of Paryavaran Suraksha. Therefore, imposed Environmental compensation of Rs. 26.83 Cr. is invalid and not as per the law. **PP demands that SEIAA should record their findings on merit on this point, as an Authority. [Ax. H ■]**

37. As per the EIA Notification and also the Violation Notification 14/03/2017, SEIAA is the Authority for consideration and grant of EC. The procedure laid down in the Notification and OM dated 07/07/2021 and 28/01/2022 are the supporting provisions for the same notification.

38. MPCB is the authority for Water/Air Act. However, "environment" is the generic term. The definition of the term "environment" INCLUDES water and air. MPCB can collect the penal charges as per their Circular 12/07/2022. There is no damage to the environment twice, OR separately under Environment Act and so also under the Water/Air Act, which is sub-set of generic word "environment".

39. EDC can't be imposed again by MPCB for untreated sewage and air pollution, based on some empirical formula, which has neither scientific basis nor legal sanctity. **The CPCB also has not issued directions to other SPCBs u/s. 18(1)(b) of the**

water/Air Act. This can't be done again, when "environment" also has considered EDA caused by untreated sewage and air pollution. This will be imposing double cost for the same head and shall amount to double jeopardy.

40. The CPCB in February 2016 has categorized various industries for the purpose of grant of Consent. It includes this activity/project at *"Sr.No.21(Old 8) Building and construction project more than 20,000 sq.m built up area".* CPCB has recorded in Remarks, that for such kind of projects, *"1. In the pre-construction stage, it is mainly air polluting due to generation of dust (PM) emissions. 2. After construction, it is mainly water polluting. If the discharge is more than 100 KLD, it will be having the normalized score of 75 and be categorized as Red."* **[Ax. I ■]**

41. PP submitted that barriers were erected all around the construction site and water was sprayed on unpaved areas/internal roads during the construction phase to control air pollution. RMC was used so there was no loose open stock of sand, gravel, or cement and hence air pollution from that.

42. PP submitted that STP of 70 kld capacity was constructed and it was operative till the project was handed over to the occupier. PP further submits that the treated sewage is connected to PMC sewer lines. PMC charges Sewerage Tax, in the bills issued to flat owners. The sewage is treated collectively in Koregaon 130 MLD STP provided for the entire area. The PMC has the 'Consent to Operate' from the MPCB for the entire city. The STP of the PMC is also

supervised by MPCB. Consent Fees are paid by PMC to MPCB for this purpose. Over and above this, samples of STP collected by MPCB are analysed in their own laboratory and the cost of which also is paid by the PMC. The treated water from STP, as per the standards laid down under EPA and 'Consent to Operate', is returned to the river, as per the agreement with Irrigation Department. This water is used by the villages downstream, for their irrigation needs and utilization for other purposes. As such this doesn't give rise to 'substantial question related to environment'.

43. PP submits that during EC application under the violation category, there are various components of EDA that are considered, identified, and quantified, field samples have been taken, and these samples were analysed in MoEFCC Recognized Environmental Laboratory, EIA and EDA have been prepared based on that. This has been deliberated before SEAC which is the Expert Committee appointed under the Notification and delegated/assigned with this specific mandate. It is supposed to assess the other reports also as stipulated and prepared by the NABET Accredited Experts.

44. PP submits that EDC has been calculated after considering that the EMP was already implemented at the site. PP submits that to invoke the **'polluter pays principle'**, there has to be identified, quantified, and assessed pollution caused resulting in damage to the environment AND hence the cost towards the Remediation Plan. This

has been upheld and emphasized by Hon'ble Supreme Court in the Deepak Nitrite case. [Ax. J ■]

45. PP submits that when the actual scientific assessment is done, as stipulated in the Violation Notification 14/03/2017 and so also in MoEFCC OM 07/07/2021, it leaves no other way for the SEAC and SEIAA to compute the EDC in any other way than the prescribed scientific method. Such a scientific technical approach, based on actual field data collection, can't be buried and substituted by some random empirical formula. It is incorrect, unscientific, wrong in totality, and can't stand any test of even logic in the present case. Merely because such an erroneous formula was used and applied in several other cases, doesn't make it a Law, Rule, and the least scientific basis.

46. The 'polluter pays principle' was evolved and applied in the Bichchri Case and Vellore Citizen case, where there was hard work by scientists on-site, in identification, sampling, analysis, quantification of the pollution, its effect on the environment, cost of remediation was worked out AND only then it was fastened on the PP/Industries as and by way of the principle of strict and absolute responsibility.

47. PP, therefore, submits that SEAC-3 and SEIAA should consider all these submissions before them on merit and record their findings based on all the reports and documents submitted before them.

48. PP requests that the Hon'ble SEAC/SEIAA appraise the EDA, EDC and cost towards other

stipulated measures. PP requests that SEAC/SEIAA should record these submissions and its speaking comments on it. SEAC/SEIAA show the break-up of EDC accepted including that towards water/air pollution, if any which was not remedied,

GOEL GANGA JUDGEMENTS (OA, REVIEW, SC APPEAL)

49. The project was granted EC on 04/08/2008 to construct 12 buildings with stilt, basement plus 11 floors vertically for 552 flats, 50 shops and 34 offices. The total plot area is 79,100 sq.m while the total built-up area is to 57,658.42 sq.m. **The OA 184/2015(WZ) was filed in the year 2015**. The final NGT Judgement is dated 27/09/2016. [Ax. K ■]

■ **All these proceedings are prior to MoEFCC Violation Notification 14/03/20217. This Notification formally and legally laid down complete step-by-step logical, scientific, and technical wisdom to deal with any violation cases.**

50. PP submits that at the time of the Goel Ganga NGT matter till the date of Judgement, there was a total absence of a legal framework to formally assess the pollution, damage to the environment, and cost of its remediation. Therefore, the cost imposed by NGT was 10% or actual whichever is lower. This 10% was on an ad-hoc / ad-valorem basis but without adjudication on merit and actual Environmental Damage Assessment (EDA) and corresponding cost towards Remediation Plan.

51. PP submits that from the various projects/activity approved by SEAC/SEIAA-Maharashtra in the past, the cost of the EMP is working out to be 3 to 5% of the project cost. This data was not submitted during the hearing by any of the respondents.

52. The NGT Review Application No. 35/2016(WZ) was filed by Tanaji Gambhire which was disposed of by Judgement 08/01/2018 without any favourable order. It was raising various issues including Carbon Footprint and CO_2 emissions. [Ax. L ■]

53. Hon'ble Supreme Court considered Civil Appeal No. 10854/2016 and decided it by Judgement on 10/08/2018, JJ Madan Lokur, Deepak Gupta. [(2018) 18 Supreme Court Cases 257: 2018 SCC Online SC 930)] [Ax. M ■]

APPEAL BEFORE SUPREME COURT U/S.22 TO BE HEARD AS CPC S.100 APPEAL (ONLY ON LAW POINT)

54. The Appeal to the Hon'ble Supreme Court against the order of the Hon'ble National Green Tribunal will be heard as an appeal as per s.100 of 'Code of Civil Procedure 1908' (CPC). i.e., Hon'ble Supreme Court will hear it as an appeal on a law point. Apex Court will not open, go into facts of the case, or merit

> *22. Appeal to Supreme Court:- Any person aggrieved by any award, decision or order of the tribunal, may file an appear to the Supreme Court, within ninety days from the date of communication*

of the award, decision or order of Tribunal, to him, on any one or more of the grounds specified in section 100 of the Code of Civil Procedure, 1908 (5 of 1908):

55. The Hon'ble National Green Tribunal is armed with 'Hon'ble Expert Member' along with 'Hon'ble Judicial Member' in the ratio 1:1. It emphasises the need of exhaustive and intrusive adjudication on the technical submissions on merit and facts of the case; and not merely the adjudication on the legal points. In fact, in the appeal before Hon'ble Supreme Court, the legal adjudication can be entertained and gone into, but not the technical issues on facts and merit.

56. Therefore, PP urges and prays with folded hands that technical submissions shall be gone into detail and in-depth with speaking orders after adjudication.

57. Hon'ble Supreme Court in various orders have emphasised the need of 'adjudication' by the Hon'ble Tribunal. Apex court has also said that such adjudication can't be outsourced to any other Expert Committee, which can only be a fact-finding committee.

- 'Project Proponent' urges with folded hand that the recommendations by SEAC and approval by SEIAA shall be recorded with speaking Minutes of Meeting. PP submits that the detailed appraisal by SEAC and approval by SEIAA, by recording all the submissions before them is absolutely **essential so as to ensure that all aspects related to**

environment have been laid before the SEAC, considered and dealt with application of mind, discussed, deliberated, clarification are sought and given by PP that are taken on record. The EC is recommended by SEAC and approval is granted by SEIAA in strict compliance of the Notification and in the interest of Environment.

DETERMINATION OF POLLUTION, DAMAGE TO ENVIRONMENT, COST OF REMEDIATION, RESTORATION OF ENVIRONMENT

58. PP submits that EDC was adequately dealt with by MoEFCC by evolving the detailed logical, scientific, and technical procedure in the Violation Notification 14/03/2017.

59. In the matter of the Vellore Citizen case OR Bicchri case, the CPCB and State PCB had deputed a team of scientists to the field. The samples of pollutants and pollution caused were collected. Those were analysed in the environmental laboratory. The scientists of the CPCB, SPCB and NEERI-CSIR deliberated on the scientific and technical solution for the treatment of the pollution done and the cost of remediation towards it. This cost was decided to be recovered from the industries responsible, by fastening the strict and absolute liability on them.

60. These ingredients of determination of pollution, assessment of its effect on the environment, and cost of restoration are totally absent in the ad-hoc ad-valorem simple mathematical formula derived by CPCB in OA 593 Paryavaran Surksha matter. There is no provision for the measurement of pollution, damage to the environment, remediation plan and cost of remediation.

MOEFCC VIOLATION NOTIFICATION 14/03/2017 (WINDOW VALIDITY PERIOD EXTENDED UP TO 14/04/2018)

61. PP submits that wherever it was environmentally sustainable to allow the grant of post facto EC, rather than demolishing the project/activity in violation, there was need for a formal procedure for such regularization.

62. PP submits that there were cases of violation as per the EIA Notification 14/09/2006. The Notification is delegated piece of legislation and not an Article in the Constitution, Act OR Rule approved by Parliament. As such to balance between environment, sustainability and a wider view so as to avoid the national waste of resources, the violation was to be dealt with penal consequences.

63. PP submits that this proper scientific methodology was described in detail, and embedded in the MoEFCC Violation Notification 14/03/2017. This procedural wisdom also stands on a higher legal pedestal and is coming straight from the MoEFCC.

64. MoEFCC Notification is a logical, scientific and technical step-by-step procedure and implementation of a methodology for EDA and EDC, based on an 'Environmental Impact Assessment Study', 'Remediation Plan', 'Environment Management Plan', 'Community & Resource Augmentation Plan'. **This is independent AND in addition to the legal penal provisions as provided in the 'Environment (Protection) Act 1986'.**

65. The 'Environment (Protection) Act 1986' already has the stringent penal provision u/s.15 to be read with s. 16, 17 and 19.

> *15. Penalty for contravention of the provisions of the Act and the rules, orders and directions:*
>
> *1) Whoever fails to comply with or contravenes any of the provisions of this Act, or the rules made or orders or directions issued thereunder, shall, in respect of each such failure or contravention, be punishable with imprisonment for a term which may extend to five years or with fine which may extend to one lakh rupees, or with both, and in case the failure or contravention continues, with additional fine which may extend to five thousand rupees for every day during which such failure or contravention continues after the conviction for the first such failure or contravention.*
>
> *(2) If the failure or contravention referred to in sub-section (1) continues beyond a period of one year after the date of conviction, the offender shall be punishable with imprisonment for a term which may extend to seven years.*

66. PP submits that the above is the provision of the Act. If this is less OR insufficient OR there is any lacuna in its implementation, then the Act needs

to be remedied. It will not be fair to somehow devise an extra-legal mechanism to punish the errant PP to the satisfaction of the public, Applicants, NGO or even authorities like SEAC/SEIAA / Tribunals OR Courts. This is the same as lynching in the name of environment OR teaching a lesson by extra-legal means.

67. The detailed logical, scientific and technical steps to be followed in violation cases were as follows.

i. Examine the project/activity as to whether it complies with basic laws such as MRTP – DC Rules, without encroaching on any public space, amenity etc.

ii. Whether the project/activity is sustainable

iii. 'Environmental Impact Assessment Study' through QCI-NABET Accredited Consultant

iv. As per QCI-NABET Scheme 2.0 (now 3.0)

v. EIA Study to be done as per EIA Manual Published by MoEFCC

vi. EIA to be supervised under 'EIA Coordinator' [NABET gives essential minimum requirement, qualifications, experience, maturity]

vii. Field Study to be done by respective 'Field Area Expert' for various aspects related to project/activity 'Building and Construction Project' [Water Pollution, Municipal Solid Waste, Land Use, Air Pollution, Noise, Ecology

& Biodiversity, Socio-Economics, Hydrography, Soil Conservation]

viii. Samples of environmental settings, recipient environmental bodies, and pollution are to be taken by the MoEFCC Recognized Environmental Laboratory which is NABL, ISO 9001, 14001, 18001 accredited

ix. Environmental Management of aspects of pollution (wastewater/sewage, air, noise, solid waste)

x. Environmental Management Plan of aspects of sustainability and betterment of the environment such as conservation of topsoil, excavation, refilling, storm water drains, use of solar power for electricity or heating, gardening/tree plantation, open spaces, internal roads, ventilation of basements, location of utilities, recreational ground/ open space/ playground, DG power for back-up, etc.

xi. The 'Environmental Damage Assessment' (EDA) was to be done on the basis of such studies.

xii. 'Remediation Plan' is to be worked out for the damage done to the environment

xiii. 'Environmental Damage Cost' to be worked out as per EDA and RP so as to restore the environment to its original state

xiv. Apart from this, a 'Community & Resource Augmentation Plan' was required to be done to compensate the society

xv. This cost was to be presented before SEAC by NABET Accredited Consultant and the PP along with information filed on the PARIVESH Portal, Form 1, 1A, Consolidated Statement, Power Point Presentation, detailed drawings and plans, other studies (as may be asked during appraisal) such as Wind Analysis, Shadow Analysis, Traffic Management and Evacuation Plan, etc.

xvi. Appraisal to be done by SEAC for the sustainability of the project/activity and EDC

xvii. Consideration and approval by SEIAA to the findings and recommendations of SEAC

xviii. The amount so worked out towards the EDC to be deposited in the form of a 'Bank Guarantee (BG)

xix. The execution to be done with the approval of the Collector / Commissioner of the LPA

xx. After submission of the Report, the BG to be released

68. Definition of Environment is done in the 'National Green Tribunal Act 2010' and so also the 'Environment (Protection) Act 1986'. It includes water, air and as such the 'Consent to Establish' and 'Consent to Operate' issued by MPCB under Water/Air Acts and violation if any is already covered under the generic word/terminology 'environment'. There can't any separate computation of EDC, the penalty for water/air pollution when the

determination is comprehensively done under the head 'environment'.

> *2(c) "environment" includes water, air and land and the inter relationship, which exists among and between water, air and land and human-beings, other living creatures, plants, micro-organism and property;*

69. PP submits that once the EDC is imposed for the damage to the "environment", then there can't be a separate penalty for damage due to water/air pollution, which is categorically, specifically and legally covered under "environment".

MOEFCC OFFICE MEMORANDUM (OM) 07/07/2021 AND 28/01/2022

70. PP submits that all the steps that were incorporated in the Violation Notification of 14/03/2017, are logical, scientific and technical. **The window period for the application might have expired, as an amnesty scheme, but the thoughtful 'wisdom' thoughtfully expressed by MoEFCC, in the above Violation Notification of 14/03/2017, has not expired. That shall remain valid forever.**

71. PP submits that MoEFCC revived this scientific approach again, after directions of the Hon'ble Supreme Court and Hon'ble Tribunal, as mentioned in the Office Memorandum 07/07/2021. MoEFCC emphasized following it and its implementation by follow-up OM dated 28/01/2022. This shows that in the eyes of the MoEFCC, the wisdom is still valid, and relevant and should be

relied upon in the cases of violation. The OM has laid down the same old valid procedure which is the executive function of MoEFCC.

72. PP submits that none of the OM has been stayed in Maharashtra and is very much operative. These OM are nothing but the re-iteration of the logical, scientific, and technical procedure laid down in the Violation Notification 14/03/2017. There is no better approach for the grant of post facto EC is the deserving cases by the imposition of EDC. CPCB Guidelines or formula derived in OA 593 Paryavaran Suraksha matter, bypassing this entire scientific procedure, has no sanctity, technical or scientific validity and is anyway on an inferior pedestal as against the MoEFCC's Notification and OM.

MOEFCC (AMENDMENT) NOTIFICATION 09/12/2016 GIVING POWERS FOR 'ENVIRONMENTAL CLEARANCE' TO 'LOCAL PLANNING AUTHORITY' (LPA)

73. PP submits that this Notification on 09/12/2016 had delegated the power for grant of EC to the LPA, through the Committee to be formed by them. [Ax. N ■] It has listed all facets and aspects of the environment in various sub-heads which are dealt with and considered in the EIA Notification 14/09/2006. These environmental aspects are; Topography and Natural drainage, Water Conservation Rainwater Harvesting and Ground Water Recharge, Waste Management, Energy, Air Quality and Noise, Green Cover, Topsoil preservation and reuse, and Transport. Out of this, only water,

solid waste and air/noise are the issues related to "pollution". The rest are all issues related to environmental sustainability and management.

74. This Notification was set aside by the Hon'ble National Green Tribunal, in part only to that extent. [Ax. O ■]

75. However, this Notification that amended the EIA Notification 14/09/2006, also had the provision as given below, which has not been set aside. This amendment is still valid and in force; and has not been set aside by any Tribunal OR Court.

> *"No Consent to Establish and Operate under the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 will be required from the State Pollution Control Boards for residential buildings up to 1,50,000 square meters.";*

76. **The Notification of the MoEFCC dated 09/12/2016 stands on a higher legal pedestal and the most current one after the issuance of the CPCB Classification of Industries in February 2016**, requiring Consent for building construction projects. This negates the requirement of 'Consent to Establish' OR 'Consent to Operate' for residential buildings up to 1,50,000 sq.m.

HIGH COURT OF DELHI JUDGEMENT OF THE BENCH 23/01/2012

77. PP submits that the Hon'ble High Court of Delhi in two concurrent Judgements finally pronounced on 23/01/2012 that residential buildings are not industry, operation or process and hence

don't attract the requirement of 'Consent to Establish' OR 'Consent to Operate' under Water / Air Acts.

CLASSIFICATION OF INDUSTRIES BY CPCB ON 29/02/2016 FOR THE REQUIREMENT OF 'CONSENT TO ESTABLISH' AND 'CONSENT TO OPERATE'

78. Subsequent to this, CPCB classified the industries in 25/06/2012 and then again in February 2016. The building and construction industry/project/activity is listed at Sr. No. (New/old) 21/8.

79. In the table and remarks, it mentions as follows. It shows that there is no hazardous waste pollution from this industry. The air pollution is only in the construction phase. The water pollution is only during the operation phase. [Ax. J ■]

Table G-3: Final List of Orange Category of Industrial Sectors

Final Sl. No.	Original S. No	Industry Sector	W1	W2	W	A1	A2	A	H	W+A+H	Revised Category	Remarks
21.	8	Building and construction project more than 20,000 sq.m built up area	20	-	**20**	20	-	**20**	-	**50**	O-O	1. In the pre-construction stage, it is mainly air polluting due to generation of dust (PM) emissions. 2. After construction, it is mainly water-polluting. If the discharge is more than 100 KLD, it will be having the normalized score of 75 and be categorized as Red.

80. To reconcile the Judgement of the Constitutional Court like the Hon'ble High Court of Delhi, in which CPCB also was the party through 'Pollution Control Committee', classification of industries published by CPCB and MoEFCC (Amendment) Notification 09/12/2016, it needs to be construed and inferred that **Residential projects shall not need 'Consent to Establish' OR 'Consent to Operate' for an area up to 1,50,000 sq.m.**

PROJECTS WITHIN LPA AREA

81. PP submits that Corporations, Nagar Parishad and LPA are granted 'Consent to Establish' and 'Consent to Operate' by MPCB. They are required to provide municipal services including collection of sewerage, treatment of sewage and garbage disposal (municipal solid waste). Clean water is supplied by LPA. As per Supreme Court in ***Municipal Council, Ratlam vs. Vardhichand***, these are the facilities that must be provided by the LPA as the bounden duty. 'Environment (Protection) Act 1986' and EIA Notification 14/09/2006 have not diluted this requirement OR have shifted this onus from LPA to 'Project Proponent'. [Ax. P ■]

82. PP submits that irrespective of the EMP prepared and implemented by PP, the residents of the society are required to pay twice for the Capital Cost of EMP and the recurring cost of EMP. No discount is given to residents of the project/activity that are covered under EIA Notification 14/09/2006 and/or have implemented their own EMP. Even when (treated/untreated) sewage is let out through the

common sewerage system, the generated sewage is treated in the city STP before discharging to the river and mother nature. As such there is no harm to the environment.

83. The PP/Residents are paying for the capital cost (as development charge) and sewerage charge/tax each month. The only disadvantage OR burden to the environment is that sewage treated on-site could have been recycled and reused at least to the extent of 33% for secondary use and flushing etc. In the absence of such STP, residents are paying for buying fresh water, as others do. In any case, there is no pollution caused to the environment, as sewage is still treated.

84. PP submits that the **aspects like Wastewater/sewage, air, and noise are defined and related to and under head "pollution". There are standards under EPA and Water/Air Acts**. All, other aspects are related to environmental betterment and sustainability. There are no benchmarks, or standards for that under EPA. Municipal solid waste also can be segregated and treated on-site but can't be used within the site. It has to be finally disposed of to the MSW-TSDF site.

RECURRING, CONTINUING CAUSE OF ACTION

85. The limitation clause/proviso in the s.14 and 15 gives protection to the PP and so also the bonafide buyers, from harassment and perpetual risk. The buyers buy flats, banks give loans and instalments of repayment start. There has to be

legitimate expectancy and certainty to all the stakeholders while reopening of the cases if the past. The limitation proviso just does grant this protection.

86. The limitation would be triggered right from the date when the cause of action first arises. **The artificially created causes for action are not supported by this proviso**.

87. Merely because the demolition is sought in the application, the period of limitation will not be extended to 5 years. It will still remain to be six months. Hon'ble Tribunal has clarified in the NGT WZ Bench Lakhan Musafir matter Judgement that there has to be a '**substantial question related to environment**' adjudicated and established before seeking 'relief, compensation, restitution' and consequential reliefs based on the cause of action. The relief sought has to be consequential, i.e., giving 'relief, compensation, restitution'.

> *14(3) No application for adjudication of dispute under this section shall be entertained by the Tribunal unless it is made within a period of six months from the date on which the cause of action for such dispute first arose:*

88. Ongoing industry can be termed as the recurring cause of action, as it lets out pollution every day. The residential project completed is not a 'recurring cause of action' which gives rise to a fresh cause of action qua such fresh repetition. Even if it is pleaded as a continuing cause of action, the clear-cut terminology in proviso s.14(3) and so also in 15(3), will trigger the counting of the limitation period from the '***date on which the cause of***

action for such dispute first arose'.

89. PP submits that the ***Forward Foundation judgement*** of the Hon'ble National Green Tribunal South Zone Bench referred by the applicant is not binding on the Western Zone Bench. The facts of the case in the Forward Foundation case are entirely different and not applicable in this case. In that case construction was done in the lake /wetland which is not the case here. The construction done is fully compliant with the MRTP – DC Rules of LPA. [2015-01-27_SCC NGT PB 222-2014 Forward Foundation Vs State of Karnataka].

'SUBSTANTIAL QUESTION RELATED TO ENVIRONMENT' AND PROHIBITION ON RAISING PLURAL CAUSES UNDER NGT RULE 14

90. PP submits that 'substantial question related to environment' has been specifically defined in the 'National Green Tribunal Act 2010' under definition.

> *(m) "substantial question relating to environment" shall include an instance where, -*
>
> *(i) there is a direct violation of a specific statutory environment obligation by a person by which, -*
>
> *(A) the community at large other than an individual or group of individuals is affected or likely to be affected by the environmental consequences; or*
>
> *(B) the gravity of damage to the environment or property is substantial; or*
>
> *(C) the damage to public health is broadly measurable;*

(ii) the environmental consequences relate to a specific activity or a point source of pollution;

91. PP submits that only one substantial cause can be raised in one application and appeal.

POLLUTION IS DEFINED IN 'WATER (PREVENTION AND CONTROL OF POLLUTION) ACT 1974'

92. The following terms are defined in the 'Water (Prevention and Control of Pollution) Act 1974'.

2. Definitions. - In this Act, unless the context otherwise requires,

[(d) "occupier", in relation to any factory or premises, means the person who has control over the affairs of the factory or the premises, and includes, in relation to any substance, the person in possession of the substance;]

(dd) "outlet", includes any conduit pipe or channel, open or closed, carrying sewage or trade effluent or any other holding arrangement which causes, or is likely to cause, pollution;]

(e) "pollution" means such contamination of water or such alteration of the physical, chemical or biological properties of water or such discharge of any sewage or trade effluent or of any other liquid, gaseous or solid substance into water (whether directly or indirectly) as may, or is likely to, create a nuisance or render such water harmful or injurious to public health or safety, or to domestic, commercial, industrial, agricultural or other legitimate uses, or to the life and health of animals or plants or of aquatic organisms;

(f) "prescribed" means prescribed by rules made under this Act by the Central Government or, as the case may be, the State Government;

(g) "sewage effluent" means effluent from any sewerage system: or sewage disposal works and includes sullage from open drains;

(gg) "sewer" means any conduit pipe or channel, open or dosed, carrying sewage or trade effluent;

93. The 'Consent to Operate' will have to be applied and obtained by the 'occupier'.

94. The environmental facilities provided are to be operated and maintained by the 'occupier'. The cost towards the same is to be borne by the 'occupier', as they pay for water, electricity, lift, housekeeping, gardening, security, garbage cleaning, etc.

95. There is provision for MPCB u/s.30 to do the certain works and recover cost of the same. Powers are given to MPCB u/s. 32. Emergency measures in case of pollution of stream or well. None of them were exercised by MPCB. **But there is no power** available **to MPCB to impose the penalty and recover the 'Environmental Damage Cost'.**

30. Power of State Board to carry out certain works,- [(1) Where ~this Act, any conditions have been imposed on any person while granting consent under section 25 or section 26 and such conditions require such person to execute any work in connection therewith and such work has not been executed within such time as may be specified in this behalf, the State Board may serve on the person concerned a notice requiring him within such time - (not being less than thirty days) as may be specified in the notice to execute the work specified therein.] [46. Substituted by Act 53of1988, S. 14, for sub-S. (1).]

(2) If the person concerned fails to execute the work as required in the notice referred to in sub-section (1), then, after the expiration of the time specified in the said notice, the State Board may itself execute or cause to be executed such work

(3) All expenses incurred by the State Board for the execution of the aforesaid work; together with interest, at such rate as the State Government may, by order, fix, from the date when a demand for the expenses is made until it is paid, may be recovered by that Board from the person concerned, as arrears of land revenue, or of public demand.

96. PP submits that this is to be recovered from the 'occupier' if the facilities are not being operated by the 'occupier'. When the possession is given and taken by the residents of the society, then it is for them to maintain, operate, and pay for these services including any legal obligations as an 'occupier'. **These powers are not available to 'Project Proponent'**. **Even then, as a gesture of goodwill, PP has given STP. The same is being operated and maintained by the occupier Society. The new OWC has been given as of now without waiting for Society to repair OR pay. PP has sent the Invoice to the occupier, with the hope that they shall pay it**.

97. The pollution is defined in the act. The 'polluter pays principle', if at all is applicable, shall operate against the occupier for an act of commission or omission; and not the 'Project Proponent'. PP is not the polluter in the operation phase, of the occupied buildings.

98. It is not the stipulation of the EIA

Notification 14/09/2006 OR any of the environmental acts/rules, OR condition of the 'Environmental Clearance' OR 'Consent to Operate' that the 'Project Proponent' shall forever operate and pay for the cost of treatment. **As per provisions of the Act, this responsibility is with the occupant**. The owner of the land OR 'Project Proponent' doesn't become responsible, merely because the conveyance of the land right is not done under the transfer of property act. The full working possession of the residential buildings entitles the residents to stay and enjoy the property with the bounden duty to bear its corresponding upkeep and maintenance.

99. **After handing over of the property, physical possession, to the buyers and occupants, the 'Project Proponent' will be trespasser to the premises**. PP can't even enter the premises and as such there is no question of EMP to be implemented by PP, post handing over of the possession of the property to the bona fide buyers/residents or the society.

'AIR (PREVENTION AND CONTROL OF POLLUTION) ACT 1981'

100. The following terminologies are defined in the Air Act. It has clearly defined air pollutants, air pollution, emission and occupier of the premises.

> *2. Definitions:- In this Act, unless the context otherwise requires,-*
>
> *(a) "air pollutant" means any solid, liquid or gaseous substance 3[(including noise)] present in the atmosphere in such concentration as may be or tend*

to be injurious to human beings or other living creatures or plants or property or environment;

(b) "air pollution" means the presence in the atmosphere of any air pollutant;

(j) "emission" means any solid or liquid or gaseous substance coming out of any chimney, duct or flue or any other outlet;

(m) "occupier", in relation to any factory or premises, means the person who has control over the affairs of the factory or the premises, and includes, in relation to any substance, the person in possession of the substance; [5. Substituted by Act 47 of 1987, S. 2, for q.(m) (w.e.f. 1-4-1988)]

Any meaning OR arrangement contrary to the provisions of the Act are redundant as there is no estoppel against the law.

101. **After handing over of the property, physical possession, to the buyers and occupants, the 'Project Proponent' will be a trespasser to the premises**. PP can't even enter the premises and as such there is no question of EMP to be implemented by PP post handing over of the possession of the property to the bona fide buyers/residents or the society.

'POLLUTER PAYS PRINCIPLE'

102. This was evolved in Vellore Citizens and Bichchri case. This right principle is applied wrongly most of the time, for lynching the 'Project Proponent' without even identifying the pollutant, quantifying, determining, assessing pollution done, its effect on environment, damage due to that to the environment, remediation plan, and its cost for restoration of the environment. The 'polluter pays

principle' is not a penal provision under EPA or Water or Air Act.

103. The 'polluter pays principle' is for fastening the strict and absolute responsibility on the polluter to recover the cost of restoration of the environment, if and when the pollution is done.

104. In absence of this determination, 'Project Proponent' can't be applied to penalise the 'Project Proponent' OR impose the punishment OR heavy fine just because Applicant / NGO / Board is not satisfied with the penalty and procedure laid down under the EPA, Water & Air Acts.

POST-FACTO EC – DESERVING CASE

105. PP submits that the Hon'ble Supreme Court in various cases has said that post-facto EC can be considered for project/activity, in exceptional cases. e.g., Sai Baba, Electro steel, [Ax. Q ■]

106. Residential project is a regulated activity as per EIA Notification 14/09/2006 under Category 8(a) and 8(b). It is a highly required activity to provide and fulfil fundamental requirements of the citizens, i.e., shelter. Central and State Government is encouraging and promoting residential activity by giving loan and subsidy. It is also promoting this through agencies like SRA, MAHADA, CIDCO, DDA and LIG, MIG, HIG, and EWS schemes. **As such residential projects are very much needed for the country.** What needs to be ensured is the sustainability of large-scale projects at one place.

i.e., those that are above 20,000 sq.m.

107. Residential activity by itself if deserving welcome project/activity. It can be allowed to be retained when it is found otherwise compliant with LPA regulations and is otherwise sustainable from an environmental angle.

108. PP submits that destroying the already constructed project is not going to serve any purpose of the environment. The resources used in construction after demolition will be a national waste. This will further add to pollution and solid waste. As such otherwise sustainable and legally compliant projects as per LPA are the deserving projects for regularization.

EVERYONE WILL GO FOR POST-FACTO EC IF MOEFCC'S OM 07/07/2021 AND 28/01/2022 IS ALLOWED TO BE IMPLEMENTED

109. PP submits that just because post-facto EC is allowed, each PP will not go for it, as a matter of choice or alternative option. PP shall be facing criminal action and risk of going to jail, apart from the penalty.

110. By circumventing the EC requirement, PP is being saddled with extra expenses towards the 'Environmental Impact Assessment Study', 'Remediation Plan', and 'Community & Resource Augmentation Plan', apart from criminal cases against all Director/s and concerned Officials of the company.

111. **PP submits that the provision of regularization is there in many Acts and Rules, with a provision of penalty**. This is decided by the legislature by providing a penalty, and procedure for imposing punishment. Whatever is provided by the Parliament and legislature will be interpreted and enforced by the Authorities, Boards, Tribunals and Courts. **Just because there is a large-scale violation OR PP is taking recourse to this option, dispute-resolving Tribunals can't take it upon to themselves make a law or rule OR lynching in the name of environment to create fear amongst PP**. That would be amounting to creating eco-terrorism against sustainably retainable projects.

112. PP submits that the 'Project Proponent' promoting large schemes can't be saddled with undue EMP, costs and penalties so much so that they would be deterred from developing largescale well-planned residential projects with amenities like Club House, Swimming Pool, Gymnasium, medical centre, garden, play-ground, tree plantation, etc. which were otherwise being planned and provided by LPA. PP in that case will go for projects that are <20,000 sq.m that need no EMP and recurring costs associated with it. AND as an outcome of that,

113. **PP submits that the capital and recurring costs of all above amenities and EMP are finally imposed on the bonafide buyers of the residential premises.** These are common citizens of India, who deserve the quality and right to quality life guaranteed under Article 14 and 21.

Citizens would be deprived of development and in-house facilities if such eco-terrorism increases.

114. PP submits that the huge capital and recurring costs associated with EMP will be applicable only for the citizens of India staying in complexes above >20,000 sq.m. They would be paying double/twice for the same services being enjoyed through LPA, just because they are staying in projects above 20,000 sq.m area. Those who actually pay higher (including for their amenities which are free to other residents) can't be compelled to pay twice, and use the recycled somewhat inferior dirty water for flushing and gardening. Whereas those who don't do any good to the environment will totally escape the cost of EMP, simply because they stay in projects <20,000 sq.m in size. This discrimination is not what is envisaged through EIA Notification 14/09/2006; and is rather opposed by Article 14 and 21 of the Constitution of India.

115. The submissions are made in detail so that nothing is left to verbal communication. All issues are documented and recorded. As the matter is pending before the Hon'ble National Green Tribunal, the entire set of documents and records are placed before SEAC and SEIAA along with the application for EC. So that nothing is left unnoticed and unrecorded. These same submissions shall be also shared and placed before Hon'ble Tribunal as well.

116. PP submits that they have complied with all the requirements of Violation Notification 14/03/2017, OM dated 07/07/2021 and OM dated

28/01/2022. As PP has applied as per the valid provision of MOEFCC for EX POST FACTO EC, they are legally entitled for the post facto EC after strict compliance with the requirements of Notification.

117. **PP submits and urges with folded hands** that PP made a submission of these facts before SEIAA and SEAC 3 by making an application through the PARIVESH Portal. PP also received the ToR for the same. Let the Committee and Authority study the facts and do the appraisal on the basis of the merit of the case.

118. **PP hereby undertakes to follow all terms and conditions of the 'Environmental Clearance' granted, deposit the Bank Guarantee, implement the 'Environment Management Plan', 'Remediation Plan', 'Community & Resource Augmentation Plan' and submit the compliance report. Only after that the 'Bank Guarantee' may be released.**

119. On the basis of the above submission PP urge that Hon'ble Tribunal should hear the matter first on the grounds of the limitation and maintainability of this original application and then check the merit of the application. Also, PP urge that this application falls under the OM dated 07/07/2021 and 28/01/2022 therefore this needs to be studied and apprised by SEIAA Maharashtra only and not by Hon'ble NGT.

AND for this act of kindness, respondent as duty bound shall ever pray.

CATEGORY - B

Note : If space provided against any parameter is inadequate,Kindly upload supporting document under 'Additional Attachments if any' at the last part of the Form1. Please note that all such Annexures must be part of single pdf document.

(I)Basic Informations

S.No.	Item	Details
	Whether proposal involved violation of EIA notification	Yes
	Weather Consent to Establishment Obtained	No
	Upload copy of CTE	NA
1.	Name of the Project	Residential Project “Bramha Exuberance” at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune
	Proposal No	SIA/MH/MIS/76973/2022
2.	Project Sector	INFRA-2
3.	Location of the project	Sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District-Pune, State-Maharashtra
4.	Shape of the project land	Block (Polygon)
	Uploaded GPS file	Annexure-GPS file
	Uploaded copy of survey of India Toposheet	Annexure-Survey of india toposheet
5.	Brief summary of project	Annexure-Brief summary of project
6.	State of the project	Maharashtra

Details of State of the project

S.no	State Name	District Name	Tehsil Name
(1.)	Maharashtra	Pune	Haveli
(2.)	Maharashtra	Pune	Haveli

7.	Town / Village	Kondhwa Khurd
8.	Plot/Survey/Khasra No.	S.No.13, H.No.1, 2 & 3, Kondhwa Khurd, Haveli, Pune
9.	S. No. in the schedule	8(a) Building and Construction projects
10.	Proposed capacity/area/length/tonnage to be handled/command area/lease area/number or wells to be drilled	50548.37 ha.
11.	New/Expansion/Modernization	New
12.	Category of project	B
13.	Does it attract the general condition? If yes, please specify	No
14.	Is there any court order to consider your project under 'A' Category if	Yes Annexure-Uploaded court order to consider your project under 'A' Category
15.	Does it attract the specific condition?	No

16.	Is there any litigation pending against the project?	Yes
	Attach court order(s) given in this regard	Annexure-Uploaded Attach court order(s) given in this regard
17.	Nearest railway station along with distance in kms.	Pune Railway Station, 8.1 km
18.	Nearest airport along with distance in kms	Pune International Airport, 14.8 km
19.	Nearest Town/City/District Headquarters along with distance in kms	Office of district collector , 7.7 km
20.	Distance of the project from nearest Habitation	4.6 , 4.6 km
21.	Details of alternative sites examined shown on a toposheet	No
22.	Whether part of interlinked projects?	No
23.	Whether the proposal involves approval/clearance under the Forest (Conservation)Act,1980?	No
24.	Whether the proposal involves approval/clearance under the wildlife (Protection)Act,1972?	No
25.	Whether the proposal involves approval/clearance under the C.R.Z notification,2011?	No
26.	Whether there is any Government Order/Policy relevent/relating to the site?	No
27.	Whether there is any litigation pending against the project and/or land in which the project is proposed to be set up?	Yes
	(a)Name of the Court	NGT
	(b)Name of the Sub court	NGT Western Zone
	(c) Case No.	Original Application No. 65/2019 (WZ)
	(d) Orders/directions of the court, if any and relevance with the proposed project.	Attached as annexure
28.	Project Cost(in Lac.)	2733
30.	Whether the proposed project/activity located in notified Industrial area(Yes/No)	No

Activity

1 Construction, operation or decommissioning of the Project involving actions, which will cause physical changes in the locality (topography, land use, changes in water bodies, etc.)

S.No	Information/Checklist confirmation	Yes/No	Details there of (with approximate quantities/rates, wherever possible) with source of information data
1.1	Permanent or temporary change in land use, land cover or topography including increase in intensity of land use (with respect to local land use plan)	No	Development was carried in line with the topography & without disturbing natural drainage pattern.

1975

			Proposed project has been approved by PMC.
1.2	Clearance of existing land, vegetation and buildings?	Yes	Residential project consisting of Wing A, B,C D & E have already been constructed.
1.3	Creation of new land uses?	Yes	Residential project has been constructed on the project site.
1.4	Pre-construction investigations e.g. bore houses, soil testing?	Yes	Pre-construction investigation was carried out as per relevant standards
1.5	Construction works?	Yes	Residential project consisting of Wing A, B,C D & E have already been constructed.
1.6	Demolition works?	No	No demolition work was required.
1.7	Temporary sites used for construction works or housing of construction workers?	Yes	Temporary sheds were provided for workers.
1.8	Above ground buildings, structures or earthworks including linear structures,cut and fill or excavations and fill or excavations	Yes	The excavated material was used within site for land filling
1.9	Underground works including mining or tunneling?	No	No underground works including mining / Tunnelling was required.
1.10	Reclamation works?	No	Not Applicable
1.11	Dredging?	No	Not Applicable
1.12	Offshore structures?	No	Not Applicable
1.13	Production and manufacturing processes?	No	Not Applicable
1.14	Facilities for storage of goods or materials?	No	This is a residential project.
1.15	Facilities for treatment or disposal of solid waste or liquid effluents?	Yes	Solid Waste: The municipal solid waste is segregated on site. The biodegradable waste is treated in Vermicomposting pits and the non-biodegradable waste is handed over to the local body. Sewage: STP has been provided to treat the sewage generation.
1.16	Facilities for long term housing of operational workers?	No	No, there is no facilities for long term housing of operational workers. This is a residential project.
1.17	New road, rail or sea traffic during construction or operation?	No	The movements of vehicles carrying construction material to and from the site was through the existing road only.
1.18	New road, rail, air water borne or other transport infrastructure including new or altered routes and stations, ports, airports etc?	No	Existing road was used for the transport purpose.
1.19	Closure or diversion of existing transport routes or infrastructure leading to changes in traffic movements?	No	There was no diversion or closure of the existing transport routes and infrastructure.
1.20	New or diverted transmission lines or pipelines?	No	No new or diverted transmission lines or pipelines.
1.21	Impoundment, damming, culverting, realignment or other changes to the hydrology of watercourses or aquifers?	No	Not Applicable

1.22	Stream crossings?	No	Not Applicable
1.23	Abstraction or transfers of water from ground or surface waters?	No	Not Applicable
1.24	Changes in water bodies or the land surface affecting drainage or run-off?	No	The existing drainage system was upgraded by providing proper storm water and sewer network.
1.25	Transport of personnel or materials for construction, operation or decommissioning?	Yes	Construction phase: There was temporary movement of personnel, machines and materials during construction phase. The impact on the surroundings was negligible. Post construction: There is regular movement of vehicles and personnel in the operational phase.
1.26	Long-term dismantling or decommissioning or restoration works?	No	Not Applicable
1.27	Ongoing activity during decommissioning which could have an impact on the environment?	No	There was no impact on the Environment, appropriate measure to minimize the effects due to construction activity were taken.
1.28	Influx of people to an area in either temporarily or permanently?	Yes	This being a residential project, there will be influx of occupants.
1.29	Introduction of alien species?	No	There won't be any introduction of alien species.
1.30	Loss of native species or genetic diversity?	No	No threat of species loss will occur.
1.31	Any other actions?	No	No other action with reference to construction.

2 Use of Natural resources for construction or operation of the Project (such as land, water, materials or energy, especially any resources which are non-renewable or in short supply):

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
2.1	Land especially undeveloped or agricultural land (ha)	No	The land has been used for construction of Residential project.
2.2	Water (expected source & competing users) unit: KLD	Yes	1. Fresh water-123 m3/day 2. Recycled water (Flushing)- 62 m3/day 3. Recycled water (Gardening)- 17 m3/day 4. Recycled water (Vehicle Washing) 4 m3/day 5. Excess treated water- 72 m3/day 6. Total water requirement- 185 m3/day
2.3	Minerals (MT)	No	Since this is a residential project, there was no use of major minerals for construction.
2.4	Construction material – stone, aggregates, sand / soil (expected source – MT)	Yes	Materials procured from local authorized dealer.
2.5	Forests and timber (source – MT)	Yes	Only door frames. Certified wood was used.
2.6	Energy including electricity and fuels (source, competing users) Unit: fuel (MT),energy (MW)	Yes	Source of power supply: Maharashtra State Electricity

1977

			Distribution Company Ltd. (MSEDCL) Power requirement: During operation phase: I) Max. demand load: 1,135 kW II) Connected load: 1,419 kW
2.7	Any other natural resources (use appropriate standard units)	No	No other natural resources used.

3 Use, storage, transport, handling or production of substances or materials, which could be harmful to human health or the environment or raise concerns about actual or perceived risks to human health

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
3.1	Use of substances or materials, which are hazardous (as per MSIHC rules) to human health or the environment (flora, fauna, and water supplies	No	No hazardous material was used for construction
3.2	Changes in occurrence of disease or affect disease vectors (e.g. insect or water borne diseases)	No	No such activity was carried out which will change or affect occurrence of vectors.
3.3	Affect the welfare of people e.g. by changing living conditions?	Yes	Proposed project has positively affected the welfare of people by providing state of art infrastructure. The project had provided job opportunities to skilled and unskilled local people.
3.4	Vulnerable groups of people who could be affected by the project e.g. hospital patients, children, the elderly etc.	No	People did not get affected by project, as project has provided good infrastructure to the people in operation phase. All necessary Environmental Management practices will be followed in true spirit.
3.5	Any other causes	No	Not Applicable.

4 Production of solid wastes during construction or operation or decommissioning (MT/month)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
4.1	Spoil, overburden or mine wastes	No	Not Applicable.
4.2	Municipal waste (domestic and or commercial wastes)	Yes	Total solid waste -699kg/day 1.Bio-degradable waste-419 kg/day 2.Non-Biodegradable waste + Inert waste-280 kg/day 3.STP sludge-1.7nKg/day Dry waste is handed over to authorized vendor for further processing. Wet waste is treated in Vermicomposting pits.
4.3	Hazardous wastes (as per Hazardous Waste Management Rules)	No	No hazardous waste is generated.
4.4	Other industrial process wastes	No	Not Applicable.

4.5	Surplus product	No	Not Applicable.
4.6	Sewage sludge or other sludge from effluent treatment	Yes	Dried sludge used as manure for plantation & gardening purposes inside the premises.
4.7	Construction or demolition wastes	Yes	Construction waste was used for road and as filling material for levelling and road, pathway construction.
4.8	Redundant machinery or equipment	No	No redundant machinery or equipment were used at project site.
4.9	Contaminated soils or other materials	No	No contamination of soil.
4.10	Agricultural wastes	No	Not applicable
4.11	Other solid wastes	No	No any other solid waste generated at project site.

5 Release of pollutants or any hazardous, toxic or noxious substances to air(Kg/hr)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
5.1	Emissions from combustion of fossil fuels from stationary or mobile sources	Yes	Vehicular movement and DG set is sources of air pollution. D.G Set is used only in case of Power Failure.
5.2	Emissions from production processes	No	Not Applicable
5.3	Emissions from materials handling including storage or transport	No	Not Applicable
5.4	Emissions from construction activities including plant and equipment	Yes	Dust emissions occurred during excavation and earthwork. Proper care was taken to reduce dust emission.
5.5	Dust or odours from handling of materials including construction materials, sewage and waste	Yes	Dust was generated during transport and handling of material.
5.6	Emissions from incineration of waste	No	No incineration of waste was carried out at site.
5.7	Emissions from burning of waste in open air (e.g. slash materials, construction debris)	No	No burning of waste was carried out at site.
5.8	Emissions from any other sources	No	None as this project is a Residential project.

6 Generation of Noise and Vibration, and Emissions of Light and Heat:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
6.1	From operation of equipment e.g. engines, ventilation plant, crushers	Yes	Construction phase: The significant source of noise pollution was the

1979

			machinery used for construction and vehicular movement. Operation phase: During operation phase the only source of noise is operation of vehicular traffic and DG sets however, DG set is operated during power failure only.
6.2	From industrial or similar processes	No	Not Applicable.
6.3	From construction or demolition	Yes	The construction activities included the noise generating activities i.e. Excavation activities etc., Concreting and mixing, Heavy vehicle movement, Operation of D.G sets. Precautions were taken to control noise pollution i.e. High noise generating activities were carried out during day time only, workers working near high noise machinery were provided with ear muffs/ear plugs, Acoustic enclosure for DG Set were provided.
6.4	From blasting or piling	No	No blasting activities were carried out.
6.5	From construction or operational traffic	Yes	During construction phase: Precautions were taken to reduce the impacts of the vehicular movement such as vehicular trips were not in peak traffic hours during the construction phase. During operation phase: The vehicular parking is restricted only in the adequate parking area provided, which helps in reducing noise pollution due to traffic congestion. Adequate tree plantation done also helps to reduce the noise level and enhance air quality
6.6	From lighting or cooling systems	Yes	Noise generation from DG sets.
6.7	From any other sources	No	Not Applicable

7 Risks of contamination of land or water from releases of pollutants into the ground or into sewers, surface waters, groundwater, coastal waters or the sea:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
7.1	From handling, storage, use or spillage of hazardous materials	No	Not Applicable
7.2	From discharge of sewage or other effluents to water or the land (expected mode and place of discharge)	No	The sewage generated is treated in STP. The treated sewage from STP is utilized for gardening, vehicle washing etc. thus there is impact on the surface / ground water.
7.3	By deposition of pollutants emitted to air into the land or into water	No	No risk of contamination due to pollutants in air or water.
7.4	From any other sources	No	Not Applicable
7.5	Is there a risk of long term build up of pollutants in the	No	Not Applicable

64

	environment from these sources?		

8 Risk of accidents during construction or operation of the Project, which could affect human health or the environment

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
8.1	From explosions, spillages, fires etc from storage, handling, use or production of hazardous substances	No	No production of hazardous substances is involved. This is a residential project.
8.2	From any other causes	No	Not Applicable
8.3	Could the project be affected by natural disasters causing environmental damage (e.g. floods, earthquakes, landslides, cloudburst etc)?	No	The project falls under seismic zone-III as per IS1893 (Part-1):2002. The structural design shall be accordingly performed. Hence, no risk due to natural hazards is envisaged

9 Factors which should be considered (such as consequential development) which could lead to environmental effects or the potential for cumulative impacts with other existing or planned activities in the locality

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
9.1	Lead to development of supporting utilities, ancillary development or development stimulated by the project which could have impact on the environment e.g.: ◦ Supporting infrastructure (roads, power supply,waste or waste water treatment, etc.) ◦ housing development ◦ extractive industries ◦ supply industries ◦ Other	Yes	The project provided a well-designed area for the new occupants with supporting infrastructure like RWH, STP etc.
9.2	Lead to after-use of the site, which could have an impact on the environment	No	Not Applicable
9.3	Set a precedent for later developments	No	Not Applicable
9.4	Have cumulative effects due to proximity to other existing or planned projects with similar effects	No	Proposed project land will be used for residential purpose and will not have major effects on environment.

(III) Environmental Sensitivity

S.No	Areas	Name/Identity	Aerial distance (within 15km.) Proposed project location boundary
1	Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or	No	Nil in 15 km Radius of the project site.

1981

	other related value

Applicants	:	Mr. Nitin Lonkar, Advocate
Respondents	:	Mr. Rahul Garg, Advocate for R- 1, 8 & 9 Mr. Aniruddha Kulkarni, Advocate for R- 4 Ms. Mansi Joishi, Advocate for R- 6 & 7 Mr. R. B. Mahabal, Advocate for R- 11 Mr. Saket Mone, Advocate for R-13

ORDER

1. From the side of Applicant, Learned counsel Mr. Nitin Lonkar has appeared.

2. From the side of Respondent No. 1/ MoEF&CC, Learned counsel Mr. Rahul Garg has appeared and apprised us that reply- affidavit has already been filed.

3. From the side of Respondent No.4 / SEIAA, learned counsel Mr. Aniruddha Kulkarni has appeared.

4. From the side of Respondent Nos. 6 & 7/ MPCB, learned counsel Ms. Mansi Joishi has appeared.

5. From the side of Respondent No.11/ Project Proponent, Learned counsel Mr. R. B. Mahabal has appeared and apprised us that he has

moved an application before Respondent No. 4/SEIAA dated 14th May, 2022, seeking *ex-post facto* environmental clearance under the Office Memorandum dated 07/07/2021 under the violation category which is pending. In the said application it has been clarified by them that the construction of the project with FSI area of 14,805.95 Sq. Mtrs. was started which comprised of five residential buildings. 248 flats were constructed in 2005 as per the sanction plan dated 14.9.2005. The work was completed in the year 2009 and the occupancy certificate was granted to the project on 4.12.2009. The society registration was done on 29.8.2011 and the possession of the flats and buildings were handed over to the buyers' residents' society in the year 2012. At the time of the construction in the year 2005, there was no EC Notification. Thereafter also, the FSI area was considered as the deciding factor for the requirement of EC which was less than 20.000 Sq. Mtrs i.e. 14,805.95 Sq.Mtrs. (till the last building plan revision in the year 2005). The total cost of the buildings which is now the deciding factor was clarified in the MoEF&CC Notification dated 04/04/20211. The total cost of the buildings A,B,D and E was Rs. 15 crore. The earlier sanctioned plan of the year 2005 had all the buildings A, B, C, D, and E. But Project Proponent did not construct building C as it was not economically viable. After 12 years from the starting of the project and 8 years after completion of the first project and 6 years after handing over of the earlier project from the buyers, in the year 2017, now the Project Proponent has decided to construct Building No. C, with its total built – up construction area of 7,420.18 Sq. Mtrs. by changes in one residential building C of 55 flats vide sanction dated 21.06.2017. It is stated to be cause of action in the present case. The plan for this building 'C' was submitted in the year 2014 and the commencement certificate was issued on 15/07/2014.

6. Further, It is submitted that earlier the project did not need EC as the project had started prior to EC Notification and the FSI was less

than 20,000 Sq. Mtrs. The Project Proponent thought that regarding earlier buildings, the project was completed in all respects and the possession was given to the buyers' society. As such the construction of building No. 'C' would be a new project. Hence, the same would be treated separately, as there is nothing in common, as the utilization of the earlier assets were handed over along-with the buildings to the earlier buyers. The building 'C' was also shown in the old sanctioned layout of the project dated 14.09.2005, If the same is treated as part of the pre-sanctioned old project, then it would not require the EC as the project was old and not new. Now the matter is pending before the SEIAA for consideration. Therefore, it is urged by learned counsel Mr. R. B. Mahabal that this matter may be taken after the application is decided by the SEIAA as same would facilitate this Tribunal to reach correct conclusion in the present case.

7. He further urged that in case this Tribunal wants to proceed with the hearing, he would pray that ground of limitation be taken into consideration first, because in any case the present original application is extremely time barred and needs to be dismissed on that count.

8. From the side of the applicant, the contention of the learned counsel for the Project Proponent is vehemently opposed saying that the total area of the survey number on which project was proposed is 17433.10 Sq. Mtrs. and that all the buildings A,B,C and D were proposed to be constructed on the said land/ survey number. Therefore, there could be no separation with respect to construction of buildings 'C'.

9. The learned counsel for the Project Proponent has admitted the violation to have been done because of which only, he has approached for grant of *ex-post facto* Environmental Clearance.

10. He further vehemently argued that this matter should be decided in totality at the earliest because if the Tribunal provides an opportunity to the Project Proponent to have his application moved before SEIAA decided first, that would mean that any such Project Proponent would

start indulging in violations and would start moving applications under violation clause before the SEIAA and would keep the matter pending for indefinite period.

11. We are of the opinion that the project was started in the year 2005 and the major portion of construction was completed long back and thereafter in the year 2017, this matter has been brought before us, therefore, it would be appropriate to deal with the limitation issue first as has been pressed by the learned counsel for the Project Proponent. However, we also deem it appropriate that the SEIAA, before which the application dated 14/01/2022 for *ex-post facto* Environmental Clearance is pending should be directed to decide the same within a period of one month from today, particularly in this matter and direct accordingly.

12. Learned counsel for the Applicant has submitted his additional rejoinder affidavit dated 8/11/2022 and the copy of the same has been provided to the other parties. Therefore, if any affidavit in rebuttal is required to be filed by them, it be filed within a period of two weeks.

13. Put up this matter on 10th January, 2023.

Dinesh Kumar Singh, JM

Dr. Vijay Kulkarni, EM

BRAMHACORP
LIMITED

14th May, 2022

To,
The Member Secretary,
State Environment Impact Assessment Authority,
Environment Department, Govt. of Maharashtra
15th floor, New Administrative Building,
Mantralaya, Mumbai-400032

Subject: **Application for Environment Clearance as per OM 07.07.2021 and OM 28.01.2022 under EIA Notification 14.09.2006, following the procedures laid down in above and Violation Notification 14.03.2017**

Project: **Bramha Corp Ltd.**
Residential project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Village - Kondhwa Khurd, Taluka - Haveli, District - Pune, Maharashtra.

Sir/Madam,

1. We, Bramha Corp Limited, are applying for Environment Clearance for the Residential project "Bramha Exuberance" at S.No.13, H.No.1, 2 & 3, Village - Kondhwa Khurd, Taluka - Haveli, District - Pune, Maharashtra.

2. We had started the construction of the project with FSI area of **14,805.95 m².** It comprises 5 residential buildings, 248 flats in 2005 as per the Sanctioned plan No. DPO5191/VI/39 dated 14.09.2005. The work was completed in the year 2009. The Occupancy Certificate was granted to the project on 04.12.2009. Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers' residents' society in the year 2012.

3. At the time of the construction in the year 2005, there was no EC Notification, Thereafter also, the FSI area was considered as the deciding factor for the requirement of Environment clearance, which was less than 20,000 m² i.e. 14,805.95 m² (till the last building plan revision in the year 2005) The term 'total covered built-up construction area' which is now a deciding factor was clarified in the MoEF&CC OM dated 04.04.2011. The TOTAL cost of the Bldgs. No. A B D and E was Rs.15 Crore. The ready

deciding factor was clarified in the MoEF&CC OM dated 04.04.2011. The TOTAL cost of the Bldgs. No. A B D and E was Rs.15 Crore. The ready reckoner price in the year 2005 was Rs. 18,17,500/m^2 and in the year 2009 was Rs.38,85,000/m^2.

4. The earlier sanctioned plan of the year 2005 had all buildings A, B, C, D, and E. But we did not construct building C. **It was not economically viable** as the selling cost was not permitting buying the TDR from the open market.

5. After 12 years from starting the project AND 8 years after completion of the first project AND 6 years after handing over of the earlier project to the buyers, in the year 2017, we decided to construct Building No. C, with its 'total covered built-up construction area' of 7,420.18 m^2 by changes in 1 residential building C of 55 flats vide sanction no. CC/0819/17 dated 21.06.2017.

6. The plan for this building C was submitted in the year 2014, and Commencement Certificate was issued on 15.07.2014.

7. PROPOSITION NO.1: The earlier project did not need EC as the project had started prior to EC Notification and the FSI was <20,000m^2. PP thought that the earlier buildings, the project was complete in all respect, OC is obtained and possession was given to buyers' society. As such this will be a new project. Hence these two projects (buildings) are to be treated separately, separated by a period of over five years. There is nothing in common, as far as utilization of the earlier assets handed over along with buildings to earlier buyers.

8. PROPOSITION NO.2: This building C was also shown in the old, sanctioned layout of the project dated 14.09.2005. If this is treated as part of the pre-sanctioned OLD PROJECT, then it won't require the EC as the project was OLD and not NEW as per Clause 2(i).

BRAMHACORP
LIMITED

9. Therefore, even the local Planning Authority did not ask the EC from approving the plans till they granted the OC. The TOTAL cost of the Bldg. No. C was Rs.12.33 Crore. The ready reckoner price in the year 2005 was Rs. 18,17,500/m^2 and in the year 2014 was Rs. 99,64,800/m^2.

10. Now the matter has been filed in the NGT OA 65/2019. Hence PP decided to apply under the violation category in accordance with the Office Memorandum dated **07.07.2021** issued by the Ministry of Environment, Forest and Climate Change (MoEFCC), New Delhi vide F. No.22-21/2022.IA.III which prescribes Standard Operation Procedure for Identification and Handling of Violation Cases under EIA Notification 2006.

11. This application is also supported by MoEFCC's Office Memorandum dated 28.01.2022 vide F. No. 22-21/2020-IA.III (E 138949).

12. We have submitted duly filled Form 1 & 1A with the building plans that are approved as per the DC Rules, constructed and granted the OC. This shows that the project is in compliance with the DC Rules.

13. We would therefore request you to consider our application for Environment Clearance for above said project and expedite the process.

Thanking you,
Yours faithfully,
For Bramha Corp Ltd.

Jadeja Shah

	(c) Case No.	Original Application No. 65/2019 (WZ)
	(d) Orders/directions of the court, if any and relevance with the proposed project.	Attached as annexure
28.	Project Cost(in Lac.)	2733
30.	Whether the proposed project/activity located in notified Industrial area(Yes/No)	No

Activity

1 Construction, operation or decommissioning of the Project involving actions, which will cause physical changes in the locality (topography, land use, changes in water bodies, etc.)

S.No	Information/Checklist confirmation	Yes/No	Details there of (with approximate quantities/rates, wherever possible) with source of information data
1.1	Permanent or temporary change in land use, land cover or topography including increase in intensity of land use (with respect to local land use plan)	No	Development was carried in line with the topography & without disturbing natural drainage pattern.

1993

			Proposed project has been approved by PMC.
1.2	Clearance of existing land, vegetation and buildings?	Yes	Residential project consisting of Wing A, B,C D & E have already been constructed.
1.3	Creation of new land uses?	Yes	Residential project has been constructed on the project site.
1.4	Pre-construction investigations e.g. bore houses, soil testing?	Yes	Pre-construction investigation was carried out as per relevant standards
1.5	Construction works?	Yes	Residential project consisting of Wing A, B,C D & E have already been constructed.
1.6	Demolition works?	No	No demolition work was required.
1.7	Temporary sites used for construction works or housing of construction workers?	Yes	Temporary sheds were provided for workers.
1.8	Above ground buildings, structures or earthworks including linear structures,cut and fill or excavations and fill or excavations	Yes	The excavated material was used within site for land filling
1.9	Underground works including mining or tunneling?	No	No underground works including mining / Tunnelling was required.
1.10	Reclamation works?	No	Not Applicable
1.11	Dredging?	No	Not Applicable
1.12	Offshore structures?	No	Not Applicable
1.13	Production and manufacturing processes?	No	Not Applicable
1.14	Facilities for storage of goods or materials?	No	This is a residential project.
1.15	Facilities for treatment or disposal of solid waste or liquid effluents?	Yes	Solid Waste: The municipal solid waste is segregated on site. The biodegradable waste is treated in Vermicomposting pits and the non-biodegradable waste is handed over to the local body. Sewage: STP has been provided to treat the sewage generation.
1.16	Facilities for long term housing of operational workers?	No	No, there is no facilities for long term housing of operational workers. This is a residential project.
1.17	New road, rail or sea traffic during construction or operation?	No	The movements of vehicles carrying construction material to and from the site was through the existing road only.
1.18	New road, rail, air water borne or other transport infrastructure including new or altered routes and stations, ports, airports etc?	No	Existing road was used for the transport purpose.
1.19	Closure or diversion of existing transport routes or infrastructure leading to changes in traffic movements?	No	There was no diversion or closure of the existing transport routes and infrastructure.
1.20	New or diverted transmission lines or pipelines?	No	No new or diverted transmission lines or pipelines.
1.21	Impoundment, damming, culverting, realignment or other changes to the hydrology of watercourses or aquifers?	No	Not Applicable

78

1.22	Stream crossings?	No	Not Applicable
1.23	Abstraction or transfers of water from ground or surface waters?	No	Not Applicable
1.24	Changes in water bodies or the land surface affecting drainage or run-off?	No	The existing drainage system was upgraded by providing proper storm water and sewer network.
1.25	Transport of personnel or materials for construction, operation or decommissioning?	Yes	Construction phase: There was temporary movement of personnel, machines and materials during construction phase. The impact on the surroundings was negligible. Post construction: There is regular movement of vehicles and personnel in the operational phase.
1.26	Long-term dismantling or decommissioning or restoration works?	No	Not Applicable
1.27	Ongoing activity during decommissioning which could have an impact on the environment?	No	There was no impact on the Environment, appropriate measure to minimize the effects due to construction activity were taken.
1.28	Influx of people to an area in either temporarily or permanently?	Yes	This being a residential project, there will be influx of occupants.
1.29	Introduction of alien species?	No	There won't be any introduction of alien species.
1.30	Loss of native species or genetic diversity?	No	No threat of species loss will occur.
1.31	Any other actions?	No	No other action with reference to construction.

2 Use of Natural resources for construction or operation of the Project (such as land, water, materials or energy, especially any resources which are non-renewable or in short supply):

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
2.1	Land especially undeveloped or agricultural land (ha)	No	The land has been used for construction of Residential project.
2.2	Water (expected source & competing users) unit: KLD	Yes	1. Fresh water-123 m3/day 2. Recycled water (Flushing)- 62 m3/day 3. Recycled water (Gardening)- 17 m3/day 4. Recycled water (Vehicle Washing) 4 m3/day 5. Excess treated water- 72 m3/day 6. Total water requirement- 185 m3/day
2.3	Minerals (MT)	No	Since this is a residential project, there was no use of major minerals for construction.
2.4	Construction material – stone, aggregates, sand / soil (expected source – MT)	Yes	Materials procured from local authorized dealer.
2.5	Forests and timber (source – MT)	Yes	Only door frames. Certified wood was used.
2.6	Energy including electricity and fuels (source, competing users) Unit: fuel (MT),energy (MW)	Yes	Source of power supply: Maharashtra State Electricity

1995

			Distribution Company Ltd. (MSEDCL) Power requirement: During operation phase: I) Max. demand load: 1,135 kW II) Connected load: 1,419 kW
2.7	Any other natural resources (use appropriate standard units)	No	No other natural resources used.

3 Use, storage, transport, handling or production of substances or materials, which could be harmful to human health or the environment or raise concerns about actual or perceived risks to human health

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
3.1	Use of substances or materials, which are hazardous (as per MSIHC rules) to human health or the environment (flora, fauna, and water supplies	No	No hazardous material was used for construction
3.2	Changes in occurrence of disease or affect disease vectors (e.g. insect or water borne diseases)	No	No such activity was carried out which will change or affect occurrence of vectors.
3.3	Affect the welfare of people e.g. by changing living conditions?	Yes	Proposed project has positively affected the welfare of people by providing state of art infrastructure. The project had provided job opportunities to skilled and unskilled local people.
3.4	Vulnerable groups of people who could be affected by the project e.g. hospital patients, children, the elderly etc.	No	People did not get affected by project, as project has provided good infrastructure to the people in operation phase. All necessary Environmental Management practices will be followed in true spirit.
3.5	Any other causes	No	Not Applicable.

4 Production of solid wastes during construction or operation or decommissioning (MT/month)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
4.1	Spoil, overburden or mine wastes	No	Not Applicable.
4.2	Municipal waste (domestic and or commercial wastes)	Yes	Total solid waste -699kg/day 1.Bio-degradable waste-419 kg/day 2.Non-Biodegradable waste + Inert waste-280 kg/day 3.STP sludge-1.7nKg/day Dry waste is handed over to authorized vendor for further processing. Wet waste is treated in Vermicomposting pits.
4.3	Hazardous wastes (as per Hazardous Waste Management Rules)	No	No hazardous waste is generated.
4.4	Other industrial process wastes	No	Not Applicable.

4.5	Surplus product	No	Not Applicable.
4.6	Sewage sludge or other sludge from effluent treatment	Yes	Dried sludge used as manure for plantation & gardening purposes inside the premises.
4.7	Construction or demolition wastes	Yes	Construction waste was used for road and as filling material for levelling and road, pathway construction.
4.8	Redundant machinery or equipment	No	No redundant machinery or equipment were used at project site.
4.9	Contaminated soils or other materials	No	No contamination of soil.
4.10	Agricultural wastes	No	Not applicable
4.11	Other solid wastes	No	No any other solid waste generated at project site.

5 Release of pollutants or any hazardous, toxic or noxious substances to air(Kg/hr)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
5.1	Emissions from combustion of fossil fuels from stationary or mobile sources	Yes	Vehicular movement and DG set is sources of air pollution. D.G Set is used only in case of Power Failure.
5.2	Emissions from production processes	No	Not Applicable
5.3	Emissions from materials handling including storage or transport	No	Not Applicable
5.4	Emissions from construction activities including plant and equipment	Yes	Dust emissions occurred during excavation and earthwork. Proper care was taken to reduce dust emission.
5.5	Dust or odours from handling of materials including construction materials, sewage and waste	Yes	Dust was generated during transport and handling of material.
5.6	Emissions from incineration of waste	No	No incineration of waste was carried out at site.
5.7	Emissions from burning of waste in open air (e.g. slash materials, construction debris)	No	No burning of waste was carried out at site.
5.8	Emissions from any other sources	No	None as this project is a Residential project.

6 Generation of Noise and Vibration, and Emissions of Light and Heat:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
6.1	From operation of equipment e.g. engines, ventilation plant, crushers	Yes	Construction phase: The significant source of noise pollution was the

1997

			machinery used for construction and vehicular movement. Operation phase: During operation phase the only source of noise is operation of vehicular traffic and DG sets however, DG set is operated during power failure only.
6.2	From industrial or similar processes	No	Not Applicable.
6.3	From construction or demolition	Yes	The construction activities included the noise generating activities i.e. Excavation activities etc., Concreting and mixing, Heavy vehicle movement, Operation of D.G sets. Precautions were taken to control noise pollution i.e. High noise generating activities were carried out during day time only, workers working near high noise machinery were provided with ear muffs/ear plugs, Acoustic enclosure for DG Set were provided.
6.4	From blasting or piling	No	No blasting activities were carried out.
6.5	From construction or operational traffic	Yes	During construction phase: Precautions were taken to reduce the impacts of the vehicular movement such as vehicular trips were not in peak traffic hours during the construction phase. During operation phase: The vehicular parking is restricted only in the adequate parking area provided, which helps in reducing noise pollution due to traffic congestion. Adequate tree plantation done also helps to reduce the noise level and enhance air quality
6.6	From lighting or cooling systems	Yes	Noise generation from DG sets.
6.7	From any other sources	No	Not Applicable

7 Risks of contamination of land or water from releases of pollutants into the ground or into sewers, surface waters, groundwater, coastal waters or the sea:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
7.1	From handling, storage, use or spillage of hazardous materials	No	Not Applicable
7.2	From discharge of sewage or other effluents to water or the land (expected mode and place of discharge)	No	The sewage generated is treated in STP. The treated sewage from STP is utilized for gardening, vehicle washing etc. thus there is impact on the surface / ground water.
7.3	By deposition of pollutants emitted to air into the land or into water	No	No risk of contamination due to pollutants in air or water.
7.4	From any other sources	No	Not Applicable
7.5	Is there a risk of long term build up of pollutants in the	No	Not Applicable

82

	environment from these sources?		

8 Risk of accidents during construction or operation of the Project, which could affect human health or the environment

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
8.1	From explosions, spillages, fires etc from storage, handling, use or production of hazardous substances	No	No production of hazardous substances is involved. This is a residential project.
8.2	From any other causes	No	Not Applicable
8.3	Could the project be affected by natural disasters causing environmental damage (e.g. floods, earthquakes, landslides, cloudburst etc)?	No	The project falls under seismic zone-III as per IS1893 (Part-1):2002. The structural design shall be accordingly performed. Hence, no risk due to natural hazards is envisaged

9 Factors which should be considered (such as consequential development) which could lead to environmental effects or the potential for cumulative impacts with other existing or planned activities in the locality

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
9.1	Lead to development of supporting utilities, ancillary development or development stimulated by the project which could have impact on the environment e.g.: ◦ Supporting infrastructure (roads, power supply,waste or waste water treatment, etc.) ◦ housing development ◦ extractive industries ◦ supply industries ◦ Other	Yes	The project provided a well-designed area for the new occupants with supporting infrastructure like RWH, STP etc.
9.2	Lead to after-use of the site, which could have an impact on the environment	No	Not Applicable
9.3	Set a precedent for later developments	No	Not Applicable
9.4	Have cumulative effects due to proximity to other existing or planned projects with similar effects	No	Proposed project land will be used for residential purpose and will not have major effects on environment.

(III) Environmental Sensitivity

S.No	Areas	Name/Identity	Aerial distance (within 15km.) Proposed project location boundary
1	Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or	No	Nil in 15 km Radius of the project site.

	other related value		
2	Areas which are important or sensitive for ecological reasons - Wetlands, watercourses or other water bodies, coastal zone, biospheres, mountains, forests	Yes	Mutha River: 6.67 km Mula Mutha River: 7.49 km Jambulwadi Lake: 7 km Katraj Snake Park Lake: 4 km Katraj Lake: 4.76 km Pisoli Lake: 5.53 km Pashan Lake: 12.93 Khadakwasla Lake: 13.80 km
3	Areas used by protected, important or sensitive species of flora or fauna for breeding, nesting, foraging, resting, over wintering, migration	No	Nil in 15 km Radius of the project site.
4	Inland, coastal, marine or underground waters	Yes	Mutha River: 6.67 km Mula Mutha River: 7.49 km Jambulwadi Lake: 7 km Katraj Snake Park Lake: 4 km Katraj Lake: 4.76 km Pisoli Lake: 5.53 km Pashan Lake: 12.93 Khadakwasla Lake: 13.80 km
5	State, National boundaries	No	Nil in 15 km Radius of the project site.
6	Routes or facilities used by the public for access to recreation or other tourist, pilgrim areas	No	Nil in 15 km Radius of the project site.
7	Defence installations	Yes	Viman Nagar: 10.34 km
8	Densely populated or built-up area	Yes	Fully urbanized area.
9	Areas occupied by sensitive man-made land uses (hospitals, schools, places of worship, community facilities)	Yes	Hospital 1. Sana Hospital: 550 m 2. Lifeline Hospital: 440 km 3. Omkar Hospital: 2.78 km 4. Adarsh Hospital: 2.45 km School 1. Iqra English School: 2.21 km 2. Maruti Badhe Memorial School: 2.77 km 3. Sinhgad City School:3.27 km 4. Creative English Medium School: 2.63 Worship place 1. Sai Temple: 1.63 km 2. ISKCON NVCC: 3.40 km 3. Good Shepherd Church of India: 3.23 km
10	Areas containing important, high quality or scarce resources. (ground water resources,surface resources,forestry,agriculture,fisheries,tourism,minerals)	Yes	Mutha River: 6.67 km Mula Mutha River: 7.49 km Jambulwadi Lake: 7 km Katraj Snake Park Lake: 4 km Katraj Lake: 4.76 km Pisoli Lake: 5.53 km Pashan Lake: 12.93 Khadakwasla Lake: 13.80 km
11	Areas already subjected to pollution or environmental damage.(those where existing legal environmental standards are exceeded)	Yes	Bhairavnath Lake is 0.3 km away from proposed project site.
12	Areas susceptible to natural hazard which could cause the project to present environmental problems (earthquakes, subsidence, landslides, erosion, flooding or extreme or adverse climatic conditions) similar effects	No	Nil in 15 km Radius of the project site.

(IV) PROPOSED TERMS OF REFERENCE FOR EIA STUDIES

1	**Uploaded Proposed TOR File**	Annexure-TOR file
2	**Uploaded scanned copy of covering letter**	Annexure-scanned copy of covering letter
3	**Uploaded Pre-Feasibility report(PFR)**	Annexure-PFR

4	**Uploaded additional attachments(only single pdf file)**	Annexure-Additional attachments

Subject : Residential Project “Bramha Exuberance” at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune

Sir,

This has reference to your proposal No. SIA/MH/MIS/76973/2022 dated 17 May 2022 regarding grant of TORs for the above mentioned proposal.

2. This is to acknowledge that the soft copies of EIA/EMP/other reports along with the proceedings of Public Hearing (if applicable to the instant project) have been uploaded on Parivesh Portal.

Yours Sincerely

SEIAA, Maharashtra

	Firefighting (Underground water tank)	50 m^3			
	Firefighting (Overhead water tank)	50 m^3			
24	**Source of water**	Pune Municipal Corporation			
25	**Rain Water Harvesting (RWH)**				
	i) Level of the groundwater table	Groundwater table: 5 m to 6 m below ground level			
	ii) Size and no of RWH tank(s) and Quantity	NA			
	iii) Quantity and size of recharge pits	Total 2 no. of Borewell (1 no. of Borewell: Size 3'x3'x4.5")			
	iv) Details of UGT tanks if any:	Domestic UG domestic tank capacity: 377 m^3, Domestic UG Fire tank capacity: 50 m^3,			
26	**Sewage and wastewater Demand**	i) Sewage generation in KLD	173 m^3/day		
		ii) STP technology	MBBR		
		iii) No. and Capacity of STP	1 no. x 70 m^3/day Existing		
27	**Solid Waste Management during Construction phase**: 0 kg/day				
28	**Solid Waste Management during operation Phase**:				

Type	**Quantity (kg/day)**	**Treatment/disposal**
Total waste generation	699 kg/day	
Wet waste	419 kg/day	Through Organic Waste Converter. Generated manure used for gardening.
Dry waste	280 kg/day	Handed over to the authorized recycling agency
Hazardous waste	NA	NA
Biomedical waste	NA	NA

	STP sludge (dry)	1.7 kg/day	Used as manure
	E-waste	NA	NA

29 **Green Belt Development**

Total RG area	2,045.85 m^2
Existing trees on plot	392
Number of trees to be planted	NA
No of trees to be retained	NA
Number of trees to be transplanted/cut	NA

30 **Power requirement**

Source of power supply	MSEDCL
During Construction Phase (Demand Load)	NA
During Operation phase (Connected Load)	1,419 kW
During Operation phase (Demand Load)	1,135 kW
Transformer	1 nos. X 82.5 kVA
DG set	1 nos. X 82.5 kVA
Fuel Used	Diesel

31 **Details of Energy saving**

Energy Conservation Measures	**Quantity**
Energy-saving due to use of solar PV panels	5 %
Energy-saving due to CFL Lamp	NA
Energy-saving due to LED Lamp	NA
Energy-saving due to Electronic Ballast	NA
Energy savings due to VFD	NA
Overall energy saving	20%

32 **Environmental Management plan budget during Construction phase**

Component	**Parameter**	**Cost (Rs. In Lakhs)**
Air Environment	Water for dust suppression	8.0
	Water utilization for tree planted along with the plot boundary	1.0
	Vehicle maintenance, washing area, tyre cleaning	0.5
	Safety net	0.5
Water Environment	Site sanitation, Toilets, STP, safe drinking water	1.0
	Environment Monitoring	0.5
	Stormwater management	0.5
Socio-Economics Environment	Disinfection at site	1.0
Health & Safety	Health check-ups for workers, first aid kit	1.0
Noise Environment	Site fencing & noise barrier	1.0
	Traffic management	0.5
Training and awareness	Safety personal protective equipment & training programs	1.0
Total		**16.5**

33 **Environmental Management plan budget during Operation phase**

	Sr.	Component	Details	Capital cost (Rs. In Lakh)	O&M cost (Rs. In Lakh/year)
	1.	Storm water management	Laying of storm & Sewer line up to final disposal point	11.00	0.90
	2.	Sewage Treatment Plant	1 no. of STP having capacity 70 m^3/day existing & 110 m^3/day to be proposed	80.25	2.6
	3.	Rain Water Harvesting	1 no. of Borewell	1.90	0.5
	4.	Solid Waste Management	Cost for Treatment of biodegradable garbage in OWC	3.00	0.4
	5.	Landscape development	Tree Plantation	17.26	1.5
	6.	Energy Conservation	Solar PV panels for electricity generation, LED etc.	25.00	2.6
	7.	Environmental Monitoring	Monitoring and analysis of Air, Water, Noise, Soil, surface water, STP treated water etc.	5.00	0.5
	8.	Firefighting system	Installation and operation of Fire Fighting system	14.50	1.7
	9.	Disaster Management		23.10	9.5
		Total		**181.01**	**20.2**

Pollution monitoring, Engineers & Contractors in Environmental Management

Accreditation No.: QCI/NABET/ENV/ACO/22/2405
Re-Accreditation dated 24.06.2021 valid up 23.09.2022
147th SEAC-III Meeting, Item No.36, Date: 21.07.2022

Proposal no. SIA/MH/MIS/76973/2022

Project Summary

- "Bramha Exburence" is a residential project at sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BramhaCorp Ltd.
- We had started the construction of the project with 'FSI area of 14,805.95 m^2. It comprises of 5 residential buildings, 248 flats in 2005 as per the Sanctioned plan No. DPO5191/VI/39 dated 14.09.2005. The work was completed in the year 2009. The Occupancy Certificate was granted to the project on 04.12.2009. Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers' residents' society in the year 2012.
- At the time of the construction in the year 2005, there was no EC Notification, Thereafter also, the FSI area was considered as the deciding factor for the requirement of Environment clearance, which was less than 20,000 m^2 i.e.14,805.95 m^2 (till the last building plan revision in year 2005)
- The earlier sanctioned plan of year 2005 had all buildings A, B, C, D and E. But we did not construct building C. **It was not economically viable** as the selling cost was not permitting buying the TDR from the open market.
- After 12 years from starting the project AND 8 years after completion of the first project AND 6 years after handing over of the earlier project to the buyers, in the year 2017, we decided to construct Building No. C, with its 'total covered built-up construction area' of 6500 m^2 by changes in 1 residential building C of 55 flats with B+G+F+11 floors vide sanction no. CC/0819/17 dated 21.06.2017.

63

2005

Project Summary Cont.

- The plan for this building C was submitted in the year 2014, and Commencement Certificate was issued on 15.07.2014.
- The earlier we unaware about project need EC as the project had started prior to EC Notification 2006 and the FSI was <20,000m^2. We thought that the earlier buildings, Building A, B, D & E were complete in all respect, OC was obtained on 04.12.2009 and possession was given to buyers' society. As such this will be a new Building C. Hence these two projects (buildings A, B, D,E & proposed C) are to be treated separately, separated by a period of over five years. There is nothing in common, as far as utilization of the earlier assets handed over along with buildings to earlier buyers.
- **Now the matter has been filed in the NGT OA 65/2019**. Hence We decided to apply under the violation category in accordance with the Office Memorandum dated **07.07.2021** issued by the Ministry of Environment, Forest and Climate Change (MoEFCC), New Delhi vide F. No.22-21/2022.IA.III
- This application is also supported by MoEF&CC's Office Memorandum dated 28.01.2022 vide F. No. 22-21/2020-IA.III (E 138949).
- We have applied for environmental clearance for the total construction area of 50,548.37 m^2 vide proposal no. SIA/MH/MIS/76973/2022 dated 17.02.2022.
- Project is accessible by 20 m wide DP Road.

Subject : Residential Project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune

Sir,

This has reference to your proposal No. SIA/MH/MIS/76973/2022 dated 17 May 2022 regarding grant of TORs for the above mentioned proposal.

2. This is to acknowledge that the soft copies of EIA/EMP/other reports along with the proceedings of Public Hearing (if applicable to the instant project) have been uploaded on Parivesh Portal.

Yours Sincerely

SEIAA, Maharashtra

Standard Terms of Reference_ April 2015 Cont.

23

1) Examine details of land use as per Master Plan and land use around 10 km radius of the project site. Analysis should be made based on latest satellite imagery for land use with raw images.
2) Submit details of environmentally sensitive places, land acquisition status, rehabilitation of communities/ villages and present status of such activities.
3) Examine baseline environmental quality along with projected incremental load due to the project.
4) Environmental data to be considered in relation to the project development would be (a) land, (b) groundwater, (c) surface water, (d) air, (e) bio-diversity, (f) noise and vibrations, (g) socio economic and health.
5) Submit a copy of the contour plan with slopes, drainage pattern of the site and surrounding area.
6) Submit the details of the trees to be felled for the project.
7) Submit the present land use and permission required for any conversion such as forest, agriculture etc.
8) Submit Roles and responsibility of the developer etc for compliance of environmental regulations under the provisions of EP Act.
9) Ground water classification as per the Central Ground Water Authority.
10) Examine the details of Source of water, water requirement, use of treated waste water and prepare a water balance chart.
11) Rain water harvesting proposals should be made with due safeguards for ground water quality. Maximize recycling of water and utilization of rain water. Examine details.
12) Examine soil characteristics and depth of ground water table for rainwater harvesting

108

13) Examine details of solid waste generation treatment and its disposal.

14) Examine and submit details of use of solar energy and alternative source of energy to reduce the fossil energy consumption.

15) DG sets are likely to be used during construction and operational phase of the project. Emissions from DG sets must be taken into consideration while estimating the impacts on air environment. Examine and submit details.

16) Examine road/rail connectivity to the project site and impact on the traffic due to the proposed project. Present and future traffic and transport facilities for the region should be analysed with measures for preventing traffic congestion and providing faster trouble free system to reach different destinations in the city.

17) A detailed traffic and transportation study should be made for existing and projected passenger and cargo traffic.

18) Examine the details of transport of materials for construction which should include source and availability.

19) Examine separately the details for construction and operation phases both for Environmental Management Plan and Environmental Monitoring Plan with cost and parameters.

20) Submit details of a comprehensive Disaster Management Plan including emergency evacuation during natural and man-made disaster.

21) Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given

22) The cost of the Project (capital cost and recurring cost) as well as the cost towards implementation of EMP should be clearly spelt out

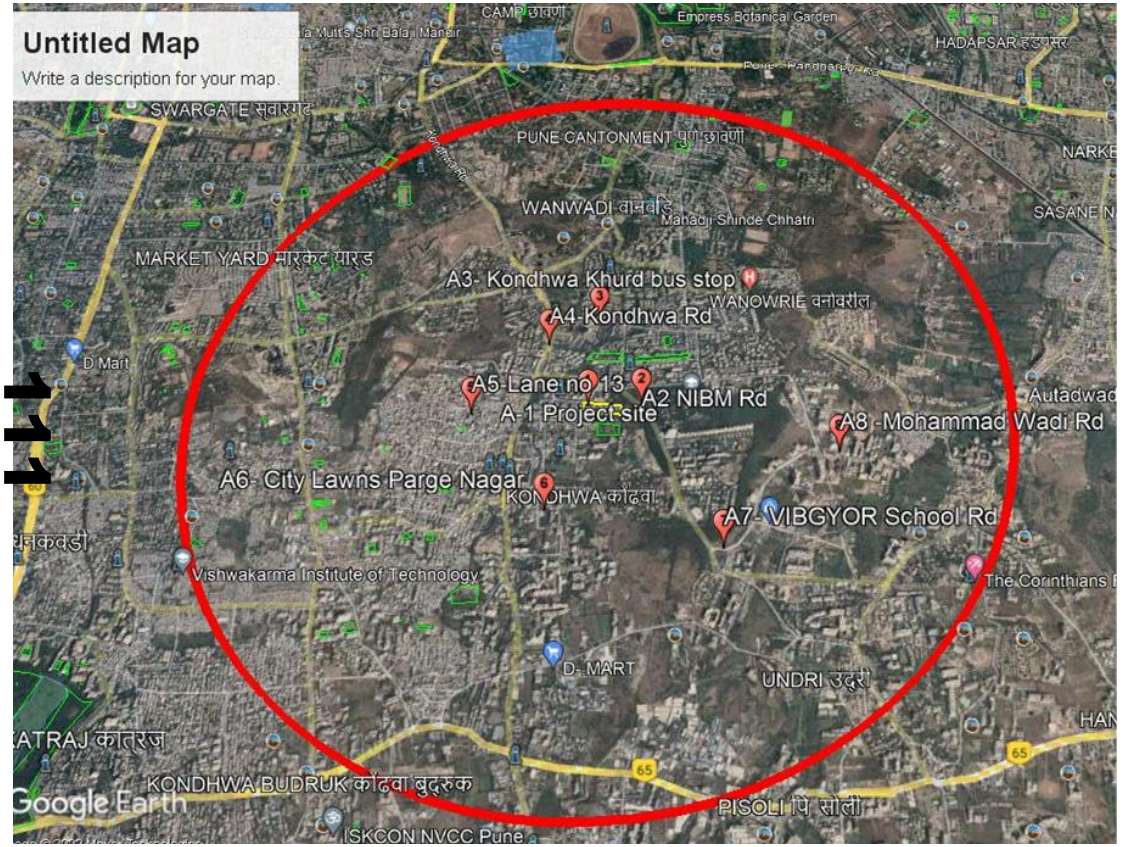
23) Any further clarification on carrying out the above studies including anticipated impacts due to the project and mitigative measure, project proponent can refer to the model ToR available on Ministry website "http://moef.nic.in/Manual/Townships".

Additional studies for ToR

- Traffic study
- Carbon footprint report
- Environment Status Report
- Biodiversity Index
- Air quality modelling study
- Treatability study of Existing STP & OWC
- Renewable energy saving details
- Storm water management
- Swept path analysis

Baseline Environmental Monitoring Locations

Wind Direction- North- South



Sr.	Environmental Attribute	Sampling location
1	Meteorology	Indian Meteorological Department, Pune
2	**Sampling at eight locations (in 3 km study area)**	
	A1, N1, S1	Project Site
	A2, N2, S2	NIBM Road
	A3, N3, S3	Kondhwa Khurd Bus stop
	A4, N4, S4	Kondhwa Road
	A5, N5, S5	Lane no 13
	A6, N6, S6	City Lawns Parge Nagar
	A7, N6, S6	VIBGYOR Highschool Road
	A8, N8, S8	Mohmmad wadi road
	Surface water	
	SW1	Katraj Lake
	SW2	Autadewadi lake
	SW3	Mutha river
	SW4	Peshve park lake
4	Ground water	
	GW1	Bore Well water (Project site Area)
5	Geology and Geohydrology	Generally, in 10 km study area
6	Land use pattern	Generally, in 10 km study area
7	Ecology	Primary data collection at site
8	Socio-economic and demography	Generally, in 10 km study area through Pune city Census data of year 2011

Baseline Environmental Monitoring Locations

Aspect	Mode of Data collection	No. of Sampling Locations	Frequency	Parameter
Meteorology	Primary data	-	13 consecutive weeks	Temperature, Humidity, Wind speed, Wind direction and Rainfall
Ambient Air Quality	Field studies	8 locations	13 consecutive weeks	PM_{10}, $PM_{2.5}$ Sulphur Dioxide (SO_2) Nitrogen Oxide (NO_x) Carbon Monoxide (CO)
Noise	Field studies	8 Locations	Once	Hourly equivalent noise level during day time and Night time
Soil	Field studies	8 Location	Once	pH, Electrical Conductivity Sodium, Nitrogen, Phosphate, Potassium, Organic Matter, Cation Exchange Capacity (meq/100 gm), Particle Size Analysis , Permeability, Water holding capacity, Porosity

Baseline Environmental Monitoring Locations

Aspect	Mode of Data collection	No. of Sampling Locations	Frequency	Parameter
Ground Water Quality	Field studies	1 Location	Once	Physical, chemical and bacteriological parameters, as per Environment Protection Rules/IS 10500 as applicable, shall be analyzed
Surface water Quality	Field studies	4 Location	Once	Physical, chemical and bacteriological parameters, as per Environment Protection Rules/IS 10500 as applicable, shall be analyzed
Land use pattern	Field visit and usage of latest satellite image		--	Already a developed urban cluster
Terrestrial Ecology	Field studies & Literature review		--	Inventory of major floral & faunal species
Socio-economic environment	Census 2011, Secondary Sources		--	Demography, caste profile, literacy rate, occupational profile

2029

Thank You

114

PP requested to withdraw the application. Committee noted & accepted the same, hence application is forwarded to SEIAA with the recommendation that PP may be allowed to withdraw the project.

****

36.	**P-36**	SIA/MH/MIS/76973/2022	Residential Project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune by BRAMHACORP LIMITED

Representative of PP was present during the meeting along with environmental consultant M/s. Mahabal Enviro Engineers Pvt. Ltd.

It is noted that, the PP has submitted the application for prior Environment clearance under violation category. PP stated that, the project for total plot area of 8,950 m2, FSI area of 20,024.42 m2, Non FSI area of 12,401.58 m2 and total BUA of 32,426 m2.

Brief information of the proposal is as below:

1	Proposal Number	**SIA/MH/MIS/269906/2022**
2	Name of Project	Expansion in Environment Clearance of Proposed development of residential and commercial project "Apple Regency" at Sr. No.138/2B/2/3/4/5, S.No. 174/B/2/3/4/5(P) at village Dhayari, Taluka Haveli, District Pune, Maharashtra by M/s Sri Sidhievinayak Associates
3	Project Category	8(a) B2 Category
4	Type of Institution	Private
5	Name of Project Proponent	Name: Mr. Rahul Paygude Regd. Office address: M/s Sri Sidhievinayak Associates. Sr. No. 138/174, Apple Regency, Sinhagad Road, Dhayari, Pune Contact number: - Email ID: srisidhievinayakassociates@gmail.com
6	Consultant	Mahabal Enviro Engineers Pvt. Ltd.
7	Applied for	Environmental Clearance
8	Details of previous EC	We have received Environment Clearance from Government of Maharashtra vide File no. SEIAA-EC-0000001546 dated 28.05.2019.
9	Location of project	Sr. No.138/2B/2/3/4/5, S. No. 174/B/2/3/4/5(P) at village Dhayari, Taluka Haveli, District Pune, Maharashtra
10	Latitude and Longitude	Latitude 18°27'23.46" N Longitude 73°48'8.32" E
11	Total Plot area (m^2)	8,950 m^2

12	Deductions (m^2)	2,491.82 m^2
13	Net Plot Area (m^2)	6,458.18 m^2
14	Proposed FSI Area (m^2)	20,024.42 m^2
15	Proposed Non-FSI Area (m^2)	12,401.58 m^2
16	Proposed Total BUA area (m^2)	32,426 m^2
17	TBUA (m^2) approved by Planning Authority till date	32,426 m^2 Building approval plan received from Pune Municipal Corporation vide no. CC/0675/21 dated 23.06.2021
18	Total ground coverage (m^2) & %	2389.46 m^2 (37%) of total net plot area
19	Total project cost (Rs.)	Rs.72.39 Crore
20	CER as per MoEF & CC circular dated 01/05/2018	

CER Activity	Details of CER activity and Place of Implementation	Name/address of implementing agency	Total Amount (Rs.)	Duration
___	___	___	___	___

			Club House	G+1 — 7.30
22	Total number of tenements/shops/offices	No. of tenement: 202 nos. No. of shops: 67 nos.		
23	**Total Water Requirement**			

		Dry Season	Wet Season
	Freshwater (in m^3/day)	101 m^3/day	101 m^3/day
	Recycled water (Flushing)	57 m^3/day	57 m^3/day
	Recycled water (Gardening)	8 m^3/day	4 m^3/day
	Total water requirement	154 m^3/day	150 m^3/day
	Wastewater generation	144 m^3/day	144 m^3/day
24	**Water Storage Capacity for Firefighting**		
	Firefighting (Underground water tank)	150 m^3	

	Firefighting (Overhead water tank)	40 m^3
25	**Source of water**	_____
26	**Rain Water Harvesting (RWH)**	
	i) Level of the groundwater table	Groundwater table: Pre-Monsoon-12 to 15m BGL Post Monsoon-5 to 6m
	ii) Size and no of RWH tank(s) and Quantity	NA
	iii) Quantity and size of recharge pits	2 nos. of recharge pit Size 2 m x1 m x2 m
	iv) Details of UGT tanks if any:	Domestic UG tank capacity: 340 m^3 Flushing UG tank capacity: 75 m^3 Fire UG tank capacity: 190 m^3
27	**Sewage and wastewater Demand**	i) Sewage generation in KLD: 153 m^3/day ii) STP technology: MBBR iii) No. and Capacity of STP: 1 no. x 160 m^3/day
28	**Solid Waste Management during Construction phase**: 20 kg/day	
29	**Solid Waste Management during operation Phase:**	

Type	**Quantity (kg/day)**	**Treatment/disposal**
Total waste generation	611 kg/day	
Wet waste	367 kg/day	Through Organic Waste Converter. Generated manure will be used for gardening.
Dry waste	245 kg/day	Handed over to the authorized recycling agency
STP sludge (dry)	1 kg/day	will be used as manure

30 Green Belt Development

Total RG area	760 m^2
Existing trees on plot	62 nos.
Number of trees to be planted	95 nos.
No of trees to be retained	Nil
Number of trees to be transplanted/cut	Nil

31 Power requirement

Source of power supply	MSEDCL
During Construction Phase (Demand Load)	20 kW
During Operation phase (Connected Load)	1360 kW
During Operation phase (Demand Load)	350 kVA
Transformer	1 no. x 630 kVA, 1 nos. x 315 kV
DG set	1 nos. X 45 kVA
Fuel Used	Diesel

32 **Details of Energy saving**

Energy Conservation Measures	Quantity
Energy-saving due renewable energy	5 %
Overall energy saving	20 %

33 **Environmental Management plan budget during Construction phase**

Parameter	Description & Criteria	Estimation	Cost (Rs. In Lakh)
Water for dust suppression	During the construction phase, water will be required for sprinkling for suppression of dust and for construction purpose.	1 Water tanker/ day for 10 months	2
Site sanitation	Toilet facility provided for labours	10 No. of Toilets	4
Environment Monitoring	Ambient air, drinking water, noise and soil testing on monthly basis.	Monitoring of Air, Noise, Soil and water and wastewater through MoEF Approved lab	2
Disinfection	Cleaning and maintaining the site	Daily Housekeeping, Annual Health Checkup, Quarterly Disinfection	1
Health Check up	Weekly health checkup at site and medicines.	PPE and Safety equipment's	1
Total			**10**

34 **Environmental Management plan budget during Operation phase**

Sr.	Component	Details	Capital cost (Rs. In Lakh)	O&M cost (Rs. In Lacs/year)
Sewage Treatment plant	1 no. of STP having Capacity 160 m^3/day	MBBR STP technology	50	8
Solid Waste Management	Cost for Treatment of biodegradable garbage in OWC	OWC installation, Maintenance & handling of Biodegradable garbage, segregation of waste	18	2
Landscape	Tree Plantation & Landscaping	Tree plantation & landscape area to be	14	1

			developed		
	Environment Monitoring	Monitoring & analysis of Air, Noise, water analysis	Regular monitoring will be scheduled every half yearly.	MoEF approved Laboratory	5
	Energy Conservation	Solar street lighting	Solar system	5	1
	Rain Water Harvesting	2 no. of recharge pits	Construction & installation	2	1
	Laying of Storm & Sewer line up to final disposal point	Laying of Storm & Sewer line up to final disposal point	Construction & Maintenance	5	1
	Total			**94**	**19**

35	**Traffic Management:**	**Type**	**Required as per DCR**	**Actual Provided**	**Area per parking (m^2)**
		4 -wheeler	204 nos.	204 nos.	2,550 (For 4-wheeler- 12.5 m^2)

		Cycle	141 nos.	141 nos.	
36	Details of Court cases / litigations w.r.t. the project and project location if any.	No			

Deliberations:-

PP stated that, they had started the construction of the project with 'FSI area of 14,805.95 m2. PP informed that, the project comprises of 5 residential buildings, 248 flats in 2005 as per the Sanctioned plan No. DPO5191/VI/39 dated14.09.2005. PP further informed that, the work was completed in the year 2009 and the Occupancy Certificate was also obtained to the project vide letter dated 04.12.2009. PP informed that, the Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers' residents' society in the year 2012. PP informed that, the earlier sanctioned plan had all buildings A, B, C, D and E but they did not construct building C as it was not

economically viable. PP stated that, at the time of the construction in the year 2005, there was no EC Notification and also the FSI area was considered as the deciding factor for the requirement of Environment clearance, which was less than 20,000 m2 i.e.14,805.95 m2 (till the last building plan revision in year 2005)

PP further stated that, after 12 years in the year 2017, they decided to construct Building No. C, with its 'total covered built-up construction area' of 6500 m2 by changes in 1 residential building C of 55 flats with B+G+F+11 floors. PP informed that, they were earlier unaware about project need EC as the project had started prior to EC Notification2006 and the FSI was more than 20,000m2

PP informed that, the matter has been filed in the NGT OA 65/2019, hence they have decided to apply under the violation category in accordance with the Office Memorandum dated07.07.2021 issued by the Ministry of Environment, Forest and Climate Change (MoEFCC). The case was discussed on the basis of the documents submitted and presentation made by the proponent. All issues relating to environment, including air, water, land, soil, ecology, biodiversity and social aspects were examined. The proposal is appraised as category 8(b) B1.

The office memorandum dated 28.01.2022 mentions SOP in clause no 10 and sub clause no (i) mentions that " ***without prejudice to any other consequences, action to be initiated under section 15 read with section 19 of the Environment (Protection) Act, 1986 against all Violations.***

It is not clear that who will initiate the action under section 15 read with section 19 of Environment (Protection) act 1986. In violation cases the committee feels that proper procedure shall be laid down based on the of OM issued by MoEFCC. However Step 3 mentions about appraisal under EIA notification, 2006, the sub clause B (i) mentions about procedure of TOR to be issued in Violation cases.

Decision-

Considering above the application is submitted for further guidance in violation cases

****

Chairman

SEAC Deliberation –

PP stated that, they had started the construction of the project with 'FSI area of 14,805.95 m2. PP informed that, the project comprises of 5 residential buildings, 248 flats in 2005 as per the Sanctioned plan No. DPO5191/VI/39 dated14.09.2005. PP further informed that, the work was completed in the year 2009 and the Occupancy Certificate was also obtained to the project vide letter dated 04.12.2009. PP informed that, the Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers' residents' society in the year 2012. PP informed that, the earlier sanctioned plan had all buildings A, B, C, D and E but they did not construct building C as it was not economically viable. PP stated that, at the time of the construction in the year 2005, there was no EC Notification and also the FSI area was considered as the deciding factor for the requirement of Environment clearance, which was less than 20,000 m2 i.e.14,805.95 m2 (till the last building plan revision in year 2005)

PP further stated that, after 12 years in the year 2017, they decided to construct Building No. C, with its 'total covered built-up construction area' of 6500 m2 by changes in 1 residential building C of 55 flats with B+G+F+11 floors. PP informed that, they were earlier unaware about project need EC as the project had started prior to EC Notification2006 and the FSI was more than 20,000m2

PP informed that, the matter has been filed in the NGT OA 65/2019, hence they have decided to apply under the violation category in accordance with the Office Memorandum dated07.07.2021 issued by the Ministry of Environment, Forest and Climate Change (MoEFCC). The case was discussed on the basis of the documents submitted and presentation made by the proponent. All issues relating to environment, including air, water, land, soil, ecology, biodiversity and social aspects were examined. The proposal is appraised as category 8(b) B1.

The office memorandum dated 28.01.2022 mentions SOP in clause no 10 and sub clause no (i) mentions that " without prejudice to any other consequences, action to be initiated under section 15 read with section 19 of the Environment (Protection) Act, 1986 against all Violations.

It is not clear that who will initiate the action under section 15 read with section 19 of Environment (Protection) act 1986. In violation cases the committee feels that proper procedure shall be laid down based on the of OM issued by MoEFCC. However Step 3 mentions about appraisal under EIA notification, 2006, the sub clause B (i) mentions about procedure of TOR to be issued in Violation cases.

Recommendations of SEAC-

Considering above the application is submitted for further guidance in violation cases

Deliberation in SEIAA-

The proposal is submitted by SEAC for further guidance in violation cases. During the meeting SEIAA observed that, all project details mentioned in above table is for different project. Further, SEIAA vide Circular dated 22.08.2022 issued guidelines appraising the violation projects. SEIAA after deliberation decided to refer back the proposal to SEAC for appraisal as per guidelines issued by SEIAA vide Circular dated 22.08.2022.

SEIAA Decision-

SEIAA decided to refer back the proposal to SEAC.

Member Secretary

Chairman

Discussion Item- 1:-

A. Correction in Minutes of Sr No. 36 of 147th SEAC-3 meeting held on 19-22.07.2022

An Email requesting correction in 147th Minutes received from "M/s. BRAMHACORP LIMITED" received on 9th August, 2022. **It is noted that, the PP has submitted the application under** Violation category.

Yes
Court case details-
NGT Western zone bench at Pune – Case no.65/2019

Deliberations:

PP informed that, the application is a Residential Project located at Village Kondhwa Khurd and the Project is a Fresh EC application under violation category with existing construction on site. PP stated that, the existing construction was started in year 2005 and there was no EC Notification. PP further stated that, FSI area was considered as the deciding factor for the requirement of Environment clearance, which was less than 20,000 m2 i.e.14,805.95 m2. PP stated that, a case has been filed in the NGT OA 65/2019 and hence they decided to apply under the violation category in accordance with the Office Memorandum dated 07.07.2021 issued by the Ministry of Environment, Forest and Climate Change MoEFCC. PP informed that the existing project has 5 buildings. PP further informed that Building A, Building B, Building D and Building E have Podium+Stilt+11 Floors building configuration and Building C has Lower Parking+Podium+11 Floors.

PP & Environment consultant could not able to explain the chronology of the project, & construction status of the project properly. PP & Environment consultant requested more time. **In view of above, the proposal is deferred and shall be considered afresh only after the compliance of above observations.**

Proposal no. SIA/MH/MIS/76973/2022

Project Summary

- **'Bramha Exuberance'** is a residential project at sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BrahmaCorp Ltd.
- As per sanction 2005, **A & B (4 wings each), D, and E (5 wings each) buildings were constructed with 'FSI area of 16,693.84 m^2**. It comprises of 5 residential buildings, **249 flats** in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21/9/2005 & CC/3387/05 dated 30/12/2005. **The entire work was completed in 2009.**
- **The Occupancy Certificate was granted to the project on 04/12/2009**. Society registration was done on 29/08/2011 and the possession of the flats and buildings was handed over to the buyers 'residents' society in the year **2012.**
- At the time of starting the construction in the year 2005, there was no EC Notification. Thereafter also, the FSI area was considered as the deciding factor for the requirement of Environment clearance, which was less than 20,000 m^2 i.e. **16,693.84 m^2** (till the last building plan revision in the year 2005).
- The earlier sanctioned plan of the year 2005 had all buildings A, B, C, D and E. But we did not construct building C. **It was not economically viable** as the selling cost was not permitting buying the TDR from the open market.
- The built-up area definition is given in the **MoEF Notification dated 04/04/2011**, *"The built-up area for the purpose of this Notification is defined as "the built-up or covered area on all the floors put together including basement (s) and other service areas, which are proposed in the building / construction projects".*
- As per CC-3954 dated 04/03/2014, Building No. C was constructed and the total built-up area of the C building is **8,823.47 m^2**. The building configuration of the C building is Lower Parking + Podium + 11 Floors & **55 flats.**
- **Commencement Certificate of the last C building was issued on 15/07/2014.**

Project Summary Cont.

- **In C building, 20000 m^2 construction area was cross after 4th slab on dated 15/11/2015**.
- **70 KLD of STP, 7 no. of Vermicomposting pits, 2 no. of the recharge well, 2,046 m^2 green area, Solar PV Panels, fire fighting system have been provided at the project site.**
- The violation application was submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 07/07/2021 and 28/01/2022 vide F. No. 22-21/2020-IA.III (E 138949). No one had directed to apply for EC. The NGT matter OA 65/2019(WZ) Tanaji Gambhire was pending before NGT with no adverse order. **NGT by Daily Order dated 09/11/2022 has stated**; ***"11….. However, we also deem it appropriate that the SEIAA, before which the application dated 14/01/2022 for ex-post facto Environmental Clearance is pending should be directed to decide the same within a period of one month from today, particularly in this matter and direct accordingly."***
- We have applied for environmental clearance for the FSI area **21,798.69 m^2**, Non-FSI area **28,749.68 m^2** & Contruction area **50,548.37** vide proposal no. SIA/MH/MIS/76973/2022 dated 17.02.2022.
- We have calculated violation days from the date of a **sanctioned plan dated** 15.07.2014 **to the date of the Occupancy Certificate dated 18.01.2019** i.e.**1,648 days.**
- We have calculated violation days from the date of a **sanctioned plan dated** 21.06.2017 **to the date of the Occupancy Certificate dated 18.01.2019** i.e.**576 days.**
- We have given the construction status on slide no.11.
- Project was considered in the 147th SEAC-III meeting as Sr.36 on 21/07/2022 and further recommended to SEIAA.
- Further project was considered in the 248th SEIAA meeting as Sr.66 on 17/08/2022 and SEIAA decided to refer back the proposal to SEAC-III.
- Project was considered in 152nd SEAC-III meeting as Sr.23 on 22/09/2022. As per the SEAC-III meeting committee wants the chronology of the project & construction status of the project properly.
- We have calculated penalty provision for violation application as per approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance on the PARIVESH portal.

Subject : Residential Project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune

Sir,

This has reference to your proposal No. SIA/MH/MIS/76973/2022 dated 17 May 2022 regarding grant of TORs for the above mentioned proposal.

2. This is to acknowledge that the soft copies of EIA/EMP/other reports along with the proceedings of Public Hearing (if applicable to the instant project) have been uploaded on Parivesh Portal.

Yours Sincerely

SEIAA, Maharashtra

Standard Terms of Reference_ April 2015

69

1) Examine details of land use as per Master Plan and land use around 10 km radius of the project site. Analysis should be made based on latest satellite imagery for land use with raw images.
2) Submit details of environmentally sensitive places, land acquisition status, rehabilitation of communities/ villages and present status of such activities.
3) Examine baseline environmental quality along with projected incremental load due to the project.
4) Environmental data to be considered in relation to the project development would be (a) land, (b) groundwater, (c) surface water, (d) air, (e) bio-diversity, (f) noise and vibrations, (g) socio economic and health.
5) Submit a copy of the contour plan with slopes, drainage pattern of the site and surrounding area.
6) Submit the details of the trees to be felled for the project.
7) Submit the present land use and permission required for any conversion such as forest, agriculture etc.
8) Submit Roles and responsibility of the developer etc for compliance of environmental regulations under the provisions of EP Act.
9) Ground water classification as per the Central Ground Water Authority.
10) Examine the details of Source of water, water requirement, use of treated waste water and prepare a water balance chart.
11) Rain water harvesting proposals should be made with due safeguards for ground water quality. Maximize recycling of water and utilization of rain water. Examine details.
12) Examine soil characteristics and depth of ground water table for rainwater harvesting

154

Standard Terms of Reference _ April 2015

13) Examine details of solid waste generation treatment and its disposal.

14) Examine and submit details of use of solar energy and alternative source of energy to reduce the fossil energy consumption.

15) DG sets are likely to be used during construction and operational phase of the project. Emissions from DG sets must be taken into consideration while estimating the impacts on air environment. Examine and submit details.

16) Examine road/rail connectivity to the project site and impact on the traffic due to the proposed project. Present and future traffic and transport facilities for the region should be analysed with measures for preventing traffic congestion and providing faster trouble free system to reach different destinations in the city.

17) A detailed traffic and transportation study should be made for existing and projected passenger and cargo traffic.

18) Examine the details of transport of materials for construction which should include source and availability.

19) Examine separately the details for construction and operation phases both for Environmental Management Plan and Environmental Monitoring Plan with cost and parameters.

20) Submit details of a comprehensive Disaster Management Plan including emergency evacuation during natural and man-made disaster.

21) Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given

22) The cost of the Project (capital cost and recurring cost) as well as the cost towards implementation of EMP should be clearly spelt out

23) Any further clarification on carrying out the above studies including anticipated impacts due to the project and mitigative measure, project proponent can refer to the model ToR available on Ministry website "http://moef.nic.in/Manual/Townships".

155

207

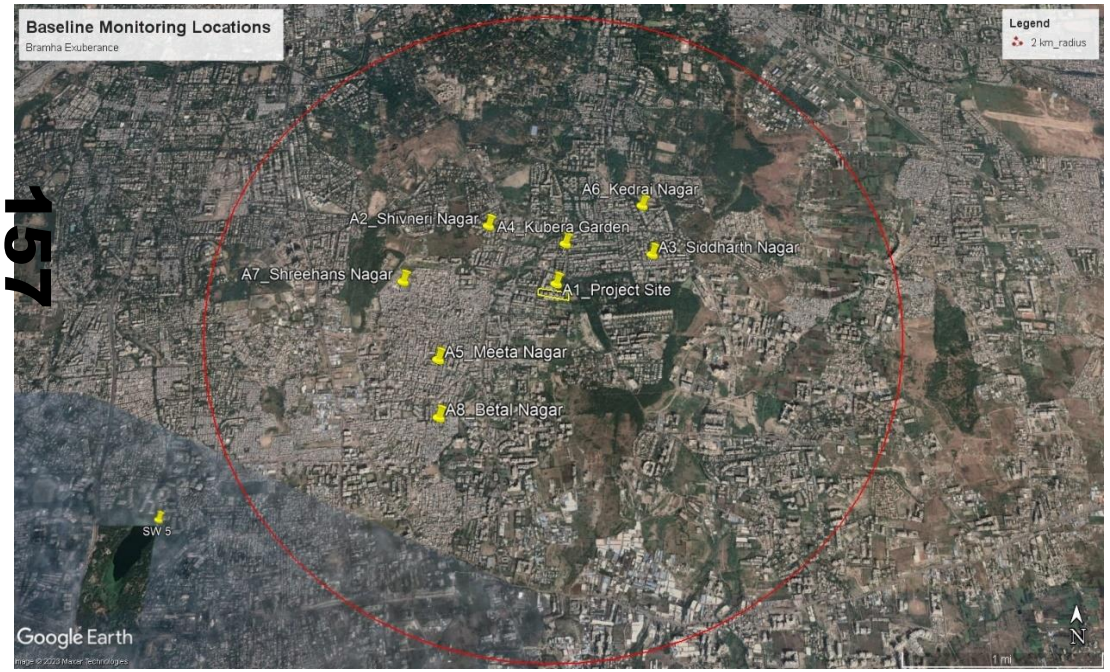
Additional studies for ToR

- Traffic study
- Carbon footprint report
- Environment Status Report
- Biodiversity Index
- Air quality modelling study
- Treatability study of Existing STP & OWC
- Renewable energy saving details
- Storm water management
- Swept path analysis

Baseline Environmental Monitoring Locations

Period of baseline: January 2023

Wind Direction: North West-North East



Sr.	Environmental Attribute	Sampling location
1	Meteorology	Indian Meteorological Department, Pune
2	**Sampling at eight locations (in 2 km study area)**	
	A1, N1, S1	Project Site
	A2, N2, S2	Shivneri Nagar
	A3, N3, S3	Siddharth Nagar
	A4, N4, S4	Kubera Garden
	A5, N5, S5	Metta Nagar
	A6, N6, S6	Kedrai Nagar
	A7, N6, S6	Shreehans Nagar
	A8, N8, S8	Betal Nagar
	Surface water	
	SW1	Mutha River
	SW2	Katraj lake

Deliberations:

PP stated that, they have submitted corrigendum application for correction in building configuration. PP informed that, the project comprises of Commercial Building with BP+LGP+G+Mezz+07 Floors building configuration and Club House with G+1 Floor configuration.

PP stated that, their project was appraised in 148th SEAC-3 & the correction in Minutes received in 149th SEAC-3. PP stated that, they have received SEAC-3 MoM as per corrected CS, But in the Environmental Clearance Certificate, configuration was not changed. Hence they have applied for corrigendum.

Decision: -

After deliberation, Committee decided to forward the application to SEIAA for corrigendum, as SEAC-3 already recommended the corrigendum in Minutes.

*****

14	**P-14**	SIA/MH/MIS/76973/2022	Residential Project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune

Representative of PP was present during the meeting along with environmental consultant M/s. Mahabal Enviro Engineers Pvt. Ltd.

It is noted that, the PP has submitted the application for Environmental Clearance as per Office Memorandum dated 07.07.2021 under violation category for proposed residential project with total plot area of 17,433.10 m2, FSI area of 21,798.69 m2, Non FSI area of 28,749.68 m2 and total BUA of 50,548.37 m2.

Brief information of the proposal is as below:

1	Proposal Number	**SIA/MH/MIS/76973/2022**
2	Name of Project	Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra by Bramha Corp Ltd.
3	Project Category	8(a) B2 Category
4	Type of Institution	Private
5	Name of Project Proponent	Name: Mr. Sachin Shah Regd. Office address: The Residency Club, 3 Queen's Garden Road, Pune Maharashtra 411001 Contact number: 020-41423333 Email ID: ec@bramhacorp.in
6	Consultant	Mahabal Enviro Engineers Pvt. Ltd.
7	Applied for	Environmental Clearance
8	Details of previous EC	NA
9	Location of project	Sr. No.13, H. No. 1, 2, & 3 of Village- Kondhwa Khurd, Taluka- Haveli, Pune, Maharashtra
10	Latitude and Longitude	18°28'31.22"N, 73°53'42.44"E
11	Total Plot area (m^2)	17,433.10 m^2
12	Deductions (m^2)	2,833.35 m^2
13	Net Plot Area (m^2)	14,599.75 m^2
14	Proposed FSI Area (m^2)	21,798.69 m^2
15	Proposed Non-FSI Area (m^2)	28,749.68 m^2
16	Proposed Total BUA area (m^2)	50,548.37 m^2
17	TBUA (m^2) approved by Planning Authority till date	14,805.95 m^2 (FSI area) as per Sanctioned plan No. DPO5191/VI/39 dated 14.09.2005 & 50,548.37 m^2 as per sanction no. CC/0819/17 dated 21.06.2017.
18	Total ground coverage	3,007.70 m^2 (20 %) of total net plot area

Member Secretary **Chairman**

Deliberations:

PP stated that, the application is a residential project located at Kondhwa Khurd, Pune. PP further stated that, the Project is a Fresh EC application in violation category. PP informed that, as per sanction 2005, A, B, C, D, and E buildings were constructed with 'FSI area of 16,693.84 m2, it comprises of 5 residential buildings, 249 flats in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21.09.2005 & CC/3387/05 dated 30.12.2005 and the work was completed in the year 2009. PP stated that, the violation application was submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 28.01.2022 vide F. No. 22-21/2020-IA.III (E 138949).

SEAC-3 appraises the proposal as per Circular issued by SEIAA vide dated 22.08.2022. The case was discussed on the basis of the documents submitted and presentation made by the proponent. All issues relating to environment, including air, water, land, soil, ecology, biodiversity and social aspects were examined. The proposal is appraised as category 8(a) B1.

After detailed deliberations on the proposal committee confirmed the case to be of violation of the EIA Notification, 2006 and as per Office Memorandum- F. No. 22-21/2020-IA.III dated 07.07.2021 issued by the Ministry of Environment, Forest & Climate Change, decided to issuing following Term of Reference for undertaking EIA and preparation of Environment Management Plan (EMP).

Terms of Reference for EIA and preparation of Environment Management Plan (EMP) for Violation Cases

The following Terms of Reference (TOR) for violation cases shall be read along with Ministry of Environment Forest and Climate Change orders no F.No.22-21/2020-IA.III Dated 7th July 2021 and F No. 22-21/2020-IA.III (E 138949) dated 28th January 2022 and Approach for Assessment for Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance" 2018

The following TOR are drafted with reference to Ministry of Environment Forest and Climate Change impact assessment division TORs for Violation Case a) For Construction Sector vide Notification S.O.804 (E) dated 14th March 2017 in the matter of IA/HR/NCP/63612/2017 and b) For Mining Sector dated 12th November 2018 in the proposal No IA/MH/MIN/68113/2017.

A) Project Description

1. Project description, its importance and benefits.

2. Project site details (location, topo-sheet of the study area of 10 Km, Coordinates, google map, layout map, land use, geological features and geo-hydrological status of the study area, drainage). hydro geological survey report with graphs & data.

3. Land use as per the approved Master Plan of the area, Permission/approvals required from the land owning agencies, Planning / Development Authorities, Local Body, Water supply & Sewerage Board, etc.

4. Land acquisition status, R & R details.

5. Forest and Wildlife and eco-sensitive zones, if any in the study area of 10 km. Any sensitive areas in impact zone such as archaeological structures, reserved forest, noise sensitive zones etc. Clearances required under the Forest (Conservation) Act, 1980, the Wildlife (Protection) Act, 1972 and/or the Environment (Protection) Act, 1986.

6. High Tension lines or Hazard lines if any on the plot.

7. Plan showing HFL/CRZ lines.

8. Permissions granted by State Government in tabular and chronological form. Comparative statement of components approved and components constructed including tis configuration as per earlier EC (if applicable) and proposed development.

9. PP to submit the detailed master plan indicating already completed construction and proposed construction. PP to submit the certificate from registered architect for completed work, built up area and configuration.

10. Project cost shall be based on government notified stamp duty ready reckoner at time of application including cost of land and construction including civil, MEP works, environment services, site/land development, horticulture/landscape works etc complete

B) Base Line Data

11. Baseline environmental study for ambient air (PM_{10}, $PM_{2.5}$, SO_2, NO_x & CO),water (both surface and ground), noise and soil for one month (except monsoon period) as per MoEF&CC/CPCB guidelines at minimum 5 locations in the study area of 10 km, The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory duly notified under the Environment (Protection) Act,1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.

12. Detail on flora and fauna and socio-economic aspects in the study area. Details of tree cutting, tree transplantation and survival report of existing trees including conformity to prevailing Tree Act.

13. Likely impact of the project on the environmental parameters (ambient air surface and ground water, land, flora and fauna and socio-economic, etc.)

14. Source of water for different identified purposes with the permissions required from the concerned authorities, both for surface water and the ground water (by CGWA) as the case may be, Rain water harvesting, etc.

15. Socio-economic infrastructure details including public transport arrangements on the site; PP to mention details of socio-economic in EIA.

16. PP to submit contour map with slopes, drainage pattern of the site and surrounding area. Layout showing natural water courses on site; total runoff calculation before and after development.

17. PP to submit details of existing trees, proposed to be cut, proposed to be transplanted along with tree survival report conforming to prevailing Tree Act.

18. Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated.

19. Proximity to Areas declared as 'Critically Polluted' should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the SPCB should be secured and furnished to the effect that the proposed Activities could be considered.

20. Similarly, for Coastal Projects, A CRZ map duly authenticated by one of the authorized agencies demarcating LTL. HTL, CRZ area, location of the mine lease w.r.t. CRZ, coastal features such as mangroves, if any, should be furnished. (Note: The Projects falling under CRZ would also need to obtain Approval of the concerned Coastal Zone Management Authority).

21. The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.

22. Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.

23. Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.

24. Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.

25. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers present and impact of mining activities on these aquifers. Necessary permission from Central

Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.

26. Details of any stream, seasonal or otherwise, passing through the lease area and modification / diversion proposed, if any, and the impact of the same on the hydrology should be examined.

27. Information on site elevation, working depth, groundwater table etc. should be provided both in AMSL and BGL. A schematic diagram may also be provided for the same.

C) Traffic Impact Study in detail including:

28. Traffic Management Plan for the development – Internal circulation indicating road width and turning radius. Cross section of roads at four places showing clear road width, distance left from building line, spaces left for plantation, footpath, service lines etc.

29. Traffic Volume Counts and Turning Movement Counts on all the external surrounding roads of the proposed project showing the time period taken.

30. Topographic details of roads and intersection of the surrounding roads where counts are taken, actual geometry on ground to be shown with dimensions.

31. Traffic generation values of similar development to be given by actual count by actual count as support data for assumption made to the particular project.

32. Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.

33. Parking statement mentioning parking as per DCR & parking provided actually.

34. Basement ventilation plan: Fire Tender Movement Plan showing clear road and turning radius. Cross section of roads at four places including UGT, OWC and DG set location showing clear road width and distance left from building line & spaces left for plantation, parking, service lines, foot paths, etc.

D) Environmental Impact and Management Plan:

35. Identify sources of air pollution, indicate mitigation measures to reduce Air pollution/Noise pollution.

36. Debris management plan including (a) debris required for refilling, (b) contour plan, (c) details of site where excess debris will be disposed, capacity of the site and NOC of plot owner. PP shall also ensure that debris disposed on other plot shall not be disposed on another

plot. If to be disposed on another plot, the same shall be carried out as per prevailing environmental laws.

37. Management of solid waste and the construction & demolition waste for the project vis-a-vis the Solid Waste Management Rules 2016 and the Construction & Demolition Rules, 2016. Transport, collection, storage and disposal for all types of wastes like hazardous waste, non-hazardous waste, solid waste, E– waste, and debris/excess earth etc. PP to provide the detailed solid waste management plan along with marked locations on the master plan. Design details of waste processing equipment such as OWC/biogas plants confirming to the technical requirements to meet the quality products.

38. Waste water management (treatment, reuse and disposal) for the project and also the study area. Design of all STP's along with BOD load, oxygen requirement calculations and sizing of the tanks with respect to the design criteria. PP to submit detailed calculation for the disinfection of the treated STP water; PP to submit cross sectional drawing of STP's showing dimensions and ground level; PP to provide ozonation for tertiary treatment. PP to mark the area required for all STP's on master layout with dimensions

39. PP to show internal storm water drain and sewer line arrangements up to final disposal point.

40. Provision of mandatory RG area on virgin land and submit the drawing with calculations, ensuring entire mandatory RG is provided on the plot where residential buildings are proposed.

41. A detailed phase wise development plan with safety planning where occupancy has been given.

42. If any site specific structures such as creation of water body, alteration of natural storm water, large alteration of slopes, creation of green areas abutting to water bodies / natural storm water drain / river etc, is involved, detailed environmental protection approach for the same shall be provided.

43. Separate chapter on Renewable energy in EIA report. PP to submit terrace plan for installing solar panels& calculations of energy saving; Energy efficient measures (LED lights, solar power, etc.) during construction as well as during operational phase of the project. Report on ECBC compliance.

44. Provide details of Solar PV and Solar water heater in the specific format. PP to carryout shadow analysis for identifying the roof-top area for providing solar panels Minimum 5% of the total connected load shall be provided with Solar PV.

45. Environmental status report including analysis reports of all environmental pollution reduction facilities if any commissioned.

46. PP to submit Disaster management plan.

47. Preparation of site specific, executable and auditable environment management plan (EMP)

48. A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory afforestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should be given. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.

49. Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc

E) Environmental Modelling and additional Studies:

50. Fugitive dust modelling by using local meteorological data.

51. Ecological footprint calculation using LCA approach.

52. Estimation of Carbon footprint of the project and its analysis to be included.

53. Assessment of ecological damage with respect to air, water, land and other environmental attributes. The collection of data and sample analysis shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986 or Environmental Laboratory accredited by NABL, or a laboratory of council of Scientific and Industrial Research (CSIR) institution working in the field of environment.

54. Gate mass balance analysis for environmental parameters related to solid/liquid waste material coming to site, waste generated and its treatment and disposal from site.

55. Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.

56. Measures of socio economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.

57. Detailed environmental management plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.

58. Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project.

Member Secretary **Chairman**

59. PP to refer "approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance" available on the portal : "ecmpcb.in".

F) NOCs, Undertakings, CER and Litigations:

60. NOC's required: a) CFO, b)Water supply with quantity, c) Drainage, d) Non-biodegradable waste disposal, e) Aviation f) HRC, G) PESO , H) Defence/NAD etc

61. Undertaking to provide DG set backup to all Pollution Control Devices, Water Supply, Emergency Services including emergency lifts, etc.

62. Include condition of "maintenance of all Pollution Control Equipment's and functioning of Environment Monitoring Cell in PP's MoU with society /maintenance agencies /vendors

63. PP to submit details of CER activities in consultation with the affected people in the project area as per MoEF&CC circular dt. 01.05.2018, along with details of fund utilization & agreement or consent of executor.

64. PP to submit Roles and Responsibilities of developer etc for compliance of environmental regulations under the provisions of EP act.

65. Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.

G) Specific Term of Reference

66. The State Government/SPCB shall take action against the project proponent under the provisions of section 15 read in conjunction with Section 19 of the Environment (Protection) Act, 1986, and further no consent to operate to be issued till the project is granted EC.

67. As per extant regulations at the time of scoping, if it is viewed that the project activity is otherwise permissible, Terms of Reference (TOR) shall be issued with directions to complete impact assessment studies and submit Environment Impact Assessment (EIA) report and Environment Management Plan (EMP) in a time bound manner.

68. Such cases shall be subject to appropriate

(a) Damage Assessment

(b) Remedial Plan and

(c) Community Augmentation Plan.

69. Assessment of ecological damage with respect to air, water, land and other environmental attributes shall be done before arriving at quantum environment remediation and natural and community resource augmentation.

70. The methodology of calculating this quantum shall be as specified in format for Assessment of Environmental damages in the paper titled "Approach for Assessment for

Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance" 2018

71. Preparation of EMP comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefits derived, which shall be based on cost of project derived from prevailing rates of construction and land of government approved ready reckoner, due to violation. The cost of the Project (capital cost and recurring cost) as prevailing in Annual Statement of Rates / District Schedule of Rates/ Government Ready Reckoner Rates as well as the cost towards implementation of EMP should be clearly spelt out.

72. The project proponent shall be required to submit a bank guarantee equivalent to the amount of remediation plan and natural and community resource augmentation plan with the SPCB prior to the grant of EC. The quantum shall be recommended by the EAC and finalized by the regulatory authority. The bank guarantee shall be released after successful implementation of the EMP in a period of one year, followed by recommendations of the EAC and approval of the regulatory authority.

73. The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.

74. The remediation plan and the natural and community resource augmentation plan shall be prepared as an independent chapter in the EIA report by the accredited consultants.

75. It should be clearly stated whether the proponent if it is a Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/violation of the environmental or forest norms/ conditions? The hierarchical system or administrative order of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the Company and/or shareholders or stakeholders at large, may also be detailed in the proposed safeguard measures in each case should also be provided.

76. Besides the above, the below mentioned general points are also to be followed:

a) All documents to be properly referenced with index and continuous page numbering.

b) Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated.

c) Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports should be available during appraisal of the Project.

d) Where the documents provided are in a language other than English, an English translation should be provided.

77. **In case of continued violation after issue of TOR, the ToR/Environmental Clearance shall be terminated forthwith**.

Project Specific emerged points

1. PP to submit the DP Plan.
2. PP to submit the detail Architect Certificate stating current status of the construction along with building wise construction done (FSI, NoN- FSI & Total built up area) on site along with the chronology.
3. PP to submit the all-approvals details (CC, OC etc) regarding project under consideration.
4. PP to submit the details of Court cases / litigations w.r.t. the project and project location, if any.
5. PP to submit details of implementation of points mentioned in point number 68 along with financial requirements for same with EIA.

Decision: -

After deliberation, Committee decided to recommend the proposal to SEIAA for grant of ToR.

"Bramha Exuberance"

at

Sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra

Consultant

Mahabal Enviro Engineers Pvt. Ltd.

Pollution monitoring, Engineers & Contractors in Environmental Management

Accreditation No.: QCI/NABET/ENV/ACO/22/2531

259th SEIAA Meeting, Item No.44, Date: 19.04.2023

Proposal no. SIA/MH/MIS/76973/2022

Project Summary

- **'Bramha Exuberance'** is a residential project at sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BrahmaCorp Ltd.
- As per sanction 2005, **A & B (4 wings each), D, and E (5 wings each) buildings were constructed with 'built-up area of 39,037.99 m^2**. It comprises of 4 residential buildings, **249 flats** in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21/9/2005 & CC/3387/05 dated 30/12/2005. **The entire work was completed in 2009.**
- **The Occupancy Certificate was granted to the project on 04/12/2009**. Society registration was done on 29/08/2011 and the possession of the flats and buildings was handed over to the buyers 'residents' society in the year **2012.**
- As per CC-3954 dated 04/03/2014, Building No. C was constructed and the total built-up area of the C building is **11,510.38 m^2**. The building configuration of the C building is Lower Parking + Podium +1 Floors & **55 flats.**
- **Commencement Certificate of the last C building was issued on 15/07/2014.**
- **20000 m^2 construction area was crossed on dated 20/11/2006.**
- **70 KLD of STP, 7 no. of Vermicomposting pits, 2 no. of the recharge well, 2,046 m^2 green area, Solar PV Panels, fire fighting system have been provided at the project site.**
- The violation application was submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 07/07/2021 and 28/01/2022 vide F. No. 22-21/2020-IA.III (E 138949). No one had directed to apply for EC. The NGT matter OA 65/2019(WZ) Tanaji Gambhire was pending before NGT with no adverse order. **NGT by Daily Order dated 09/11/2022 has stated**; ***"11..... However, we also deem it appropriate that the SEIAA, before which the application dated 14/01/2022 for ex-post facto Environmental Clearance is pending should be directed to decide the same within a period of one month from today, particularly in this matter and direct accordingly."***

2091

Project Summary Cont.

93

- We have applied for environmental clearance for the FSI area **21,798.69 m²**, Non-FSI area **28,749.68 m²** & Contruction area **50,548.37** vide proposal no. SIA/MH/MIS/76973/2022 dated 17/05/2022.
- We have calculated violation days from the date of a **total construction area exceeds the threshold limit of 20,000 m² i.e. 20/11/2006 to the date of the Occupancy Certificate dated 18/01/2019** i.e.**4,442 days.**
- We have given the construction status on slide no.10.
- Project was considered in the 147th SEAC-III meeting as Sr.36 on 21/07/2022 and further recommended to SEIAA.
- Further project was considered in the 248th SEIAA meeting as Sr.66 on 17/08/2022 and SEIAA decided to refer back the proposal to SEAC-III.

178

- Project was considered in 152nd SEAC-III meeting as Sr.23 on 22/09/2022. As per the SEAC-III meeting committee wants the chronology of the project & construction status of the project properly.
- We have calculated penalty provision for violation application as per approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance on the PARIVESH portal.
- Project was considered in the 165th SEAC-III meeting as sr. no.14 on 08/03/2023. Additional ToR was received in the same meeting.

Brief information

Sr.	Details	Information
1.1	Name of the project	“Bramha Exuberance” - Residential Project by BramhaCorp Ltd.
1.2	Screening category	8(a) B2 category “Building and Construction Projects”
1.3	Location details	Sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka Haveli, District-Pune, State-Maharashtra
1.4	Project cost	**Rs.27.33 Crore**
1.5	Name, contact and email ID of the project proponent	**BramhaCorp Ltd.** Mr. Sachin Shah Telephone No.: 02041423333, Mobile No. 82639788/9325066422 E-mail: ec@bramhacorp.in Address: The Residency Club, 3 Queen’s Garden Road, Camp, Pune-411001
1.6	Name, contact and email ID of Environmental consultant	**Mahabal Enviro Engineers Pvt. Ltd.** Plot F-7, Road 21, MIDC Wagle Estate, Thane West - 400604 mahabal.thane@gmail.com
1.7	QCI Accreditation status	QCI/NABET/ENV/ACO/22/2531
1.8	Accreditation for the category	Sectors 1, 2, 4, 8, 9, 21, 22, 27, 31, 32, 33, 38 and 39
1.9	Ownership and land use in DP	Land use in DP-Residential
1.10	Any court case, litigation, if any	Yes, Case no NGT OA 65/2019

EIA study

- EIA study, baseline study period is January, 2023
- We are preparing the EIA report as per the EIA guidance manual by Administrative Staff College of India, Hyderabad, February 2010 and Standard terms of reference Mannual issued by MoEFCC, April 2015 and the additional ToR granted by the SEAC-III.
- Damage Assessment report are preparing as per MoEFCC Notification dated 28th January 2022 and the approach paper published by environment department Maharashtra.

Chapter	Content
1	Introduction
2	Project Description
3	Description of the Environment
4	Anticipated Environmental impacts & mitigation measures
5	Alternative technology

Acceptance Letter for TOR application

F.No.- SIA/MH/MIS/76973/2022

State Environment Impact Assessment Authority

Maharashtra

dattatray.bhalerao@nic.in

Dated: 17 May 2022

To,

BRAMHACORP LIMITED
, Pune
Maharashtra , 411001

Subject : Residential Project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune

Sir,

This has reference to your proposal No. SIA/MH/MIS/76973/2022 dated 17 May 2022 regarding grant of TORs for the above mentioned proposal.

2. This is to acknowledge that the soft copies of EIA/EMP/other reports along with the proceedings of Public Hearing (if applicable to the instant project) have been uploaded on Parivesh Portal.

Yours Sincerely

SEIAA, Maharashtra

Standard Terms of Reference_ April 2015

07

1) Examine details of land use as per Master Plan and land use around 10 km radius of the project site. Analysis should be made based on latest satellite imagery for land use with raw images.
2) Submit details of environmentally sensitive places, land acquisition status, rehabilitation of communities/ villages and present status of such activities.
3) Examine baseline environmental quality along with projected incremental load due to the project.
4) Environmental data to be considered in relation to the project development would be (a) land, (b) groundwater, (c) surface water, (d) air, (e) bio-diversity, (f) noise and vibrations, (g) socio economic and health.
5) Submit a copy of the contour plan with slopes, drainage pattern of the site and surrounding area.
6) Submit the details of the trees to be felled for the project.
7) Submit the present land use and permission required for any conversion such as forest, agriculture etc.
8) Submit Roles and responsibility of the developer etc for compliance of environmental regulations under the provisions of EP Act.
9) Ground water classification as per the Central Ground Water Authority.
10) Examine the details of Source of water, water requirement, use of treated waste water and prepare a water balance chart.
11) Rain water harvesting proposals should be made with due safeguards for ground water quality. Maximize recycling of water and utilization of rain water. Examine details.
12) Examine soil characteristics and depth of ground water table for rainwater harvesting

192

Standard Terms of Reference _ April 2015

13) Examine details of solid waste generation treatment and its disposal.

14) Examine and submit details of use of solar energy and alternative source of energy to reduce the fossil energy consumption.

15) DG sets are likely to be used during construction and operational phase of the project. Emissions from DG sets must be taken into consideration while estimating the impacts on air environment. Examine and submit details.

16) Examine road/rail connectivity to the project site and impact on the traffic due to the proposed project. Present and future traffic and transport facilities for the region should be analysed with measures for preventing traffic congestion and providing faster trouble free system to reach different destinations in the city.

17) A detailed traffic and transportation study should be made for existing and projected passenger and cargo traffic.

18) Examine the details of transport of materials for construction which should include source and availability.

19) Examine separately the details for construction and operation phases both for Environmental Management Plan and Environmental Monitoring Plan with cost and parameters.

20) Submit details of a comprehensive Disaster Management Plan including emergency evacuation during natural and man-made disaster.

21) Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given

22) The cost of the Project (capital cost and recurring cost) as well as the cost towards implementation of EMP should be clearly spelt out

23) Any further clarification **on carrying out the above studies including anticipated impacts due to the project and mitigative measure**, project proponent can refer to the model ToR available on Ministry website "http://moef.nic.in/Manual/Townships".

193

210

Additional ToR of 165th SEAC-III meeting

A. Project Description

1. Project description, its importance and benefits.
2. Project site details (location, topo-sheet of the study area of 10 km, Coordinates, google map, layout map, land use, geological features and geo hydrological status of the study area, drainage). hydro geological survey report with graphs & data.
3. Land use as per the approved Master Plan of the area, Permission/approvals required from the land-owning agencies, Planning / Development Authorities, Local Body, Water supply & Sewerage Board, etc.
4. Land acquisition status, R & R details.
5. Forest and Wildlife and eco-sensitive zones, if any in the study area of 10 km. Any sensitive areas in impact zone such as archaeological structures, reserved forest, noise sensitive zones etc. Clearances required under the Forest (Conservation) Act, 1980, the Wildlife (Protection) Act, 1972 and/or the Environment (Protection) Act, 1986.
6. High Tension lines or Hazard lines if any on the plot.
7. Plan showing HFL/CRZ lines.
8. Permissions granted by State Government in tabular and chronological form. Comparative statement of components approved and components constructed including the configuration as per earlier EC (if applicable) and proposed development.
9. PP to submit the detailed master plan indicating already completed construction and proposed construction. PP to submit the certificate from registered architect for completed work, built up area and configuration.
10. Project cost shall be based on government notified stamp duty ready reckoner at time of application including cost of land and construction including civil, MEP works, environment services, site/land development, horticulture/landscape works etc. complete.

B. Base Line Data

11. Baseline environmental study for ambient air (PM_{10}, $PM_{2.5}$, SO_2, NO_x & CO), water (both surface and ground), noise and soil for one month (except monsoon period) as per MoEF&CC/CPCB guidelines at minimum 5 locations in the study area of 10 km, The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory duly notified under the Environment (Protection) Act,1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
12. Detail on flora and fauna and socio-economic aspects in the study area. Details of tree cutting, tree transplantation and survival report of existing trees including conformity to prevailing Tree Act.
13. Likely impact of the project on the environmental parameters (ambient air surface and ground water, land, flora and fauna and socio-economic, etc.)

Additional ToR of 165th SEAC-III meeting 2

14. Source of water for different identified purposes with the permissions required from the concerned authorities, both for surface water and the ground water (by CGWA) as the case may be, Rain water harvesting, etc.
15. Socio-economic infrastructure details including public transport arrangements on the site; PP to mention details of socio-economic in EIA.
16. PP to submit contour map with slopes, drainage pattern of the site and surrounding area. Layout showing natural water courses on site; total runoff calculation before and after development.
17. PP to submit details of existing trees, proposed to be cut, proposed to be transplanted along with tree survival report conforming to prevailing Tree Act.
18. Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated.
19. Proximity to Areas declared as 'Critically Polluted' should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the SPCB should be secured and furnished to the effect that the proposed Activities could be considered.
20. Similarly, for Coastal Projects, A CRZ map duly authenticated by one of the authorized agencies demarcating LTL. HTL, CRZ area, location of the mine lease w.r.t. CRZ, coastal features such as mangroves, if any, should be furnished. (Note: The Projects falling under CRZ would also need to obtain Approval of the concerned Coastal Zone Management Authority).
21. The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.
22. Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.
23. Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.
24. Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.
25. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers present and impact of mining activities on these aquifers. Necessary permission from Central Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.
26. Details of any stream, seasonal or otherwise, passing through the lease area and modification / diversion proposed, if any, and the impact of the same on the hydrology should be examined.
27. Information on site elevation, working depth, groundwater table etc. should be provided both in AMSL and BGL. A schematic diagram may also be provided for the same.

195

211

C. Traffic Impact Study in detail

28. Traffic Management Plan for the development – Internal circulation indicating road width and turning radius. Cross section of roads at four places showing clear road width, distance left from building line, spaces left for plantation, footpath, service lines etc.
29. Traffic Volume Counts and Turning Movement Counts on all the external surrounding roads of the proposed project showing the time period taken.
30. Topographic details of roads and intersection of the surrounding roads where counts are taken, actual geometry on ground to be shown with dimensions.
31. Traffic generation values of similar development to be given by actual count by actual count as support data for assumption made to the particular project.
32. Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.
33. Parking statement mentioning parking as per DCR & parking provided actually.
34. Basement ventilation plan: Fire Tender Movement Plan showing clear road and turning radius. Cross section of roads at four places including UGT, OWC and DG set location showing clear road width and distance left from building line & spaces left for plantation, parking, service lines, foot paths, etc.

D. Environmental Impact and Management Plan

35. Identify sources of air pollution, indicate mitigation measures to reduce Air pollution/Noise pollution.
36. Debris management plan including (a) debris required for refilling, (b) contour plan, (c) details of site where excess debris will be disposed, capacity of the site and NOC of plot owner. PP shall also ensure that debris disposed on other plot shall not be disposed on another plot. If to be disposed on another plot, the same shall be carried out as per prevailing environmental laws.
37. Management of solid waste and the construction & demolition waste for the project vis-a-vis the Solid Waste Management Rules 2016 and the Construction & Demolition Rules, 2016. Transport, collection, storage and disposal for all types of wastes like hazardous waste, non-hazardous waste, solid waste, E– waste, and debris/excess earth etc. PP to provide the detailed solid waste management plan along with marked locations on the master plan. Design details of waste processing equipment such as OWC/biogas plants confirming to the technical requirements to meet the quality products.
38. Waste water management (treatment, reuse and disposal) for the project and also the study area. Design of all STP's along with BOD load, oxygen requirement calculations and sizing of the tanks with respect to the design criteria. PP to submit detailed calculation for the disinfection of the treated STP water; PP to submit cross sectional drawing of STP's showing dimensions and ground level; PP to provide ozonation for tertiary treatment. PP to mark the area required for all STP's on master layout with dimensions.

39. PP to show internal storm water drain and sewer line arrangements up to final disposal point.
40. Provision of mandatory RG area on virgin land and submit the drawing with calculations, ensuring entire mandatory RG is provided on the plot where residential buildings are proposed.
41. A detailed phase wise development plan with safety planning where occupancy has been given.
42. If any site-specific structures such as creation of water body, alteration of natural storm water, large alteration of slopes, creation of green areas abutting to water bodies / natural storm water drain / river etc., is involved, detailed environmental protection approach for the same shall be provided.
43. Separate chapter on Renewable energy in EIA report. PP to submit terrace plan for installing solar panels& calculations of energy saving; Energy efficient measures (LED lights, solar power, etc.) during construction as well as during operational phase of the project. Report on ECBC compliance.
44. Provide details of Solar PV and Solar water heater in the specific format. PP to carryout shadow analysis for identifying the roof-top area for providing solar panels Minimum 5% of the total connected load shall be provided with Solar PV.
45. Environmental status report including analysis reports of all environmental pollution reduction facilities if any commissioned.
46. PP to submit Disaster management plan.
47. Preparation of site specific, executable and auditable environment management plan (EMP)
48. A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory afforestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should be given. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.
49. Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.

E. Environmental Modelling and additional Studies

50. Fugitive dust modelling by using local meteorological data.
51. Ecological footprint calculation using LCA approach.
52. Estimation of Carbon footprint of the project and its analysis to be included.
53. Assessment of ecological damage with respect to air, water, land and other environmental attributes. The collection of data and sample analysis shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986 or Environmental Laboratory accredited by NABL, or a laboratory of council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
54. Gate mass balance analysis for environmental parameters related to solid/liquid waste material coming to site, waste generated and its treatment and disposal from site.

197

21

55. Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.
56. Measures of socio-economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
57. Detailed environmental management plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.
58. Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project.
59. PP to refer "approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance" available on the portal: "ecmpcb.in"

F. NOCs, Undertakings, CER and Litigations

60. NOC's required: a) CFO, b) Water supply with quantity, c) Drainage, d) Non-biodegradable waste disposal, e) Aviation f) HRC, G) PESO, H) Defense/NAD etc.
61. Undertaking to provide DG set backup to all Pollution Control Devices, Water Supply, Emergency Services including emergency lifts, etc.
62. Include condition of "maintenance of all Pollution Control Equipment's and functioning of Environment Monitoring Cell in PP's MoU with society/maintenance agencies /vendors
63. PP to submit details of CER activities in consultation with the affected people in the project area as per MoEF&CC circular dt. 01.05.2018, along with details of fund utilization & agreement or consent of executor.
64. PP to submit Roles and Responsibilities of developer etc. for compliance of environmental regulations under the provisions of EP act.
65. Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.

G. Specific Term of Reference

66. The State Government/SPCB shall take action against the project proponent under the provisions of section 15 read in conjunction with Section 19 of the Environment (Protection) Act, 1986, and further no consent to operate to be issued till the project is granted EC.
67. As per extant regulations at the time of scoping, if it is viewed that the project activity is otherwise permissible, Terms of Reference (TOR) shall be issued with directions to complete impact assessment studies and submit Environment Impact Assessment (EIA) report and Environment Management Plan (EMP) in a time bound manner.

Additional ToR of 165th SEAC-III meeting 6

68. Such cases shall be subject to appropriate:
    a) Damage Assessment
    b) Remedial Plan and
    c) Community Augmentation Plan.
69. Assessment of ecological damage with respect to air, water, land and other environmental attributes shall be done before arriving at quantum environment remediation and natural and community resource augmentation.
70. The methodology of calculating this quantum shall be as specified in format for Assessment of Environmental damages in the paper titled “Approach for Assessment for Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance” 2018.
71. Preparation of EMP comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefits derived, which shall be based on cost of project derived from prevailing rates of construction and land of government approved ready reckoner, due to violation. The cost of the Project (capital cost and recurring cost) as prevailing in Annual Statement of Rates / District Schedule of Rates/ Government Ready Reckoner Rates as well as the cost towards implementation of EMP should be clearly spelt out.
72. The project proponent shall be required to submit a bank guarantee equivalent to the amount of remediation plan and natural and community resource augmentation plan with the SPCB prior to the grant of EC. The quantum shall be recommended by the EAC and finalized by the regulatory authority. The bank guarantee shall be released after successful implementation of the EMP in a period of one year, followed by recommendations of the EAC and approval of the regulatory authority.
73. The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
74. The remediation plan and the natural and community resource augmentation plan shall be prepared as an independent chapter in the EIA report by the accredited consultants.
75. It should be clearly stated whether the proponent if it is a Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/violation of the environmental or forest norms/ conditions? The hierarchical system or administrative order of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the Company and/or shareholders or stakeholders at large, may also be detailed in the proposed safeguard measures in each case should also be provided.

69. Besides the above, the below mentioned general points are also to be followed:
    a) All documents to be properly referenced with index and continuous page numbering.
    b) Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated.
    c) Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports should be available during appraisal of the Project.
    d) Where the documents provided are in a language other than English, an English translation should be provided.
77. In case of continued violation after issue of TOR, the ToR/Environmental Clearance shall be terminated forthwith.

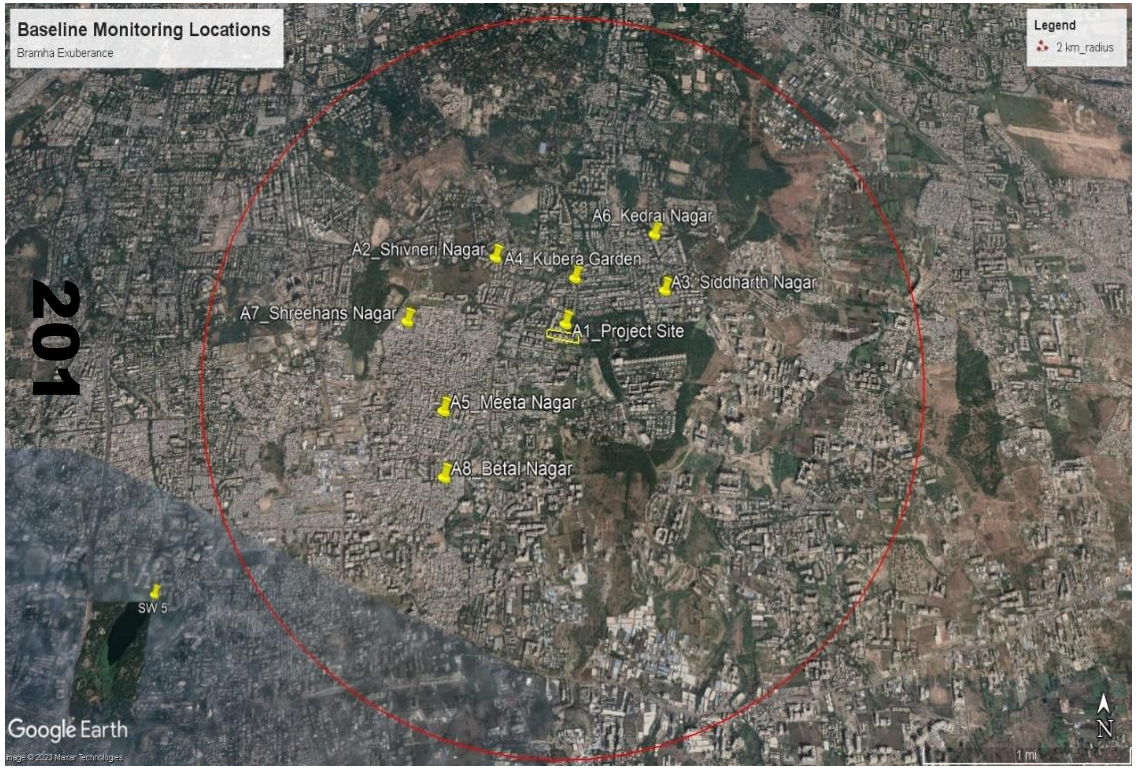
Project Specific emerged points

1. PP to submit the DP Plan.
2. PP to submit the detail Architect Certificate stating current status of the construction along with building wise construction done (FSI, NoN- FSI & Total built up area) on site along with the chronology.
3. PP to submit the all-approvals details (CC, OC etc) regarding project under consideration.
4. PP to submit the details of Court cases / litigations w.r.t. the project and project location, if any.
5. PP to submit details of implementation of points mentioned in point number 68 along with financial requirements for same with EIA.

Baseline Environmental Monitoring Locations

Period of baseline: January 2023

Wind Direction: North West-North East



Sr.	Environmental Attribute	Sampling location
1	Meteorology	Indian Meteorological Department, Pune
2	**Sampling at eight locations (in 2 km study area)**	
	A1, N1, S1	Project Site
	A2, N2, S2	Shivneri Nagar
	A3, N3, S3	Siddharth Nagar
	A4, N4, S4	Kubera Garden
	A5, N5, S5	Metta Nagar
	A6, N6, S6	Kedrai Nagar
	A7, N6, S6	Shreehans Nagar
	A8, N8, S8	Betal Nagar
	Surface water	
	SW1	Mutha River
	SW2	Katraj lake
	SW3	Jambhulwadi lake
	SW4	Pashan lake
	SW5	Mutha river canal
	SW6	Khadakwasla dam
4	Ground water	
	GW1	Bore Well water (Project site Area)
5	Geology and Geohydrology	Generally, in 10 km study area
6	Land use pattern	Generally, in 10 km study area
7	Ecology	Primary data collection at site
8	Socio-economic and demography	Generally, in 10 km study area through Pune city Census data of year 2011

Baseline Environmental Monitoring Locations

17

Aspect	Mode of Data collection	No. of Sampling Locations	Frequency	Parameter
Meteorology	Primary data	-	5 consecutive weeks	Temperature, Humidity, Wind speed, Wind direction and Rainfall
Ambient Air Quality	Field studies	8 locations	5 consecutive weeks	$PM_{2.5}$, PM_{10}, SO_2, NO_X, O_3, Pb, CO, NH_3, C_6H_6, BaP, As, Ni
DG set	Project site	1 Location		PM2.5, PM_{10}, SO_2, NO_X,
Noise	Field studies	8 Locations	Once	Hourly equivalent noise level during day time and Night time
Soil	Field studies	8 Location	Once	pH, Electrical Conductivity Sodium, Nitrogen, Phosphate, Potassium, Organic Matter, Cation Exchange Capacity (meq/100 gm), Particle Size Analysis , Permeability, Water holding capacity, Porosity

202

Baseline Environmental Monitoring Locations

Aspect	Mode of Data collection	No. of Sampling Locations	Frequency	Parameter
Ground water Quality	Field studies	1 Location	Once	Physical, chemical and bacteriological parameters, as per Environment Protection Rules/IS 10500 as applicable, shall be analyzed
Surface water Quality	Field studies	6 Location	Once	Physical, chemical and bacteriological parameters, as per Environment Protection Rules/IS 10500 as applicable, shall be analyzed
Terrestrial Ecology	Field studies & Literature review		--	Inventory of major floral & faunal species
Socio-economic environment	Census 2011, Secondary Sources		--	Demography, caste profile, literacy rate, occupational profile
Wastewater analysis	Project site	1 Location	Once	pH, BOD, TSS, COD, N, P, FC

Thank You

Minutes of 259th Day 1 (Part D) meeting of SEIAA held on 19th April, 2023

Item no. 44

Proposal No.:- SIA/MH/MIS/76973/2022 **Type of Project: ToR**

Subject- Environmental Clearance for Residential Project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune by Bramha Corp Ltd.

Project Details-

Representative of PP was present during the meeting along with environmental consultant M/s. Mahabal Enviro Engineers Pvt. Ltd.

Brief information of the proposal is as below:

1	Proposal Number	**SIA/MH/MIS/76973/2022**
2	Name of Project	Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd,Taluka Haveli, District Pune, Maharashtra by Bramha Corp Ltd.
3	Project Category	8(a) B2 Category
4	Type of Institution	Private
5	Name of Project Proponent	Name: Mr. Sachin Shah Regd. Office address: The Residency Club, 3 Queen's Garden Road, Pune Maharashtra 411001 Contact number: 020-41423333 Email ID: ec@bramhacorp.in
6	Consultant	Mahabal Enviro Engineers Pvt. Ltd.
7	Applied for	Environmental Clearance
8	Details of previous EC	NA
9	Location of project	Sr. No.13, H. No. 1, 2, & 3 of Village- Kondhwa Khurd, Taluka- Haveli, Pune, Maharashtra
10	Latitude and Longitude	18°28'31.22"N, 73°53'42.44"E
11	Total Plot area (m^2)	17,433.10 m^2
12	Deductions (m^2)	2,833.35 m^2
13	Net Plot Area (m^2)	14,599.75 m^2
14	Proposed FSI Area (m^2)	21,798.69 m^2
15	Proposed Non-FSI Area (m^2)	28,749.68 m^2
16	Proposed Total BUA area (m^2)	50,548.37 m^2
17	TBUA (m^2) approved by Planning Authority till date	14,805.95 m^2 (FSI area) as per Sanctioned plan No. DPO5191/VI/39 dated 14.09.2005 & 50,548.37 m^2 as per sanction no. CC/0819/17 dated 21.06.2017.
18	Total ground coverage (m^2) & %	3,007.70 m^2 (20 %) of total net plot area
19	Total project cost (Rs.)	Rs. 27.33 Crore

Member Secretary

Chairman

20	CER as per MoEF & CC Circular dated 01.05.2018	Not applicable
21	Details of Building Configuration	

Sr.	Building Name	Configuration	Height (m)
1	A Building	Below podium parking, podium parking, 1st – 11th floor, terrace	34.90
2	B Building	Below podium parking, podium parking, 1st – 11th floor, terrace	34.90
3	C Building	Below podium parking, podium parking, 1st – 11th floor, terrace	34.90
4.	D Building	Lower Basement parking, Below podium parking, podium parking, 1st – 11th floor, terrace	34.90
5.	E Building	Below podium parking, podium parking, 1st – 11th floor, terrace – 54 tenements	34.90

22	Total number of tenements/shops/offices	Tenements: 249 Nos.	
	Number of expected residents / users	Total Population: 1,432 Nos.	
23	**Water Budget**		
		Dry Season	**Wet Season**
	Freshwater (in m^3/day)	123 m^3/day	123 m^3/day
	Recycled water (Flushing)	62 m^3/day	62 m^3/day
	Recycled water (Gardening)	17 m^3/day	9 m^3/day
	Swimming pool	NA	NA
	Total water requirement	185 m^3/day	185 m^3/day
	Wastewater generation	173 m^3/day	173 m^3/day
24	**Water Storage Capacity for Firefighting**		
	Firefighting (Underground water tank)	50 m^3	

Member Secretary

Chairman

	Firefighting (Overhead water tank)	50 m^3
24	**Source of water**	Pune Municipal Corporation
25	**Rain Water Harvesting (RWH)**	
	i) Level of the groundwater table	Groundwater table: 5 m to 6 m below ground level
	ii) Size and no of RWH tank(s) and Quantity	NA
	iii) Quantity and size of recharge pits	Total 2 no. of Borewell (1 no. of Borewell: Size 3'x3'x4.5")
	iv) Details of UGT tanks if any:	Domestic UG domestic tank capacity: 377 m^3, Domestic UG Fire tank capacity: 50 m^3,
26	**Sewage and wastewater Demand**	

i) Sewage generation in KLD	173 m^3/day
ii) STP technology	MBBR
iii) No. and Capacity of STP	1 no. x 70 m^3/day Existing

27	**Solid Waste Management during Construction phase**: 0 kg/day
28	**Solid Waste Management during operation Phase:**

Type	**Quantity (kg/day)**	**Treatment/disposal**
Total waste generation	699 kg/day	
Wet waste	419 kg/day	Through Organic Waste Converter. Generated manure used for gardening.
Dry waste	280 kg/day	Handed over to the authorized recycling agency
Hazardous waste	NA	NA
Biomedical waste	NA	NA
STP sludge (dry)	1.7 kg/day	Used as manure
E-waste	NA	NA

29	**Green Belt Development**	
	Total RG area	2,045.85 m^2
	Existing trees on plot	392
	Number of trees to be planted	NA
	No of trees to be retained	NA
	Number of trees to be transplanted/cut	NA
30	**Power requirement**	
	Source of power supply	MSEDCL
	During Construction Phase (Demand Load)	NA
	During Operation phase (Connected Load)	1,419 kW
	During Operation phase (Demand Load)	1,135 kW

Member Secretary

Chairman

	Transformer	1 nos. X 82.5 kVA
	DG set	1 nos. X 82.5 kVA
	Fuel Used	Diesel

31 **Details of Energy saving**

Energy Conservation Measures	Quantity
Energy-saving due to use of solar PV panels	5 %
Energy-saving due to CFL Lamp	NA
Energy-saving due to LED Lamp	NA
Energy-saving due to Electronic Ballast	NA
Energy savings due to VFD	NA
Overall energy saving	20%

32 **Environmental Management plan budget during Construction phase**

Component	Parameter	Cost (Rs. In Lakhs)
Air Environment	Water for dust suppression	8.0
	Water utilization for tree planted along with the plot boundary	1.0
	Vehicle maintenance, washing area, tyre cleaning	0.5
	Safety net	0.5
Water Environment	Site sanitation, Toilets, STP, safe drinking water	1.0
	Environment Monitoring	0.5
	Stormwater management	0.5
Socio-Economics Environment	Disinfection at site	1.0
Health & Safety	Health check-ups for workers, first aid kit	1.0
Noise Environment	Site fencing & noise barrier	1.0
	Traffic management	0.5
Training and awareness	Safety personal protective equipment & training programs	1.0
Total		**16.5**

33 **Environmental Management plan budget during Operation phase**

Sr.	Component	Details	Capital cost (Rs. In Lakh)	O&M cost (Rs. In Lakh/year)
1.	Storm water management	Laying of storm & Sewer line up	11.00	0.90
		to final disposal point		

Member Secretary

Chairman

	2.	Sewage Treatment Plant	1 no. of STP having capacity 70 m^3/day existing & 110 m^3/day to be proposed	80.25	2.6
	3.	Rain Water Harvesting	1 no. of Borewell	1.90	0.5
	4.	Solid Waste Management	Cost for Treatment of biodegradable garbage in OWC	3.00	0.4
	5.	Landscape development	Tree Plantation	17.26	1.5
	6.	Energy Conservation	Solar PV panels for electricity generation, LED etc.	25.00	2.6
	7.	Environmental Monitoring	Monitoring and analysis of Air, Water, Noise, Soil, surface water, STP treated water etc.	5.00	0.5
	8.	Firefighting system	Installation and operation of Fire Fighting system	14.50	1.7
	9.	Disaster Management		23.10	9.5
		Total		**181.01**	**20.2**

34	**Traffic Management:**	

Type	**Required as per DCR**	**Actual Provided**	**Area per parking (m^2)**
4 -wheeler	140 nos.	214nos.	2,675
2 -wheeler	388 nos.	411 nos.	1,233
Total			**4,458**

35	Details of Court cases / litigations w.r.t. the project and project location if any.	Yes Court case details- NGT Western zone bench at Pune – Case no.65/2019

SEAC Deliberation –

PP stated that, the application is a residential project located at Kondhwa Khurd, Pune. PP further stated that, the Project is a Fresh EC application in violation category. PP informed that, as per sanction 2005, A, B, C, D, and E buildings were constructed with 'FSI area of 16,693.84

Member Secretary

Chairman

m2, it comprises of 5 residential buildings, 249 flats in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21.09.2005 & CC/3387/05 dated 30.12.2005 and the work was completed in the year 2009. PP stated that, the violation application was submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 28.01.2022 vide F. No. 22-21/2020-IA.III (E 138949).

SEAC-3 appraises the proposal as per Circular issued by SEIAA vide dated 22.08.2022. The case was discussed on the basis of the documents submitted and presentation made by the proponent. All issues relating to environment, including air, water, land, soil, ecology, biodiversity and social aspects were examined. The proposal is appraised as category 8(a) B1. After detailed deliberations on the proposal committee confirmed the case to be of violation of the EIA Notification, 2006 and as per Office Memorandum- F. No. 22-21/2020- IA.III dated 07.07.2021 issued by the Ministry of Environment, Forest & Climate Change, decided to issuing following Term of Reference for undertaking EIA and preparation of Environment Management Plan (EMP).

Terms of Reference for EIA and preparation of Environment Management Plan (EMP) for Violation Cases

The following Terms of Reference (TOR) for violation cases shall be read along with Ministry of Environment Forest and Climate Change orders no F.No.22-21/2020-IA.III Dated 7th July 2021 and F No. 22-21/2020-IA.III (E 138949) dated 28th January 2022 and Approach for Assessment for Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance" 2018

The following TOR are drafted with reference to Ministry of Environment Forest and Climate Change impact assessment division TORs for Violation Case a) For Construction Sector vide Notification S.O.804 (E) dated 14th March 2017 in the matter of IA/HR/NCP/63612/2017 and b) For Mining Sector dated 12th November 2018 in the proposal No IA/MH/MIN/68113/2017.

A) Project Description

1. Project description, its importance and benefits.
2. Project site details (location, topo-sheet of the study area of 10 Km, Coordinates, google map, layout map, land use, geological features and geo-hydrological status of the study area, drainage). hydro geological survey report with graphs & data.
3. Land use as per the approved Master Plan of the area, Permission/approvals required from the land owning agencies, Planning / Development Authorities, Local Body, Water supply & Sewerage Board, etc.
4. Land acquisition status, R & R details.
5. Forest and Wildlife and eco-sensitive zones, if any in the study area of 10 km. Any sensitive areas in impact zone such as archaeological structures, reserved forest, noise sensitive zones etc. Clearances required under the Forest (Conservation) Act, 1980, the Wildlife (Protection) Act, 1972 and/or the Environment (Protection) Act, 1986.
6. High Tension lines or Hazard lines if any on the plot.
7. Plan showing HFL/CRZ lines.

Member Secretary

Chairman

8. Permissions granted by State Government in tabular and chronological form. Comparative statement of components approved and components constructed including tis configuration as per earlier EC (if applicable) and proposed development.
9. PP to submit the detailed master plan indicating already completed construction and proposed construction. PP to submit the certificate from registered architect for completed work, built up area and configuration.
10. Project cost shall be based on government notified stamp duty ready reckoner at time of application including cost of land and construction including civil, MEP works, environment services, site/land development, horticulture/landscape works etc complete

B) Base Line Data

11. Baseline environmental study for ambient air (PM10, PM2.5, SO2, NOx & CO),water (both surface and ground), noise and soil for one month (except monsoon period) as per MoEF&CC/CPCB guidelines at minimum 5 locations in the study area of 10 km, The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory duly notified under the Environment (Protection) Act,1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
12. Detail on flora and fauna and socio-economic aspects in the study area. Details of tree cutting, tree transplantation and survival report of existing trees including conformity to prevailing Tree Act.
13. Likely impact of the project on the environmental parameters (ambient air surface and ground water, land, flora and fauna and socio-economic, etc.)
14. Source of water for different identified purposes with the permissions required from the concerned authorities, both for surface water and the ground water (by CGWA) as the case may be, Rain water harvesting, etc.
15. Socio-economic infrastructure details including public transport arrangements on the site; PP to mention details of socio-economic in EIA.
16. PP to submit contour map with slopes, drainage pattern of the site and surrounding area. Layout showing natural water courses on site; total runoff calculation before and after development.
17. PP to submit details of existing trees, proposed to be cut, proposed to be transplanted along with tree survival report conforming to prevailing Tree Act.
18. Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated.
19. Proximity to Areas declared as 'Critically Polluted' should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the SPCB should be secured and furnished to the effect that the proposed Activities could be considered.

Member Secretary

Chairman

20. Similarly, for Coastal Projects, A CRZ map duly authenticated by one of the authorized agencies demarcating LTL. HTL, CRZ area, location of the mine lease w.r.t. CRZ, coastal features such as mangroves, if any, should be furnished. (Note: The Projects falling under CRZ would also need to obtain Approval of the concerned Coastal Zone Management Authority).
21. The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.
22. Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.
23. Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.
24. Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.
25. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers present and impact of mining activities on these aquifers. Necessary permission from Central Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.
26. Details of any stream, seasonal or otherwise, passing through the lease area and modification / diversion proposed, if any, and the impact of the same on the hydrology should be examined.
27. Information on site elevation, working depth, groundwater table etc. should be provided both in AMSL and BGL. A schematic diagram may also be provided for the same.

C) Traffic Impact Study in detail including:

28. Traffic Management Plan for the development – Internal circulation indicating road width and turning radius. Cross section of roads at four places showing clear road width, distance left from building line, spaces left for plantation, footpath, service lines etc.
29. Traffic Volume Counts and Turning Movement Counts on all the external surrounding roads of the proposed project showing the time period taken.
30. Topographic details of roads and intersection of the surrounding roads where counts are taken, actual geometry on ground to be shown with dimensions.
31. Traffic generation values of similar development to be given by actual count by actual count as support data for assumption made to the particular project.
32. Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of

Member Secretary

Chairman

handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.

33. Parking statement mentioning parking as per DCR & parking provided actually.
34. Basement ventilation plan: Fire Tender Movement Plan showing clear road and turning radius. Cross section of roads at four places including UGT, OWC and DG set location showing clear road width and distance left from building line & spaces left for plantation, parking, service lines, foot paths, etc.

D) Environmental Impact and Management Plan:

35. Identify sources of air pollution, indicate mitigation measures to reduce Air pollution/Noise pollution.
36. Debris management plan including (a) debris required for refilling, (b) contour plan,

(c) details of site where excess debris will be disposed, capacity of the site and NOC of plot owner. PP shall also ensure that debris disposed on other plot shall not be disposed on another

plot. If to be disposed on another plot, the same shall be carried out as per prevailing environmental laws.

37. Management of solid waste and the construction & demolition waste for the project vis-a-vis the Solid Waste Management Rules 2016 and the Construction & Demolition Rules, 2016. Transport, collection, storage and disposal for all types of wastes like hazardous waste, non-hazardous waste, solid waste, E– waste, and debris/excess earth etc. PP to provide the detailed solid waste management plan along with marked locations on the master plan. Design details of waste processing equipment such as OWC/biogas plants confirming to the technical requirements to meet the quality products.
38. Waste water management (treatment, reuse and disposal) for the project and also the study area. Design of all STP's along with BOD load, oxygen requirement calculations and sizing of the tanks with respect to the design criteria. PP to submit detailed calculation for the disinfection of the treated STP water; PP to submit cross sectional drawing of STP's showing dimensions and ground level; PP to provide ozonation for tertiary treatment. PP to mark the area required for all STP's on master layout with dimensions
39. PP to show internal storm water drain and sewer line arrangements up to final disposal point.
40. Provision of mandatory RG area on virgin land and submit the drawing with calculations, ensuring entire mandatory RG is provided on the plot where residential buildings are proposed.
41. A detailed phase wise development plan with safety planning where occupancy has been given.
42. If any site specific structures such as creation of water body, alteration of natural storm water, large alteration of slopes, creation of green areas abutting to water bodies / natural

Member Secretary

Chairman

storm water drain / river etc, is involved, detailed environmental protection approach for the same shall be provided.

43. Separate chapter on Renewable energy in EIA report. PP to submit terrace plan for installing solar panels& calculations of energy saving; Energy efficient measures (LED lights, solar power, etc.) during construction as well as during operational phase of the project. Report on ECBC compliance.
44. Provide details of Solar PV and Solar water heater in the specific format. PP to carryout shadow analysis for identifying the roof-top area for providing solar panels Minimum 5% of the total connected load shall be provided with Solar PV.
45. Environmental status report including analysis reports of all environmental pollution reduction facilities if any commissioned.
46. PP to submit Disaster management plan.
47. Preparation of site specific, executable and auditable environment management plan (EMP)
48. A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory afforestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should be given. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.
49. Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc

E) Environmental Modelling and additional Studies:

50. Fugitive dust modelling by using local meteorological data.
51. Ecological footprint calculation using LCA approach.
52. Estimation of Carbon footprint of the project and its analysis to be included.
53. Assessment of ecological damage with respect to air, water, land and other environmental attributes. The collection of data and sample analysis shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986 or Environmental Laboratory accredited by NABL, or a laboratory of council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
54. Gate mass balance analysis for environmental parameters related to solid/liquid waste material coming to site, waste generated and its treatment and disposal from site.
55. Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.

Member Secretary

Chairman

56. Measures of socio economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
57. Detailed environmental management plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.
58. Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project.
59. PP to refer "approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance" available on the portal : "ecmpcb.in".

F) NOCs, Undertakings, CER and Litigations:

60. NOC's required: a) CFO, b)Water supply with quantity, c) Drainage, d) Non-biodegradable waste disposal, e) Aviation f) HRC, G) PESO , H) Defence/NAD etc
61. Undertaking to provide DG set backup to all Pollution Control Devices, Water Supply, Emergency Services including emergency lifts, etc.
62. Include condition of "maintenance of all Pollution Control Equipment's and functioning of Environment Monitoring Cell in PP's MoU with society /maintenance agencies /vendors
63. PP to submit details of CER activities in consultation with the affected people in the project area as per MoEF&CC circular dt. 01.05.2018, along with details of fund utilization & agreement or consent of executor.
64. PP to submit Roles and Responsibilities of developer etc for compliance of environmental regulations under the provisions of EP act.
65. Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.

G) Specific Term of Reference

66. The State Government/SPCB shall take action against the project proponent under the provisions of section 15 read in conjunction with Section 19 of the Environment (Protection) Act, 1986, and further no consent to operate to be issued till the project is granted EC.
67. As per extant regulations at the time of scoping, if it is viewed that the project activity is otherwise permissible, Terms of Reference (TOR) shall be issued with directions to complete impact assessment studies and submit Environment Impact Assessment (EIA) report and Environment Management Plan (EMP) in a time bound manner.
68. Such cases shall be subject to appropriate

(a) Damage Assessment
(b) Remedial Plan and

Member Secretary

Chairman

(c) Community Augmentation Plan.

69. Assessment of ecological damage with respect to air, water, land and other environmental attributes shall be done before arriving at quantum environment remediation and natural and community resource augmentation.
70. The methodology of calculating this quantum shall be as specified in format for Assessment of Environmental damages in the paper titled "Approach for Assessment for Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance" 2018
71. Preparation of EMP comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefits derived, which shall be based on cost of project derived from prevailing rates of construction and land of government approved ready reckoner, due to violation. The cost of the Project (capital cost and recurring cost) as prevailing in Annual Statement of Rates / District Schedule of Rates/ Government Ready Reckoner Rates as well as the cost towards implementation of EMP should be clearly spelt out.
72. The project proponent shall be required to submit a bank guarantee equivalent to the amount of remediation plan and natural and community resource augmentation plan with the SPCB prior to the grant of EC. The quantum shall be recommended by the EAC and finalized by the regulatory authority. The bank guarantee shall be released after successful implementation of the EMP in a period of one year, followed by recommendations of the EAC and approval of the regulatory authority.
73. The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
74. The remediation plan and the natural and community resource augmentation plan shall be prepared as an independent chapter in the EIA report by the accredited consultants.
75. It should be clearly stated whether the proponent if it is a Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/violation of the environmental or forest norms/ conditions? The hierarchical system or administrative order of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the Company and/or shareholders or stakeholders at large, may also be detailed in the proposed safeguard measures in each case should also be provided.
76. Besides the above, the below mentioned general points are also to be followed:

a) All documents to be properly referenced with index and continuous page numbering.
b) Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated.

Member Secretary

Chairman

c) Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports should be available during appraisal of the Project.

d) Where the documents provided are in a language other than English, an English translation should be provided.

77. In case of continued violation after issue of TOR, the ToR/Environmental Clearance shall be terminated forthwith.

Project Specific emerged points

1. PP to submit the DP Plan.
2. PP to submit the detail Architect Certificate stating current status of the construction along with building wise construction done (FSI, NoN- FSI & Total built up area) on site along with the chronology.
3. PP to submit the all-approvals details (CC, OC etc) regarding project under consideration.
4. PP to submit the details of Court cases / litigations w.r.t. the project and project location, if any.
5. PP to submit details of implementation of points mentioned in point number 68 along with financial requirements for same with EIA.

Recommendations of SEAC-

After deliberation, Committee decided to recommend the proposal to SEIAA for grant of ToR.

Deliberation in SEIAA-

Proposal is recommended in 165th meeting of SEAC-3 for grant of Terms of References (ToR) under violation category.

SEIAA further directed SEIAA cell to communicate with MPCB to confirm whether action has been initiated against the Project Proponent under section 15 of Environment (Protection) Act, 1986 for violating provisions of EIA Notification, 2006.

SEIAA after deliberation decided to grant of Terms of References (ToR) as per recommendation of SEAC.

SEIAA Decision-

SEIAA after deliberation decided to grant of Terms of References (ToR) as per recommendation of SEAC.

State Environment Impact Assessment Authority

No. SIA/MH/MIS/76973/2022
Environment & Climate Change
Department, 217(Annex),
Mantralaya, Mumbai- 400032.
Date :20.04.2023.

To,
M/s. Bramha Corp Ltd.,
S.No.13, H.No.1, 2&3,
Kondhwa Khurd, Haveli, Pune

Subject: Environmental Clearance for Residential Project "Bramha Exuberance" at S.No.13, H.No.1, 2&3, Kondhwa Khurd, Haveli, Pune by M/s. Bramha Corp Ltd.

Ref. : Your application no. SIA/MH/MIS/76973/2022

This has reference to your proposal submitted to State Environment Impact Assessment Authority (SEIAA) for seeking Terms of Reference (ToR) in terms of the provisions of the Environment Impact Assessment (EIA) Notification, 2006 under the Environment (Protection) Act, 1986 under violation category as per MoEF&CC OM dated 07.07.2021.

2. The proposal for grant of Terms of Reference (ToR) which was considered by the State Expert Appraisal Committee (SEAC-3) in its 165th meeting and by SEIAA in its 259th (Day-1) meeting.
3. ToR for the said project is issued as per details of the project, which are as given below:-

1	Proposal Number	**SIA/MH/MIS/76973/2022**	
2	Name of Project	Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd,Taluka Haveli, District Pune, Maharashtra by Bramha Corp Ltd.	
3	Project Category	8(a) B2 Category	
4	Type of Institution	Private	
5	Name of Project Proponent	Name	Mr. Sachin Shah
		Regd. Office address	The Residency Club, 3 Queen's Garden Road, Pune Maharashtra 411001
		Contact number	020-41423333
		Email ID	ec@bramhacorp.in
6	Consultant	Mahabal Enviro Engineers Pvt. Ltd.	
7	Applied for	Environmental Clearance	

8	Details of previous EC	NA
9	Location of project	Sr. No.13, H. No. 1, 2, & 3 of Village- Kondhwa Khurd, Taluka- Haveli, Pune, Maharashtra
10	Latitude and Longitude	18°28'31.22"N, 73°53'42.44"E
11	Total Plot area (m^2)	17,433.10 m^2
12	Deductions (m^2)	2,833.35 m^2
13	Net Plot Area (m^2)	14,599.75 m^2
14	Proposed FSI Area (m^2)	21,798.69 m^2
15	Proposed Non-FSI Area (m^2)	28,749.68 m^2
16	Proposed Total BUA area (m^2)	50,548.37 m^2
17	TBUA (m^2) approved by Planning Authority till date	14,805.95 m^2 (FSI area) as per Sanctioned plan No. DPO5191/VI/39 dated 14.09.2005 & 50,548.37 m^2 as persanction no. CC/0819/17 dated 21.06.2017.
18	Total ground coverage (m^2) & %	3,007.70 m^2 (20 %) of total net plot area
19	Total project cost (Rs.)	Rs. 27.33 Crore
20	CER as per MoEF &CC Circular dated 01.05.2018	Not applicable
21	Details of Building Configuration	

Sr.	Building Name	Configuration	Height (m)
1	A Building	Below podium parking, podium parking, 1st – 11th floor, terrace	34.90
2	B Building	Below podium parking, podium parking, 1st – 11th floor, terrace	34.90
3	C Building	Below podium parking, podium parking, 1st – 11th floor, terrace	34.90
4.	D Building	Lower Basement parking, Below podium parking, podium parking, 1st – 11th floor, terrace	34.90

		5.	E Building	Below podium parking, podium parking, 1st – 11th floor, terrace – 54 tenements	34.90

22	Total number of tenements/shops/offices	Tenements: 249 Nos.	
	Number of expected residents / users	Total Population: 1,432 Nos.	
23	**Water Budget**		
		Dry Season	**Wet Season**
	Freshwater (in m^3/day)	123 m^3/day	123 m^3/day
	Recycled water (Flushing)	62 m^3/day	62 m^3/day
	Recycled water (Gardening)	17 m^3/day	9 m^3/day
	Swimming pool	NA	NA
	Total water requirement	185 m^3/day	185 m^3/day
	Wastewater generation	173 m^3/day	173 m^3/day
24	**Water Storage Capacity for Firefighting**		
	Firefighting (Underground water tank)	50 m^3	
	Firefighting (Overhead water tank)	50 m^3	
24	**Source of water**	Pune Municipal Corporation	
25	**Rain Water Harvesting (RWH)**		
	i) Level of the groundwater table	Groundwater table: 5 m to 6 m below ground level	
	ii) Size and no of RWH tank(s) and Quantity	NA	
	iii) Quantity and size of recharge pits	Total 2 no. of Borewell (1 no. of Borewell: Size 3'x3'x4.5")	
	iv) Details of UGT tanks if any:	Domestic UG domestic tank capacity: 377 m^3, Domestic UG Fire tank capacity: 50 m^3,	
26	**Sewage and wastewater Demand**	i) Sewage generation in KLD: 173 m^3/day ii) STP technology: MBBR iii) No. and Capacity of STP: 1 no. x 70 m^3/day Existing	
27	**Solid Waste Management during Construction phase:** 0 kg/day		

28 Solid Waste Management during operation Phase:

Type	Quantity (kg/day)	Treatment/disposal
Total waste generation	699 kg/day	
Wet waste	419 kg/day	Through Organic Waste Converter. Generated manure used for gardening.
Dry waste	280 kg/day	Handed over to the authorized recycling agency
Hazardous waste	NA	NA
Biomedical waste	NA	NA
STP sludge (dry)	1.7 kg/day	Used as manure
E-waste	NA	NA

29 Green Belt Development

Total RG area	2,045.85 m^2
Existing trees on plot	392
Number of trees to be planted	NA
No of trees to be retained	NA
Number of trees to be transplanted/cut	NA

30 Power requirement

Source of power supply	MSEDCL
During Construction Phase (Demand Load)	NA
During Operation phase (Connected Load)	1,419 kW
During Operation phase (Demand Load)	1,135 kW
Transformer	1 nos. X 82.5 kVA
DG set	1 nos. X 82.5 kVA
Fuel Used	Diesel

31 Details of Energy saving

Energy Conservation Measures	Quantity
Energy-saving due to use of solar PV panels	5 %
Energy-saving due to CFL Lamp	NA
Energy-saving due to LED Lamp	NA
Energy-saving due to Electronic Ballast	NA
Energy savings due to VFD	NA
Overall energy saving	20%

32 Environmental Management plan budget during Construction phase

Component	Parameter	Cost (Rs. In Lakhs)

Air Environment	Water for dust suppression	8.0
	Water utilization for tree planted along with the plot boundary	1.0
	Vehicle maintenance, washing area, tyre cleaning	0.5
	Safety net	0.5
Water Environment	Site sanitation, Toilets, STP, safe drinking water	1.0
	Environment Monitoring	0.5
	Stormwater management	0.5
Socio-Economics Environment	Disinfection at site	1.0
Health & Safety	Health check-ups for workers, first aid kit	1.0
Noise Environment	Site fencing & noise barrier	1.0
	Traffic management	0.5
Training and awareness	Safety personal protective equipment & training programs	1.0
Total		**16.5**

33 **Environmental Management plan budget during Operation phase**

Sr.	Component	Details	Capital cost (Rs. In Lakh)	O&M cost (Rs. In Lakh/year)
1.	Storm water management	Laying of storm & Sewer line up to final disposal point	11.00	0.90
2.	Sewage Treatment Plant	1 no. of STP having capacity 70 m^3/day existing & 110 m^3/day to be proposed	80.25	2.6
3.	Rain Water Harvesting	1 no. of Borewell	1.90	0.5
4.	Solid Waste Management	Cost for Treatment of biodegradable garbage in OWC	3.00	0.4
5.	Landscape development	Tree Plantation	17.26	1.5

	6.	Energy Conservation	Solar PV panels for electricity generation, LED etc.	25.00	2.6
	7.	Environmental Monitoring	Monitoring and analysis of Air, Water, Noise, Soil, surface water, STP treated water etc.	5.00	0.5
	8.	Firefighting system	Installation and operation of Fire Fighting system	14.50	1.7
	9.	Disaster Management		23.10	9.5
		Total		**181.01**	**20.2**

34	**Traffic Management:**	

Type	Required as per DCR	Actual Provided	Area per parking (m^2)
4 -wheeler	140 nos.	214nos.	2,675
2 -wheeler	388 nos.	411 nos.	1,233
Total			**4,458**

35	Details of Court cases / litigations w.r.t. the project and project location if any.	Yes Court case details- NGT Western zone bench at Pune – Case no.65/2019

4. The project/ activity is covered under item 8(a) 'Townships and Area Development Projects' of the Schedule to the EIA Notification, 2006 under violation category.
5. SEAC-3 in its 165th meeting after detailed deliberation recommended the project for grant of ToR.As per the recommendations of the SEAC, the SEIAA hereby accords ToR for preparation of the Environment Impact Assessment (EIA) Report and Environment Management Plan (EMP) the following specific and general conditions:-

Specific Conditions-

Terms of Reference for EIA and preparation of Environment Management Plan (EMP) for Violation Cases

The following Terms of Reference (TOR) for violation cases shall be read along with Ministry of Environment Forest and Climate Change orders no F.No.22-21/2020-IA.III Dated 7th July 2021 and F No. 22-21/2020-IA.III (E 138949) dated 28th January 2022 and Approach for Assessment for Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance" 2018

The following TOR are drafted with reference to Ministry of Environment Forest and Climate Change impact assessment division TORs for Violation Case a) For Construction Sector vide Notification S.O.804 (E) dated 14th March 2017 in the matter of IA/HR/NCP/63612/2017 and b) For Mining Sector dated 12th November 2018 in the proposal No IA/MH/MIN/68113/2017.

A) Project Description

1. Project description, its importance and benefits.
2. Project site details (location, topo-sheet of the study area of 10 Km, Coordinates, google map, layout map, land use, geological features and geo-hydrological status of the study area, drainage). hydro geological survey report with graphs & data.
3. Land use as per the approved Master Plan of the area, Permission/approvals required from the land owning agencies, Planning / Development Authorities, Local Body, Water supply & Sewerage Board, etc.
4. Land acquisition status, R & R details.
5. Forest and Wildlife and eco-sensitive zones, if any in the study area of 10 km. Any sensitive areas in impact zone such as archaeological structures, reserved forest, noise sensitive zones etc. Clearances required under the Forest (Conservation) Act, 1980, the Wildlife (Protection) Act, 1972 and/or the Environment (Protection) Act, 1986.
6. High Tension lines or Hazard lines if any on the plot.
7. Plan showing HFL/CRZ lines.
8. Permissions granted by State Government in tabular and chronological form. Comparative statement of components approved and components constructed including tis configuration as per earlier EC (if applicable) and proposed development.
9. PP to submit the detailed master plan indicating already completed construction and proposed construction. PP to submit the certificate from registered architect for completed work, built up area and configuration.
10. Project cost shall be based on government notified stamp duty ready reckoner at time of application including cost of land and construction including civil, MEP works, environment services, site/land development, horticulture/landscape works etc complete

B) Base Line Data

11. Baseline environmental study for ambient air (PM10, PM2.5, SO2, NOx & CO),water (both surface and ground), noise and soil for one month (except monsoon period) as per MoEF&CC/CPCB guidelines at minimum 5 locations in the study area of 10 km, The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory duly notified under the Environment (Protection) Act,1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
12. Detail on flora and fauna and socio-economic aspects in the study area. Details of tree cutting, tree transplantation and survival report of existing trees including conformity to prevailing Tree Act.
13. Likely impact of the project on the environmental parameters (ambient air surface and ground water, land, flora and fauna and socio-economic, etc.)

14. Source of water for different identified purposes with the permissions required from the concerned authorities, both for surface water and the ground water (by CGWA) as the case may be, Rain water harvesting, etc.
15. Socio-economic infrastructure details including public transport arrangements on the site; PP to mention details of socio-economic in EIA.
16. PP to submit contour map with slopes, drainage pattern of the site and surrounding area. Layout showing natural water courses on site; total runoff calculation before and after development.
17. PP to submit details of existing trees, proposed to be cut, proposed to be transplanted along with tree survival report conforming to prevailing Tree Act.
18. Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated.
19. Proximity to Areas declared as 'Critically Polluted' should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the SPCB should be secured and furnished to the effect that the proposed Activities could be considered.
20. Similarly, for Coastal Projects, A CRZ map duly authenticated by one of the authorized agencies demarcating LTL. HTL, CRZ area, location of the mine lease w.r.t. CRZ, coastal features such as mangroves, if any, should be furnished. (Note: The Projects falling under CRZ would also need to obtain Approval of the concerned Coastal Zone Management Authority).
21. The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.
22. Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.
23. Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.
24. Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.
25. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers present and impact of mining activities on these aquifers. Necessary permission from Central Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.
26. Details of any stream, seasonal or otherwise, passing through the lease area and modification / diversion proposed, if any, and the impact of the same on the hydrology should be examined.

27. Information on site elevation, working depth, groundwater table etc. should be provided both in AMSL and BGL. A schematic diagram may also be provided for the same.

C) Traffic Impact Study in detail including:

28. Traffic Management Plan for the development – Internal circulation indicating road width and turning radius. Cross section of roads at four places showing clear road width, distance left from building line, spaces left for plantation, footpath, service lines etc.
29. Traffic Volume Counts and Turning Movement Counts on all the external surrounding roads of the proposed project showing the time period taken.
30. Topographic details of roads and intersection of the surrounding roads where counts are taken, actual geometry on ground to be shown with dimensions.
31. Traffic generation values of similar development to be given by actual count by actual count as support data for assumption made to the particular project.
32. Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.
33. Parking statement mentioning parking as per DCR & parking provided actually.
34. Basement ventilation plan: Fire Tender Movement Plan showing clear road and turning radius. Cross section of roads at four places including UGT, OWC and DG set location showing clear road width and distance left from building line & spaces left for plantation, parking, service lines, foot paths, etc.

D) Environmental Impact and Management Plan:

35. Identify sources of air pollution, indicate mitigation measures to reduce Air pollution/Noise pollution.
36. Debris management plan including (a) debris required for refilling, (b) contour plan,

(c) details of site where excess debris will be disposed, capacity of the site and NOC of plot owner. PP shall also ensure that debris disposed on other plot shall not be disposed on another

plot. If to be disposed on another plot, the same shall be carried out as per prevailing environmental laws.

37. Management of solid waste and the construction & demolition waste for the project vis-a-vis the Solid Waste Management Rules 2016 and the Construction & Demolition Rules, 2016. Transport, collection, storage and disposal for all types of wastes like hazardous waste, non-hazardous waste, solid waste, E– waste, and debris/excess earth etc. PP to provide the detailed solid waste management plan along with marked locations on the master plan. Design details of waste processing equipment such as OWC/biogas plants confirming to the technical requirements to meet the quality products.
38. Waste water management (treatment, reuse and disposal) for the project and also the study area. Design of all STP's along with BOD load, oxygen requirement calculations and sizing of the tanks with respect to the design criteria. PP to submit detailed

calculation for the disinfection of the treated STP water; PP to submit cross sectional drawing of STP's showing dimensions and ground level; PP to provide ozonation for tertiary treatment. PP to mark the area required for all STP's on master layout with dimensions

39. PP to show internal storm water drain and sewer line arrangements up to final disposal point.
40. Provision of mandatory RG area on virgin land and submit the drawing with calculations, ensuring entire mandatory RG is provided on the plot where residential buildings are proposed.
41. A detailed phase wise development plan with safety planning where occupancy has been given.
42. If any site specific structures such as creation of water body, alteration of natural storm water, large alteration of slopes, creation of green areas abutting to water bodies / natural storm water drain / river etc, is involved, detailed environmental protection approach for the same shall be provided.
43. Separate chapter on Renewable energy in EIA report. PP to submit terrace plan for installing solar panels& calculations of energy saving; Energy efficient measures (LED lights, solar power, etc.) during construction as well as during operational phase of the project. Report on ECBC compliance.
44. Provide details of Solar PV and Solar water heater in the specific format. PP to carryout shadow analysis for identifying the roof-top area for providing solar panels Minimum 5% of the total connected load shall be provided with Solar PV.
45. Environmental status report including analysis reports of all environmental pollution reduction facilities if any commissioned.
46. PP to submit Disaster management plan.
47. Preparation of site specific, executable and auditable environment management plan (EMP)
48. A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory afforestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should be given. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.
49. Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc

E) Environmental Modelling and additional Studies:

50. Fugitive dust modelling by using local meteorological data.
51. Ecological footprint calculation using LCA approach.
52. Estimation of Carbon footprint of the project and its analysis to be included.

53. Assessment of ecological damage with respect to air, water, land and other environmental attributes. The collection of data and sample analysis shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986 or Environmental Laboratory accredited by NABL, or a laboratory of council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
54. Gate mass balance analysis for environmental parameters related to solid/liquid waste material coming to site, waste generated and its treatment and disposal from site.
55. Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.
56. Measures of socio economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
57. Detailed environmental management plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.
58. Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project.
59. PP to refer "approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance" available on the portal : "ecmpcb.in".

F) NOCs, Undertakings, CER and Litigations:

60. NOC's required: a) CFO, b)Water supply with quantity, c) Drainage, d) Non-biodegradable waste disposal, e) Aviation f) HRC, G) PESO , H) Defence/NAD etc
61. Undertaking to provide DG set backup to all Pollution Control Devices, Water Supply, Emergency Services including emergency lifts, etc.
62. Include condition of "maintenance of all Pollution Control Equipment's and functioning of Environment Monitoring Cell in PP's MoU with society /maintenance agencies /vendors
63. PP to submit details of CER activities in consultation with the affected people in the project area as per MoEF&CC circular dt. 01.05.2018, along with details of fund utilization & agreement or consent of executor.
64. PP to submit Roles and Responsibilities of developer etc for compliance of environmental regulations under the provisions of EP act.
65. Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.

G) Specific Term of Reference

66. The State Government/SPCB shall take action against the project proponent under the provisions of section 15 read in conjunction with Section 19 of the Environment

(Protection) Act, 1986, and further no consent to operate to be issued till the project is granted EC.

67. As per extant regulations at the time of scoping, if it is viewed that the project activity is otherwise permissible, Terms of Reference (TOR) shall be issued with directions to complete impact assessment studies and submit Environment Impact Assessment (EIA) report and Environment Management Plan (EMP) in a time bound manner.
68. Such cases shall be subject to appropriate
(a) Damage Assessment
(b) Remedial Plan and
(c) Community Augmentation Plan.
69. Assessment of ecological damage with respect to air, water, land and other environmental attributes shall be done before arriving at quantum environment remediation and natural and community resource augmentation.
70. The methodology of calculating this quantum shall be as specified in format for Assessment of Environmental damages in the paper titled "Approach for Assessment for
Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance" 2018
71. Preparation of EMP comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefits derived, which shall be based on cost of project derived from prevailing rates of construction and land of government approved ready reckoner, due to violation. The cost of the Project (capital cost and recurring cost) as prevailing in Annual Statement of Rates / District Schedule of Rates/ Government Ready Reckoner Rates as well as the cost towards implementation of EMP should be clearly spelt out.
72. The project proponent shall be required to submit a bank guarantee equivalent to the amount of remediation plan and natural and community resource augmentation plan with the SPCB prior to the grant of EC. The quantum shall be recommended by the EAC and finalized by the regulatory authority. The bank guarantee shall be released after successful implementation of the EMP in a period of one year, followed by recommendations of the EAC and approval of the regulatory authority.
73. The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.
74. The remediation plan and the natural and community resource augmentation plan shall be prepared as an independent chapter in the EIA report by the accredited consultants.
75. It should be clearly stated whether the proponent if it is a Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/violation of the environmental or forest norms/ conditions? The hierarchical system or administrative order of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also

be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the Company and/or shareholders or stakeholders at large, may also be detailed in the proposed safeguard measures in each case should also be provided.

76. Besides the above, the below mentioned general points are also to be followed:

a) All documents to be properly referenced with index and continuous page numbering.

b) Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated.

c) Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports should be available during appraisal of the Project.

d) Where the documents provided are in a language other than English, an English translation should be provided.

77. In case of continued violation after issue of TOR, the ToR/Environmental Clearance shall be terminated forthwith.

Project Specific emerged points

1. PP to submit the DP Plan.
2. PP to submit the detail Architect Certificate stating current status of the construction along with building wise construction done (FSI, NoN- FSI & Total built up area) on site along with the chronology.
3. PP to submit the all-approvals details (CC, OC etc) regarding project under consideration.
4. PP to submit the details of Court cases / litigations w.r.t. the project and project location, if any.
5. PP to submit details of implementation of points mentioned in point number 68 along with financial requirements for same with EIA.

General Guidelines

i. The EIA document shall be printed on both sides, as for as possible.

ii. All documents should be properly indexed, page numbered.

iii. Period/date of data collection should be clearly indicated.

iv. The letter/application for EC should quote the Proposal No. and also attach a copy of the letter prescribing the ToR.

v. The copy of the letter received from the SEIAA on the ToR prescribed for the project should be attached as an annexure to the final EIA-EMP Report.

vi. The final EIA-EMP report submitted to the SEIAA must incorporate the issues mentioned in ToR. The index of the final EIA-EMP report, must indicate the specific chapter and page no. of the EIA-EMP Report where the specific ToR prescribed by Ministry. Questionnaire related to the project (posted on MoEF & CC website) with all sections duly filled in shall also be submitted at the time of applying for EC.

vii. Grant of ToR does not mean grant of EC.

viii. The status of accreditation of the EIA consultant with NABET/QCI shall be specifically mentioned. The consultant shall certify that his accreditation is for the sector for which this EIA is prepared.

ix. On the front page of EIA/EMP reports, the name of the consultant/consultancy firm along with their complete details including their accreditation, if any shall be indicated. The consultant while submitting the EIA/EMP report shall give an undertaking to the effect that the prescribed ToRs (ToR proposed by the project proponent and additional ToR given by the MoEF & CC) have been complied with and the data submitted is factually correct (Refer MoEF & CC Office memorandum dated 4th August, 2009).

x. While submitting the EIA/EMP reports, the name of the experts associated with/involved in the preparation of these reports and the laboratories through which the samples have been got analyzed should be stated in the report. It shall clearly be indicated whether these laboratories are approved under the Environment (Protection) Act, 1986 and the rules made there under (Please refer MoEF & CC Office Memorandum dated 4th August, 2009). The project leader of the EIA study shall also be mentioned.

xi. All the ToR points as presented before the State Expert Appraisal Committee (SEAC) shall be covered.

6. The above ToR should be considered in addition to all the relevant information as per the 'Generic Structure of EIA' given in Appendix III and IIIA in the EIA Notification, 2006.
7. The project proponent shall submit the detailed final EIA/EMP prepared as per ToR to the SEIAA for considering the proposal for environmental clearance within 3 years as per the MoEF & CC O.M. No. J-11013/41/2006-IA-II (I) (Part) dated 29.08.2017.
8. The consultants involved in preparation of EIA/EMP report after accreditation with Quality Council of India/National Accreditation Board of Education and Training (QCI/NABET) would need to include a certificate in this regard in the EIA/EMP reports prepared by them and data provided by other Organization(s)/ Laboratories including their status of approvals etc. vide Notification of the MoEF&CC dated 19.07.2013.
9. The prescribed ToR would be valid for a period of three years for submission of the EIA/EMP Reports.

(Pravin Darade)
Principal Secretary &
Member Secretary, SEIAA

Copy to:

1. Chairman, SEIAA (Maharashtra), Mumbai.
2. Principal Secretary, Environment, Room no.217, Annex. Bldg., Mantralaya, Mumbai.
3. Member Secretary, SEAC-3, 15th floor, New Administrative Building, Mantralaya, Mumbai.
4. Member Secretary, Maharashtra Pollution Control Board, Kalpataru Point, 3rd and 4th Floor, Opp. Cine Planet, Sion Circle, Mumbai - 400 022.

2147

Form-1 (Part-C): Information for Appraisal (for Category - A/B1)

1. Details of Terms of Reference (ToR)

2. Select nature of the ToR	Standard ToR issued by the Ministry

Note: Please select option "Standard ToR available on website" in case of Expansion under 7 (ii) (a).

2.1. Date of issuance of ToR/Standard ToR	06/06/2023
2.2. Date of issuance of Additional ToR, if any	20/04/2023
2.3. MoEF&CC / SEIAA File No.	SIA/MH/MIS/76973/2022
2.4. Upload ToR letter (PDF only)	ToR granted letter.pdf **Preview**
2.5. Whether any amendment to ToR has been obtained	No

3. Details of Public Consultation

3.1. Whether the Project has been exempted from Public Hearing?	Yes
3.1.1. Reason	Category B2 projects and activities

Baseline Details

3. Summary of Baseline Data

Details of Baseline data collection

3.1. Season	Winter

Period of collection

3.2. From	01/01/2023
3.3. To	31/01/2023

Number of monitoring locations

3.4. Meteorology (Nos.)	1
3.5. Ambient Air Quality (Nos.)	8
3.6. Surface Water Quality (Nos.)	6
3.7. Ground Water Quality (Nos.)	1
3.8. Ground Water Level (Nos.)	1
3.9. Noise Level (Nos.)	8
3.10. Soil Quality (Nos.)	8

4. Meteorological Parameters

Parameter	Min. Value	Max. Value	Mean Value
4.1. Temperature (°C)	10	32	21
4.2. Wind Speed (m/s)	1	6	3.5
4.3. Relative Humidity (%)	17	100	58.5
4.4. Solar Radiation (W/m^2)	9	9.7	9.35
	Total rainfall (mm)	**No. of rainy days**	**Average annual rainfall (mm)**
4.5. Rainfall	452.2	1250.36	851.28
4.6. Predominant Wind direction	East (E)		

5. Ambient Air Quality

Note: Please Specify range in case of data monitored at multiple locations

Monitoring Location			Observed Value			
Buffer Zone	**Criteria Pollutant**	**Unit**	**From**	**To**	**Mean Value**	**Prescribed Standard**
Buffer Zone	PM10	Micro Gram per Meter Cube	40	64	52	100
Buffer Zone	PM2.5	Micro Gram per Meter Cube	11	35	23	60
Buffer Zone	SO2	Micro Gram per Meter Cube	5	8.7	6.85	80
Buffer Zone	NOx	Micro Gram per Meter Cube	5.45	15.3	10.37	80

Core Zone	Potassium	300	315	mg/kg	-
Core Zone	Magnesium	7.48	8.1	mg/kg	-

13. Whether Traffic study has been conducted?	Yes

Meteorological Parameters		
Parameter	**Existing**	**Proposed**
13.1. Road	Kausar Baug Road	NA
13.2. V (volume in PCU/day)	732	0
13.3. C (capacity in PCU/day)	1500	0
13.4. Existing V/C Ratio	0.49	0
13.5. LOS	0.49	0

14. Whether any Schedule-I Species found in the study area?	No
14.1. Whether conservation plan for Schedule-I Species has been approved by competent authority?	N/A

15. Impact Prediction

Air Quality Impact Prediction

16. Funds Allocated for Environment Management

16.1. Funds Allocated for Environment Management (Capital) (in Lakhs)	N/A
16.2. Funds Allocated towards Corporate Environmental Responsibility (in Lakhs)	N/A
16.3. Funds Allocated for Environment Management Plan (EMP) (Recurring per Annum) (in Lakhs)	N/A
17. Status of Land Acquisition	N/A

18. Details of Post-project monitoring program

Parameters to be monitored during construction and operation of the unit

19. Whether Environmental cell is proposed for implementation and monitoring of EMP	N/A
20. Whether compliance report from integrated regional office on existing EC is obtained?	N/A

Enclosures

FINAL ENVIRONMENTAL IMPACT ASSESSMENT REPORT FOR PROPOSED RESIDENTIAL PROJECT "BRAMHA EXUBERANCE"

at

S. No. 13, H. No. 1, 2 & 3, Village – Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra

-: PROJECT DETAILS: -

Plot area: 17,433.10 m^2
Total BUA: 50,548.68 m^2
Cost of the project: Rs. 27.33 Cr.
ToR No.: SIA/MH/MIS/76973/2022 dated. 17.05.2022
Category as per EIA Notification, 2006: 8 (a) Cat "B2"

APPLICANT

M/s. -BramhaCorp Ltd

LIMITED

DECLARATION GIVEN BY THE PROPONENT

I, hereby declare that the data furnished in FORM-1, 1A and the data furnished in EIA Report submitted for obtaining EC of **"Bramha Exuberance Project, at Kondhwa, Pune"** are true and correct to the best of my knowledge and belief. I am aware that if any part of the data and information submitted is found to be false or misleading at any stage, the project will be rejected and clearance given if any to the project will be revoked at our risk and cost.

Date: 02.06.2023
Place: Pune, Maharashtra

Signature of the Proponent

DECLARATION BY EXPERTS CONTRIBUTING TO THE EIA

I, hereby, certify that I was a part of the EIA team in the following capacity that developed the above EIA.

EIA coordinator:

Mr. Raghunath Mahabal

Date: 03.06.2023

Period of involvement: From December 2022 – On going
Contact information: **Mahabal Enviro Engineers Pvt. Ltd.**
Plot no F-7, road no. 21, Wagle Estate, Thane west-400604, Maharashtra
Phone: 022 2582 3154

Functional area experts:

Sr.	Functional areas	Name of the expert/s	Involvement (task**)	Signature
1	AP	Pravin Latwade	Baseline Monitoring data verification approval, Interpretations of Air environment, identify source of emissions, Impact Identification and Suggested Mitigation Measures, Provide Air quality management measures, Report writing	
2	AP	Ajeet Kumar	Baseline Monitoring, Assist and Report to FAE	
3	AQ	Pravin Latwade	Baseline Monitoring, Preparation of meteorological data, fugitive dust emission Modelling, Suggested Mitigation Measure	
4	AQ	Kunal Gajare	Worked on fugitive dust emission modelling	
5	WP	Priyanka Ubale	Checked the water balance calculation as per NBC code 2016 before submission on ECMPCB portal. Checked sewage generation Calculation and Suggested capacity and Treatment Methodology of STP. Checked the Rain water harvesting calculation Checked the storm water	

Sr.	Functional areas	Name of the expert/s	Involvement (task**)	Signature
			generation calculation Studied the 10 km radius of the project area for baseline monitoring. Selected of water sampling locations as per CPCB guideline. Identified Impacts on Surface and Ground water sources. Report writing	
6	WP	Sachin Gore	Baseline Monitoring, data verification and approval wrt to WP.	
7	MSW	Usha Waghmare	• Calculation of solid waste generation. • Prepared the solid waste management plan • Area calculation for solid waste storage and composting machine	
8	MSW	Priyanka Ubale	• Checked the calculation of solid waste generation. • Checked the solid waste management plan • Checked the area calculation for solid waste storage and composting machine • Suggested the location of storage and composting machine area. • Disposal methods of dry, wet and inert solid wastes.	
9	EB	Manoj Eledath	• Identify flora and Fauna of the surrounding environment. Calculate bio diversity index.	
10	SE	Sushil Meshram	Socioeconomic survey, Socioeconomic Assessment of Project area and surrounding area, Impact prediction and assessment, Suggestions for required welfare activities that can be taken up by PP based on scale of project as well as management, Report to EC	

Sr.	Functional areas	Name of the expert/s	Involvement (task**)	Signature
11	HG	Vinay Nikam	Impact Identification and Suggested Mitigation Measures, Report to EC	
12	GEO	Jotiram Balwant Pishte	Impact Identification and Suggested Mitigation Measures, Report to EC	
13	SC	Neeta Salunkhe	Baseline Monitoring, Analysis of soil material & results, Suggested Mitigation Measure	
14	LU	Tapas Bhargava	Land Use and Land Cover Classification and GIS Image processing, Impact on LU and related mitigations	

Declaration by the Head of the accredited consultant organization/ authorized person.

I, **Mr. Raghunath Mahabal,** hereby, confirm that the above-mentioned experts prepared the EIA study for **Proposed Expansion "Bramha Exuberance" is a residential project at sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BrahmaCorp Ltd.**

I also confirm that the consultant organization shall be fully accountable for any mis-leading information mentioned in this statement.

Chapter 1
Introduction

1.1 Preamble

"Bramha Exuberance" is a residential project at sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BrahmaCorp Ltd.

The violation application was submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 07.07.2021 and 28.01.2022 vide F. No. 22-21/2020-IA.III (E 138949) for the FSI area **21,798.69 m²**, Non-FSI area **28,749.68 m²** & Construction area **50,548.37** vide proposal no. SIA/MH/MIS/76973/2022 dated 17.05.2022.

As per sanction 2005, **A & B (4 wings each), D, and E (5 wings each) buildings were constructed with 'built-up area of 39,037.99 m²**. It comprises of 4 residential buildings, 249 flats in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21.9.2005 & CC/3387/05 dated 30.12.2005. **The entire work was completed in 2009.**

The Occupancy Certificate was granted to the project on 04.12.2009. Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers 'residents' society in the year **2012.**

The earlier sanctioned plan of year 2005 had all buildings A, B, C, D and E. But we did not construct building C. **It was not economically viable** as the selling cost was not permitting buying the TDR from the open market.

As per CC-3954 dated 04.03.2014, Building No. C was constructed and the total built-up area of the C building is **11,510.38 m²**. The building configuration of the C building is Lower Parking + Podium +1 Floors & **55 flats.**

The plan for this building C was submitted in the year 2014 and Commencement Certificate was issued on 15.07.2014.

The EIA is prepared by considering the manual of Administrative Staff College of India, Hyderabad (2010), MoEF&CC & Standard Terms of Reference (ToR), 2015 & additional ToR received in the 165th SEAC-III meeting & the 259th SEIAA meeting dated 20.04.2023.

The purpose of this Environmental Impact Assessment (EIA) study is to provide information on the nature and extent of environmental impact that might have been arising from the project.

1.2 General Information on Building Construction Project

The plot area of the project is 17,433.10 m^2 and total Built up area is 50,548.37 m^2.

Table 1.1: Construction Area Details

Description	Area (m^2)
Plot area	17,433.10
Deductions	2,833.35
Net plot area	14,599.75
Total proposed F.S.I area	21,798.69
Total Non-F.S.I. area	28,749.68
Total construction area	50,548.37

Sr.	Particulars	Building A	Building B	Building C	Building D	Building E	Total
1	**FSI**	3,191.55	3,191.55	4,706.14	4,867.09	5,443.65	21,399.98
2	**Excess balcony**					398.71	398.71

1.3 Environmental Clearance Process

We have applied for environment clearance under the Office Memorandum dated 28.01.2022 having proposal no. SIA/MH/INFRA2/411979/2022 dt.17.05.2022. The details area as per mentioned in points no. 1.1 of project summary.

1.4 Terms of Reference (ToR)

Form 1 & 1A has been submitted for the project. As per the EIA notification project falls under the 8(a) B2 category. EIA report is prepared as per EIA guidance manual by Administrative Staff College of India, Hyderabad, February 2010, Standard terms of reference by MoEF&CC, April 2015 and Additional ToR received in the 165th SEAC-III meeting & the 259th SEIAA meeting dated 20.04.2023.

Table 1.2: Standards Terms of Reference

Sr.	Terms of Reference (ToR)	Chapter	Page no.
1.	Examine details of land use as per Master Plan and land use around 10 km radius of the project site. Analysis will be done based on latest satellite imagery for land use with raw images. Check on flood plain of any river.	Chapter 3	91
2.	Submit details of environmentally sensitive places, land acquisition status, rehabilitation of communities/villages and present status of such activities.	Chapter 3, 7	105 & 164
3.	Examine baseline environmental quality along with projected incremental load due to the project.	Chapter 3	74
4.	Environmental data to be considered in relation to the project Development would be (a) land, (b) groundwater, (c) surface water, (d) air, (e) bio-diversity, (f) noise and vibrations, (g) socio economic and health.	Chapter 3	76
5.	Submit a copy of the contour plan with slopes, drainage pattern of the site and surrounding area. Any obstruction of the same by the project.	Chapter 2	45
6.	Submit the details of the trees to be cut for the project.	Chapter 4	120
7.	Submit the present land use and permission required for any conversion such as forest, agriculture etc.	Chapter 3	91
8.	Submit roles and responsibilities of the developer etc. for compliance of environmental regulations under the provisions of EP Act.	Chapter 10	194
9.	Ground water classification as per the Central Groundwater Authority.	Chapter 3	89
10.	Examine the details of Source of water, water requirement, use of treated waste-water and prepare a water balance chart.	Chapter 2	57
11.	Rainwater harvesting proposals will be made with due safeguards for ground water quality. Maximize recycling of water and utilization of rain water. Examine details.	Chapter 2	65
12.	Examine soil characteristics and depth of ground	Chapter 3	97

Sr.	Terms of Reference (ToR)	Chapter	Page no.
	water table for rainwater harvesting.		
13.	Examine details of solid waste generation treatment and its disposal.	Chapter 2, 7	62 165
14.	Examine and submit details of use of solar energy and alternative source of energy to reduce the fossil energy consumption. Energy conservation and energy efficiency.	Chapter 5	128
15.	DG sets are likely to be used during construction and operational phase of the project. Emissions from DG sets must be taken into consideration while estimating the impacts on air environment. Examine and submit details.	Chapter 4	114
16.	Examine road/rail connectivity to the project site and impact on the traffic due to the proposed project. Present and future traffic and transport facilities for the region will be analyzed with measures of preventing traffic congestion and providing faster trouble-free system to reach different destinations in the city.	Chapter 5	130
17.	A detailed traffic and transportation study will be made for existing and projected passenger and cargo traffic.	Chapter 7	176
18.	Examine the details of transport of materials for construction which will include source and availability.	Chapter 5	127
19.	Examine separately the details for construction and operation phases both for Environment Management Plan and Environment Monitoring Plan with cost and parameters.	Chapter 10	185
20.	Submit details of a comprehensive Disaster Management Plan including emergency evacuation during natural and man-made disaster.	Chapter 7	137

Table 1.3: Additional ToR in the 165th SEAC-III meeting & the 259th SEIAA meeting

Sr.	Terms of Reference (ToR)	Reply	Page no.
A.	**Project Description**		
1.	Project description, its importance and benefits.	Project description is given in chapter 2 & its importance and benefits are given in chapter 8.	41 178
2.	Project site details (location, topo-sheet of the study area of 10 Km, Coordinates, google map, layout map, land use, geological features and geo hydrological status of the study area, drainage). hydro geological survey report with graphs & data.	Coordinates-Chapter 1-Table 1.7 google map- Chapter 1-Figure 1.1 layout map- Chapter 2-Figure 2.7: land use-Chapter 3- Section 3.7 hydro geological survey report-Chapter 7- Section 7.13	35 33 51 91 177

Sr.	Terms of Reference (ToR)	Reply	Page no.
3.	Land use as per the approved Master Plan of the area, Permission/approvals required from the land-owning agencies, Planning / Development Authorities, Local Body, Water supply & Sewerage Board, etc.	Land use study of the 10 km study area is given in Chapter 3- Section 3.7 Permission/approvals required from the land-owning agencies, Planning / Development Authorities, Local Body, Water supply & Sewerage Board, etc.-Chapter 1-Table 1.8	91 38
4.	Land acquisition status, R & R details.	Land acquisition status is attached as Annexure-XIV.	
5.	Forest and Wildlife and eco-sensitive zones, if any in the study area of 10 km. Any sensitive areas in impact zone such as archaeological structures, reserved forest, noise sensitive zones etc. Clearances required under the Forest (Conservation) Act, 1980, the Wildlife (Protection) Act, 1972 and/or the Environment (Protection) Act, 1986.	No eco-sensitive zone in the 10 km study area.	
6.	High Tension lines or Hazard lines if any on the plot.	No high-tension lines or Hazard lines passing through the plot.	
7.	Plan showing HFL/CRZ lines.	No HFL/CRZ lines.	
8.	Permissions granted by State Government in tabular and chronological form. Comparative statement of components approved and components constructed including the configuration as per earlier EC (if applicable) and proposed development.	We have received water, drainage, sewage disposal permission from PMC. We have mentioned the permission details in Chapter 1, Table no. 1.8 of the EIA report Project statement is given in Chapter 2, Table no.2.1 of the EIA report.	38 42
9.	PP to submit the detailed master plan indicating already completed construction and proposed construction. PP to submit the certificate from registered architect for completed work, built up area and configuration.	Detailed project layout plan is given in Chapter 2, Figure 2.7 in the EIA report. Architect certificate is attached as Annexure XII.	51
10.	Project cost shall be based on government notified stamp duty ready reckoner at time of application including cost of land and construction including civil, MEP works, environment services, site/land development, horticulture/landscape works etc. complete.	The project cost was calculated based on ready reckoner.	42
B.	**Base Line Data**		
11.	Baseline environmental study for ambient air (PM_{10}, $PM_{2.5}$, SO_2, NOx & CO), water (both surface and ground), noise and soil for one month (except monsoon period) as per MoEF&CC/CPCB	We have carried out the baseline environmental study for ambient air, water, noise and soil in the 10 km study	75

Sr.	Terms of Reference (ToR)	Reply	Page no.
	guidelines at minimum 5 locations in the study area of 10 km, The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory duly notified under the Environment (Protection) Act,1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.	area. Location of the baseline study area is given in Chapter 3, Table 3.1 of EIA report.	
12.	Detail on flora and fauna and socio-economic aspects in the study area. Details of tree cutting, tree transplantation and survival report of existing trees including conformity to prevailing Tree Act.	The details of flora and fauna are given in Chapter 3, Table 3.19 to Table 3.20 of the EIA report. Socio-economic aspects of the study area are given in Chapter 3, Section 3.12 of the EIA report.	101 105
13.	Likely impact of the project on the environmental parameters (ambient air surface and ground water, land, flora and fauna and socio-economic, etc.)	Impact of the project on the environmental parameters like ambient air surface and ground water, land, flora and fauna and socio-economic, etc. is given in chapter 4.	109
14.	Source of water for different identified purposes with the permissions required from the concerned authorities, both for surface water and the ground water (by CGWA) as the case may be, Rain water harvesting, etc.	Water permission is attached as annexure XVI.	
15.	Socio-economic infrastructure details including public transport arrangements on the site; PP to mention details of socio-economic in EIA.	The details of socio-economic infrastructure including public transport is described in Section 3.12 of Chapter 3.	105
16.	PP to submit contour map with slopes, drainage pattern of the site and surrounding area. Layout showing natural water courses on site; total runoff calculation before and after development.	The contour plan is given in Figure 2.2 of chapter 2. Total run off calculations is given in Table 2.15 & also in Hydrological survey report & it attached as Annexure IX.	41 69
17.	PP to submit details of existing trees, proposed to be cut, proposed to be transplanted along with tree survival report conforming to prevailing Tree Act.	Tree details are given in chapter 3, Table 3.20, chapter 7, Table 7.11 Tree survival report is attached as Annexure X	102, 163
18.	Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated.	Land use study of the 10 km study area is given in Chapter 3- Section 3.7	91
19.	Proximity to Areas declared as 'Critically Polluted' should also be indicated and	No 'Critically Polluted' are in the 10 km study area.	

Sr.	Terms of Reference (ToR)	Reply	Page no.
	where so required, clearance certifications from the prescribed Authorities, such as the SPCB should be secured and furnished to the effect that the proposed Activities could be considered.		
20.	Similarly, for Coastal Projects, A CRZ map duly authenticated by one of the authorized agencies demarcating LTL. HTL, CRZ area, location of the mine lease w.r.t. CRZ, coastal features such as mangroves, if any, should be furnished. (Note: The Projects falling under CRZ would also need to obtain Approval of the concerned Coastal Zone Management Authority).	The project is not coming under the CRZ area.	
21.	The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.	The total water requirement of project is around 185 m^3/day. Source of water is from Pune Municipal Corporation. The water requirement details are given in chapter 2, Table 2.10	57
22.	Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.	Water source is Pune Municipal Corporation. We are not extracting the water.	
23.	Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.	Rainwater harvesting details of the project is given in chapter 2.	65
24.	Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.	Impact of the project on the water quality, both surface and groundwater are given in chapter 4, Section 4.6.	114
25.	Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers present and impact of mining activities on these aquifers. Necessary permission from Central Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.	Hydro Geological report is attached as Annexure IX.	
26.	Details of any stream, seasonal or otherwise, passing through the lease area and modification / diversion proposed, if any, and the impact of the	No stream passing through the plot.	

Sr.	Terms of Reference (ToR)	Reply	Page no.
	same on the hydrology should be examined.		
27.	Information on site elevation, working depth, groundwater table etc. should be provided both in AMSL and BGL. A schematic diagram may also be provided for the same.	Chapter 2 Ground water level; Chapter.3 Summer Season – 11.00 m. to 14.00 m. BGL. (12.50 m. Average) Rainy Season – 5.00 m. to 6.00 BGL. (5.50 m. Average) Winter Season – 7.50 m. to 10.00 m. BGL. (8.75 m. Average) Details schematic diagram is given in Hydro Geological report, it is attached as Annexure X.	
C.	**Traffic Impact Study in detail**		
28.	Traffic Management Plan for the development – Internal circulation indicating road width and turning radius. Cross section of roads at four places showing clear road width, distance left from building line, spaces left for plantation, footpath, service lines etc.	Traffic analysis report is attached as Annexure V.	
29.	Traffic Volume Counts and Turning Movement Counts on all the external surrounding roads of the proposed project showing the time period taken.	Traffic analysis report is attached as Annexure V.	
30.	Topographic details of roads and intersection of the surrounding roads where counts are taken, actual geometry on ground to be shown with dimensions.	Traffic analysis report is attached as Annexure V.	
31.	Traffic generation values of similar development to be given by actual count by actual count as support data for assumption made to the particular project.	Traffic analysis report is attached as Annexure V.	
32.	Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.	Traffic analysis report is attached as Annexure V.	
33.	Parking statement mentioning parking as per DCR & parking provided actually.	We have provided the parking area as per the DCR. Parking details are given in	55

Sr.	Terms of Reference (ToR)	Reply	Page no.
		chapter 2, Table 2.9.	
34.	Basement ventilation plan: Fire Tender Movement Plan showing clear road and turning radius. Cross section of roads at four places including UGT, OWC and DG set location showing clear road width and distance left from building line & spaces left for plantation, parking, service lines, foot paths, etc.	Basement ventilation plan is given chapter 2, Figure 2.13 Fire Tender Movement Plan showing clear road and turning radius is given in chapter 2, Chapter 7, Figure 2.26, Figure 7.5.	56 72 147
D.	**Environmental Impact and Management Plan**		
35.	Identify sources of air pollution, indicate mitigation measures to reduce Air pollution/Noise pollution.	We have given the source of air & noise pollution with mitigation measures to reduce Air pollution/Noise pollution in Chapter 4 of the EIA report.	109
36.	Debris management plan including (a) debris required for refilling, (b) contour plan, (c) details of site where excess debris will be disposed, capacity of the site and NOC of plot owner. PP shall also ensure that debris disposed on other plot shall not be disposed on another plot. If to be disposed on another plot, the same shall be carried out as per prevailing environmental laws.	Debris management plan is given in chapter 7.	169
37.	Management of solid waste and the construction & demolition waste for the project vis-a-vis the Solid Waste Management Rules 2016 and the Construction & Demolition Rules, 2016. Transport, collection, storage and disposal for all types of wastes like hazardous waste, non-hazardous waste, solid waste, E– waste, and debris/excess earth etc. PP to provide the detailed solid waste management plan along with marked locations on the master plan. Design details of waste processing equipment such as OWC/biogas plants confirming to the technical requirements to meet the quality products.	Solid waste management plan details are given in Chapter 2 section 2.5.4, Chapter 7, Section 7.8.	62 165
38.	Waste water management (treatment, reuse and disposal) for the project and also the study area. Design of all STP's along with BOD load, oxygen requirement calculations and sizing of the tanks with respect to the design criteria. PP to submit detailed calculation for the disinfection of the treated STP water; PP to submit cross sectional drawing of STP's showing dimensions and ground level; PP to provide ozonation for tertiary treatment. PP to mark the area required	Waste water management details are given in chapter 2, Section 2.5.3. STP design details are given as Annexure II.	57

Sr.	Terms of Reference (ToR)	Reply	Page no.
	for all STP's on master layout with dimensions.		
39.	PP to show internal storm water drain and sewer line arrangements up to final disposal point.	Internal storm water drain is given in chapter 2, Figure 2.15 and sewer line arrangements up to final disposal point is given in chapter 2	58
40.	Provision of mandatory RG area on virgin land and submit the drawing with calculations, ensuring entire mandatory RG is provided on the plot where residential buildings are proposed.	We have provided the mandatory RG area 2,045.85 m^2 RG area details is given in chapter 7, section 7.6.2. Landscape plan is given in Figure 3.9 of chapter 3.	162 103
41.	A detailed phase wise development plan with safety planning where occupancy has been given.	Project was completed in a single phase.	
42.	If any site-specific structures such as creation of water body, alteration of natural storm water, large alteration of slopes, creation of green areas abutting to water bodies / natural storm water drain / river etc., is involved, detailed environmental protection approach for the same shall be provided.	There won't be any alteration of any structure in the operation phase.	
43.	Separate chapter on Renewable energy in EIA report. PP to submit terrace plan for installing solar panels& calculations of energy saving; Energy efficient measures (LED lights, solar power, etc.) during construction as well as during operational phase of the project. Report on ECBC compliance.	Energy Conservation Building Code (ECBC) Report is attached as Annexure IV.	
44.	Provide details of Solar PV and Solar water heater in the specific format. PP to carryout shadow analysis for identifying the roof-top area for providing solar panels Minimum 5% of the total connected load shall be provided with Solar PV.	Overall energy saving details is 20.33%. Renewable energy saving is 13.21%. Shadow analysis report is attached as Annexure IV.	130
45.	Environmental status report including analysis reports of all environmental pollution reduction facilities if any commissioned.	The environmental status report is attached as Annexure XI.	
46.	PP to submit Disaster management plan.	Disaster management plan is given in Chapter 7, Section 7.3 of the EIA report.	137
47.	Preparation of site specific, executable and auditable environment management plan (EMP)	Site specific environment management plan is given in Chapter 9 of the EIA report.	180
48.	A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in	Tree details are given in chapter 3, Table 3.20, chapter 7, Table 7.11 Tree survival report is	102, 163

Sr.	Terms of Reference (ToR)	Reply	Page no.
	mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory afforestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should be given. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.	attached at Annexure V Landscape plan is given in Figure 3.9 of chapter 3	103
49.	Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.	Project benefit is given in chapter 8.	178
E.	**Environmental Modelling and additional Studies**		
50.	Fugitive dust modelling by using local meteorological data.	Fugitive dust modelling is attached.	
51.	Ecological footprint calculation using LCA approach.	Ecological footprint calculation using LCA approach is attached as Annexure VII.	
52.	Estimation of Carbon footprint of the project and its analysis to be included.	Carbon footprint is attached as Annexure VI.	
53.	Assessment of ecological damage with respect to air, water, land and other environmental attributes. The collection of data and sample analysis shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986 or Environmental Laboratory accredited by NABL, or a laboratory of council of Scientific and Industrial Research (CSIR) institution working in the field of environment.	Ecological damage assessment is attached as Annexure I.	
54.	Gate mass balance analysis for environmental parameters related to solid/liquid waste material coming to site, waste generated and its treatment and disposal from site.	Gate mass balance analysis is attached as Annexure VIII.	
55.	Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.	The environment management plan during the operation phase is given in chapter 15, Table 15.1. Budget allocation is given in chapter 15, section 15.2.	218
56.	Measures of socio-economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may	In the remediation plan, we have covered the socio-economic points.	218

Sr.	Terms of Reference (ToR)	Reply	Page no.
	be given with time frames for implementation.		
57.	Detailed environmental management plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.	The environment management plan during the operation phase is given in chapter 15, Table 15.1.	218
58.	Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project.	A public hearing is not required for this project.	
59.	PP to refer "approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance" available on the portal: "ecmpcb.in".	As per the approach paper, we have prepared the damage assessment.	
F.	**NOCs, Undertakings, CER and Litigations**		
60.	NOC's required: a) CFO, b) Water supply with quantity, c) Drainage, d) Non-biodegradable waste disposal, e) Aviation f) HRC, G) PESO, H) Defense/NAD etc.	CFO NOC, Water supply NOC, Drainage NOC and Nonbiodegradable waste disposal NOC is attached as Annexure XVI.	
61.	Undertaking to provide DG set backup to all Pollution Control Devices, Water Supply, Emergency Services including emergency lifts, etc.	Undertaking to provide DG set backup to all Pollution Control Devices, Water Supply, and Emergency Services including emergency lifts is attached as an annexure-XIII.	
62.	Include condition of "maintenance of all Pollution Control Equipment's and functioning of Environment Monitoring Cell in PP's MoU with society/maintenance agencies /vendors	Society is doing the maintenance of all Pollution Control Equipment's and functioning of Environment Monitoring Cell.	
63.	PP to submit details of CER activities in consultation with the affected people in the project area as per MoEF&CC circular dt. 01.05.2018, along with details of fund utilization & agreement or consent of executor.	As per MoEF&CC OM 25.02.2021. CER implemented as per EMP	
64.	PP to submit Roles and Responsibilities of developer etc. for compliance of environmental regulations under the provisions of EP act.	The role and responsibilities of the developer are given in chapter 10.	185
65.	Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.	Yes Court case details- NGT Western zone bench at Pune – Case no.65/2019	
G.	**Specific Term of Reference**		

Sr.	Terms of Reference (ToR)	Reply	Page no.
66.	The State Government/SPCB shall take action against the project proponent under the provisions of section 15 read in conjunction with Section 19 of the Environment (Protection) Act, 1986, and further no consent to operate to be issued till the project is granted EC.	Yes, we agree with the condition.	
67.	As per extant regulations at the time of scoping, if it is viewed that the project activity is otherwise permissible, Terms of Reference (TOR) shall be issued with directions to complete impact assessment studies and submit Environment Impact Assessment (EIA) report and Environment Management Plan (EMP) in a time bound manner.	Yes, we agree	
68.	Such cases shall be subject to appropriate: (a) Damage Assessment (b) Remedial Plan and (c) Community Augmentation Plan.	We have prepared the Damage Assessment, Remedial Plan, and Community Augmentation Plan.	217
69.	Assessment of ecological damage with respect to air, water, land and other environmental attributes shall be done before arriving at quantum environment remediation and natural and community resource augmentation.	Yes, we agree with the condition.	
70.	The methodology of calculating this quantum shall be as specified in format for Assessment of Environmental damages in the paper titled "Approach for Assessment for Environment Damage and Estimation of Remediation Costs for Building Construction Projects Initiated Without Mandatory Environment Clearance" 2018.	As per the Approach paper, we have prepared the damage assessment.	
71.	Preparation of EMP comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefits derived, which shall be based on cost of project derived from prevailing rates of construction and land of government approved ready reckoner, due to violation. The cost of the Project (capital cost and recurring cost) as prevailing in Annual Statement of Rates / District Schedule of Rates/ Government Ready Reckoner Rates as well as the cost towards implementation of EMP should be clearly spelt out.	We have prepared considering the remediation plan and natural and community resource augmentation. Chapter 15, section 15.1.	218
772.	The project proponent shall be required to submit a bank guarantee equivalent to the amount of remediation plan and natural and community resource augmentation plan with the SPCB prior to the grant of EC. The quantum shall	We will submit the bank guarantee as per the remediation plan.	

Sr.	Terms of Reference (ToR)	Reply	Page no.
	be recommended by the EAC and finalized by the regulatory authority. The bank guarantee shall be released after successful implementation of the EMP in a period of one year, followed by recommendations of the EAC and approval of the regulatory authority.		
73.	The collection and analysis of data shall be done by an environmental laboratory duly notified under the Environment (Protection) Act, 1986, or an environmental laboratory accredited by NABL, or a laboratory of a Council of Scientific and Industrial Research (CSIR) institution working in the field of environment.	The baseline monitoring was done though the NABL lab.	
74.	The remediation plan and the natural and community resource augmentation plan shall be prepared as an independent chapter in the EIA report by the accredited consultants.	We have prepared a separate chapter 15 for the remediation plan and the natural and community resource augmentation plan.	218
75.	It should be clearly stated whether the proponent if it is a Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/violation of the environmental or forest norms/ conditions? The hierarchical system or administrative order of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the Company and/or shareholders or stakeholders at large, may also be detailed in the proposed safeguard measures in each case should also be provided.	We are working on the Environment Policy.	
76.	Besides the above, the below mentioned general points are also to be followed: All documents to be properly referenced with index and continuous page numbering. Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated. Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports	Yes, we agree.	

Sr.	Terms of Reference (ToR)	Reply	Page no.
	should be available during appraisal of the Project. Where the documents provided are in a language other than English, an English translation should be provided.		
77.	In case of continued violation after issue of TOR, the ToR/Environmental Clearance shall be terminated forthwith.	Yes, we agree.	
	Project Specific emerged points		
1.	PP to submit the DP Plan.	DP plan is attached as Annexure XVI.	
2.	PP to submit the detail Architect Certificate stating current status of the construction along with building wise construction done (FSI, Non-FSI & Total built up area) on site along with the chronology.	Architect Certificate is attached as Annexure XII	
3.	PP to submit the all-approvals details (CC, OC etc.) regarding project under consideration.	All approval details are given in table 1.8	38
4.	PP to submit the details of Court case/litigations w.r.t. the project and project location, if any.	Court case details- NGT Western zone bench at Pune – Case no.65/2019	
5.	PP to submit details of implementation of points mentioned in point number 68 along with financial requirements for same with EIA	We have prepared the Damage Assessment, Remedial Plan and Community Augmentation Plan. Chapter 13 to Chapter 15.	

1.5 Validity of Environmental Clearance

We are in process of Environment Clearance.

1.6 Post-Environmental Clearance Monitoring

We have not yet received environment clearance for the project, but after received the environment clearance we will submitted six-monthly EC Compliance & Monitoring report to the regional office of MoEF&CC, Nagpur and RO & HQ of MPCB offices.

1.7 Transferability of Environmental Clearance

Not applicable

1.8 Generic Structure of Environmental Impact Assessment (EIA) Report

We have collected base line data for the period of January 2023. EIA report is prepared as per EIA guidance manual by Administrative Staff College of India, Hyderabad, February 2010, Standard terms of reference by MoEF&CC, April 2015 and Additional ToR received in the 165th SEAC-III meeting & the 259th SEIAA meeting dated 20.04.2023. EIA report contains monitoring data, project description, assessment of impacts, preparation of environmental management plan, damage and disaster management plan. The report is organized in following fourteen chapters:

Chapter 1 Introduction

This chapter describes Environmental clearance and ToR for project, objectives, methodology for EIA and also brief description of project.

Chapter 2 Project Description

This chapter gives a brief description of the location, layout of the 'Bramha Exuberance' project site at Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra. Also, it includes identification of natural hazard prone areas like, earthquake, flood, landslide, manpower requirement etc.

Chapter 3 Description of the Existing Environment

This chapter presents details of the baseline environmental status for Ambient air quality, noise, traffic, surface and ground water quality, soil quality, flora, fauna and socio-economic status etc.

Chapter 4 Anticipated impacts and mitigation measures

This chapter discusses the anticipated impact and mitigation measures for land, water, air, noise, biological, socio-economic, environment and solid waste, hazardous waste, construction and demolition waste impacts of the project during construction and operation phases.

Chapter 5 Alternative technologies

This chapter discusses the alternative technologies implemented for green building, resource conservation and recycling and energy conservation technologies used for project.

Chapter 6 Environmental Monitoring Programme

This chapter describes the details about the post project environmental monitoring programme.

Chapter 7 Additional Studies

This chapter presents the Disaster management plan, Solid waste management plan, and Debris management plan.

Chapter 8 Project Benefits

This chapter presents the benefits of the 'Bramha Exuberance'' project.

Chapter 9 Environmental Cost Benefit Analysis

Not applicable

Chapter 9 Environmental Management Plan

This chapter presents the environment management plan for anticipated impacts and remedial measures.

Chapter 10 Summary and Conclusions

This chapter deals with the project description and projects benefits, environmental examinations along with additional studies include Environmental management plan and post project monitoring program, Environmental Risk Assessment (ERA) and Public Health and Safety issues related to the project.

Chapter 11 Details of consultant engaged

This chapter covers the details of environmental consultants, NABET accreditation details.

Chapter 12 Nature of Violation

Chapter 13 Assessment of Ecological Damage Report

Chapter 14 Remediation Plan and Nature and Community resource Augmentation Plan

Objectives of the study

1.9 The objectives of the EIA study are:

- To describe the scope of the project and associated works;
- To establish the existing environmental status of the project site;
- To identify and quantify pollution sources and determine the significance of impact on receptors;
- To identify, predict and evaluate environmental and social impact expected during the construction and use phases in relation to the existing civic infrastructure and receptors present, if any;
- To develop mitigation measures so as to minimize pollution, environmental disturbance and nuisance during construction and use;
- To design and specify Environment Management Plan (EMP) monitoring schedule for implementation and the effectiveness of the mitigation measures adopted.

1.9.1 Methodology of the study

Inspection survey is carried out to understand the nature of the development of residential project 'Bramha Exuberance' to conduct visual site inspection, to decide the sampling locations and program.
Sampling locations were identified on the basis of the following criteria:

- Predominant wind direction in the study area;
- Existing topography;
- Location of existing activities;
- Accessibility, availability of power, security of monitoring instruments and
- Samples collected at various locations were identified in the inspection survey to establish environmental quality existing at project site. The impacts of development of the project are identified. The appropriate Environment Management Plan (EMP) is defined to mitigate adverse environmental impact.

The samples were collected during post-monsoon i.e., from January 2023. The sampling locations and the parameters studied during the survey are given in **Table 1.4**

Table 1.4: Parameters studied during the survey

Sr.	Attribute	Parameters	Frequency of Monitoring
1	Ambient air quality	PM_{10}, $PM_{2.5}$, SO_2, NO_2, Lead, Ammonia, Benzene, benzo(a) pyrene, Arsenic, Nickel, Ozone, and CO	Ambient Air Quality was monitored at 8 locations are for 24-hours twice a week.
2	Meteorology	Surface: Wind speed and direction, temperature, relative humidity and rainfall	Primary data: Hourly readings during the study period of months at project site were taken. Secondary data collection from IMD, Pune.
3	Noise levels	Noise levels in dB(A)	Continuous 24-hourly monitoring at 8 locations during the study period.
4	Water Quality	As Per IS: 10500	Once in Study Period (1 months)
5	Soil characteristics	Parameters related to agricultural & afforestation potential	Sampling 8 location was monitored.
6	Land use	Land use for different categories	Based on data published in Primary Census abstract 2011 and satellite imagery.
7	Socio-economic aspects	Socio-economic characteristics of local population	Based on data collected from Census 2011
8	Geology	Geology of the area	Based on data collected from secondary sources
9	Hydrology	Drainage pattern, nature of streams, aquifer characteristics recharge discharge areas.	Based on data collected from secondary sources
10	Traffic study	Traffic density/ pattern	Survey at 3 locations

Sr.	Attribute	Parameters	Frequency of Monitoring
11	Ecology	Existing terrestrial and aquatic flora and fauna.	Based on the data collected from secondary sources

1.10 Identification of Project Proponent

Table 1.5: Identification of Project Proponent

Name of Project	Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra by BramhaCorp Ltd.
Type of Project	Residential Project
Category	8(a), B2 Category EIA is done by considering it as a violation case as per MoEF notification dated 14.03.2017
Project Proponent	BramhaCorp Ltd.
Proponent	Mr. Sachin Shah
Designation (Owner/Partner/CEO)	Owner
Registered Address	The Residency Club, 3 Queen's Garden Road, Pune Maharashtra 411001
Mobile	020-41423333
Email	ec@bramhacorp.in

1.11 Brief Description of Project

The project is located at Sr. No.13, H. No. 1, 2, & 3 of Village- Kondhwa Khurd, Taluka- Haveli, Pune, Maharashtra. The geographical location of the project site is **18°28'31.22"N** latitude and **73°53'42.44"E** longitude.

The proposed project site is approachable by **20 m** wide DP Road. The site is about **8.1 km** away from Pune railway station, **14.8 km** from Pune Airport. The project is planned in the gross plot admeasuring approximately **50,548.37 m²** area (as in proposed expansion). Location map is shown in **Figure 1.1**. Co-ordinates at all corners of the project site are mentioned in Error! Reference source not found.**7**

Table 1.6: Co-ordinates of 4 corners of the Project Site

Details	Latitude	Longitude
Corner 1	18°28'32.64"N	73°53'37.61"E
Corner 2	18°28'31.53"N	73°53'46.96"E
Corner 3	18°28'28.99"N	73°53'47.42"E
Corner 4	18°28'30.82"N	73°53'37.31"E

Figure 1.1: Location map

Chapter 2
Project Description

2.1 General

This chapter presents the salient features of the project including the infrastructure required for the functioning of the residential project. Overall suitability of the site and proposed activity in light of the existing environment is also covered in this section.

2.2 Description of the project

The proposed project is located in at Sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BrahmaCorp Ltd. The project is providing the development of residential project with relevant amenities and services.

The main purpose and benefits of the project are:

- To create good standards of working environment.
- To meet the growing demand for comfortable and updated Residential Buildings in an environmentally sustainable manner in the area.
- The project will uplift the socio-economic status of the area.
- The project is generating employment to skilled and unskilled population in the surrounding area.

The proposed development includes site formation works and construction of building/structures, access roads, drains and sewer connections.

2.2.1 Project cost

The estimated project cost is approximately Rs.27.33 Crore, including all residential construction as well as other infrastructures like roads, drainage, landscape, amenities etc.

Table 2.1: Project cost

Net Project Cost	Rs. 27.33 Crore

Land use (Standard ToR point no.1)

The total built up area of proposed project is 50.548.37 m^2. Project statement is given in **Table 2.1** & the FSI and Non-FSI area details given in **Table 2.2**.

Table 2.1: Statement of the Project

Sr.	Description	Details	Unit
1	Project name	"Bramha Exuberance"	-
2	EIA category	8 (a)	-
3	Plot area	17,433.10	m^2
4	Deductions	2,833.35	m^2
5	Net plot area	14,599.75	m^2
6	Proposed FSI area	21,798.69	m^2
7	Non FSI area	28,749.68	m^2
8	**Total built up area**	**50,548.37**	m^2
9	Project cost	Rs. 27.33	Crore
10	Total No. of Tenements	249	Nos.
11	Total population	1,432	Nos.
12	Total water requirement	185	m^3/day
15	Fresh water requirement	123	m^3/day
16	Flushing water requirement	62	m^3/day
17	Sewage generation	173	m^3/day
18	STP capacity	70	m^3/day
19	Total solid waste generation	699	kg/day
20	Bio-degradable waste	419	kg/day
21	Non-Bio-degradable and Inert Waste	280	kg/day
25	STP dry sludge	1.7	kg/day
26	RWH Pits	2	Nos.
27	Parking area	4,458	m^2
28	Two-Wheeler	214	No.
29	Four-Wheeler	411	No.
30	RG area	2,045.82	m^2
31	No. of trees	392	No.
32	Connected Load	1,438	kW
33	Maximum Demand	1,007	kW
34	DG set number & capacity details	1 x 82.5	No. x kVA
35	EMP Capital cost during operation phase	88.91	Rs. Lakh
36	EMP O & M cost during operation phase	8.60	Rs. Lakh/year

Total construction area of proposed project is **50,548.37 m²**. Total FSI area is **21,798.69 m²**. Non FSI area as per existing EC is **28,749.68 m²**. The area statements are given in **Table 2.2**. Built up area of buildings is given in **Table 2.3**.

Table 2.2: Area Statement - FSI and Non FSI area

Sr.	Details	Area	Unit
1	Plot area	17,433.10	m^2
2	Deduction	2,833.35	m^2
3	Net plot area	14,599.75	m^2
4	Proposed FSI area	21,798.69	m^2
5	Non FSI area	28,749.68	m^2

Total	**249**		**21,798.69**	**28,749.68**	**50,548.37**

2.2.2 Remote Sensing Satellite Imagery

Satellite image of the project site is shown in **Figure 2.1**

Figure 2.1: Satellite image of the project site

2.2.3 Contour Map (Standard ToR point no.V)

The Development is located on a plain contour having higher level of 628.5 m to lower level 614.5 m. Contour plan is shown in **Figure 2.2**.

Figure 2.2: Contour map

Table 2.4: Contour level details

Maximum contour level	628.5 m
Minimum contour level	614.5 m
Level difference	14.0 m

Levelling was done by excavation and backfilling.

2.3 Site Selection

The project site is in a residential Zone. Contour level difference is 14 m. The plot is away from forest area or any type of reservations. It is not a flooding area. The ground water table is observed at the depth of around 5-6 m.

In the immediate vicinity, the site is bounded on the 4 sides by:

- East: Residential buildings
- West: Residential buildings
- North: Residential buildings
- South: Residential buildings

No national Park, Eco sensitive area, Bird & Tiger/wildlife sanctuaries, Reserved Forest is located within the study area.

Accessibility

Availability of proper road access to the project site.

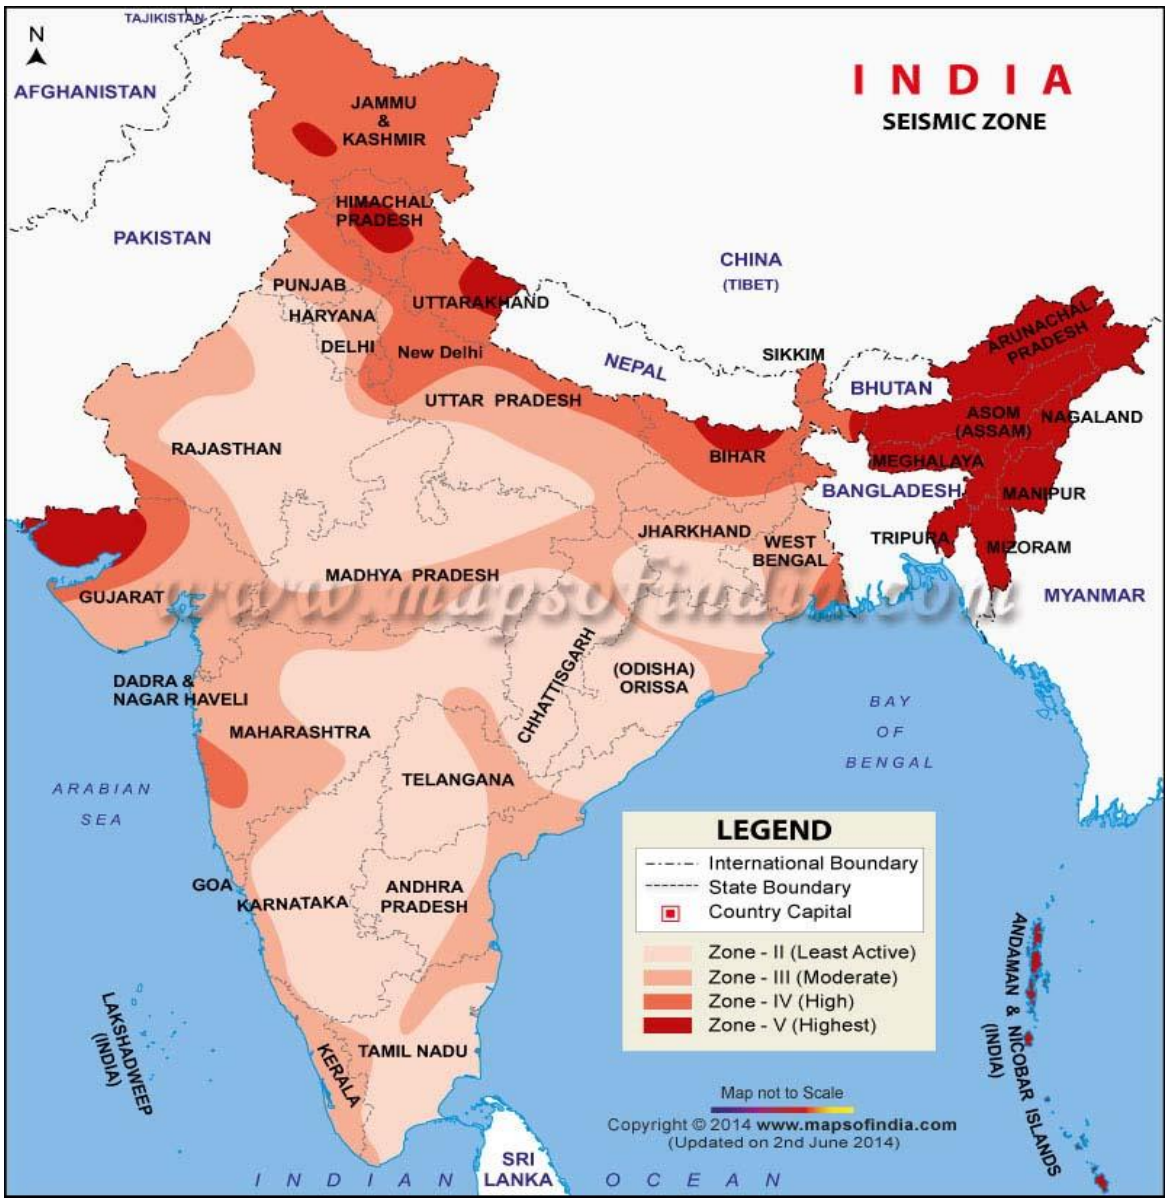
- Land suitability based on topographical and geological conditions.
- Availability of water and electricity from government boards, local bodies and independent sources.
- The proposed site is at **18°28'31.22"N** latitude and **73°53'42.44"E** longitude. The proposed site is located at about **8.1 km** from Pune Railway station and about at **14.8 km** from Pune International Airport. The site is about **7.7 km** from Pune City.

2.3.1 Land Use Zoning in Natural Hazard Prone Areas

Earthquake Prone Areas

The project site is in Seismic zone III, with less chances of earthquake. The Seismic zones of India are shown in **Figure 2.3**. Pune lies close to the seismically active zone Pune has experienced some moderate-and many low-intensity earthquakes in its history.

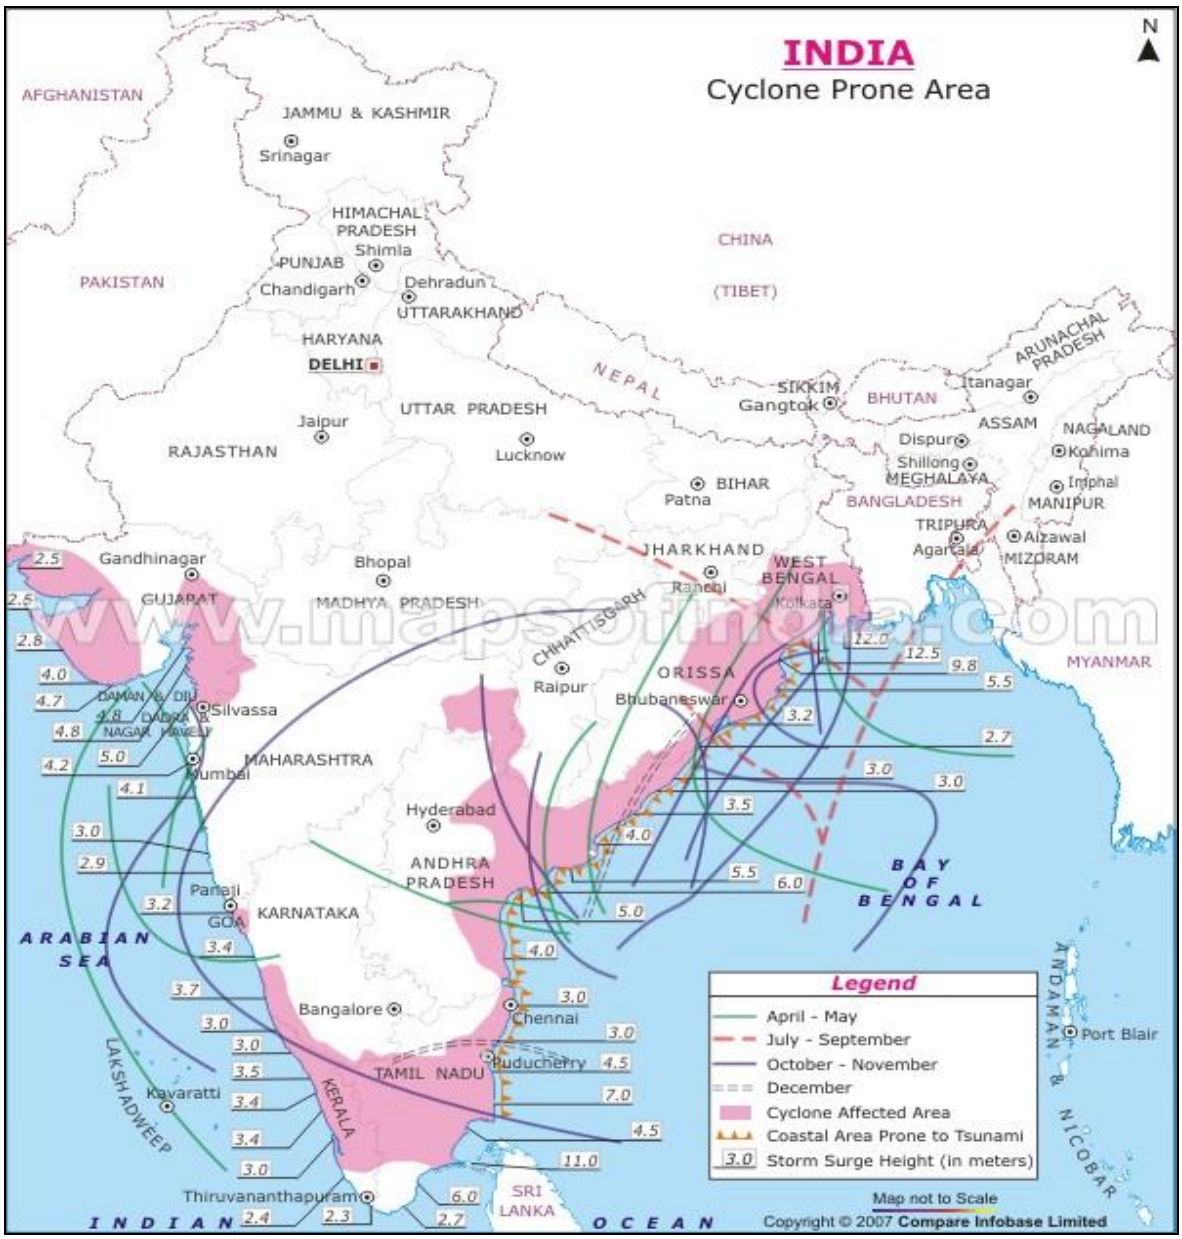
Figure 2.3: Seismic Zones of India



Cyclone Prone Areas

The project site is not in cyclone prone areas. **Figure 2.4** is showing cyclone prone areas.

Figure 2.4: Cyclone Prone Areas of India



Flood Prone Areas

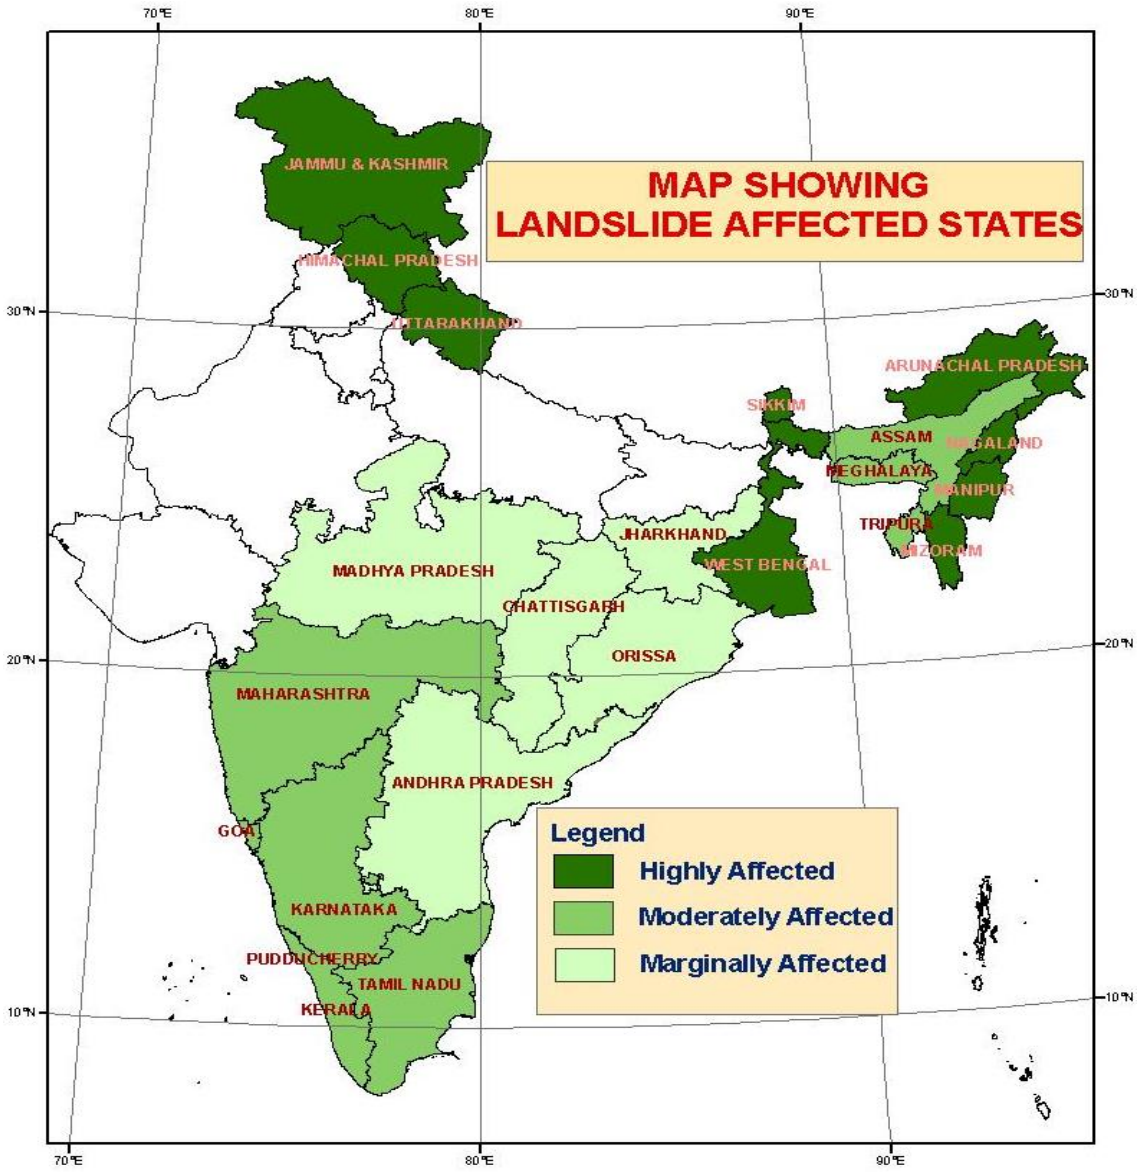
The states falling under "India Flood Prone Areas" are West Bengal, Orissa, Andhra Pradesh, Kerala, Assam, Bihar, Gujarat, Uttar Pradesh, Haryana and Punjab. The project is located in Maharashtra state hence, it does not come under Flood prone areas. **Figure 2.5** showing India's Flood Prone areas is as follows;

Figure 2.5: Flood Prone Areas of India

Land Slide Prone Areas

The "Bramha Exuberance'" project is in Maharashtra state, which comes under moderately affected landslide areas. **Figure 2.6** showing landslide zones of India is as follows.

Figure 2.6: Showing Landslide Zones of India



2.4 Manpower requirement

Operation phase will have opportunities of employment for poor section of the society generally in the form of helpers, drivers, cleaners etc.

During the project, a workforce is needed which includes both skilled and unskilled people. The workers from areas outside the region may impact the local culture, habits and economics. These effects have both positive and negative aspects and they are managed by the project proponents & developers from their experience in other similar projects.

2.5 Project Implementation Schedule

2.5.1 Project Components

The proposed Residential Project **"Bramha Exuberance"** is located at Village- Kondhwa Khurd, Taluka-Haveli, District-Pune, Maharashtra. Project includes residential accommodation having easy accessibility.

The proposed maximum height of the residential building is **34.90 m**. The buildings are designed to utilize maximum natural light and ventilation.

The building details are given in **Table 2.5**

Table 2.5: Building Details

Building	No. of Floors	Height (m)
A	LP + P +11 floors	34.90
B	LP + P +11 floors	34.90
C	LP + P +11 floors	34.90
D	LB + LP + P + 11 floors	34.90
E	LP + P +11 floors	34.90
Club House	G + 1	7

Project proposed layout is shown in **Figure 2.7**.

Project Infrastructure and utilities planned

The infrastructure facilities planned for the proposed project at Pune are highlighted below.

Water Supply

The total water requirement of project is around **185 m^3/day.** Source of water is from Pune Municipal Corporation. NOC for water supply has been obtained from PMC. The total fresh water requirement for the project is **123 m^3/day**. Water usage is shown in **Table 2.10** shows the enhancement of water requirement and usage over the total requirement. All treated waste was used after proper disinfection though the treated water was mainly be used in no human contact activities.

Table 2.10: Water utilization details

	Dry Season (KLD)	Wet Season (KLD)
Total water budget	185	185
Fresh water requirement	123	123
Domestic water	123	123
Flushing water	62	62
Gardening	17	9
Sewage generation	173	173

2.5.3 Sewage system

The sewage generated from the proposed project will be approximately, 173 m^3/day. Proponent provided 70 KLD STP at project site. All sewage is connected to municipal sewer line. STP technology used for the proposed project is Moving Bed Bioreactor (MBBR).

STP process and location is shown in **Figure 2.16** and **Figure 2.14** respectively, while STP details and characteristic is shown in **Table 2.11** and **Table 2.12**, respectively. STP details are attached as **Annexure II**.

Table 2.111: STP details

Details	As per Sanction plan	Unit
STP capacity	70	m^3/day
Total sewage generated	173	m^3/day

Water to municipal sewer	173	m^3/day

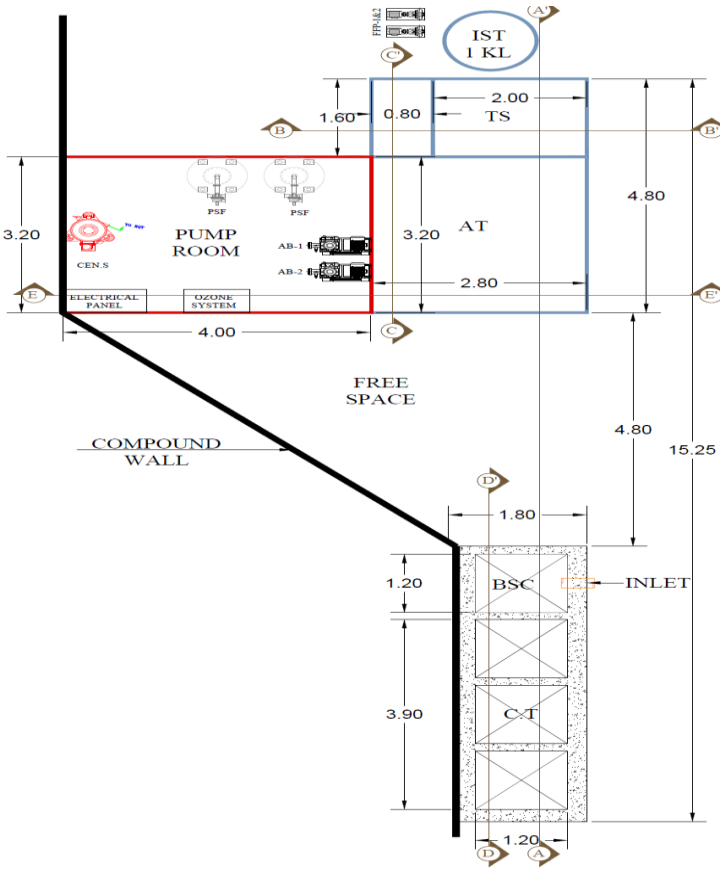

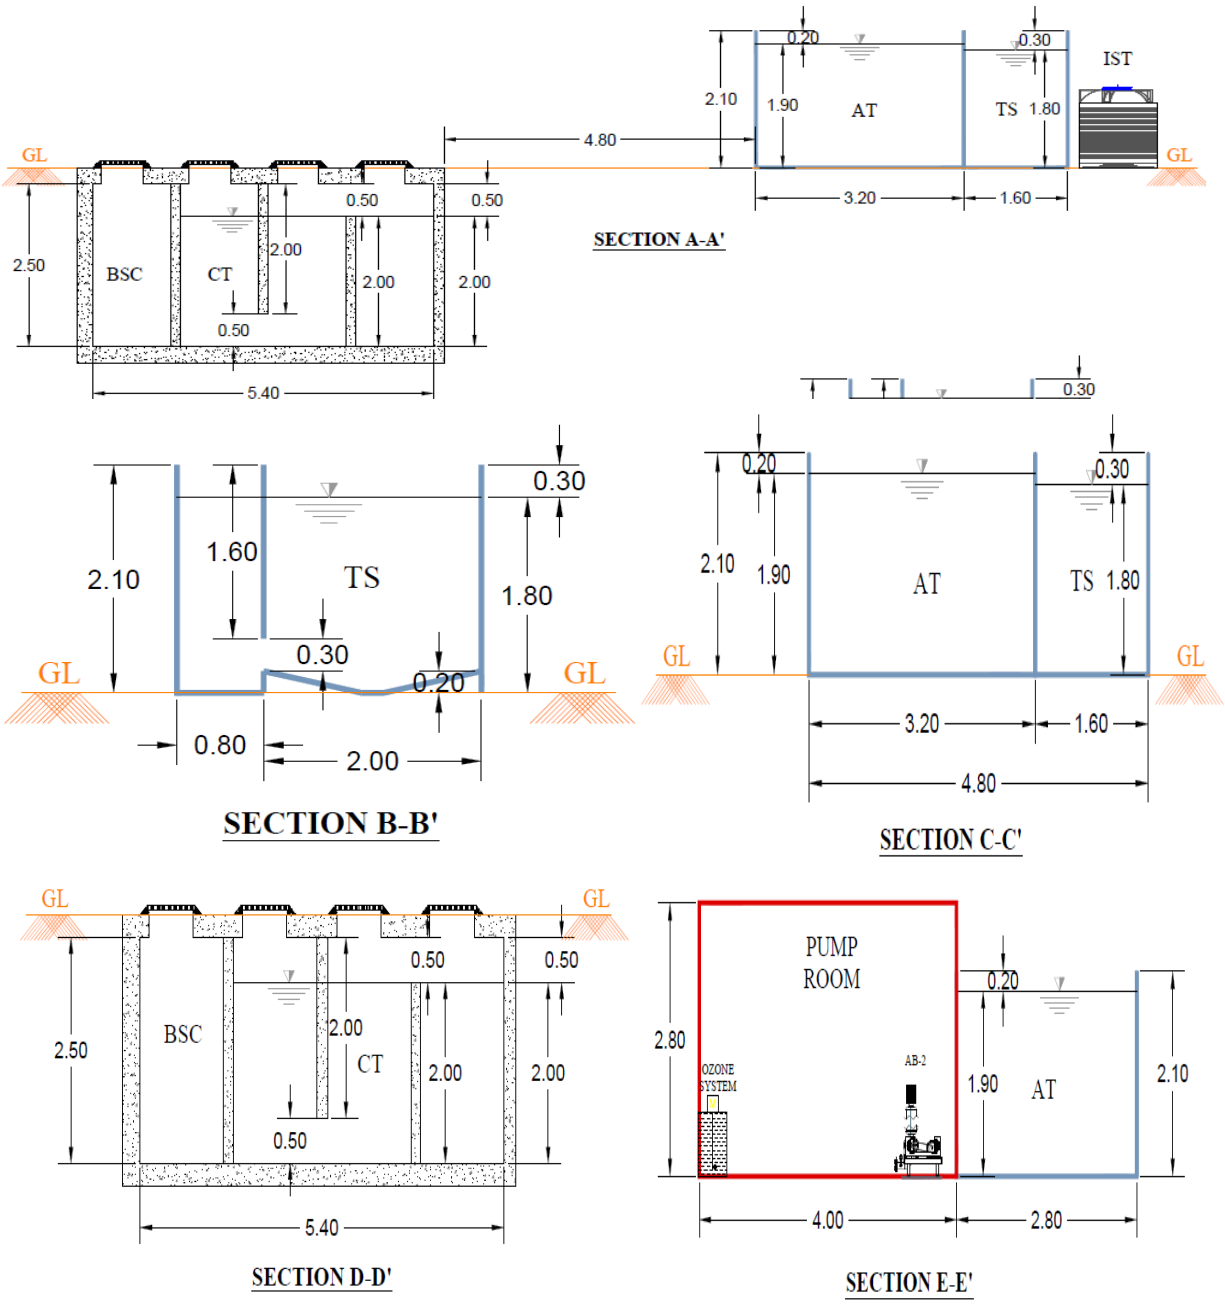

Figure 2.16: Flow diagram of Moving Bed Bioreactor (MBBR)

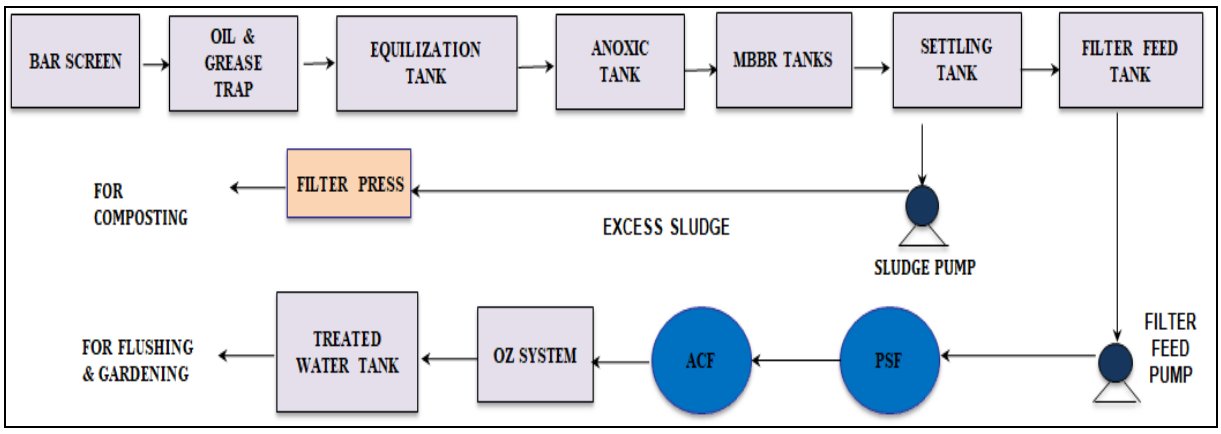


Sewage Treatment Process

PROCESS DESCRIPTION

SCREEN CHAMBER

The sewage generated through domestic activities enters the screen chamber containing suspended as well as floatable solids. The chamber is fitted with MS, perforated screen, having required perforations. Floating objects larger than 20 mm are prevented from flowing to equalization tank and are to be removed periodically from the screen manually. The gritty material gets collected in the grit sump of screen chamber which also needs to be removed periodically. Cleaning of the tank is done manually by labour.

OIL & GREASE CHAMBER

The sewage from screen chamber flows to this tank. The oil entrained in the sewage being light in density than water floats on the surface and is prevented from finding its way into equalization tank by the baffle plate provided near the water level on the outlet side. The sewage then overflows to equalization tank. Oil collected on the surface of water to be removed periodically by manual means.

EQUALISATION TANK

The sewage flow entering into the tank varies in quality and quantity. The equalization tank helps in having more or less uniform quality of flow and the constant pumping at uniform rate helps in making the reaction in MBBR tank more predictable. The air is continuously circulated in equalization tank by using air blowers to avoid aseptic conditions in tank. The sewage from equalization tanks is pumped to MBBR tank for biological treatment.

MBBR TANK

The water from equalization tank is passed to this MBBR tank for biological treatment. The air is provided in this tank for continuous mixing of the sewage through the air blower to provide the oxygen for the growth of microorganism in this tank. The air supply is continuous to avoid the anaerobic condition and maintain the growth of microorganisms. This is also avoiding the problem of odour in and around the aeration tank. In MBBR tank, we are providing MBBR media. MBBR tank works on attached growth principle. The micro-organisms grown into the tank will get attached to the MBBR media to form colonies. These bacterial colonies will be rich in nature and effectively convert the organic matter into Carbon Dioxide and water by reducing the COD and BOD of sewage. Waste water from this tank is then pass through to tube settler for settling the excess biomass and suspended matter.

TUBE SETTLER

The overflow of MBBR tank is then passed to the tube settler where all the larger particles get settle down and removed from the bottom of the tube

settler in the form of sludge. The sludge settled at the bottom is sent to filter press by Filter press feed pump and clear water is collected from the upper part of tube settler and flows to Clarified Treated Water Tank.

CLARIFIED TREATED WATER TANK

Clarified treated water from tube settler is collected in this tank.

SLUDGE DEWATERING EQUIPMENT (Teknobag Draimad)

The sludge is pumped by using special sludge transfer pump to Teknobag Draimad. This pumping is done at uniform rate for every batch to form semi solid sludge. The liquid (filtrate) from the Teknobag Draimad is returned to equalization tank. The dried sludge is discharged to storage facility for the disposal or land filling.

TERTIARY TREATMENT Tertiary treatment comprises of the following:

1. PRESSURE SAND FILTER (PSF) FOR THE CLARIFIED TREATED SEWAGE

The treated water from collection tank would be pumped into this filter for tertiary treatment by using filter feed pumps. The Pressure Sand filter has a graded sand supporting pebbles. The PSF media has special surface properties due to which the small colloidal particles get attached to the surface. Manual Multiport valve is used for operation of the filter. Filter backwash is carried out once a day for removing adhered particle on the media in filter.

2. ACTIVATED CARBON FILTER (ACF)

The treated sewage from Dual media filter would get further treated in ACF for removal of odour and colour. ACF has Activated Carbon, one of the most widely used media for absorption of impurities. The Activated carbon is employed for- • Removal of Organics • Removal of Odor. The Activated carbon media has finite capacity of absorption and shall exhaust on prolonged usage depending upon the inlet impurity load. Manual Multiport valve is used for operation of the filter. Filter backwash is carried out once a day for removing adhered particle on the media in filter.

3. OZONTATOR

The filtered water is then passed through a venturi throat which creates a vacuum and pulls the ozone gas into the water or the air is then bubbled up through the water being treated. Since the ozone will react with metals to create insoluble metal oxides. Ozone is effect over a wide pH range and rapidly reacts with bacteria, viruses, and protozoans and has stronger germicidal properties. Ozone has a very strong oxidizing power with a short reaction time. The treatment process does not add chemicals to the water. Ozone can eliminate a wide variety of organic and microbiological impurity taste and odour problems.

4. FILTERED WATER COLLECTION TANK

The treated water after ozonation is collected here for recycle or reuse purpose within the premised.

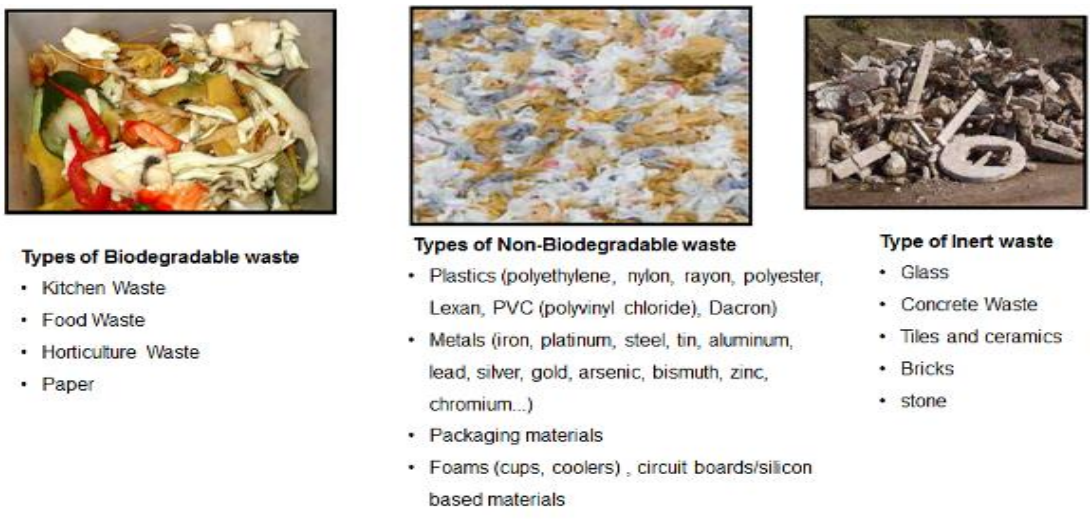
Brief Description of Moving Bed Bioreactor technology (MBBR)
The MBBR is one of the "fill and draw" versions of the conventional activated sludge system. In contrast to the continuous flow alternative, all treatment processes, i.e., fill, react, settle, and decant are occurred in a single reactor and in a well-defined and continuously repeated time sequence as shown in figure below.

In the "fill' phase, wastewater goes into the MBBR tank which already comprises of a pre- determined amount of sludge (bacteria). For this phase, initial degradation process occurs while wastewater is in contact with bacteria. After the "fill" phase, treatment process is switched to "react" phase wherein the wastewater is completely mixed with bacteria by diffused aeration to perform complete degradation of organic substances. The "settle" phase is initiated after the "react" phase to accomplish separation between treated wastewater and biomass. After complete separation between treated wastewater and biomass, the "decant" phase is started to decant the treated sewage. After the decanting process, the treatment process is switched again to the "fill" phase to start new cycle. Excess sludge wastage can be done in the "decant" phase or can be performed as a separate sludge draw-off phase of the treatment cycle.

The Moving Bed Bioreactor technology (MBBR) comprising of two concrete process basins where influent wastewater is directed into each aeration basin. Inflow to the two basins is controlled by influent shut off valves programmed to operate at pre-designed cycles via a cycle control center.

2.5.4 Solid Waste

Figure 2.17: Classification of solid waste generation



The garbage is collected manually from each of the building, and transported to collection spot. This garbage is segregated as dry waste and wet waste. The management would focus on segregation of waste at the source. The biodegradable waste/ Organic waste is sent to vermicomposting pits and converted manure is used for gardening after treatment. Compost is used as manure. The Inorganic/Non-Bio-degradable waste is sent to authorised recycler for further handling and purpose. We have made agreement with authorized vendor for disposal of Non bio degradable, Inert waste & E waste.

Out of the total solid waste generated, **280 kg/day** is dry waste and inert waste& while remaining **419 kg/day** is wet quantity (biodegradable). E-waste is not expected to generate.

- **Dry waste**: The Inorganic/Non-Bio-degradable waste, Inert waste is sent to authorised recycler for further handling and purpose.
- **Wet waste**: Wet waste is used at site in Vermicomposting pits to produce manure. &Used manure for gardening
- **STP Sludge (Dry sludge)**: Dry sludge was used as manure for plantation & gardening purposes inside the premise.

Vermicomposting

Concept:

Vermicomposting is a natural process whereby earthworms convert waste material with rigid structures into compost. The compost produced in this green process is traditionally and popularly used as a natural fertilizer for enhancing plant growth. Earthworms belong to the phylum Annelida, subclass Oligochaeta.

This process is mainly required to add nutrients to the soil. Compost is a natural fertilizer that allows an easy flow of water to the growing plants. The earthworms are mainly used in this process as they eat the organic matter and produce castings through their digestive systems.

Process:

- To prepare the vermicompost, a concrete tank has used according to the availability (Size- based on the number of raw materials available)
- Collect the dried biomass (garden waste, animal waste, municipal waste, etc.) and chop them.
- Mix the chopped dry material with cow dung in a 1:3 ratio and keep them aside for 15-20 days for partial decomposition.
- Add a thin layer of soil /sand (2-3 inches) at the bottom of the tank.

- Now prepare the bedding by adding the partially decomposed cow dung and dried waste mixture. Distribute it evenly on the soil.
- Continually add the mixture up to a depth of 0.5-1 foot.
- Now release the earthworms in the tank (1000-2000 earthworms / square meters). Cover the mixture with gunny bags/ straw/ plastic.
- Monitor the bin for the availability of food to the earthworms and add the food (fruit and vegetable peels, other kitchen waste) when necessary (make sure not to add excess food)
- Do water regularly to maintain moisture.
- Monitor the composting tank to maintain temperature and moisture
- Beds turned in every 30 days for aeration and proper decomposition.
- The compost is ready in 45-50 days.

Project specific solid waste details:

Solid waste generated from proposed project is **699 kg/day**. Out of which **419 kg/day** is biodegradable component and **280 kg/day** is non-biodegradable waste.

Table 2.13: Solid waste generation calculation details

Details	Information	units
Population	1432	Nos.
Total waste generation	699	kg/day
Biodegradable waste	419	kg/day
Non-Biodegradable waste & Inert Waste	280	kg/day
STP sludge	1.7	kg/day

Figure 2.18: Location of Vermicomposting pits & section

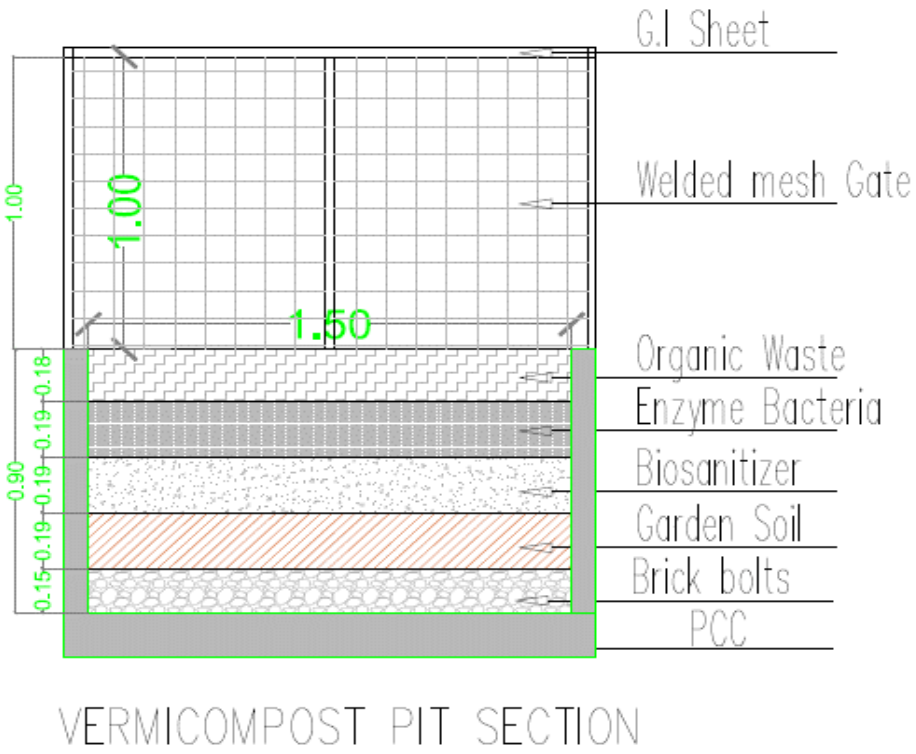


Figure 2.19: Vermicomposting pits photograph

2.5.5 Rain water harvesting (Standard ToR point no. 11)

Rainwater harvesting can serve as a solution to the water problem in the water crisis area by capturing the runoff. It helps in utilizing the primary source of water and prevents the runoff from going into sewer or storm drains, thereby serving dual purpose i.e. making water available for future use and reducing the burden on treatment plants. Recharging the water aquifer helps in improving the quality of existing groundwater through dilution. Rainwater harvesting thus comprises of two sections:

- Rooftop rainwater & surface runoff is discharged into rainwater harvesting tanks after filtration. These RWH pits are located in the basement area for beneficial use in future
- The overflow from the RWH pits will help artificial recharge of ground water.

In the proposed project rain-water harvesting is with a view to recharge the ground water table. Rainwater from terrace and pathways is harvested through a network of storm water drains and diverted to the recharge pits.

The rainwater harvesting unit have been implemented with care not to endanger the stability of complex structure or earthwork. It is designed such that no dampness is caused in any part of the walls or foundation of the complex or those of an adjacent complex.

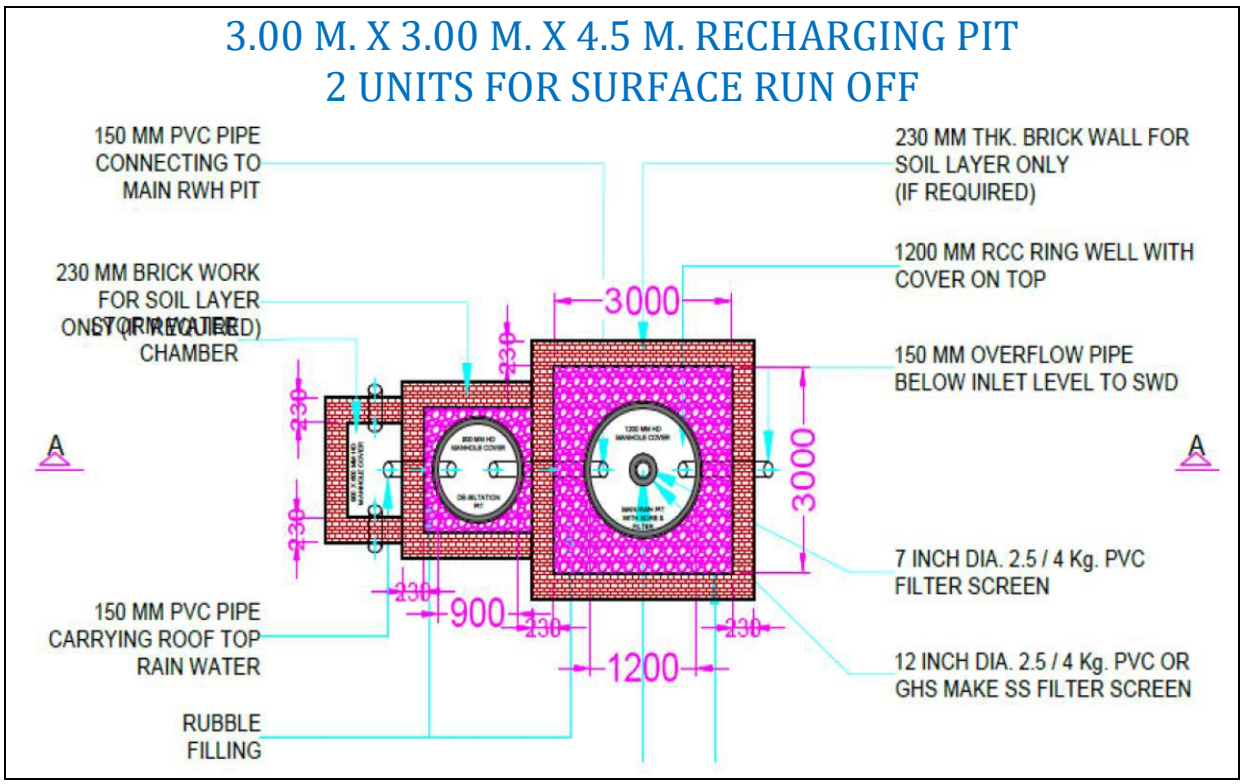
As far as possible the recharged water is used for non-drinking and non-cooking purposes such as washing, gardening etc. If at all it needs to be used for drinking and cooking purposes, proper filter arrangements and the separate outlet for by-passing the first rainwater will be provided. Water is used for drinking only when proper disinfection and water purification arrangements are done.

Surface runoff is used to recharge the ground water sources through recharge pits for further use. **Figure 2.20** shows Rainwater harvesting system.

Figure 2.20: Rain water harvesting

Total of 2 nos. of recharge pits are constructed on the proposed site. Rooftop rainwater and surface runoff both is harvested through recharge pits. Location of recharge pits are shown in **Figure 2.21**. Size of the recharge pit will be 3'x3'x4.5".

Figure 2.21: Section of the surface drain recharge pits



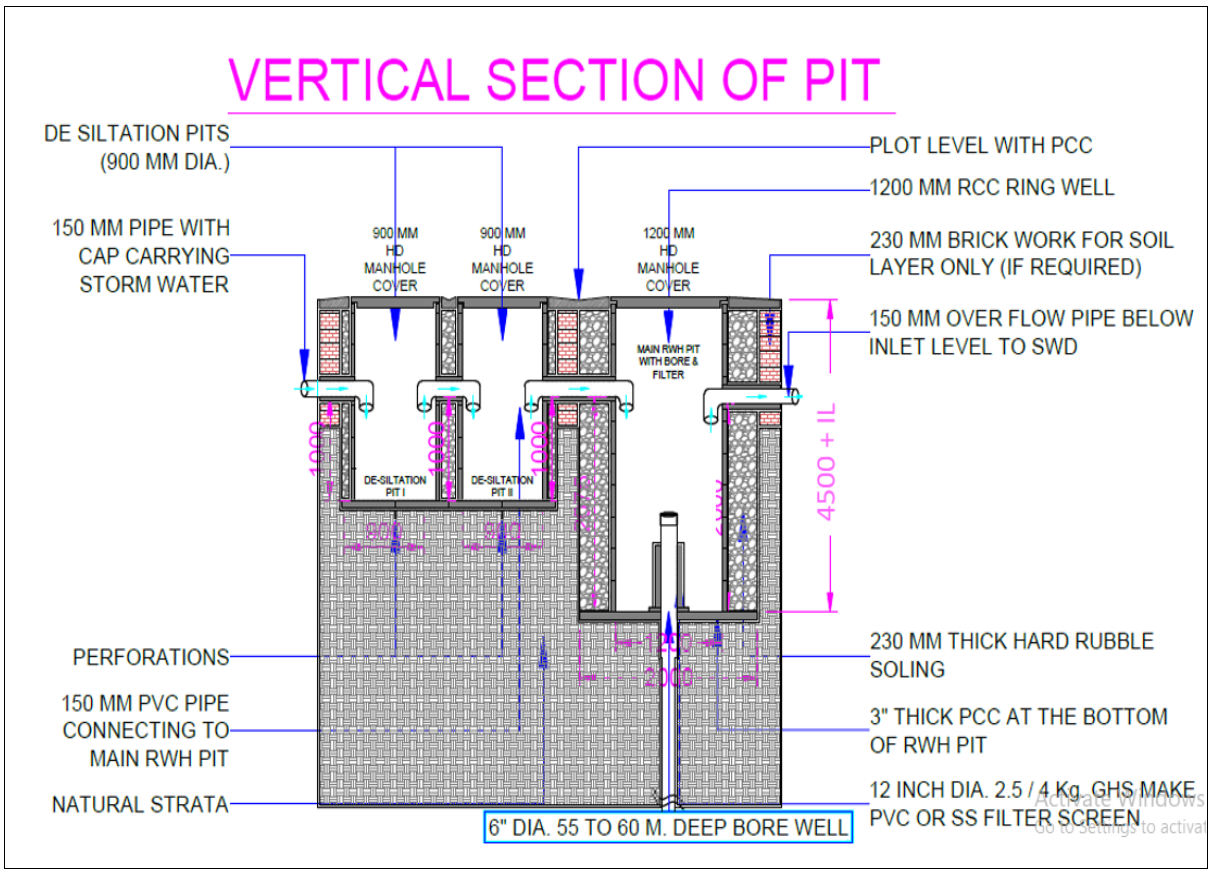


Figure 2.21: Location of Recharge pits

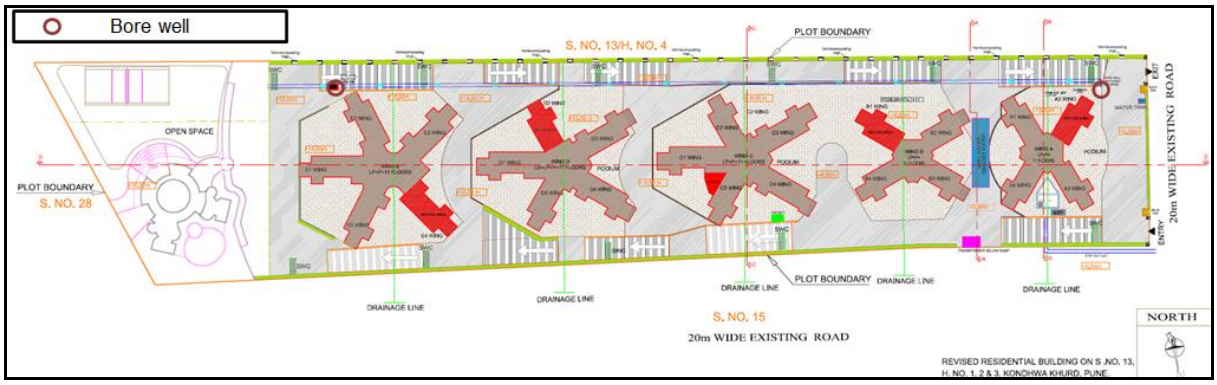


Storm water collection & disposal

Storm water drainage line is constructed at site. Storm water management plan developed incorporates following best management practices:

- Regular check-up and cleaning of storm drains
- Covering waste storage areas
- Avoiding use of pesticides and herbicides before wet season
- Secondary containment and dykes in fuel/oil storage facilities.
- Conducting routine inspections to ensure cleanliness
- Preparing spill response plans, particularly for fuel and oil storage areas
- Good housekeeping in the above areas

Calculation of storm water is given below in **Table 2.14**. Storm water drainage system is designed considering 100% paved area and to accommodate total rainwater as run-off.

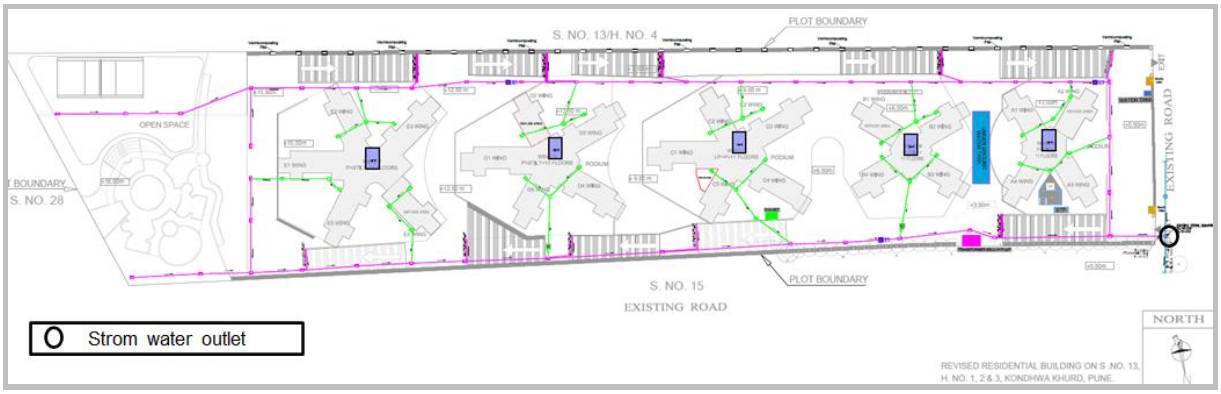
Table 2.14: RWH Details

Sr. no	Description	Quantity	Unit
	Total plot area	17,433.10	m^2
	Total Deductions	2,833.35	m^2
	Net area under consideration	14,599.75	m^2
	Annual average rain fall	50	mm
1.	**Rain water discharge from Roof Area**		
	Total Roof Area	2,948.08	m^2
	Run-off Coefficient	0.85	
	Quantity of rain water collected from roof	125.29	m^3

2.	**Storm water runoff from Paved Surfaces**		
	Internal roads, paved, services area (open to sky)	9,605.82	m^2
	Run-off Coefficient	0.7	
	Quantity of storm water collected from paved areas	336.20	m^3
3.	**Storm water runoff from Landscape Areas**		
	Total Landscape area on Mother Earth	2,045.85	m^2
	Run-off Coefficient	0.4	
	Quantity of storm water collected from paved areas	40.92	m^3
	Total Storm Water Discharge	**502.41**	**m^3/hr**
	Water collected in 5 min. of peak rain fall	**83.74**	**m^3/5 Min**
	Volume of one recharge pit	**41.94**	**m^3**
	Number of recharge pits required	**2.00**	**No.**
	No. of RWH pits	**2**	**No.**

% of Harvesting against Incremental Rise After Development	**108.53**

Figure 2.22: Storm water plan



2.5.6 Power supply

The power supply necessary for the proposed project is estimated as Total Connected load is **1438 kW**. Total demand load is **1007 kW**. The power supply is available from **MSEDCL**. The network of power supply in this region is well established and the project proponents would provide separate sub- stations as per requirement. Standby power supply for meeting emergency requirements is available by installing **1 no. of DG sets having capacity of 82.5 kVA.**

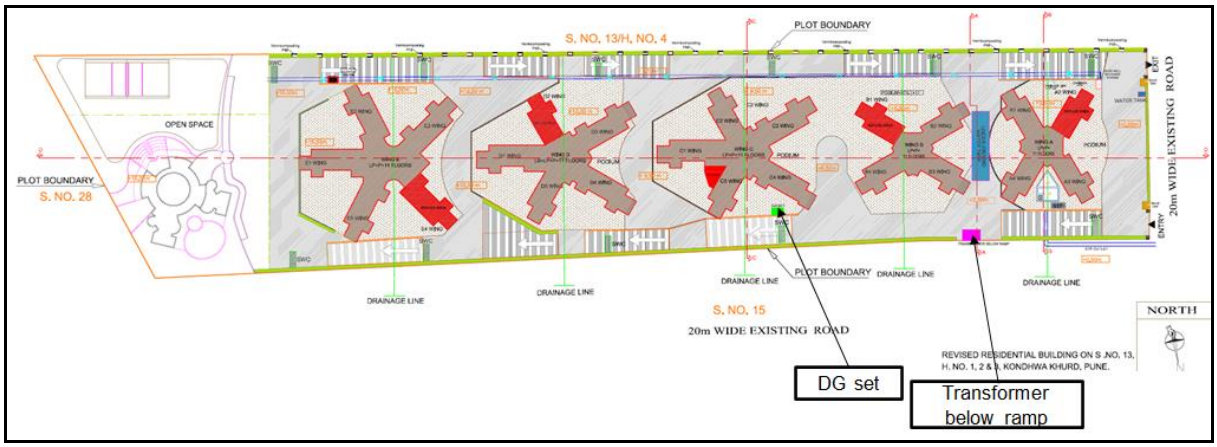
DG set capacity and numbers are: **1 no. X 82.5 kVA**

Table 2.15: Power Supply during operational phase

Details	Total
Demand load	1,007 kW
Connected load	1,438 kW
DG set	1 no. x 82.5 kVA
Transformer no.	2 no. x 630 kVA
Fuel used	Diesel

Figure 2.23: DG set photograph

Figure 2.24: DG set location plan



Fire fighting

Adequate firefighting facilities and safety measures provided at the proposed project as per the norms laid down by Chief Fire Officer (CFO). CFO NOC has been obtained from Pune Municipal Corporation (PMC).

Fire tender access

20 m wide DP road, 6 m and 7.5 m internal driveway. This will be helpful for the fire tender movement.

Fire suppression

It is proposed only for common areas of the residential buildings. Stand pipe system will be provided at each level.

Firefighting equipment's provided:

Table 2.16: Disaster management resource

Sr.	Fire-fighting equipment description	Quantity
1	Fire water tank underground	50 m^3
2	Fire water tank overhead	Total Capacity 50 m^3 (Firefighting OHT of capacity 50 m^3 as per Fire NOC)
3	Fire tank capacity	As per fire NOC
4	Fire hydrant system	As per fire NOC
5	Water sprinkler system	As per fire NOC
6	Fire extinguishers	ABC Type On each floor and in machine room
7	Smoke detection system	As per fire NOC
8	Fire alarm system	Manual Call point and talk back P.A. System
9	CCTV security system	Entry/Exit gates, Each building and Driveway
10	Emergency power (DG set)	1 nos. X 82.5 kVA
11	Refuge floors	8^{th} floor
12	Fire resistant doors	Staircase of each floor
13	Signage	At Entry/Exit points and prominent locations
14	Lightening arrestors	As per fire NOC
15	Staircase	5 no. of staircases with total area 756.14 m^2
16	Lifts	Total 10 no. of Lifts

The fire tender movement plan is given in **Figure 2.26**

The nearest fire station is **Kondhwa Khurd Fire Station**, **Pune**. The proposed site is around **950 m** away from the fire station. The road map of proposed project is shown in **Figure 2.26**. It will take about **4 minutes** to reach the proposed site.

Figure 2.25: Road map of the proposed project from Kondhwa Khurd Fire Station, Pune

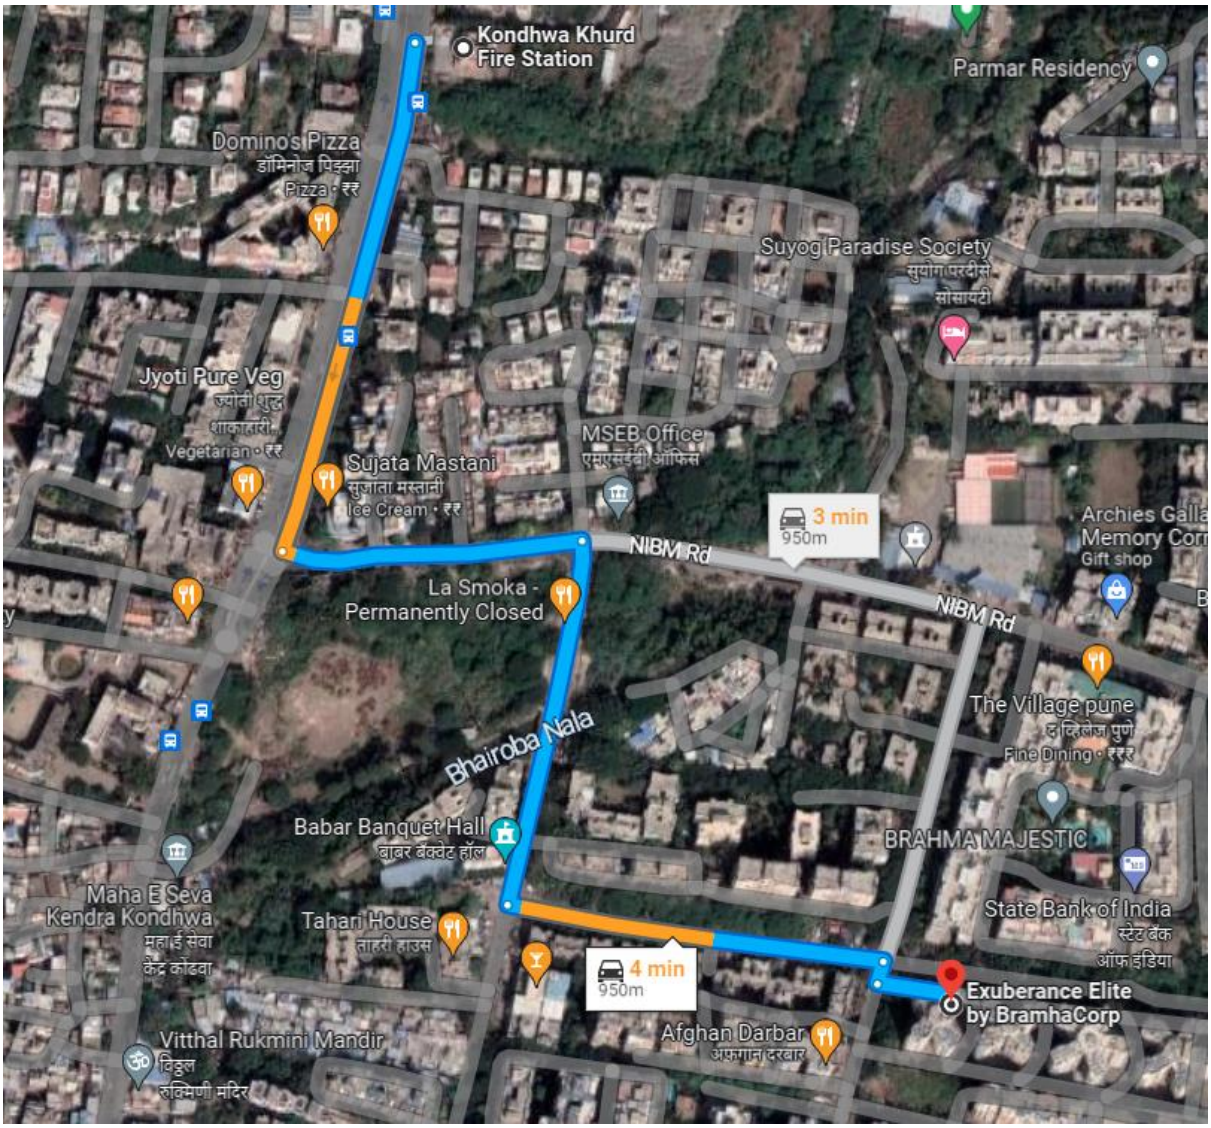


Figure 2.26: Fire tender movement plan

The above fire tender plan clearly depicts 6 m, 7.5 m wide internal road. These will be helpful for the fire tender movement.

2.5.7 Environmental assessment of building, planning and use

Environmental issues are addressed in planning of proposed project through various factors as follows:

- All public areas will have LED lamps for lighting. The longer façade of the building facing north-south. This is best orientation considering solar passive design principle. This orientation is favourable considering reduced solar gains.
- External windows is of aluminium with glass panes. Timber is used only for internal door frames.
- Sewage generation: **173 m^3/day** during operational phase
- Sewage treatment plant is recommended for treating domestic sewage.
- Rainwater harvesting scheme is proposed with **2 no**. of recharge pits for collection and reused of rainwater.
- Approximate solid waste generation: **699 kg/day** during Operational phase
- Fly-ash was used in concrete work. AAC Blocks were used for wall construction.
- Aluminium shuttering systems (MEVA, DOKA, MIVAN Formwork) was used for all typical frame construction, avoiding use of timber for shuttering.
- R.C.C. frame structure with open footing on hard murram.
- All R.C.C. walls have putty filling on internal and external side avoiding cement plaster.
- All internal brick masonry walls with gypsum plaster and all internal doors with timber frame wooden flush doors
- Project is designed to meet requirements of seismic zone III.
- Energy efficient building services and equipment, public area lighting and exterior lighting. Installation of solar PV panels for generation renewable energy from project site.
- Parking arrangements for Residential building are provided.
- Arrangements for service roads for walking, standby power supply, floor washing, and storage of biodegradable and non-biodegradable waste.
- Separate internal pathways for pedestrians, ramps for disabled persons, road painting, signage and speed breakers as required or insisted upon by the local authority.

Chapter 3
Description of the Environment

3.1 Introduction

Baseline environmental status forms the basis for evaluation of the proposed development on the existing conditions. This can be broadly grouped into physical, social, aesthetic and economic environment. Physical environment includes air, water, land, aquatic and terrestrial flora & fauna, civic infrastructure, public services, etc. Social environment includes demography, community facilities and services, community characteristics, employment centers, commercial facilities servicing the area etc. Aesthetic environment includes historical monuments, archaeological or architectural sites at and in the vicinity of the proposed project activity. Economic environment covers employment levels, sources and levels of income, economic base of the area, land values, land ownership etc.

3.2 Scope of Baseline Studies

For the present EIA study, the attributes of environment considered are:

- Air environment (Meteorology, ambient air quality, noise levels, traffic pattern and traffic density);
- Water environment
- Land environment (Geology, Geo-hydrology, land use, solid waste disposal etc.);
- Biological environment (Flora, fauna, vegetation, ecosystem); and
- Socio-economic environment (Demography, occupational structure, educational, medical facilities, literacy etc.)

It is important to define the study area for conducting the Environmental Impact Assessment Study which could reflect the changes due to the proposed developmental activity. In the present project, area of study has been identified as **10 km** radius of the site. Hence, the environmental parameters are studied to establish an existing environmental scenario of an area covering 2 km radius, which is considered as an impact zone. The area covering 10 km radius is considered for biological and socio-economic study.

Following section of the report is given the baseline environmental scenario in the study area with respect to the above stated environmental attributes along with its monitoring details, results obtained, data analysis and conclusions.

3.3 Air Environment

3.3.1 Meteorology

Meteorology (weather and climate) is the key to understand the air quality. The essential relationship between meteorology and atmospheric dispersion involves the wind in the broadest sense of the term. Wind fluctuations over a very wide range of time accomplish dispersion and strongly influence other processes associated with them. Secondary data also plays an important role in identifying the general meteorological status of the region. Site-specific data can be compared with secondary data in order to identify changes, which may have taken place due to various developments in the area. Both primary and secondary meteorological data were collected.

Classification of months according to seasons is shown below:

- Summer Season – March to May
- Monsoon season – June to September
- Post Monsoon – October to November
- Winter season – December to February

Presentation of Secondary Data: The main source of secondary meteorological data for the study area is Indian Meteorological Department, Pune.

Climate

The climate of the district is on the whole agreeable. The winter season is from December to about the middle of February followed by summer season which last up to May. June to September is the south-west monsoon season, whereas October and November constitute the post-monsoon season. The minimum temperature is about 12°C and maximum temperature is about 39°C.

The detailed data on the microclimate of the site was collected for a period of one month (December 2022), representing the post monsoon season. A micrometeorological station was set up in the study area near the project site for collection of data at hourly intervals during the study period. Temperature, humidity, wind speed and direction, pressure, rainfall and cloud cover were monitored at hourly intervals.

Wind

Winds are generally moderate, but they greatly increase in force during the monsoon months. Winds during October and the southwest monsoon season are mainly from directions between south-west and north-west. In the rest of the year, winds blow from directions between north and east in the mornings and between west and north in the afternoons. It was observed that the predominant wind direction during winter season was from East to West, **2.47 m/s**. wind speed.

Cloud Cover

During the south-west monsoon months, the sky is generally heavily clouded or overcast. Cloudiness decreases after the withdrawal of the south-west monsoon towards the end of September. During the period December to March, clear or lightly clouded skies prevail generally. Later, cloudiness increases with the progress of the season.

3.3.2 Meteorological Data

Meteorological data for winter season (December 2022) of Pune have been collected from IMD for year 2021-2022. The parameters for which data have been collected are:

- Wind speed
- Wind direction
- Temperature
- Relative Humidity

A micrometeorological station was set up in the study area near the project site, for collection of data at hourly intervals during the study period. Temperature, humidity, wind speed and direction, and - rainfall were monitored and summarized.

Meteorological Data of Post monsoon season (December 2022) Average / maximum and minimum meteorological data for period December, 2022 is represented in **Table 3.2.**

Table 3.2: Average/ maximum and minimum meteorological data

Study Period	Temperature ^{0}C		Predominant Wind Direction	Average Wind Speed (km/h)		Relative Humidity (%)	
	Max	Min		Max	Min	Max	Min
December	32	10	East	6	1	100	17

3.3.3 Ambient Air Quality

Air pollution can cause significant effects on humans, animals, vegetation and materials. The project construction is not a major contributor to the air pollution except for particulate matter emission during both; construction phase due to plant and machinery, and vehicular pollution during use phase. However, air environment monitoring covered the parameter, for which National Ambient Air Quality standards have been defined by the Ministry of Environment and Forests. Accordingly, parameters monitored were Particulate Matter<10µ (PM_{10}), Particulate Matter<2.5µ $PM_{2.5}$, Sulphur dioxide (SO_2), Nitrogen Oxide (NO_x), Ozone (O_3), Lead (Pb), Carbon monoxide (CO), Ammonia (NH_3), Benzene (C_6H_6), Benzo(a) Pyrene (BaP), Arsenic (As) and Nickel (Ni).

An assessment of baseline air quality was undertaken:

- To establish the status of exposure of the major sensitive receptors, and
- To identify the major air pollution sources and their impacts on the area surrounding the site.

This assessment was accomplished by reviewing historical ambient air quality data of the Pune city, examining sources of air emissions within a 2 km radius of the proposed project site and through site-specific background sampling programme. In this manner, background data collected was expected to be representative of all meteorological conditions.

The following sources of air emissions were identified within the impact zone:

- Vehicular and construction activities in the surrounding areas of the site; and
- Other sources of air pollution within the impact zone include domestic fuel combustion.

A well-devised air quality monitoring programme was undertaken to ascertain the major air pollutants [Particulate Matter<10µ (PM_{10}), Particulate Matter<2.5µ $PM_{2.5}$, Sulphur dioxide (SO_2), Nitrogen Oxide (NO_x), Ozone (O_3), Lead (Pb), Carbon monoxide (CO), Ammonia (NH_3), Benzene (C_6H_6), Benzo (a) Pyrene (BaP), Arsenic (As) and Nickel (Ni).

During the time of ambient air quality sampling (post monsoon season), the monitoring locations were selected by taking into consideration the long-term meteorological trends to obtain the predominant wind direction.

Season and Period of Monitoring

The ambient air monitoring work was carried out in the January 2023

Selected Sampling Locations

The locations for Ambient Air Quality Monitoring were decided based on the guidelines given in EIA manual from MoEF. For this EIA, the purpose is to ascertain the baseline pollutant concentrations in ambient air at dense residential areas & near road areas.

Monitoring stations were placed at sensitive receptors within 2 km radius from the project site. Monitoring stations were placed at the height of 3 meters at 8 places on Project Site; Shivneri Nagar, Siddharth Nagar, Kubera Garden, Bhatnagar Colony, Meeta Nagar, Kedari Nagar, Shreehans Nagar, Betal Nagar etc.

The monitoring stations were placed so as to cover all the upwind and downwind areas of the proposed development site. Air quality monitoring locations are described in **Table 3.3**

Table 3.3: Ambient air quality monitoring location details

Sr.	Station Code	Monitoring Location	Distance with Respect to Site (km)	Direction with Respect to Site
1.	A1	Project site	Within	-
2.	A2	Shivneri Nagar	1.10	NW
3.	A3	Siddharth Nagar	1.60	NE
4.	A4	Kubera Garden	0.95	N
5.	A5	Metta Nagar	2.00	SW
6.	A6	Kedrai Nagar	2.00	NE
7.	A7	Shreehans Nagar	2.00	W
8.	A8	Betal Nagar	2.00	SW

Air quality was monitored at eight locations for 24 hours, twice a week, for a total of 13 weeks as per the guidelines specified by the MoEF. The volumetric flow rate of each sampler was maintained at 1.1-1.2 l/min. The collected air samples are analysed by using standard procedures prescribed by Central Pollution Control Board (CPCB), Indian Standards: IS 5182 and American Public Health Association (APHA). Details of techniques used for analysis of air samples are given in **Table 3.4.**

Table 3.4: Techniques Used for Analysis of Air Quality

Sr.	Parameters	Code of Practice	Equipment/Instruments for Analysis	Minimum Detectable Limit
1.	SO_2	IS: 5182 (Part II)	APM 433 - Gaseous Sampler (Chemical Absorption)	3.0 µg/m^3
2.	NO_x	IS-5182 (Part-VI)	APM 433 - Gaseous Sampler (Chemical Absorption)	3.0 µg/m^3
3.	PM_{10}	IS-5182 (part-IV)	APM 550 - Dust Sampler (Gravimetric Method)	5.0 µg/m^3

Sr.	Parameters	Code of Practice	Equipment/Instruments for Analysis	Minimum Detectable Limit
4.	$PM_{2.5}$	IS-5182 (part-IV)	APM 550 - Dust Sampler (Gravimetric Method)	5.0 µg/m^3
5.	CO	IS-5182 (Part-22)	CO Analyser	10 mg/m^3
6.	O_3	IS-5182	APM 433 - Gaseous Sampler (Chemical Absorption)	2.0 ppb
7.	Pb	IS-5182	APM 550 - Dust Sampler (AAS Method)	0.1 ppb
8.	NH_3	USEPA method TO-1 or TO-2	Low volume sampling pump connected to Adsorption Tube / Tedlar bags	0.1 ppb
9.	C_6H_6	USEPA method TO-1 or TO-2	Low volume sampling pump connected to Adsorption Tube / Tedlar bags	0.1 ppb
10.	BaP	USEPA method TO-1 or TO-2	Low volume sampling pump connected to Adsorption Tube / Tedlar bags	0.1 ppb
11.	Ar	IS-5182	APM 550 - Dust Sampler (AAS Method)	0.1 ppb
12.	Ni	IS-5182	APM 550 - Dust Sampler (AAS Method)	0.1 ppb

Presentation of Air Quality Analysis Results

Ambient Air quality analysis results for the eight monitoring locations, which were selected to represent baseline conditions of the region, are given below:

Table 3.5: Ambient Air Quality monitoring results

Table 3.6: National Ambient Air Quality Standards (NAAQS)

Sr.	Pollutants	Time weighted average	Concentration in Ambient Air (in µg/m³ except indicated)	
			Industrial, Residential and other areas	Sensitive Area
1	Sulphur dioxide (SO_2)	Annual Average*	50	20
		24 Hours**	80	80
2	Nitrogen oxide (NO_x)	Annual Average	40	30
		24 Hours**	80	80
3	Particulate Matter (Size less than 10µg) or PM_{10}	Annual Average	60	60
		24 Hours**	100	100
4	Particulate Matter (Size less than 2.5µg) or $PM_{2.5}$	Annual Average	40	40
		24 Hours**	60	60
5	Lead (Pb)	Annual Average	0.5	0.5
		24 Hours**	1	1
6	Carbon monoxide (CO)	8 Hour Average	2 mg/m³	2 mg/m³
		1 Hour Average	04 mg/m³	04 mg/m³
7	Ammonia (NH_3)	Annual Average	100	100
		24 Hours**	400	400
8	Benzene (C_6H_6)	Annual Average	5	5
9	Benzo (a) Pyrene (BaP)-particulate phase only	Annual Average	1	1
10	Arsenic (As)	Annual Average	6	6
11	Nickel (Ni)	Annual Average	20	20
12	Ozone (O_3)	8 Hour Average	100	100
		1 Hour Average	180	180

*Annual arithmetic means of minimum 104 measurements in a year taken twice a week 24 hourly at uniform interval.
**24 hourly/8 hourly values will be met 98% of the time in a year. However, 2% of the time they may exceed but not on two consecutive days

Table 3.7: Air pollution impact on human body

Air pollutant	Impacts
Sulphur dioxide (SO_2)	• Sulphur dioxide causes its irritant effects by stimulating nerves in the lining of the nose and throat and the lung's airways. • This causes a reflex cough, irritation, and a feeling of chest tightness, which may lead to narrowing of the airways. This latter effect is particularly likely to occur in people suffering from asthma and chronic lung disease.
Nitrogen Oxide (NO_X)	• Nitrogen dioxide is toxic to various animals as well as to humans • Its toxicity relates to its ability to form nitric acid with water in the eye, lung, mucus membrane and skin.
Particulate matter	• May cause Lung cancer, cardiovascular disease, respiratory diseases, premature delivery, birth defects, and premature death. • Effects on vegetation: 1. Particulate matter can clog stomata openings of plants and interfere with photosynthesis functions. 2. In this manner, high particulate matter concentrations in the atmosphere can lead to growth stunting or mortality in some plant species.
Ozone (O_3)	• It causes mucous membrane irritation, respiratory infections and lung infections.
Carbon Monoxide (CO)	• Carbon monoxide is a gas that is absorbed by haemoglobin in the blood after it has entered a human body, causing the blood to be less able to transport oxygen. • When carbon monoxide is absorbed in low concentrations, people will experience tiredness. • People that have heart conditions often experience chest pains. Higher concentrations of carbon monoxide cause bad vision, decreases in concentration, headaches, dizziness, nausea and confusion.

The salient observations of the results and their compliance to the 24-hourly average NAAQ standards are as follows:

- The peak PM_{10} value of 65.00 µg/m^3 was observed at Project site. The peak $PM_{2.5}$ value of 35.00 µg/m^3 was observed at Kedrai Nagar, Shreehans Nagar.
- The Sulphur dioxide levels monitored at all the locations confirm to the standard of 80 µg/m^3, with highest value of 11 µg/m^3 at Kubera Garden.
- The Oxides of Nitrogen levels monitored at all the locations confirm to the standard 80 µg/m^3, with highest value of 15.7 µg/m^3 at project site.
- The Carbon monoxide levels also complied with the stipulated standards of 2 mg/m^3. The CO levels at all the locations were within

the stipulated limit with highest value of 1,12 µg/m^3 at project site and Shreehans Nagar.

3.3.3 Air Quality Index (AQI)

An air quality index is defined as an overall scheme that transforms the weighed values of individual air pollution related parameters (for example, pollutant concentrations) into a single number or set of numbers.

Seven main parameters (SO_2, NOx, PM_{10}, $PM_{2.5}$, CO, NH_3, O_3) monitored at eight locations were considered to calculate AQI at the project site. **AQI=54** was found around the project site which falls under satisfactory category or band (51-100) according to the AQI scale given in National Ambient Air Quality Standards.

Referring to AQI index of an area, it can be predicted that how safe is the ambient of that particular area for the population residing in it. **AQI 54** in 'Bramha Exuberance'' project area shows that ambience is safe for a residence project. Extreme health issue will be mild discomfort only for sensitive people.

Date			Station	Project site
30-Jan-23			City	Kondhwa Khurd
			State	Maharashtra

Pollutants		concentration in µg/m^3 (except for CO)	Sub-Index	check	Air Quality Index
PM10	24-hr avg	54.43	54	1	
PM2.5	24-hr avg	25.32	42	1	
SO2	24-hr avg	7.35	9	1	
NOx	24-hr avg	11.87	15	1	AQI = 54
*CO (mg/m3)	max 8-hr	0.78	39	1	
O3	max 8-hr	20.55	21	1	
NH3	24-hr avg	17.95	4	1	

* Concentrations of minimum three pollutants are required; one of them should be PM10 or PM2.5
* The check displays "1" when a non-zero value is entered

Breakpoints for AQI Scale 0-500 (µg/m^3)

AQI Category (Range)	PM_{10} 24-hr	$PM_{2.5}$ 24-hr	NO_2 24-hr	O_3 8-hr	CO 8-hr (mg/m^3)	SO_2 24-hr	NH_3 24-hr	Pb 24-hr
Good (0-50)	0-50	0-30	0-40	0-50	0-1.0	0-40	0-200	0-0.5
Satisfactory (51-100)	51-100	31-60	41-80	51-100	1.1-2.0	41-80	201-400	0.6 –1.0
Moderate (101-200)	101-250	61-90	81-180	101-168	2.1- 10	81-380	401-800	1.1-2.0
Poor (201-300)	251-350	91-120	181-280	169-208	10.1-17	381-800	801-1200	2.1-3.0
Very poor (301-400)	351-430	121-250	281-400	209-748*	17.1-34	801-1600	1201-1800	3.1-3.5
Severe (401-500)	430 +	250+	400+	748+*	34+	1600+	1800+	3.5+

AQI	Associated Health Impacts
Good (0–50)	Minimal Impact
Satisfactory (51–100)	May cause minor breathing discomfort to sensitive people
Moderate (101–200)	May cause breathing discomfort to the people with lung disease such as asthma and discomfort to people with heart disease, children and older adults
Poor (201–300)	May cause breathing discomfort to people on prolonged exposure and discomfort to people with heart disease with short exposure
Very Poor (301–400)	May cause respiratory illness to the people on prolonged exposure. Effect may be more pronounced in people with lung and heart diseases
Severe (401-500)	May cause respiratory effects even on healthy people and serious health impacts on people with lung/heart diseases. The health impacts may be experienced even during light physical activity

3.4 Noise Environment

Noise in general is a sound which is composed of frequency components of various loudness, which is distributed over the audible frequency range. The factors on which the sound is described as noise depends upon its degree of loudness, period of exposure, time of day and location at which it occurs.

The noise level measurements were carried out by measured (A-weighted) using precision noise level meter. The noise level survey was carried at all 8 locations located within the 2 km radius of the proposed project site. The major source identified in the study area is of vehicular traffic movement. Background noise levels were also monitored in residential and commercial areas.

3.4.1 Methodology for Noise Monitoring

Sound pressure level (SPL) measurements were automatically recorded with the help of an Integrated Sound Level Meter to give the equivalent noise level for every hour continuously for 24 hours in a day. In this

manner, 1 full day (i.e., 24-hourly values) of data was collected at each of the eight locations.

Selection of Noise Monitoring Locations

The locations selected for noise monitoring were:

Table 3.8: Noise monitoring location details

Station Code	Village	Distance from Project Site (km)
N1	Project site	Within-
N2	Shivneri Nagar	1.10
N3	Siddharth Nagar	1.60
N4	Kubera Garden	0.95
N5	Metta Nagar	2.00
N6	Kedrai Nagar	2.00
N7	Shreehans Nagar	2.00
N8	Betal Nagar	2.00

Results

The equivalent noise levels viz., Leq dB(A) day and Leq dB(A) night at all the noise monitoring locations are presented in **Table 3.9**. The equivalent noise levels obtained at these locations were compared with day time and night time Ambient Noise Quality Standards which are given in **Table 3.10.**

Table 3.9: Noise Monitoring Results

Location	Date Time Leq dB(A)	Night Time Leq dB(A)
Project site	53	42.6
Shivneri Nagar	51.06	41.1
Siddharth Nagar	50.6	42.3
Kubera Garden	52.1	43.4
Metta Nagar	51.1	42.6
Kedrai Nagar	51.9	43.2
Shreehans Nagar	52.2	42.6
Betal Nagar	52.7	42.4

Daytime will mean from 6.00 a.m. to 10.00 p.m.
Night time will mean from 10.00 p.m. to 6.00 a.m.
(*Note- Monitoring results of Nov. 3rd week (20.11.2017) considered as an average.)

Table 3.10: Ambient Noise Quality Standards

Area Code	Category of area/Zone	Limits in dB(A) Leq*	
		Day Time	Night Time
(A)	Industrial area	75	70

Area Code	Category of area/Zone	Limits in dB(A) Leq*	
		Day Time	Night Time
(B)	Commercial area	65	55
(C)	Residential area	55	45
(D)	Silence zone	50	40

Day time will mean from 6.00 a.m. to 10.00 p.m.
Night time will mean from 10.00 p.m. to 6.00 a.m.

- Silence zone is defined as an area comprising not less than 100 meters around hospitals, educational institutions and courts. The silence zones are zones, which are declared as such by the competent authority.
- Mixed categories of areas may be declared as one of the four above-mentioned categories by the competent authority.

Observations

Noise Levels observed at the project site & other monitoring locations are within the permissible limits.

3.5 Surface Water

The water required for proposed residential development is source from Pune Municipal Corporation. Mutha river canal is located abutting to project site in north-west direction. Mutha river lies towards north-west direction at 9.8 km distance while Jambhulwadi lake lies towards 9.2 km in South-west. Also, Katraj Lake lies at 6.2 km towards the South-west and the Khadakwasla dam lies at 10 km towards the South-west and Pashan lake lies towards 10 km in South-west.

Baseline Water Quality

Baseline Water quality monitoring was carried out to assess the nature and magnitude of existing pollution in the study area. To establish the baseline status of water environment in the study area, samples were collected from surface water sources within 10 km distance from the project site as mentioned in the ToR.

Water Quality Analysis

Surface water and ground water quality monitoring was carried out at 6 location.

Methodology adopted for sampling of surface water is described below:

- Samples collected from well-mixed section of the river, below 30 cm of water surface using a weighted bottle.
- DO is determined in a sample collected in a DO bottle using a DO sampler. The DO in the sample is fixed immediately after collection, using reagents.

- For physical and chemical analysis, sample is collected separately in two litres jerry can and preserved at the site and transported to laboratory for analysis.
- For bacteriological analysis, sample is separately collected in a sterile glass bottle, preserved in ice and transported to laboratory.
- All the analyses were carried out using standard protocol 'Standard Methods for the Examination of Water and Wastewater (APHA)' 21st Edition.

Parameters Selected for Monitoring the Quality

The physico-chemical parameters selected to evaluate the water quality are Colour, Odour, pH, Turbidity, TDS, BOD, COD, Oil & Grease, Total Phosphorus, Dissolved Phosphorus, Ammoniacal Nitrogen, Total Nitrogen, Aluminium, Calcium, Magnesium, Arsenic, Cadmium, Chromium, Copper, Nitrate, Alkalinity and Total Hardness.

Surface Water Quality

Surface water samples from six locations were collected. Location details are given in **Table 3.11.**

The surface water analysis report is given in **Table 3.12.**

Table 3.11: Surface water sampling locations

Sr.	Station Code	Name of the Location	Distance from the site (km)
1.	SW1	Mutha River	9.8
2.	SW2	Katraj lake	6.2

Surface water sample was collected at six different locations within the study zone. These samples were taken and were analysed for various parameters and compared with the standards IS: 2296 (Class C).

Details of surface water sampling locations are mentioned in **Table 3.11**. The surface water sample results are mentioned in the **Table 3.12**. On carrying out the surface water monitoring at the six different places within the 10 km area of the project site, it was observed that bacteriological analysis total coliform is present hence water is polluted hence its useful only after treatment for drinking purposes.

3.5.1 Ground water monitoring

Ground Water samples were collected from surrounding of project site which is commonly used for drinking purposes. These samples were taken as grab samples and were analysed various parameters and compared with the standards for drinking water as for IS: 10500:1991.

The parameters of ground water which were observed during study period are as follows: Colour, Odour, pH, Turbidity, TDS, SS, Dissolved Oxygen, Oil & Grease, Aluminium, Anionic Detergents, Boron, Calcium, Chloride, Copper, Fluoride, Iron, Magnesium, Manganese, Nitrate, Selenium,

Sulphate, Alkalinity, Total Hardness, Phenolic Compounds, Cyanide, Cadmium, Chromium, Arsenic, Lead, Mercury, Zinc.

The samples were also analysed for finding the concentration of heavy metals in terms of zinc, lead, manganese etc. Location details are given in **Table 3.13**. Ground water analysis report is given in **Table 3.14**.

Table 3.13: Ground water sampling locations

Sr.	Station Code	Name of the Location	Distance from the site (km)
1.	GW1	Surrounding project Site	Within

Total Coliform	Absent	MPN/100ml	IS 1622:1981
E.coli.	Absent	per/100ml	IS 1622:1981
Remark(s): ➢ For Total Coliform & *E.coli*. Absent can be consider as Zero [Refer IS:1622 (R.A.1996), Table No.-3].			

The collected samples represent open well from nearby villages and bore well. The geological strata are mainly rocky with low permeability.

Ground water is mostly used for household activities including drinking.

TSS is significantly low indicating better water quality as compared to surface waters in the same locality.

All physico-chemical parameters are within the desirable limit of BIS 10500 for drinking purposes.

Heavy metals such as copper, lead, chromium, cadmium, zinc etc. were not found in any water sample.

3.6 Solid Waste

The population of the Pune city is approximately **94,29,408** persons (2011 census), which generates considerable amount of solid waste daily. Solid waste contains bio-degradable and non-biodegradable components. The dumping of garbage not only affects aesthetics of the area, but poses a health hazard. The constituents of solid waste can be broadly classified as biodegradable waste, paper, and plastic, glass, metal, bio resistant, inert and other. Bio resistant material includes leather, rubber and other synthetic material.

3.7 Land Environment

Land use and Land cover Classification:

The National Remote Sensing Agency (NRSA), Government of India, conducted a land use survey using Remote Sensing Techniques in the year 1988-89 at the behest of the Planning Commission for classifying land by visual interpretation techniques and digital techniques. NRSA's output resulted in a two-level system of classification, comprising seven primary land use / land cover categories. Some of these primary categories required further delineation, leading to a second level of classification that resulted in further sub-categories.

This system of classification has been the basis for our land use / land cover studies. Whilst these categories are generally found relevant with respect to describing land use and land cover classes in the Indian context, sometimes modifications are required, and made, to include additional sub-categories, which are more relevant in describing the land use and land cover for a particular study.

Methodology

- Study and collection of relevant documents and maps.
- Interpretation of Satellite Imagery.
- Checking of Imagery.
- Field Survey for Ground Truthing.
- Generation of Final Landuse and Landcover Map.

Data Acquisition

- Procuring of remote sensing data using the licensed software, ArcGIS Earth and Google Earth Pro, having high resolution (< 1.0 m) imagery.
- Topographical maps as base maps.
- District Resource Map as base maps.
- Rapid Reconnaissance Survey of the study area by technical team to get preliminary notion of the entire area aiding in interpretation of the data.

Interpretation of Data

The downloaded imagery was interpreted considering the basic elements of interpretation such as size, shape, texture, pattern, location, association, shadow, aspect and resolution along with ground truth and ancillary information collected during the preliminary reconnaissance survey.

Field Survey/Ground Truthing

The aim of ground truth studies is to confirm whether the interpreted land uses are correct thus improving the quality of the output. It also allows interaction with local parties and stakeholders, thereby giving background information on the land use. Ground truth was carried out to check the discrepancy of the interpreted data. The survey consisted of traversing the study area, cross-checking of identified features with those represented on the map. Field notes were kept in the form of log sheets that recorded information pertaining to co-ordinates and identified land uses. Additional features identified or remarks made against existing interpretation were also recorded.

GPS readings were taken during the surveys wherever it was felt that additional confirmation in interpretation of the data and also observations of land features were noted. Additionally, spot checks were also done to confirm the land use / land cover interpretation even where confidence of interpretation was high.

Class wise Area Statistics of Brahma Exuberance Project

Table 3.15: Land use Pattern within 10 km Radius of the Study Area

Sr. No.	Landuse and Landcover Classification	Area (km^2)	Area %
1	Agriculture Area	43.09	13.77

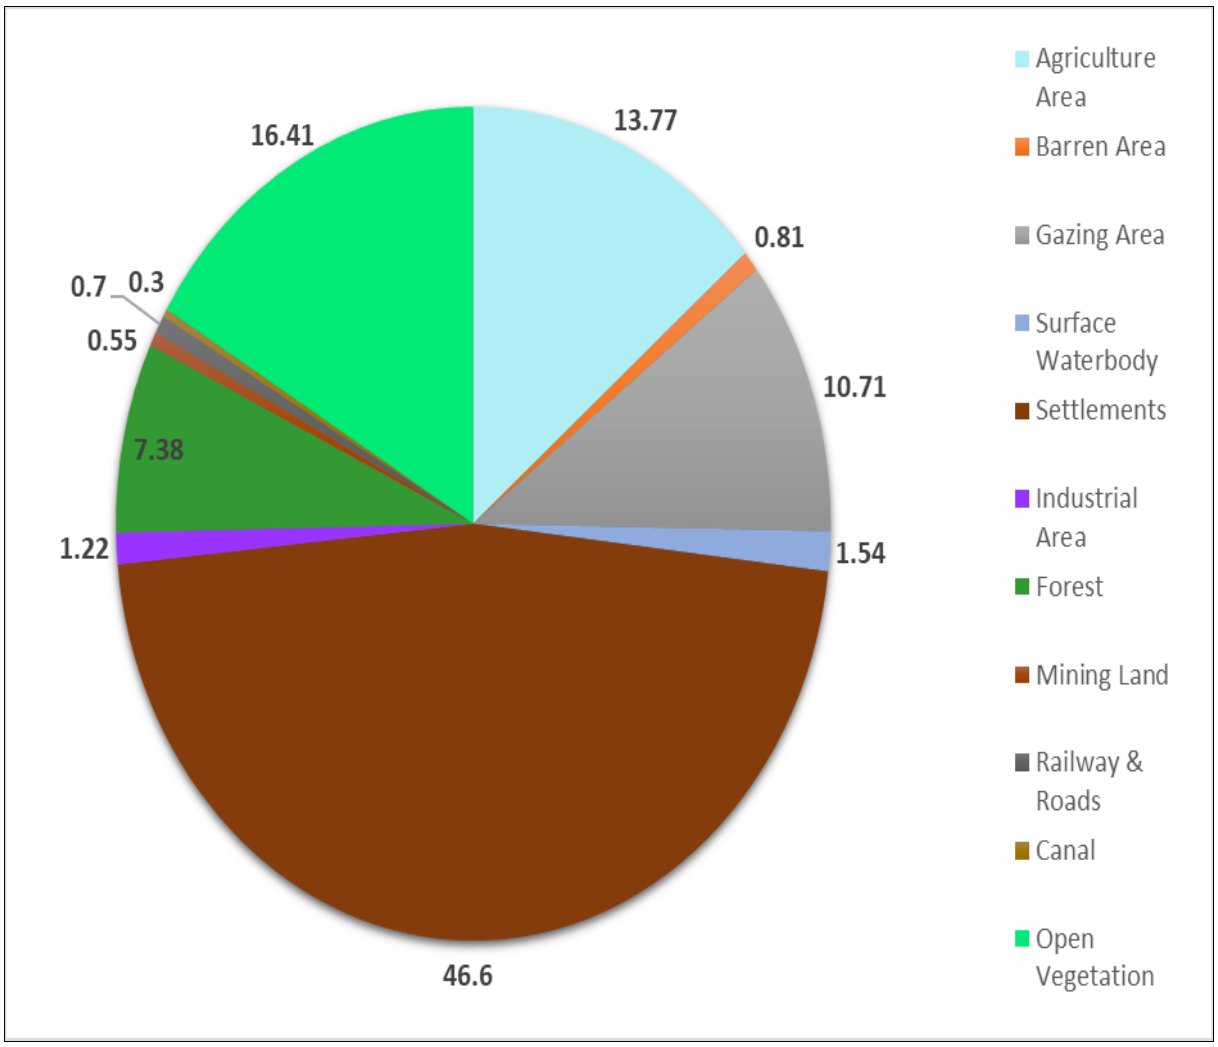
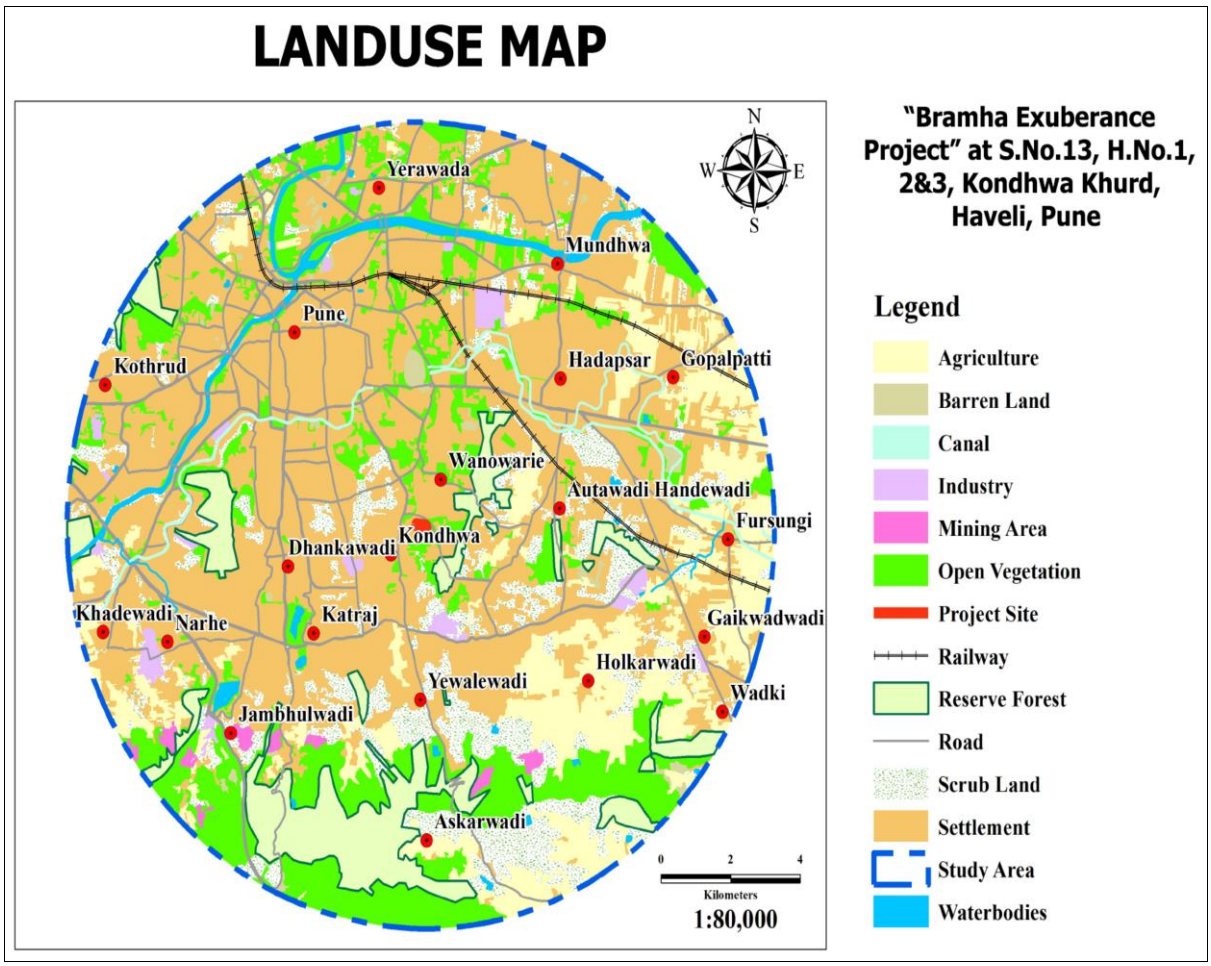
Figure 3.3: Land Use Category of Study Area





3.8 Geology

Pune is the second largest district of Maharashtra State in respect of area. The district has a geographical area of 15,642 sq. km., which is 5.08% of the total area of State. It is situated in the western part of the State and lies between north latitude 17°54' and 19°24' and east longitudes 73°2 9' and 75°10' and falls in parts of Survey of India degree sheets 47-E, 47-F, 47-I, 47-J, 47-K, 47-N and 47-O. It is bounded by Ahmednagar district in the north and east. Satara and Solapur districts in south and south east, respectively and Thane and Raigarh districts in north west and west, respectively.

For administrative convenience it is divided in 14 talukas namely Pune City, Haveli, Khed, Ambegaon, Junnar, Shirur, Daund, Indapur, Baramati, Purandhar, Bhor, Velhe, Mulsi and Maval. The hydrogeology and Geomorphology maps published by geological survey of India for Pune are presented in **Figure 3.4 & 3.5**.

Figure 3.4: Hydrogeology of Pune

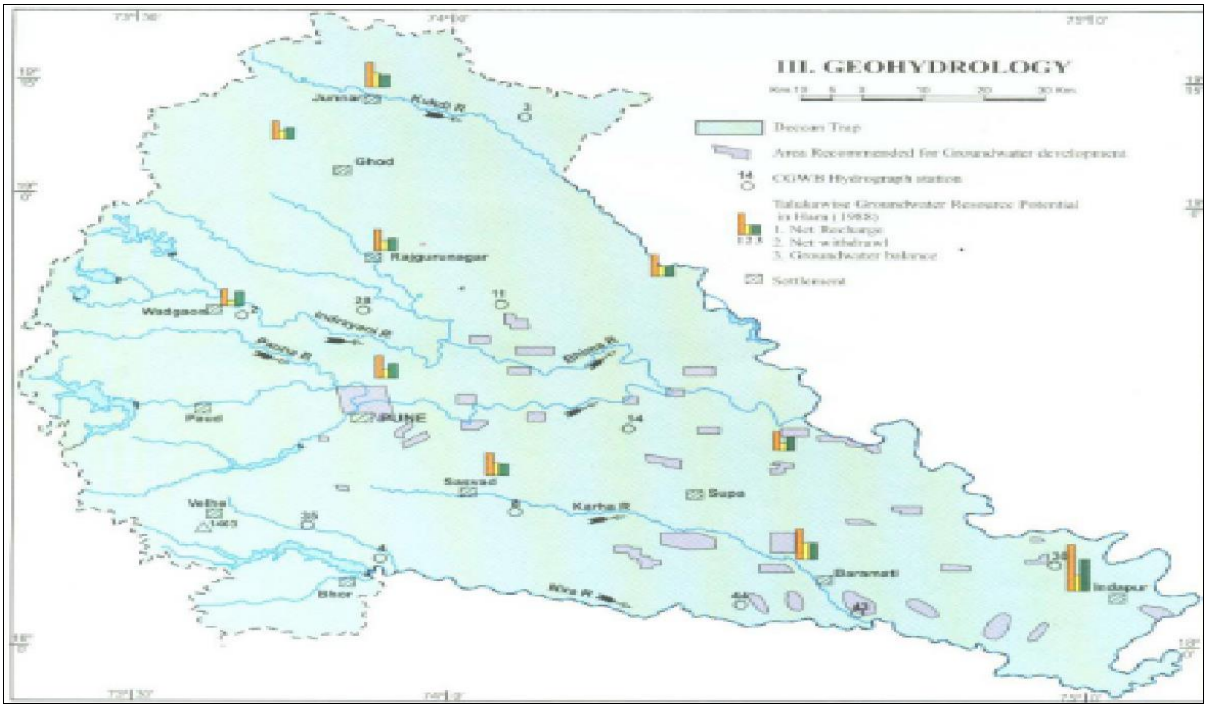


Figure 3.5: Geomorphology of Pune

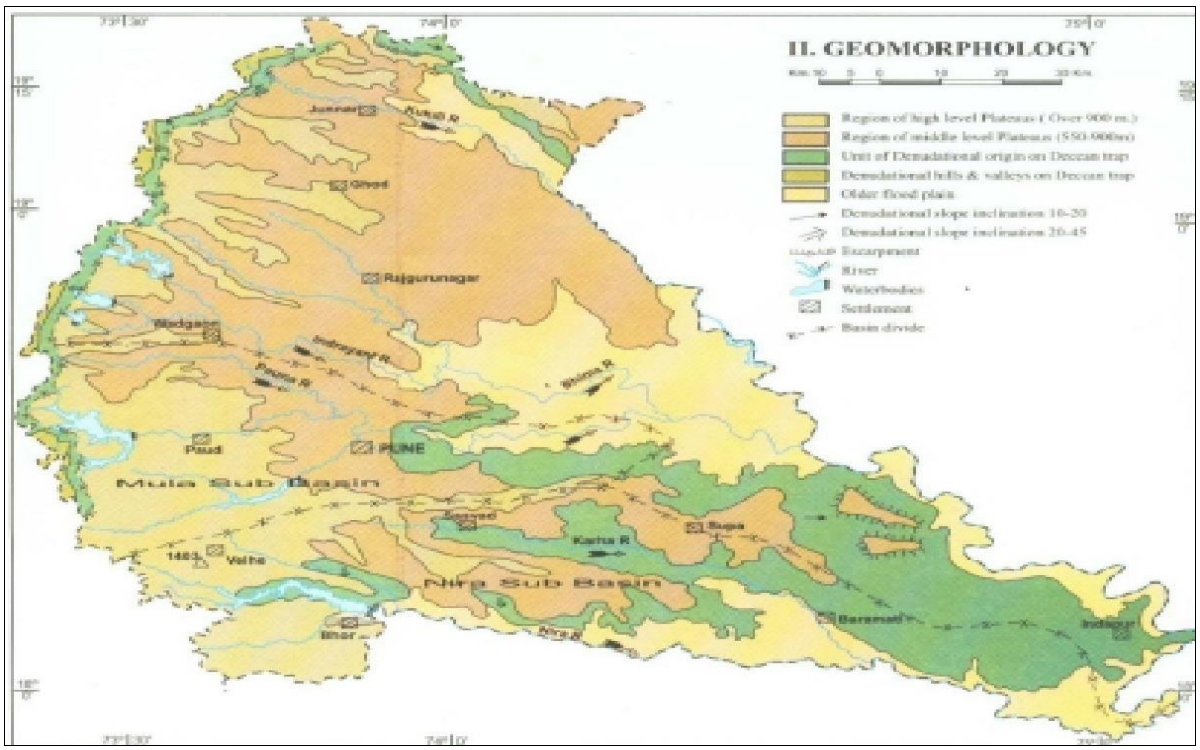

Figure 3.6: Satellite imaginary at Pune city

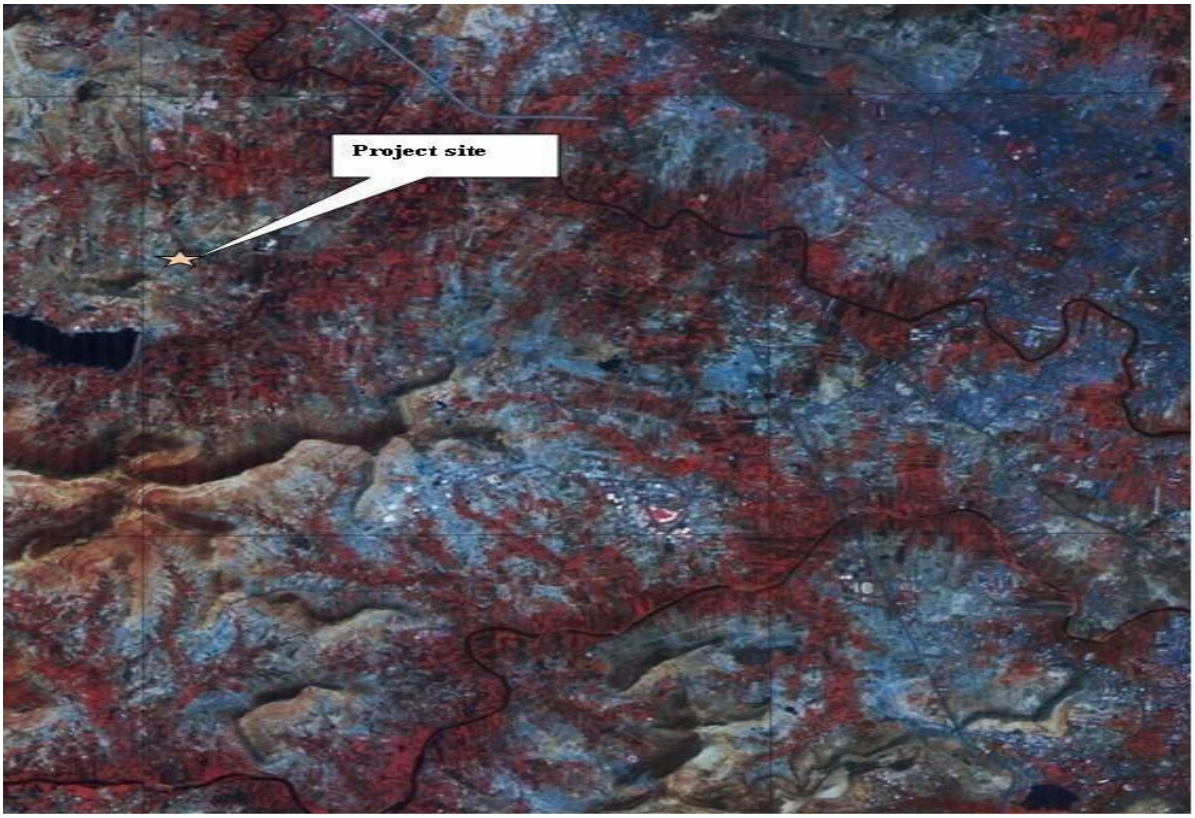


Physiology and Soil Type

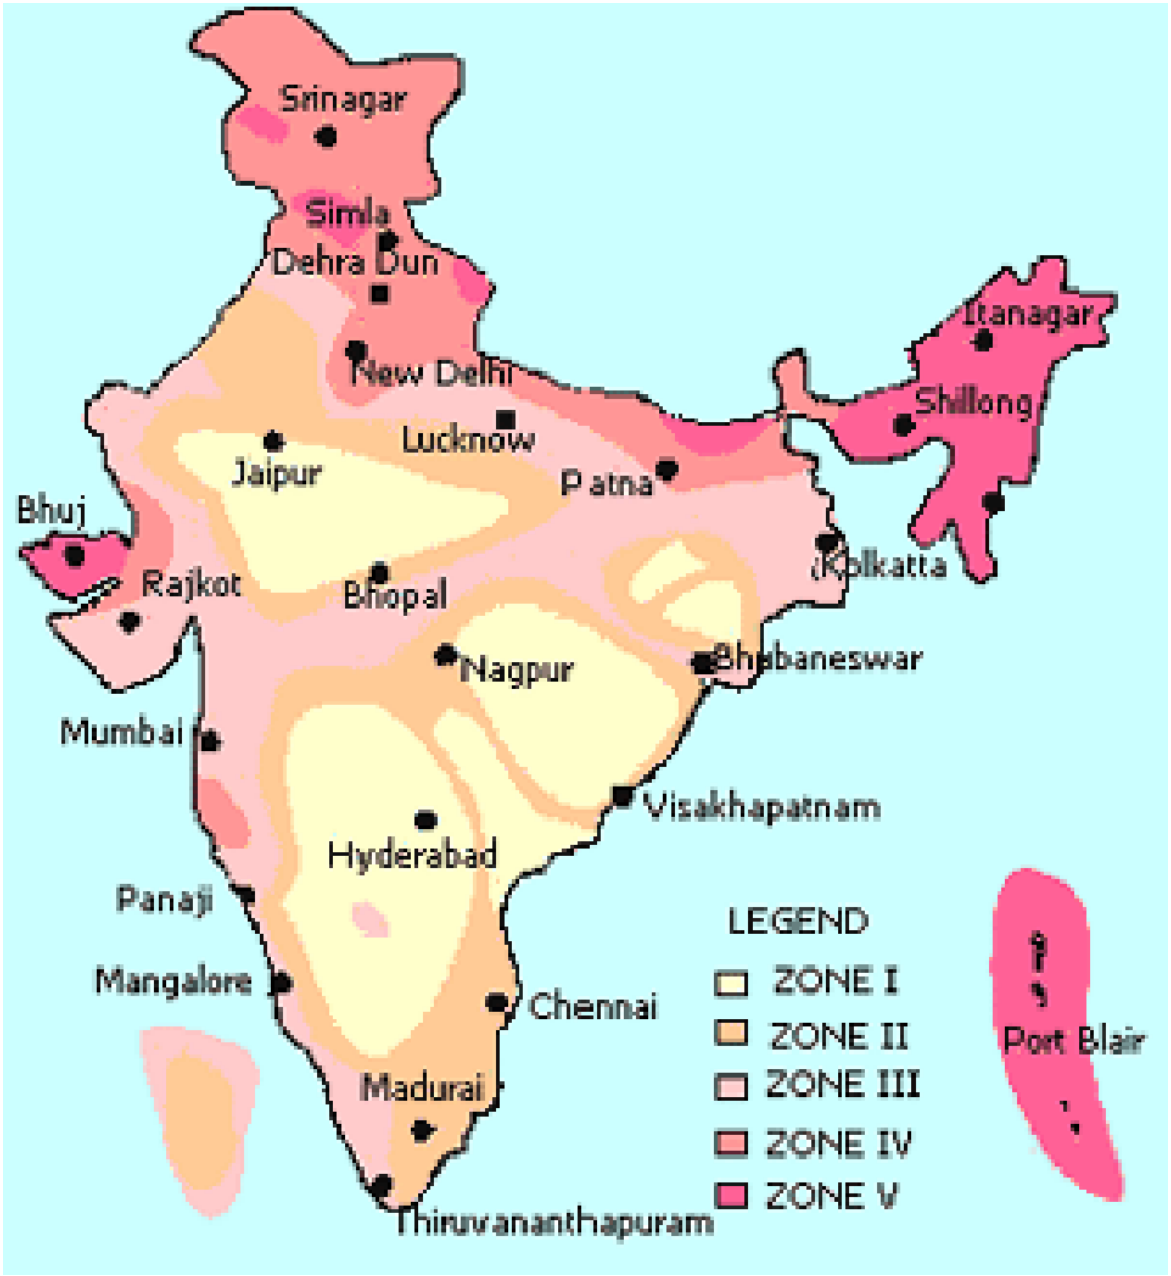
The topography of the district is distributed in a triangular fashion at the foothills of Sahyadri Mountains. It is divided in to three parts; Ghatmatha, Maval and Desh. The District of Pune falls under the tropical monsoon land and therefore shows quite a marked seasonal variation in temperature as well as rain water conditions. The climate in western Pune is cool, whereas eastern region remains hot and dry. Due to topography and geographical conditions within the district, the rainfall within the district is rather unevenly distributed.

Soil sample was collected on the site to establish the baseline characteristics. Soil samples have been collected using auger from a depth of 60 cm from the project site.

3.9 Seismology

Pune is classified under the Zone III of the Bureau of Indian Standards (BIS) 2000 seismic zone map for India as seen in **Figure 3.7**. Zone III is defined as having a maximum intensity expected around VII on MM scale.

Figure 3.7: Seismic Zones of India

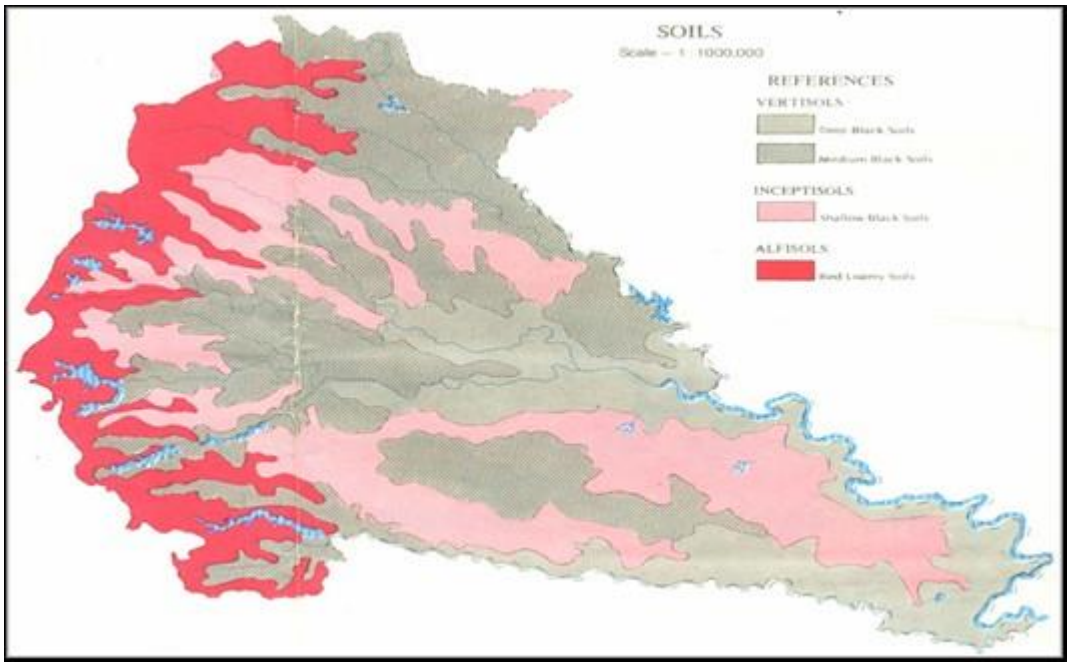


Structurally, proposed project at Pune has been designed to meet seismic requirements of Zone III.

3.10 Soil

Soil sample was collected on the site to establish the baseline characteristics. Soil samples have been collected using auger from a depth of 60 cm from the project site. The soil characteristics in the study are shown in **Figure 3.8**.

Figure 3.8: Soil Characteristics in the study area



The soil samples were analysed for physical and chemical characteristics. The locations of soil analysis are shown in **Table 3.16.** The results of the analysis are given in **Table 3.17.**

Note: All results are on air dry basis. FAO: Food & Agriculture Organization, United Nations											

At the project site, the soil was found to have a pH was 7.04, indicating a neutral condition that falls within the acceptable range and can support plant growth. Soil Electrical Conductivity (EC) assessments measure the soluble salts in the soil. EC of soil depends upon the porosity, water content, salinity level, cation exchange rate and temperature. The EC of project site soils was observed in at 0.198 Mmhos/cm.

The cation exchange capacity (CEC) of a soil refers to the amount of positively charged ions which can be held by soil. When dissolved in water, the nutrients are either positively charged or negatively charged. Examples of positively charged ions (cations) include: calcium (Ca^{++}), magnesium (Mg^{++}), potassium (K^{+}), sodium (Na^{+}), hydrogen (H^{+}) and ammonium (NH_4^{+}). The CEC analysis of the soil sample was observed as 20.2 meq/100gm.

Table 3.18: Chemical Classification of Soil Quality

Sr.	Soil Test	Classification
1	pH	4.5 Extremely acidic 4.51- 5.50 Very strongly acidic 5.51-6.00 moderately acidic 6.01-6.50 slightly acidic 6.51-7.30 Neutral 7.31-7.80 slightly alkaline 7.81-8.50 moderately alkaline 8.51-9.0 strongly alkaline 9.01 very strongly alkaline
2	Salinity Electrical Conductivity (mmhos/cm) (1ppm = 640 mmhos/cm)	Upto 1.00 Average 1.01-2.00 harmful to germination 2.01-3.00 harmful to crops (sensitive to salts)
3	Organic Carbon (%)	Upto 0.2: very less 0.21-0.4: less 0.41-0.5 medium, 0.51-0.8: on an average sufficient 0.81-1.00: sufficient >1.0 more than sufficient

Sr.	Soil Test	Classification

3.11 Biological Environment

3.11.1 Approach

Study of biological environment is one of the important aspects in environmental impact assessment in view of the need for conservation of environmental quality. Natural flora and fauna are the two important components of the biological environment of the ecosystem. They are organized into natural communities and constantly interact with their physical environment as well as among themselves. They show various responses and sensitivities to outside influences. The need to assess the change in status of the animal and plant resources is the primary requirement for a meaningful assessment. In view of this, baseline studies of biological environment with reference to terrestrial and aquatic ecosystem under the study area were carried out. Information regarding ecological resources was collected through field visits and from records of different Government Departments.

The main objective of biological survey is to collect the baseline data regarding flora and fauna in the study area. Data has been collected through extensive survey of the area with reference to flora and fauna. Information is also collected from different Government Departments, such as Social Forestry, Animal Husbandry & Forest Office of Pune, Government of Maharashtra. On the basis of onsite observations as well as forest department records the checklist of flora and fauna was prepared.

Assessment of Flora

The vegetation in the surrounding area was studied randomly to assess the representative flora in and around the project site. Total 392 no. of trees existed on project site. The list of the herbs broadly found in the

study area is presented in the enclosed tables. Similarly, the list of shrubs and trees is also presented in enclosed **Table 3.19**.

Table 3.19: List of common plant species

Sr.	*Scientific Name (Botanical name)*	Name of species (Common name)
1.	*Peltophorum pterocarpum*	Copper Pod

33.	*Murraya paniculata*	Kamini (Jasmine)
34.	*Syzgium cumini*	Jamun tree
35.	*Annona squamosa*	Custard apple
36.	*Grevillea robusta*	Silveroak
37.	*Lagerstroemia speciosa*	Tamhan
38.	*racemosa*	Umbar
39.	*Prunus Dukis*	Badam

Fauna observed in study area

According to the available data the livestock population in the Pune district includes cows, bullocks, buffaloes, donkeys, goat, poultry birds, dog, cat etc.

As far as birds are concerned, the most common birds observed at various places were crow, sparrow, myna, dove, bulbul, pigeon, etc.

Plantation & Landscaping

Selection of the plant species have been done on the basis of their adaptability to the existing geographical conditions and the vegetation composition of the region. During the development of the green belt within the project area, emphasis have given on the selection of plant species like nitrogen fixing species, species of ornamental value, species growing very fast with good canopy cover etc. Plantation details of site are given in the Table 3.20.

Table 3.20: List of planted trees on site

Sr.	*Scientific Name (Botanical name)*	Name of species (Common name)	No.

3.12 Socio Economic Environment

The social environment refers to demographic structure of the area incorporating population dynamics, infrastructure resource base and health status of the community, while economic environment refers to land utilization pattern, land values, employment generation, industrial development and sustainability of the project in financial terms. The aesthetic environment refers to scenic value of the area, tourist attraction, forest and wildlife, historic and cultural monuments.

A reconnaissance survey of the study area was conducted during the study period considering the socio-economic condition of the study area. Data about the villages was collected both from secondary and primary sources. The secondary sources of data were primarily the Census data (year 2011) supplied by the Registrar General of India. Details are shown in **Table 3.22**.

In 2011, Pune had population of 94,29,408 of which male and female were 49,24,105 and 45,05,303, respectively. In 2001 census, Pune had a population of 72,32,555 of which males were 37,69,128 and remaining 34,63,427 were females. Pune District population constituted 8.39 percent of total Maharashtra population. In 2001 & 2011 census, this figure for Pune District was at 7.47 percent of Maharashtra population. The population census abstracts of 2011 is shown in **Table 3.21**

Table 3.21: Population of Pune district (Census 2011)

Description	2011	2001
Actual Population	9,429,408	7,232,555
Male	4,924,105	3,769,128
Female	4,505,303	3,463,427
Population Growth	30.37%	30.73%
Area Sq. km	15,643	15,643
Density/km^2	603	462
Proportion to Maharashtra Population	8.39%	7.47%
Sex Ratio (Per 1000)	915	919
Child Sex Ratio (0-6 Age)	883	902
Average Literacy	86.15	80.45
Male Literacy	90.84	88.34
Female Literacy	81.05	71.89
Total Child Population (0-6 Age)	1,104,959	968,851
Male Population (0-6 Age)	586,665	509,367
Female Population (0-6 Age)	518,294	459,484
Literates	7,171,723	5,039,290

Description	2011	2001
Male Literates	3,940,210	2,879,761
Female Literates	3,231,513	2,159,529

Socio-economic Survey

A survey pertaining to the subjective analysis of the socio-economic indicators to assess the perception of the inhabitants in the study area as well as the project is undertaken. This also in general reflects on the 'Quality of Life' in this region. The indicators refer to housing, occupation, education and health status, availability of fuel, water supply, sanitation and transportation. Besides this, expectations and aspirations from the project are also discussed.

The salient observations arising out of survey are:

The proportion of male and female respondents in the interview varies from 40 - 70%. Most of the respondents have either semi pucca or pucca houses. This is also evident from the wealth status as most of the respondents have reported their monthly income falling in the range of Rs.5000/- to Rs.8000/- and up to Rs. 15,000/per month.

Most of the respondents are engaged in agricultural farming and labour and some of them run small scale business. Amenity near the project site shown in **Table 3.24**. **Table 3.25** shows Eco sensitive, archaeological & heritage sites near the project site.

Chapter 4
Anticipated Environmental Impact and Mitigation Measures

4.1 Introduction

Environmental impact assessment involves identification, prediction and evaluation of potential impact of the proposed activities within the study area. The baseline setting for the environmental components is documented in the previous chapter whereas the present chapter discusses potential impact faced during the use phase.

The impact identification and prediction process aim to

- Identify potential source or cause of impact throughout the life of the project.
- Characterize the potential impact affecting a target or receptor (physical, human and socio-economic).
- Assess the potential of changing likelihood of impact through Environmental Management Plan (EMP).

4.2 Pollution sources

Pollutants generated in the development of project during the operation phases were solid, liquid and gaseous in nature. Also, the generation of pollution was continuous, periodic or accidental in nature. Sources of pollutants and their characteristics during the operational phase are given below in **Table 4.1**

Table 4.1 : Pollutant sources and characteristics

Sr.	Activity/ Area	Pollutant	Pollutant Characteristics	Frequency
	Operational phase			
1	Vehicular movement	Air emissions and Noise	Vehicle exhaust emissions	Continuous/Periodic
2	Diesel generators	Air emissions	SO_2, NO_x, $PM_{2.5}$, PM_{10} from fuel burning	Periodic during power failure
		Noise	Noise due to running of equipment	Periodic during power failure
		Hazardous waste	Used Oil Generation	Periodic, during oil changes
3	Sewage treatment Plant	Solid waste	Settled and stabilized sludge	Continuous
		Treated water	Treated sewage used for horticulture	Continuous
		Solid waste	Settled sludge during tank cleaning	Occasional
4	Diesel Storage	Oil	Oil spillage - Accidental large spills due to pipe rupture	Accidental / Only due to poor housekeeping
			Oil Spillage - Small quantities due to	

Sr.	Activity/ Area	Pollutant	Pollutant Characteristics	Frequency
			small leakage in pipe	
5	LPG Cylinders	Thermal / Blast Effect	Accidental Explosion due to LPG leaks and fire	Accidental
6	Maintenance / house-keeping	Wastewater	Floor washing	Continuous
		Solid waste	Used equipment parts and garden wastes	Continuous
7	Air conditioners	Air emission	Ozone Depleting Substance release	Continuous
8	Vehicle Parking Area	Oil Spills	Minor oil leaks in parking lot	Continuous - small quantities
9	Storm water drains	Waste water	Contamination discharge from site - Mainly suspended solids	During rainy season

4.3 Project Activities

Project activities that are summarized in **Table 4.2** from an impact identification perspective under three distinguishable phases.

Table 4.2 : Project Activity

Operation Phase
➢ Liability period O&M activities a responsibility of proponent: • Building repair and maintenance • Plumbing repairs • Housekeeping • Electrical repairs • Lift O&M • Carpentry related repairs • Associated infrastructure utility/facility O&M • Community infrastructure utility/facility O&M

4.4 Impact Evaluation

Impact Criteria and Ranking

All project environmental activities/aspects were comprehensively identified for the proposed project operational phase. The level of impact that may result from each of the activity component interactions are assessed based on subjective criteria in this chapter.

Based on standard environmental assessment methodologies, three key elements are considered for this analysis.

Severity of Impact

The degree of damage that may be caused to the environmental components concerned. This will be decided by the standards available for the parameter. To decide severity a scale is essential. This scale is assumed to be percentage value of the parameter with respect to the

existing standard. The 0 reading would be considered as 0% and the standards valued will be considered as 100%. For example, SO_x standard is 80 microgram / m^3. In this case if a project depicts baseline or prediction value as 80 microgram/ m^3 then the value in terms of scale is considered as 100%. If a project depicts baseline or predicted value as 72 microgram/ m^3 then the value is 90%. Based on this scale three levels of severity are considered which are defined below.

Severity 1 (Low)	The baseline and / or predicted value is less than 90%
Severity 2 (Moderate)	The baseline and / or predicted value is between 90% to 110%
Severity 3 (High)	The baseline and / or predicted value is more than 110%

Extent of Impact

The geographical spread of the impact around project location and corridors of activities. Extent of the project impact is based on the impact's extent beyond the project boundary. As per the model ToR for Building and Construction Manual by MoEF (2010), the primary impact zone is 500 m from the project boundary. Based on this data the scale of extent of impact is defined as below.

Extent 1 (Low)	The extent of the impact is within the project boundary.
Extent 2 (Moderate)	The extent of the impact is within 500 m from the project boundary.
Extent 3 (High)	The extent of the impact is beyond 500 m from the project boundary.

Duration of Impact

The time for which the impact lasts taking into account the project lifecycle. Any impact that is going to happen because of the operation of the project will continue throughout the life of the project. Hence, these impacts are categorized based on their likely occurrence or frequency. These are defined in the following manner.

Ope. Duration 1 (Low)	Rare (e.g. D. G. set operation)
Ope. Duration 2 (Moderate)	Periodic
Ope. Duration 3 (High)	Regular (e.g. traffic generated by the project occupants)

A positive or beneficial impact that may result from this project is not ranked and is depicted in the form of ++.

Impact Significance

The significance of the impact is adjudged based on a multiplicative factor of the three element rankings mentioned above. The **Table 4.3** below assigns impact significance in the scale of Low-Medium-High and will be used for delineation of preventive actions, if any, and management plans for mitigation of the impacts.

The impact significance is determined taking into account the measures which are factored at the design and planning phase of the project. Legal issues are taken into account in the criteria sets, wherever appropriate, to aid in Prestige Estates Projects Limited effort to comply with all relevant legislations. Additionally, the results of quantitative impact prediction exercise, wherever undertaken, are also fed into the process.

Table 4.3 : Criteria Based Significance of Impact

Severity of Impact (A)	Extent of Impact (B)	Duration of Impact (C)	Impact Significance (A x B x C)	
1	1	1	1	LOW
1	1	2	2	
1	2	1	2	
2	1	1	2	
2	1	2	4	
1	2	2	4	
3	1	2	6	Medium
1	3	2	6	
2	2	2	8	
3	2	2	12	
2	3	2	12	
2	2	3	12	
3	3	2	18	High
3	2	3	18	
2	3	3	18	
3	3	3	27	
Impact is Beneficial -			++	

To assist in determining and presenting the significance of an impact, an impact evaluation matrix was developed. The significance of the impact is depicted using colour codes for easy understanding. In the case that an environmental component might be impacted by more than one project activity the higher impact significance ranking is taken as the significance ranking for the subject receptor. Impacts that are determined to have high significance ranking of ">12" are considered to be significant and hence require examination in terms of preventive actions and/or required additional mitigation to reduce the level of the potential impact.

The critical areas of environmental concerns for which the impact and its predictions are taken into consideration are mainly:

- Air Environment
- Water Environment
- Noise Environment
- Land Environment
- Biological Environment
- Socio economic Environment and
- Aesthetics
- Solid waste

The impact can be further categorized as positive impact and negative impact depending upon its nature, potential and magnitude. The impact during the construction phase of the project is generally short term.

4.5 Air Environment

The project does not contribute much to degradation of ambient air quality (AAQ) levels during its project life cycle. Maximum air emissions are expected to happen during construction phase of the project. The baseline monitoring study conducted suggests that the particulate matter (PM_{10} and $PM_{2.5}$) values and other parameters such as SO_2, NOx and Hydrocarbons etc. are observed to be within the norms.

During operational phase, foul smell emanating from STP, Solid waste segregation centres, composting yards could be potential sources for local air quality deterioration. However, measures would be taken to reduce odour pollution by maintaining green buffer around the STP. Summary of Anticipated Impacts on AAQ are given in **Table 4.4**.

Table 4.4 : Anticipated Impacts on AAQ

Impacts to consider during Planning Phase	Impacts Operational Phase
Locating STP, Solid waste segregation centers, Composting yards	Foul smell from STP, Solid waste segregation centers, composting yards
	Indoor air quality issues in individual commercial units

4.5.1 Predicted Air Emissions from the Site

For the purpose of air dispersion modelling, traffic and DG set emissions are considered for operation phases on the proposed site.

Fugitive emission from material sourcing and transportation

Fugitive emissions in the form re-entrained dust are also likely to arise from the vehicular movement along the site approach road. The fugitive dust and vehicular exhaust may therefore lead to the degradation of the air quality due to possible increase in ambient air pollutant concentration and may also adversely affect the community health of households residing along the approach road.

Significance of Impact

Using the scale mentioned above the significance of the impact is as mentioned below.

Severity of Impact	1	**Extent of Impact**	2	**Duration of Impact**	2
Impact Significance = 4 i.e. Low					

4.5.2 Operation Phase

- **Operation of DG sets**

There is 1 no. of DG set having total capacity **1 no. x 82.5 kVA**, for residential project that shall be located either individually or combined at locations within the project area.

- **Increased Traffic and Vehicle Movement**

Increased incoming vehicles of visitors and staff to have impact on traffic management.

4.5.3 Emission Inventory

The emission from vehicles is depend on the type and capacity of the vehicles used. The pollutants emitted from vehicles are HC, CO, NOx, SO_2, Particulate Matter, and Lead. The air dispersion modelling was carried out for CO, NOx and PM.

4.6 Water Environment

Impacts of water on Human Health

Water is the source of life and one of the most important factors affecting human sustenance. Water pollution is primarily the contamination of natural or manmade sources of fresh water. Pollution of water happens on many levels and affects human health in many ways.
There are numerous waterborne diseases that are a direct result of water pollution.

Health ailments

Ingestion of poorly treated water can cause diarrhoea, cholera, stomach infections and typhoid. Dirty or polluted water is the preferred breeding ground for mosquitoes and other pests. Mosquito bites adversely affect human health and can cause diseases such as Malaria, Filariasis, Dengue and Chikungunya.

Aquatic life

Water pollution also affects the health of water animals such as fish. When humans consume these sick fish, the infections get passed and can take more serious form in the human body. Apart from fish, water pollution also affects other plants and animals. And this in turn affects human health. If we consume food that has already been infected, we are bound to fall ill.

Hygiene and cleanliness

Water pollution in general results in unsanitary and unhygienic conditions. Using polluted water for cleaning purposes does not have any benefit. The water is unable to remove the accumulated germs which causes diseases thereby affecting human health.
Water pollution affects human health in disastrous ways. Various organisations are constantly trying to clean corrupted water bodies to meet the demand of safe drinking water. We must remember that we have a limited supply of water. And if we continue to pollute the available water, it will most definitely lead to diseases and deaths.

Mitigation Measure

The mitigation measures provided shall be implemented by each individual project based on its applicability to the activities and processes. Construction activities close to water channels shall ensure greater degree of precautions and effectiveness of implementation

Effluent/ Sewage Disposal

- To minimize adverse impacts due to escape/discharge of untreated sewage outside the project site, adequate number of toilets (at least 1 toilet per 10 labour) with Mobile STP onsite for disposal of sewage as per the design aspects of Bureau of Indian Standards;
- Random disposal of wastewater by workers in the labour colony was strictly restricted. Adequate drains and collection sumps for recharge of water from bathing areas were provided at the labour campsites;
- Sludge from sanitary wastewater treatment systems were disposed in compliance with local regulatory requirements;
- Runoff Management
- Storage area was kept away from the storm water drain to prevent any wash away into water bodies outside the facility;
- Segregation and pre-treatment of oil and grease containing effluents from workshop (e.g. use of a grease trap) is undertaken prior to discharge into sewer systems;

4.6.1 Operation Phase Impacts

➢ **Discharge of surface run-off**

The rainwater harvesting system has provided. The harvested rainwater has used for domestic purpose after giving proper treatment to reduce the municipal load during monsoon period.

➢ **Drainage System**

Proper drainage system has provided within the project for Buildings to maintaining site slope. Also, oil & grease trap is provided to prevent water contamination.

➢ **Water Demand**

Water demand during the operational phases is estimated on the basis of various activities proposed as per project master plan and associated consumption pattern. Details of the water requirement and sources are given in **Table 4.5**

Table 4.5 : Water Requirement during Operational Phase

Particular	**Management**
Source of water	Pune Municipal Corporation/STP
Total water required	**185 m^3/day**

Water Balance

Water balance for the site has been calculated from the water requirement for the site and the reclaimed wastewater that was used on site. Water Balance for Monsoon and Non-monsoon season are depicted below.

Significance of Impact

Severity of Impact	1	**Extent of Impact**	2	**Duration of Impact**	3
Impact Significance = 6 i.e. Medium					

Mitigation Measures

Sustainable surface water extraction plan is evolved considering the water demand of the project in its operation phase. Water conservation and development measures need to be taken including all possible potential for reuse and recycling of water. These could be in the form of the following:

- Rainwater Harvesting and water source development
- Minimizing water consumption
- Promoting reuse of water after treatment and development of closed loop systems for different water streams.

4.6.2 Impact on Water Environment Quality

The wastewater generation during operation phase is described below:

Operation Phase Impacts

During this phase, 100% of the water supplied for flushing and 90% for domestic use was discharged as waste water. For optimal management (treatment and reuse), wastewater generation has been categorized under two sources:

A. Gray water (wastewater generated from various household activities, except for the wastewater produced from the toilet flushing)

B. Black water (wastewater generated from the toilet)

Significance of Impact

Severity of Impact	1	**Extent of Impact**	1	**Duration of Impact**	3
Impact Significance = 3 i.e. Low					

Mitigation measure

The sewage generated from the proposed project is **173 m^3/day**. The sewage generated is first treated in STP. We have provided 1 no. of Sewage treatment having capacity 70 m^3/day for residential project. The treated sewage was used for flushing, gardening. Details are shown in Table 2.12 Excess water is discharge into the sewer line. Dual plumbing system is installed for the purpose of separate supply of domestic and treated wastewater in the buildings.

The reuse / recycle of water are vital for the sustainability of any developmental activity. The project proponent, being an enlightened group also desires to maximize the reuse / recycle of this natural resource. The project is used STP of MBBR technology and ensured the minimum desired quality of wastewater which given in **Table 4.6**

Table 4.6 : Discharge composition of wastewater

Details	Untreated	Treated
pH	6.0 - 8.5	7.0 – 7.5
Total suspended solids	180 – 250 mg/l	<10 mg/l
Chemical Oxygen Demand	400 – 850 mg/l	<30 mg/l
Biochemical Oxygen Demand, 3 day, 27 °C	250 – 400 mg/l	<10 mg/l
Oil & Grease	25 mg/l	Nil

Promoting Reuse of Water after Treatment and Development of Closed Loop Systems

To promote reuse and development of closed loop system for water, segregation of two schemes namely (i) Wastewater Treatment scheme; and (ii) Storm Water Management scheme have been suggested.

Wastewater Treatment Scheme

Sanitation infrastructure shall comprise of following:

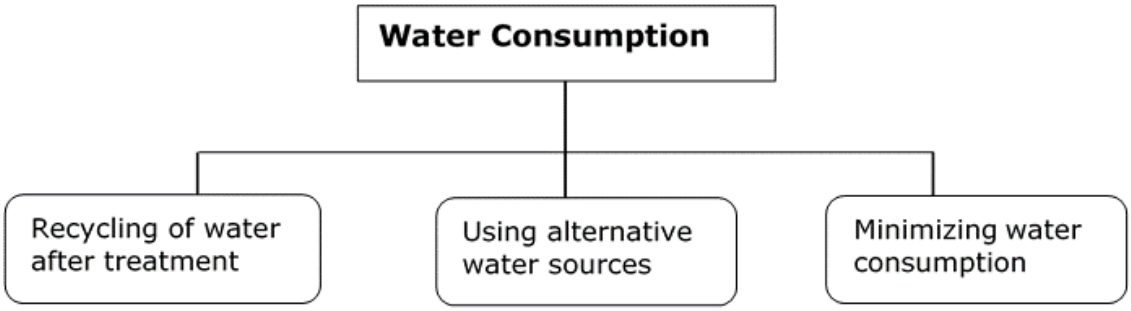
- Wastewater collection and conveyance system
- Wastewater treatment and disposal arrangement

Wastewater collection and conveyance system is an underground drainage network that is designed to collect wastewater from each and every point and convey it to one point for treatment.

Proposed development has sewage treatment plants based on MBBR Technology for treatment of the waste water generated from the different activities proposed. Treated effluent was used for flushing, landscaping.

Water Conservation and Development

The water conservation plan consists of a combination of three major steps depicted below:



Water conservation is practiced to the extent possible by use of reclaimed water for non-potable application like gardening and flushing.

4.7 Noise Environment

4.7.1 Impact on Ambient Noise Environnent

The assessment of the impacts of noise on the surrounding community depends upon:

- Characteristics of noise source (instantaneous, intermittent, or continuous in nature, with the latter contributing the least to noise pollution);
- Time of day at which noise occurs; and
- Location of noise source with respect to noise sensitive receptor.

Operation Phase

The impact on noise during the operation phase of the project is due to vehicular traffic and use of DG sets in case of power failure. Implementation of traffic management systems will help in lessening the noise impacts.

Noise related impacts during operational phase are anticipated from regular vehicular movement caused by the vehicles and operation of DG sets during a power failure. The interpretation of baseline data on ambient noise quality confirmed that noise level is exceeding both day and night time noise standards near the site.

Thus, considering the small incremental traffic over existing traffic, adequately spaced buildings, the occasional use of DG set complying with noise limits specified by CPCB and vegetation in the proposed green belt, the impact is assessed to be very low.

It is likely that noise generated from the loud music operations at the events/celebrations can disturb the surrounding buildings.

The frequency of events/celebration will increase the noise levels within the project site and surrounding areas.

Mitigation Measures

Mitigation measures are measures taken to control, reduce or prevent pollution due to automobile emissions. Some of the measures that may be adopted to reduce fuel consumption and air pollution are given below.

- **Noise Emissions Control Technologies**

Diesel generator set is housed in a suitable acoustic enclosure so that noise level at a distance of 1 m does not exceed 75 dB(A) at 75% load as per CPCB standards - 2008 or is meeting the standard whichever is higher. It would be ensured that the manufacturer provides acoustic enclosure as an integral part along with diesel generator sets. Further enclosure of the services area with 5 m high wall is reduce noise levels and ensure that noise is at a permissible limit for residents of the site and surrounding receptors. Mitigation measures for noise is tree plantation that acted as barrier for noise pollution.

4.8 Land Environment

4.8.1 Anticipated Impact on Landscape and Topography

The landscape of the area is gradually change with residential building development project. The change is topography mostly at the micro-level due to levelling of area or modification of terrain. The construction activities such as excavation works for foundations of various project-

components, development of drains, providing proper slopes across the area etc. and ultimately for erection of the associated structures and buildings are changing the topography of the area. The dumping of construction debris in surrounding vicinity can impact the drainage of the area. These activities would lead to soil erosion causing loss of top productive layer of the soil. However, such impacts were primarily confined to the project site during initial construction period.

Solid waste generated during the construction phase was properly collected and segregated as plastic, paper, metal, and other; and disposed of as per the standard practice. The impacts on soil during construction phase was marginal and reversible in the nature. The operational phase of the project generates garbage as solid waste. Land contamination mainly occurs due to lack of proper storage and disposal of solid waste. The solid waste is mainly domestic in nature and does not contain any hazardous waste. To avoid the impacts on the land appropriate measures is adopted for storage and disposal of solid waste. The total solid waste generated from the project development is 699 kg/day. Out of this, 419 kg/day is biodegradable waste and 280 kg/day is non-biodegradable E waste will not be generated. The wet waste is treated in vermicomposting pits.

The impact on ecological environment during the operation phase of the project is positive as landscaping and plantation is done along the roads and within the project premises. Landscape details & tree details are given in **Table 4.7**.

Table 4.7 : Landscape & Tree details

Description	**Details**
Green Belt Area	2,045.85 m^2
Trees planted at site	392 nos.
Total no. of trees	**392 nos.**

Prediction of Impacts

There is a potential for elevation of air temperatures in urban areas as compared to the surrounding areas (urban heat island), and this temperature increase can have negative impacts on human comfort and health.

4.8.2 Mitigation Measure

The Project is ensured following mitigation measures to minimize impact on Land use, topography, landscape and drainage of each project site and surrounding region. The issues pertaining to urban heat islands and increase in runoff have been addressed as a part of master planning by providing green areas and effective storm water drainage system for the region. It is recommended that the project should establish with embedded green elements in all infrastructural development proposed.

- No extra soil is brought into the site from outside the project boundary for the construction activity. All excavated soil was used in level raising;
- The construction contractors were instructed not to cut any tree. Wherever possible avoid disturbance to existing ecology to improve the landscape of the project site;
- **Development of greenbelt**: About **2,045.85 m²** is provided for development of green belt. Total 392 no. plants are planted for green belt development.
- The green belt development is done to improve the landscape and minimize impact on land use, topography.
- Diversion dykes are constructed to channel runoff around the excavated site to avoid surface runoff of excavated material;
- Construction footprint is well defined and construction work was carried out within the Project footprints only.
- Proper drainage facilities are provided along the roads.
- The small amount of construction debris and surplus excavated material was disposed of in suitable pre-identified areas.

Significance of Impact

The overall impact on the landscape and topography is assessed to be moderate, however with the implementation of mitigation measures the impact can be contained with minor residual impacts.

Severity of Impact	1	**Extent of Impact**	1	**Duration of Impact**	2
Impact Significance = 2 i.e. Low					

4.8.3 Natural Topography

The proposed project area is under residential zone of Pune Municipal Corporation (PMC). The project area is having minimal contour and slightly sloping towards south east side of the project.
The buildings within project area are planned considering site conditions and topography.

4.9 Biological Environment

392 nos. of trees have been planted. **Table 4.8** shows the list of planted trees.

Table 4.8 : List of planted trees

Sr.	*Scientific Name (Botanical name)*	Name of species (Common name)	No.
1.	Peltophorum pterocarpum	Copper Pod	59

Sr.	*Scientific Name (Botanical name)*	Name of species (Common name)	No.
2.	Acorus calamus	Sweet Flag (Vacha)	15
3.	Ficus benjamina	Weeping Fig	73
4.	Grevillea Robusta	Silver Oak	11
5.	Araucaria columnaris	Christmas Tree	3
6.	Butea monosperma	Palash	1
7.	Nyctanthes arbor-tristis	parijat	7
8.	Plumeria rubra	Chafa	22
9.	Aegle marmelos	Bael (Bilwa)	2
10.	benghalensis	Banyan	1
11.	Mangifera indica	Mango	9
12.	Myroxylon Balasarum	Guava	1
13.	Tabebuia	Pink Rosy Trumpet	16
14.	Spathodea campanulata	African Tulip Tree	20
15.	Leucaena leucocephala	River Tamarind	3
16.	Tecoma	Yellow Bells	70
17.	Cordia sebestena	Geiger tree	3
18.	Bambusa Vulgaris	Bamboo	8
20.	Umbrella Tree	Octopus Tree	1
21.	Cordia dichotoma	Indian Cherry (Bhokar)	7
22.	Azadirachta Indica	Neem	6
23.	Alstonia scholaris	Blackboard tree	8
24.	Santalum album	Sandalwood	2
25.	Bauhinia variegata	(Orchid) Kanchan tree	8
26.	Citrus limon	lemon	5
27.	Citrus sinensis	Sweet orange	1
28.	Swietenia	Mahogany	5
29.	Thespesia populnea	Indian tulip tree (Bhendi)	1
30.	Saraca asoca	Ashoka tree	1
31.	Prunus avium	Cherry	2
32.	Cascabela thevetia	Bitti (Kaner)	5
33.	Khaya senegalensis	Khaya	1
34.	Murraya paniculata	Kamini (Jasmine)	4
35.	Syzgium cumini	Jamun tree	1
37.	Annona squamosa	Custard apple	1
38.	Lagerstroemia speciosa	Tamhan	4
39.	racemosa	Umbar	1
40.	Prunus Dukis	Badam	2
41.	Leucaena leucocephala	Subabhal	1
42.	Religiosa	Pimpal	1
	Total no. of trees		**392**
	Landscape area (m^2)		**2,045.85**

Availability of Fauna is not applicable as site is located in fully urbanized area i.e., in the developing area of Pune City.

There would have been a marginal impact on fauna due to increase in population density and activities.

4.10 Socio-economic Anticipated Impact

Operational phases

Project had put positive impacts on socio-economic environment.

This facilitated the development of the region socially and economically.

- This is to facilitate development of the region socially and economically.
- This brings benefits to communities as it serves in many ways through direct and indirect employment generation.
- To provide quality residential accommodation
- To create an environment that could support the good standard of living environment
- To meet the growing demands of residential space in an environmentally sustainable manner in the area.
- To enhance the surroundings with greenery, landscaping and pleasing aesthetics
- To implement the policy of water conservation and rain water harvesting.
- Better economic status of the community due to better earnings.
- The expected outcome of the proposed project is a good quality livelihood to people.
- The establishment of a plantation covered land in and around the proposed development project will result in many direct and indirect benefits such as:
- Plantation can absorb a wide variety of atmospheric pollutants emitted from traffic and can attenuate the noise levels.
- Plantation is able to control the build-up of atmospheric greenhouse gases (e.g. CO_2) that are emitted from project appliances and thereby help reducing global warming.
- Afforestation will help restore the geodynamics around the plant. It checks soil erosion and increases soil fertility.
- A green belt acts as a buffer zone and increases the aesthetic value of the surrounding area by adding to the greenery and providing a visual filter.

4.11 Solid Waste

Significant amount of solid waste is generated during the operation phase of the project.

Operation Phase Impacts

Waste quantification has been done based on the activities proposed in the project master plan. Waste generation factors are selected for each activity based on the National and International standards applicable in similar setting. Following section give the details of the type of waste generated by different activities.

Municipal Solid Waste management

Dry waste (non-biodegradable)

Dry waste **280 kg/day** generated during operation phase is segregated & disposed-off to recyclers.
STP Sludge (Dry sludge): Dry sludge is used as manure for plantation & gardening purposes inside the premise.

Wet waste quantity (biodegradable)

Wet waste **419 kg/day** generated during operation phase is composted and used as organic manure for landscaping.

Waste generation factor for residential waste as specified in the Manual on Municipal Solid Waste Management is 0.5 kg/cap/day.

Hazardous Waste Management

It is residential so hazardous waste not generated on project site.

E-Waste Management

It is residential so E-waste waste is negligible.

E-Waste Management

Collection and storage

Daily collected wastes was collected and segregated at designated place and handed over to authorized vendors as per their waste categories.

Significance of impact

Severity of Impact	1	**Extent of Impact**	1	**Duration of Impact**	3
Impact Significance = 3 i.e. Low					

Mitigation Measures

In the operation phase organic as well inorganic waste is generated from the proposed development. The Ministry of Environment and Forests (MoEF) formulated the draft Municipal Solid Waste (Management and Handling) Rules in September, 1999 and subsequently notified the MSW Rules in September, 2000 & its subsequent amendments. The management of MSW is covered under the Schedule II of the Rules and provides directions for segregation, collection, storage, transportation, processing, and disposal of waste. Details of the management practice are given below:

- **Public Awareness**
  - Public awareness on waste segregation and disposal rules in form of leaflets to permanent and floating population is provided. For residents and staff periodic awareness talks is given for waste management.
  - Signboards and information boards are put up in required area in English and local language (Marathi).
- **Waste Segregation**
  - Segregation or sorting of waste at its source practiced in order to encourage reuse/ recycling and to minimize the negative effects of the waste and increase its economic value. With segregation at source recyclables do not lose their commercial value due to cross contamination.
  - Dedicated bins are placed to collect biodegradable and nonbiodegradable wastes.
  - In the parking space and other open areas also dedicated bins are placed.
- **Collection Bins**
  - Daily collection of waste is taking place from all the bins.
  - Daily sweeping and collection of waste from roads and other common facility area is doing daily in the morning by the same operator.

4.12 Aesthetics

Operation phase

In the operation phase, project area has good aesthetic quality as there is a provision of developing landscaped garden and green belt development within the project site.

4.13 Impact Matrix

Various activities from the residential project 'Bramha Exuberance' are likely to have some impacts on the environmental constituents during its operational phase outside the plot. The impact assessment matrix given in **Table 4.10** reveals the impacts associated with each activity of the project on various environmental parameters during operation phase before any mitigation measures are implemented. To assess the severity of the impacts, they are categorized as follows:

Table 4.9 : Impact Identification Matrix

Parameter	Type	Severity	Extent	Duration	Resultant Significance
Air	Operation Phase Traffic	1	2	3	6
	Operation Phase D. G. Set	1	1	1	1
Noise	Operation Phase Traffic and DG	1	1	2	2
	Operation Phase Celebration and Events	2	1	2	4
Water	Quantity Operation Phase	1	2	3	6
	Quality Operation Phase	1	1	3	3
Solid waste	Operation Phase	2	1	3	6
Land Use Environment		+	+	+	+
Soi Economic Environment		+	+	+	+
Aesthetic		+	+	+	+

Chapter 5
Analysis of Alternatives

5.1 Introduction

Alternative technology is major approach towards the sustainable development. Alternative technologies are eco-friendly and aids people to control the production processes in the view of sustainability. The alternative technologies are used with appropriate technologies to cover necessary aspects of sustainable development. Alternative technologies can produce better habitats while also nourishing the local poor communities with jobs, income as well bringing other socio-economic and environmental benefits.

5.2 Building materials

The conventional practice of clay, brick consumes a large quantity of energy in terms of coal and other fuels which are primarily non-renewable and highly polluting. Water requirements of building industry are also very high. Steel which is used in the construction process is manufactured by non-renewable resource. Normally, conventional materials used for construction are non-renewable resources.

Use of alternative technologies for each component of the buildings of envelope, superstructure, finishes and the road and surrounding areas are discussed in detail. Some of them is given below:

- Brick and block products with waste and recycled contents such as fly ash (waste from coal burning plants), blast furnace slag, sewage sludge, waste wood fibre etc.
- Fly ash based lightweight aerated concrete blocks can be used for walls.
- Perforated bricks can be used for wall structures.
- Brick panel with joists, Filler slab roofing, brick funicular shell roofing, RCC channel units, micro-concrete roofing tiles are some of the alternative techniques for roofing.

Some of the alternate materials for openings in construction are: -

- Use of precast thin lintels, use of Ferro cement-sunshade cum lintel etc.
- Use of renewable timber for doors and windows
- Use of steel manufactured from recycled content
- Aluminium from verified recycled content
- Sawdust based doors and window frames

- Ferro cement shutters, PVC doors and windows, Rice husk boards, Natural fiber in forced polymer composite door panels
- Bamboo based products, bamboo strip boards
- Alternatives for finishes include Fly ash, Ceramic tiles, Terrazzo floors

The use of the alternatives for building materials can help reduce the use of non-renewable resources and the impact on natural resources.

5.3 Energy conservation

Energy conservation programme is implemented through measures taken both on energy demand and supply. Energy conservation is one of the focuses during the building planning. The conservation efforts would consist of the following:

Architectural design

- Maximize the use of natural lighting through design.
- Increase natural source of light through glazed windows.
- Energy conservation aspects such as selection of appropriate building material having adequate thermal resistance value (R-value) have been taken into consideration in building design.

Energy saving practices

- Purchase of energy efficient appliances.
- Constant monitoring of energy consumption and defining targets for energy conservation.
- Adjusting the settings and illumination levels to ensure that minimum energy is used for desired comfort levels.
- Use of LED in the common areas.

Behavioral change on consumption:

- Training residents on methods of energy conservation and to be vigilant to such opportunities.

Power Distribution & Backup Sources

- Power distribution to the upper floors will be rising mains and will be of sandwich type.
- Diesel generating set is installed for providing back up for all common loads including all fire emergency loads.

- Fire panel have direct second source from the DG set.
- 10% of common area / staircases / basement parking and corridor lights has designated as emergency lights. Same as per its codes and provided with DG back up.
- LT power cable and low voltage signal cables and wires have separate and dedicated shafts with adequate fire rating.

Other Energy Conservation Measures

Energy Efficient Electrical Fixtures

- Use of energy efficient, BEE labelled electrical fixtures, solar powered lighting in external common area.
- Energy efficient LED lights which give approx. 30% more light output for the same watts consumed and therefore require less no. of fixtures.
- Use of T5 tubes having 2.5 to 3 times life over conventional tubes and hence rate of disposal of tubes will be reduced drastically.
- All fluorescent light fixtures are specified to incorporate electronic ballast with THD less than 10% which have less watt-loss compared to electromagnetic ballast and result in superior operating power factor. Electronic chokes also improve the life of the fluorescent lamps.
- Power factor of the complete electrical system is maintained close to unity. This will reduce electrical power distribution losses in the installation.
- An APFC relay based on thyristor switching are proposed to affect the power factor correction improvement within a few cycles of deviation from the setting & also to reduce inrush currents.
- Copper conductor cables are specified for sizes up to 16 mm, this will reduce losses and improve reliability.
- All cables are de-rated to avoid heating during use. This also indirectly reduces losses and improves reliability.
- Solar lighting system for common areas.
- Variable frequency drives are incorporated on energy efficient motors which can save considerable energy.
- Additional energy and water flow meters for measurements and verification need to be additionally incorporated in the electrical design for measurement and verification purposes.
- Residents premises are made aware of energy saving measures on continuous basis.
- Auto Timer control for external & Common lighting
- Use of CFL / LED lamps in all public/ common areas.

- Solar powered water heating.
- Electronic V3F Drives for Elevators
- Solar PV Panel power for common area lighting

Details of energy saving is given in Table 5.1. The ECBC Report is attached as **Annexure IV**.

Table 5.1: Details of energy saving

Sr.	Point Discretions	Min. Requirement as per ECBC	Actual Provided
1.	Fuel efficient Automated DG Set.	1 Nos. of 82.5 kVA	12.7 lit./hr @ 75% Loading
2.	If power quality is poor then the special provision like capacitor bank etc.	✓	✓
3.	LED Lights	LED	For all Common Amenities &utilities
4.	Solar PV panel	MNRE/MEDA GUIDELINE (i.e.1%)	✓
5.	Solar Hot Water	MNRE/MEDA GUIDLINE	✓
6.	Lighting Dimmer		NA
7.	Lighting Timers	External	Provided for External &Internal Lighting
8.	Energy Efficient Lift	Energy saving Drive	VVVF drives with Energy Efficient Motors
9.	5 Star Rated Pumps	5 star	Yes - 5 Star Rated WaterPumps
10.	Occupancy/Lighting Sensor		Not provided / NA
11.	5 star rated Heat Pump.		NA
12.	Total Power saving including saving due to water heater in %		20.33 %

Sr.	Energy Saving By	Total energy saving in KWH /Annum	% Savings
1.	Solar PV	135000.00	9.27
2.	Auto Timer Logic Controller	79113.75	5.43
3.	Electronic V3F drive for Lifts	24506.10	1.68
4.	Solar Water heater	57420.00	3.94
	Total	**296039.85**	**20.33**

5.4 Transportation

A well-planned road network already exists in the area, connecting to the nearest railway station and main roads, ensuring proper communication links.

This site is in village Kondhwa Khurd, the major project traffic carrying road in the vicinity is the NIBM road and Kondhwa Khurd main road. The

traffic generated by the project during peak hours which will egress on this road and then will scatter in different directions.

Sufficient parking space is provided on the site i.e. The details of parking are given in **Table.5.2**

Table 5.2: Parking details & parking statement

Details	Required parking details		Provided parking details	
	No. of vehicles required	Total parking area required (m^2)	No. of vehicles provided	Total parking area provided (m^2)
4 Wheelers parking	140	1750	214	2675
2 Wheelers parking	388	1164	411	1233
Cycle parking	388	543	393	550
Total	**528**	**3,457**	**625**	**4,458**

Details	No. of Vehicles	Parking area (m^2)	Driveway (m^2)	Total required Parking area + Driveway (m^2)	Area /vehicle (m^2)	As per MoEF Manual (m^2)
4-wheeler parking						
Basement floor parking	11	137.5	248	385	35	35
Below podium floor parking	106	1325	1,855	3,180	30	30
Podium floor parking	97	1212.5	1,698	2,910	30	30
2 Wheelers parking	411	1233	493	1,726	4.2	4.2
Cycle parking	393	550.2	1,100	1,651	4.2	4.2
Total		**4,458**	**5,394**	**9,852**		

The entry and exit points design are very important as it will not disturb the existing traffic. Sufficient parking provisions are to be made. Visitors parking will not disturb the traffic of surrounding area.

Traffic Management is as follows;

- Internal roads
- Pathways

- Driving instructions along with parking and site map is displayed at appropriate place for users.

Chapter 6
Environmental Monitoring Programme

6.1 General

This includes the technical aspects of monitoring the effectiveness of mitigation measures including measurement methodologies, data analysis, report schedules, procurement schedules etc.

6.2 Air quality monitoring programme

Generation of ambient air quality data helps to develop sustainable environment.
Following monitoring programme was carried out for further environmental improvements:

- Generation of air quality data is of immense importance to get the variations in ground level concentration, efficiencies of pollution control systems and fugitive emission control.
- Sampling for fugitive emission had carried out near all transfer points, gantries/yards and all the fugitive dust generating operations. Monthly work place monitoring/sampling had carried out at health risk areas/operations to maintain occupational health norms.
- Air quality data had helped to take preventive measures in polluted areas of the project site. Sampling for the D.G. set had helped to check on pollution emission and systems periodically for taking preventive measures.
- Ambient air quality monitoring was carried out at eight locations surrounding the project as per CPCB Guidelines. Parameters such as PM_{10}, $PM_{2.5}$, Sulphur Dioxide, and Oxides of Nitrogen were monitored at each location.
- Regular maintenance of DG sets was carried out.
- Based on the generated data, all corrective and preventive measures were taken as part of regular project activity and maintenance of pollution control systems.

6.3 Noise quality monitoring programme

Monitoring of the noise levels and exposures is essential to assess the effectiveness of environmental management plan implemented to reduce noise levels.

- A good quality sound level meter was used for the purpose.
- Audiometric tests were conducted periodically for the employees/labors working close to the noise sources under the

supervision of health officials. These tests were helpful in monitoring the effectiveness of ear protective measures.

- Monitoring of noise levels at quarterly intervals was essential to assess the efficiency of maintenance schedules and noise protection measures undertaken to reduce noise levels.
- Monthly noise level measurements and frequency analysis was carried out inside the project site and adjoining premises.
- Ambient noise level measurement in the surrounding area was also carried out as per CPCB guidelines.
- Records of all measurements were maintained.

6.4 Water quality monitoring programme

For effective water pollution control, the following monitoring programme will be implemented:

In support of effective water pollution control, the following monitoring programme was implemented:

- Raw water and drinking water quality will be checked regularly for the physical, chemical and biological parameters.
- During operation phase waste water (Sewage) monitoring and analysis will be conducted for the pH, BOD, COD, TSS, TDS, O&G. etc. An environmental monitoring plan during operation phase is given in **Table 6.1**.

Table 6.1: Environment monitoring plan during operational phase

Sr.	Item	Parameters	Frequency	Location
1	Ambient air Quality	$PM_{2.5}$ & PM_{10}, SO_2, NO_X, O_3, Pb, CO, NH_3, C_6H_6, BaP, As, Ni	Quarterly	Periphery of the site.
2	Noise level	Equivalent noise Level	Quarterly	Near DG sets, Near STP, Near parking area.
3	Exhaust from DG set	Particulate matter, $SO_{2,}$ NO_x	Six Monthly	DG sets.
4	Water analysis	Colour and odour, Suspended solids, pH, turbidity, total dissolved solid, Calcium, Chloride, Fluoride, Residual free chlorine, Iron, magnesium, nitrate, sulphate, Phenolphthalein Alkalinity, Total hardness, total coliform, E-coli	Quarterly	-
5	Waste water analysis	pH, BOD, COD, TSS, TDS, O &G	Quarterly	Before & after treatment from STP.

Chapter 7
Additional Studies

7.1 General

India has been traditionally vulnerable to natural disasters on account of its unique geoclimatic conditions. Natural disasters may not be totally preventable but their impact can be minimized by effective planning.
This chapter covers the risk assessment and disaster management plan for 'Bramha Exuberance' project. Apart from this, natural resource conservation under this this project is also mentioned in this chapter. Resettlement & Rehabilitation Action Plan is also kept under this section.

Risk assessment and Disaster Management Plan (DMP)

Risk assessment is the systematic identification of the hazards associated with construction work and the evaluation of the risks associated with those hazards. A hazard - risk assessment shall take account of all the work activities and consideration shall also be given to anyone else who could be affected by the work activities.

Risk is the combination of the frequency, or probability of occurrence, and consequence of a specified hazardous event". Where frequency of exposure is an issue then duration of exposure is also considered. Risk is the level to which a hazard poses a threat to life, limb or property. This will vary from a minor laceration to a permanent disability, an illness such as cancer, or death.

7.2 Risk assessment study

Risk assessment study deals with identifying and evaluating the magnitude of impending risks to which the neighboring population is exposed due to occurrence of accidents from project construction and development. This assisted in illustrating the guidelines for preparation of disaster management plan which were executed to handle the situation in case of any emergency.
Following were the risks that are identified in residential buildings.

Fire Risk

The following codes and standards from the guidelines:

- National building code 2005
- NFPA 72-2007 Fire Alarm system
- NOC from the fire department

Fire is a serious threat for any health-care facility. Many patients have special needs that make them especially vulnerable in a fire emergency,

thus increasing the risk of fire-casualties. Healthcare staff must therefore make every effort to prevent fires from starting and must be prepared to respond if a fire breaks out.

Fire is mainly caused in project due to carelessness, short circuits, malfunctioning of gas regulator, tube and such related products. At the proposed project, hazard occurrence may result in on-site implications like:

- Leakage of flammable material leading to fire;
- Fire and/or explosion;
- Natural calamities like earthquake etc.
- Short circuit in any electric equipment's due to voltage fluctuations.

Potential Fire Hazards:

The following are the Potential Fire Hazards identified in this building:

- Petrol and diesel in form of fuel at common parking floors;
- Diesel in fuel tanks of in DG sets,
- Combustible materials e.g., paper, cardboard, plastic, fabrics etc. will be present.

There will be proper storage of the combustible material like paper, cardboards. Location mapping for the same was carried out at the time of commissioning;

Onsite Emergency Plan

For incidents which could affect people and the environment inside the building.

- Display of emergency phone nos. (Includes phone number and address of nearby hospital, fire station, police station, public help service etc.)
- Periodic maintenance and checking of all equipment.
- Training to all users for different type of emergencies
- Building emergencies manual
- Training program for the tenants, security guards, housekeeping and other stake holders of the building.
- Evacuation plan, floor plan, site plan, elevation marked with refuge area etc.
- Fire & other emergencies regular drill programs
- Posters and other templates, showing emergency preparedness for children and building occupants.

Evaluation and updating of the plan to improve effectiveness.

7.3 Disaster management plan

- Modern disaster management goes beyond post-disaster assistance. It includes pre-disaster planning, preparedness activities, organizational planning, training, information management, public relations and many other fields.
- The events of a disaster can move rapidly and can be extremely traumatic for those who are unprepared. Disaster managers often do not get a second chance.
- Principles of disaster management apply in both routine & crisis incident, during disaster mitigation and disaster reconstruction.
- Emergency operations cover both the preparedness phase & the immediate post disaster period.

7.3.1 Purpose

The Disaster Management plan has two primary goals: to reduce the likelihood that the premises will experience disaster and to mitigate the impact of any disasters that do occur. The "best" disaster is one for which we will be so well prepared that it never happens. Potential for disaster can be reduced by identifying and correcting hazardous conditions and by encouraging staff alertness in detecting and reporting problems.

The Disaster Management plan is created with the aim of an effective management for the disaster with the minimum possible impact on the human being and the establishment. Our proposed residential project "Bramha Exuberance" aim to achieve this through pro-active measures, protective equipment's, efficient and rigorous trainings & drills and practicing exhaustive emergency procedures.

Disasters can take many different forms and the duration can range from an hourly disruption to days or weeks of on-going destruction. Below is a list of the various types of disasters - both natural and man-made or technological in nature that can impact a community.

7.3.2 Types of Disasters

Natural Disasters:

1. Earthquakes
2. Floods
3. Cyclone

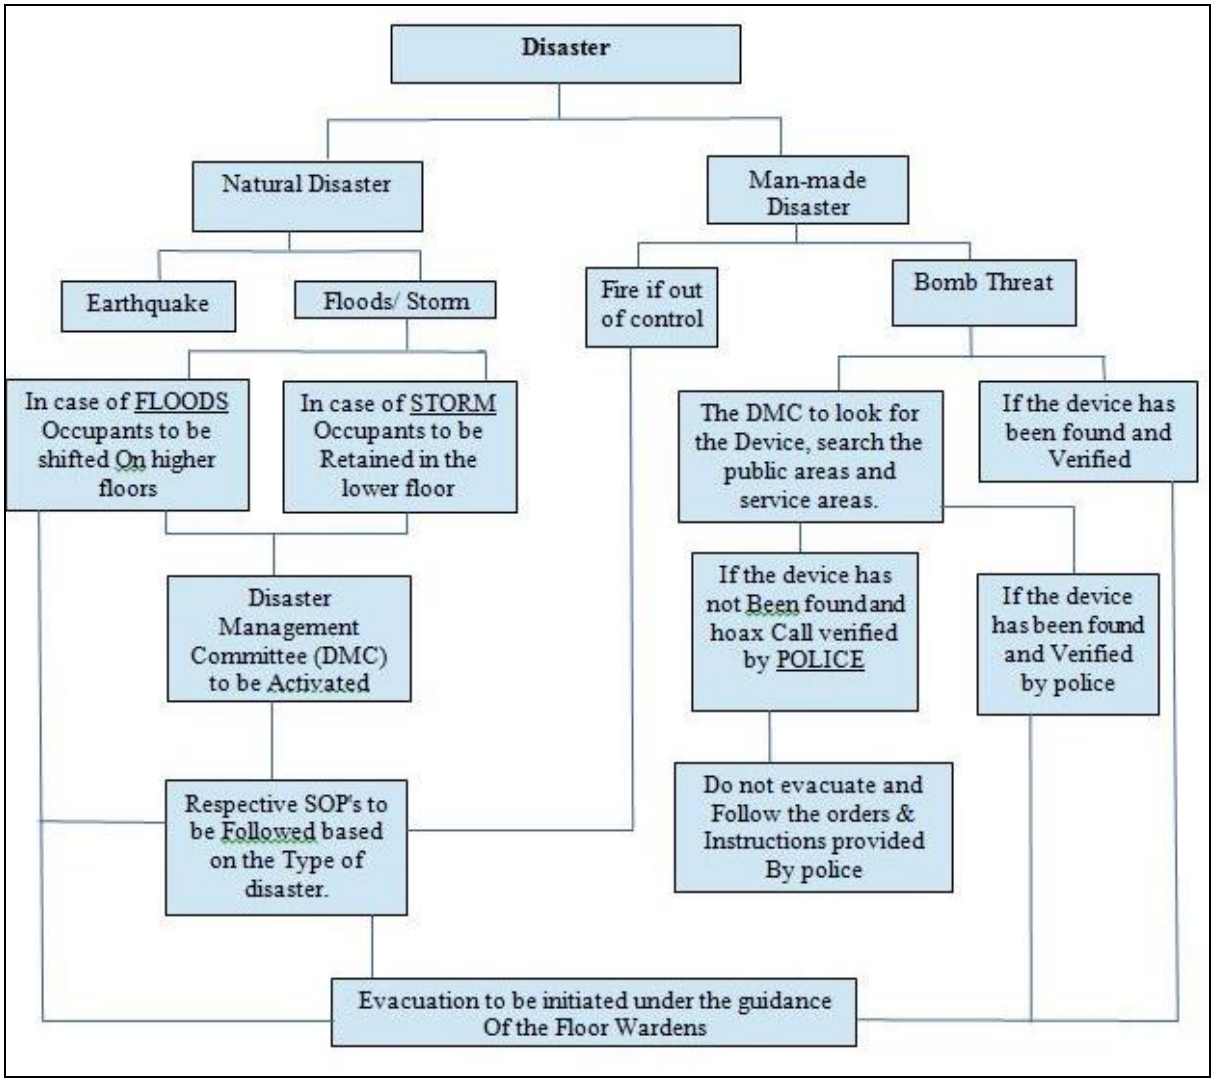
Man-Made Disasters:

1. Fire
2. Bomb Threat

Any kind of disaster may prove weak with proper planning against the disaster. Planning to fight the impacts of a disaster is dine at three level:

1. **Before any disaster**, in form of preparedness and using precautionary measures
2. **At the time of disaster**, in form of quick response
3. **After a disaster**, in form of proper management

Figure 7.1: Disaster response plan



7.3.3 Risk Assessment and Vulnerability Analysis

Without vulnerability there is disaster. The process of risk assessment starts with the assessment of potential disasters through a combination of hazards mapping and vulnerability analysis. Risk assessment was carried out by:

i. Hazard mapping i.e., gathering information regarding location
ii. Frequency
iii. Duration of the hazard in an area

All these hazards could occur at different time period. They could vary seasonally, especially natural hazards like flood and cyclone. Manmade hazards could occur at any time of the year. Similarly, earthquake and tsunami could occur at any time of the year, depending on climatic conditions. A seasonal hazard mapping for different disasters is presented in **Table 7.1.**

Table 7.1: Seasonal disaster mapping

Type of disasters	Vulnerability mapping	Remark	Seasonal mapping
Floods	The vulnerability of floods at the proposed site will depend on the drainage pattern, sewerage system, heavy rainfall and others	Management plan for floods is highlighted below. We have provided the storm water drainage for the proposed project. Site doesn't have water logging areas, wetland / water body.	Mainly from July - September as there is possibility of heavy rainfall
Cyclone	Pune falls under least to risk zone for cyclone mapping. Cyclone is formed in condition when warm sea (temperature in excess of 26^{o}C to a depth of 60 m) with abundant and turbulent transfer of water vapours to the overlying atmosphere by evaporation	No possibilities of cyclones in Pune region.	
Earthquake	Proposed site is located in Pune which falls under Earthquake Zone III, moderate risk zone, as per the map showing seismic zones of India IS 1893 (Part I): 2002.	Management plan for earthquake is highlighted below. We have provided earthquake resistance structure as per required norms. Structural consultant was appointed for the project. Required IS codes were followed during the design of the building.	This is a natural calamity that could take place at any point of time.
Fire	Fire accidents could take place due to improper maintenance of electrical wiring, faulty wiring and gas leakage etc. Carelessness is one of the major factors for fire hazards	Fire hazard is considered in the study and an evacuation plan is also designed for the proposed project. The project site is provided with **20 m** wide DP road, **7.5 m** wide access road and **6 m** internal road with turning radius is **9 m**. we have provided assembly point in open space and refuge floors **--** as per the fire norms.	It can occur at any point of time and we have provided adequate mitigation measures.

7.4 Mitigation and Preparedness

7.4.1 Standard Operating Procedures (SOP's)

A. Cyclones and Floods

- Community awareness and mass education programme has arranged in association with NGO to manage the challenges during and after floods and cyclones. NGO details are given in **Table 7.5**
- Residents has made aware to switch off electrical mains at emergency situation.
- Proper maintenance of storm water channel and sewer lines.
- Residents has educated about Dos and Don'ts during Cyclones and Floods.
- Awareness has spread about the hazards of stored water. Communicable diseases like malaria, dengue, etc. Could spread if water is stored for longer time.
- Building is investigated for leakages and any leakage found will be repaired by project proponent that will assist in this activity.
- Leakage would be repaired by developer would assist in this activity.

B. Earthquake

- Project proponent is tie-up with local newspaper, radio or television station to:
  - Provide series of information on locating hazards in workplaces, day care centres, etc.
  - Provide tips for earthquake drills.
- Project proponent has provided building codes to the society manager or the concern authority. National building codes would be made available to the concern authority.
- Project proponent has prepared a disaster emergency kit that includes battery operated torch, battery operated radio, first aid kit and manual, candles, matches in a water proof container, knife, essential medicines, thick ropes & cords, sturdy shoe, chlorine tablets or powdered water purifiers and can opener which has maintained at site.
- Project proponent is following seismic building standards and land use codes that regulate land use along fault lines, in areas of steep topography and along shorelines.
- The code that is following by project proponent is given in **Table 7.2**

Table 7.2: Codes that will be followed by project proponent

Codes	What it says

Codes	What it says
IS:1893 (Part 2)	Elevated and ground supported liquid retaining structures
IS:1893 (Part 3)	Bridges and retaining walls
IS:4326	Earthquake resistant construction
IS:13920	Ductile detailing of reinforced concrete structures
IS:13827	Earthen dwellings
IS:13828	Low strength masonry structures
IS:13935	Seismic strengthening of structures

C. Water scarcity management

- **377 m^3** capacity of underground domestic water storage tank & **50 m^3** capacity of fire water tank is already existing on site.
- Occupants has provided with booklet that is highlight measures to save water and importance of water.
- Recycled waste water using for flushing, gardening.
- Ultralow flow faucets and flushing devices are installed to save water.
- We have tie up with NGO's to promote development of emergency low cost water treatment plant. NGO details are given in **Table 7.5**
- We tie upped with **Shri Renuka Enterprises, Galaxy Water Supplier, & Kusum Enterprises (water tanker supplier)** during water unavailability. Details of Tanker water suppliers given in **Table 7.3**
- We have provided chemical standards for drinking water to all residents & also display it in the lobbies and the same maintained by Environment Health & safety (EHS) officer.

Table 7.3: Details of tanker water suppliers

Sr.	Name of water supplier	Distance from project site
1.	Shri Renuka Enterprises	1.9 km
2.	Galaxy Water Supplier	1.8 km
3.	Kusum Enterprises (water tanker supplier)	1.8 km

E. Fire Hazard

- List of nearby hospitals and fire stations has been displayed at site office room. Details of hospital and fire stations given in **Table 7.6 and 7.9** respectively.
- The road map & contact details of **Kondhwa Khurd fire station** have been displayed at lobbies, environment office room by us and

the same is maintained by concerned authority.

- We had been giving booklet for Do's and Don'ts for fire hazard.
- We are following the norms for electrical wiring systems to minimize the fire hazards.
- Evacuation plan has been shared with all the staff members, residential and the same is displayed at each floor and environment office. The same plan is maintained by concerned authority. Refuge floor plan given in **Figure no.7.6**
- We have installed fire hoses/ fire extinguisher and first aid kit box in each office. Concerned authority is inspecting them on regular interval. Maintenance for the same is taking care initially by us and later by environment management committee.
- We have installed sprinkler systems, fire and smoke alarm systems as per requirement. Locations for the same is chalked out after completion of project. They are regularly monitored for their efficient functioning.
- We have provided the assembly point in the Project layout plan.
- **50 m^3** capacity of fire underground water storage tank & **50 m^3** capacity of overhead water storage tank provided for fire-fighting measures.
- Electric supply to these pumps is on independent circuit.
- Walls enclosing lift shaft have 2 hours fire resistant capacity.
- Required number of fire extinguishers has been provided
- We have installed fire alarm system with main control panel at ground, pill boxes and hooters at each floor level. The layout of fire alarm is in accordance to relevant I.S. Specification.
- There is a provision of clear **20 m** wide DP road and 6 m and **7.5 m** wide internal road around the building. This will be helpful for the fire tender movement. Fire tender movement plan given in **Figure no. 7.5**

7.4.2 Inventory Resources

A. Disaster management kit & first Aid kit

The Disaster management kit consist of:

1. Battery operated torch
2. Battery operated radio
3. First aid kit & manual
4. Candles and matches in a waterproof container
5. Knife
6. Essential medicines

7. Thick ropes & cords
9. Chlorine tablets or powdered water purifiers
10. Can opener

B. List of NGOs

Table 7.4: List of NGO's

Sr.	Name of NGOs	Address	Contact details	Functions
1.	Samajik Suraksha Sanstha	Shop no. 5, Shreenath Krupa Building, Bheraonath Talim Chowk, Pune, Maharashtra 411048	+91 -8805015222	Homes for children, women and men, self-help groups, general outreach, women empowerment
2.	Hind Social Foundation	6 B, Kausar Baugh Rd, NIBM Undri Road, Kausar Baugh, Kondhwa, Pune, Maharashtra 411048	9422004913	Homes for children, women
3.	Loksewa Social Foundation	Brahma Avenue, C-4/404, Sr No. 60+I+2, Off Nibm Road, Kondwa, Pune-48, Maharastra – 411048.	+91-7038807386	Education upliftment, Children's education, nutrition, basic protection

C. List of Hospitals

List of hospitals near proposed project is given in **Table 7.5**

Table 7.5 : List of hospitals

Sr.	Hospital	Address	Contacts	Distance
1.	Lifeline Hospital	NIBM Rd, Kausar Baugh, Kondhwa, Pune, Maharashtra 411048	+91-8237035055	1 km
2.	Satyanand Hospital	Satyanand Hospital Opp. Konark Pooram, Kondhwa (K) Pune 411 048, Maharashtra, India.	+91 20-26838194	1.6 km
3.	Welfare Multispeciality Hospital	Welfare hospital, Kondhwa Main Rd, opposite konark puram, next to Bus Stop, Badshah Nagar, Kausar Baugh, Kondhwa, Pune, Maharashtra 411048	+91 9511295983	1.8 km

Table 7.6 : Disaster management resource

Sr.	Fire-fighting equipment description	Quantity
1.	Fire water tank underground	50 m^3
2.	Fire water tank overhead	50 m^3
3.	Total fire tank capacity	100 m^3
4.	Fire hydrant system	Court yard fire hydrant system

Sr.	Fire-fighting equipment description	Quantity
5.	Water sprinkler system	Water sprinklers system in all parking levels
6.	Fire extinguishers	ABC Type fire extinguisher at Main switch board, Parking, Lift room, Transformer room and each floor.
7.	Smoke detection system	As per fire NBC
8.	Fire alarm system	Manual Call point and talk back P.A. System
9.	CCTV security system	Entry/Exit gates
10.	Emergency power (DG set)	1 number (total capacity 82.5 kVA)
11.	Refuge floors	Total 344.36 m^2
12.	Fire resistant doors	Staircase of each floor
13.	Signage	At strategic locations
14.	Lightening arrestors	As per fire NOC
15.	Staircase	5 no. of staircases with total area 756.14 m^2
16.	Lifts	Total 10 no. of Lifts

Figure 7.2: Firefighting equipment's

7.4.3 Evacuation plan

Emergency evacuation is the immediate and urgent movement of people away from the threat or actual occurrence of a hazard. The most common equipment in buildings to facilitate emergency evacuations will be fire alarms, exit signs and emergency lights.
Emergency evacuation plans will be developed to ensure the safest and most efficient evacuation time of all expected residents of a structure.

Table 7.7: Evacuation time

Evacuation time-4 wheeler		
Particulars	**Value**	**Unit**

Evacuation time-4 wheeler		
Particulars	**Value**	**Unit**
Total number of the car parked in the total parking lot (A)	214	nos.
Speed of the car at exit gate	6	km/hr
Time required to farthest car to reach gate	2	minutes
Time required for exit of one car from the gate (B)	3	Seconds per car
No. of Exit lanes available (Total width of gates / 3m) (C)	6	nos.
Time required for exit of cars at 100% occupancy (((A-C) X B / C) + (C X 60)) / 60	8	minutes
Reaction Time	5	minutes
Total Time required for exit of cars at 100% occupancy	**13**	**minutes**

Evacuation time-2 wheeler		
Particulars	**Value**	**Unit**
Total number of the 2 Wheeler parked in the total parking lot (D)	411	nos.
Speed of the 2 Wheeler at exit gate	6	km/hr
Time required for exit of one 2Wheeler from the gate (E)	2	Seconds per scooter
No. of Exit lanes available (Total width of gates / 3m) (F)	6	no.
Time required for exit of 2 Wheelers at 100 % occupancy (D X E) / (F X 2) / 60	1	minutes
Reaction Time	5	minutes
Total Time required for exit of 2 Wheelers at 100 % occupancy	**6**	**minutes**

Figure 7.3: Evacuation time

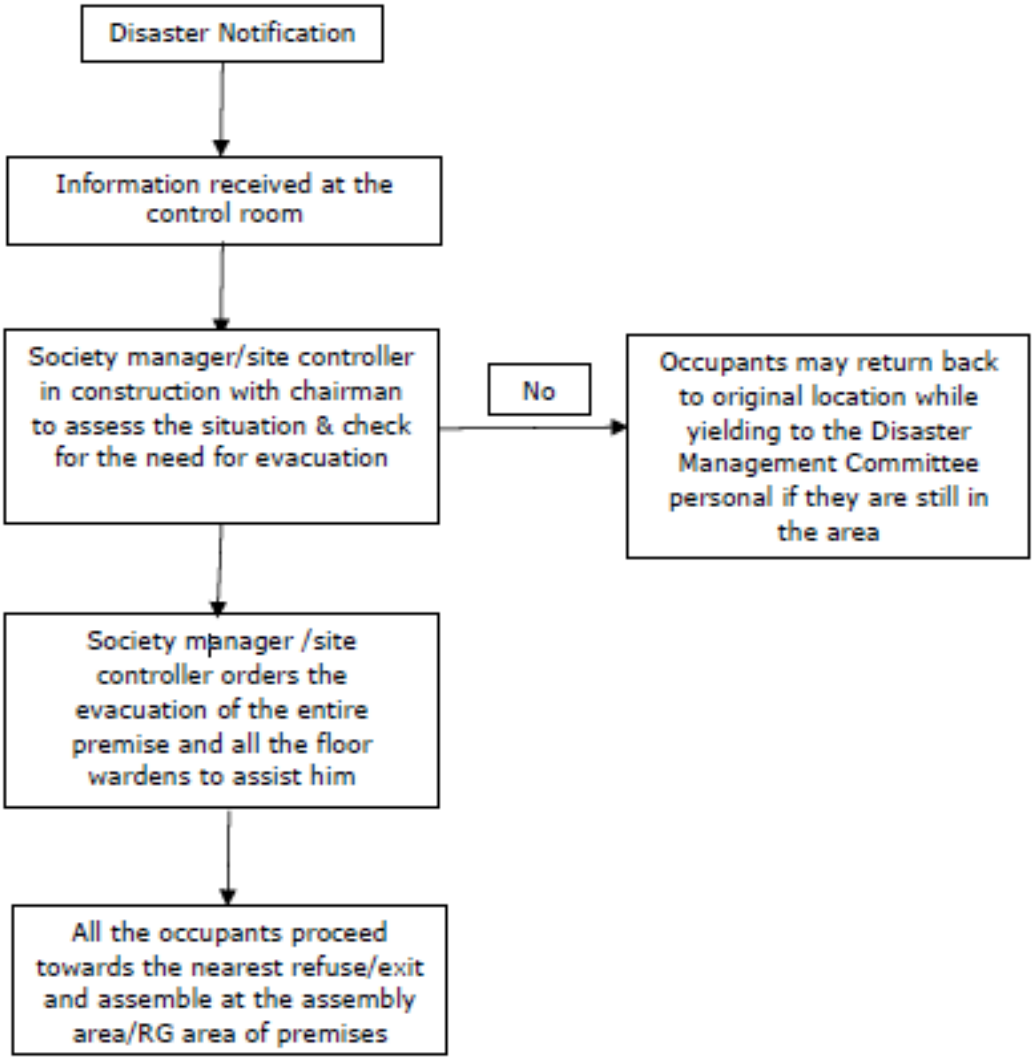


Figure 7.4: Activities to be undertaken in case of evacuation

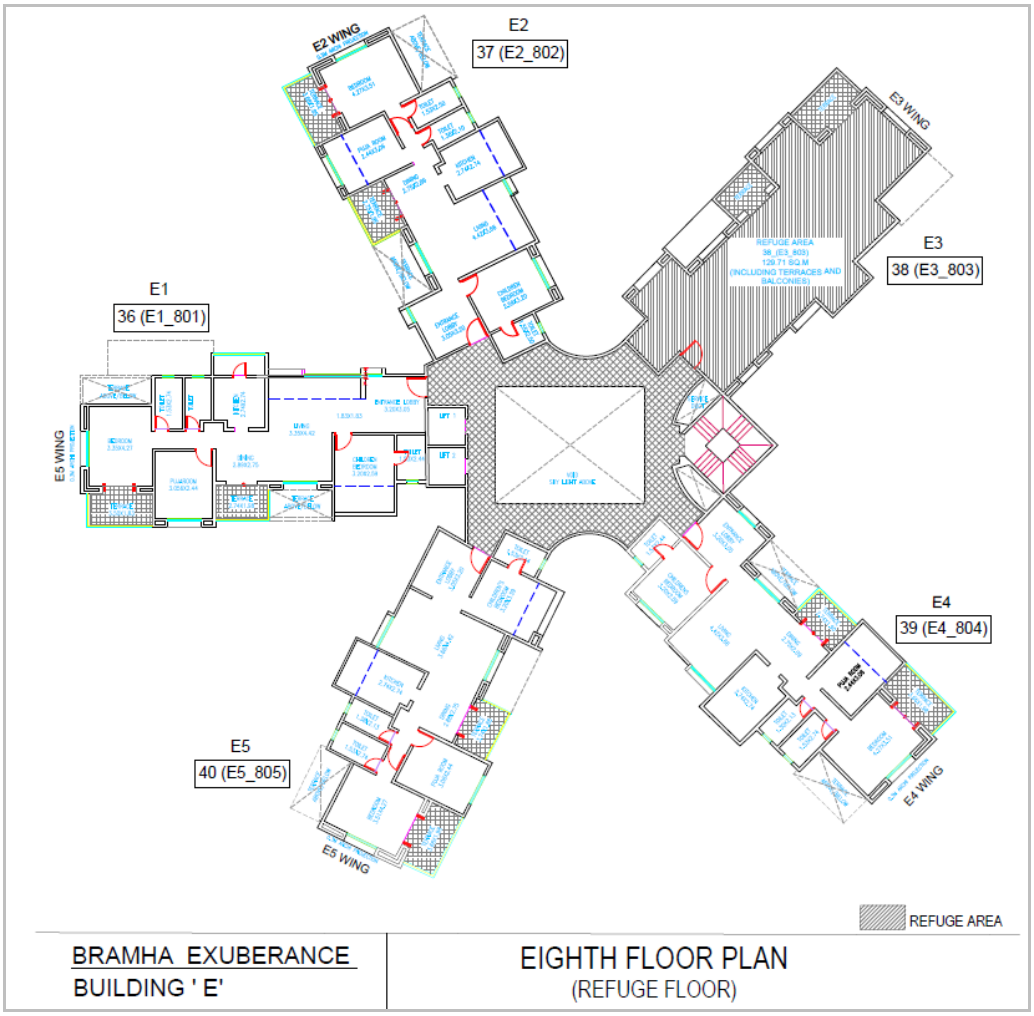

Figure 7.7: Lightening arrester layout

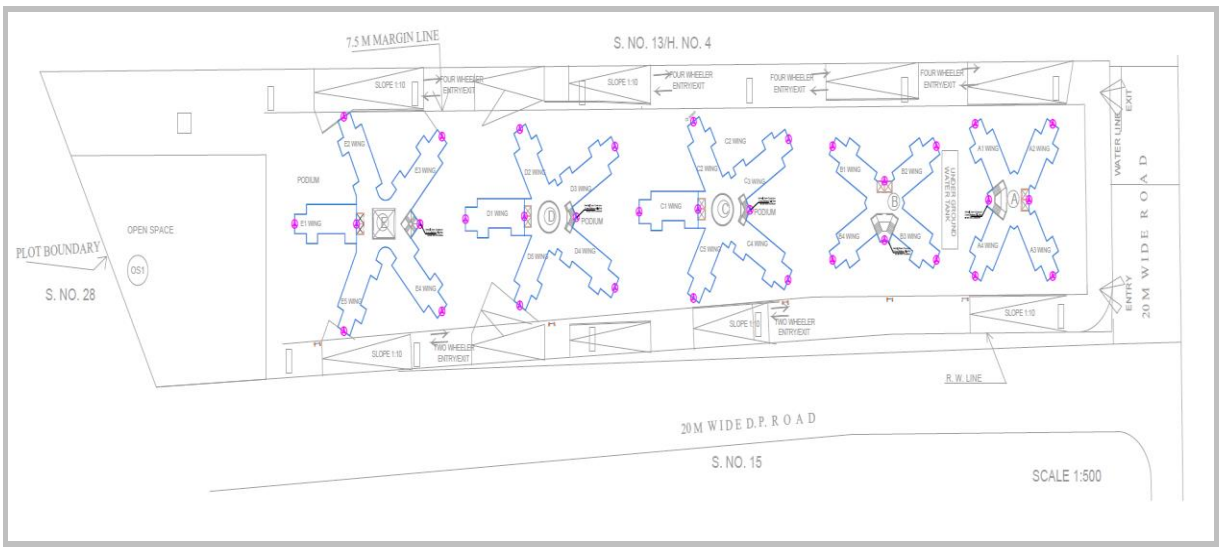
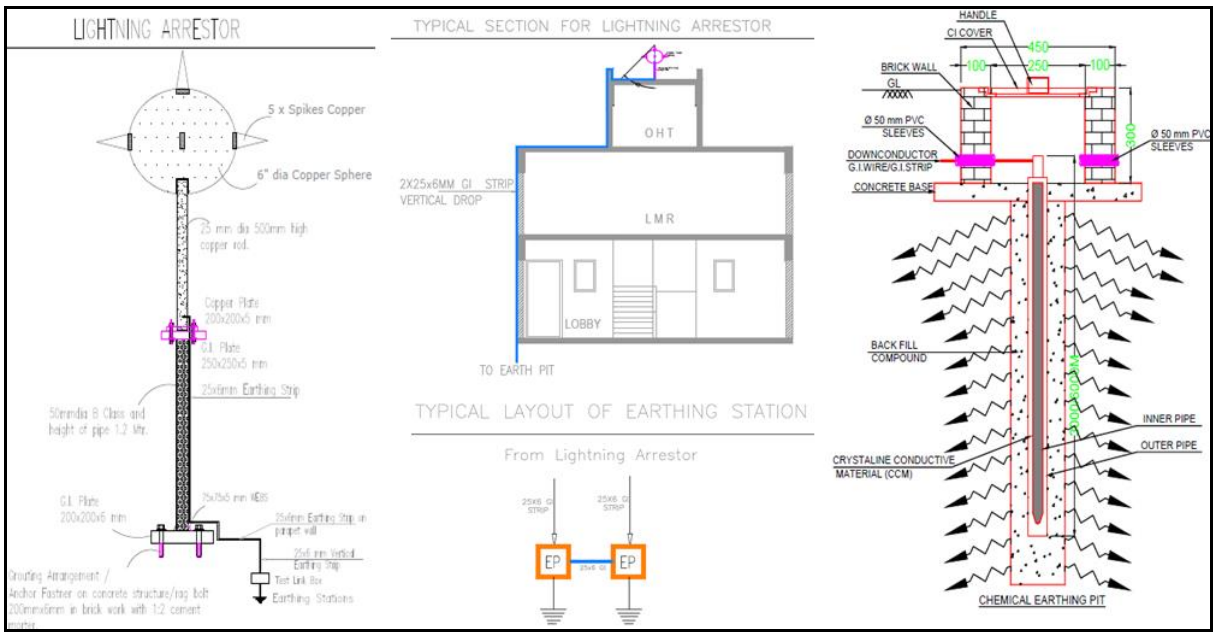




The above fire tender plan clearly depicts the:

1. Clear 20 m wide DP road
2. 6 m and 7.5 m wide internal roads around the building

These will be helpful for the fire tender movement.

7.4.4 Warning system and information sharing

Maharashtra has eight area Cyclone Warning Centre (ACWC) monitoring stations of IMD. They mainly release special bulletins for cyclone warning. Project proponent will assist in procuring such information and sharing it with society manager or concerned authority. They had instructed the occupant as per the information, without creating any panic situation. To share this information some of the communication routes that taken are:

a) Battery-less hand radio

Some battery-less, low-cost hand radios are now available in the market which will be useful for receiving warnings. Project proponent will provide such battery less hand radios to manager for receiving warnings from All India Radio (AIR).

b) Internet

In the present era of electric communication, internet provides a useful platform for communications. It provides a new and potentially revolutionary option for the rapid, automatic and global dissemination of disaster information. Many individuals, organizations and groups, including IMD, are using the internet real time dissemination of weather observation forecasts, satellite and other data. In the most critical phase of natural disasters, electronic communication has provided the most effective, and in some instances perhaps the only means of communication with the outside world. Project proponent will provide internet-based services at environment office and also to all the building.

It will be dependent on owners to decide on selecting a particular brand of internet.

All these warning systems are utilized by the proposed building for acquiring warning data and thus plan adequately for the disasters

7.4.5 Road map of fire stations

Proposed Environment Clearance of Residential project "Bramha Exuberance" at Sr. no. 13, H. no. 1, 2 & 3 of Village-Kondhwa Khrud, Taluka-Haveli, District - Pune, State- Maharashtra by BramhaCorp Ltd.

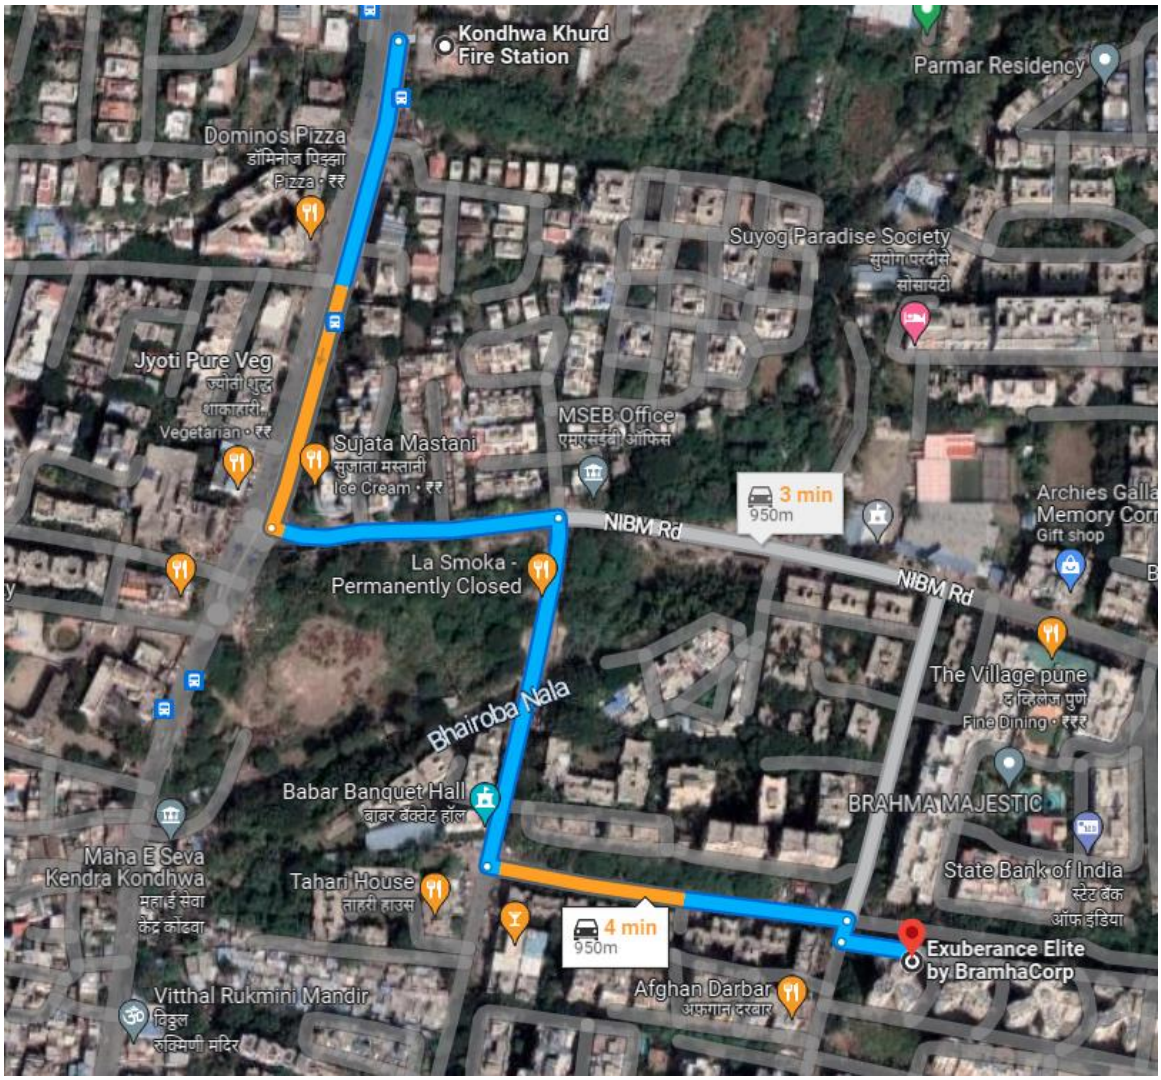
The address, phone number and minimum distance (by road) of nearby fire station is given in **Table 7.8**

Table 7.8: Details of fire stations near proposed project

Sr.	Name of fire station	Address	Phone number	Nearest distance by road (in km)	Time
1.	Kondhwa Khurd Fire Station	Inamdar hospital, Bungalow No.62, Fakhri Hills, Next to Kubera Park, Kondhwa Main Rd, Fakhri Hills, Kondhwa, Pune, Maharashtra 411048	+91 20 25390002	1.7 km	7 min

The near fire station is Kondhwa Khurd fire station. The proposed site is approximately 1.7 km away from the fire station. The road map of proposed project is shown in **Figure no. 7.8.** It takes about 7 minutes to reach the proposed site.

Figure 7.8: Road map of proposed project from fire brigade station Kondhwa Khurd fire station

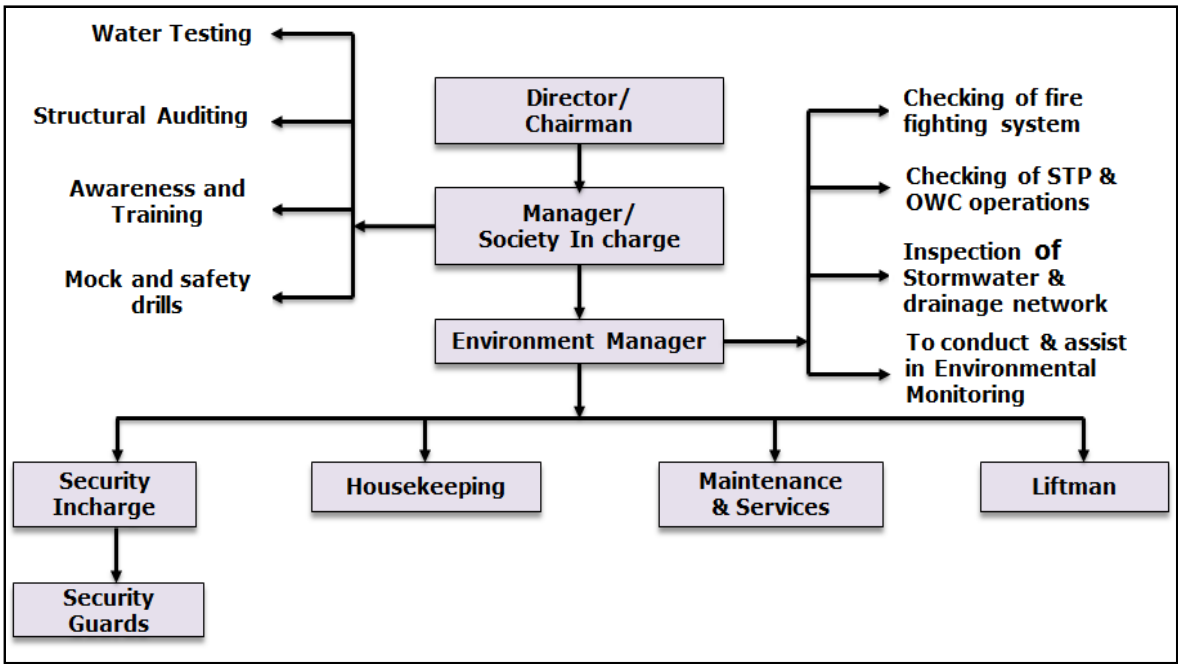


Disaster Management Committee (DMC)

To handle disaster during operation phase Disaster Management Committee (DMC) is formed.

Details of DMC is given below;

During operation phase:



Responsibility of committee members

The Primary responsibility of the committee would be:

- Analysis of the incident.
- Prompt decision making, prioritization and distribution of tasks.
- Communication of information and decisions to all involved parties.
- Development of media/public relations response.
- Reviewing Post-crisis situation and making necessary changes in Manual for future use.

The Team would also ensure that:

- The team role during the crisis situation is very important. Maintaining calmness both in action and manner of speaking is very important.
- Directions must be given firmly and clearly, without excessive anxiety. A moderate level of tension is expected and, in fact, can help convey an appropriate sense of urgency.
- Identification of Vulnerable Areas in the building and the resources that are available or can be made available with the building in case of any disaster.

A check-list would be prepared on the following points to plan actions for future, so as to make the building a safer place:

- Are the corridors and stairwells clear of any obstruction?
- Does the Property have provision for emergency backup?

- Does the building have minimum two exits?
- Are all the exits from the building clear?
- Are there adequate arrangements for fire safety etc.?

Evacuation Route-Map

The following things have kept in mind:

- The entire building is divided into zones with each zone having its own staircase.
- The exit routes are clearly marked and path is free of any obstruction.
- The safe places where the people shall gather is clearly located and the location is clearly marked and communicated to the respective classes. (Assembly point in the building).

Dissemination of plan to everybody –

This is very essential for effectiveness of the plan. This can be done by making every staff in the building aware of the plan and following steps as:

- Put up signs for exits on walls and roofs etc.
- Display the maps on every floor in the building.
- Call a meeting and discuss the plan with all staff members.
- Prepare floor-wise evacuation route maps.

Functions of committee members

Society Chairman:

During normal working hours the Society Chairman shall be available in Emergency Control room & he or Society Secretary shall give directions to all other committee members based on the information received from the site controller. The site controller will be coordinating from Control Room which is located at ground floor.
Exclusive telephone extension number i.e., Extn No. **10** / mobile tel. number of the Society Chairman/ Secretary/Security officer shall be displayed at all conspicuous locations in the project site for easy accessibility. The Security Control Room extn No. is **01/02**. The said extension number shall always be kept free & shall not be normally used by any security staff/control Room staff.
In case any help is required from the neighboring / external agencies such as Fire brigade / Civil defense / Local Police / Hospitals / Ambulance / Blood Bank etc. the same will be handled by Security Officer only and in his absence by the officer appointed by him to handle such situation.

Site Controller/Security Officer:

Based on the geographical locations of the shops/Building, following member is nominated as site controllers.

Sr. Security officer- Mr. XXX

The site controller shall inform about the emergency situation to the society chairman on exclusive extension number or his mobile number and wait for instructions from the society chairman / Secretary. The Site Controller shall not issue any instruction whatsoever to any other Committee Members which may result in confusion.

- Any Emergency noted in his respective area is to be immediately communicated to Society Chairman / Dy. Society Chairman/Secretary.
- Also, he can communicate this over phone on Emergency telephone no. 1000, which is kept at the Gate No. 1.
- He is responsible for taking care of employees and material of his area during Emergencies.
- If the area is likely to be flooded, the electrical supply of that area is to be cutoff with the help of electrician.
- If evacuation is required to be done, he has to guide his employees to assemble at a safer place.
- Any further instructions from Society Chairman are to be followed.

Fire Safety Incharge:

On receipt of information from any source, the Fire officer shall check with Society chairman and rush to the place of incident along with his team & security team and shall also communicate emergency squad members from the shop / location where the incident has taken place to rush to the site. In emergency, the fire officer will coordinate with site controllers and fire marshal appointed.

The Fire & Safety Officers shall evacuate and carry out rescue operation with the help of emergency squad members and if the situation is beyond their control, the Fire officer shall inform the Society Chairman to seek help from outside agencies.

Engineering Incharge/Safety Supervisor:

The Engineering In charge/safety supervisor after receiving the information shall contact the Society Chairman and inform him about the action initiated to isolate the machines / power / generators – as per the situation. The buildings he will coordinate with the control Room. He will not do any operation independently which can cause harm to the life and or property. He shall also ensure availability of water with sufficient pressure and quantity. Necessary help for civil work / removal of debris etc. shall be arranged by him.

Declaring Emergency:

In case of any such major hazards, which is likely to cause extensive damage to property or human life, the Society Chairman shall communicate through the various communication channels like blowing of siren, Telecommunication, Two way communication system, Public Address System available with him and make the residence aware of the situation and give instruction / direction what is expected from them and instruct them to evacuate / assemble at designated assembly points as under:

1) Nearest Refuge floor
2) RG Area

Co-Ordination with internal & external agencies:

The communication of a disaster refers to the escalation channel that needs to be followed during the notification or occurrence of disaster (or if the disaster has occurred). It shall depend on its nature whether it's a predictable or an unpredictable disaster. A predictable disaster is the one that is followed by a warning or a notification whereas in case of an unpredictable disaster there is no warning or notification.

After taking stock of the situation based on feedback received from various members of central committee the Society Chairman shall decide if any help needs to be sought from neighboring / external agencies. This should also be made known to all residence through different communication channels viz. Two-way communication system, public address system, circulars, newsletters, e-mails etc. working in different shift to avoid confusion.

Directing rescue operations:

All the members of Central Emergency Committee shall work under instructions from Society Chairman and shall take decisions in their areas of operation, however they shall keep the Society Chairman informed about the action being initiated and update him on the same.

Medical facilities:

No occupant has been assigned medical or rescue duties during an emergency situation in this building. There may be some occupants who have volunteered and been trained for building search and rescue or Disaster First Aid by any professional agency or by any government agencies for building disaster situations (e.g. a large earthquake). These volunteers will report to the Emergency Management teams in a disaster.

Declaring normalcy:

After all operations are over the Society Chairman shall declare the normalcy.

Documentation:

The Society Chairman on completion of the activities, keep track of the events and record the same. He shall inform the Management / Occupier about the occurrence and in consultation with all committee members suggest / recommend additional facilities / amendment in procedures required to meet such situation in future.

Mock drills:

Mock drills activities is conducting six monthly bases for ensuring its efficiency during emergency as well as for refinement and up gradation. These drills based on the plan will help achieve its objectives of the disaster management plan.

7.5 Do's and Don'ts for Disasters

A. Fire

- Do not panic; keep calm, think and act quickly.
- Activate the manual fire alarm system provided on the floor to raise alarm.
- Report to security.
- Summon the fire brigade on telephone No. 101
- Alert the people near fire.
- Do not take shelter in the toilet.
- Fight the fire only if you can. Do not take undue risk.
- Crawl, in case you encounter smoke.

B. Cyclone

(i) Before the cyclone season

- Concern authority will inspect the building; secure loose tiles, carry out repair work for doors and windows.
- Remove dead woods or dying trees close to the building; anchor removable objective like lumber piles, loose tin sheds, garbage can, sign-boards etc. which can fly in strong winds.
- Emergency light with extra batteries, battery operated torches, battery operated radio and enough dry cells is kept at safety office.
- First aid kit box is checked regularly.

(ii) When the Cyclone starts

- Listen to the radio (All India Radio stations give weather warnings)
- Keep monitoring the warnings. This will help one to prepare for a cyclone emergency.
- Pass on the information to others. But one must not spread rumors.
- Ignore rumors and do not spread them; this will help to avoid panic situations.
- Believe in the official information.
- Users will be made aware to switch off electrical mains at emergency situation.

(iii) Post-cyclone measures

- One must get inoculated against diseases immediately.
- Strictly avoid any loose and dangling wires from the lamp posts.
- Concern authorities will clear all the debris from the premises.

C. Floods

The concerned authorities will take the following measures as soon as they receive flood warning:

- Closing of sewer wells
- Torch
- Batteries
- Emergency light
- Acquiring sufficient food material and potable drinking water
- Maintenance of first aid kit - This first aid kit includes disinfectant (Dettol), dressing material, soap, band aid, antiseptic cream, medicines, antibiotics, and scissors.

Measures after floods

- During floods, incidence of water borne and vector-borne diseases increases. Hence, all the staffs and members of the residential area will be advised to undergo a thorough medical check-up for betterment of their health.
- All the underground and overhead tanks is cleaned and disinfected regularly. We will assist in identifying the concern authority or NGOs who carry out this kind of activities.
- Desilting and cleaning of storm water channels will be carried out by concerned authority. We will assist in carrying out this activity.

D. Earthquake

If one is outdoor at the time of earthquake,

- In case, any open space is available nearby, go there.
- Do not run through streets; hoardings or lamps as they may fall.

If one is caught indoors at the time of an earthquake,

- Be calm.
- Stay indoors until the shaking stops.
- Stay away from glass windows, doors, cupboards etc.
- Stay away from falling plasters, bricks or stones.
- Get under a table so that one does not get hurt by falling objects.
- Do not rush towards the doors or staircase. They may be broken or jammed.
- If one goes outside, move away quickly from the building to prevent injury from falling debris.
- Be aware that fire alarm and sprinkler systems frequently go off in building during an earthquake, even if there is no fire. Check and extinguish small fires and exit via stairs.

Avoid the following in an earthquake

- Do not crowd around damaged areas or buildings.
- Do not waste water. It is needful for firefighting.
- Do not move the seriously hurt people.
- Wait for medical help to arrive.
- Do not spread rumours. It leads to panic and in turn worsening the situation.

After an earthquake

- Check if anyone else is hurt. Use first aid at least on the cuts and bruises.
- Keep the streets clear for emergency services.
- Switch off all application like the machines, printers, Computers.
- A battery-operated radio will aid in receiving important messages.
- Use the stairs, not an elevator.
- Listen to a portable, battery-operated radio or television for updated emergency information and instructions.

- Cellular telephone equipment will be subject to damage by quakes and cell phones may not be able to get a signal, but regular "land line" phones may work.
- Open closet and cabinet doors cautiously as contents may have shifted during the shaking and could fall, creating further damage or injury.
- Watch out for fallen power lines and stay out of damaged areas.
- Stay out of damaged buildings. Damaged buildings may be destroyed by aftershocks following the main quake.
- Be alert for and observe official warnings.
- Do not smoke; smoking in confined areas can cause fires.

Conclusion and Recommendation

- Project proponent will provide essential information of cyclone and flood warning to society manager or concerned authority.
- Mobile towers and communication services for all service providers is available near project site. We are also providing up-to-date building codes to the society manager or the concern authority. National building codes will be made available to the concern authority. These codes identify construction technique for building that help them withstand earthquakes without collapsing and killing people.
- Localize the information by printing the phone numbers of local emergency services offices and hospitals.
- Provide tips on conducting earthquake drills at the proposed site.
- Interview representative of the electric and water companies about shutting off utilities.
- PP is providing 24 x 7 water supply.
- All the members are made familiar with evacuation plan.
- PP has formulated disaster management cell which is responsible for:
  - Check up and structural auditing of building and submitting the report to manager and PMC on regular basis.
  - Evaluation of sprinklers, firefighting equipment's, first aid kit box, disaster management rescue items, safety training, mock drills, awareness among occupant, etc.

Table 7.9: DMP cost during operation phase

Sr.	Parameters	Capital Cost in (Lakh)	O & M Cost (Lakh)
1	Fire Fighting measures (Sprinkling System, Fire	40.50	7.5

Sr.	Parameters	Capital Cost in (Lakh)	O & M Cost (Lakh)
	alarm, Portable fire extinguishers, Fire Tanks, Water lift pumps Fire Hydrant Cabinets with hose reels, Fire Hydrant Pumps, Fire list, Fire alarm, Fire Curtains, Fire Tanks, PA systems, etc.)		
2	Disaster Management Kit (First Aid Facility, Stretcher, A portable battery, powered radio, Flashlight and extra batteries, First aid kit and first aid manual, Safety shoes, helmets, Hand gloves, fire mask, fire blanket, Axe Cutter)	3.10	1.5
3	Well-equipped Control Room, CCTV	2.0	0.2
4	Disaster Management training to Users and Security staff, Mock Exercise	1.5	-
5	Alternate source of power supply/DG sets and Diesel pump for emergency	1.70	0.5
7	Lightening arrester	3.6	0.15
	Total	**52.4**	**9.85**

7.6 Natural Resource conservation

7.6.1 Biodiversity Study of the Project Site

Landscape planning & proper management practice plays a major role in this aspect. It deals with the role of plants & proper landscaping & selection techniques in reducing the pollution waste management. It improves aesthetics with the use of existing vegetation. It concerns how wildlife is sustained. It is an attempt to strengthen biodiversity status of the area through inclusion of certain useful species on project as well as public areas. Most of the vegetation of this city is wet tropical type.

Landscaping plays major role in maintaining city's environment in ecological condition by maintaining aesthetic sense to flourish its biodiversity. Pune city is growing in a very rapid pace showing its impact on physical status. Number of old trees are removed or pruned for development works by changing the face of the land & introducing new vegetation. The plant species; which attract insects, birds for nesting, feeding or breeding; act as ecological controller in future.

7.6.2 Biodiversity Index (additional ToR point no. 17)

The term "variety" of various items present, is generally used to describe "diversity". A **diversity index** is a numerical indicator of the number of distinct species present in a dataset while also accounting for how equally basic things (like persons) are spared among those species.

When both the number of kinds and their consistency increase, a diversity index's value rises. When all types are equally and sufficiently available, a diversity index's value for a given number of types reaches its highest point. Simpson's Diversity Index is a measure of diversity. In ecology, it is often used to measure the biodiversity of a habitat. It considers the

number of species present, as well as the abundance of each species for measurement.

Formula:

$$D = \frac{\Sigma n(n-1)}{N(N-1)}$$

Where,

n= the total number of organisms of a specific species

N= the total number of organisms of entire species

As per this index, 0 signifies infinite diversity and 1, no diversity.
That is, the more the value of D, the less is the diversity.
The value of D ranges between 0 and 1

Table 7.10: Biodiversity calculations

Sr.	Details	No. of trees	'D' value
1	Existing trees on plot	392	0.90

Table 7.11: Biodiversity index of proposed trees

Sr.	Boanical Name	Common Name	No. of individuals	(n-1)	n (n-1)

7.7 Resettlement& Rehabilitation Action Plan

This project is on urbanized land and there is no population displacement due to this project. Resettlement and rehabilitation action plan for the residential project 'Bramha Exuberance', Kondhwa, Pune is not applicable.

7.8 Solid Waste Management Plan

Solid Waste Management is one of the most essential services for maintaining the quality of life in the urban areas and for ensuring better standards of health and sanitation. In India, this service falls short of the desired level, as the systems adopted are outdated and inefficient. Institutional weakness, shortage of human and financial resources, improper choice of technology, inadequate coverage and lack of short and long-term planning are responsible for the inadequacy of service

7.8.1 Components of Municipal Solid waste Management

Collection

Waste is collecting on door-to-door basis. This waste is brought to near temporary storage place where segregation done. Then it is brought to waste processing plant. Each person collecting waste has to be given safety gloves and related personal protective equipment (PPE). Garbage bins is used to collect waste.

Segregation

Waste is now segregated to biodegradable, non-biodegradable and inert waste for the classification and proper treatment processes. Segregation is done by local nearby worker who trained about segregation.

Transport

Transport of waste is done using wheel barrow. Segregated waste is going their respective place for further process. Biodegradable waste goes for composting, non-biodegradable waste is sending to the authorized recycler dealer for further processing. Inert waste is disposing as per Pune Municipal Corporation (PMC).

Treatment and process

- For the proposed project, impacts from waste disposal is not be significant, since municipal solid waste is disposing-off as per Municipal Solid Waste Handling and Management Rules.
- Biodegradable waste – Biodegradable waste is treated using vermicomposting pits and used as manure for landscaping.
- Recyclables (Tin, glass, paper, cardboard, leather, metals etc.) is segregated and sold over to local recyclers.
- Insert waste- Inert waste is going for land filling.

7.8.2 Project specific solid waste details

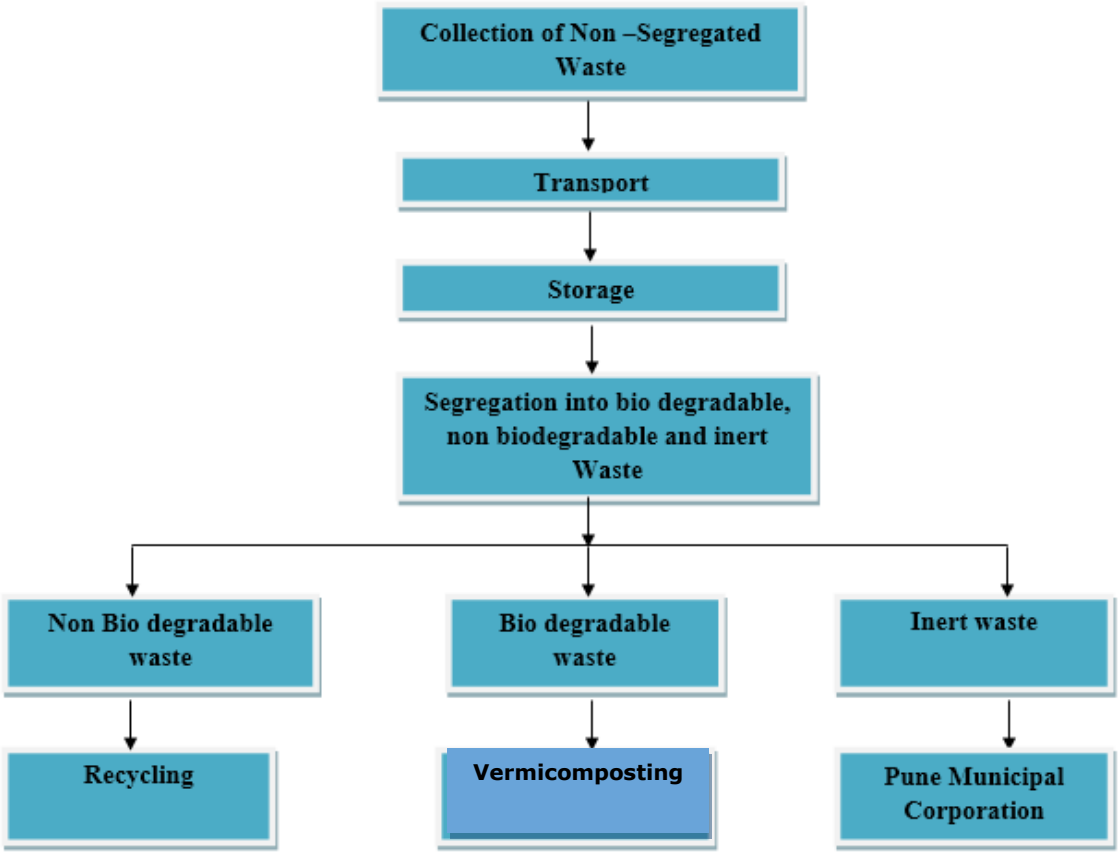
During operational phase:

Solid waste generated from entire project is 699 kg/day. Out of which 419 kg/day is biodegradable component and 280 kg/day is non-biodegradable. We have provided vermicomposting pits for proposed project.

Table 7.12: Solid waste generation calculation details

Details	Information
Population	1,432 nos.
Total waste generation	699 kg/day
Biodegradable waste	419 kg/day
Non-Biodegradable + Inert waste	280 kg/day
STP sludge	1.7 kg/day

Figure 7.9: Schematic representation of Solid Waste Management Waste



Biodegradable waste

Process description for Vermicompost system

Vermicomposting is a simple biotechnological process of composting, in which a certain species of earthworms is used to enhance the processing of waste conversion and produce a better fertilizer product. Vermicompost is a product enriched with biological, physical and chemical properties that can enhance soil health and promote high growth and harvest of plants such as crops. The earthworms are encouraged to multiply by setting up their suitable environment, the moisture should be between 50 and 70%, and the soil pH should be 7.

The compost produced in this green process is traditionally and popularly used as a natural fertilizer for enhancing plant growth. Earthworms belong to the phylum Annelida, subclass Oligochaeta.

This process is mainly required to add nutrients to the soil. Compost is a natural fertilizer that allows an easy flow of water to the growing plants. The earthworms are mainly used in this process as they eat the organic matter and produce castings through their digestive systems.

This product contains more and readily available plant nutrients such as nitrogen, phosphorus, potassium and micronutrients. This product contains beneficial microorganisms that can solubilize phosphorus and other minerals for plant uptake. Vermicompost has high organic carbon that is highly required by plants as compared to other conventional composts. This compost has high water holding capacity, improves soil porosity, increases activity of beneficial microbes and is good when mixed with sandy soil.

- To prepare the vermicompost, a concrete tank has used according to the availability (Size- based on the number of raw materials available)
- Collect the dried biomass (garden waste, animal waste, municipal waste, etc.) and chop them.
- Mix the chopped dry material with cow dung in a 1:3 ratio and keep them aside for 15-20 days for partial decomposition.
- Add a thin layer of soil /sand (2-3 inches) at the bottom of the tank.
- Now prepare the bedding by adding the partially decomposed cow dung and dried waste mixture. Distribute it evenly on the soil.
- Continually add the mixture up to a depth of 0.5-1 foot.
- Now release the earthworms in the tank (1000-2000 earthworms / square meters). Cover the mixture with gunny bags/ straw/ plastic.
- Monitor the bin for the availability of food to the earthworms and add the food (fruit and vegetable peels, other kitchen waste) when necessary (make sure not to add excess food)
- Do water regularly to maintain moisture.
- Monitor the composting tank to maintain temperature and moisture

- Beds turned in every 30 days for aeration and proper decomposition.
- The compost is ready in 45-50 days.

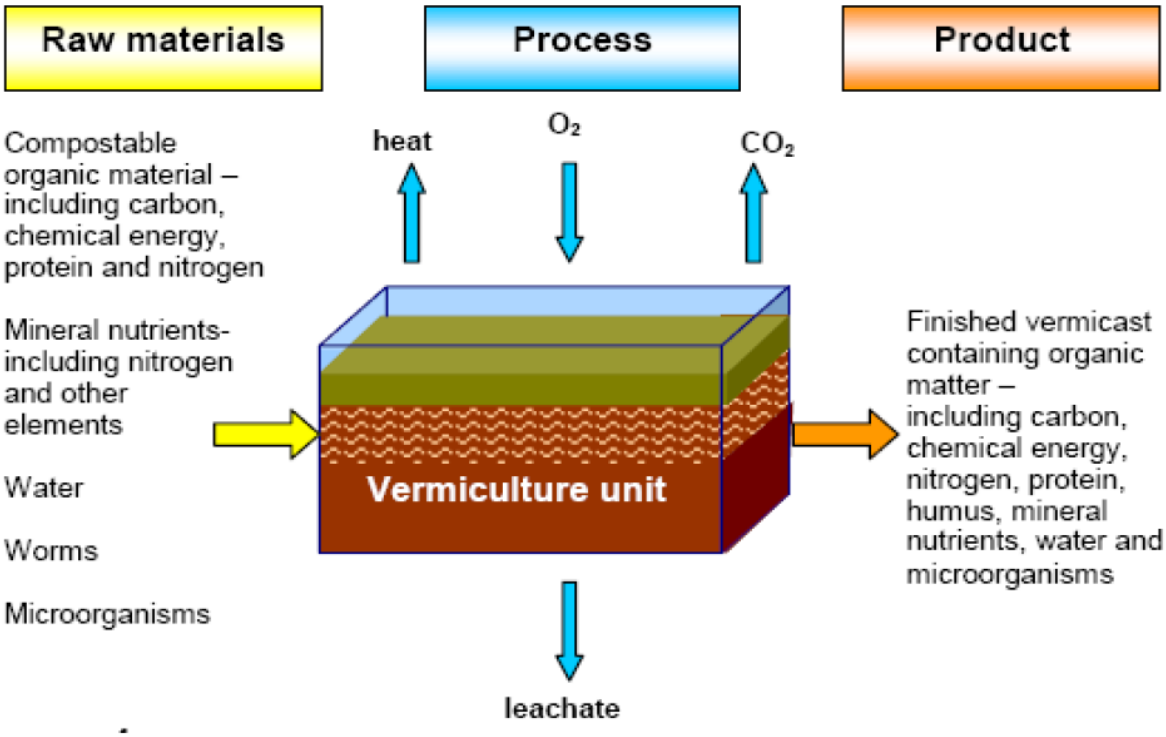
Table 7.13: Vermicompost pit details

No. of units	35 nos.
Capacity (kg/day)	49.35 m^3
Total space provided	56.5 m^2

Table 7.14 : General study of waste generated and its utilization

Type of waste which can be treated: -	1. Cooked food, vegetable and fruit remains. 2. Tea and coffee powder. 3. Garden waste including fresh leaves and dry leaves.
Type of composting	In vessel Aerobic Composting
Time requires for composting cycle	15-20 days.
Any additional material required for composting	Ready Compost / Saw dust/shredded leaves
Requirement of water during composting.	Yes
Utilization of compost	In garden, agriculture land as manure.
Advantages	• Eco-friendliness, • Nutrient-rich compost, • Improve soil structure, texture, porosity, water-holding capacity, drainage, and aeration and reduces erosion. • It improves plant growth • It is easy to apply and handle, economical and has no foul odor. • It is free from any pathogens or harmful materials. • It contains several micro and macronutrients, vitamins, enzymes, and hormones like auxins and gibberellins.

Figure 7.10: Solid Waste Management



Recycled waste (Non-Biodegradable)

Non-Biodegradable or recyclable waste is non-organic material that can't be broken down easily by natural processes. Recyclables are items and materials bound for the waste stream that can be converted into a reusable material. Non-biodegradable waste generated other than inert waste will be send to the authorized recycler or dealer for further processing.

Table 7.15 : General study of waste generated and its utilization

Sr.	Component	Description	Criteria	Total capital cost (In Lakh)	O & M cost (In Lakh/year)
1	Vermicomposting machine	34 no. of vermicomposting pits for treatment of biodegradable garbage	Handling of Biodegradable garbage, segregation of waste & Vermicomposting pits	3	0.4

7.9 Debris Management Plan

Debris Management plan includes handling, collection, storage, treatment, and disposal of hazardous and non-hazardous waste, debris, excess earth etc. Basic process is segregation of Hazardous and Non-Hazardous Waste.

Non-Hazardous Material and Waste:

Common non-hazardous solid wastes generated at the site includes:

- Concrete Waste
- Scrap wood (Used or un used)
- Bricks
- Debris generated out of Plaster Waste etc.
- Plumbing Fixtures and Piping Waste
- Metal Scrap and electrical wiring material
- Other misc. scrapes
- Biodegradable waste from the labour camp
- Non-biodegradable waste from the labour camp

This debris gets generated at different phases of project cycle.

Handling and collection of Non-Hazardous waste:

PP is trying to take following steps for handling and collection of these wastes.

- PP is planning to use the debris generated from plaster waste within site premises only by using sand screening machine for misc concrete and plaster work for external development.
- The waste generated is either manually / by machinery collected and handled by tractors or suitable vehicles for shifting.

Waste from site:

The-waste generated from site was mainly comprise of household domestic waste that is collecting and composting on project site. The non-compostable and non-recyclable portion of the-waste is collecting & segregated. We have made arrangement for collection & disposal of non-biodegradable waste.

During collection stage, the biodegradable, non-biodegradable/inert waste is collecting separately and segregated properly. Different containers is used for storage of such wastes with signage.

Biodegradable-waste is processing for further composting whereas; non-biodegradable/inert waste is sending to the authorized dealers after segregation and processing.

Treatment & disposal:

Biodegradable waste:

It is a residential project. The wastes generally that is generated are canteen waste, food waste, horticulture waste, paper etc.

The segregated biodegradable-waste is composted by using vermicomposting pits

Non-biodegradable waste:

It is a residential project. The wastes generally that is generated are plastics polyethylene, nylon, rayon, polyester, lexan, glass, metals, packaging materials, foams, rubber etc.

The non-compostable and non-recyclable portion of the is collecting & segregated.

We have made arrangement for collection & disposal of Non-biodegradable waste to authorized recycler.

Inert waste:

Inert waste is refuge, reject, or residue material that does not undergo biological, chemical, physical, or radiological transformation. Inert waste includes building (demolition) waste, gravel, sand, and stone but not any biodegradable, hazardous, or green (botanical) material. The inert waste is handing over to the authorized recyclers.

As there is no demolition at project site, the possibility of generation of inert waste is negligible.

Topsoil management:

To minimize disruption of soil and for conservation of topsoil, the contractor taken out the topsoil separately and stockpile it. Other measures, which was followed to prevent soil erosion and contamination included:

- Maximize the use of organic fertilizer for landscaping and green belt development
- Removal of as little vegetation as possible during the development, and re-vegetation of bare areas after the project

Hazardous Waste: Common hazardous waste generated at site includes following:

- Used oil from DG set and machineries
- Waste paints, varnishes, solvent, sealers, thinners, adhesive, etc.
- Acids used at batteries etc.

Handling and Collection/Storage of Hazardous Waste: PP is adopting following steps for storage to ensure the safe working environment:

- PP has ensured the storage of material on the basis of its properties of hazardous nature. Wooden material, waste wooden scrape, flammable liquid, diesel, paint, varnish, etc. is stored at different locations. This hazardous material is stored at such place which is kept away. The area is well equipped with all type of fire extinguisher, etc.
- The material is stored in a covered area. A separate godown is made away and easily accessible.
- PP is trying to maintain the delivery period in such a way that just in time can be achieved, particularly for these types of material.
- PP has been ensuring that minimum stock of diesel has been keeping on site.
- PP has been trying to avoid the use of machineries like petrol vibrator, diesel pumps, etc. to minimize the stock of these hazardous materials instead use alternative equipment's.
- PP has ensured that godown of Paints, varnishes, thinner etc. to be under well covered hard roof and away from direct sunlight.
- PP has maintained the regular frequency for training of safe working practices for the labours who are handling this hazardous material.
- PP has ensured the signages must be clearly visible during day as well as night time. PP Will also keep the awareness regarding same.
- PP has ensured enough illumination during night hours.
- PP has restricted the entry of worker to this area. Only authorized persons are allowed to enter and the area.
- PP has ensured that only the minimum required quantity to be issued to working site, balance quantities will be kept at central godown.
- The entry has restricted to only to contractor site representative authorized at initial stage only.
- The signages like danger board, entry restricted etc. has installed in the area.
- The PP has maintained the material safety data sheet for better handling of the material.

Disposal Mechanism of Hazardous Waste-

The chemical and Hazardous material which is used at site is mostly getting consumed fully. There are not be a waste of this material. There are some of the hazardous materials which may get wastage is treated with high care.

- PP has ensured that whatever the balance hazardous waste in the form of paint/thinner/varnishes etc. is recovered and returned back to the approved vendor/contractor.
- The empty can/buckets etc. is well washed and reused for other purpose.
- Balance material (buckets, cans, drums etc.) is sold to the approved vendor/supplier/contractor.

E-waste:

PP is entering into an agreement with SWACH for collecting E-waste generated at site.

E-waste comprises of wastes generated from used electronic devices and house hold appliances which are not fit for their original intended use and are destined for recovery, recycling or disposal. Such wastes encompass wide range of electrical and electronic devices such as computers, handheld cellular phones, personal stereos, including large household appliances such as refrigerators, air conditioners etc. E-wastes contain over many different substances some of them are toxic and potentially hazardous to environment and human health, if these are not handled in an environmentally sound manner.

Components of E-Waste

E waste has been categorized into three main categories, Viz. Large Household Appliances, IT and Telecom and Consumer Equipment. Refrigerator and Washing Machine represent large household appliances, Personal Computer, Monitor and Laptop represent IT and Telecom, while Television represents Consumer Equipment. Each of these E-waste items has been classified with respect to twenty-six common components, which could be found in them. These components form the "Building Blocks" of each it demands therefore they are readily "identifiable" and "removable". These components are metal, motor/ compressor, cooling, plastic, insulation, glass, LCD, rubber, wiring/ electrical, concrete, transformer, magnetron, textile, circuit board, fluorescent lamp, incandescent lamp, heating element, thermostat, BFR-containing plastic, batteries, CFC/HCFC/HFC/HC, external electric cables, refractory ceramic fibres, radioactive substances and electrolyte capacitors (over L/D25mm). The kinds of components, which are found in Refrigerator, Washing Machine, Personal Computers (PC) and TV's are described below-

- Radioactive substances, refractory ceramic fibres, electrolyte capacitors (Over L/D 25 mm), textile and magnetron are not present in any item.
- Plastic, circuit board and external electric cables are present in majority of items. BFR containing plastic is present in refrigerator, laptop and television.

- Refrigerators are unique items because of presence of CFC/HCFC/HFC/HC, cooling, insulation, incandescent lamp and compressor.
- Heating element is found in washing machine, while thermostat is found in both refrigerator and washing machine.
- Fluorescent lamp is found only in laptop
- Metal and motor are found in majority of items except refrigerator
- Transformer is not found in washing machine and refrigerator
- CRT is found in personal computer and TV, while LCD is found in PC and TV.
- Batteries are found in PC and laptop.
- Concrete is found in washing machine.
- Rubber is found in refrigerator and washing machine.
- Wiring/ Electrical is found in all the items.

Collection Systems for e-waste as per CPCB

A producer is responsible for his products he may be involved in the establishment of the take back system for end of use electronic and electrical equipments. The producer responsibility could be the Individual or collective. Individual model requires each producer to be managing thee- waste generated by their products. The producer shall announce take back system. The individual producers can have direct contact with dismantlers or recyclers which allow them to get back there- usable components from their obsolete equipments. The producers can also get the data from the collector/ dismantler/recycler about the specific composition and characteristics of the products. In the case of collective producer responsibility, the producer would enter into contractual agreements with a collection agency which would be responsible for collection of the waste from generator. The producers through the collection agency have to pay a fixed price for their products to the generator, as in the collective responsibility model. The take back system may provide free collection or provide discount on purchase of new items. This facilitates in establishing a feasible and effective collection system to enable the channelization of thee-waste to appropriate recycling facilities and increasing re- use of certain components. The economic rationale behind is to facilitate the transfer of the benefits to the consumers enabling them to get better price on the sale of used equipment.

- As CPCB directs collection agency PP is entering into a contractual Agreements with a named as SWACH to collect all the E-waste generated at the site.

Figure 7.11: Contour plan

Higher contour level	628.5 m
Lower contour level	614.5 m
Level difference	14 m

Details	**Excavation quantity (m^3)**	**Backfilling quantity (m^3)**
Building	2,000	1,840
Services		80
Road		80
Total	**2,000**	**2,000**

Disposal of the construction waste debris:

Total debris quantity of **2,000 m^3** was estimated from excavation quantity. The excavated material **2,000 m^3** was reused within site for backfilling purpose.

Conclusion –

1. PP has precisely defined the scope and objectives of the project with respect to the generation and management of different types of wastes.
2. PP has identified and segregated the wastes generated as; bio-degradable, non-bio-degradable, hazardous, non-hazardous and e-wastes.
3. The project is a residential scheme; hence the quantum of non-hazardous material is less than the hazardous material.
4. The identified hazardous materials are diesel, used oil, paints, acids, thinners etc.
5. PP are taking all precautionary measure for storage, handling and collection of hazardous material with all sign boards and safety measures.
6. PP has identified that there is negligible wastage for electronic and electrical goods/waste.

7. Excavation debris generated from the project was reused within the site for backfilling purpose & remaining quantity used for landscaping purpose.

7.10 Traffic study

Project proponent has proposed to residential project 'Bramha Exuberance' located in Village Kondhwa, Taluka Haveli, Pune, Maharashtra.

Pune railway station is the nearest railway station located at 8.1 km from site which provides local connectivity. Pune International Airport, Lohgaon is the nearest airport from site which is located at distance of 15.1 km from site. The project location is surrounded by a local road network. Project site is accessible by clear 20 m wide DP road and 6 m and 7.5 m internal road.

Detail traffic analysis report is attached as **Annexure V.**

7.11 ECBC Compliance Study

ECBC compliance study is done for proposed residential project 'Bramha Exuberance, Pune'. The specific study is done to evaluate annual energy usage and apply various energy efficiency measures for ECBC Compliance for maximum Energy Efficiency.

The building was analysed using hourly energy simulation to evaluate the performance in terms of energy consumption and thermal comfort of the occupants. The purpose of this study is to present the performance of the design building in comparison to a baseline budget building based on ECBC 2007. A complete ECBC compliance report is attached as **Annexure IV.**

7.12 Carbon Foot Print Study

A 'Carbon Footprint' refers to the potential climate impact of the greenhouse gases (GHG) that are emitted directly or indirectly due to construction activities. To calculate a Carbon Footprint involves the preparation of a GHG inventory, typically an estimation of building's annual emission of GHG expressed interms of tonnes of carbon dioxide equivalent (tCO_2e). The results are presented in three stages. First, the construction phase emissions of the project are assessed. Second, the operation phase carbon consumption is presented taking in to account different type of energy consuming sources. In the third phase, carbon sequestration through vegetation and renewable energy has been considered.

The carbon footprint analysis shows that, the total emission of the project during construction phase can be **15332.0 tCO2e**. The emission is mainly

from Manufacturing of Construction material, Transportation and power consumption uring construction phase.

The total emission during operation phase of project will be **2466.2 tCO2e/yr.** The emission is mainly from Power Consumption, followed by Solid waste Management and Waste water Treatment.

The total reduction in carbon footprint due to vegetation and renewable energy sources will be **120.1 tCO2e/yr.** The total carbon footprint during operation phase is **2346.1 tCO2e/yr.**

Carbon footprint study report is done for the proposed project which is attached as **Annexure VI.**

7.13 Hydrological Survey Report

Hydrological survey report including graphs and data is attached as **Annexure IX.**

7.14 Gate Mass-Balance Analysis Study

Mass balance analysis study is significant in construction projects for the following purposes:

- For better management of waste generated
- To reduce the quantity of debris during construction phase
- To reduce load on landfills site.

For above said purposes, Mass balance analysis for construction waste is presented in this study.

Gate mass balance study report is attached as **Annexure VIII**.

Chapter 8
Project Benefits

8.1 General

Urban infrastructure consists of drinking water, sanitation, sewage systems, electricity distribution, urban transport, primary and advance health care services and environmental regulation. The process of urbanization has gathered considerable momentum in recent years.

The proposed project is the part of such urban infrastructure development and its associated activities will help to build physical infrastructure like residential use, roads, telephone lines, electric substations and colony and water supply lines in study area. The residential development project consists of residential buildings. Following are the benefits of the project:

- This proposed project is facilitating the development of the region socially and economically.
- The project created affordable houses for the middle-class population at the outskirt of Pune.
- The entire infrastructure and amenities are developed and maintained by the Developer at his cost.
- Thus, people got integrated residential development with amenities and in facilities

8.2 Improvement in Social Infrastructure

From the very initial stage of the inception of the project, infrastructure development in and around the project site has been kept in consideration. Infrastructure development is done based on actual requirement of the region. The infrastructure development is rolled out as a part of CER activity.

8.3 Economic Development

This project is increased the economic activities around the area, creating avenues for direct/ indirect employment in the operation phase of the project. There would be a wider economic impact in terms of generating opportunities for other business-like workshops, marketing, repair and maintenance tasks etc.

Adequate road connectivity and maintenance is provided for easy transportation in the operation phase. Such improved transport networks will improve flow of goods and will increase business. Due to proposed project other commercial facilities will also be upgraded. The corrective

measures planned to improve the environmental quality will definitely reduce the health problems. In short, the project is providing value addition to the existing infrastructure. The continuous inflow of people will require local transport systems like autos, taxis etc which would help economic boost.

8.4 Employment Potential

During operation phase skilled workers required for STP operation, security guards, landscaping, generator operator etc. which is hired locally. Moreover, commercial activities due to this project will enhance economic growth of the region.

8.5 Landscape development

After implementation of the project, the green cover of the project area is enhanced by beautifully landscaped and green cover plantation by native species. This is not only enhancing the aesthetic beauty of the region but also regenerate and enhance the local ecology and biodiversity.

8.6 Improvement in infrastructure facility

New and better infrastructure facility are developed.

Chapter 9
Environmental Cost Benefit Analysis

Chapter 10
Environmental Management Plan

10.1 General

Environmental Management Plan (EMP) deals with evaluation of significance of unavoidable or residual impacts following mitigation and the proposed monitoring.

10.2 Introduction

Environmental Management Plan (EMP) is a site-specific plan developed to ensure that the project is implemented in an environmentally sustainable manner where all contractors and subcontractors, including consultants, understand the potential environmental risks arising from the project and take appropriate actions to properly manage that risk.

EMP also ensures that the project implementation is carried out in accordance with the design by taking appropriate mitigative actions to reduce adverse impact on the environment and recommends corrective measures where required. Also, the plan outlines roles and responsibility of the key personnel and contractors who are charged with the responsibility to manage the site.

The potential environmental impact that needs to be regulated is mentioned below:

- Air pollution due to the emission of particulate matter and gaseous pollutants;
- Noise pollution due to various noise generating equipment as well as vehicular movement;
- Wastewater generation from sanitary/domestic activities; and solid waste disposal

10.3 Project description

We are applying for Environment Clearance for Proposed Residential project 'Brahma Exuberance' at Sr.no. 13, H. No. 1, 2 & 3 of Village – Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra by BrahmaCorp. Ltd.

Figure 10.1: Master Layout

Table 10.1: Qualification & cost of officials/persons of environment management cell

Sr.	Officials	Qualification	Salary in Rs./month
1	Chairman of society	N.A.	N.A.
2	Secretary of society	N.A.	N.A.
3	Supervisor	M.Sc./BE Environment	19,000/-
4	Operators for STP – 2 Nos.	I.T.I.	15,000/-

Sr.	Officials	Qualification	Salary in Rs./month
5	Operator for OWC – 1 Nos.	I.T.I.	9,000/-
6	Outside agency for collection of waste from door to door	-	20,000/-
7	Outside agency for monitoring and six monthly	-	2,50,000/year
8	Disaster Management Supervisor	M.Sc.& Diploma in Fire & Safety	15,000/-
9	Officer	B.Sc.& Diploma in Fire & Safety	12,000/-

Compliance Schedule

Table 10.2: Statutory Compliances

ACT	Responsibilities under section	Penalties under section
Water (Prevention & Control Of Pollution) ACT, 1974 (No. 6 of 1974)	19, 20(2) & (3), 21(3)(e), 23, 24(1) (a),24(1) (b), 25(1) & 26, 25(4) & 26, 27(2), 28, 29, 31(1), 32(1)(c), 33(3)(l), 33 A	41(1), 41(2), 42(1), 42(2), 43, 44, 45, 45A
Environment (Protection) Act, 1986 (No. 29 of 1986)	5, 7, 8, 9(1), 9(3), 10(1), 10(2), 11(1)	15, 26

* We are complying with Construction Workers Safety and Welfare Act.

Compliance schedules:

There are three facts to design and follow the schedules viz.:

(A) For compliance of responsibilities,

(B) For day-to-day operation and maintenance of STP and OWC,

(C) For routine environmental monitoring, to assess the impact and take timely action.

The Schedule:

I) Daily Compliance:

1. Take the meter readings - initial and final, for checking the water consumption.
2. Maintain the electricity consumption record for pollution control equipment's.
3. Monitor ambient air periodically as per Consent and EC Conditions.

II) Monthly Compliance:

1. Monitor the emission sources through the competent laboratory and submit the analysis reports to the board and MoEF.
2. Monitor ambient/work zone noise levels & ensure conformance to standards.

III) Quarterly Compliance:

1. Monitor the ambient air quality at upwind and downwind locations of the project.
2. Review the Water Reuse performance.

IV) Half Yearly Compliance:

Submit the Post Environment Clearance Report to the Regional Office Nagpur of MoEF & Climate Changes along with the State Pollution Control Board as may be prescribed in the prior EC every June & December.

V) Yearly Compliance:

1. Carryout "Environmental Audit Statement" of various environmental aspects, review the environmental policies with the help of experts and make the up gradation /changes accordingly.
2. Submit the "Environmental Statement" to the State Pollution Control Board in Form V under Rule 14 of the Environment (Protection) Second Amendment Rules 1992 of the Environment (Protection) Act, 1986.
3. Renew the Consent to Operate under the Water and Air Acts.

Environment management systems

The following components are part of the EMS:

- Environmental Policy
- Objectives & Targets
- Structure and Responsibility
- Emergency Planning
- Environmental Monitoring Program
- Operation and Maintenance of Environmental Management Facilities like STP, Rain water harvesting, Solar Systems, other energy saving measures, landscape development, Solid waste management system
- Non-conformance detection and Corrective & Preventive Action
- Short term and long-term budgetary provisions for the EMP

- Submission of six-monthly report to Regional office, MoEF for compliance of conditions in Environmental Clearance

Executable EMP

Table 10.3: Executable EMP – Operation phase

Sr.	Environmental Issues/Impacts	Mitigation measures	Responsibility	Legal & Other requirements
Operation phase				
1.	Increase in water demand	• Use of treated sewage for gardening (17 m^3/day) and flushing (62 m^3/day) • Rain water collection from terraces into 2 number of RWH pits	Society Management system	Water Prevention and Control of pollution Act 1974 as amended
2.	Sewage generation and disposal of sewage	• Provision of total 1 number of Sewage Treatment Plants of total capacity 70 m^3/day for treatment of sewage by MBBR technology. • Proper operation and maintenance of STP and monthly analysis of general parameters like pH, BOD, COD and TSS & O & G of the STP outlet to ensure good treatment of waste water with the help of onsite sensors. • Use of treated sewage for flushing gardening. • Provision of adequate ventilation around the STP. • Proper arrangements for sludge handling units and its reuse as manure	Society Management system	CPCB Standards
3.	Increment in Runoff from site	• Proper management of channelization of storm water from site by using proper internal SWD system and discharge point of having adequate capacity. • Proper maintenance	Society Management system	-

Sr.	Environmental Issues/Impacts	Mitigation measures	Responsibility	Legal & Other requirements
		of storm water drainage to avoid choking of drains and flooding on site		
4.	Increase in power consumption	• Provision of Solar Panels for common area lighting and water heating • Provision of LED lights. • Use of Electronic Ballast. • Use of timers in buildings common lighting and external lighting • Use of Star rated geysers and AC	Society Management system /Individuals	ECBC norms
5.	Use of DG sets may lead to Air & Noise pollution	• Stack height as per CPCB norms • New trees Plantation with retention of existing trees • Maintenance of green belt • DG sets with inbuilt acoustic enclosures	Society Management system	CPCB norms
6.	Vehicular movement leads to • Increase in traffic • Air emissions & Noise • Contamination of soil leads to Oil leaks	• Proper parking arrangement for the vehicles • Provide adequate traffic signs and signages to notify users • Install safety mirrors to aid visibility in conflict point. • Prevent parking near the Entry and Exit Gate. • Provide speed humps to regulate speed of vehicles. • Provide pedestrian crossings and dedicated footpath to cater to the walking population. • Assign traffic wardens to regulate flow of project traffic during peak hours. • Adequate width of internal Driveway • Plantation of new	Society Management system	-

Sr.	Environmental Issues/Impacts	Mitigation measures	Responsibility	Legal & Other requirements
		trees with retention of existing trees to mitigate dust and noise. • Provision of oil and grease traps to the Storm water drains		
7.	Odour and unsanitary conditions due to STP and Composting of biodegradable garbage	• Proper ventilation around STP and Garbage room • Proper operation and maintenance of STP and solid waste management facility. • Proper housekeeping and maintenance. • Regular monitoring of stack/s	Society Management system	Air act 1981 as Amended
8.	Municipal waste & other solid waste generation	• Informing and educating occupants for solid waste management • Provision of adequate space for solid waste management • Proper segregation on site to biodegradable and non-biodegradable • Non-biodegradable waste (280 kg/day) handing over to an authorized agency for further disposal • Biodegradable waste (419 kg/day) is treating in 34 no. of vermicomposting Plant • Manure generated from vermicomposting Plant using for landscaping purpose	Society Management system	-
9.	Disaster like Fire, Earthquake, lightning etc.	• Preparation of Disaster Management Plan • Provision of Safety officer, Security and First aid team • Regular review of DMP and mock drill • Effective implementation of DMP	EHS Team	-

10.4 Emergency Response Plan

Table 10.4: Emergency response plan

Sr.	Emergency Response Plan				
	Emergency	**Probable reason**	**Immediate Action**	**Report To**	**Precautionary Action**
A	**Due to Anthropogenic Activities**				
1	Structure collapse	Improper fitting of the objects; Materials used; quality etc.	Evacuate the portion/ floor at an immediate intimation; Walk away from the structure falling; count the number of people; if any one missing- report immediately; if injuries/ fatalities, take them to nearby hospital; Keep first aid box handy	Labour Supervisor, Chairman	Engage Sirens as a sign of danger; Evacuation area must be clear and well maintained; Maintain a book of Incidents, note the reason, impact and the causes.
2	Heavy objects slipping/ falling off	Careless placing/ improper placing of objects/ angles etc.	Walk away from the portion/ area, where the objects are falling from;	Labour Supervisor and Site Engineer/ EHS Team	Evacuation area must be clear and well maintained; Maintain a book of Incidents, note the reason, impact and the mistake; Avoid placing heavy objects at a risky, slippery, or slanted plane; always check before leaving the site if there is any such possible threat.
3	Bombing by anti-social groups/ Incident involving immediate firing, explosions etc.	Riots, national/ state issue	Safe underground/ nearby store rooms must be provided (they must have, radio, any mode of communication, first aid kits, food and water storages); keep Safety manual and First aid handy; Count the total number of workers present; help others to move from the site if possible.	Security Officer; Chief Controller/ Engineer	Keep the area fenced to protect from any unwanted activity; keep the security tight in order to get the first information; keep an eye on unattended objects and report to the police the moment they are seen; if any person looks

Sr.	Emergency Response Plan				
	Emergency	**Probable reason**	**Immediate Action**	**Report To**	**Precautionary Action**
					suspicious, immediately ask for the identity card else wise inform the nearby police station; during and after the incident always consider children, ladies, elderly and then men but before make sure you yourself are safe.
b	**Due to Natural Calamities**				
1	Earthquake/ Land slide	Nature	Keep all the inflammatory liquids and heavy machines/ materials at a safe place always in advance*;Walk away from the structure; Move to a safe, underground/ nearby store room (they must have, radio, any mode of communication, first aid kits, food and water stored); Don't come out till the tremors are over; in case of landslide move away to a safer place; cover your head; help other to move as well; keep information updated on radio/ mobile/ television about any continued occurrence or issue.	Rescue/ Evacuation Squad; First Aid squad (emergency help lines); Chief Engineer / Controller	Engage Sirens as a sign of danger; decide a place for gathering; A safety room is must where there is adequate amount of packed food, water, medicines, radios and communication devices; Everyone must be aware of the regional warnings via e media/ print media/ etc.
2	Flood/ Cloud Burst	Nature	Keep all the inflammatory liquids, chemical components and heavy machines/ materials at a safe place always in advance*; Shut down the main power; Move to a safe nearby store room (it must have, radio, any mode of communication, first aid kits, food and water stored); Don't let the	Rescue Squad; First Aid squad (emergency help lines); Chief Engineer / Controller	Engage Sirens as a sign of danger; decide a place for gathering; A safety room is must where there is adequate amount of packed food, water, medicines, radios and

			water stay in and around (Keep mopping it towards drains/ ducts etc.); watch out for snakes, bugs etc. keep information updated on radio/ mobile/ television about any continued occurrence or issue.		communication devices; Everyone must be aware of the regional warnings via e media/ print media/ etc.
3	Tornados/ Storms/ lightening	Nature	Keep all the inflammatory liquids, chemical components and heavy machines/ materials at a safe place always in advance*; Shutdown the main power; Move to a safe nearby store room (it must have, radio, any mode of communication, first aid kits, food and water stored); watch out for snakes, bugs etc. keep information updated on radio/ mobile/ television about any continued occurrence or issue.	Rescue Squad; First Aid squad (emergency help lines); Chief Engineer / Controller	Engage Sirens as a sign of danger; decide a place for gathering; A safety room is must where there is adequate amount of packed food, water, medicines, radios and communication devices; Everyone must be aware of the regional warnings via e media/ print media/ etc.
4	Draught	Nature	Transport water from the available source; use water efficiently; restrict to dry and less work; maintain a water conservation practice, so that it can be utilized in such situation; wear wet angocha/ towel on head to avoid sudden energy loss; in case of excessive heat/ fatigue or no water condition stop the work and relocate workers for a limited period of time till he water is not availed at that place.	Contractor; Chief Controller/ Engineer	Engage Sirens as a sign of danger; decide a place for gathering; A safety room is must where there is adequate amount of packed food, water, medicines, radios and communication devices; Everyone must be aware of the regional warnings via e media/ print media/ etc.
c	**Due to other reasons**				
1	Fire in		Keep all the	Fire	Engage Sirens

Sr.	Emergency Response Plan				
	Emergency	**Probable reason**	**Immediate Action**	**Report To**	**Precautionary Action**
	Camp/ site		inflammatory liquids, chemical components and heavy machines/ materials at a safe place always in advance*; Call the nearest fire station as soon as possible; Evacuate Move to a safe nearby store room (it must have, radio, any mode of communication, first aid kits, food and water stored); watch out for snakes, bugs etc. keep information updated on radio/ mobile/ television about any continued occurrence or issue.	Fighting Squad; First Aid squad (emergency help lines); Chief Engineer / Controller	as a sign of danger; decide a place for gathering; A safety room is must where there is adequate amount of packed food, water, medicines, radios and communication devices; ONLY firefighting Squad is to be allowed to extinguish the fire.
2	Worker falling off a height, drowning in tank, slipping from the raft while working etc.		Rush to pick up the person/ persons; first aid (if needed); Call the ambulance ASAP;	Contractor; Chairman/ project Engineer	Wear Safety helmets; keep safety equipment (rope, torch etc. handy); make sure in advance that the pulley, work space etc. is perfect for performing the task whatsoever; keep away from the danger zones without precautions and other workers.
3	Epidemic Outburst	stored water; garbage dumping/ unmanaged waste; Unhygienic surroundings; alien microbial growth etc.	(Malaria, plague etc.) Keep medicines handy; try and avoid using infected clothes, utensils, areas and contacts; If outburst is prolonged, then evacuate as soon as possible and return when ambiance is back to normal; maintain self and the site in a hygienic and clean manner.	Chief Engineer / Controller	Site must be cleaned and managed properly in case of disposal of garbage etc.; open pits must be closed; stagnant water in tyres/ drums/ logged water must be cleared off

Sr.	Emergency Response Plan				
	Emergency	**Probable reason**	**Immediate Action**	**Report To**	**Precautionary Action**
					ASAP; a book must be maintained for noting down the probable cases and then discuss with authorities for the probable solution in order to avoid more such incidences.
4	Any Particular disease	Seasonal; unhygienic conditions; communicated from elsewhere; occupational diseases; immunity issues etc.	(Diarrhea, food poisoning, typhoid, amoebiasis etc.) infected person/ persons must be taken to nearby hospitals; must be given proper drugs for the treatment; if the disease is communicable (Conjunctivitis, viral etc.), it is advisable to not to use infected persons' clothes/ utensils/ personal stuff (razor, food items etc.); if the disease comes under occupational disease- asbestosis, asthma, broad spectrum infection, psoriasis etc.	Contractor/ Labour Supervisor	On site usually, there could be two reasons: Water borne diseases- Potable water must be provided to all the workers; active educational trainings/ sessions of 15 20 minutes must be provided to all, having subject like washing hands before eating; drinking water must be clean, sanitation and hygiene practices.
5	Mob/ Fight/ strike etc.	Unresolved issue, Disambiguate; due/ pending wages; unattended grievances etc.	If any gathering or a group seems suspicious inform the security guard; try to sort out the matter if possible; if there are uncontrolled situations, inform the police at the earliest; Ask the others who are not related to the discussion to leave the place.	Contractor/ Labour Supervisor, Chairman, Security Officers	Contractor must see into the matter of any unresolved issues; proper answer to any grievance/ demands must be given with appropriate logics;

10.5 Environmental Monitoring Plan

Table 10.5: Environment monitoring plan - Operation phase

Sr.	Item	Parameters	Frequency	Location
1	Ambient air Quality	$PM_{2.5}$ & PM_{10}, SO_2, NO_X, O_3, Pb, CO, NH_3, C_6H_6, BaP, As, Ni	Quarterly	Periphery of the site.
2	Noise level	Equivalent noise Level dB (A)	Quarterly	Near DG sets, Near STP, Near parking area.
3	Exhaust from DG set	Total Particulate matter, SO_2, NO_x	Six Monthly	DG sets.
4	Water analysis	Colour and odour, Suspended solids, pH, turbidity, total dissolved solid, Calcium, Chloride, Fluoride, Residual free chlorine, Iron, magnesium, nitrate, sulphate, Phenolphthalein Alkalinity, Total hardness, total coliform, E-coli	Quarterly	-
5	Waste water analysis	pH, BOD, COD, TSS, TDS, O &G	Quarterly	Before & after treatment from STP.

10.6 Budgetary allocation for EMP

Table gives the expenditure to be incurred by **BramhaCorp Ltd.** on environmental matters during operational phase.

Table 10.6: EMP costing during operation phase

Sr.	Component	Description	Criteria	Capital cost Rs. Lakh	O&M cost Rs. Lakh/year
1.	Storm water management	Laying of storm & Sewer line up to final disposal point	MBBR STP technology	11.00	0.90
2.	Sewage Treatment Plant	1 no. of STP having capacity 70 KLD existing	Maintenance	11.25	0.50
3.	Rain Water Harvesting	2 no. of Borewell	Construction, Maintenance & handling of Biodegradable garbage, segregation of waste	1.90	0.50
4.	Solid Waste Management	Cost for Treatment of biodegradable garbage in vermicomposting	Regular monitoring will be scheduled every month.	3.00	0.40

Sr.	Component	Description	Criteria	Capital cost Rs. Lakh	O&M cost Rs. Lakh/year
5.	Landscape development	Tree Plantation	Installation & Maintenance, battery backup	17.26	1.50
6.	Energy Conservation	Solar PV panels for electricity generation, LED etc.	Tree plantation & landscape area to be developed	25.00	2.60
7.	Environmental Monitoring	Monitoring and analysis of Air, Water, Noise, Soil, surface water, STP treated water etc.	Maintenance	5.00	0.50
8.	Firefighting system	Installation and operation of Fire Fighting system		14.50	1.70
	Total			**88.91**	**8.60**

10.7 Responsibility for further O &M

There is formation of Phase-wise societies for the maintenance and management of environmental infrastructure. Corpus fund handed over to these societies. While handing over Environmental Management Facilities M.O.U. has made with societies to accept responsibility of further O & M of EMF. Apex body/ independent company has established by Society to operate and maintain all Environmental infrastructures including green belt.

Record keeping:

Record keeping and reporting of performance is an important management tool for ensuring sustainable operation of the proposed project. Records is maintained for regulatory, monitoring and operational issues. Typical record keeping requirements is summarized in **Table 9.7.**

Table 10.7: Record keeping requirements

Parameter	Particulars
Air emissions	Random checks of equipment logs/ manuals to check equipment's/ vehicles are operated within specified parameters
Noise	•Noise level recording •Working hour records to minimize night shift •Maintenance records of vehicles to minimize noise from vehicles •Site working practices records and noise reading implement good working practices •Random checks of equipment logs/ manuals to check equipment's operated within specified design parameters
Solid Waste	•Daily quantity of waste generated

Parameter	Particulars
Handling and Disposal	•Daily quantity treated and recycled •Daily quantity sent outside for disposal •Comprehensive Waste Management Plan in place and available for inspection on-site.
E waste /Hazardous Wastes	•Quantity of waste generated •Quantity of wastes sent out for treatment/disposal. •Waste manifests as per regulations
Wastewater Discharge	•Daily quantity of raw and treated sewage •Treated wastewater quality
Drainage	•Visual inspection of drainage and records thereof
Regulatory Licenses (Environmental)	•Environmental Permits / Consents from MPCB /Post clearance submissions to Regional office of MoEF etc. •Copy of Waste manifests as per requirement
Monitoring and Survey	•Records of all monitoring carried out as per the finalized monitoring protocol.
Accident reporting	•Date and time of the accident if any mainly during construction phase •Sequence of events leading to accident •Emergency measure taken •Step to prevent recurrence of such events •Mock drills
Others	•Log book of compliance •environmental, health and safety records for the employees during construction phase •Vehicle maintenance and inspection records

10.8 Training and Capacity Building

Training and human resource development is an important link to achieve sustainable operation of the facility and environmental management. For successful functioning of the project, relevant EMP's is communicated to the following groups of people:

Occupants and Contractors*:*

All occupants had made aware of the importance of waste segregation and disposal, water and energy conservation. This awareness is provided through leaflets and periodic housing society meetings. They informed of their responsibilities for successful operation of various environmental and energy management schemes inside the premises.

Site Staff*:*

Relevant personnel at site is trained for the following:

- Techniques for waste minimization, water conservation and energy conservation.
- Collection, transport, treatment and disposal solid and hazardous/E waste/ Bio Medical Waste.
- Operation and maintenance of Sewage Treatment Plant and reclamation system.

- Requirements of the Disaster Management Plan in case of an emergency.
- Applicable environmental, health and safety regulations and compliance requirements for the same.
- Functioning of the Environmental Management System including environmental monitoring, reporting and documentation needs.

Chapter 11
Summary & Conclusions

11.1 General

BramhaCorp Ltd. intends to develop of residential project. "Bramha Exuberance" at Sr. no. 13 H. no. 1, 2 & 3 of Village – Kondhwa Khurd, Taluka-Haveli, District Pune, State - Maharashtra.

As per the Environment Impact Assessment (EIA) notification dated 14th September, 2006 project comes under 'Category B2' since the total built up area is 50,548.37 m^2 with activity type number '8(a)' and as per MoEF&CC notification dated 14th March, 2017 vide no. S.O.804 (E) the project requires preparation of EIA report to obtain Environmental Clearance from the State Expert Appraisal Committee under the violation cases.

The violation application was submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 07.07.2021 and 28.01.2022 vide F. No. 22-21/2020-IA.III (E 138949) for the FSI area **21,798.69 m^2**, Non-FSI area **28,749.68 m^2** & Construction area **50,548.37** vide proposal no. SIA/MH/MIS/76973/2022 dated 17.05.2022.

The estimated project cost is approximately Rs.27.33 Crore. It includes construction and land cost. The proposed project site encompasses about proposed plot are is 17,433.10 m^2. The site selected for development is situated in Residential zone at village- Kondhwa, Tal- Haveli, Dist.- Pune.

As per sanction 2005, **A & B (4 wings each), D, and E (5 wings each) buildings were constructed with 'built-up area of 39,037.99 m^2**. It comprises of 4 residential buildings, **249 flats** in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21.9.2005 & CC/3387/05 dated 30.12.2005. **The entire work was completed in 2009.**

The Occupancy Certificate was granted to the project on 04.12.2009. Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers 'residents' society in the year **2012.**

The earlier sanctioned plan of year 2005 had all buildings A, B, C, D and E. But we did not construct building C. **It was not economically viable** as the selling cost was not permitting buying the TDR from the open market.

As per CC-3954 dated 04.03.2014, Building No. C was constructed and the total built-up area of the C building is **11,510.38 m^2**. The building configuration of the C building is Lower Parking + Podium +1 Floors & **55 flats.**

The plan for this building C was submitted in the year 2014 and Commencement Certificate was issued on 15.07.2014.

Now, we have applied for Environment clearance for the project having FSI area 21,798.69 m^2, Non FSI area 28,749.68 m^2 and total built up area 50,548.37 m^2 for A, B, C, D & E buildings.

Introduction

The "Bramha Exuberance" is located in Kondhwa, Pune and construction of building A, B, C, D & E has already completed at site as per earlier sanction plan received from Pune Municipal Corporation vide no. CC/2342/05 dated 21.9.2005, CC/3387/05 dated 30.12.2005 & CC-3954 dated 04.03.2014. The construction continued and as on date of total BUA at site **50,548.37 m^2** already constructed.

11.2 Project description and project benefits

The project is located near to residential area in Kondhwa, Taluka Haveli, District Pune, State Maharashtra. There are no mountains, national parks, wildlife sanctuaries, historical monuments etc. in the 10 km radius of the project. Mula Mutha River is passing within distance of 6.8 km. The geographical location of the project site is **18°28'30.41"N** latitude and **73°53'43.23"E** longitude.

The site is about 1 km away from Kondhwa and Pune railway station is 8.1 km from Bramha Exuberance, about 15.1 km away from Pune International Airport, Lohgaon and adjacent to NIBM road.

The project is planned in the total build up area of plot 50,548.37 m^2 areas.

The project had created employment opportunities during construction which benefited local people to get work opportunities. Short-term employment was generated during the construction activities, however approx. 100 employees in administrative and maintenance sector have got employment in this project. This was a positive outcome of the proposed project.

This project has a huge positive impact on the socio-economic environment. Activities such as maintenance of the complex and ancillary services also provided employment. Employment of local residents in tasks like housekeeping, security etc. is expected to have a significant positive impact on employment and business.

11.3 Environmental Examination

For the present EIA study area 10 km, the attributes of environment considered are:

- Air environment (Meteorology, ambient air quality, noise levels, traffic pattern and traffic density)
- Land environment (land use, solid waste disposal etc.)
- Water environment (Ground water, Surface Water Sampling Analysis),
- Biological environment (Flora, fauna, vegetation)
- Socio-economic environment (Demography, educational, literacy etc.)
- Solid waste management and details.

Air Environment

Meteorology (weather and climate) is the key to understand the air quality. An essential relationship between meteorology and atmospheric dispersion involves the wind in the broadest sense of the term. Wind fluctuations over a very wide range of time accomplish dispersion and strongly influence other processes associated with them. The detailed data on the microclimate of the site was collected for a period of one month. **December 2022** representing the winter season. The data summaries are given in the report. It was observed that the predominant wind direction during winter season was from East to West directions. Average wind speed was **2.47m/s**. Wind rose is also presented in the report.

Ambient air quality

Air pollution can cause significant effects on humans, animals, vegetation and materials. The Bramha Exuberance project construction is not a major contributor to the air pollution except for particulate matter emission during both construction phase due to plant and machinery and vehicular pollution during use phase. However, air environment monitoring covered the parameters for which National Ambient Air Quality standards have been defined by Central Pollution Control Board, New Delhi/ Maharashtra Pollution Control Board, Maharashtra. Accordingly, parameters monitored were, Particulate Matter (Size less than 10µm) (PM_{10}), Particulate Matter (Size less than 2.5µm) ($PM_{2.5}$), Oxides of Nitrogen (NO_x), Sulphur dioxide (SO_2). Vehicular emissions and construction activities are the major contributors affecting the ambient air quality. Also, Ozone (O_3) and Lead (Pb), Carbon monoxide (CO), Ammonia (NH_3), Benzene (C_6H_6), Benzo(a)Pyrene (BaP), Arsenic (As) and Nickel (Ni) for the study area analyzed.

A well-devised air quality monitoring programme was undertaken to ascertain the major air pollutants.

Traffic Pattern and Traffic Density

Traffic pattern and traffic density was assessed in the study area for 12 hours for different locations Separate internal pathways for pedestrians, ramps for disabled persons, road painting and signage and speed breakers as required and insisted upon by local authority shall be provided inside the premise of project.

Solid waste management

Solid waste generated from entire project is about **699 kg/day**. Out of this, **419 kg/day** is biodegradable component, **280 kg/day** is non-Biodegradable. Collection of solid waste is doing. Segregation of dry and wet garbage is doing at source. Dry garbage is in the form of inert/recyclable waste such as plastics, glass, metals, rubber, etc. is segregated and disposed of authorized waste collection agency. Wet garbage/ biodegradable matter like leftover food, vegetables are composted using vermicomposting pits. Hence, the proposed project would not cause adverse environmental impact in case of solid waste generation and management.

Noise Environment

The environmental impact of noise generated depends on the environmental setting of the project, population distribution around the plant and on noise sources within. In the proposed project noise was generated during the construction phase. However, measures were taken to minimize noise generation at source itself. Preventive maintenance and suitable measures were taken to reduce the noise levels below permissible limit. Ear-plugs/ear-muffs were provided to workers in high noise areas. Noisy activities were restricted to the day time.

Green belt development plan is further act as a barrier for noise generated due to traffic. Studies revealed that total noise level impact of the proposed project sources, after the implementation of proposed project on nearby human settlement, is not increase significantly. Additionally, suggested Environmental Management Plan has implemented. The monitored noise levels in the study area are well below the noise standards.

After the implementation of the Bramha Exuberance project sources total noise level impact on nearby human settlement, isl not increase significantly. Additionally, suggested Environmental Management Plan was implemented. The monitored noise level in the study area is below the noise standards.

Hence, due to Bramha Exuberance project, there was no significant impact on the ambient noise quality of the study area and the post project noise levels is well below the stipulated standards of Central Pollution Control Board, New Delhi (CPCB).

Water Environment

Domestic sewage effluent generation from the proposed project is around 173 m^3/day. The sewage generated is first treated in STP. Sewage treatment plants is provided for Residential buildings. 1 no. of STP has installed having total capacity 70 m^3/day. Society is not operating STP.

Sewage Treatment Plant

The process adopted in the sewage treatment plant will be Moving Bed Bio-film Reactor.
The treatment will include the following unit/equipment;

- Screen chamber
- Oil and Grease Chamber
- Equalization tank
- MBBR Tank
- Settler
- Raw Sewage Transfer pumps
- Treated water storage tank

Socio-economic Environment

The environment is a whole complex of physical, social, economic, cultural and aesthetic dimensions, which affects individual, communities and ultimately determines their forms, characters, relationships and survival. As such, it becomes imperative to integrate the components of socio-economic environment into the impact assessment study related to environmental conservation, protection and management.

An investigation survey of the study area was conducted during the study period considering the socio-economic condition of the study area. Data about the villages were collected both from secondary and primary sources.

The baseline information is collected by way of primary and secondary data. An official Census 2011 detail of Pune, a district of Maharashtra released by Directorate of Census Operations in Maharashtra was used as secondary data. Socio-economic survey also helps to understand people's awareness and opinions about the project, as well as their misapprehensions about and expectations from the project.

Socio-economic Survey

A survey; pertaining to the subjective analysis of the socio-economic indicators, to assess the perception of the inhabitants in the study area, as well as the project, is undertaken. This also, in general, reflects on the 'Quality of Life' in this region. The indicators refer to housing, occupation, education and health status, availability of fuel, water supply, sanitation and transportation.

11.4 Additional studies

Emergency preparedness

Drills

Building evacuation drills are mandatory for all residents, visitors, and security personnel. Consult Managing Committee if there is wish to have an evacuation or fire drill in commercial building. The Managing Committee is responsible for conducting the drill and documenting it. Periodic report for the same would be submitted to higher authority.

Securing building contents during Natural Disasters

Many earthquake-related injuries do not come from collapsing buildings, but from objects inside the building which fall on people, or from windows shattering and causing lacerations. Management ensures that shelves, heavy glass windows, any other equipment's are physically secured.

The structure elements consist of the foundations, columns, beams and slabs, walls, and braces that hold the building up against vertical gravity forces and horizontal wind and earthquake forces. The non-structural elements include building service system, such as electricity and lighting, heating and cooling, plumbing and interior architectural system, such as ceilings, floors, partitions, and other interior components. Contents and equipment's are completely dependent on the type of occupancy and function of the space.

11.5 Natural Resource conservation

Landscape planning & proper management practice plays a major role in this aspect. It deals with the role of plants & proper landscaping & selection techniques in reducing the pollution waste management. It improves aesthetics with the use of existing vegetation. It concerns how wildlife is sustained. It is an attempt to strengthen biodiversity status of the area through inclusion of certain useful species on project site.

Landscaping play's major role in maintaining city's environment in ecological condition by maintaining aesthetic sense to flourish its biodiversity. Pune city is growing in a very rapid pace showing its impact on physical status. Number of old trees are removed or pruned for development works by changing the face of the land & introducing new vegetation. The plant species; which attract insects, birds for nesting, feeding or breeding; act as ecological controller in future.

11.6 Resettlement and Rehabilitation action plan

In this project there is no population displacement due to the residential project "Bramha Exuberance" at village Kondhwa Khurd, Pune. Hence, Resettlement and Rehabilitation action plan is not applicable.

11.7 Environmental Management Plan and Post Project Monitoring Program

Environmental Management Plan (EMP) deals with mitigation of unavoidable or residential impacts. The Environmental Management Plan (EMP) is needed to ensure that the mitigation measures specified in the EIA will actually be complied with when the project is approved for implementations. Monitoring details are given in Chapter 6.

11.8 Risk Assessment (RA) and Disaster Management Plan (DMP)

Four factors which contribute to the risk are:

- Hazards (natural such as earthquake, floods, landslides, cyclones etc. or manmade such as exposure to hazardous material, explosion etc.)
- Location of hazard relative to the community at risk.
- Exposure (the effect of hazard on infrastructure and lifeline systems serving the population such as water supply, communication, transportation network etc.)
- Vulnerability of the exposed society, structure and systems to the hazard.

Following are the risks that are identified and proper preventive measures are already implemented in project site.

11.9 Fire Risk

Fire is a serious threat for any health-care facility. Many patients have special needs that make them especially vulnerable in a fire emergency, thus increasing the risk of fire-casualties. Healthcare staff must therefore make every effort to prevent fires from starting and must be prepared to respond if a fire breaks out.

Fire is mainly caused in project due to carelessness, short circuits, malfunctioning of gas regulator, tube and such related products. At the proposed project, hazard occurrence may result in on-site implications like:

- Leakage of flammable material leading to fire;
- Fire and/or explosion;
- Natural calamities like earthquake etc.
- Short circuit in any electric equipment's due to voltage fluctuations.

Potential Fire Hazards:

The following are the Potential Fire Hazards identified in this building:

- Petrol and diesel in form of fuel at common parking floors;
- Diesel in fuel tanks of in DG sets,
- Combustible materials e.g. paper, cardboard, plastic, fabrics etc. will be present.

There will be proper storage of the combustible material like paper, cardboards. Location mapping for the same was carried out at the time of commissioning;

Disaster Management Plan

- Modern disaster management goes beyond post-disaster assistance. It includes pre-disaster planning, preparedness activities, organizational planning, training, information management, public relations and many other fields.
- The events of a disaster can move rapidly and can be extremely traumatic for those who are unprepared. Disaster managers often do not get a second chance.
- Principles of disaster management apply in both routine & crisis incident, during disaster mitigation and disaster reconstruction.
- Emergency operations cover both the preparedness phase & the immediate post disaster period.

Onsite Emergency Plan

For incidents which could affect people and the environment inside the building.

- Display of emergency phone nos. (Includes phone number and address of nearby hospital, fire station, police station, public help service etc.)
- Periodic maintenance and checking of all equipment.
- Training to all users for different type of emergencies
- Building emergencies manual
- Training program for the tenants, security guards, housekeeping and other stake holders of the building.
- Evacuation plan, floor plan, site plan, elevation marked with refuge area etc.
- Fire & other emergencies regular drill programs
- Posters and other templates, showing emergency preparedness for children and building occupants.

Evaluation and updating of the plan to improve effectiveness.

Offsite emergency plan

For the incidents which could affect people and the environment inside the building:

- Awareness programme conducted
- Emergency awareness program for the outsiders performed.
- Evacuation procedures signage and templates displayed.
- Fire & other emergencies: regular drill programmes for outsiders performed.

11.10 Public Health and safety issue related to the project

The major concern of public health and safety issues related with Polyclinic (Institutional) is biomedical waste that will be generated after its commissioning. The biomedical waste will be segregated as per Bio Medical Waste (Management and disposal) Rules, 2016 and properly disposed of through authorized vendor for handling and disposed of biomedical waste from Polyclinic (Institutional). Regarding safety of patient and visitors we have already planned environmental cell to take preventive measures for safety related concern. There have been no other public health and safety related issues to be exist in this setting which might cause harm to public health.

11.11 The Socio-economic impacts of the projects

Operational phases

The proposed project has major positive impacts on socio-economic environment. Provision of recreational ground is supporting for protection of natural environment, recreational facilities, improving a community's image, socio-economic status and enhancing the area's desirability. Recreation brings neighbours together, encourages safer, cleaner neighbourhoods and creates a livelier community atmosphere.

11.12 Energy conservation measures to be implemented

Alternatives are used for energy conservation. Energy conservation plan is implemented through measures taken both on energy demand and supply. Energy conservation plan starts from the building planning.
The conservation efforts are consisting of the following:

- Architectural design
- Maximize the use of natural lighting through design.
- Increase natural source of light through glazed windows.
- Energy saving practices

- No use of energy efficient processes or specialized building material used for energy conservation during construction phase.
- Specially designed Air-conditioned system, cooled screw with variable speed drive is used.
- Pressure independent balancing cum control valve is in use.
- Entire building is illuminated with lower power consuming LED fixture.
- Multiple circulations are done to keep the lights off during nights.
- Day light sensors are provided in common areas.
- Motion sensors are provided in all the occupancy areas including toilet blocks.
- Water cooled heat pumps are used for hot water system which consumes low power as well as give chilled water as by product.

Summing Up

Kondhwa Khurd is in a phase of major development in Pune District. The demand supply scenario presents a great opportunity to set up a development project for construction of residential buildings. With the demand increasing as a result of the upcoming mega projects, a large demand for residential construction spaces is also foreseen in and around Kondhwa Khurd, Pune.

The project proponent has adequate pollution control measures for the effective control of environmental pollution at source itself. Similarly, green belt development, water conservation and social welfare activities will also be taken up on a priority basis in the area.

An Environment Management Plan is implemented vigorously during construction as well as operational phase. Risk Assessment, Disaster Management Plant plan (DMP) has been prepared and DMP is implemented dynamically. An Environment Monitoring Cell is look after pollution control at source, environmental monitoring, remedial measures, social welfare activities etc.

In view of the above, the proposed residential project 'Bramha Exuberance' by M/s. BramhaCorp Ltd. is environmentally compatible in all respects.

Chapter 12
Details of Consultant Engaged

This EIA report [Form I, Pre-feasibility report & Executive Summary or EIA in case of Industrial project] is prepared on behalf of the proponents, taking inputs from proponent's office staff, their R & D wing, Architects, Project Management Professionals etc. by Environmental Consultants **M/s. Mahabal Enviro Engineers Pvt. Ltd.,** Thane, that are approved under QCI-NABET scheme. Accreditation Committee meeting for Re-Accreditation held on September, 2021. Sectors is given below,

Table 12.1: Sectors Approved

Sr. No.	NABET Scheme Sectors	Sector Description	Cat.	Sector No. (MoEFCC Notification dt. September 14,2006 & Amendments)
1	1	Mining of minerals opencast only	A	1 (a) (i)
2	2	Offshore and onshore oil and gas exploration, development & production	A	1 (b)
3	4	Thermal power plants	B	1 (d)
4	8	Metallurgical industries (ferrous & non-ferrous)	B	3 (a)
5	9	Cement plants	B	3 (b)
7	22	Distilleries	A	5 (a)
8	27	Oil & gas transportation pipeline (crude and refinery/ petrochemical products), passing through national parks/ sanctuaries/ coral reefs /ecologically sensitive areas including LNG terminal	A	6 (a)
9	31	Industrial estates/ parks/ complexes/areas, export processing Zones (EPZs), Special Economic Zones (SEZs), Biotech Parks, Leather Complexes	A	7 (c)
10	32	Common hazardous waste treatment, storage and disposal facilities (TSDFs)	A	7 (d)

13.2 Brief description

BramhaCorp Ltd. is Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra.

The project consists of total 5 Residential buildings i.e., Building A, B (4 wings each), C, D, and E (5 wings each) with total 249 nos. of flats.

Construction of 5 Residential buildings A, B, C, D & E completed at site as per received sanction plans i.e. 50,548.37 m^2.

As per sanction 2005, **A & B (4 wings each), D, and E (5 wings each) buildings were constructed with 'built-up area of 39,037.99 m^2**. It comprises of 4 residential buildings in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21.09.2005 & CC/3387/05 dated 30.12.2005. **The entire work was completed in 2009.**

The Occupancy Certificate was granted to the project on 04.12.2009. Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers 'residents' society in the year **2012.**

As per CC-3954 dated 04.03.2014, Building No. C was constructed and the total built-up area of the C building is **11,510.38 m^2**. The building configuration of the C building is Lower Parking + Podium +1 Floors & **55 flats.**

Commencement Certificate of the last C building was issued on 15.07.2014.

20000 m^2 construction area was crossed on dated 20.11.2006.

The violation application is submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 07.07.2021 and 28.01.2022 vide F.

No. 22-21/2020-IA.III (E 138949) for the FSI area **21,798.69 m²**, Non-FSI area **28,749.68 m²** & Construction area **50,548.37** vide proposal no. SIA/MH/MIS/76973/2022 dated 17.05.2022.

13.3 Violation

The construction is completed as per the sanction plan. The violation component is only the completed construction of area **50,548.37** m^2 which is crossing the EC applicability limits under the office memorandum (OM) dated 07.07.2021 and 28.01.2022 issued by the Ministry of Environment, Forest and Climate Change (MoEFCC), New Delhi. This area constructed is the violation.

As per the office memorandum (OM) dated 07.07.2021 has prescribed the procedure to assess the cases where violation has taken place. Hence the present application is prepared and submitted as per the Notification requirement.

The EIA preparation is in process considering the Standard ToR prescribed by Administrative Staff College of India, Hyderabad, 2010 and MOEF&CC Standard Book, April 2015, Additional ToR received in the 165th SEAC-III meeting & the 259th SEIAA meeting dated 20.04.2023.

Building configuration of A, B, C & E building is LP + P + 11 floors & D building is LB + LP + P+11 floors.The total project with all buildings, having BUA of 50,548.37 m^2 is hereby submitted for grant of prior EC now. This construction above the Environmental Impact Assessment Report constructed residential building of Bramha Exuberance" at Village-Kondhwa Khurd, threshold limit of 20,000 m^2 would be considered as violation as per the office memorandum (OM) dated 07.07.2021 and 28.01.2022 issued by the Ministry of Environment, Forest and Climate Change (MoEFCC), New Delhi vide F. No.22-21/2022.IA.III.

Therefore, we are applying to get clearance for project under violation procedure.

The purpose of this Environmental Impact Assessment (EIA) study is to provide information on the nature and extent of environmental impact which might have been arising from the construction of Ganga Arcadia project. Additionally, we have prepared Environmental Management Plan (EMP), Assessment of damage to environment, Community Resource Augmentation plan, to verify any adverse environmental impact.

It has to be noted that the BramhaCorp Ltd. had the 'Approved Sanction Plan' for the project of Bramha Exuberance.

Even though the prior 'Environment Clearance' was not received for residential buildings 'Bramha Exuberance' constructed; the 'Environment Management Plan' was implemented during the construction of these buildings.

i. The construction has been done which can run sustainably under compliance of environmental norms with adequate environmental safeguards.

ii. The project has been constructed at site with approved conceptual plan and permissible under prevailing laws. All the precautions as stipulated in the 'Environment Management Plan' were followed at site.

No compromise or alterations were required to be done in case of open spaces, tree plantations, and all other environmental facilities as planned.

Environmental safeguards Facilities are already implemented at site such as 70 KLD of STP, 34 no. of Vermicomposting pits, 2 no. of the recharge well, 2,046 m2 green area, Solar PV Panels, fire fighting system have been provided at the project site.

Chapter 14
Assessment of Ecological Damage Report

14.1 Background Violation

"Bramha Exuberance" is a residential project at sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BrahmaCorp Ltd.

The violation application was submitted on PARIVESH portal as per MoEF&CC Office Memorandum dated 07.07.2021 and 28.01.2022 vide F. No. 22-21/2020-IA.III (E 138949) for the FSI area **21,798.69 m²**, Non-FSI area **28,749.68 m²** & Construction area **50,548.37** vide proposal no. SIA/MH/MIS/76973/2022 dated 17.05.2022.

As per sanction 2005, **A & B (4 wings each), D, and E (5 wings each) buildings were constructed with 'built-up area of 39,037.99 m²**. It comprises of 4 residential buildings in 2005 as per the Sanctioned plan No. CC/2342/05 dated 21.9.2005 & CC/3387/05 dated 30.12.2005. **The entire work was completed in 2009.**

The Occupancy Certificate was granted to the project on 04.12.2009. Society registration was done on 29.08.2011 and the possession of the flats and buildings was handed over to the buyers 'residents' society in the year **2012.**

The earlier sanctioned plan of year 2005 had all buildings A, B, C, D and E. But we did not construct building C. **It was not economically viable** as the selling cost was not permitting buying the TDR from the open market.

As per CC-3954 dated 04.03.2014, Building No. C was constructed and the total built-up area of the C building is **11,510.38 m²**. The building configuration of the C building is Lower Parking + Podium +1 Floors & **55 flats.**

The plan for this building C was submitted in the year 2014 and Commencement Certificate was issued on 15.07.2014.

14.2 Violation in a glance

Table 14.1: Details of violation

Sr.	Particulars	Building A	Building B	Building C	Building D	Building E	Total
1	**FSI**	3,191.55	3,191.55	4,706.14	4,867.09	5,443.65	21,399.98

9	**Podium area**	1,464.70		3,023.17	1,474.18	1,763.76	7,725.81
10	**Lift M. room**	10.24	10.24	7.82	10.24	10.24	48.78
11	**Built up Area of residential buildings**						40,921.87
12	**Area of club house**						310.06
13	**Area of Transformer room**						20
14	**Area of undergrounds tanks**						100
16	**Area of Security cabin**						25
17	**Area of Parking below podium**						7,197.37
18	**Terrace (11th floor of each building)- A=296.80+B=296.80+C=427.47+D=449.06+E=503.94**						1,974.07
	Total built up area of the project						**50,548.37**

14.3 Environment Management Plan

EMP was already prepared as the part of the project planning. The same EMP is also followed during construction of additional area. As such the same environmental monitoring plan, management plan and mitigatory measures were taken care.

The violation is in the nature of construction of additional area of 30,548.37 m^2 beyond the applicability limit of EC for construction project as per the office memorandum (OM) dated 07.07.2021 and 28.01.2022 issued by the Ministry of Environment, Forest and Climate Change (MoEFCC), New Delhi vide F. No.22-21/2022.IA.III.

Only the project portion that has been sanctioned from Pune Municipal corporation has been commissioned (i.e. Building A, B, C, D, and E as per the Sanctioned plan No. CC/2342/05 dated 21.9.2005, CC/3387/05 dated 30.12.2005 and CC-3954 dated 04.03.2014) 'Environment Management Plan' is already implemented and followed meticulously.

We envisage no additional damage to environment, as EMP was already implemented during the construction phase and the additional area 30,548.37 m^2 of Building A, B, C, D, and E which is 60% of the total project area.

All the environmental parameters that are being monitored as part of the EMP; i.e. air emissions (fugitive), ambient air quality, noise, emissions

from sources (D.G. set, construction equipment, transport vehicles), surface / ground water quality, soil, etc.

The construction of A, B, C & E building is LP + P + 11 floors & D building is LB + LP + P+11 floors had the same environmental parameters that were required to be monitored and controlled. As such the same EMP was also continued to be implemented during the construction of A, B, C, D, and E building.

The construction of A, B, C, D, and E building was completed in about 159 months. As such the environmental monitoring and EMP was implemented, as planned and provided for during construction phase.

- Construction is done as per approved building plan obtained vide No. CC/2342/05 dated 21.09.2005 & CC/3387/05 dated 30.12.2005 (A & B -4 wings each, D and E -5 wings each building) and as per CC-3954 dated 04.03.2014 (C building)**.**
- Violation relates to only additional built-up areas **30,548.37** m^2. There is no change in plinth area & therefore percentage of ground coverage does not change. There is no change on environmental factors.
- As such there is no additional damage to environment due to violation in the project. Present status of environmental parameters such as air, water, noise soil, bio-diversity, ecology, tree plantation etc. is enclosed.
- We are also enclosing the complete EIA report for this project.

Detail Ecological damage assessment report is attached as **Annexure I.**

Chapter 15
Remediation Plan and Nature and Community Resource Augmentation Plan

15.1 Environmental Management Plan

The Environmental Management Plan (EMP) has been developed to ensure that the project is implemented in an environmentally sustainable manner where all contractors and subcontractors, including proponent, understand the potential environmental risks arising from the project and take appropriate actions. EMP also ensures that the project implementation is carried out in accordance with the design and by taking appropriate mitigative actions to reduce adverse environmental impacts during its life cycle.

Table 15.1: Environmental Management Plan for Operation Phase

Operational Activities	Potential Impacts	Mitigation Measures
Impact due to Water Consumption & Wastewater Generation	Fresh water consumption	• Use of low flow and low flush – water saving plumbing fixtures, automatic level controllers at water tanks to reduce / optimize the demand side of water resource.
	Sewage generation & disposal problems	• Onsite Sewage Treatment Plant of capacity 70 KLD based on MBBR technology has been provided.
Impact due to rainwater discharges	Water Pollution	• Rain water harvesting through 2 recharge borewell. • Rain water & storm water management plan is incorporated. • Annual Cleaning of Recharge pits, RWH filters and SWD.
	Flooding conditions	• Adequate Storm water drains to collect, carry, recharge/discharge storm- water runoff. • Regular Cleaning of SWD

Operational Activities	Potential Impacts	Mitigation Measures
	Biological Environment	• Plantation of Native trees along the plot boundary and RG area • Tree already planted: 392 Nos. • Landscape area provided: 2,045.85 m^2
Impacts due to Solid Waste generation	Land pollution	• Separate dustbins for collection of wet & dry waste have been provided. • Wet garbage has composted using vermicomposting system and used as organic manure for landscaping • The inorganic material is handed over to authorized vendors.
Impact due to Energy Consumption	Energy Consumption for building utilities and functions	• We have installed solar PV panel for residential building having capacity 135000 KWH/Annum. • Solar hot water system is provided for buildings having capacity 57420 KWH/Annum • The site planning has been done such that none of the building blocks are hinder light access to other buildings • The project is using pumps, motors and transformers with minimum losses and as per the ECBC 2007 requirements.
Parking	Traffic congestion	• Proper entry and exit points and driveways are provided for easy movement of vehicles • Vehicular movement and signages have been installed. • Adequate parking space is provided
DG set and Traffic	Noise Pollution	• Existing DG set: We have installed 1 no. X 82.5 kVA DG set on project site. • Traffic management measures to reduce noise.

Operational Activities	Potential Impacts	Mitigation Measures
		• Plantation along plot boundary, Creepers on Plot boundary
Energy Consumption for Thermal Comfort of people		• Tree plantation done along the periphery of the project site ensuring adequate buffer and reducing heat gain by the building • The project design uses high energy performing building materials which would have low U value (Thermal Conductance) as compared to the conventional materials. The external wall of proposed building would use fly ash blocks & glass have mandatory SHGC as required by ECBC.
Energy Consumption for Lighting		• Internal and external lighting designs are provided as required by ECBC with Lighting Power Density as per space requirements. • The project provides 20% lower LPD than as specified in ECBC, to achieve energy saving, while providing the require illumination levels, by using high efficacy lighting. • Solar PV units of having capacity 135000 KWH/Annum provided for buildings. • Solar hot water system is provided for buildings having capacity 57420 KWH/Annum.
Safety hazards		• The Transformer or the Sub Station for the project are adequately protected from entry, allowing only authorized personnel to enter the facility • All required energy protection measures such as high voltage cut-off, shock protector etc. had installed.
Impacts due to Cleaning & repairing activities		• A Manual is created by the PP to make occupants aware of these measures to be undertaken: • Choose non-toxic, biodegradable substitutes for household cleaning agents. • Avoid products with potentially harmful ingredients such as sponges with antibacterial ingredients. • Conserve water, sweep instead of wet mop when possible. • Use biodegradable drain clog removers made with natural enzymes.

Operational Activities	Potential Impacts	Mitigation Measures
	• Don't pour hazardous chemicals through the sink or the drain; Don't use chlorine-based bleach for cleaning • The regular monitoring & repairing of the equipment's such as STP, DG sets etc. to avoid the sudden failure. • Cleaning of building premises, parking areas and common areas are doing on a regular basis, taking care to see that no solid waste is carried to the storm water drains. • Green Guideline Brochure circulated to AMC workers.	

15.2 Budget allocation (Operation phase)

It is necessary to include the environmental cost as a part of the remediation plan as it is a sum provided for mitigation measures taken in accordance to the loss that has or would be suffered. It is proposed to take up protective measures like water sprinkling on road during construction, STP, rainwater harvesting, Solar PV units, Solar hot water, vermicomposting plant and green belt development for execution of Environmental Management Plan.

The details of adequate budgetary provision are given below;

Table 15.2 Budget Allocation for Operation Phase

Sr.	Component	Details	Capital cost Rs. Lakh	O&M cost Rs. Lakh/year
1.	Storm water management	Laying of storm & Sewer line up to final disposal point	11.00	0.90
2.	Sewage Treatment Plant	1 no. of STP having capacity 70 KLD existing	11.25	0.50
3.	Rain Water Harvesting	2 no. of Borewell	1.90	0.50
4.	Solid Waste	Cost for Treatment of biodegradable garbage	3.00	0.40

Sr.	Component	Details	Capital cost Rs. Lakh	O&M cost Rs. Lakh/year
	Management	in vermicomposting		
5.	Landscape development	Tree Plantation	17.26	1.50
6.	Energy Conservation	Solar PV panels for electricity generation, LED etc.	25.00	2.60
7.	Environmental Monitoring	Monitoring and analysis of Air, Water, Noise, Soil, surface water, STP treated water etc.	5.00	0.50
8.	Firefighting system	Installation and operation of Fire Fighting system	14.50	1.70
	Total		**88.91**	**8.60**

15.3 Cost benefit analysis

Cost benefit analysis is a method of assessing a project that quantifies in monetary terms the value of all the effects of the project on the investor and / or society. The main purpose of cost benefit analysis is to base funding decisions and implementation of construction projects. Every project has the potential to result in benefits to the community. These benefits are primarily economic and include employment and workforce training.
Secondary benefits are in term of up gradation of the connected area like local businesses always flourish with any construction project. Benefits in monetary terms are given in table below:

Table 15.3 Qualification & Cost of Officials/Persons of Environment Management Cell

Sr.	Officials	Qualification	Salary in Rs./month
1	Chairman	N.A.	N.A.
2	Secretary	N.A.	N.A.

Sr.	Officials	Qualification	Salary in Rs./month
3	Supervisor	M.Sc./BE Environment	19,000
4	Operators for STP – 2 Nos.	I.T.I	15,000
5	Operator for vermicomposting – 34 No.	-.	9,000
6	Outside agency for collection of waste from door to door	-	20,000
7	Outside agency for monitoring and six monthly	-	20,000
8	Disaster Management Supervisor	M.Sc.& Diploma in Fire & Safety	15,000
9	Officer	B.Sc.& Diploma in Fire & Safety	12,000

15.4 Natural resource augmentation

Rain water harvesting: Roof top rain water harvesting is proposed through 2 nos. of bore well recharge pits. 2 no. bore well recharge pits are already provided on site.

Trees: Proponent has planted around 392 nos. of native trees at plot and provided green spaces (2,045.85 m^2) in the project premises that would serve as a carbon sink for the site, assembly point during emergencies and would improve the aestheticism of the area

Renewable Energy: We have installed solar panel for residential buildings having capacity 135000 KWH/Annum. This is helping to reduce the carbon footprint. Solar hot water system is provided for buildings having capacity 57420 KWH/Annum

Building Material: The project design uses high energy performing building materials which would have low U value (Thermal Conductance) as compared to the conventional materials. The external wall of proposed building would use fly ash blocks, AAC blocks & glass have mandatory SHGC as required by ECBC.

Water Recycling: Total water requirement during the operational phase of constructed buildings is 185 KLD. The treated water from STP is

recycled for flushing, gardening purposes This is helping to reduce the fresh water requirement. The freshwater requirement is 123 KLD.

15.5 Community resource augmentation plan

The project is a residential project and the major benefit due to the project activities are in the field of generating direct and indirect employment for the nearby locality of the region. The local people were given priority during the construction period as labourers. The project has been providing positive impact on the economic development of the region in terms of employment opportunities.
The significant positive impact on employment and occupation is envisaged on account of;

- Better Economic status of the community due to better earnings
- Permanent employees Housekeeping staffs, Security guards, Electricians, Plumbers, etc. has been employed from the locality of the project.
- Higher input towards infrastructural facilities due to the activities of the project.
- Community infrastructure and services has been improved under Corporate Social Responsibility (CSR).

Project Proponent has set out responsibilities the for implementation and monitoring the of augmentation plan. Monitoring the of Augmentation Plan has been done to determine:

- Whether the measures have been implemented as per plan;
- The success of implemented measures;
- Identification and reporting of measures which are not proving effective;

15.6 Calculation of cost of remediation plan and natural & community resource augmentation plan

Penalty provision for violation application as per approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance available on the portal: "ecmpcb.in".

Sr.	Description	Details	Amount
A	**Assessment of Environment Damage**		
1.	Total of recurring cost	Cost arrived from above table per day X number of days in violation	Rs.5,657/day x violation days 2,568 Nos. = Rs.145 Lakh

Sr.	Description	Details	Amount
2	Non-recurring cost	Cost as arrived from above tables	Rs.146 Lakh
3	**Subtotal (1+2 above)**	**Subject to minimum Rs. 1 Crore**	Rs.291 Lakh
4	Excluding Cost of STP, rechange bore well, planted trees, cost of barricades around the project site and O & M cost		Rs.121 Lakh
5	**Overall total (3-4 above)**		Rs.170 Lakh
B	**Economic benefits accrued due to violation**		
1.	Economic benefits	1 % of Total project cost including land, as declared by PP before SEAC, subject to maximum Rs. 10 crores	• Total project cost of constructed building is Rs.27.33 Crore • 1% of project cost i.e. Rs.27.33 Lakh
2.	Track record of Project proponent	Incremental cost of Rs. 10 lakhs for each EC violation by PP observed at any other projects in last 3 years.	All directors on board have no track record of other violation
C	Cost of remediation plan and natural community resource augmentation plan	Sum of A & B above or amount equivalent to the MoEF&CC's office Memorandum no. F. No. 22-65/2017-IA-III dated 01/05/2018, whichever is higher.	• Sum of A & B – Rs.197.5 Lakh • As per MoEF&CC's office Memorandum no. F. No. 22-65/2017-IA-III dated 25/02/2021, CER not applicable for B2 category projects. • Therefore, the cost of remediation plan is **Rs.197.5** Lakh which is higher.

Penalty provision for violation application as per OM dated 07.07.2021 and OM 28.01.2022 under EIA Notification 14.09.2006 for new project as follows;

Sr.	Details	Amount in INR
A.	Project cost attributed to violation area incurred up to the date of filing of the application	Rs.27.33 Crore
B.	1% of A	Rs.27.33 Lakh
C.	Total project turnover during the period of violation	Rs.95.87 Crore
D.	0.25% of the total turnover during the period of violation	Rs.23.97 Lakh
E.	**B+D**	**Rs.51.3 Lakh**

15.7 Remediation cost bifurcation:

Sr.	Description of Activity	% allocation	Total cost will be spent within one years after the receipt of EC (Rs. In Lakh)	Activities to be done at	Implementing agency	Remarks
1.	Afforestation (can include plantation, garden development)	25%	49	Plantation will be done at both sides of roads & garden in the 1 km to 3 km vicinity from the project site.	Social forestry and Local body (Pune Municipal Corporation)	The afforestation can be either through social forestry or the local body. Preferably within 50 km from project site
2.	Water conservation program (Jalyuktshivar, etc.)	25%	49	In consultation with Pune Municipal Corporation in the water shortfall areas.	Local body (Pune Municipal Corporation)	Preferably within 50 km radius from project site
3.	Urban environment and sanitation (can include swatchta Bharat, playground development, urban ground-water recharge schemes etc.)	20%	40	Slum area at Pune village in consultation with respective local authority	Local body (Pune Municipal Corporation)	
4.	Sewerage lines and STP, solid waste management	20%	39	Development of sewerage line and STP & solid waste management in slum area of Pune Municipal	Local body (Pune Municipal Corporation)	

Sr.	Description of Activity	% allocation	Total cost will be spent within one years after the receipt of EC (Rs. In Lakh)	Activities to be done at	Implementing agency	Remarks
				Corporation.		
5.	Urban air/noise Pollution control initiatives	10%	20.5	We will be provided air pollution measure machines & noise barrier in traffic prone areas near project site and also in consultation with Pune Municipal Corporation.	Local body (Pune Municipal Corporation)	
		100%	**197.5**

Environmental Damage Assessment Report

1. INTRODUCTION

Damage Assessment is the assessment of actual impacts in terms of air, water, land, ecology, and socio-economic aspects on a particular area resulting from the incidents like a disaster, construction etc. Ministry of Environment and Forest (MoEF&CC) has issued a notification on the procedure to be adopted for dealing with the EC violation cases on 07.07.2021, 28.01.2022 and these violations are primarily related to initiating the project work or carrying out the project activities without obtaining the mandatory EC. The Office Memorandum (OM) dated 07.07.2021 and 28.01.2022 stipulated the procedure for consideration of such cases where construction of projects was carried out without obtaining EC, treating such cases as violation cases.

Bramha Corp Ltd. intends to develop Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra.

The total plot area is 17,433.10 m^2. Total FSI area is 21,798.69 m^2. The total construction area is 50,548.37 m^2.

The project consists of total 5 Residential buildings i.e. Building A, B (4 wings each), C, D, and E (5 wings each) with total 249 nos. of flats.

The Construction of 5 Residential buildings i.e. Building A, B (4 wings each), C, D, E (5 wings each) with services (STP, vermicomposting pits and Transformer & DG) was completed on site covering total built up area of **50,548.37 m^2**. The construction of area above 20,000 m^2 is comes under violation of EIA Notification 2006 and shall be dealt with procedure stipulated in the office memorandum (OM) dated 07.07.2021 and 28.01.2022 issued by the Ministry of Environment, Forest and Climate Change (MoEFCC), New Delhi.

The damage assessment plan and remediation & Natural community augmentation plan is prepared as per approach paper "Assessment for Environmental Damage and Estimation of Remediation Costs for Building Construction Projects initiated without obtaining mandatory Environmental clearance (Violation Cases) dated 18.03.2019" issued by SEIAA Maharashtra.

1.1 LOCATION

The Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra.

The Latitude and Longitude of project site is as follows:

Latitude: 18°28'31.22"N

Longitude: 73°53'42.44"E

The google Image of the project is given below:

Figure 1: Google Image showing the Project site

Proposed Development and present status:

The details of the proposed building configuration and the present status of the project is given in Table 1

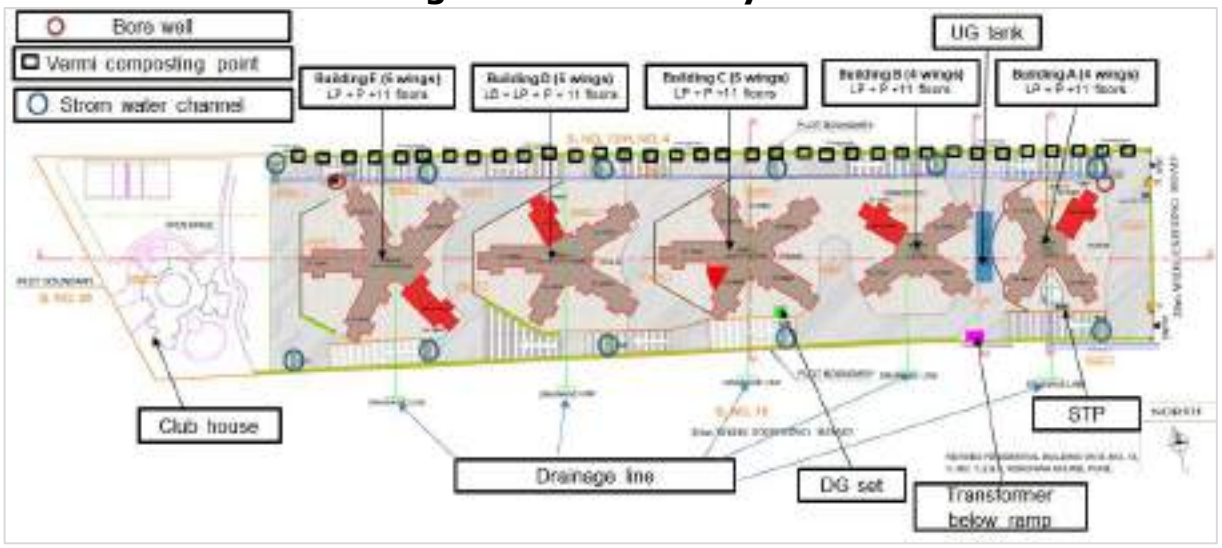
Table 1: Construction status at site

Sr.	Building Name	Building configuration	Present status
1	A Building	LP + P +11 floors	Completed (2009)
2.	B Building	LP + P +11 floors	Completed (2009)
3.	C Building	LP + P +11 floors	Completed (2019)
4.	D Building	LB + LP + P + 11 floors	Completed (2009)
5.	E Building	LP + P +11 floors	Completed (2009)

Sr.	Building Name	Building configuration	Present status
6.	Club House	G + 1	Completed (2009)

The layout plan of the proposed development is given in Figure 2

Figure 2: Master Layout



The constructed area on site as of today is 50,548.37 m^2

Table 2: Constructed area statement

Sr	Particulars		Building A	Building B	Building C	Building D	Building E	Total
1	**FSI**		3191.55	3191.55	4706.14	4867.09	5443.65	21399.98
2	**Excess balcony**						398.71	398.71

2.0 PROJECT DETAILS

1	Name and address of Project	Proposed residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra by Bramha Corp Ltd.	
2	Name of Directors	Mr. Sachin Shah	
3	Total construction completed (built- up area as per EC notification):	FSI area	21,798.69 m^2
		Non FSI area	28,749.68 m^2
		Total construction area	50,548.37 m^2
4	Total construction proposed, built- up area as per EC notification	FSI area	21,798.69 m^2
		Non FSI area	28,749.68 m^2
		Total construction area	50,548.37 m^2
5	Whether the project has any EC; if yes, give details including approved built-up area	No	
6	The total cost of the project and total cost of the project already executed? Also, give total cost of the project constructed without EC.	Total cost of the project – Rs. 27.33 Crore.	
7	Date of commencement of project	Building A & C - As per commencement certificate CC/2342/05 dt. 21.09.2005 Building B, D, E, Club House-As per commencement certificate CC/3387/05 dt. 30.12.2005	
8	Date of violation of EC regulation (please justify with documentary evidence)	Dated 20.11.2006 total construction area exceeds the threshold limit of 20,000 m^2	

9	Date of first submission of information of such violation to the SEIAA or SEAC, if self-notified, along with stoppage of construction work	Date of application for EC: 17.05.2022 Completion/Stoppage of construction: **Building C OC no. OCC/1333/18** dated 18.01.2019
	No. of days of violation (9-8)	5,657 days
10	Name and address of Environmental consultant, with date of engagement of such consultant	**Mahabal Enviro Engineers Pvt. Ltd.** Plot F-7, Road 21, MIDC Wagle Estate, Thane-400604 Phone: 02235087207 mahabal.thane@gmail.com
11	Any other case of EC violation is reported or pending or decided earlier for projects where any of the directors are involved? If yes, give details	No
12	Any court case related to EC violation pending or decided against any of the directors including High Court, NGT and sessions court?	Yes Court case details- NGT Western zone bench at Pune – Case no.65/2019

3.0 ATTRIBUTES FOR ENVIRONMENTAL DAMAGES

The PP and consultant described the details of each attribute in qualitative and quantitative manner as below;

The construction of project (Building A to E) proposed was on vacant land; hence, no demolition work was carried out. The field assessment was carried out to assess the impact of proposed development on flora and fauna. It is evident from google images that plot was vacant and there was no tree on plot. The time-lapse of the project site is given in following figures

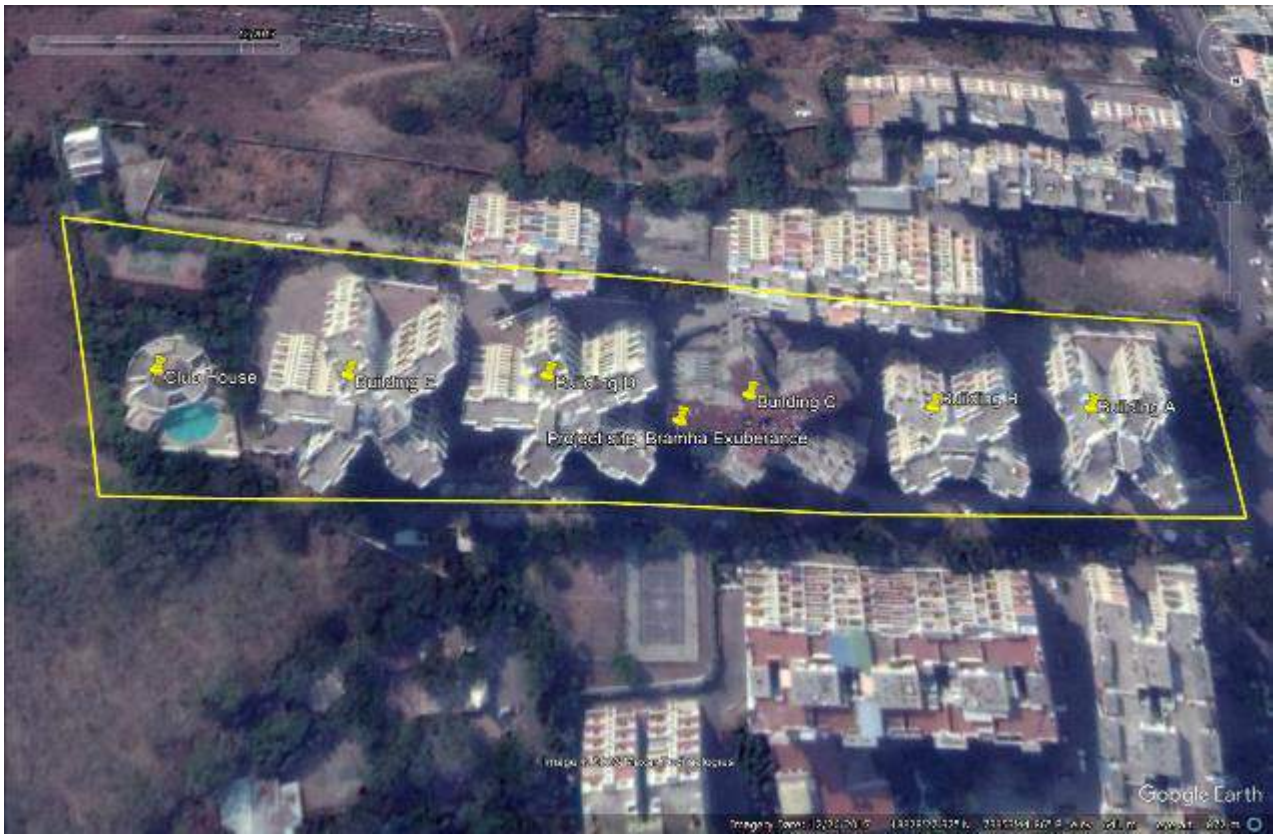
Figure 4: Time Lapse Google Images

17.11.2005

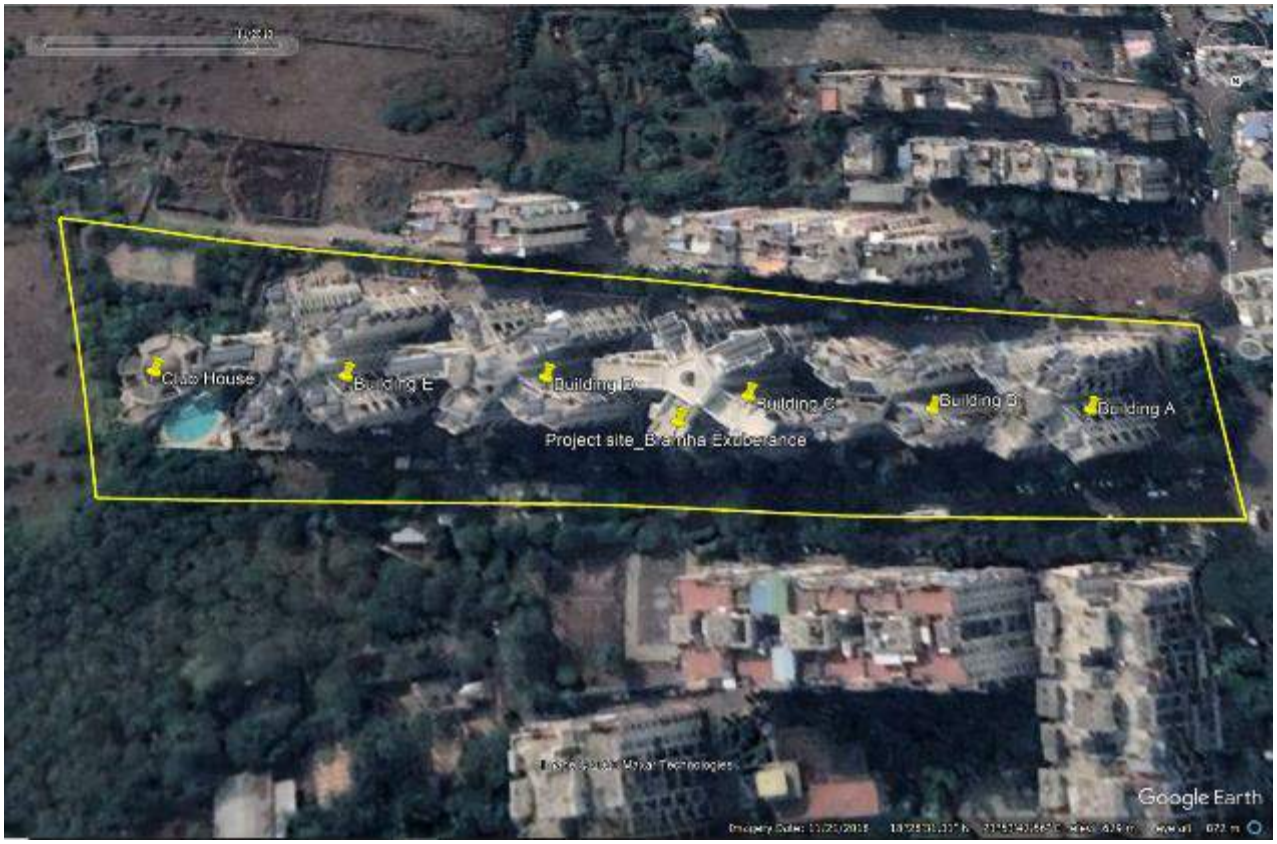
01.03.2010

25.05.2014

10.11.2014



26.12.2017



21.11.2018

27.11.2019

02.11.2020

12.11.2022

Land/soil environment was temporarily affected due to activities like site preparation, excavation for foundation purposes, material handling & storage etc. during the construction phase. The excavated soil generated was used at the site itself for the purpose of site development, landscaping and green area development.

The debris generated during construction activities was limited to the project site only and during the construction phase only. These were reused for backfilling and road development after manual segregation. These wastes have been utilized for the construction of roads. Conclusively, it can be stated that impacts may be confined to small area (mainly due to project site) and for short duration.

Small quantity of fugitive emission was envisaged during transport and handling of construction material. Such emission was temporary and that was controlled by providing water sprinkling technique.

The machinery which was used for construction was of high standard. These standards itself take care of noise pollution control / vibration control and air emission control. Hence insignificant impacts due to construction machinery are envisaged. Apart from this, the construction activities were restricted to daytime only.

The project activities have not affected the surroundings & any significant land disturbance, resulting in soil erosion, subsidence and instability. The area is not susceptible to erosion. The excavated earth materials had

utilized at the site for levelling, backfilling and landscaping/green area development.

The labour colony was provided to workers. Also, local employees were deployed for construction. The sanitary facilities with a Septic tank and soak pit were provided to workers. Hence there was no disposal of untreated sewage in the water body.

The ground surface of the project is flat. The project is not likely to alter or obstruct any natural drainage courses. There is no natural watercourse passing through the site. Hence the project does not involve the alteration of natural drainage systems.

Observation & interpretation

Project falls under residential zone as per DP of the PMC. Prior construction, the land was devoid of vegetation any ecologically important biodiversity. Project being small, does not affect these zones directly or indirectly.

The area surrounding the plot of project site, in 2005 was comparatively underdeveloped with less population density. Pune has experienced an exponential growth with respect to the urbanization of the area. It has developed both residentially and commercially. Damage caused to the area is the combined effect of overall development of the area. Specific impact of the project is negligible as the project doesn't involve changing of land use pattern, destruction of vegetation and pollution of environment.

3.1 AIR ENVIRONMENT

Construction of the project involved various activities that generate high levels of dust causing air pollution. Excavation of the earth for foundation purpose, land clearing, burning, mixing of cement, loading and unloading of material, diesel used in generators is also responsible for emissions of Carbon Monoxide, Hydrocarbons, Carbon dioxide etc. Project site involved excavation of the earth for foundation purpose. However, these activities were limited to the site only and till the construction phase. The only source of air pollution during the operational phase is vehicular traffic emissions and DG Set emissions.

Proponent in both construction and operation phase took number of measures in order to ease avoid dust emissions as stated in Section 5.1. As a remediation, on project site total 392 no. of existing trees and provided green spaces (2,045.85 m^2) within the layout that would serve as a carbon sink for the site, assembly point during emergencies and would improve the aestheticism of the area.

Also, awareness is created amongst the employees for maintenance of their vehicles. Proponent ensures that the stack height of the DG set is in accordance with the CPCB norms.

3.2 NOISE ENVIRONMENT

Construction site involves noises mainly from the heavy equipment's used for excavation purposes; drilling and DG set generators at the site. Transportation noise, to some extent, can also create a noise nuisance. As the development is inevitable, and the construction work is inherent noise, control measures were proposed to reduce the impact on workers in the surrounding area.

Proponent provide different type of Personal Protective Equipment's (PPE) to the workers working in high noise level area. Work hours were restricted to the day time.

High decibel noise during an operational phase is of Diesel Generator and vehicular traffic noise to a particular extend. Various measures are implemented to minimize the level of noise.

Proponent ensured the area assigned for the DG set is acoustically treated (sound proof) by the manufacturer. DG set location side plot is surrounded by a thick hedge of trees to buffer the area from noise coming across the premises. The proposed project is adjacent to 20 m wide DP Road and 6 m wide internal road, vehicular noise can create nuisance. On project site total 392 no. of existing trees and provided green spaces (2,045.85 m^2) within the layout.

3.3 LAND ENVIRONMENT

The construction phase involves excavation, drilling, levelling of the earth causing erosion and degrading the fertility of the soil. The excavation was carried out for foundation and land levelling purpose. The construction debris thus generated was about 667 m^3.

The excavated material and construction debris were utilized at site only for land levelling and filling of low laying area. Top soil excavated during the construction was preserved and used later for landscaping purposes. This type of damage is restricted only to the construction phase and is site specific.

Land in operational phase can be polluted due to the garbage disposed without treating or reusing. Amount of solid waste generating is 699 kg/day out of which, 419 kg/day is a biodegradable component and 280 kg/day is nonbiodegradable component. Solid waste generation from occupied residential building is 699 kg/day. Vermicomposting pits has been provided for the management of biodegradable component. Inert waste handing over to the vendor for recycle and reuse of the waste.

3.4 WATER ENVIRONMENT

Water was used in almost all the stages of construction serving different purposes like curing, washing, material preparation, drinking and flushing

purpose for construction workers. Drinking water was sourced from PMC. Water required for construction purpose was sourced from water tanker. Septic tanks were provided as sanitation facility to the workers at site. Around 100 workers were deployed in the construction of the project.

Total water requirement in its operational phase is 185 KLD. The freshwater required is 123 KLD. The water demand is met by Pune Municipal Corporation. The water storage facility is provided at ground level (underground water tank) as well as the top floor (overhead water tank). Sewage generation is 173 KLD. The total water consumption for an occupied building is 185 KLD. The freshwater consumption for occupied building is 123 KLD. Proponent provided 70 KLD STP but society not using the STP. All sewage is connected to municipal sewer line.

Vermicomposting pits

DG Set

Corporation water supply network

Existing STP

3.5 AESTHETICS

Aesthetics generally refers to the identification of visual resources, the quality and character of what can be seen, and the overall visual perception of the environment. Prior development the plot area was barren land and devoid of vegetation. The plot, on its East and West side was covered with residential buildings.

Construction Phase: The aesthetics of the project area was not disturbed during the construction phase as the site was barren land.

Operation Phase: The proposed land use of the site is Residential Building and will not result in obstruction of view, scenic amenity or landscape. However, the building layout was planned with open areas and landscaped areas. Moreover, with the passage of time, various other developments with advanced planning have emerged that has positive synergistic effect on the aesthetic view of the area.

3.6 SOCIO-ECONOMIC ENVIRONMENT

Construction phase: Majority of the labours was recruited locally and some skilled workers were outsiders, which is anticipated to be very small number and will not alter the existing demographic profile of the area.

Temporary sheds were provided to the workers with proper arrangement of sanitation and drinking water supply. Short term employment was created during the construction phase of the project.

The project is located in well urbanized area and has all basic infrastructural facilities as School, Colleges, Hospital, community facilities & places of worship etc.

Functional phases: As the project is residential direct and indirect employment opportunities has been generated in various sectors. It creates long term employment in activities such as maintenance of the buildings and ancillary services for below poverty line local residents.

Such employment has positive impact on the local economy, thereby increasing the quality of life.

3.7 ECOLOGY

No ecological sensitive places or ecological importance species within 5 km radius of study area. Mutha river is 6.7 km away from the project site. The project being a residential building, will not affect the flora and fauna in the area. Terrain of the site was almost plain without much undulation. In 2005, the site was an open land with devoid of vegetation.

After part completion of the project, proponent has designed a landscape and green spaces within the layout. Around 2,045.85 m^2 area is provided for green belt development, an open green space for recreational activities. At present there are 392 nos. of trees are planted within the layout. The trees are planted along the compound wall and RG area with adequate space between them so that their growth is not hampered.

Tree Plantation photographs

CONCLUSION

The project activities have been confined within the project in the site only and the likely impacts on land-use, residential facilities and open space is very merger. Proponent has taken every possible measure that would reduce the extent of pollution caused during construction as well as operation. No major damage has been caused due during and after the commencement of the project. The negligible amount of pollution caused is common to every site under construction. However, remediation plan discussed in Section 5 of this report suggests all the measures undertaken in both the phases have been discussed in detail.

4.0 DESCRIPTION OF ACTIVITIES CONTRIBUTING TO THE ENVIRONMENTAL DAMAGE AND DEGRADATION;

A.	Demolition, site preparation	
1	Whether any demolition work was carried out prior to EC? If yes what is date of commencement of demolition and also date of completion of demolition?	No. The construction was done on vacant plot
2	Whether such demolition or site had some asbestos, industrial waste or contaminated soil or hazardous waste etc. and if yes, how these types of waste have been segregated and disposed?	No
3	If the project is located on any industrial site, whether any due diligence or environmental status of site was assessed? If yes, give details	No. The plot was vacant.
4	State the quantity of demolition waste disposed from the site, including quantity and disposal location along with location map and photographs	Not applicable

<table>
<tr><td>5</td><td>Any air quality (including noise) monitoring done during demolition work? If yes, results</td><td>Not applicable</td></tr>
<tr><td>6</td><td>Whether building plan and layout approved and permission from local authorities is taken to commence the work prior to demolition work</td><td>Not applicable</td></tr>
<tr><td>B.</td><td>Construction stage</td><td></td></tr>

<tr><td>5</td><td>Whether, the additional construction work, over and above valid EC, if so available, has any additional ground footprint? If yes please state, ground footprint in sqm as per EC, approved layout and current proposed layout?</td><td>No</td></tr>
</table>

6	Whether the expansion was carried out simultaneously with EC approved work? If not give details of time frame? If yes, please give incremental additional time required for construction of additional area	No
7	Is there any change in foundation design, i.e. depth of foundation, basement etc. that were done due to additional area? If yes, what is the additional soil quantity excavated for such incremental foundation depth? Where it is disposed?	No change in foundation design.
8	What is the quantity of top soil removed and how it is managed?	920 m^3 of Top soil excavated during the construction phase of the existing building is reused for plinth filling, backfilling, landscaping & gardening.
9	Also, if water is encountered at such foundation depth, what is the volume of water pumped for such additional depth of excavation?	Groundwater was not encountered during the excavation and foundation work of completed work.
10	How much additional water was required for curing and construction purpose? Source of water?	The quantity of water required for the construction of an additional area of 1,01,097 KLD (2 KL/ m^2 x 50,548.37 m^2 violation area= 1,01,097 KLD) The source of water is through water tanker.

11	Rain Water harvesting details	The rainwater harvesting work is completed at site for existing buildings. 2 No. of borewell are constructed on site.
12	Solar PV panels, water heating details	We have installed solar panel for residential buildings Solar PV panels having capacity 135000 KWH/Annum. Solar water heating system having capacity 57420 KWH/Annum.
13	Use fly ash bricks ensured? Details there of	Not Applicable
14	Whether any noise or air pollution control measures taken, if so what are they?	For Noise and Air pollution control Barricading was done along the periphery of the site. Regular water sprinkling to avoid spreading of dust particles
15	Whether any air quality and noise level monitoring done during construction stage, if yes attach results	**Air Pollution Control Measures** • Water sprinkling on unpaved roads to arrest air bourne dust • Covered vehicles for carrying construction materials • Sand, murram, loose soil, cement, stored on site • covered adequately so as to prevent dust pollution. • Use of ready-mix concrete • Use of PUC certified vehicles **Noise Pollution Control Measures** • Barricading to plot boundary • No excavation and foundation were done during night time • PPEs were provided to construction workers • Plantation along the plot boundary
16	Whether any third-party rights are created on the construction without EC?	Not applicable

<table>
<tr><td>17</td><td>Whether any of the construction without EC has already been occupied? If yes, number of families gave such occupation. Also give total commercial area being used presently. Also, state type of commercial activity i.e. offices, shops, hotels, restaurants, etc.</td><td>Yes,
249 nos. of tenements (A building -43 nos., B building-43 nos., C building - 55 nos., D building – 54 nos., E building-43 nos.) are occupied.</td></tr>
<tr><td>18</td><td>How many flats sold which are in the area of EC violation and total sale value of such flats?</td><td>249 nos. of tenements are sold (A building - 43 nos., B building-43 nos., C building - 55 nos., D building – 54 nos., E building-43 nos.)
Total turnover=Rs.95.87 Crore</td></tr>

3	What is total water supply to project, source and quality	Source of water – Pune Municipal Corporation. Fresh water required for the project – 123 m^3 /day Total water requirement for project 185 m^3 /day
4	Total sewage generation m^3 /day	Total sewage generation of project is 173 m^3 /day
5	STP details	Existing STP - 70 KLD
6	Treated waste water disposal	Total sewage generated from whole project is 173 KLD and it is connected to municipal sewer line.
7	Any DG sets, are they complying the norms	**Existing:** We have installed 1 no. X 82.5 kVA DG set on project site.

Format of Assessment of Environmental Damage

Attributes	Scope of saving on account of environmental protection measures	Non-recurring cost (Rs.)	Recurring cost, Rs. /day
Air Pollution	• Water requirement for sprinkling (KL/day): • Plot area of the project 17,433 m^2. • Water requirement for sprinkling per m^2 = **2 liters (Calculated as per CSIR NEERI, Dust suppressant note)** • Total water requirement for 17,433 m^2 = **35 KLD** • Water from borewell was used for sprinkling purpose • **As per (As per CGWA notification dt 24th September, 2020, Page No. 41 Ground water abstraction charges for infrastructure project is Rs.1/m^3. However, we have considered Rs.15/m^3)** • Cost of 1 KL water (Rs.) considered is Rs.15 per kL • Recurring cost for 35 KLD water consumption = 35 KLD x Rs.15/KL =Rs.525 • Water helped to reduce 25%-30% pollutants which holds moisture for about 15 min. Application in 1 hr. in a day. i.e., total cost in rupees for 1 hr.= Rs.525 x 1 **= Rs.525 day**	**Nil**	**525**
Water	A. Cost of water requirement:		

Attributes	Scope of saving on account of environmental protection measures	Non-recurring cost (Rs.)	Recurring cost, Rs. /day
Pollution	• Construction phase: • No. of labour = 100 nos. • Total water consumption=4.5 KLD • **PMC domestic water supply rate is Rs.8 per m^3** • Cost of 1 KL water is Rs.8 • Recurring cost for 4.5 KLD water consumption = **Rs.36/day** • Violation construction area=50,548.37 m^2 • The water required for construction has been considered from a Research paper titled "Assessment of water resource consumption in building construction in India" - Rs. 2KL / m^2 • Total water required during construction =50,548.37 m^2 x 2KL/m^2 =101097 KL • Cost for construction water=**Rs.15,16,451**	**15,16,451**	**36**
	a) Operation phase: • Building A, B, C, D & E is in under violation • No. of flats of Building A, B, C, D & E -249 nos. (2 BHK-130 nos., 3 BHK-119 nos.) • Total fresh water= (No of flats x residential occupancy x 90 lpd water as per NBC 2016) + 5% visitors x 5 lpd water as per NBC 2016	**69,513**	**984**

Attributes	Scope of saving on account of environmental protection measures	Non-recurring cost (Rs.)	Recurring cost, Rs. /day
	= (130 x 5 x 90) + (119 x 6 x 90) + 68 x 5 = 123 KLD • **PMC domestic water supply rate is Rs.8 per m^3** • Cost of 1 kL water is Rs.8 • Recurring cost for 123 KLD water consumption = **Rs.984/day** • Total water supply pipeline cost = **Rs.69,513 (As per water connection charges & road cutting charges paid challan)**		
	B. Cost of sewage treatment, reuse & disposal:		
	a) Construction phase: • No. of labours = 100 nos. • Total water consumption=4.5 KLD • Sewage generation= 4 KLD • Cost for capacity of 5 KLD Septic tank = **Rs.25,000** (As per regular practice) • O & M -10% of capital cost/day=**Rs.7/day**	**25,000**	**7**
	b) Operation phase: • Total Sewage generation of buildings = 173 KLD • Required STP-182 KLD • Provided STP capacity for all building = 70 KLD • Total capital cost of sewage treatment in MBBR is **Rs.32,25,000**	**32,25,000**	**442**

Attributes	Scope of saving on account of environmental protection measures	Non-recurring cost (Rs.)	Recurring cost, Rs. /day
	• O & M cost/day=**Rs.442** • Cost of 70 KLD sewage treatment in MBBR =Rs.11,25,000 **(As per STP work order)** • O & M cost/day = Rs.154/day		
	C. Quantity of water pumped out during excavation and a lumpsum cost of Rs. 50 per cum for such unauthorized water extraction and disposal (Ground water was not encountered during excavation and foundation work of completed work.)	**Nil**	**Nil**
	C. Cost of construction & maintenance of recharge well: • No. of required recharge pits= 4 nos. • **Cost of recharge pit as per DSR 2022-2023 is Rs.51,500 (pg. no.317) i.e. Rs.51,500/rechange pit** • Construction cost of 4 recharge pits = **Rs.2,06,000** • On project site we have constructed total 2 nos. of recharge pits • Operation and maintenance cost/day= **Rs.28/day**	**2,06,000**	**28**
Soil environment	In case of demolition has carried out, the cost of demolition waste management	**Nil**	**Nil**

Attributes	Scope of saving on account of environmental protection measures	Non-recurring cost (Rs.)	Recurring cost, Rs. /day
	plan needs to be discussed and finalized as non-recurring cost. Demolition work not done.		
	In case the`re is some hazardous waste like asbestos or the site is located on industrial area where hazardous chemical or waste was handled, the cost based on due diligence of the project site, as given by consultants. (The report must include soil analysis, water analysis, MPCB consent copies, manifest of HW if any). This requires critical examination from SPCB.	-	No Hazardous waste generation
	Cost of preservation of top soil& excavated earth to be considered. • Excavated quantity: 920 m^3 • **Cost of excavation of soil as per the CSR 2022-2023 for 1 m^3 is Rs.98.90 (pg. no. 21)** • Cost for excavation = 920 x 98.90 = **Rs.90,988**	**90,988**	**Nil**
Noise and Vibration	For damage due to noise pollution & vibration, the cost of barricades around the project site should be considered. [perimeter(m)x height of the barricade (m)x cost of the sheet) • **Barricading cost as per DSR 2022-2023 is Rs.5,078 (pg. no. 298)**	**91,49,794**	Barricading was done during construction. No saving on this item.

Attributes	Scope of saving on account of environmental protection measures	Non-recurring cost (Rs.)	Recurring cost, Rs. /day
	• Perimeter (720.74 m) x height of the barricade (2.5 m) x cost of the sheet (Rs.2,539) = **Rs. 91,49,794**		
Green Belt	In case of any tree cutting without EC Cost of Rs.10000/-per tree apart from any statutory action for such tree cutting if any, Cost of planting & maintaining trees (Number of trees as per the bye-laws) Cost of compensatory tree plantation (5 trees for each tree cut) • No. of required trees=218 nos. • On project site we have planted 392 nos. of trees. • Labour rates has been considered from the gazette of India circular under Gramin Vikas Mantralay - Rs. 256/ day. Tree sapling rate a has been considered from Krishi Aayuktalay – Maharashtra circular published in 2021 - Rs. 200/ Tree (maximum has been considered) • No trees were cut. • Tree plantation cost= 392 x 200=Rs.74,800 • Cost of labour for pits: Pits dug per day=10 no. • Labor cost=256 x 392/10=Rs.10,035 • Total cost= Rs.74,800 +	**88,435**	**Nil**

Attributes	Scope of saving on account of environmental protection measures	Non-recurring cost (Rs.)	Recurring cost, Rs. /day
	Rs.10,035 **=Rs.88,435**		
RH/OHS	Cost of workers benefits to be considered in view of Building and Other Construction Workers Welfare Cess Act,1996		
	A. Cost of health checkups of workers B. Cost of safety measures including PPEs: • The Cost of Health check-up for labour has been considered as per the full body check-up plans available in the diagnostic centers - Rs.1500/ Labour • Total labour 100 no. • Cost of PPE has been calculated considering the requirements such as Safety Harness: Rs.1000, Helmet: Rs. 210, Shoes: Rs. 400, Goggles: Rs. 100, Safety Gloves: Rs. 470, Masks and ear plugs: Rs. 100 and First aid Kits: Rs. 200 -Rs.2480 / PPE Kit. • The Cost of Health check-up for labour has been considered as per the full body check-up plans available in the diagnostic centers - Rs. 1500/ Labour = (100 x 1500 + 2480 x 20) = 1,99,600/- • Total cost=**Rs. 1,99,600**	**1,99,600**	**546**
Total		**1,45,70,781**	**2,568/day**

5.0 REMEDIATION PLAN AND NATURE AND COMMUNITY RESOURCES AUGMENTATION PLAN

5.1 Environmental Management Plan

The Environmental Management Plan (EMP) has been developed to ensure that the project is implemented in an environmentally sustainable manner where all contractors and subcontractors, including proponent, understand the potential environmental risks arising from the project and take appropriate actions. EMP also ensures that the project implementation is carried out in accordance with the design and by taking appropriate mitigative actions to reduce adverse environmental impacts during its life cycle.

Table 4: Environmental Management Plan for Operation Phase

Operational Activities	Potential Impacts	Mitigation Measures
Impact due to Water Consumption & Wastewater Generation	Fresh water consumption	• Use of low flow and low flush – water saving plumbing fixtures, automatic level controllers at water tanks to reduce / optimize the demand side of water resource.
	Sewage generation & disposal problems	• Onsite Sewage Treatment Plant of capacity 70 KLD based on MBBR technology has been provided.
Impact due to rainwater discharges	Water Pollution	• Rain water harvesting through 2 recharge borewell. • Rain water & storm water management plan is incorporated. • Annual Cleaning of Recharge pits, RWH filters and SWD.
	Flooding conditions	• Adequate Storm water drains to collect, carry, recharge/discharge storm- water runoff. • Regular Cleaning of SWD
	Biological Environment	• Plantation of Native trees along the plot boundary and RG area • Tree already planted: 392 Nos.

Operational Activities	Potential Impacts	Mitigation Measures
		• Landscape area provided: 2,045.85 m^2
Impacts due to Solid Waste generation	Land pollution	• Separate dustbins for collection of wet & dry waste have been provided. • Wet garbage has composted using vermicomposting system and used as organic manure for landscaping • The inorganic material is handed over to authorized vendors.
Impact due to Energy Consumption	Energy Consumption for building utilities and functions	• We have installed solar PV panel for residential building having capacity 135000 KWH/Annum. • Solar hot water system is provided for buildings having capacity 57420 KWH/Annum • The site planning has been done such that none of the building blocks are hinder light access to other buildings • The project is using pumps, motors and transformers with minimum losses and as per the ECBC 2007 requirements.
Parking	Traffic congestion	• Proper entry and exit points and driveways are provided for easy movement of vehicles • Vehicular movement and signages have been installed. • Adequate parking space is provided
DG set and Traffic	Noise Pollution	• Existing DG set: We have installed 1 no. X 82.5 kVA DG set on project site. • Traffic management measures to reduce noise. • Plantation along plot boundary, Creepers on Plot boundary
Energy Consumption for Thermal Comfort	• Tree plantation done along the periphery of the project site ensuring adequate buffer and reducing heat gain by the building	

Operational Activities	Potential Impacts	Mitigation Measures
of people	• The project design uses high energy performing building materials which would have low U value (Thermal Conductance) as compared to the conventional materials. The external wall of proposed building would use fly ash blocks & glass have mandatory SHGC as required by ECBC.	
Energy Consumption for Lighting	• Internal and external lighting designs are provided as required by ECBC with Lighting Power Density as per space requirements. • The project provides 20% lower LPD than as specified in ECBC, to achieve energy saving, while providing the require illumination levels, by using high efficacy lighting. • Solar PV units of having capacity 135000 KWH/Annum provided for buildings. • Solar hot water system is provided for buildings having capacity 57420 KWH/Annum.	
Safety hazards	• The Transformer or the Sub Station for the project are adequately protected from entry, allowing only authorized personnel to enter the facility • All required energy protection measures such as high voltage cut-off, shock protector etc. had installed.	
Impacts due to Cleaning & repairing activities	• A Manual is created by the PP to make occupants aware of these measures to be undertaken: • Choose non-toxic, biodegradable substitutes for household cleaning agents. • Avoid products with potentially harmful ingredients such as sponges with antibacterial ingredients. • Conserve water, sweep instead of wet mop when possible. • Use biodegradable drain clog removers made with natural enzymes. • Don't pour hazardous chemicals through the sink or the drain; Don't use chlorine-based bleach for cleaning • The regular monitoring & repairing of the equipment's such as STP, DG sets etc. to avoid the sudden failure.	

Operational Activities	Potential Impacts	Mitigation Measures
	• Cleaning of building premises, parking areas and common areas are doing on a regular basis, taking care to see that no solid waste is carried to the storm water drains. • Green Guideline Brochure circulated to AMC workers.	

5.2 BUDGET ALLOCATION (OPERTION PHASE)

It is necessary to include the environmental cost as a part of the remediation plan as it is a sum provided for mitigation measures taken in accordance to the loss that has or would be suffered. It is proposed to take up protective measures like water sprinkling on road during construction, STP, rainwater harvesting, Solar PV units, Solar hot water, vermicomposting plant and green belt development for execution of Environmental Management Plan.

The details of adequate budgetary provision are given below;

Table 5: Budget Allocation for Operation Phase

Sr.	Component	Details	Capital cost Rs. Lakh	O&M cost Rs. Lakh/year
1.	Storm water management	Laying of storm & Sewer line up to final disposal point	11.00	0.90
2.	Sewage Treatment Plant	1 no. of STP having capacity 70 KLD existing	11.25	0.50
3.	Rain Water Harvesting	2 no. of Borewell	1.90	0.50
4.	Solid Waste Management	Cost for Treatment of biodegradable garbage in vermicomposting	3.00	0.40
5.	Landscape development	Tree Plantation	17.26	1.50
6.	Energy Conservation	Solar PV panels for electricity generation, LED etc.	25.00	2.60

Sr.	Component	Details	Capital cost Rs. Lakh	O&M cost Rs. Lakh/year
7.	Environmental Monitoring	Monitoring and analysis of Air, Water, Noise, Soil, surface water, STP treated water etc.	5.00	0.50
8.	Firefighting system	Installation and operation of Fire Fighting system	14.50	1.70
	Total		**88.91**	**8.60**

5.3 COST BENEFIT ANALYSIS

Cost benefit analysis is a method of assessing a project that quantifies in monetary terms the value of all the effects of the project on the investor and / or society. The main purpose of cost benefit analysis is to base funding decisions and implementation of construction projects. Every project has the potential to result in benefits to the community. These benefits are primarily economic and include employment and workforce training.
Secondary benefits are in term of up gradation of the connected area like local businesses always flourish with any construction project. Benefits in monetary terms are given in table below:

Table 6: Qualification & Cost of Officials/Persons of Environment Management Cell

Sr.	Officials	Qualification	Salary in Rs./month
1	Chairman	N.A.	N.A.
2	Secretary	N.A.	N.A.
3	Supervisor	M.Sc./BE Environment	19,000
4	Operators for STP – 2 Nos.	I.T.I	15,000
5	Operator for vermicomposting – 34 No.	-.	9,000
6	Outside agency for collection of	-	20,000

Sr.	Officials	Qualification	Salary in Rs./month
	waste from door to door		
7	Outside agency for monitoring and six monthly	-	20,000
8	Disaster Management Supervisor	M.Sc.& Diploma in Fire & Safety	15,000
9	Officer	B.Sc.& Diploma in Fire & Safety	12,000

5.4 NATURAL RESORCE AUGMENTATION

Rain water harvesting: Roof top rain water harvesting is proposed through 2 nos. of bore well recharge pits. 2 no. bore well recharge pits are already provided on site.

Trees: Proponent has planted around 392 nos. of native trees at plot and provided green spaces (2,045.85 m^2) in the project premises that would serve as a carbon sink for the site, assembly point during emergencies and would improve the aestheticism of the area

Renewable Energy: We have installed solar panel for residential buildings having capacity 135000 KWH/Annum. This is helping to reduce the carbon footprint. Solar hot water system is provided for buildings having capacity 57420 KWH/Annum

Building Material: The project design uses high energy performing building materials which would have low U value (Thermal Conductance) as compared to the conventional materials. The external wall of proposed building would use fly ash blocks, AAC blocks & glass have mandatory SHGC as required by ECBC.

Water Recycling: Total water requirement during the operational phase of constructed buildings is 185 KLD. The treated water from STP is recycled for flushing, gardening purposes This is helping to reduce the fresh water requirement. The freshwater requirement is 123 KLD.

5.5 COMMUNITY RESOURCE AUGMENTATION PLAN

The project is a residential project and the major benefit due to the project activities are in the field of generating direct and indirect employment for the nearby locality of the region. The local people were given priority during the construction period as labourers. The project has been providing positive impact on the economic development of the region in terms of employment opportunities.
The significant positive impact on employment and occupation is envisaged on account of;

- Better Economic status of the community due to better earnings
- Permanent employees Housekeeping staffs, Security guards, Electricians, Plumbers, etc. has been employed from the locality of the project.
- Higher input towards infrastructural facilities due to the activities of the project.
- Community infrastructure and services has been improved under Corporate Social Responsibility (CSR).

Project Proponent has set out responsibilities the for implementation and monitoring the of augmentation plan. Monitoring the of Augmentation Plan has been done to determine:

- Whether the measures have been implemented as per plan;

- The success of implemented measures;
- Identification and reporting of measures which are not proving effective;

5.6 CALCULATION OF COST OF REMEDIATION PLAN AND NATURAL & COMMUNITY RESOURCE AUGMENTATION PLAN

Penalty provision for violation application as per approach paper for assessment for environmental damage and estimation of remediation costs for building construction projects initiated with obtaining mandatory environmental clearance available on the portal: "ecmpcb.in".

Sr.	Description	Details	Amount
A	**Assessment of Environment Damage**		
1.	Total of recurring cost	Cost arrived from above table per day X number of days in violation	Rs.5,657/day x violation days 2,568 Nos. = Rs.145 Lakh
2	Non-recurring cost	Cost as arrived from above tables	Rs.146 Lakh
3	**Subtotal (1+2 above)**	**Subject to minimum Rs. 1 Crore**	Rs.291 Lakh
4	Excluding Cost of STP, rechange bore well, planted trees, cost of barricades around the project site and O & M cost		Rs.121 Lakh
5	**Overall total (3-4 above)**		Rs.170 Lakh
B	**Economic benefits accrued due to violation**		
1.	Economic benefits	1 % of Total project cost including land, as declared by PP before SEAC, subject to maximum Rs. 10 crores	• Total project cost of constructed building is Rs.27.33 Crore • 1% of project cost i.e. Rs.27.33 Lakh

Sr.	Description	Details	Amount
2.	Track record of Project proponent	Incremental cost of Rs. 10 lakhs for each EC violation by PP observed at any other projects in last 3 years.	All directors on board have no track record of other violation
C	Cost of remediation plan and natural community resource augmentation plan	Sum of A & B above or amount equivalent to the MoEF&CC's office Memorandum no. F. No. 22-65/2017-IA-III dated 01/05/2018, whichever is higher.	• Sum of A & B – Rs.197.5 Lakh • As per MoEF&CC's office Memorandum no. F. No. 22-65/2017-IA-III dated 25/02/2021, CER not applicable for B2 category projects. • Therefore, the cost of remediation plan is **Rs.197.5** Lakh which is higher.

Penalty provision for violation application as per OM dated 07.07.2021 and OM 28.01.2022 under EIA Notification 14.09.2006 for new project as follows;

Sr.	Details	Amount in INR
A.	Project cost attributed to violation area incurred up to the date of filing of the application	Rs.27.33 Crore
B.	1% of A	Rs.27.33 Lakh
C.	Total project turnover during the period of violation	Rs.95.87 Crore
D.	0.25% of the total turnover during the period of violation	Rs.23.97 Lakh
E.	**B+D**	**Rs.51.3 Lakh**

5.7 REMEDIATION COST BIFURCATION:

Sr.	Description of Activity	% allocation	Total cost will be spent within one years after the receipt of EC (Rs. In Lakh)	Activities to be done at	Implementing agency	Remarks
1.	Afforestation (can include plantation, garden development)	25%	49	Plantation will be done at both sides of roads & garden in the 1 km to 3 km vicinity from the project site.	Social forestry and Local body (Pune Municipal Corporation)	The afforestation can be either through social forestry or the local body. Preferably within 50 km from project site
2.	Water conservation program (Jalyuktshivar, etc.)	25%	49	In consultation with Pune Municipal Corporation in the water shortfall areas.	Local body (Pune Municipal Corporation)	Preferably within 50 km radius from project site
3.	Urban environment and sanitation (can include swatchta Bharat, playground development, urban ground-water recharge schemes etc.)	20%	40	Slum area at Pune village in consultation with respective local authority	Local body (Pune Municipal Corporation)	
4.	Sewerage lines and STP, solid waste management	20%	39	Development of sewerage line and STP & solid waste management in slum area of Pune Municipal Corporation.	Local body (Pune Municipal Corporation)	

Sr.	Description of Activity	% allocation	Total cost will be spent within one years after the receipt of EC (Rs. In Lakh)	Activities to be done at	Implementing agency	Remarks
5.	Urban air/noise Pollution control initiatives	10%	20.5	We will be provided air pollution measure machines & noise barrier in traffic prone areas near project site and also in consultation with Pune Municipal Corporation.	Local body (Pune Municipal Corporation)	
		100%	**197.5**			

***

DATE: - 25.06.2022	DESIGN BASIS REPORT	AQUATECH ENGINEERS
Page1 of 6	CLIENT: Bramhacorp	

DESIGN BASIS

This Sewage treatment plant has been designed to treat the domestic wastewater generated in the project of **Bramhacorp Exuberance-75 KLD** By considering following wastewater characteristics:

Flow	:	75 m^3 /d Average
Peak factor	:	3 times for Averag e flow
Operating Hours	:	20 Hours.

DESIGN PARAMETERS WITH INLET & OUTLET CHARACTERISTICS:

Sr. No.	Design Parameters	Inlet Characteristics	Outlet Characteristics	MOEF Standards
1.	**pH**	6.0 – 8.5	5.5 – 9.0	5.5 – 9.0
2.	**Oil & Grease (mg/l)**	10 – 20	< 5	< 5
3.	**BiologicalOxygenDemand (BOD) (mg/l)**	200 – 300	< 10	< 10
4.	**ChemicalOxygenDemand (COD) (mg/l)**	350 – 450	< 30	< 30
5.	**Total Suspended Solid (TSS) (mg/l)**	150 – 200	< 10	< 10
6.	**Total Nitrogen (mg/l)**	20-25	< 50	< 50
7.	**Nitrate (mg/l)**	15-16	< 10	< 10
8.	**Dissolve PO_4 (mg/l)**	6-8	< 5	< 5
9.	**Fecal Coliform (MPN/100 ml)**	10^6	Nil	Nil

ASSUMED PARAMETERS:

1. The plant is designed to operate at max. +/– 10 % variation in raw wastewater parameters.
2. No other parameters other than mentioned above is present in the raw wastewater which is beyond Pollution Control Norms and hazardous to micro – organisms.

LEVEL OF AUTOMATION

The plant design is based on **Moving Media Bio Reactor (MMBR),** which needs skilled Oprater /no skilled manpower for its operation. The operations involved are ON / OFF of the pumps , air blower, sludge removal system, filter backwash. The pumps are provided with level switch for ON / OFF based on the tank water level and to avoid dry run which may damage mechines. This is SEMI – AUTOMATIC process design.

PROCESS DESCRIPTION

The raw sewage generated will be passed through the **BAR SCREEN CHAMBER** wherein the free, floating, coarse suspended solids having particle size greater than 10 mm will be trapped and removed manually. The effluent is then collected in the **EQUALIZATION TANK** wherein the wastewater will be collected by gravity as particles having specific gravity heaver than water will settle down and pumped into downstream units. The tank will be provided with coarse bubble aeration to avoid settling of solids and to keep the effluent in homogenous condition.

The effluent is then pumped into the **AERATION TANK** wherein the aerobic microbes will utilize the organic matter in presence of oxygen. In this tank dissolved Oxygen, Active micro organism and organic impurities from the raw sewage feed water are allowed to react together. This is a bio chemical reaction, organic decomposition is completed and new cells are produced. Thus BOD in the sewage is reduced and also COD reduces to that extent. The moving media is provided as surface for micro-organisms to attach.

The partially treated wastewater then flows by gravity into the **SETTLING TANK.** The dead biomass generated in the bacterial activity allow to settle under gravity. After removal of settlable solids , the parameter like BOD ,COD and TSS gets reduced. The sludge get collected in hopper bottom portion & clear water flows from top in **FILTER FEED TANK**. The sludge in the hopper bottom needs to be removed in proper intervals . The treated wastewater will be dosed with ozone for disinfection purpose.

The partially treated wastewater will then be pumped through **PRESSURE SAND FILTER** to remove fine suspended solid which is difficult to settle by gravity. After Pressure Sand Filter it is passed through **ACTIVATED CARBON FILTER**. In Activated Carbon Filter organic impurities will be removed by adsorption on surface area of Activated Carbon. This treated wastewater will be then collected in **TREATED W/W TANK** prior to reuse for suitable purpose as required by client. The tank is provided with aeration to improve the dissolved oxygen level in treated wastewater.

EQUIPMENT DETAILS – CIVIL

A) Area required for STP: - 31.46 sq.m

1.	**BAR SCREEN CHAMBER**		**(T – 01)**
	Units provided	:	One
	Size	:	1200 x 1200 x 2000 mm SWD
	Material of Construction	:	R.C.C
	Volume	:	2.88 m3
2.	**COLLECTION TANK**		**(T – 02)**
	Units provided	:	One
	Size	:	3900 x 1200 x 2000 mm SWD
	Material of Construction	:	R.C.C
	Volume	:	9.36 m3
3.	**AERATION TANK**		**(T – 03)**
	Units provided	:	One
	Size	:	3200 x 2800 x 1900 mm SWD
	Material of Construction	:	M.S
	Volume	:	17.02 m3
4.	**SETTLING TANK**		**(T – 04)**
	Units provided	:	One
	Size	:	2800 x 1600 x 1800 mm SWD
	Material of Construction	:	M.S
	Volume	:	8.06 m3
5.	**FILTER FEED TANK**		**(T – 05)**
	Units provided	:	One
	Size	:	---------- mm SWD
	Material of Construction	:	SINTEX
	Volume	:	1.00 m3

ELECTRICAL DETAILS

Sr. No.	Equipment	Qty.	Connected Power (HP)	Operating Power (HP)
1.	Feed pump	2	2.0	1.0
2.	Filter Feed Pump	2	2.0	1.0
3.	Sludge Pump	1	0.5	0.5
4.	Jet Aerator	2	5.0	2.5
7.	Centrifuge system	1	0.5	0.5
8.	Backwash Pump	1	1.0	1.0
	Total		**11.0**	**6.5**
9.	Extra	1	2.0	2.0

Sludge Details:-

1) **Dewatering technique**: - Mechanical Dewatering .
2) **Dried sludge disposal**: - 6.15 kg/d, As Manure.
3) **Sludge quantity** :- 6.15 m3 /day (includes 35 – 40% Organics & 60 – 65% inerts/Minerals)

CAPITAL COST

For Civil Work	**Rs. 13,58,000 /-**
For Mechanical + Electrical + Instrumentation	**Rs.10,52,000 /-**
TOTAL	**Rs. 24,10,000 /-**

OPERATING COST (Per year)

Sr. No.	Parameter	
I.	**POWER (kwh / d x Rs. 10 per unit)** For Sewage Treatment Plant (97.5 kw hrs/d x 365 days)	3,55,900/-
II.	**LUBRICANTS** Oil – 20 L/ Annum x 200 Rs./ L Grease – 3.5 kg / Annum x 400 Rs./ kg	 4000.0/- 1400.0/-
III.	**MANPOWER** Operator – 1 operator per shift x 2 shift x 12 month x 10000 Rs./ Month	2,40,000/-
	TOTAL (Rs. per year)	**6,01,300/-**

Sizing of Ozonation :
Disinfection by Ozonation is considered with a dosage of 7 ppm. After considering 70 % of mixing efficiency, actual dose will be 5 ppm of ozone.
For 75 KLD, ozonation system provided is for 30 gm/hr.

Electrodes :
Electrode in ozone generator is of stailess steel 316. And dielectric used is quartz which can withstand very high temperature.Our ozone generator has multiple ozone cells operated together to produce desired quantity of ozone.

ORP
Oxidation – Reduction potential of over 600 mV ensures complete disinfection. Using an online ORP controller the ozone generator is turned on & Off to maintain ORP between 650 – 750 mV.

ORP make : HACH
Make of Ozonator manufacturer:
Universal Ozone Generator / Eltech Engineers /Equivalent .

1.0 ABOUT ECBC

The purpose of Energy Conservation Building Code (ECBC) is to provide minimum requirements for energy efficient design and construction of buildings and their systems. ECBC is first step towards promoting energy efficiency in the building sector. The code is applicable to buildings or building complexes that have a connected load of 100 kW or greater or a contract demand of 120 kVA or greater. This report shall however focus on Envelope measures for ECBC Compliance. The Building envelope refers to the exterior façade, and is comprised of opaque components (roof, wall, slab, basement, opaque doors etc.) and fenestration systems (window, skylights, ventilators etc.) Envelope design strongly affects the visual and thermal comfort of the occupants as well as energy consumption of the building. This considers the heat transfer in the building occurring through the envelope via Radiation, Convection and Conduction.

2.0 ABOUT PROJECT

M/s. Bramha Corp Ltd. are proposing residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra.

The Latitude and Longitude of project site is as follows
Latitude – 18°28'31.22"N Longitude - $73^0$53'42.44" E

The plot area is 17,433.10 m^2 and total construction area is 50,548.37 m^2. The project details are as follows:

No.	Description	Proposed
1.	Total plot area (Sq.mt.)	17,433.10 m^2
2.	Deductions (Sq.mt.)	2,833.35 m^2
3.	Net Plot Area	14,599.75 m^2
4.	Permissible Built-up Area as per FSI including Fungible Area (sq.mt.)	14,805.95 m^2
5.	Proposed FSI area (Sq.mt.)	21,798.69 m^2
6.	Proposed Non FSI area (Sq.mt.)	28,749.68 m^2
7.	Total Construction Built – up Area (Sq.mt.)	50,548.37 m^2
8.	Tenements	249
9.	Total Population	1,432 (1364 + 86 visitors)
10.	Connected load	1438 kW
11.	Demand load	1007 kW
12.	Transformer kVA	2 x 630

13.	DG set - kVA	1 x 82.5

BUILDING DETAILS

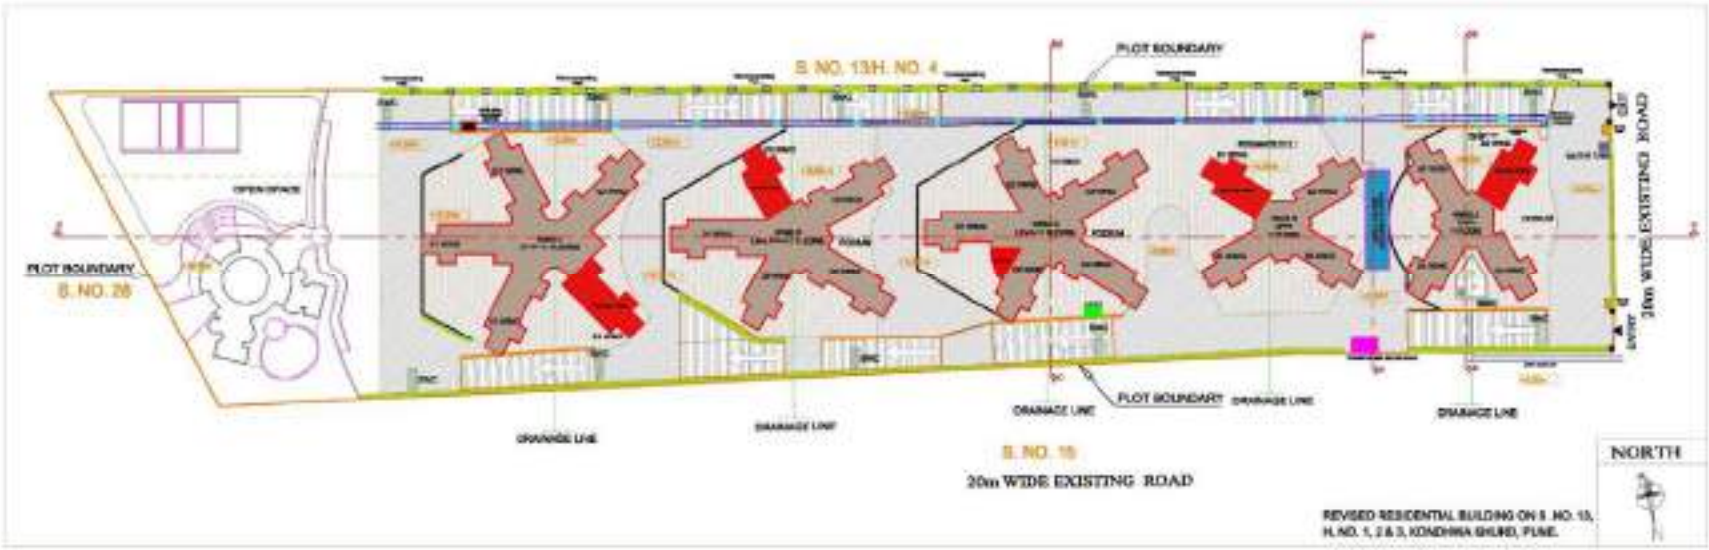
The project is being designed and built considering the various energy efficiency features and intends to meet and exceed the requirements of the Energy Conservation Building Code (ECBC) 2007 & 2017 version.

Building Details

Building	Configuration	Building Height m
A Building	LP + P +11 floors	34.90
B Building	LP + P +11 floors	34.90
C Building	LP + P +11 floors	34.90
D Building	LB + LP + P + 11 floors	34.90
E Building	LP + P +11 floors	34.90
Club House	G + 1	

The layout plan of proposed development is given in Figure 1

FIGURE 1: Layout Plan



3.0 DEFINITIONS AND ABBREVIATIONS

Building envelope: Building envelope is the exterior plus the semi-exterior portions of a building.
For the purposes of determining building envelope requirements, the classifications are defined as follows:

- Building envelope, exterior: the elements of a building that separate conditioned spaces from the exterior
- Building envelope, semi-exterior: the elements of a building that separate conditioned space from unconditioned space or that encloses semi-heated spaces through which thermal energy may be transferred to or from the exterior, or to or from unconditioned spaces, or to or from conditioned spaces.

Fenestration (Horizontal): Horizontal Fenestration is the area under a skylight, monitor, or saw-tooth configuration with an effective aperture greater than 0.001 (0.1%).

Fenestration (Vertical): Vertical Fenestration is the floor area adjacent to side apertures (vertical fenestration in walls) with an effective aperture greater than 0.06 (6%).

K-Value (Thermal Conductivity): The time rate of steady heat flow through a unit area of homogeneous material induced by a unit temperature gradient in a direction perpendicular to that unit area. Units of K are BTU-in / hr – ft2 – °F.

Projection factor, overhang: PF (overhang) is the ratio of the horizontal depth of the external shading projection divided by the sum of the height of the fenestration and the distance from the top of the fenestration to the bottom of the farthest point of the external shading projection, in consistent units.

Projection factor, side fin: PF (side fin) is the ratio of the horizontal depth of the external shading projection divided by the distance from the window jamb to the farthest point of the external shading projection, in consistent units.

Roof: Roof is the upper portion of the building envelope, including opaque areas and fenestration, that is horizontal or tilted at an angle of less than 60° from horizontal

R-Value (Thermal Resistance): R-Value is the reciprocal of the time rate of heat flow through a unit area induced by a unit temperature difference between two defined surfaces of material or construction under steady-state conditions. Units of R are m^2- ºC/W (h-ft2- ºF/Btu). For the prescriptive building envelope option, R- Value is for the insulation alone and does not include building materials or air films.

Shading Coefficient (SC): SC is the ratio of solar heat gain at normal incidence through glazing to that occurring through 3 mm (1/8 in) thick clear, double-strength glass. Shading coefficient, as used herein, does not include interior, exterior, or integral shading devices.

Solar Heat Gain Coefficient (SHGC): SHGC is the ratio of the solar heat gain entering the space through the fenestration area to the incident solar radiation, typically ranging from 0.9 to 0.1, where lower values indicate lower solar gain. Solar heat gain includes directly transmitted solar heat and absorbed solar radiation, which is then reradiated, conducted, or convected into the space.

U-Value (Thermal Transmittance): U- value is heat transmission in unit time through unit area of a material or construction and the boundary films, induced by unit temperature difference between the environments on each side. Unit of U are $W/m^2 – {}^oC$ ($Btu/h\text{-}ft^{2o}F$).

Visible Light Transmittance (VLT): VLT is also known as the Visible Transmittance, is an optical property of a light transmitting material (e.g. window glazing, translucent sheet, etc.) that indicates the amount of visible light transmitted of the total incident light.

Wall: Wall is that portion of the building envelope, including opaque area and fenestration that is vertical or tilted at an angle of 60° from horizontal or greater. This includes above and below-grade walls, between floor spandrels, peripheral edges of floors, and foundation walls.

Window Wall Ratio (WWR): WWR is the ratio of vertical fenestration area to gross exterior wall area. Gross exterior wall area is measured horizontally from the exterior surface; it is measured vertically from the top of the floor to the bottom of the roof.

4.0 METHODOLOGY

The objective of this report is to analyse the annual energy consumption patterns of the proposed case and compare it with the baseline as per the ECBC 2007 & 2017. For doing so, the whole-building performance method has been used and the simulations were performed according to the ECBC 2007 & 2017guideline for whole-building performance method.

In order to analyse performance of proposed design, analysis was performed considering Climate, Orientation of building, Site Context, Building Material, Daylight & Natural Ventilation, Fenestration and Thermal Comfort of the occupant. The Energy conservation measures were considered in proposed design considering various factors such as on building envelope, usage of artificial lighting, Electrical appliances used in the project and HVAC System proposed for project in order to reduce the annual energy usage. Annual energy usage was derived by performing hourly simulations by using approved energy simulation software.

5.0 ABOUT THE SOFTWARE

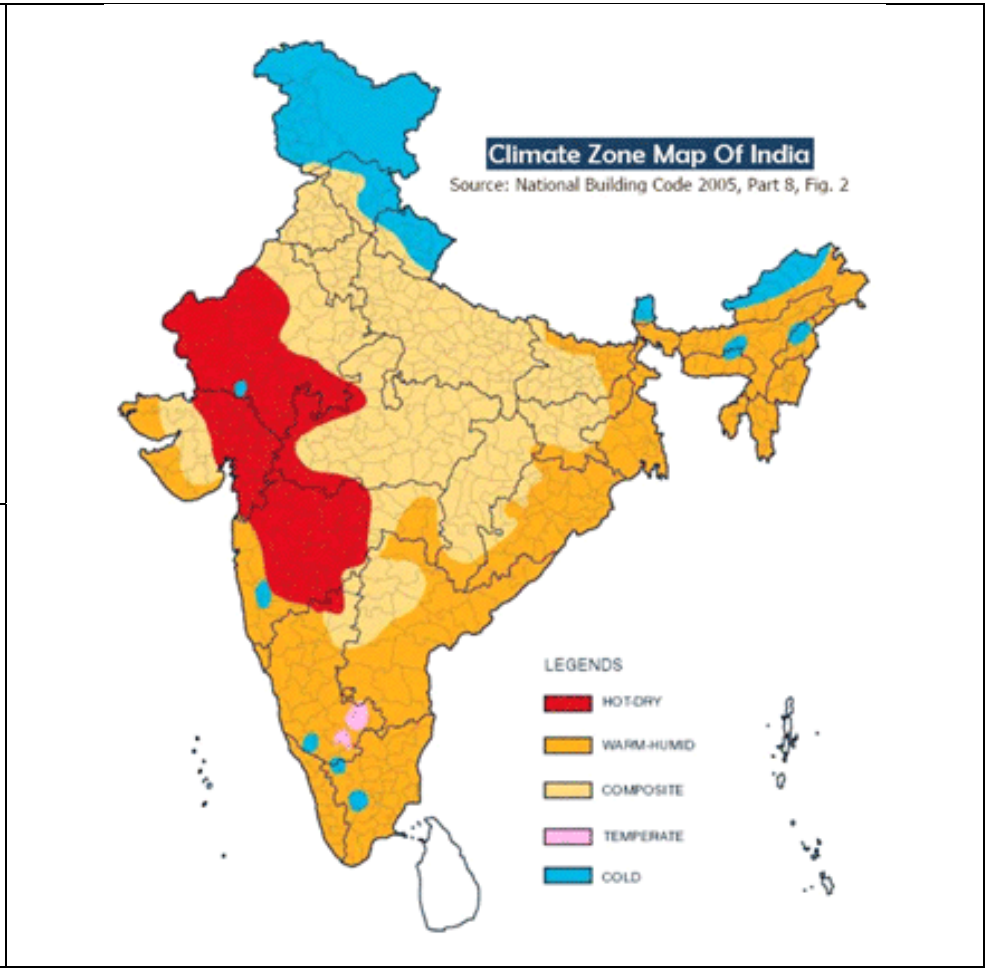
The simulation program used for modelling the project is eQuest V3.65. This software is based on DOE 2.2 engine and has the below capabilities:

- Analysis for 8,760 hours
- Hourly variations in occupancy, lighting loads, misc. loads, HVAC
- Ability to schedule hourly profiles for each day of week and holidays
- Thermal mass effects
- Part load performance curves for mechanical equipment
- Ability to model baseline building design characteristics for section ASHRAE 90.1 Appendix G.
- Ability to simulate parametric runs for multiple energy efficiency measures
- Ability to perform hourly load calculations to determine required equipment capacities and air and water flow rates.
- Perform simulation using a representative weather file specific to a location.

6.0 CLIMATE ZONE

The proposed project comes under Hot and Dry Zone as per ECBC 2007 & 2017 Climate zone map of India is given in next page

Figure 2: Climate Zone Map



7.0 BASECASE DESCRIPTION

For envelope components, ECBC sets requirements for roof, opaque walls; fenestration and skylights. The Baseline specifications to be considered for ECBC for envelope of the building shall be as follows:

Roof

Table 1: Showing Baseline Roof Assembly U-factor and R- value Requirement

Climate Zone	24 hour use building hospitals, Hotels, Call centres etc		Daytime use buildings other building types	
	Maximum U factor of the overall assembly (W/m^2 K)	Minimum R value of insulation alone (m^2 K/W)	Maximum U factor of the overall assembly (W/m^2 K)	Minimum R value of insulation alone (m^2 K/W)
Composite	0.261	3.5	0.409	2.1
Hot and Dry	0.261	3.5	0.409	2.1
Warm and humid	0.261	3.5	0.409	2.1
Moderate	0.261	2.1	0.409	2.1
Cold	0.261	3.5	0.409	2.1

Warm and humid	3.30	0.25	0.20
Moderate	6.90	0.40	0.30
Cold	3.30	0.51	0.51

(Source: Table 4.3Pg. 8, Vertical Fenestration U-factor and SHGC Requirements Energy Conservation Building Code, 2007)

Description of Design Case

- The proposed design has the same building floor area, gross wall area and gross roof area as the base building. The occupancy for both the cases has been maintained at 24hr functional and their respective values are taken.
- The u-value for each envelope component in base case is has been derived from the values prescribed by ECBC as listed in Table 1& 2. The proposed design case u-values have been calculated from the assembly using values from ECBC**.**
- The SHGC value for each window component for base case has been derived from the values prescribed by ECBC as listed in Table 3. The proposed design case SHGC has been mentioned.

8.0 ENERGY PERFORMANCE ANALYSIS

For energy Performance analysis a virtual 3D model is generated as per proposed design. The proposed model is divided into several zones considering number of floors and activity of spaces, conditioning and unconditioned spaces, habitable spaces and non-habitable spaces as per the proposed design. Building height, Window to wall ratio proposed building materials and Fenestration details were assigned to the virtual 3D model as per design. Further each zone was assigned with different parameters such as Lighting Power Density, Lighting Schedules, Occupancy Pattern, Equipment load, Hot water Usage, HVAC System and schedules.

For energy performance analysis a baseline building as per the parameters described in ECBC 2007 was modelled. The building was simulated with actual orientation and again after rotating the entire Building by 90, 180 & 270 Degrees as described in ECBC 2007. The annual energy consumption was analyzed for the ECBC 2007.

Further, virtual 3D model is assigned with various energy conservation measures considered in order to reduce energy consumption. The annual energy consumption was analyzed by simulating building with actual orientation.

8.1 Design Parameter

Sr. No.	Input Parameter	Baseline Case (As per ECBC 2007 & 2017)			Proposed Case		
1	Exterior Wall Construction	U-factor: W/Sq.m.K	0.440		U-Value: W/sm.K	0.85	
2	Roof Construction	U Value: W/Sq.m.K	0.409		U-Value: W/sm.K	0.47	
3	Glazing	U Value:	3.30	W/sm.K	U Value:	4.60	W/sm.K
		SHGC:	0.25		SHGC:	0.42	
					VLT:	45%

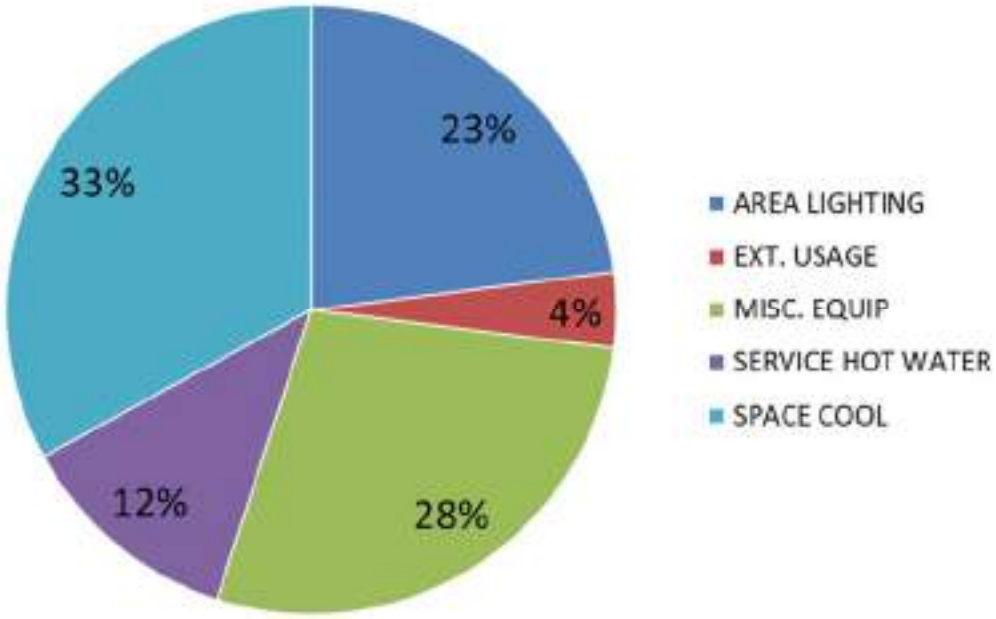
13	PF Correction	0.95			0.95		
14	Power Distribution Losses	< 1%			< 1%		

8.2 Base Case: ECBC 2007

Based on the analysis the average annual energy usage consumption for ECBC 2007 mandated baseline is 4613 MWh. The EPI of Base case for ECBC 2007 mandated baseline is 91.25 kWh / Sq. m. / annum.

Energy Usage Consumption ECBC 2007 – BASECASE



8.3 Proposed Case

Based on the analysis the average annual energy usage consumption for proposed case is 4403 MWh. The EPI of proposed case is 87.10 kWh / Sq. m. / annum.

	Energy Basecase 2007	ProposedCase
Energy Saving	0	210
SPACE COOL	1522	1878
SERVICE HOT WATER	554	299
MISC. EQUIP	1292	1292
EXT. USAGE	185	163
AREA LIGHTING	1061	770

With the proposed energy conservation measures the project is able to save 210 MWh annually (4.55 %)

9.0 SUMMARY

Objective of this report was to analyses annual energy consumption and to proposed Energy Conservation Measured (EMS) guided as per Energy Conservation Building Codes in order to reduce energy consumption and to achieve thermal comfort of occupant.

The EPI of Base case for ECBC 2007 mandated baseline is 91.25 kWh/Sq. m./annum. The EPI of proposed case is 87.10 kWh/ Sq. m. / annum. The EPI ratio against base case 2007 is 0.955. The energy saving over ECBC 2007 is 210 MWh annually (4.55 %)

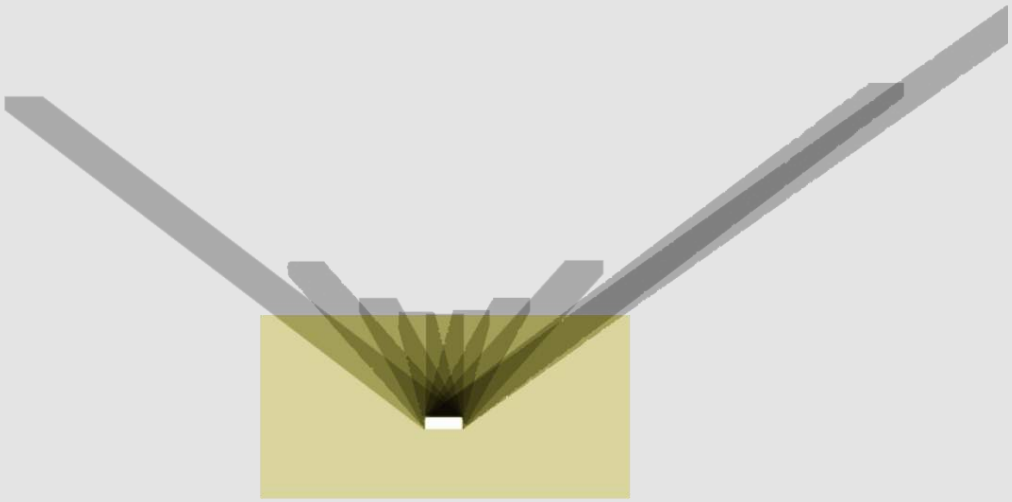
SHADOW ANALYSIS



538

Structure affects the surrounding environment based upon the sun's position (time of day), and the time of year. It can be either positive or negative depending upon the site specific circumstances.

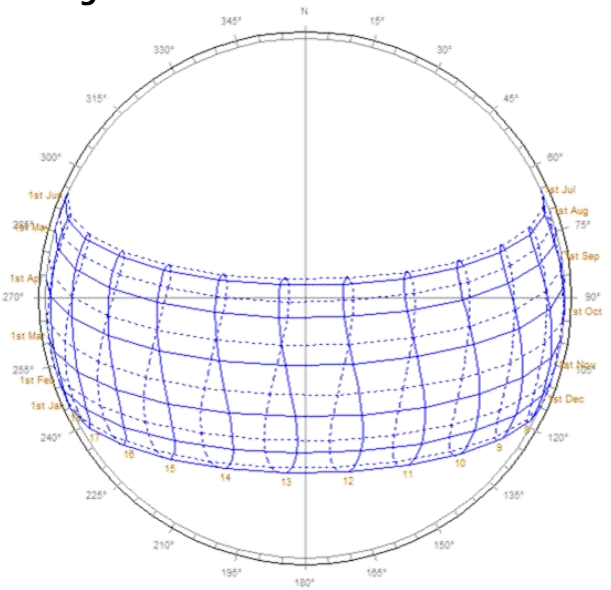
A potential benefit of shading for adjacent structures may be a cooling effect gained during warm weather.
Negative consequences of shading include the loss of natural light for passive or active solar energy applications or the loss of warming influences during cool weather.

Shading analysis is one of the most essential steps in phase of solar energy system design.

In photovoltaic it is important to analyze shading caused by surrounding objects and/or vegetation.

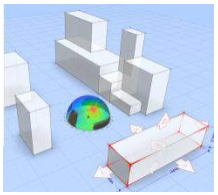
Sun path diagrams can tell you a lot about how the sun will impact your site and building throughout the year.

Sun path diagram

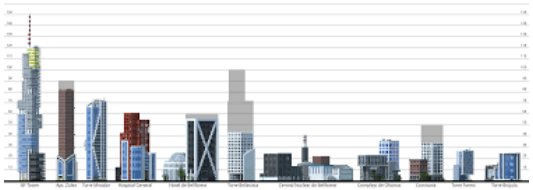


<u>Factors influencing the relative impact of shadow effects are:</u>

Location of the site and Surroundings



Height and bulk of the structure



Climatic condition

Adjacent land use

2455

Aim

The aim of the study is to assess the potential impact of the development with respect to sunlight and shadow analysis.

Objective

To study effect of proposed structure shadows on surrounding
To study and understand mutual shading effect caused by proposed building.
To assess the impact of physical obstructions affect the access to direct solar access.

Methodology

Autodesk Ecotect analysis 2010 is used for performing solar analysis of the project.

To determine impacts of the proposed project structures, the 3D virtual model of the proposed building and surrounding structures were created in the software. Actual weather file of **Pune** were used for the simulation.

Shadow mask

A shading mask is simply a mechanism for recording which parts of the sky are visible from a particular point in the model and which are not.

For any given set of obstructions, this information can be overlaid on a sun-path diagram to show when in the year the point is in shade or not.

Traffic Analysis Report

A well-planned road network already exists in the area, connecting to the nearest railway station and main roads, ensuring proper communication links. Traffic analysis report is a process to know the volume and nature of the traffic. The present report is the Residential Project "Bramha Exuberance" Sr. no.13, H.No.1, 2 & 3 of Village-Kondhwa Khurd, Taluka-Haveli, District Pune, State-Maharashtra by BramhaCorp Ltd. The Traffic Analysis Location of this project is shown in **Figure 1.**

Figure 1: Traffic Analysis Location of the project site

To analyze the traffic load nearby project site, the quick survey of 12 hours was carried out on NIBM Road, Kausar Baug Road, Kausar Baug Road 2. Classified traffic volume count survey (CTV) conducted on weekdays so as to get appropriate data. The traffic data thus collected is analysed for different traffic parameters /operational indices. Methodology for this traffic analysis included data collection, future year traffic projections, existing conditions analysis, future build analysis and recommendations which are described in brief as follows.

- A 12-hour classified traffic volume data collected on site attached road. The location of classified traffic analysis is shown in **Figure No.1**
- Peak hour trip ingress and egress data is also collected at adjacent road, to get an idea of peak hour movement characteristics

Classified traffic volume count and trip generation survey collected in May, 2023.

Traffic data is collected and tentative peak hour volume count is completed first to take fair idea of traffic. The Vehicles are classified in the following categories for traffic count:

- Two-Wheeler
- Three-Wheeler
- Car/Taxi
- Light Commercial Vehicle
- Govt. bus/Private bus
- Truck
- Multi Axle vehicle

The classification of vehicles has been done as per IRC: 106-1983. PCU factors are given in **Table 1**

Table 1: PCU Factors

Type of Vehicle	PCU Factor
Two-Wheeler	0.5
Three-Wheeler	1
Car / Taxi	1
LCV	1.5

Type of Vehicle	PCU Factor
Govt bus / Private bus	3
Truck	3
Multi-Axle	4.5

Passenger Car Unit

It is a metric used in Transportation engineering, to assess traffic flow rate. A Passenger Car Equivalent is essentially the impact that a mode of transport has on traffic variables (such as headway, speed, density) compared to a single car.

Table 2 shows the capacity of different types of roads in both directions.

Table 2: Capacity in PCU/hour for various traffic conditions

No. of traffic lanes and width	Traffic flow	Roads with no frontage access, no standing vehicles, very little cross traffic	Roads with frontage access but no standing vehicle and high-capacity intersections	Roads with free frontage access, parked vehicle and heavy cross traffic
2-lane	One way	2400	1500	1200
2-lane	Two way	1500	1200	750
3-lane	One way	3600	2500	2000
4-lane	One way	4800	3000	2400
4-lane	Two way	4000	2500	2000
6-lane	One way	3600	2500	2200
6-lane	Two way	6000	4200	3600

Source: Indian Road Congress 'Geometric Design Standards for Urban Roads in Plains'-IRC:106-1983 Edition 1991, Reprinted in 2001. Page No. 6 & 7.

These volumes make up the traffic volumes along these roads under survey. show**.** Traffic composition and hourly mode wise distribution was also prepared and analyzed along Roads of project site. Numbers of Vehicles are given in **Table 3, Table 4 and Table 5**

Level of Service

As per Indian Road Congress 'Geometric Design Standards for Urban Roads in Plains'-IRC: 106-1983, level of service definition generally describes these conditions in terms of factors such as speed and travel time, freedom to manpower, traffic interruption, comfort and convenience and safety. Six level of services are commonly designated from A to F with level of services. A representing the best operating condition (i.e., Free flow) and level of service F represent the worst (forced or breakdown). Following graphs indicates the different level of services:

Table 18: CMP Level of Service Criteria for Arterials Based on Volume-to-Capacity Ratios

Level of Service	Description	V/C
A	Free-flow conditions with unimpeded maneuverability. Stopped delay at signalized intersection is minimal.	0.00 to 0.60
B	Reasonably unimpeded operations with slightly restricted maneuverability. Stopped delays are not bothersome.	0.61 to 0.70
C	Stable operations with somewhat more restrictions in making mid-block lane changes than LOS B. Motorists will experience appreciable tension while driving	0.71 to 0.80
D	Approaching unstable operations where small increase in volume produces substantial increases in delay and decreases in speed.	0.81 to 0.90
E	Operations with significant intersection approach delays and low average speeds.	0.91 to 1.00
F	Operations with extremely low speeds caused by intersection congestion, high delay, and adverse signal progression.	Greater Than 1.00

Future Development

After completion of the project, **411** no. of scooter, **393 no**. of cycles & **214** no. of cars will be added on the existing road.

Observations:

Observations on the traffic flow and its density are given below: -

Kausar Baug Road

The total vehicle count at this point is observed to be **8,056** during the survey of 12 hours. The Two-wheeler contributes maximum in the traffic volume. The Two-wheeler observed are **2,496** in number followed by Four wheelers and Three-wheeler vehicles with **2,367** and **2,208** in number respectively. The peak hour traffic flow in the morning was observed between **9-10 am** with **696** Vehicles on the road and in the evening, the peak hour was observed between **7-8 pm** with **695** Vehicles.

NIBM Road

The total vehicle count at this point is observed to be **7,918** during the survey of 12 hours. The Four-wheeler contribute maximum in the traffic volume. The Four-wheeler observed are **2,406** in numbers followed by two-wheeler and three-wheeler vehicles with **2,290** and **2,207** in number respectively. The peak hour traffic flow in the morning was observed between **9-10 am** with **689** Vehicles on the road and in the evening, the peak hour observed between **7-8 pm** with **716** Vehicles.

Kausar Baug Road 2

The total vehicle count at this point is observed to be **7,664** during the survey of 12 hours. The Four-wheeler contribute maximum in the traffic volume. The Four-wheeler observed are **2,391** in numbers followed by two-wheeler and three-wheeler vehicles with **2,317** and **2,035** in number respectively. The peak hour traffic flow in the morning was observed between **9-10 am** with **678** Vehicles on the road and in the evening, the peak hour observed between **7-8 pm** with **691** Vehicles.

Mitigation and action plan for parking within the project area

1. Security persons at entry and exit point to insure the smooth traffic movement.
2. We were provided sufficient parking inside the site premises during the construction phase for staff as well as visitor.
3. We have encouraged the staff of contractor and self to use public transport.
4. We have provided two different lanes for up and down direction flows of vehicles.
5. We were provided a separate parking area for vehicles unloading material within the site premises so as to avoid waiting of other vehicles.
6. A driveway of 6 m (adequate to accommodate 6 vehicles) is provided from the entry of the project.
7. PUC is compulsory for all the vehicles being parked in the building premises.
8. Separate parking for Cars, two-wheelers and bicycles are provided.
9. Informatory signage's: Adequate informatory signage's/Speed control devices are put up within premises near entry/exit gates to regulate and control the speed of outgoing/incoming traffic.
10. We have designed the entry and exit points in such a way that they will not disturb the existing traffic.

1 INTRODUCTION

A carbon footprint is historically defined as the total green gas emissions caused by an individual, event, organization, or product, expressed as carbon dioxide equivalent. The term carbon footprint has become the standard for measuring the environmental impact of activities in several sectors. Calculated as carbon dioxide equivalent using the relevant 100-year global warming potential (GWP100).

The composition of greenhouse gases is 76% carbon dioxide CO_2, 13% methane, 6% nitrogen oxide and 5% fluorocarbons. Therefore, CO_2 is a significant contributor for increasing the global temperature.

The building sector is responsible for about 40% of the total primary energy consumption. Approximately 50% of the total energy is consumed for maintaining thermal comfort (heating/ cooling) inside the built envelope during the operational phase of the building. The construction sector in India has been growing at the average annual rate of 10% over the last decade. The housing stock in India has increased at a remarkable rate, from 250 million units in the year 2001 to 330 million units in the year 2011. In India, energy demand for material manufacturing is nearly 20–25% of the total energy demand, while annual building material consumption is exceeding 2 billion tonnes. Simultaneously GHG emissions by construction sector are contributing up to 30% of the total GHG emissions of the country. Global warming due to the increased concentrations of greenhouse gases (GHG's) in the atmosphere is causing climate patterns to change.

Buildings account for roughly one third of all greenhouse gas emissions globally. Identifying the sources of these emissions and understanding their relations to the construction phase is essential in climate change mitigation. The construction industry accounts for up to 40% of carbon emissions, hence there is an immediate need to reduce energy use in new and existing buildings (UNEP, 2009). In general, buildings contribute approximately 30% to total global GHG emissions (UNEP, 2009).

2 ABOUT PROJECT

M/s. Bramha Corp Ltd. are proposing residential project "Bramha Exuberance" at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra.

The Latitude and Longitude of project site is as follows
Latitude – 18°28'31.22"N Longitude - $73^0$53'42.44" E

The plot area is 17,433.10 m^2 and total construction area is 50,548.37 m^2. The project details are as follows:

No.	Description	Proposed
1.	Total plot area (Sq.mt.)	17,433.10 m^2
2.	Deductions (Sq.mt.)	2,833.35 m^2
3.	Net Plot Area	14,599.75 m^2
4.	Permissible Built-up Area as per FSI including Fungible Area (sq.mt.)	14,805.95 m^2
5.	Proposed FSI area (Sq.mt.)	21,798.69 m^2
6.	Proposed Non FSI area (Sq.mt.)	28,749.68 m^2
7.	Total Construction Built – up Area (Sq.mt.)	50,548.37 m^2

Building Details

Building	Configuration	Status Of Construction	Building Height m
A Building	LP + P +11 floors	Completed 2009	34.90
B Building	LP + P +11 floors	Completed 2009	34.90
C Building	LP + P +11 floors	Completed (2019)	34.90
D Building	LB + LP + P + 11 floors	Completed 2009	34.90
E Building	LP + P +11 floors	Completed 2009	34.90
Club House	G + 1	Completed 2009

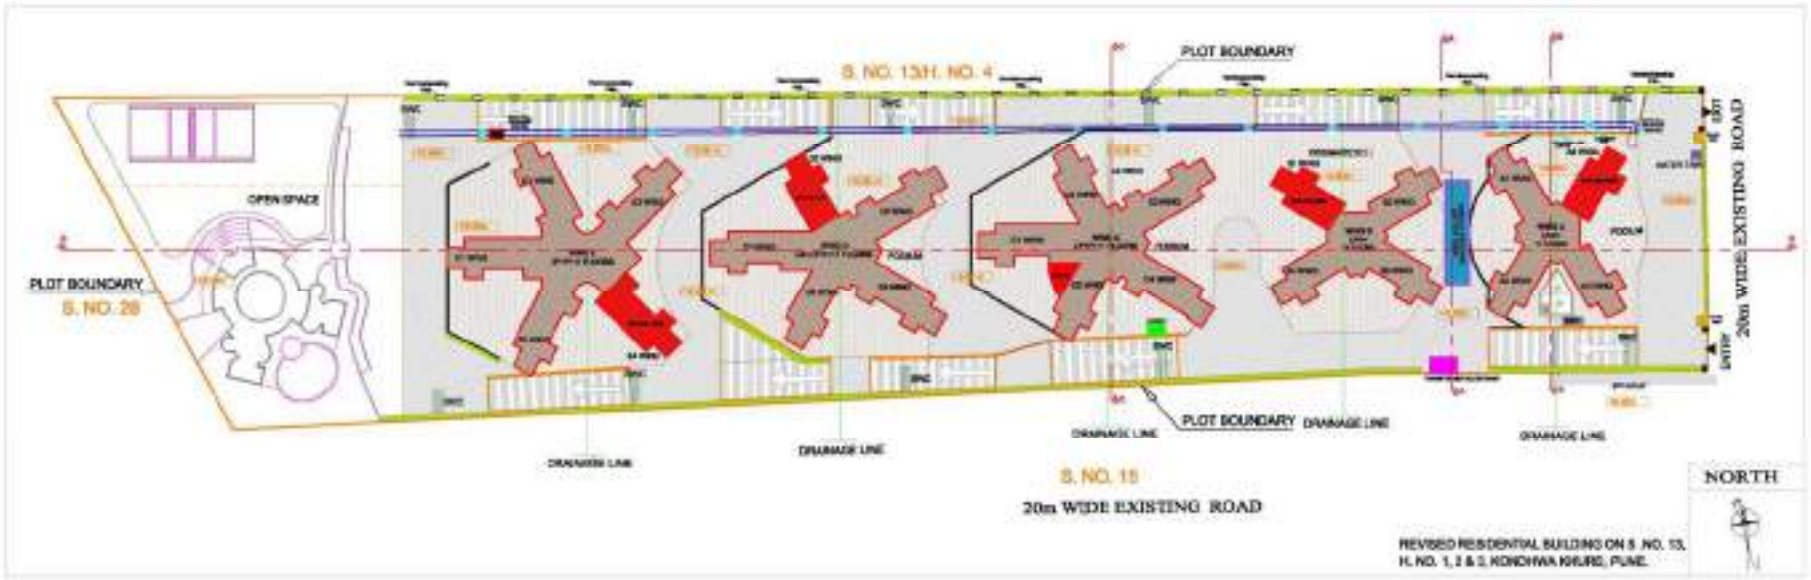
Figure 2: Layout Plan



3 METHODOLOGY

The objective of this report is to undertake carbon footprint analysis of proposed project and to propose measures in order to reduce carbon footprint of the proposed project. Following parameters were considered to perform Carbon Footprint Analysis.

1. Embodied Energy of Construction Materials
2. CO_2e Emission during Construction Phase
3. CO_2e Emission during Operation Phase
4. Carbon sequestration through renewable energy and Vegetation

The result is presented in three stages

- Construction Phase emission
- Operation Phase emission
- Carbon sequestration through renewable energy and Vegetation
- Carbon footprint reduction due to mitigation measures

4 CONSTRUCTION PHASE EMISSIONS

The building construction phase is responsible for significant resource consumption. Therefore, environmental impact of construction materials is most important. The bill of quantities of construction material required for the project is as follows.

Table 1: Construction Material List

Sr. No.	Construction Material List	Material MT
1.	Cement	8159
2.	Sand	35082
3.	Aggregate	19963
4.	Steel	2835
5.	Fly Ash Bricks	9336
6.	Clay Bricks	0
7.	Vitrified Ceramic Tiles	934
8.	Glass	73
9.	Wood	70
10.	Aluminium	47
11.	Gypsum Plaster	622
12.	Stone	328
13.	Fly Ash	1499

4.1 Analysis for Embodied Energy of Construction Materials

Embodied energy is the energy consumed by all of the processes associated with the materials used for the construction of building, from the mining and processing of natural resources to manufacturing, transport and product delivery. Embodied energy analysis of construction material was performed considering the Bill of Quantities of proposed Project.

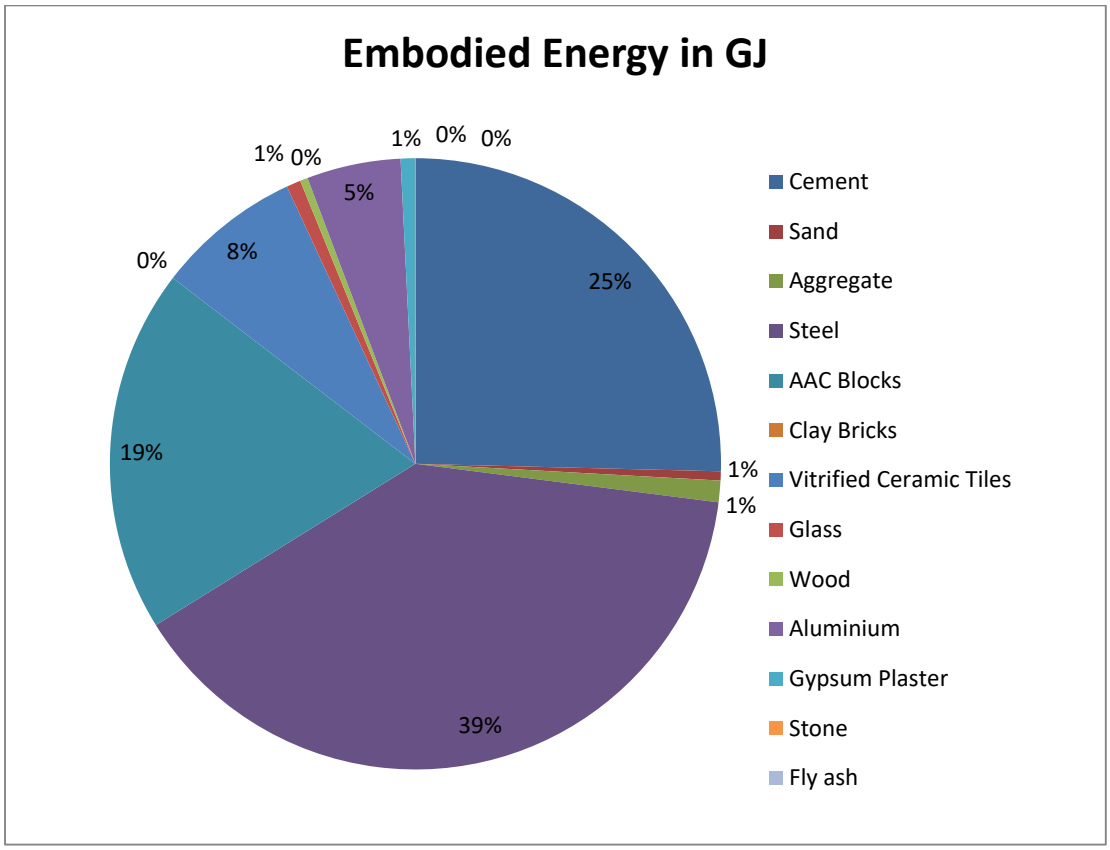
Embodied Energy=Quantity of the material* Embodied energy coefficient

The embodied energy of construction material for the project is **145558.1 GJ**

Table 2: Embodied Energy of Construction Material

Sr. No.	Construction Material List	Material	Embodied Energy
		MT	**GJ**
1.	Cement	8159	36958.0
2.	Sand	35082	701.6
3.	Aggregate	19963	1656.9
4.	Steel	2835	56978.9
5.	Fly Ash Bricks	9336	28008.9
6.	Clay Bricks	0	0.0
7.	Vitrified Ceramic Tiles	934	11203.6
8.	Glass	73	1092.3
9.	Wood	70	595.2
10.	Aluminium	47	7235.6
11.	Gypsum Plaster	622	1120.4
12.	Stone	328	6.6
13.	Fly Ash	1499	0.0
	Total	**78947**	**145558.1**

Figure 3: Embodied Energy of Construction Material



4.2 Estimation of CO_2 Emission

The main sources of CO_2 emission in construction industry are as follows:

- CO_2 emission during manufacturing of Construction Material
- CO_2 emission during transportation of Construction Material
- CO_2 emission due to Power Consumption
- CO_2 emission during transportation of Construction debris

4.2.1 CO_2 during Manufacturing of Construction Material

The CO_2 emission during manufacturing of material is calculated by
CO_2 Emission=Quantity of the material CO_2 emission factor*

The CO_2 emission during manufacturing of construction material is **14807.2 tCO_2e.**

4.2.2 CO_2 emission during transportation of Construction material

The CO_2 emission during transportation of Construction material is **318 tCO_2e**. The details of same are given in **Table 3.**

Table 3: CO_2 emission during transportation of Construction Material

Sr. No.	Construction Material List	Distance to the Plant km	Total VKT	Total Emission tCO_2e
1.	Cement	254	103613	76.2
2.	Sand	32	56131	41.3
3.	Aggregate	32	31941	23.5
4.	Steel	360	51026	37.5
5.	Fly Ash Bricks	215	100365	73.8
6.	Clay bricks	60	0	0.0
7.	Vitrified Ceramic Tiles	860	40146	29.5
8.	Glass	465	1693	1.2
9.	Wood	25	117	0.1
10.	Aluminium	306	952	0.7
11.	Gypsum Plaster	582	18112	13.3
12.	Stone	750	12302	9.0
13.	Fly Ash	215	16112	11.8
		Total	**432510**	**318**

4.2.3 Disposal of Construction debris

The construction waste generation from project is around 1468 m^3. The emission during transportation of construction debris, Excavated material and demolition waste to disposal site is given in Table 4.

Table 4: CO2 emission during transportation of Construction Debris

Sr. No.	Construction Debris	Waste Quantity in m^3	Total VKT	Total Emission tCO_2e
1	RMC	559	1343	0.99
2	Tiles	38	49	0.04
3	Bricks work	105	218	0.16
4	Light weight block work	227	437	0.32
5	Mortar for plastering	425	1019	0.75
6	Water proofing work (brick bat)	76	146	0.11
7	Gypsum work	38	67	0.05
	Total (A)	**1468**	**3277**	**2.41**

The CO_2 emission due to transportation of Construction Debris **2.41 tCO_2e**

4.2.4 Transportation of Workers

The average workers required during construction phase is 200 Nos. The workers will come to site via different transportation modes. The mode of transport of workers is given in Table 5

Table 5: Mode of Transport of workers

Sr. No.	Details	Quantity
1	No. of workers coming by Public Transport	75
2	No. of workers coming by 2W	50
3	No. of workers coming by 3W	75
4	No of workers/day	200

The CO_2 emission due to transportation of Construction workers is **56.45 tCO_2e**

4.2.5 Power Consumption

The energy required during construction phase is 150 kwh. The CO_2 emission during construction period (3 years) will be **134.7 tCO_2e.**

4.2.6 Solid Waste

Solid waste generation from workers staying at site during construction period is 24 kg/day. The CO2 emission during construction period due to solid waste generated from workers is **9.72 tCO2e**

.4.2.7 Sewage Treatment

The sewage generation during construction phase is 9.0 KLD. The CO2 emission during construction period due to sewage generated from workers is **3.51 tCO2e.**

5 OPERATION PHASE EMISSIONS

5.1 Power Consumption

The operational energy requirements of a building can be considered as the energy that is used to maintain the environment inside that building. Life cycle analysis of building shows that operational energy accounts for 85–95% of the total energy consumption and CO_2 emissions of a building which comes from occupancy through heating, cooling, ventilation, and hot water use. This will include energy from electricity, gas, and the burning of fuels such as oil or coal. The annual energy consumption can be reduced by providing measures like Renewable energy (Solar Hot Water, Solar PV Panels), energy efficient pumps and lighting to reduce the CO_2 emission

The estimated power consumption of the project is **2899.93 MWH/yr**. **The CO_2 emission due to power generation is about 2377.9 tCO_2e/yr**

5.2 Solid Waste Management

The solid waste generation from the proposed development is 699 kg/day. The solid waste will be segregated at source. The dry waste (280 kg/day) will be handed over to Authorised agency. The biodegradable waste (419 kg/day) will be treated at site through Organic Waste convertor.

The inadequate disposal of solid waste creates a strong negative environmental impact on soil, groundwater, surrounding flora and fauna, and public health. Once deposited in a landfill or open dump, the carbon in waste containing organic materials, such as food, paper, wood, and garden trimmings, is consumed by microorganisms, causing decomposition. Under the anaerobic conditions prevalent in such sites, the microbial communities contain methane-producing bacteria. Because the microorganisms gradually decompose organic matter over time, methane (CH_4), carbon dioxide (CO_2), and N_2O are generated and form landfill gas.

The waste segregation at source, onsite mechanical composting and recycling of dry waste will help to reduce the Green House gas emissions from the project.

The CO2 emission from the solid waste is 56.6 tCO_2e/yr

5.3 Waste Water Treatment

The wastewater treatment plants (WWTP) are considered as source of GHG emissions because of the generation of CO_2, CH_4 and N_2O both directly and indirectly. The gaseous by-products are the direct emissions and the emission due to energy usage and secondary activities are the indirect emissions.

The GHG emissions include 1) direct emission of GHG from wastewater treatment comprising emission of CO_2 due to degradation of organic matters, emission of N_2O during the process of nitrification and denitrification and emissions of CH_4 and N_2O from anaerobic digestion during sludge treatment and 2) indirect emissions of GHG from sludge treatment, usage of electrical power and chemicals during the operation and maintenance of the treatment plant and disposal of sludge. Apart from these, the production and transportation of construction materials also cause indirect emissions of GHG

The sewage generation from proposed project is **173 KLD.**

Total equivalent CO_2 Tonnes per year from STP will be 22.50 tCO_2e/yr

5.4 Vehicular Emissions

Greenhouse gas emissions from vehicular movement vary with vehicle type, fuel type, driving speed, driving style, vehicle loading and distance travelled.

The Vehicle Kilometre Travelled (VKT) approach is considered for estimation of CO_2emission. Vehicle Kilometre Travelled (VKT) is basically the total distance travelled by the vehicles on roads. The internal distance travelled by the vehicles upto entry and exit points of the project are considered as VKT. After the VKT inventory has been obtained, next aspect is to quantify the emission factors. The emission factor (kg CO_2/km) is then multiplied by VKT (km) to obtain the quantity of emissions.

The details of Trip generation are sourced from the Traffic study.

Table 6: Parking Provided

Sr. No.	Vehicles	Parking Provided (No. of Vehicles)
1	Cars	214
2	Scooters	411

The total CO_2 emission from Vehicular Movement is 9.2 tCO_2e/yr

6. CARBON SEQUESTRATION THROUGH VEGETATION AND RENEWABLE ENERGY

Carbon sequestration is nothing but capturing atmospheric carbon dioxide or anthropogenic CO_2 from large scale stationary sources before it is released to the atmosphere. Once captured, the CO_2 gas is put into long term storage. CO_2 sequestration in plants has the potential to significantly reduce the level of carbon that occurs in the atmosphere. Terrestrial or biologic sequestration means using plants to capture CO_2 from the atmosphere and then storing it as carbon in the stems and roots of the plants as well as in the soil.

6.1 Carbon sequestration through Vegetation

The CO_2 sequestration through Vegetation and Landscape is as follows:

The lawn area provided: 2045.85 m^2

The trees to be planted in project: 392 Nos.

The CO_2 sequestration through Lawn area: 0.8 tCO2e/yr

The CO_2 sequestration through Trees: 8.62 tCO2e/yr

The total CO_2 sequestration through vegetation is **9.4 tCO2e/yr**

6.2 Renewable Energy

The Solar PV panel unit are proposed to reduce the power consumption. The renewable energy generated through Solar PV panels will be around 135 Mwh/yr.

Sr. No.	Particulars	Total Power Saving (Mwh/yr)
1	Solar PV Panel unit	135
2	Solar Hot Water	0
	Total	**135**

The reduction in carbon footprint due to renewable energy sources will be **110.7 tCO_2e/yr.**

The total reduction in carbon footprint due to vegetation and renewable energy sources will be 120.1 tCO_2e/yr.

7. MITIGATION MEASURES

- Use of high energy efficient pumps for firefighting, UG tanks and STP, Energy efficient lighting using LED lamps
- Use of renewable energy (Solar PV and Solar Hot Water) in project reduce the energy consumption
- Provision of green cover, Plantation along plot boundary, roads and RG area
- Low embodied carbon Building materials such as fly ash bricks, steel, AAC blocs used in project, EPD certified materials used, avoided use of virgin materials & possible extraction in the construction,
- Materials sourced with minimum distance from site
- Reuse of materials and % content of recycled material is maximized upto permissible limit
- Low maintenance, good quality materials used to reduce operational cost and replacement
- Use of AAC blocks instead of Red Bricks
- Treatment of Biodegradable Waste and Sewage at site to reduce the greenhouse gas emissions
- Use of RMC with 10-20% of fly ash

8. CONCLUSION

Carbon footprint is commonly defined as the total amount of greenhouse gases produced directly or indirectly as a result of an activity. The term carbon footprint has

become the standard for measuring the environmental impact of activities in several sectors

The carbon footprint analysis shows that, the total emission of the project during construction phase will be **15332.0 tCO_2e**. The emission is mainly from Manufacturing of Construction material, Transportation and power consumption during construction phase.

Sr. No.	Component	Total Emission tCO_2e	%
1	Manufacturing of Construction Material	14807.2	96.58
2	Transportation of Construction Material	318	2.07
3	Transportation of workers	56.45	0.37
4	Workers- Solid Waste	9.72	0.06
5	Workers- Sewage treatment	3.51	0.02
6	Disposal of Construction Debris	2.41	0.016
7	Power Consumption	134.7	0.88
	Total	**15332.0**	**100.00**

Operation Phase:

Sr. No.	Component	Total Emission tCO_2e	%
1	Power Consumption	2377.9	96.42
2	Solid Waste Management	56.6	2.29
3	Waste Water Treatment	22.5	0.91
4	Vehicular Emissions	9.2	0.37
	Total (A)	**2466.2**	**100.00**
	Carbon Footprint Reduction due to		
1	Carbon sequestration through Vegetation	9.4	
2	Renewal Energy	110.7	
	Energy saving (B)	**120.1**	
	Total (A-B)	**2346.1**	

The total emission during operation phase of project will be **2466.2 tCO_2e/yr.** The emission is mainly from Power Consumption, followed by Solid waste Management and Waste water Treatment.

The total reduction in carbon footprint due to vegetation and renewable energy sources will be **120.1 tCO_2e/yr.** The total carbon footprint during operation phase is **2346.1 tCO_2e/yr.**

9. REDUCTION IN CARBON FOOTPRINT

The reduction in carbon footprint due to implementation of mitigation measures during construction phase and operation phase is as follows:

CF during Construction Phase

	CF Base Case tCO2e	CF Proposed Case tCO2e	Reduction in CF
Manufacturing of Construction Material	16760.4	14807.2	1953.2
Transportation of Construction Material	318	318	-
Transportation of Construction Workers	56.45	56.45	-
Workers Solid Waste	9.72	9.72	-
Workers Sewage Treatment	3.51	3.51	-
Disposal of Construction Debris	2.41	2.41	-
Power Consumption	134.7	134.7	-
	17285.19	15332.0	1953.2
Reduction in %			11.30

Reduction in CF during Construction Phase

1 INTRODUCTION

The building sector is responsible for about 40% of the total primary energy consumption and 36% of CO_2 emissions globally. Approximately 50% of the total energy is consumed for maintaining thermal comfort (heating/ cooling) inside the built envelope during the operational phase of the building. The construction sector in India has been growing at the average annual rate of 10% over the last decade. The housing stock in India has increased at a remarkable rate, from 250 million units in the year 2001 to 330 million units in the year 2011. In India, energy demand for material manufacturing is nearly 20–25% of the total energy demand, while annual building material consumption is exceeding 2 billion tonnes. Simultaneously GHG emissions by construction sector are contributing up to 30% of the total GHG emissions of the country.

For environmental protection regulation, waste assimilation is another challenging task after the GHG emissions. The annual waste generated in India is about 62 million tonnes, while 25% of the total waste is contributed by construction and demolition (C&D) waste. C&D waste requires approximately 1240 hectare land per year. If the same growth rate in waste generation is maintained, it will reach 165 million tonnes by 2031, requiring as much as 66 thousand hectares of useful land for waste disposal in the next 20 years (considering 10 m high waste pile).

Within the industrial sector, construction activity, including its associated industry, is the largest consumer of such natural resources as timber, minerals, water, and energy. In the European Union, the construction of buildings consumes 40% of the total consumption of materials, 40% of the total consumption of primary energy and generates 40% of the total waste, taking particular responsibility for the ongoing deterioration of the environment the expansion of urban land. Therefore, in the pursuit of improving the environmental performance of buildings, it is necessary to assess this through indicators, so that the weight of the environmental impacts can be qualified and quantified throughout their life cycle, from the extraction of raw materials to demolition. The tools that analyze these impacts generally follow the methodology of Life Cycle Analysis (LCA)

2 ABOUT PROJECT

M/s. Bramha Corp Ltd. are proposing residential project “Bramha Exuberance” at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra.

The Latitude and Longitude of project site is as follows

Latitude – 18°28'31.22"N
Longitude - $73^0$53'42.44" E

The plot area is 17,433.10 m^2 and total construction area is 50,548.37 m^2. The project details are as follows:

No.	Description	Proposed
1.	Total plot area (Sq.mt.)	17,433.10 m^2
2.	Deductions (Sq.mt.)	2,833.35 m^2
3.	Net Plot Area	14,599.75 m^2
4.	Permissible Built-up Area as per FSI including Fungible Area (sq.mt.)	14,805.95 m^2
5.	Proposed FSI area (Sq.mt.)	21,798.69 m^2
6.	Proposed Non FSI area (Sq.mt.)	28,749.68 m^2
7.	Total Construction Built – up Area (Sq.mt.)	50,548.37 m^2

Table 1: No of buildings & configuration

Building	Configuration	Status Of Construction	Building Height m
A Building	LP + P +11 floors	Completed 2009	34.90
B Building	LP + P +11 floors	Completed 2009	34.90
C Building	LP + P +11 floors	Completed (2019)	34.90
D Building	LB + LP + P + 11 floors	Completed 2009	34.90
E Building	LP + P +11 floors	Completed 2009	34.90
Club House	G + 1	Completed 2009	

2.1 Location

The proposed residential project “Bramha Exuberance” is located at S. No. 13, H. No. 1, 2 & 3, Village- Kondhwa Khurd, Taluka Haveli, District Pune, Maharashtra.

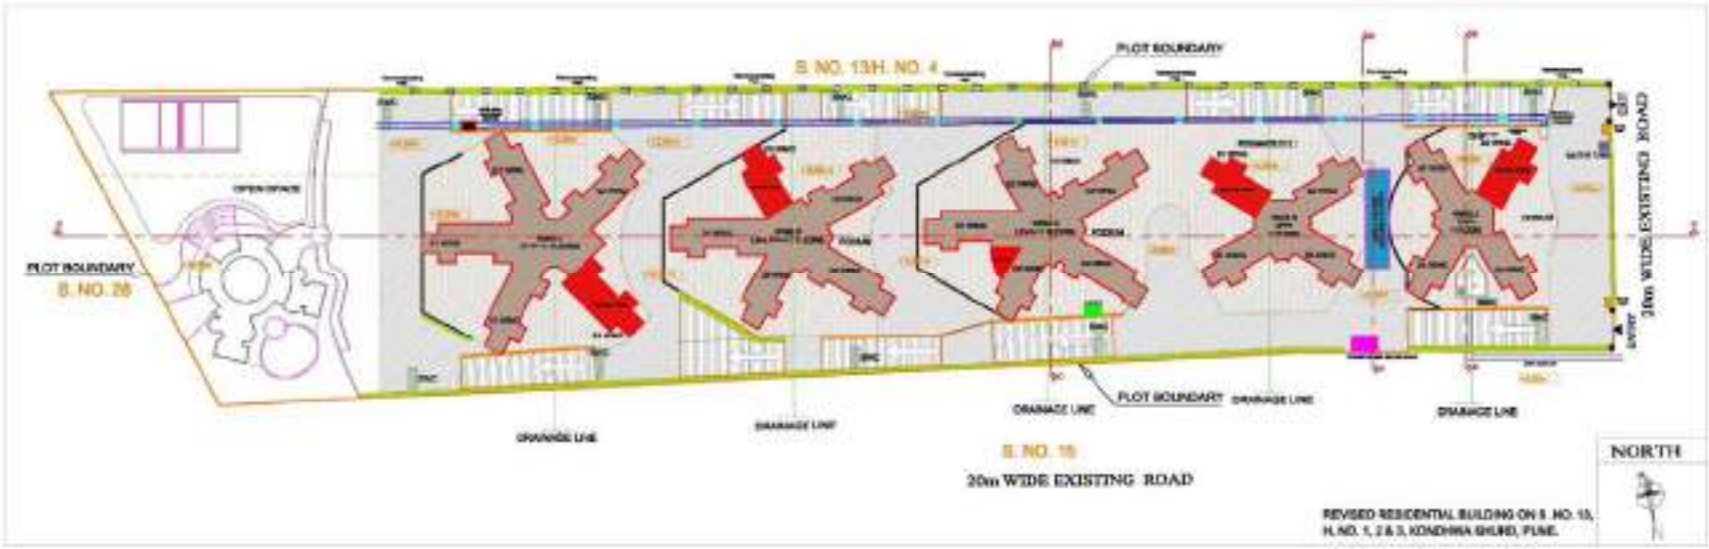
The Latitude and Longitude of project site is as follows
Latitude – 18°28'31.22"N Longitude - 73^{0}53’42.44” E

The Google Image of the project is given below:

Figure 1: Google Image showing the Project site

The layout plan of proposed development is given in Figure 2

Figure 2: Layout Plan



3 ECOLOGICAL FOOTPRINT

EF is the amount of land that would be required to provide the resources (grain, feed, firewood, fish, and urban land) and absorb the emissions (CO_2) of humanity

The Ecological Footprint has emerged as one of the world's leading measures of human demand on nature. In the last three decades, various tools (such as Ecological Footprint (EF), life cycle energy and carbon assessment) have been developed to estimate the sustainability of a system.

It is now considered one of the most relevant indicators for the assessment of impacts on the environment, and can also be used in conjunction with other indicators, such as the carbon footprint and water footprint

The Ecological Footprint of an activity is expressed in terms of global hectare (gha), which is defined as ''One global hectare is equivalent to one hectare of bio-productive land with world average productivity''. The expression for evaluating EF (in gha) is as follows:

$$\text{Ecological Footprint} = \sum (C_i/Y_i).e_i$$

where C_i is annual consumption of item i (kg/year), Y_i is annual productivity of item i (kg/ha), e_i is equivalence factor

Life Cycle Assessment (LCA): A quantitative approach that assesses a products impact on the environment throughout its life. LCA attempts to quantify what comes in and what goes out of a product from "cradle to grave," including the energy and material associated with materials extraction, product manufacture and assembly, distribution, use and disposal and the environmental emissions that result

Equivalence factor: A productivity-based scaling factor that converts a specific land type (such as cropland or forest) into a universal unit of biologically productive area, a global hectare.

The equivalence factor (e_i) of different land types (cropland, pastureland, forestland, marine land, etc.) is given by:

$$e_i = \frac{\text{Net Primary Productivity of specific land type (kg/ha)}}{\text{Average Net Primary Productivity of all land types (kg/ha)}\times\text{(gha/ha)}}$$

4 METHODOLOGY

The EF indicator has been integrated with the LCA approach for assessment of the impact of a project under consideration on the biosphere that determines the EF total of a building based on natural resource consumption, GHG emissions and waste assimilation. LCA of building project is defined as to investigate and measure the ecological consequences during their life, from the extraction of raw materials, material production, construction phase, use and maintains phase, materials and C&D waste transportation, and demolition phase.

The life cycle of a building is associated with resource consumption (material, fuel, electricity, water, etc.), transportation, manpower, physical land use for building construction and C&D waste disposal (landfill or recycling and reuse, etc.)

All the above parameters are converted into the equivalent productive land needed to produce or absorb their impacts in the form of CO_2 absorption land, forestland, cropland and built-up land.

EFtotal contains all phases of the building's life: implementation and construction phase, operation and maintenance phase and demolition phase.

It is used to effectively examine the impact of the building project on the environment and calculated with Eq.

$EF_{total} = EF_{cons} + EF_{oper}$

$EF_{cons} = EF_{wm} + EF_{we} + EF_{ww} + EF_{wt} + EF_{wws} + EF_{wb}$

$EF_{oper} = EF_{we} + EF_{wws} + EF_{wt} + EF_{we}$

Where EF_{wm}, EF_{we}, EF_{ww}, EF_{wt}, EF_{we}, and EF_{wb}represent the life cycle ecological footprint of material consumption, energy consumption, water consumption, transportation, waste disposal and built-up land consumption of the building respectively.

5 ESTIMATION OF ECOLOGICAL FOOTPRINT DURING CONSTRUCTION PHASE

5.1 EF OF CONSTRUCTION MATERIAL

The building construction phase is responsible for significant resource consumption. Therefore, environmental impact of construction materials is most important. The bill of quantities of construction material required for the project is as follows.

Table 2: Construction Material List

Sr. No.	Construction Material List	Material MT
1.	Cement	8159
2.	Sand	35082
3.	Aggregate	19963
4.	Steel	2835
5.	AAC Blocks	9336
6.	Clay Bricks	0
7.	Vitrified Ceramic Tiles	934
8.	Glass	73
9.	Wood	70
10.	Aluminium	47
11.	Gypsum Plaster	622
12.	Stone	328
13.	Fly Ash	1499

Note: Only Major materials are considered for calculation

5.1.1 Analysis for Embodied Energy of Construction Materials

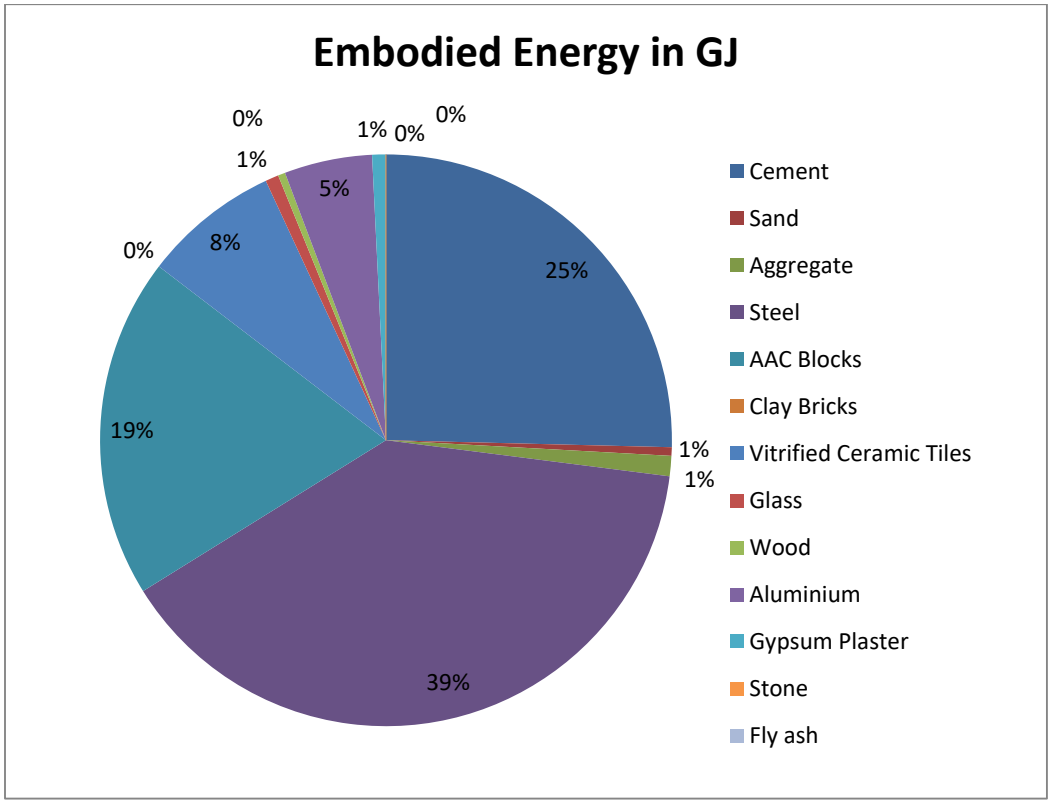
Embodied energy is the energy consumed by all of the processes associated with the materials used for the construction of building, from the mining and processing of natural resources to manufacturing, transport and product delivery. Embodied energy analysis of construction material was performed considering the Bill of Quantities of proposed Project.

Table 3: Embodied Energy of Construction Material

Sr. No.	Construction Material List	Material	Embodied Energy
		MT	**GJ**
1.	Cement	8159	36958.0
2.	Sand	35082	701.6
3.	Aggregate	19963	1656.9
4.	Steel	2835	56978.9
5.	AAC Blocks	9336	28008.9
6.	Clay Bricks	0	0.0
7.	Vitrified Ceramic Tiles	934	11203.6
8.	Glass	73	1092.3
9.	Wood	70	595.2
10.	Aluminium	47	7235.6
11.	Gypsum Plaster	622	1120.4
12.	Stone	328	6.6
13.	Fly Ash	1499	0.0
	Total	**78947**	**145558.1**

The embodied energy of construction material for the project is **145558.1 GJ**

Figure 3: Embodied Energy of Construction Material



The footprint of construction materials is determined using the following expression

$$EF_{wm} = \frac{\sum_i Cm_i \cdot Ese_{mi}}{EP} \cdot e_f$$

where $EF_{wm}$is the Weighted EF of construction materials (gha/year), $Cm_i$is the Material consumption (kg); Ese_{mi} is the Specific embodied energy of material i (MJ/kg) and EP is the Energy productivity (MJ/ha/year).

The footprint of the construction materials is allocated to CO_2 absorption land, since the wooden construction materials used in the work represent only a tiny percentage of the total.

The Ecological footprint of construction material is **4950.5 gha**

5.2 EF OF TRANSPORTATION

The EF of transportation consists of three stages

(a) building material transportation from factory to construction site,

(b) manpower transportation from their houses to project site and

(c) C&D waste disposal from the site to landfill area.

To estimate the EF_{wt} of the project, some assumptions are made; for example, material and waste are transported via heavy-duty trucks (HDTs) and labour travels through public transport systems and both vehicles run on diesel fuel.

Few assumptions are made to determine the EFt, which are given as follows:

- The average distance travelled by labours to reach the construction site is in the range of 10–15 km.
- All materials and C&D wastes are transported through HDT, and C&D waste is disposed in landfill 10 km from the construction site.
- 60% workers travel by public transport systems.

The life cycle EF of transportation is calculated with given below:

$$EF_{wt}=\{(\sum C_{mi}.\ D_{mi}\ /T_c + \sum C_{wj}.\ D_{wj}\ /T_c).\ E_{truck} + \sum M_k.\ D_{mk}\ /T_b.\ E_{bus}\}.\ \lambda_{diesel}.eco_2\ land$$

where C_{mi} and D_{mi} are weight of transportable of i^{th} material and average distance of transportation of i^{th}material, respectively; C_{wj} and $D_{wj}$are waste and average distance of transportation of j^{th} material, respectively; M_k and D_{mk} are number of labour and average distance travelled by the labour;$T_c$andT_b represent the capacity of truck and bus, respectively; and λ_{diesel} is emission factor of diesel fuel.

Table 4: Total VKT for transport of Construction Material

Sr. No.	Construction Material List	Distance to the Plant km	Total VKT
1.	Cement	254	103613
2.	Sand	32	56131
3.	Aggregate	32	31941
4.	Steel	360	51026
5.	AAC Blocks	215	100365
6.	Clay bricks	60	0
7.	Vitrified Ceramic Tiles	860	40146
8.	Glass	465	1693
9.	Wood	25	117
10.	Aluminium	306	952
11.	Gypsum Plaster	582	18112
12.	Stone	750	12302
13.	Fly Ash	215	16112
		Total	**432510**

Note: Mode of transport considered is Trucks

The construction debris generation from project is around 1468 m^3. The total VKT for disposal of construction debris is given in **Table 5**

Table 5: Total VKT for disposal of construction debris

Sr. No.	Construction Debris	Waste Quantity in m^3	Total VKT	Total Emission tCO_2e
1	RMC	559	1343	0.99
2	Tiles	38	49	0.04
3	Bricks work	105	218	0.16
4	Light weight block work	227	437	0.32
5	Mortar for plastering	425	1019	0.75
6	Water proofing work (brick bat)	76	146	0.11
7	Gypsum work	38	67	0.05
	Total (A)	**1468**	**3277**	**2.41**

Note: Mode of transport considered is Trucks

The average workers required during construction phase is 200 Nos. The mode of transport of workers is given in **Table 6**

Table 6: Mode of Transport of workers

Sr. No.	Details	Quantity
1	No. of workers coming by Public Transport	75
2	No. of workers coming by 2W	50
3	No. of workers coming by 3W	75
4	No of workers/day	200

The ecological footprint due to transportation of construction material, disposal of construction debris and transport of construction workers is given in **Table 7**

Table 7: EF due to Transportation

Sr. No.	Details	gha
1	EF due to building material transportation	106.32
2	EF due to disposal of construction debris	0.81
3	EF due to Workers Transportation	15.72
4	**Total**	**122.85**

The ecological footprint due to Transportation is **122.85 gha**

5.3 EF OF DOMESTIC SOLID WASTE

The details of domestic waste generation from labour at site is as follows:

Table 8: Solid waste generation during construction phase

Sr. No.	Details	Quantity	Unit
1	No of workers	200	Nos
2	Solid waste generation	0.2	kg/capita/day
3	Construction Period Considered	3	years
4	Total Solid Waste generation during Construction period	43800	kg
5	Organic Waste generation	26280	kg
6	Inorganic Waste generation	17520	kg

The following expression is used for the determination of the total footprint of the waste,

$$EF_{wws} = \sum_{i} CR_{x_i} \cdot G_i$$

Where,EF_{wws} is the Weighted EF of the waste (gha/year), CR_{xi} is the Weighted Conversion Rate (gha/year/t), G_i is the Waste Generation (t).

Table 9: EF of domestic solid waste generation during construction phase

Sr. No.	Waste	Generation in tonnes	EF in gha
1	Organic Waste	43.8	14.38
2	Inorganic Waste	29.2	17.35
	Total	**73.0**	**31.74**

The ecological footprint due to domestic solid waste is **31.74 gha**

5.4 EF OF WATER CONSUMPTION

The water demand for domestic use and construction purpose in construction phase is 198938.2 m^3

Table 10: Water consumption during construction phase

Sr. No.	Particulars	Quantity	Unit
1	No of workers	200	Nos
2	No of workers staying at worker colony	0	Nos
3	Local Workers	200	Nos
4	Total Water consumption	9.0	KLD
5	Construction Period	3	years

Sr. No.	Particulars	Quantity	Unit
6	Total water consumption for workers during construction period	9855.00	m^3
7	Total water required for construction and curing purpose	42579.00	m^3
8	Total Water Consumption	52434.00	m^3

The ecological footprint of water consumption is calculated by

$$EF_{ww} = \frac{W}{FP} \cdot e_f$$

Where EF_{ww} is the weighted ecological footprint of water consumption (gha/year), W is the Water consumption (m^3) and FP is the Forest productivity (m^3/ha/year).

The Ecological footprint of water consumption is **903.24 gha**

5.5 EF DUE TO ENERGY CONSUMPTION DURING CONSTRUCTION PHASE

The daily energy consumption during construction phase is 150 kwh. The ecological footprint of Power Consumption is calculated by

$$EF_{we} = \sum_i \frac{P_i}{EP_i} \cdot e_f$$

where EF_{we} is the weighted ecological footprint of electricity consumption (gha/year), P_i is the Primary energy consumption (GJ), EP_i is the Energy productivity (GJ/ha/year).

The Ecological footprint of power consumption is **45.00 gha**

5.6 EF OF BUILT UP LAND

This footprint is obtained by considering the project area (17433.1 m^2) under consideration. The ecological footprint of Built up land is calculated by

$EF_{wb} = S \cdot e_b$

Where, EF_{wb} is the Weighted EF of built land (gha/year), S is the Surface area consumed (ha/year), e_b is the Equivalence factor of built land.

The Ecological footprint of Built up land is **4.4 gha**

6 ESTIMATION OF ECOLOGICAL FOOTPRINT DURING OPERATION PHASE

The share of operational phase impact of a building is much more than rest of the other phases of building. Therefore small savings in building operation can reduce much more amount of environmental impact. To calculate the ecological footprint of project during operation phase, the operational year considered is 45 years.

6.1 EF OF POWER CONSUMPTION

The operational energy requirements of a building can be considered as the energy that is used to maintain the environment inside that building. Life cycle analysis of building shows that operational energy accounts for 85–95% of the total energy consumption and CO_2 emissions of a building which comes from occupancy through heating, cooling, ventilation, and hot water use. This will include energy from electricity, gas, and the burning of fuels such as oil or coal. The annual energy consumption can be reduced by providing measures like Renewable energy (Solar Hot Water, Solar PV Panels), energy efficient pumps and lighting to reduce the CO_2 emission

The estimated power consumption during operation phase of project is **2899.93 MWh/yr.**

Table 11: EF of power consumption during operation phase

Sr. No.	Particulars	Value	Unit
1	Electricity consumption	7.95	MWh/day
2	Operation Period	365	days
3	Total Power Consumption	2899.93	MWh/year
4	EF of Power consumption	795.01	gha/year
5	EF of Power consumption for LCA 45 years	35775.55	gha

The EF of power consumption during operation phase is **795.01 gha/year**

The Ecological footprint of power consumption for LCA 45 years is **35775.55 gha**

6.2 EF OF WATER CONSUMPTION

The total water requirement during operation phase of project is 185 KLD.

Table 12: EF of water consumption during operation phase

Sr. No.	Particulars	Value	Unit
1	Total Water consumption	185	KLD
2	Fresh water Consumption	123	KLD
3	Operation years of Buildings	365	days
4	Total Water consumption during 365 days	67525	m^3

5	EF of Water Consumption/year	57.62	gha
6	EF of Water Consumption for LCA 45 years	2592.96	gha

The Ecological footprint of water consumption is **57.62 gha**

The Ecological footprint of water consumption for LCA 45 years is **2592.96 gha**

6.3 EF OF DOMESTIC SOLID WASTE GENERATION

The solid waste generation from the proposed development is 1223 kg/day. The organic component is 733.8kg/day. The inorganic component is 489.2 kg/day. The solid waste will be segregated at source. The dry waste will be handed over to Authorised agency. The biodegradable waste will be treated at site through Organic Waste convertor. The total solid waste generation during operation period of buildings is 446.4tonnes

Table 13: EF of solid waste generation during operation phase

Sr. No.	Waste	Generation in tonnes	EF in gha
1	Organic Waste	153.08	50.27
2	Inorganic Waste	102.05	60.67
3	**Total**	**255.14**	**110.94**

The Ecological footprint of domestic solid waste generation is **110.94 gha**

The Ecological footprint of domestic solid waste generation for LCA 45 years is **4992.43 gha**

6.4 EF DUE TO TRANSPORTATION DURING OPERATION PHASE

Greenhouse gas emissions from vehicular movement vary with vehicle type, fuel type, driving speed, driving style, vehicle loading and distance travelled.

The Vehicle Kilometre Travelled (VKT) approach is considered for estimation of CO_2 emission. Vehicle Kilometre Travelled (VKT) is basically the total distance travelled by the vehicles on roads. The internal distance travelled by the vehicles upto entry and exit points of the project are considered as VKT. After the VKT inventory has been obtained, next aspect is to quantify the emission factors. The emission factor (kg CO_2/km) is then multiplied by VKT (km) to obtain the quantity of emissions. The details of Trip generation is sourced from the Traffic study

Table 14: Parking provided

Sr. No.	Vehicles	Parking Provided (No. of Vehicles)
1	Cars	214
2	Scooters	411

The Ecological footprint due to transportation is **3.1 gha**

The Ecological footprint due to transportation for LCA 45 years is **137.94 gha**

8 EF REDUCTION THROUGH VEGETATION AND RENEWABLE ENERGY

Carbon sequestration is nothing but capturing atmospheric carbon dioxide or anthropogenic CO_2 from large scale stationary sources before it is released to the atmosphere. Once captured, the CO_2 gas is put into long term storage. CO_2 sequestration in plants has the potential to significantly reduce the level of carbon that occurs in the atmosphere. Terrestrial or biologic sequestration means using plants to capture CO_2 from the atmosphere and then storing it as carbon in the stems and roots of the plants as well as in the soil.

8.1 EF REDUCTION THROUGH VEGETATION

The EF reduction due to Vegetation and Landscape is as follows

The lawn area provided: 2045.85 m^2. The trees to be planted in project: 392 Nos.
The total EF reduction through vegetation is **12.03 gha**

8.2 EF REDUCTION THROUGH RENEWABLE ENERGY

The Solar PV panel unit (150 kw) are proposed to reduce the power consumption. The renewable energy generated through Solar system will be around 273.75 Mwh/yr

Table 15: Energy saving trough Renewable Energy

Sr. No.	Particulars	Total Power Saving (Mwh/yr)
1	Solar Hot Water	0
2	Solar PV Panel unit	135
3	Total	135

The reduction in ecological footprint due to renewable energy sources during operation phase of project will be **36.98 gha**

The total reduction in ecological footprint due to vegetation and renewable energy sources will be **49.02 gha**

9 CONCLUSION

The ecological footprint has been carried out to evaluate the environmental pressure generated by the construction of project (for total area of **50548.37 m²**) using LCA approach. The Ecological Footprint of an activity is expressed in terms of global hectare (gha), which is defined as ‘‘One global hector is equivalent to one hectare of bio-productive land with world average productivity’’. The EF was carried out for construction, Operation and demolition phase of project.

	Total	**46596.77**	**100.00**

EF per m^2 area

Sr. No.	Particulars	value	Unit
1	Total Construction area	50548.37	m^2
2	Already Constructed area	50548.37	gha
3	Ecological footprint of project	46596.77	gha
5	Ecological footprint per m^2 area	0.92	gha

The Ecological footprint considering the embodied energy of construction material is 4950.5 gha. (i.e 0.09 gha/m^2)

The ecological footprint of project is 46596.77 gha. The EF_{total} of the project clearly indicates that the CO_2 absorption land is the most significant land in all consumed land types of the building. The effects of energy consumption during the building life are highly significant and have the largest share in the $LCEF_{total}$. The transportation, water, manpower and waste assimilation carry very low decisive EF.

Chapter 1
Solid Waste

1.1 Introduction

India is developing very fast for past few decades but some major issues are holding our capabilities at back foot, Solid waste issue is most significant among those problems. Only reason behind this problem is poor management of solid waste.

Construction sector is a substantial contributor in generating solid waste. Waste produced during the construction project mainly ends up in landfilling creating huge load on limited landfill areas. Therefore, keeping eye on waste produced due to construction may create a difference to landfill sites.

Mass balance analysis of solid waste can play a key role in management of solid waste. Mass Balance analysis can be proved beneficial due to following aspects.

- Better estimation of waste generation at project side, so better practices can be invented to produce less waste.
- Better management and reduced waste at project side will ease the load on landfill site.
- Better management and less produced waste will ease burden on local waste managing bodies.

1.2 Mass balance analysis of solid waste for Bramha Exuberance project

Solid waste generation at project site during operation is estimated in this study.

2.1.1 Solid waste generation in operation phase

Estimation of solid waste generation during operation and its management plan is given in **Chapter 2 and Chapter 7** of EIA report of this project.

Total no. of population on site is 1432 nos.

Solid waste generated from entire project is 699 kg/day. Out of which 419 kg/day is biodegradable component and 280 kg/day is non-biodegradable.

2.2.1.1 Management of waste produced

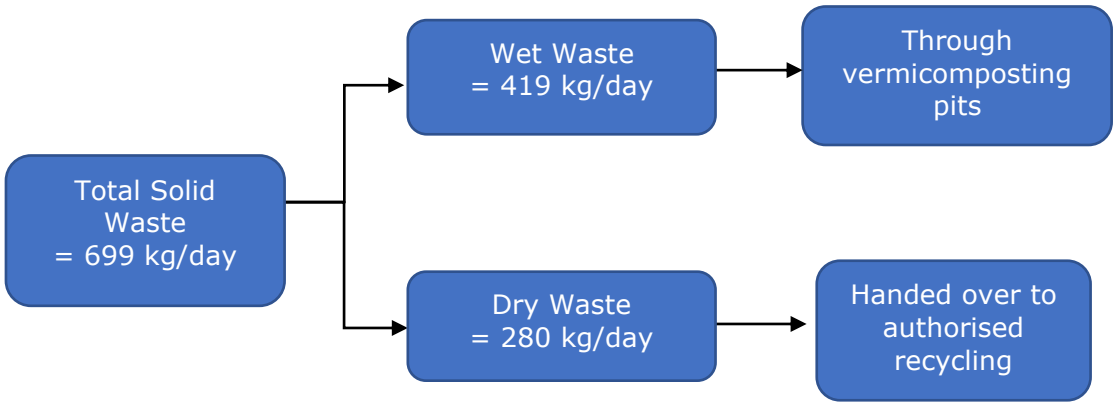
Different coloured waste collection bins for wet and dry waste have placed at different sites. Waste regarding information has provided to workers in form of awareness session to make them understand the significance of waste collection and disposal.

Disposal of collected waste:

Wet waste: Biodegradable waste is treated using vermicomposting pits and used as manure for landscaping.

Dry waste: Collected dry waste is handed over to authorised recycling.

Figure 1.1: Mass balance of solid waste in operation phase



Chapter 2
Liquid Waste

2.1 Introduction

21st century is an era of development, globally. India is one among the developing nations. Development is at its peak in every sector mainly in technology and construction. Construction sector development at its best because of continuous growth in population.

Unfortunately, is development always associated with some drawbacks, for an example waste generation. More is the construction; more will be the waste generation. Hence, proper attention is must towards waste management besides the development. Among the wastes, liquid waste must be on priority as water is basic need for survival for living beings.

Construction sector plays an important role in liquid waste management as it is directly involved in liquid waste generation, in both phases- construction and operation, irrespective of commercial or residential project. Prediction of waste generation can be helpful to manage waste efficiently at any construction project.

Mass balance analysis of liquid waste for any construction project is an important procedure for estimation of wastewater generated. Mass balance analysis helps in:

- Better estimation of wastewater generation and inventing better practices for waste management.
- Adopting efficient method to reduce the wastewater generation that will reduce the load on private or common STP.
- Reduce the chances of surface or ground water contamination using good management practices.

To attain the above purposes, mass balance analysis for wastewater is done for 'Bramha Exuberance' project.

2.2 Mass balance analysis for Bramha Exuberance project.

Liquid waste generation at project site during operation is estimated in this study.

2.2.1 Liquid waste generation in operation phase

Estimation of liquid waste generation during operation and its management plan is given in **Chapter 2** of EIA report of this project.

2.2.2 Liquid waste generation

Total no. of population on site will be 1432.

Total water requirement is 185 KLD. Total sewage generation is 173 KLD. Sewage generated was treated in STP. Treated water was used at activities, like gardening, flushing.

1.0 Geology

1.1 Geography

The area is part of Deccan Plateau. The area is situated at Pune, Maharashtra in the survey of India Topo-sheet no. **E43H15** (47F/15) in quadrant **1D** at the altitude of 569 m. (Above MSL). Location of the site is at Latitude 18°28'31.22"N, 73°53'42.44"E. The area is easily approachable by tar road. The area lies on the eastern slopes of Sahyadri ranges.

Figure 1: Google Earth Image of Site

1.2 Rainfall

As the area lies in heavy rain fall (West of Sahyadris) area receives poor to average quantity of rain fall, (i.e. around 897.7 mm. approx. in 80 days per year) with nearly 82 % of the rainfall occurring during June – September and 10% occurring during October. The normal annual rain fall of Pune varies from about 505.78 to 2767.75 mm.

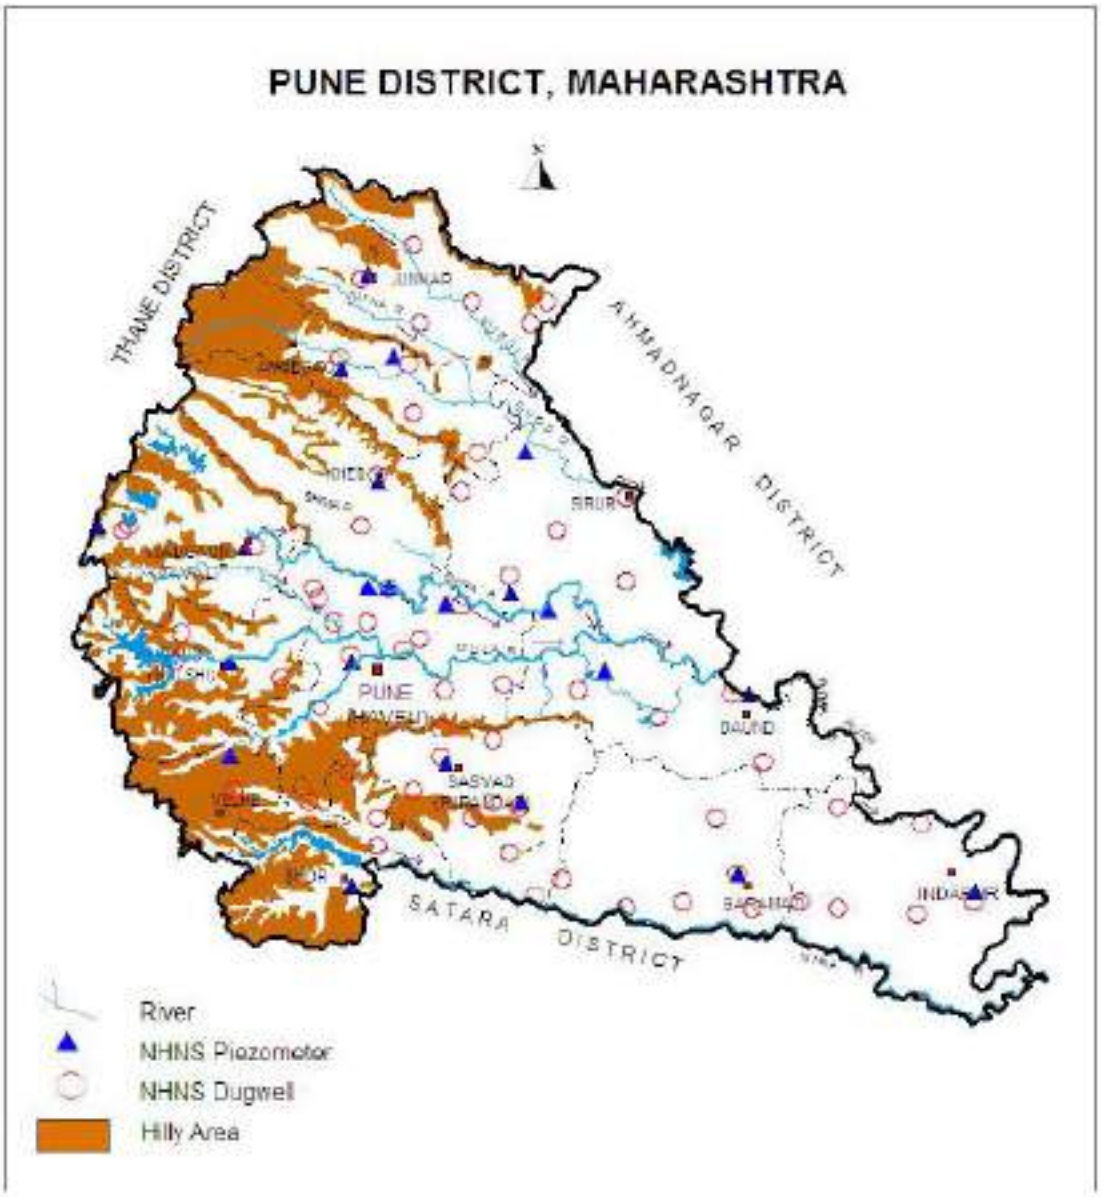
Average Rainfall for Haveli = 0.8977 m/year

Project Site Location: Topo sheet

1.3 Geomorphology: Morphological Location

The village & site lies in BM –46 watersheds and in 2/9 Micro-shed of safe zone classified in Morphozone- Site comes under Moderate to moderate Priority Zone of Kondhwa Khurd village. Site comes under Arial photograph no. 728. The property slopes towards West.

Figure 2: Location Map



The property slopes in general towards West (W). Topography of plot is almost flat in nature. Topography shows that the Eastern part of the land is at higher altitude and Western part is at lower altitude. In general, a variation of altitude of about 0.75 to 1.0 meters is observed. From the water shed, it shows typical dendritic drainage pattern.

1.4 Petrology

The area forms the heart of a vast suite of basalts. In general soil cover is good in all parts of land. Below soil well weathered and fractured basalt is present. Basalts are formed from the solidification molten lavas, rich in minerals of Augite and Plagioclase.

1.4.1 Lava Flow Types

Mafic lava flows have been classically divided into two categories: pahoehoe and aa (e.g., Dutton, 1884; Macdonald, 1953). Pahoehoe is characterized by having a smooth surface, and aa has a spinose auto breccia surface. In more recent years, some transitional types of basaltic lava have been noted, including slab pahoehoe and spiny pahoehoe (also called "toothpaste" or "sharkskin" pahoehoe). Spiny pahoehoe has the same centimeter scale morphology as classical pahoehoe but has a spinose surface (e.g., Rowland and Walker, 1987). Slab pahoehoe has the same meter-scale morphology as an aa flow, but the auto breccia is dominated by slabs of broken pahoehoe surfaces (e.g., Macdonald, 1972). There are also many sub varieties of classic pahoehoe in Hawaii, such as S- and P type pahoehoe (Walker, 1989), dense blue glassy pahoehoe (Hon et al., 1994), and shelly pahoehoe (Swanson, 1973). Most recently, another type of intermediate lava flow has been recognized. This flow type, dubbed "rubbly pahoehoe," is characterized by a flow top auto breccia comprised primarily of broken pahoehoe lobes (Keszthelyi, 2000; Keszthelyi and Thordarson, 2000). The area under investigation forms the part of the volcanic sequence of basaltic rocks belonging to the Deccan Volcanic activity, which is one of the largest known geological formations in India, covering over 80 percent area of the state of Maharashtra. As described earlier the local Basalt is converting in to Laterite in upper layers. The significant contributions to the field studies of the Deccan Volcanic Province during last few decades have recognized different flow types of basalts on the basis of associated volcanic features. In general, the basaltic lava flows have been grouped in to two as follows;

- Compound (Pahoehoe) type
- Simple (Aa) type flows

The lava flows in the proposed site area are of compound types that occur in entire Pune area. The most characteristic feature of the compound flows is that they consist of flow units, which have smooth upper surface, often with ropy structures developed on them, and a basal zone exhibiting inverted 'Y' shaped pipe vesicles. The western and northern portion consists of a relatively denser rock. The upper portion of such flow units is vesicular / amygdaloidal (filled with white or green silica material) and the cavities are generally ovoidal. The compound flows consist of such several flow units. Ropy surfaces and ovoidal vesicles (often filled) together with pipe amygdales are characteristic features to recognize the individual units of a compound flow. A thin glassy (fine-grained) crust, which is usually reddened at the top, also delineates the different flow units. Congealed glassy lava toes with hummocky (undulating) tops are often noticed in fresh exposures in northern part. The maximum and minimum thickness observed for compound flows is 160 m and 40 m respectively. Thinner flow units are throughout vesicular. These features are especially very common in the region around Mumbai, Pune, Lonavala, Nasik, Aurangabad and Ahmednagar and have been documented. The simple (Aa) flows on the contrary are characterized by rough fragmental clinker tops and dense, hard and massive rock below. The clinker fragments are irregular, spiny and varying in size from a few cm reaching to the order of about a meter. The basalt Flows, in general are thick, tabular in form, having large areal extent. Thickness of flows generally ranges between 5 and 80 m.

Another aspect of the flows is that seldom they are separated by tuffaceous material referred to as bole. The boles are of red-, green and brown- types depending on their color. These represent fine-grained material and are not uniformly developed on flows. The flows are also separated by volcanic breccias. Volcanic breccias consist of angular to sub angular fragments of basalt in a tuffaceous material. Both these features have some adverse effect on the quarrying of rock depending upon their thickness.

2.0 HYDRO-GEOLOGY

2.1 Vegetation

The natural vegetation is poor in the study area. Developer has planted lots of trees as per their requirement / convenience.

2.2 Soil

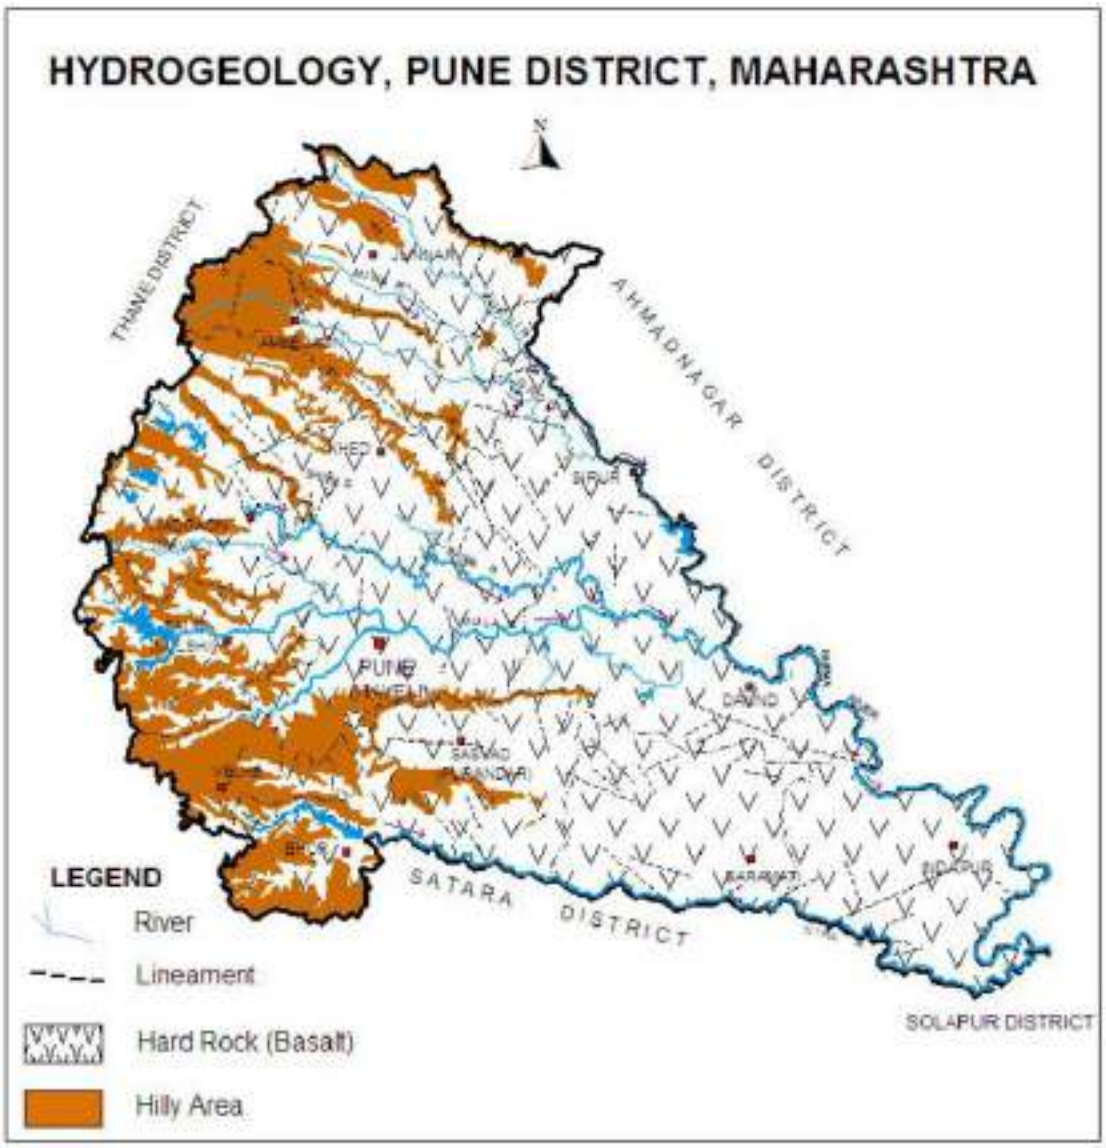
The area forms the heart of a vast suite of basalts with 0.1 to 0.2 m. of soil cover in N, NW, W, & SW parts of land and it is about 0.2 to 0.3 m. of soil cover in SW, SE and S and Southern parts of land.

In general soil cover is very good in entire parts of land. The soil is mainly grayish in colour. In some areas the soil is mixed with concerns, small Zeolites like Silica, Calcite, Feldspars, Natrolites and Green earths etc.

2.3 Hydrology / Well-hydrology

In the surrounded areas, bore wells are present. Depths of bore wells are limited between 30 to 60 m. and yield varies from 1" to 1 ¼". Water from the bore wells is mainly used for plantation, construction and domestic purpose.

Figure 3: Hydrogeological Map



3.0 Ground Water Survey Report

3.1 Information

The Groundwater survey was conducted using Electrical resistivity method in the given premises. In all 2 no. of soundings were taken. We have identified 4 no. of spots with the help of Resistivity data and Hydro – Geological conditions to explore the ground water by drilling bore wells.

Deccan basalts of west-central India are hydro-geologically inhomogeneous rocks. A proper understanding of the physical framework of the basalts within which groundwater resides and moves is a key to the hydrogeology of these rocks. Two types of basalt, the vesicular amygdaloidal basalt and the compact basalt, occur as alternate layers in the volcanic pile. Although the rocks are generally inhomogeneous, structures in the basalt, such as sheet joints and vertical joints, serve as zones of groundwater flow. In the shallow subsurface, two groundwater systems are operative. Groundwater system A consists of a vesicular amygdaloidal basalt underlain by a compact basalt, whereas groundwater system B consists of a vesicular amygdaloidal basalt overlain by a compact basalt. Groundwater system A has a better developed network of openings and, as a consequence, this system has a higher transmissivity and storage coefficient than groundwater system B. Wells tapping groundwater system A have higher yields on average and irrigate more hectares of cropland than do wells tapping groundwater system B. This simple systems concept offers a practical methodology for understanding the geometry of the physical framework that contains groundwater in the Deccan basalts. The efficacy of the concept is in its widespread utility for the region. The concept may also be extrapolated to help understand the hydrogeology of deeper Deccan basalt groundwater systems.

3.2 Methodology

3.2.1 Electrical Resistivity Method (IS: 1892-1979)

By applying this method, the resistance to the flow of an electric current through the subsurface materials is measured at intervals on the ground surface. The resistivity is usually defined as the resistance between opposite phases of a unit cube of the material. Each material has its own resistivity depending upon the water content, compaction and composition. The test is conducted by driving four metal spikes to serve as electrodes in to the ground along a straight line at equal distances. A direct voltage is imposed between the two outer potentiometer electrodes and the potential

drop is measured between the inner electrodes. To interpret the resistivity data for knowing the nature and distribution of the subsurface formations, it is necessary to make preliminary trial on known formations. The potential 'V' thus obtained divided by the current 'I' applied gives the resistance 'R' of the ground. The product of the resistance and the spacing factor, which is depending upon the disposition of the electrodes, is the resistivity of the ground.

This method is routinely used for:

- Determining the sub-surface strata classification
- Determination of hard rock foundation
- Estimation of overburden thickness and hard rock quantities
- Determination of the suitability of the area for quarrying and excavation

A great variety of electrode arrangements have been used to measure the earth resistivity but essentially, they may be grouped into three classes.

1. Arrangements in which the potential differences between two widely spaced measuring electrodes are recorded.
2. Arrangements in which a potential gradient or electric field intensity is measured using closely spaced pair of measuring electrodes.
3. Arrangements in which the curvature of the potential function is measured using a closely spaced current electrode pair as well as a closely spaced measuring electrode pair.

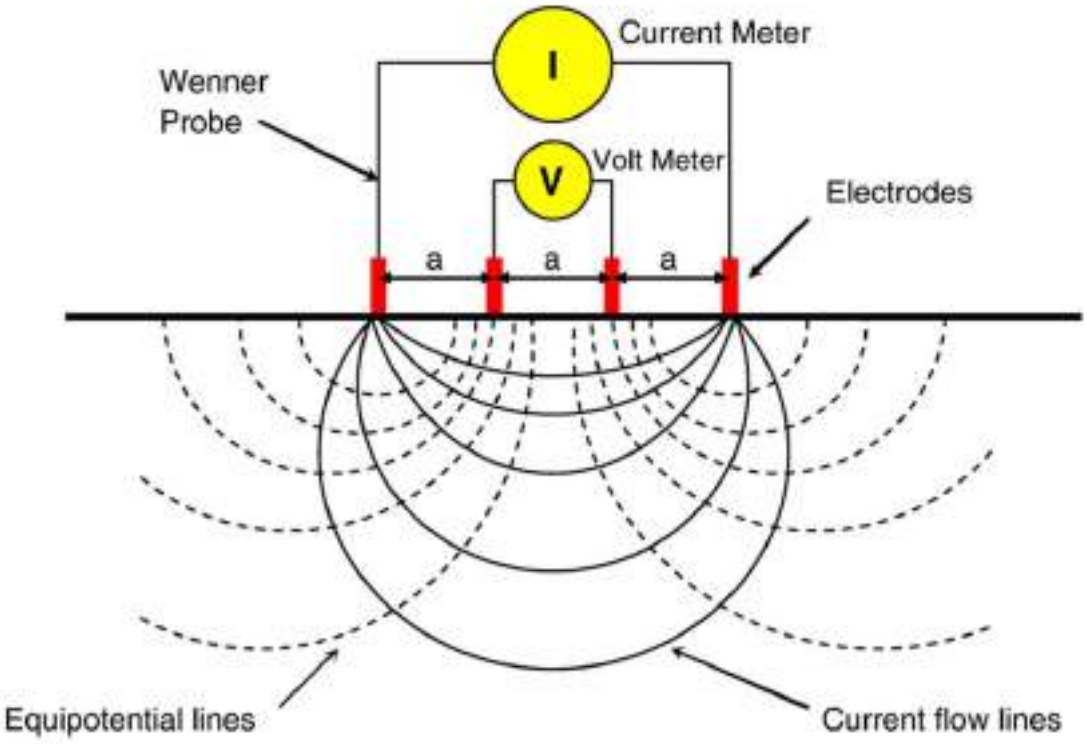
Any one of these arrays may be used to study variations in resistivity with depth or in lateral condition. In studying the variation of resistivity with depth, as in the case of a layered medium the spacing between the various electrodes is gradually increased. With larger spacing, the effect of material at depth on the measurements becomes more pronounced.

In studying the lateral as well as vertical variations, various electrode configurations are adopted and the array is moved as a whole along a traverse line. The first type of measurement is called as 'Vertical Electrical Sounding' (VES) and the second one is 'Horizontal Profiling' (HP). In the present work VES were conducted at 2 different locations and the depth was limited to 60 m.

3.2.2 Wenner's Configuration

It is a geophysical prospecting operation method in which measurement of earth resistivity is made from ground surface. The relative value of electrical resistivity can be interpreted, under certain condition, in terms of the general geology of the subsurface to limits depths. The method has been used in ground water exploration since the early 1930s.

Figure 4: Schematic representation of electrical resistivity measurement with Wenner's probe



Various types of earth materials generally exhibit certain ranges of the resistivity values. Using four electrodes set in the ground, the apparent earth resistivity is determined by measuring the voltage drop between two interior electrodes when current is passed thought the earth between outer electrodes.

The most common arrangement is the Wenner's Configuration with the electrodes equally spaced along straight line. Electrical resistivity surveying finds its best application in preliminary exploration of large areas, where a substantial ground water development is desired.

In the present work VES were conducted at 2 different locations.

3.2.3 VES Data Output

Table 1: Depth w.r.t Strata characteristic

Depth in BGL	Description of Strata
0-3	Soil + Weathered Murum
3-12	Moderately fractured weathered
12-27	Poorly fractured weathered basalt
27-42	Moderately fractured basalt rock
45-60	Poorly fractured basalt
60-65	Moderately weathered/ Hard rock at places
65<	Compact rock

Figure 5: Representation of Sub Surface Strata

3.2.4 Data Procession

In the area to understand the shallow subsurface geological and aquifer conditions extending up to 60 meters' depth, vertical electrical soundings were conducted. The proposed area was investigated based on VES data as attached. Using IPI2 WINDOW based software the data obtained from field was processed. This software helps in interactive semi-automated interpretation of the field data. All the sounding data were modeled for the existing sections. The VES data on apparent resistivity values was modeled by using IPI2 WINDOW based software to get different layers depicting their thickness, depth and true resistivity.

In nutshell, the above interpretation gives generalized geological situation with depth-wise variations. As discussed above the sounding points with typical curves at selected sites give point information, which was further utilized to build comprehensive picture of subsurface geological situation depth-wise by preparing 2-D geo-electrical sections.

Figure 6: Resistivity Cross-Section

3.2.5 Geophysical Observations

Groundwater Investigations have been carried out by using geological and hydro-geological observations as already mentioned. Geophysical investigations have been carried out using electrical resistivity method at 2 no. of spots with Wenner's configuration. The recommendations are as follows:

Table 2: Lithology of the land as per resistivity survey

Sr. No.	Soil + Weathered Rock	Moderately Fractured Basalt	Poorly Weathered and Fractured Basalt	Poorly Weathered Fractured, Hard Compact Basalt
VES 1	1-3 m	3-12 m	12-27 m	27-65 m
VES 2	1-2.95 m	2.95-14 m	14-29 m	29-65 m

Aquifer Status:

Average depth of Un-confined aquifer is at 5.00 m. to 6.00 m. (5.50 m. Average).

Average depths of Confined aquifers are at 12.00 m. to 15.00 m. & 37.50 m. to 42.50 m.

Aquifer layers shows an uneven thickness.

Ground Water Table:

Summer Season – 11.00 m. to 14.00 m. BGL. (12.50 m. Average)
Rainy Season – 5.00 m. to 6.00 BGL. (5.50 m. Average)
Winter Season – 7.50 m. to 10.00 m. BGL. (8.75 m. Average)

4.0 Recharging

Recharging may be carried out by artificial surface recharging. Recharging would not only help in sustaining the well by recharging but also in improving the quality of the water by reducing alkalinity (salinity) and hardness.

4.1 Rainwater Harvesting

Rainwater harvesting should be carried out in the property to enhance the availability of groundwater. In this case surface rain water pits are suggested.

Considerations:

1) Total plot area: 17,433.10 m^2

2) Less deductions for road widening & amenity area: 2,833.35 m^2

3) Net area under Consideration: 14,599.75 m^2

4) Total roof top area: 2,948.08 m^2

5) Total area under internal road, paved, services and rest area: 9,605.82 m^2

6) Open space, plotting area, Landscape / Garden area: 2,045.85 m^2

7) We are considering 897.7 mm. annual rain fall.

8) We are considering 50 days of rainfall in one year.

9) We are considering 0.85 factor for roof top area.

10) We are considering 0.7 factor for road, paved area & services area.

11) We are considering 0.4 factor for open Space and landscape & garden area,

12) Expected percolation of water via pit with bore is – NA -

13) Total harvesting capacity 4,100.00 m^3/Year i.e. 82.00 m^3/ Day.

14) Total suggested harvesting is > 100 % of total surface run off after development, it is > 100 % of incremental rise in surface run off after development.

Table 3: Run off calculations

Run off for Roof top Area	Run off for Paved, Internal Roads, Services Area	Run off for Open Space, Landscape & Garden Area	Total Run off for Entire Area
2,249.52 m^3/year	6,036.20 m^3/year	734.62 m^3/year	9,020.34 m^3/year
44.99 m^3/day	120.72 m^3/day	14.69 m^3/day	180.41 m^3/day
Total surface run off before development			5,242.48 m^3/year
Total surface run off after development			9,020.34 m^3/year
Incremental rise in surface run off			3,777.86 m^3/year
Incremental rise in surface run off			75.56 m^3/day

4.2 RWH Scheme Details (Proposed)

a. Number of RWH Pits– 2 No. (Surface rain water pits)

b. Volume of rainwater that can be harvested in 1 Pit = 41.00 cum/day

c. Rainwater available from site = 75.56 cum/day.

d. Rain water harvesting capacity = 82.00 cum/day.

e. Suggested harvesting more than available surface rain water = 6.44 m^3 per day.

f. Suggested harvesting more than incremental rise in run off = 322.14 m^3 per year.

g. Percentage Harvesting capacity = > 100 % of total available rain water, it is > 100 % of incremental rise in surface run off after development.

Conclusions:

1) As the unconfined aquifer is at the depth of 5.00 m. to 6.00 m. (5.50 M. Average), we have recommended surface rain water pits only.

2) Confined aquifers are at the depth of 12.00 m. to 15.00 m. & 37.50 m. to 42.50 m. of depth (Average).

3) As the increase in the runoff is 3,777.86 m^3 per year i.e. 75.56 m^3 per day, available surface rain water after development is 9,020.34 m^3 per year i.e. 180.41 m^3 per day & as per requirement of form 1 B, we have recommended a recharge of 82.00 m^3/Day with the help of 2 no. of RWH Pits.

4) Total harvesting provided is > 100 % of the total surface run off after development, it is > 100 % of incremental rise in surface run off after development.

5) Percentage of harvesting compared to incremental raise in rain water (w.r.t average rain fall): - **108.53%.**

DESCRIPTION			SURFACE RUNOFF PER YEAR (m^3)	SURFACE RUNOFF PER DAY (m^3)
Total Plot Area	17433.1	sq. m		
Total Deductions	2833.35	sq. m		
Net Area Under Consideration	14599.75	sq. m		
Annual Average Rain Fall	0.0977	m.		
Peak Rain Fall	0.05	m.		
Roof Top (Concrete)	0.85			
Internal Road & Paved Area	0.7			
Open Space, Landscape, Garden	0.4			
Roof Top Area	2948.08	sq. m	2249.52	44.99
Area Under Road, Paved, Rest etc	9605.82	sq. m	6036.20	120.72
Open Space, Landscape, Garden Area	2045.85	sq. m	734.62	14.69
Total	14599.75		9020.34	180.41
Average Runoff Coefficient	0.4			
Total Surface Runoff After Development		Cu. m	9020.34	180.41
Total Surface Runoff Before Development		Cu. m	5242.48	104.85
Increase in Surface Runoff After Development		Cu. m	3777.86	75.56

Rain Water Harvesting Details	Surface Rain Water Harvesting
No. of RWH Pits with Bores	2.00
Individual single unit RWH capacity (Cum/Day)	41.00
Typewise Individual capacity of RWH Pits (Cum/Day)	44.99
Total Capacity of RWH Pits (Cum/Day)	82.00
Total Capacity of RWH Pits (Cum/Year)	4100.00

- Percentage of harvesting compaired to incremental raise in rain water (w.r.t average rain fall): - **108.53%**
- Total harvesting provided is greater than 100 % of total surface runoff after development, it is greater than 100 % of incremental rise in surface runoff after development.

RUNOFF CALCULATIONS

Total Plot Area (sq.m)	17433.1
Total Deductions (Sq.m)	2833.35
Net Area (Sq.m)	14599.75
Rainfall (mm)	50

Rain Water Discharged from Roof Area	
Total Roof Area	2948.08
Run-off Coefficient	0.85
Quantity of rain water collected from roof	125.29

Storm water runoff from paved surfaces	
Internal roads, paved, services area	9605.84
Run-off Coefficient	0.7
Quantity of storm water run-off from paved areas	336.20

Storm water runoff from landscape area	
Total landscape area on mother earth	2045.85
Run-off Coefficient	0.4
Quantity of storm water run-off from green areas	40.92

Total storm water discharge (m3/hr.)	502.41
Water collected in 5 min. of peak rainfall	83.74
volume of one recharge pit	41.94
No. of recharge pit required	2.00
No. of RWH Pits proposed	2

3.00 M. X 3.00 M. X 4.5 M. RECHARGING PIT

Existing Environmental Status Report

Project Name	Bramha-Exuberance : Survey No. 13 hissa No. 1 2 3 at Kondhwa Khurd, Haveli, Pune-411048
Date of report	2021.10.23
Construction status	Wing A B C D and E were completed Wing A (4 wings) – Podium +Stilt + 11 Wing B (4 wings) – Podium +Stilt + 11 Wing C (5 wings) – Lower parking + Podium + 11 Wing D (5 wings) – Podium +Stilt +7 Wing E (5 wings) – Podium +Stilt + 11
Facility	✓ Statutory compliance has been completed by Project Proponent Received plan sanctioned, land documents, CFO, Water, Drainage, Garden,
	✓ Air, Water, Noise, Soil and land : Considering all Impact, its mitigation measures has been provided and taken care by Project Proponent
	✓ Green Belt and play area : According to Corporation DCR norms, proper green belt and play area has been provided and well developed by Project Proponent
	✓ Energy Conservation measures : Like LED street light and Solar PV Panels has been provided and well developed
	✓ Waste Management : Composting : Facility of Proper vermin composting pits has been provided and maintained. Drainage : Also sewerage network line well designed and connected to municipal line.
	✓ Water network : Storm water network : well-designed network as per contour slop has been provided Rain water harvesting network : Proper Rain water ground water recharge pits has been provided. Proper water sprinkling also doing to maintain the soil moisture and reduce the dust and air pollution Facility of swimming pool has been provided
	✓ Fire tender Movement : Internal road and fire-fighting movement has been well designed and proper fire-fighting equipment's has been installed. Lift and staircase also provided.
	✓ Parking facility : Provision of 4W Parking designed and developed considering DCR rules.

Environment facilities provided	
1.	✓ Proper entry and exit to project
2.	✓ Sewage Treatment Plant
3.	✓ Sewerage Drainage network
4.	✓ Rainwater Harvesting pits with Ground water recharges pits
5.	✓ Storm water network
6.	✓ Provision of Solar PV Panels
7.	✓ Provision of Street light - LED
8.	✓ Internal driveway
9.	✓ Road connectivity
10.	✓ Water Facility
11.	✓ Tree Plantation
12.	✓ Amenities like Club house, swimming pool and play area
13.	✓ Green area
14.	✓ Provision of parking area
15.	✓ External road connectivity
16.	✓ Provision of DG set and transformer
17.	✓ Provision of transformer
18.	✓ Provision of Fire Fighting system
19.	✓ Utilization of Recycled water as well as Ground water
20.	✓ Approval plan and sanctioned
21.	✓ Contour slop – hill area
22.	✓ Solid waste management

Photo	Remark
	External Road **has well road connectivity**
	Surroung area – well developed
	Project Site **Construction completed**

Photo	Remark
	Completed wing
	Completed wing **Fly ash bricks are used for construction work at project site**
	Completed wing with parking facility with propoer ventilation

Photo	Remark
	Corporation water supply network has been provided – for fresh water line network for all wing
	Proper Parking arrangement and proper fighting system
	Parking area at Ground / Stilt level **Natural ventilation and fire-fighting system has been provided**

Photo	Remark
	Parking area at Ground / Stilt level **Proper natural ventilation provided as per slope**
	Parking area at Ground / Stilt level
	Internal driveway **6 m road width** **Natural ventillation and lighting has been provided**

Photo	Remark
	Solid Waste Management Facility (Vermin composting pits) **7 no of pits provided for each wing** **Non-biodegradable waste handed over to PMC authority**
	Ground water recharge with RH **Ground water is used for gardening purpose, from 1 borewell located in South East direction of project site**
	STP in parking Area of Building-A : having capacity of 70 CMD (Not is operational) **Total STP capacity as per norms to be required-158 KLD**

Photo	Remark
	Fire Pumping Station **Fire system is provided with fire pump room, fire extinguishers, fire hydrants, Firefighting hose, fire hose reels etc.**
	Provision of proper Fire-fighting system
	Provision of proper Fire firefighting system near parking area

Photo	Remark
	Internal Driveway and firefighting movement **Turning radius 9 m**
	Internal Driveway and firefighting movement **6m width of internal driveway**
	Internal Driveway and firefighting movement **6 m and 9 m turning radius**

Photo	Remark
	Internal Driveway and firefighting movement – 6 m and 9 m turning radius
	Proper manhole, storm water network and RWH pits has been provided
	Club House

Photo	Remark
	Play area
	Play area - Basketball Court and plantation
	Tree Plantation- Total 392 no has been done on site **Top Soil is used for landscaping purpose on project site**

Photo	Remark
	Tree Plantation - near plot boundary
	Shrub plantation – green area
	DG Set

Photo	Remark
	Proper DG Set with proper Stack **1 no. DG Set with capacity 82.5 kVA is provided with Chimney facility at height 3m**
	STP Tank – below the ground
	Borewell Water used for gardening

Photo	Remark
	Internal Drainage network – Sewerage network **Sewage line directly connected to Corporation Drainage line.**
	Internal Draiange chember network
	LED street Lighting

Photo	Remark
	Solar PV Panels **Having capacity 90 kW** **Providing Hot water to Building C and Solar PV panels provide to buidnf A B D & E**
	Swimming Pool facility has been provided
	Lift Provison in each wing

Date : 15/10/2007

To,
The Aid,
Architects,
Pune-4.

Sub. : Final N.O.C. for perposed building at S.No.13, H.No.1,2 & 3, Kondhwa-Khurd, Pune. (For Bldgs. A, B & E only)

Ref. : Your office letter, Dtd.10.10.2007.

Sir,

As per your refered letter, visited the proposed site along with Mr.Khandelwal on 12.10.2007 and tested the hydrant system, hose reel system with equipments and portable fire extinguishers suggested, in our last N.O.C. F.B./770, , dt. 16.6.2007.

All the suggestions made in our last N.O.C. are carried out to my satisfaction and I have no objection to use the building for proposed purpose.

All the fire fighting equipments and systems installed in the building should be maintained in high efficiency state and in proper working order at all time during the use of the building by owner or occupier.

Yearly inspection of the fire protection system shall be carried out by this office.

Name of the person, owner, society responsible for the maintenance should be informed to this office.

Fire protection system provided in the building should not be removed from the building for any reason.

This no objection is subjected to any other conditions laid by any other department.

Chief Fire Officer,
Pune Municipal Corporation.

Copy to : Asst. Engineer (B.C.)
Pune Municipal Corporation.

Office of the Chief Fire Officer

To,
Alok Kirad Architects,
Nana Peth, Pune.

Sub :- Final Fire NOC for the Building at S.No. 13, H.NO. 1,2,3, Kondhawa Khurd, Pune. (For Building C Only)

Ref :- Your Office letter Dt.26.06.2018.

As per your above reffered request letter, visited the proposed site along with Mr. Khandelwal on Dt.26.07.2018 and tested the Hydrant system, Hose Reel system with equipments portable fire extinguishers and all type of fire fighting system suggested in Provisional N.O.C.FB/8832, Dt.03.12.2016 issued by Fire Department.

The suggestions made in Provisional N.O.C. are carried out to my satisfaction and I have No Objection to use the building for proposed purpose. Annual Fee is paid by challan No. 34950, Dt.01.08.2018, Rs.600/- M/s. Red Air Fire Solutions (India), Pune has submitted the **"FORM A"** to this office for the fire prevention, protection & fire fighting system installed in the above said building as per The Maharashtra Fire Prevention & Life Safety Measures Act 2006.

The fire fighting equipments and systems installed in the building should be maintained in high efficiency state and in proper working order at all time during the use of the building by owner or occupier. It will be your responsibility to get the yearly renewal of this Fire NOC after due inspection from the Fire Brigade authorities. The maintenance work of the fire fighting system shall be done by the licensed contractor, having license from Director, Maharashtra Fire services or Chief Fire Officer, Pune Fire Brigade. The list of the licence contractor is available on www.maharashtrafireservices.org.

Name of the person, owner, responsible for the building maintenance should be informed to this office. Fire protection system provided in the building should not be removed from the building for any reason.

This Final No Objection is subjected to any other conditions laid by any other department.

Vermicomposting Design Basis Report

For

Proposed Residential Project

“Bramha Exuberance”

at

S. No. 13 H No.1, 2&3 Kondhwa Khurd, Haveli, Pune

by

M/s. BramhaCorp Ltd.

Prepared by

BramhaCorp Ltd.

The Residency Club, 3 Queen's Garden Road, Camp, Pune 411001.

Vermicomposting Design Basis Report

Vermicomposting Plant

Introduction:

Solid Wastes are being produced since the beginning of civilization. One of the sources of environmental pollution in any human settlement today is the improper handling and disposal of waste. The challenge is to preserve the urban environment's carrying capacity for the sake of sustainable and environmentally sound development and to provide for a proper and healthy living environment for its inhabitants. Several alternatives are available to handle the disposal of solid wastes. Composting is one of the alternatives in a form of recycling because over 50% of the domestic wastes generated have "organic" nature. While solid waste generation rates have increased, the capacity to handle these materials has declined. Technological developments have opened new opportunities for resource recovery, recycling, and reuse. Landfill facilities are closed because they are full; others are choosing to shut down rather than meet stringent new regulations governing their design and operation. In addition, new landfills and combustors are increasingly difficult to site. In conjunction with this growing gap in disposal capacity, tipping fees at solid waste management facilities are rising in many communities, and the trend does not appear to be changing. As communities search for safe and effective ways to manage solid waste, composting is becoming a more attractive management option, which leads to a reduction of the number of wastes that require disposal. Composting is the natural process of decomposition and recycling of organic material into a humus rich soil amendment known as compost.

Vermicomposting Concept:

Vermicomposting is a natural process whereby earthworms convert waste material with rigid structures into compost. The compost produced in this green process is traditionally and popularly used as a natural fertilizer for enhancing plant growth. Earthworms belong to the phylum Annelida, subclass Oligochaeta.

This process is mainly required to add nutrients to the soil. Compost is a natural fertilizer that allows an easy flow of water to the growing plants. The earthworms are mainly used in this process as they eat the organic matter and produce castings through their digestive systems.

Objective:

1. To offer decentralized solution for treatment of Segregated Organic Waste.
2. To minimize haulage of waste to long distance landfill site.
3. Compliance with government regulations and codes.

4. Resale the resulting compost and generate revenue.
5. Reduction in garbage volume.
6. A rich, natural fertilizer cuts back on use of chemical fertilizers.
7. Improves soil aeration and drainage.
8. Helps control weeds.
9. Decreases the need for costly watering.

Input Data:
Type of waste: Domestic segregated wet waste
Type of Composter: Verm composter

Manual machine Duty of operation: Continuous operated, one compost batch of 45-50 days.

Vermicomposting system comprising of:
Each building has 7 Vermicomposting pits (for each day of week)

Process:

1. To prepare the vermicompost, a concrete tank has used according to the availability (Size- based on the number of raw materials available)
2. Collect the dried biomass (garden waste, animal waste, municipal waste, etc.) and chop them.
3. Mix the chopped dry material with cow dung in a 1:3 ratio and keep them aside for 15-20 days for partial decomposition.
4. Add a thin layer of soil /sand (2-3 inches) at the bottom of the tank.
5. Now prepare the bedding by adding the partially decomposed cow dung and dried waste mixture. Distribute it evenly on the soil.
6. Continually add the mixture up to a depth of 0.5-1 foot.
7. Now release the earthworms in the tank (1000-2000 earthworms / square meters). Cover the mixture with gunny bags/ straw/ plastic.
8. Monitor the bin for the availability of food to the earthworms and add the food (fruit and vegetable peels, other kitchen waste) when necessary (make sure not to add excess food)
9. Do water regularly to maintain moisture.
10. Monitor the composting tank to maintain temperature and moisture
11. Beds turned in every 30 days for aeration and proper decomposition.
12. The compost is ready in 45-50 days.

Waste generation:

Proposed Residential building project "Bramha Exuberance" following are detail calculations for waste generation;

Details	Population	Total waste generated (kg/day)	Wet waste (kg/day)	Dry waste (kg/day)	Capacity (m^3)
Residential Project	**1432**	**699**	**419**	**280**	**49.35**

From above calculations we required to provide vermicomposting plant of 49.35 m^3 capacity.

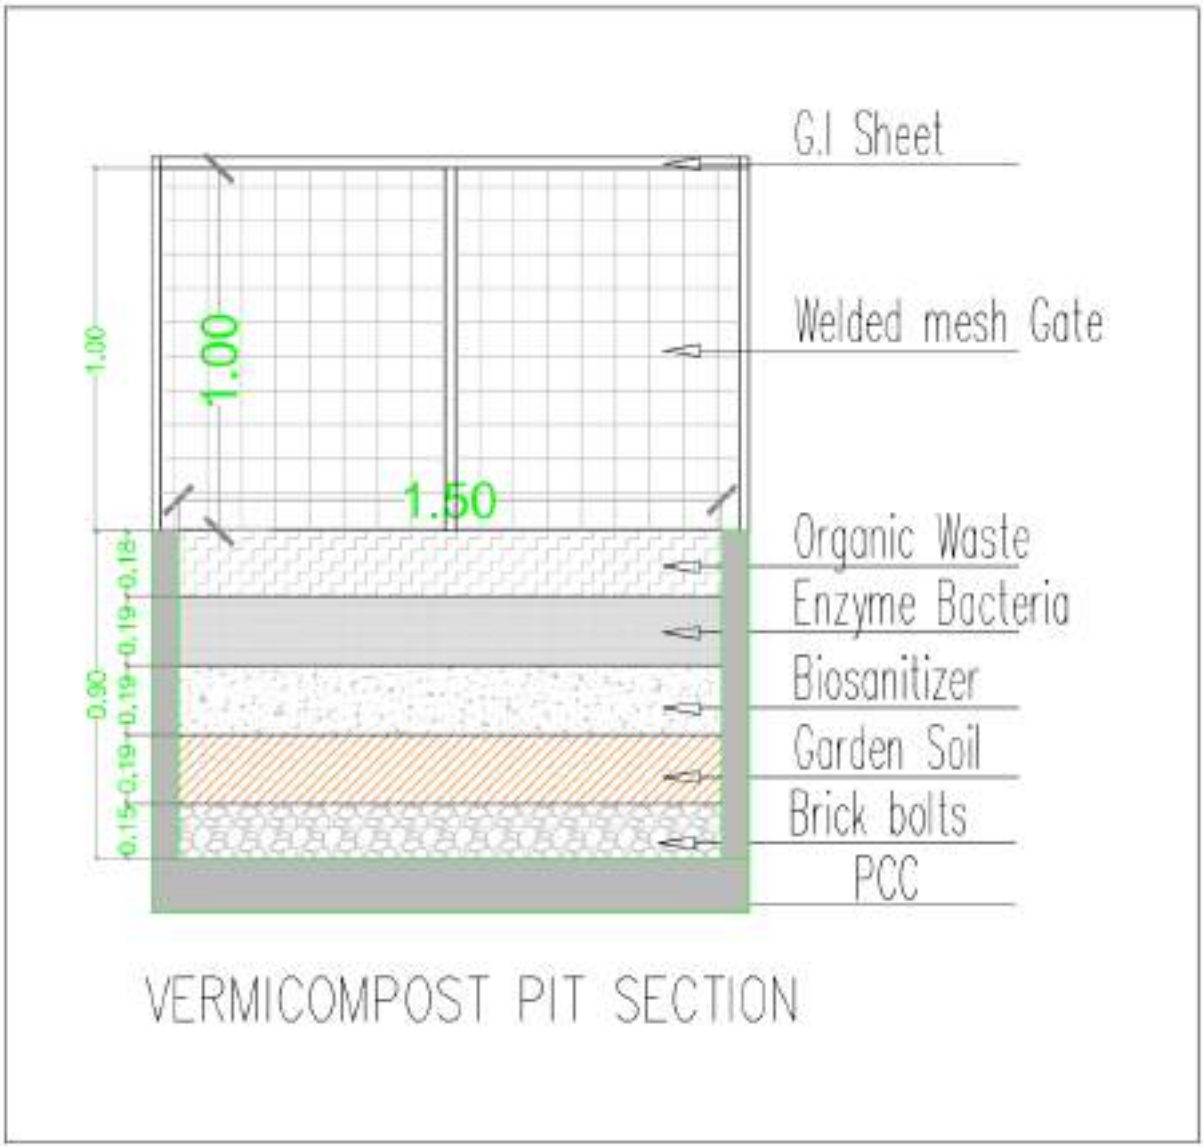
Design calculations:

Volume of one pit – 5*4*2.5 Feet = 50 Cubic Feet i.e., 1.41 m^3

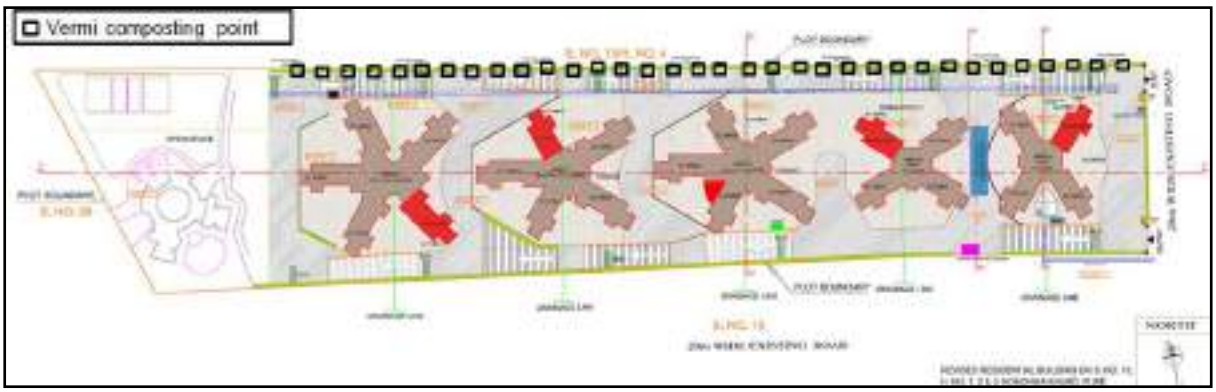
Per week 7 pits are provided so, 7*1.41 = 9.87 m^3

For 5 buildings total capacity: 9.87*5 = 49.35 m^3

Vermicomposting pit section:



Vermicomposting pits Location:



Vermicomposting pits photograph

No. of units	**35 no.**
Total Capacity	**49.35 m^3**
Total space provided	**56.35 m^2**

Operation and maintenance costing:

Organic Waste – 419 kg/day
Vermicomposting plant capacity – 49.35 m^3

Vermicomposting plant	**(Rs. in Lakhs)**
Capital Cost	3
Operation and maintenance cost (per year)	0.4
Total cost	**3.4**

Part - E: Additional information

39.

a. Do you have any proposals to upgrade the present system for treatment and disposal of effluent/emissions and/or hazardous waste.

NA

b. If yes, give the details with time- schedule for the implementation and approximate expenditure to be incurred on it.

NA

40.

Capital and recurring (O & M) expenditure on various aspect of environment protection such as effluent, emission, hazardous waste, solid waste, tree- plantation, monitoring, data acquisition etc. (give figures separately for items implemented/to be implemented).

NA

41.

To which of the pollution control equipment, separate meters for recording consumption of electric energy are installed ?

42.

Which of the pollution control items are connected to D.G. Set (captive power source) to ensure their running in the event of normal power failure

STP

43. Nature, quantity and method of disposal of non- hazardous solid waste generated separately from the process of manufacture and waste treatment. (Give details of area/capacity available in applicant's land)

Type	*Quantity*	*UOM*	*Treatment*	*Disposal*	*Other Details*
Bio-degradable waste	419	Kg/Day	Composting	Used as Manure	NA
Non Bio-degradable and Inert Waste	280	Kg/Day	NA	Handed over to Authorized Vendor	NA
STP dry sludge	1	Kg/Day	NA	NA	NA

44. Hazardous Chemicals – Give details of Chemicals and quantities handled and Stored.

(i) Is the unit a Majot Accident Hazard unit as per Mfg.Storage Import Hazardous Chemicals Rules ?

NA

(ii) Is the unit an isolated storage as defined under the MSIHC Rules ?

NA

(iii) Indicate status of compliance of Rules 5,7,10,11,12,13 and 18 of the MSIHC Rules.

NA

(iv) Has approval of site been obtained from the concerned authority?

NA

(v) Has the unit prepared an off-site Emergency Plan? Is it updated ?

NA

(vi) Has information on imports of Chemicals been provided to the concerned authority?

NA

(vii) Does the unit possess a policy under the PLI Act?

NA

45. Brief details of tree plantation/green belt development within applicant's premises (in hectors)

Open Space Availability	*Plantation Done On*	*Number of Trees Planted*
14599 Square meter	2045.82 Square meter(14 %)	392

46.

Information of schemes for waste Minimization, resource recovery and recycling - implemented and to be implemented, separately.

NA

47.

(a) The applicant shall indicate whether Industry comes under Public Hearing, if so, the relevant documents such as EIA, EMP, Risk Analysis etc. shall be submitted, if so, the relevant documents enclosed shall be indicated accordingly.

NA

(b) Any other additional information that the applicants desires to give

7 no. of Vermicomposting pits, 1 no of the recharge well, Solar PV Panels, fire fighting system have been provided at the project site

(c) Whether Environmental Statement submitted ? If submitted, give date of submission.

Yes

48.

I/We further declare that the information furnished above is correct to the best of my/our knowledge.

49.

***I/We hereby submit that in case of any change from what is stated in this application in respect of raw materials, products, process of manufacture and
treatment and/or disposal of effluent, emission, hazardous wastes etc. In quality and quantity; a fresh application for Consent/Authorization shall be made and
until the grant of fresh Consent/Authorization no change shall be made.***

50.

I/We undertake to furnish any other information within one month of its being called by the Board

Yours faithfully

Published by SEIAA on January 29, 2018

An Approach for Assessment for Environmental Damage And Estimation of Remediation Costs For Building Construction Projects initiated without obtaining mandatory Environmental clearance (Violation Cases)

1. Ministry of Environment and Forest (MoEFCC) has issued a notification on procedure to be adopted for dealing with the EC violation cases on 14.3.2017[1] and also, gave 6-month amnesty window for such proponents who have violated the EC regulations. These violations are primarily related to initiating the project work or carrying out the project activities without obtaining the mandatory EC. Special EAC was also notified to deal with violations cases at the central level. Subsequently, on 8.3.2018[2], MoEFCC issued another notification which delegated the powers to deal with such 'violation cases' to the concerned SEIAA and further provided an additional amnesty window of one month for such project proponents to apply for grant of EC.

2. The notification dated 14.3.2017 stipulated the procedure for consideration of such cases where construction of projects was carried out without obtaining EC, treating such cases as violation cases. The important provisions for considerations of such proposal in the said notification are as under;

   (2) In case the projects or activities requiring prior environmental clearance under Environment Impact Assessment Notification, 2006 from the concerned Regulatory Authority are brought for environmental clearance after starting the construction work, or have undertaken expansion, modernization, and change in product- mix without prior environmental clearance, these projects shall be treated as cases of violations and in such cases, even Category B projects which are granted environmental clearance by the State Environment Impact Assessment Authority constituted under sub-section (3) Section 3 of the Environment (Protection) Act, 1986 shall be appraised for grant of environmental clearance only by the Expert Appraisal Committee and environmental clearance will be granted at the Central level. (3) In cases of violation, action will be taken against the project proponent by the respective State or State Pollution Control Board under the provisions of section 19 of the

[1] MoEF notification SO 804 (E) Dated 14.3.2017
[2] MoEFCC notification SO 1030 (E) dated 8.3.2018

Environment (Protection) Act, 1986 and further, no consent to operate or occupancy certificate will be issued till the project is granted the environmental clearance. (4) The cases of violation will be appraised by respective sector Expert Appraisal Committees constituted under subsection (3) of Section 3 of the Environment (Protection) Act, 1986 with a view to assess that the project has been constructed at a site which under prevailing laws is permissible and expansion has been done which can be run sustainably under compliance of environmental norms with adequate environmental safeguards; and in case, where the finding of the Expert Appraisal Committee is negative, closure of the project will be recommended along with other actions under the law. (5) In case, where the findings of the Expert Appraisal Committee on point at sub-para (4) above are affirmative, the projects under this category will be prescribed the appropriate Terms of Reference for undertaking Environment Impact Assessment and preparation of Environment Management Plan. Further, the Expert Appraisal Committee will prescribe a specific Terms of Reference for the project on assessment of ecological damage, remediation plan and natural and community resource augmentation plan and it shall be prepared as an independent chapter in the environment impact assessment report by the accredited consultants. The collection and analysis of data for assessment of ecological damage, preparation of remediation plan and natural and community resource augmentation plan shall be done by an environmental laboratory duly notified under Environment (Protection) Act, 1986, or a environmental laboratory accredited by National Accreditation Board for Testing and Calibration Laboratories, or a laboratory of a Council of Scientific and Industrial Research institution working in the field of environment. (6) <u>The Expert Appraisal Committee shall stipulate the implementation of Environmental Management Plan, comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefit derived due to violation as a condition of environmental clearance.</u>

(7) <u>The project proponent will be required to submit a bank guarantee equivalent to the amount of remediation plan and Natural and Community Resource Augmentation Plan with the State Pollution Control Board and the quantification will be recommended by Expert Appraisal</u>

Committee and finalized by Regulatory Authority and the bank guarantee shall be deposited prior to the grant of environmental clearance and will be released after successful implementation of the remediation plan and Natural and Community Resource Augmentation Plan, and after the recommendation by regional office of the Ministry, Expert Appraisal Committee and approval of the Regulatory Authority.

Subsequently, vide notification dated 8.3.2018, such powers have also been delegated to concerned SEIAA.

3. Maharashtra Scenario: In Maharashtra, there are about 104 cases which have been submitted for grant of EC under this 'violation' notification. As per the information given by DoE, there are 91 cases related to building construction projects and 14 cases related to industry. However, this number is likely to increase substantially, as during evaluation of new EC cases, the SEAC generally finds non-compliance in the appraisal process.

4. Department of Environment (DoE) and SEIAA Maharashtra wanted to streamline the process of evaluation of the 'environmental damage assessment' for such violation cases to bring reasonable consistency and uniformity in approach and assessment while dealing with such cases. The assessment of environmental damage is no doubt a very specialised study and the parameters, approach, weightages, techniques are likely to vary significantly from project to project and also, from area to area. Still however, it would be necessary and prudent to develop some broad structure and framework for such environmental damage assessment which can be used by concerned SEAC for consistent and uniform methodology. The SEACs can obviously incorporate any new specific aspect of evaluation, based on project type, damages anticipated and sensitivity of project area by making special reference to such compelling factors to incorporate additional evaluation aspects. This report is outcome of such requirement of DoE and SEIAA Maharashtra.

5. As a part of preparation of Approach paper, a draft was widely circulated among the stakeholders including the NABET approved consultants and also, the associations of the project proponents. A consultative meeting

was also held in Pune on 21.12.2018 wherein inputs for stakeholders were also received.

6. The present approach paper deals only with Building construction project. However, the broad principles can be adopted with suitable modifications for the industrial projects. The subject of environmental damage assessment and also, restitution and restoration of environment is a very complex and multidisciplinary subject and the present approach paper is based on desktop studies to prepare some basic framework for assessment of the proposal received in order to ensure a broader consistency in appraisal for various SEAC. The framework is generic in nature and obviously, open for further updating with gain of knowledge and experience while dealing with subject, based on field level data and information.

7. Assessment of environmental damages and preparation of remediation plan are highly specialised subject and very much case specific. The methods and techniques to assess the damage would vary from project to project and also, has significant correlation with project site. Considering this, the scope of this approach paper has been limited to preparation of broad guidelines and framework to assess the damage, rather than detailing actual procedure and methodology. Considering the types of projects, the environmental damage assessment methodology can be conveniently grouped in three types of activities/process namely; a. building and construction activities b. infrastructure and mining and c. industries. The broader contours of environmental damage assessment of these three sectors would vary significantly in its content, scope of investigation and analytical processes to assess the damages. Considering the present scope of this report, the report only deals with damage assessment aspects of violation cases. In fact, most of the literature on environmental damage assessment is related to unauthorised effluent discharges, ecological damages, chemical accidents, ground water contamination, hazardous waste disposal etc. Though, there is also a serious and urgent need of developing India specific protocols for such environmental damage assessment as a part of enforcement strategy and interventions, the report does not deal with these aspects and the scope

strictly remains limited to damage assessment for violation cases as per MoEFCC notification dated 14.3.2018, with main focus on Building and construction projects as per the requirement of DoE and SEIAA.

8. Legal background: The "Polluter Pays" principle as interpreted by Supreme Court[3,4] means that the absolute liability for harm to the environment extends not only to compensate the victims of pollution but also the cost of restoring the environmental of the damaged environment is part of the process of "Sustainable Development" and as such polluter is liable to pay the cost to the individual sufferers as well as the cost of the reversing the damaged ecology The precautionary principle and the polluter pays principle have been accepted as part of the law of the land. It is thus settled by Supreme Court that one who pollutes the environmental must pay to reverse the damage caused by his acts. In *Vellore Citizens' Welfare Forum v. Union of India and Ors.: AIR1996SC2715*, the precautionary principles and polluter pays principle were held to be part of the environmental law of the country. It was held that the polluter pays principle means that the absolute liability for harm to the environment extends not only to compensate the victims of pollution but also the cost of restoring the environmental degradation. Remediation of the damaged environment is part of the process of sustainable development.

9. The use of liability assessment following instances of physical damage or pollution of environmental resources has long been a feature of national legislations. The restitution and restoration aspects have been part of Water (P&CP) Act, 1974, but unfortunately no specific guidelines or protocol have been established so far. There are also not much of established success stories of restitution which can provide some guidance. The National Green Tribunal Act, 2010 specifically provides provisions for restitution, restoration and compensation in case of environmental damages or incidences of environmental degradation, on strict liability basis. However, no technical guidelines or procedures are available for such environmental damage assessment or restoration or

[3] Enviro-Legal Action vs. Union of India 1996 (2) JT 196

[4] (1997)1SCC388B . W.P.(C) No996: M.C. Mehta Vs Kamal Nath and ors.

compensation etc except one prepared for CPCB for liability assessment for HW disposal.[5] Still however, there are no published case studies regarding application of these guidelines.

10. For example, the US Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) has provided for the clean-up of hazardous waste sites since 1980 and requires resource damage assessment for this and similar instances of environmental injury. In Europe, the Environmental Liability Directive (ELD 2004/35/EC) now applies a common approach to assessment which aims to prevent and remedy environmental damage by holding those responsible liable for remediation. However, while there are prescribed procedures for remediation, there remain the difficulty of how to achieve an equivalent level of habitat quality to that, which existed before an incident and how to account for interim losses, including losses to social wellbeing.

11. Damage as defined by the ELD presupposes that liability can be identified. Where this is possible, the ELD allows for three types of remediation:
    a. Primary remediation to restore a damaged resource or impaired service to its baseline condition;
    b. Complementary remediation when a site cannot be fully restored using primary remediation and which involves intervention or improvements to habitat at another site which is physically or geographically linked in terms of species/ habitats or human interactions;
    c. Compensatory remediation in cases where there are interim losses before ecological functions can be fully restored or replaced.

12. Liability to the government for clean-up costs and natural resource damages under CERCLA is generally joint and several, unless the defendant can show that the harm is divisible or another reasonable basis for apportionment. However, in the present case, as there is only single project, there is no occasion to consider proportioning the liability. The entire liability (absolute) on the complementary basis stands against the

[5] Guidelines on Implementing Liabilities for Environmental Damages due to Handling & Disposal of Hazardous Waste and Penalty, published by CPCB 2016.

project proponent, as the remediation and restoration of construction site is not envisaged.

13. A number of US courts have applied the "Gore factors," so named because they were part of a 1980 proposed amendment to CERCLA sponsored by then-Senator (now Vice President) Albert Gore (which was not ultimately enacted):
    a. the ability of the parties to show that their contribution to a discharge, release or disposal of a hazardous waste can be distinguished;
    b. the amount of the amount of hazardous waste involved; - the degree of toxicity of the hazardous waste involved;
    c. the degree of involvement by the parties in the generation, transportation, treatment, storage, or disposal of the hazardous waste;
    d. the degree of care exercised by the parties with respect to the hazardous waste; and
    e. the degree of party cooperation with government officials.

14. Federal courts have also applied the following other equitable factors:
    a. the relative fault of the parties in causing the release of the hazardous materials;
    b. the knowledge and/or acquiescence of the parties in the contaminating activities;
    c. the benefits received by the parties from the contaminating activities;
    d. the relative clean-up costs incurred as a result of the released hazardous wastes;
    e. the financial resources of the parties involved;
    f. contracts between the parties bearing on the subject;
    g. circumstances and conditions of property conveyance in cases involving successive owners; and
    h. any traditional equitable defences as mitigating factors.

15. Role of Consultants: The PP and industries generally take advise of the NABET approved consultants for preparation of EIA report and also, for

completing EC procedure. These consultants are 'accredited' consultants duly recognised by NABET after careful evaluation of their capabilities and understanding of environmental law and regulations besides technical competence. In other words, these consultants have been given special recognition and also, the MoEFCC notification has especially mandated that all the EIAs and EC procedures needs to be done only through NABET approved consultants, carving out a niche business for these consultants. Such a recognition and special business opportunity will obviously entail with 'responsibility' cast upon these consultants to advise the project proponents on compliance, identify the non-compliance and also, bring it to notice of project proponents/regulators at the first instance while advising the project proponents to ensure timely compliance. It is therefore necessary that the role of such consultants, if they are associated with the project proponents during the occurrence of such violation or immediately thereafter, needs to be critically examined in order to ensure that these consultants perform their duty to ensure compliance in a more effective way. The proposed damage and liability assessment exercise needs to cover these aspects which will ensure that the non-compliances in future are brought to the notice of project proponents and regulator in time, for timely enforcement and compliance actions.

16. Considering the above discussions, it is proposed that in this phase of report, methodologies for damage assessment and liability evaluation are proposed for building and construction projects, with following considerations;

    a. These methodologies are for the projects (construction and industries) which are in 'permissible' in the area where project is located and are included in 'regulated' activity as per EC regulations and associated notifications. The methodology cannot be and should not be applied for the projects in non-conforming zone.
    b. These methodologies are evolved only to consider limited violation in terms for initiating the project activities without EC. They cannot and should not be applied in case of any case pollution or degradation incident for which separate methodologies need to be developed and adopted.

17. Damage Assessment and Remediation cost:

The notification of 14.3 2017 describes the rationale for assessment of environmental damage costs and remediation costs as under;

"6. *The Expert Appraisal Committee shall stipulate the implementation of Environmental Management Plan, comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefit derived due to violation as a condition of environmental clearance.*

7. The project proponent will be required to submit a bank guarantee equivalent to the amount of remediation plan and Natural and Community Resource Augmentation Plan with the State Pollution Control Board and the quantification will be recommended by Expert Appraisal Committee and finalized by Regulatory Authority and the bank guarantee shall be deposited prior to the grant of environmental clearance and will be released after successful implementation of the remediation plan and Natural and Community Resource Augmentation Plan, and after the recommendation by regional office of the Ministry, Expert Appraisal Committee and approval of the Regulatory Authority. "

16. Three aspects emerge from the above as under;

a. The project proponent needs to develop remediation action plan commensurate with the environmental damage assessed and also, the economic benefit derived due to violation of EC.
b. The PP also needs to develop natural and community Resource Augmentation plan (NCRAP) along with the cost. This is not linked with the environmental damage or economic benefits accrued from violation.
c. Both the remediation and NCRAP needs to be implemented by PP independently which needs to be verified by regulatory authority. There is no time limit or verification methodology defined for such implementation. Still however, the time limit can always be

considered by authority as a part of EMP while approving the EMP and EC.

17. The literature and references available on environmental damages are mainly related to environmental degradation resulting from waste disposal or degradation of forest. The important aspects in the design of remediation program can be as under;

a. Damage assessment and significance;
   i. Definition of the status of the resource prior to the incident causing damage; (Baseline)
   ii. Assessment of the scale of damage; (Services and beneficial use of site)
   iii. Impact assessment; (modeling) and;
   iv. Determining whether damage is 'significant'. (Significance threshold and integrity of site)

b. Primary restoration options,
   i. With an aim to restore the damaged resource and, if possible, return the resource to baseline (pre-incident) conditions
   ii. Setting restoration targets;
   iii. Identifying primary restoration options;
   iv. Selecting primary restoration options; and
   v. Estimating interim losses

c. Compensatory restoration options.
   i. Setting the objectives for compensatory restoration options;
   ii. Monetary compensation and/or resource compensation;
   iii. Identifying the compensatory options; and
   iv. Selecting the compensatory options.

18. Generally, the remediation and restoration need to be designed based on either of the three following approaches in order to design, select and determine the scale of the compensatory restitution and restoration options

a. **Service-to-service approach:** Accept a one-to-one trade-off between the services that are lost due to damage and the services that are created through compensatory restoration. Reasonable to make this

assumption if the replacement resources are of the same type, quality and of comparable value.

b. **Value-to-value approach:** Used for scaling of Class II and II options, i.e. when the assumption of a one-to-one match between lost services and compensatory services is not necessarily valid. The approach estimates the economic value of interim losses and the economic value of the services generated by the compensatory restoration option.

c. **Value-to-cost approach:** Within this approach, restoration is scaled by equating the cost of the restoration plan to the value (in monetary terms) of losses due to the injury. This approach is only suitable when damage is relatively minor.

The remediation plan also needs to be proactive on futuristic issues and need to consider following;

- should be the result of an evaluation process based on, but not limited to the following :
  - The cost to carry out the option;
  - Time it will it take for the restoration to be effective;
  - Extent to which each option is expected to return the damaged resource to its baseline;
- Likelihood of success of each option;
- The extent to which each option will prevent future damage (flowing from the initial incident), and avoid collateral damage as a result of implementing the option;
- The extent to which each option generates benefits for the damaged and/or other natural resources beyond returning the damaged resource to its baseline; and
- The effect of each alternative on public health and safety

19. The total environmental damage needs to be assessed based on the environmental restoration cost required considering the above-mentioned project related attributes and as per the settled legal principles, such assessment need to be based on 'absolute' liability principle.

The notification refers to covering mainly three aspects in overall damage assessment studies prior to consideration of such violation cases, namely;

- Opportunity cost: benefits accrued due to early implementation of project without obtaining the mandatory EC and shall also include Cost for deterrence (penalty) for violation of EC regulation which needs to consider factors like project proponents track record, factors contributing to environmental damage etc.
- Environmental damage cost to be assessed based on the available data
- Cost of remediation and restoration.

20. While working on these themes, it would be necessary to keep in mind that the entire exercise is being under the provisions of the EC regulation 2006, as amended and the Environmental protection Act. It is also necessary to note that there are hardly any scientific studies to assess the environmental damages in holistic manner and also, there are very few cases where environmental restoration and restitution has fully been achieved. However, they are related to remediated of contaminated sites and/or contaminated ground water. There are several cases where the SC, HCs and NGT have ordered remediation and restoration, but there are hardly any studies where both restitution/restoration and damage assessment has been carried out simultaneously. It would therefore be necessary to adopt an approach which may be advoc in nature but based on scientific approach. There could be uncertainty in damage assessment but as already held by judicial pronouncements, the uncertainly in environmental damage and restoration on a positive side, towards preserving environment (precautionary principle) is acceptable, while demonstrating the good efforts in assessing the same.

21. Economic Benefit Assessment: One of the important aspects of this notification is inclusion of concept of economic benefits accrued due to violation of EC regulations. Traditionally, this concept has always been integrated in effective enforcement of standards and regulations all over the world because any violation or relaxation in environmental regulations, would result into economic advantage, rather in many cases, environmental norms are violated to derive economic advantages and benefits. In order to ensure that the compliance is encouraged, it would

be in the best interest to develop some tools to incorporate financial disadvantage for the non-compliance.

22. Violators obtain an economic benefit from violating the law by delaying compliance, avoiding compliance or achieving an illegal competitive advantage. In delaying compliance, the violators eventually comply, but they use the money that should have been spent on compliance. The violators then use that money for profit-making investments. In a very simple sense, the violators "gain" the interest on the amount of money that should have been invested in pollution prevention and control measures. When an offender avoids compliance, it essentially does not incur the costs that would have been necessary to come into compliance. The third type of economic benefit is derived from an illegal competitive advantage. It is necessary to have reliable methods to calculate any significant economic benefit of non-compliance. The existence of a well-defined and substantiated methodology strengthens the enforcement agency's position in case of eventual appeal of the assessment.

Though there are several references available for such assessment particularly by USEPA and also, several state environmental agencies besides OECD, One of the good case studies is prepared by OECD and is available at http://www.oecd.org/env/outreach/46959936.pdf. [6]. The study illustrates a key principle that in order to deter future non-compliance, a fine should at a minimum eliminate any financial gain or benefit the operator has obtained as a result of his non-compliance. The "benefit component" of a fine corresponds to the delayed or avoided compliance costs or the illegal competitive advantage and puts the violator in a less favourable situation compared to those who comply with the requirements in a timely manner. The additional penalty amount, or the "gravity component", should reflect the seriousness of the offence and the operator's behaviour. USEPA has also elaborate case studies on such efforts and has also developed the penalty and financial models that can be used to analyze the financial aspects of enforcement actions. https://www.epa.gov/enforcement/penalty-and-financial-models. BEN (5.8.0) - Calculates a violator's economic benefit of noncompliance from delaying or avoiding pollution control expenditures. The model requires the date the violation occurred, the date of compliance, the costs of

[6] REMOVING ECONOMIC BENEFITS OF ENVIRONMENTAL VIOLATIONS IN AZERBAIJAN: Case Study Report, By OCED

compliance and the year the costs were estimated, and the date the penalty will be paid. Still however, no much work has been done in Indian context on this principle of effective environmental governance, particularly enforcement.

All such economic benefit assessment needs to carefully designed in case of construction projects as scope and extent of construction in such building cases are rather governed by local municipal rules particularly for built up area, FSI, requirement of open area, parking etc. In many cases, the municipal laws are amended and some modifications are made in available permissible limits for the above criteria. The general trend in building industry to initiate the construction in anticipation of such amendments and modification. And therefore, in order to assess the economic benefits, it is proposed to consider the applicable laws on the date of violation, rather than while assessment of the damages and benefits accrued. The allowable built up, FSI, open space etc only shall be considered and any violation of these ground should also be assessed as economic benefits. Based on the actual data, three scenarios can be envisaged for violation of EC regulations by Building construction Industry;

A. The construction work is fully/partly completed without EC and the flats/commercial area is already sold to third parties.
B. The construction work is started and some amount has been received from third party, but now the work is stopped.
C. The construction work is started but no amount has been received from any third party.

23. One such approach adopted by Indiana government [7] elaborately discuss the matrix of calculations for the penalties for environmental violations. Though, presently, this approach paper does not deal with penalties, but the process and structured approach adopted therein, can suitably be adopted in the present study.

Violators Track record: As referred in above references, the violators track record and also, action subsequent to noticing the violations play an important role in formulation of environmental restoration and

[7] INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT NONRULE POLICY DOCUMENT, https://www.in.gov/idem/ctap/files/nrpd_enf-002.pdf

restitution program. Hon'ble Supreme Court in CIVIL APPEAL NO. 10854 OF 2016 decided on 10th August 2018 has elaborately considered such aspects and it is necessary to adopt the same approach while dealing with the EC violators.[8]

24. **Proposed Framework**: Considering the discussions above, following broad approach and framework is suggested to derive the environmental damage cost which needs to be considered while appraising the remediation plan and the costs associated with such proposed remediation costs. Moreover, such cost needs to be appropriately accounted for the opportunity costs which *inter alia* should include the factors related to environmental track record of the project proponents. The proposed framework is suggestive in nature and is an attempt to develop a framework for such assessment in future, based on scientific evidence. Moreover, this framework is essentially for cases of violation of EC regulations in terms on obtaining the EC by construction projects and is not aimed to be used as enforcement tool in case of violation of EC conditions and/or incidences of pollution of environmental degradation. Still however, the SEAC can expand the scope of such assessment and costing with reference to any specific incidence on case to case basis, particularly where construction is carried out at industrial sites and/or there are complaints of pollution due to construction which will further strengthen such appraisal process. It is necessary to collect some specific information from the project proponents to assess such cost of remediation and also, opportunity cost. Therefore, a set of information is proposed to be called from PP as under. Some of the information could be repetitive but it would be worth to have all such relevant information at a place to understand the process.

[8] https://www.sci.gov.in/supremecourt/2016/37233/37233_2016_Judgement_10-Aug-2018.pdf

25. Information Required:

A. Project details;

1	Name and address of Project	
2	Name of Directors	
3	Total construction completed (built-up area as per EC notification):	
4	Total construction proposed, built-up area as per EC notification	
5	Whether the project has any EC; if yes, give details including approved built up area	
6	Total cost of the project and total cost of the project already executed? Also, give total cost of the project constructed without EC.	
7	Date of commencement of project	
8	Date of violation of EC regulation (please justify with documentary evidence)	
9	Date of first submission of information of such violation to the SEIAA or SEAC, if self-notified, along with stoppage of construction work	
	1. No. of days of violation (9-8)	
10	Name and address of Environmental consultant, with date of engagement of such consultant	
11	Any other case of EC violation is reported or pending or decided earlier for projects where any of	

	the directors are involved? If yes, give details	
12	Any court case related to EC violation pending or decided against any of the directors including High Court, NGT and sessions court?	

B. What can be the attributes for environmental damages: The PP and consultant needs to describe the details of each attributes in qualitative and quantitative manner; for example;
   1. Air pollution: construction dust, noise, demolition dust
   2. Water: incremental sewage increase, extra water pumped from foundations
   3. Soil: excess foundation excavation, excess ground foot print
   4. Noise: extra time required for construction,
   5. Loss of vegetation: additional trees cut (type, age and number of trees with its significance)
   6. Transport and material handling

C. Description of activities contributing to the environmental damage and degradation;

A.	**Demolition, site preparation**	
1	Whether any demolition work was carried out prior to EC? If yes what is date of commencement of demolition and also date of completion of demolition?	
2	Whether such demolition or site had some asbestos, industrial waste or contaminated soil or hazardous waste etc and if yes, how these types of waste have been segregated and disposed?	
3	If the project is located on any industrial site, whether any due diligence or environmental	

	status of site was assessed? If yes, give details	
4	State the quantity of demolition waste disposed from the site, including quantity and disposal location along with location map and photographs	
5	Any air quality (including noise) monitoring done during demolition work? If yes, results	
6	Whether building plan and layout approved and permission from local authorities is taken to commence the work prior to demolition work	
7		
B.	**Construction stage**	
1	Date of commencement of construction and completion of construction, if any	
2	Whether the construction carried out is strictly as per the sanction plan given by concerned local authority? If yes, please provide such certification	
3	In the additional construction, how much construction material including, sand, bricks, cement etc was required to be transported? No. of trucks and its average haulage?	
4	How many labours were engaged in construction, average per day?	
5	Whether, the additional construction work, over and above valid EC, if so available, has any additional ground foot print? If yes please state, ground foot print in sqm as per EC approved	

	layout and current proposed layout?	
6	Whether the expansion was carried out simultaneously with EC approved work? If not give details of time frame? If yes, please give incremental additional time required for construction of additional area	
7	Is there any change in foundation design, i.e. depth of foundation, basement etc. that were done due to additional area? If yes, what is the additional soil quantity excavated for such incremental foundation depth? Where it is disposed?	
8	What is the quantity of top soil removed and how it is managed?	
9	Also, if water is encountered at such foundation depth, what is the volume of water pumped for such additional depth of excavation?	
10	How much additional water was required for curing and construction purpose? Source of water?	
11	Rain Water harvesting details	
12	Solar light, water heating details	
13	Use of fly ash bricks ensured? Details thereof	
14	Whether any noise or air pollution control measures taken, if so what are they?	
15	Whether any air quality and noise level monitoring done	

	during construction stage, if yes attach results	
16	Whether any third-party rights are created on the construction without EC?	
17	Whether any of the construction without EC has already been occupied? If yes, number of families given such occupation. Also give total commercial area being used presently. Also state type of commercial activity i.e. offices, shops, hotels, restaurants etc.	
18	How many flats sold which are in the area of EC violation and total sale value of such flats	
19	How much commercial area sold which is in area of EC violation and total sale value of such commercial area.	
C	**Commissioning of project**	
1	Date of when the project was made operational either by giving possession of residential or commercial areas of the project?	
2	How many families are staying in project?	
3	What is total water supply to project, source and quality	
4	Total sewage generation m3/day	
5	STP details,	
6	Treated wastewater disposal	
7	Any DG sets, are they complying the norms	

26. The notification provides for "*The Expert Appraisal Committee shall stipulate the implementation of Environmental Management Plan, comprising remediation plan and natural and community resource augmentation plan corresponding to the ecological damage assessed and economic benefit derived due to violation as a condition of environmental clearance.".* It can be seen from the provision that EMP is required to have two components i.e. 1. Remediation plan and 2. Natural and community resource augmentation plan. They are required to be corresponding to the ecological damage assessed and economical profit derived due to the violation.

Considering the broad conspectus and the need to evaluate the ecological assessment which will vary from project to project, site to site and also, will be subject of very detailed relative assessment. In absence of standard protocol and guidelines for such ecological damage assessment, it is proposed to adopt an advoc approach only for construction projects within the parameters specified by the notification. It is proposed to have broadly two components i.e. environmental damages and secondly economic benefits derived. The economic benefits derived can suitably take into account the construction stage besides the role and environmental performance record of the project proponent.

And therefore, the EMP and natural resource augmentation plan shall not only cover the ecological damages but also, the track record of project proponents as an attribute of the economic benefits derived. As regards the ecological damages, a protocol which is rather based on basic environmental impacts like soil disposal, noise, air pollution, water pollution etc has been prepared by Gujarat SEAC, which is further modified to incorporate additional factors. The protocol format presented below is required to be prepared and certified by approved environmental consultants who are required to submit an undertaking certifying correctness of the data presented.

Format of Assessment of Environmental Damages

Attributes	Scope of saving on account of environmental protection measures	EMP cost	
		Recurring cost, per day (Rs.)	Non-recurring cost (Rs.)
Air Pollution	Water requirement for sprinkling (KL/day): Cost of 1 KL water (Rs):		
Water Pollution	A. Cost of water requirement: a). Construction phase: b). Operation phase: B. Cost of sewage treatment, reuse & disposal: a). Construction phase: b). Operation phase: C. Quantity of water pumped out during excavation and a lumpsum cost of Rs. 50 per cum for such unauthorized water extraction and disposal D. cost of construction& maintenance of recharge well:		
Soil environment	In case of demolition has carried out, the cost of demolition waste manage-ment plan needs to be discussed and finalized as non- recurring cost.		
	In case there is some hazardous waste like asbestos or the site is located on industrial area where hazardous chemical or waste was handled, the cost based on due diligence of the project site, as given by consultants. (the report must include soil analysis, water analysis, MPCB consent copies, manifest of HW if any). This requires critical examination from SPCB.		

	Cost of preservation of top soil & excavated earth to be considered. [Area (m2)xdepth (m)x sp. Gravity (kg/m3)x cost per ton (Rs.)]		
Noise and Vibration	For damage due to noise pollution & vibration, the cost of barricades around the project site should be considered. [perimeter (m) x height of the barricade(m) x cost of the sheet)		
Green Belt	In case of any tree cutting without EC cost of Rs. 10000/- per tree apart from any statutory action for such tree cutting if any, Cost of planting & maintaining trees (Number of trees as per the bye-laws) Cost of compensatory tree plantation (5 trees for each tree cut)		
RH/OHS	Cost of workers benefit to be considered in view of Building and Other Construction Workers' Welfare Cess Act, 1996		
	A. cost of health checkup of workers: B. cost of safety measures including PPEs:		
Total			

27. The economic benefits derived can be either on both costs saved towards not taking appropriate environmental protection measures and also, the benefits derived by going ahead with project to gain commercial gains. This aspect has also been considered by Gujarat SEAC, by apportioning 10% amount of profit which is considered to be 20% construction costs including the land value. All the standard literature including regulatory guidelines referred above incorporate such commercial economic benefits accrued from early going ahead by starting and commissioning project without obtaining EC. It is therefore necessary to incorporate such

consideration in assessing the economic benefits which can be deterrent factor in future cases. At the same time, it is necessary that there should be a consideration for such cases where the project proponent has applied for EC but for some reason or other the EC is not considered and granted without assigning any reason beyond a reasonable time frame. There could be different scenarios for such economic benefit assessment;

- The construction (residential/commercial) under violation, where the construction is stopped after some time:
- The construction (residential/commercial) under violation and where the full construction area is occupied by the third party:
- The construction area (residential/commercial) under violation where the partial construction is occupied by the third party

There could be different ways to assess the Economic benefit derived, considering various aspects like stage of construction, Ready reckoner cost, project cost, cost of the construction under violation, status of violation and also, track record of environmental compliance of the project proponent. However, the notification neither refer to any method or technique to assess the economic benefits nor provide any specific method for assessing environmental damage. There are no standard guidelines available on assessing the economic benefits proportioning above mentioned attributes. And hence, in absence of uniform and objective methodology on pan India basis, it would be prudent to adopt simplistic and uniform approach for such assessments. This will primarily avoid subjectivity and reliance on unverified and uncertain data. Another aspect which is relevant here is that the present proposals are submitted under the amnesty scheme and hence, a specific view needs to be taken while appraising the projects to avoid further complications and uncertainty. However, there is an urgent need to evolve specific guidelines and methodology for assessment of economic benefits accrued due to environmental no-compliance.

Detailed deliberations on these aspects have been held and it is noted that the economic benefit can best be realistically assessed in terms of the % of total project cost. Considering the present practice in states like Gujarat and also, Tamil Nadu etc, and keeping high cost of property in the state, it is proposed to consider 1% of project cost, including land, as

declared by the project proponent before SEAC, as the economic benefit accrued due to non-compliance, subject to maximum amount of Rs. 10 Cr. Such an approach seems more rational, consistent and objective without any subjectivity, in the absence of any specific guidelines or methods given in the notification or any specific guidance from MoEFCC on these issues. Such an approach is also consistent with the spirit of notification. It would be important to note that such methodology is not universal and is only applicable for the building and construction projects, and will be applicable till a scientific methodology is evolved at national level or any specific guidelines are issued by MoEFCC. However, it is imperative and necessary to ensure that these additional costs are required to be borne by Project proponent and cannot be and shall not be passed on to the consumers. In fact, the customers are entitled to seek any other legal remedy for any compensation etc as per prevailing laws.

28. In addition to above environmental damage costs, it is necessary to incorporate certain consideration for the environmental track record of the project proponent as a part of economic benefits accrued by the proponents and it is proposed that for each of earlier or similar other EC violation in other projects being developed by project proponents shall be accounted for Rs. 10,00,000/- (Rs. Ten lakhs) in the community action plan. This consideration directly stems from Gore's correction referred earlier. This will surely bring the frequent and habitual defaulters on a common platform which is a significant step for future compliance enforcement. The regular defaulters will find such a criterion as a 'reputation risk' which itself will trigger the compliance in future. The final amount towards remediation, and natural and community resource augmentation action plan can be summation of these aspects or the amount equivalent to the CER amount as per the MOEF&CC's office Memorandum No: F NO 22-65/2017-IA-III dated 01/05/2018, whichever is higher.

29. **Calculation of Cost of remediation plan and natural & community resource augmentation plan**

Sr	Description	Details	Amount
A	Assessment of Environment Damages		
1	Total of recurring cost	Cost arrived from above table per day X number of days in violation	
2	Non-recurring cost	Cost as arrived from above table	
	Sub Total (1+2 above)	(Subject to minimum Rs. 1 crore)	
B.	Economic benefits accrued due to violation		
1.	Economic benefits	1% of Total Project cost including land, as declared by PP before SEAC, subject to maximum Rs. 10 Cr.	
2.	Track Record of Project proponent	Incremental cost of Rs. 10 lakhs for each EC violation by PP observed at any other projects in last 3 years	
C.	Cost of remediation plan and natural & community resource augmentation plan	Sum of A and B above or amount equivalent to the CER amount as per the MOEF&CC's office Memorandum No: F NO 22-65/2017-IA-III dated 01/05/2018, whichever is higher.	

30. It is manifest from the language of the notification that the spirit of notification is twofold; firstly, there needs to a deterrent action against EC violation and secondly, there needs to be sufficient environmental restoration and restitution of the presumed environmental damages which generally occur in the surrounding due to construction projects. In the present case, most of the construction projects are located in urban areas of Mumbai and Pune and hence, in order to ensure that the local community really gets benefitted by such planned environmental restoration program, it is proposed that such environmental restoration/restitution shall preferably be carried out in the surrounding of the project location.

31. Another important aspect of the notification is that the PP needs to give a bank guarantee of equivalent amount and such bank guarantee will be returned on verification of implementation of such EMP by regional office of Ministry, and further recommended by SEAC and only thereafter, SEIAA can take a decision on return of BG. The notification contemplates inclusion of such action plan as part of EMP. However, it is required to note that the proposed remediation and community restoration program will have to be carried out ex-situ i.e. not at construction site as there would not be appropriate place to carry out remediation or restoration, and moreover, most of the environmental damage would have been in the surrounding area like; in terms of air pollution or noise pollution or the soil disposal related issues. And as such, the project proponent will not have administrative control or mechanism to carry out such complementary remedial actions in the areas which are not under his control. One of the options is conducting such activities similar to CSR. Be that as it may, it is an admitted fact that there is a significant gap in such verification of compliance through environmental regulatory authority and therefore it would be difficult for SEAC and SEIAA to take a decision in this regard.

32. In order to simplify the entire process, it is proposed that the estimated EMP cost can be attributed to overall environmental development works in a fixed approportionate percentage which will avoid ambiguity and inconsistency. Though such a scheme of restoration may not be ideal scenario for any environmental restoration program, but as in the present case, we are strictly dealing with ex-situ restoration or rather environmental improvement program, such a practice can be most appropriate and effective. However, such practice cannot be adopted for

any future on-site restoration/restitution and is not a substitute 'pay and pollute' formulae for well established legal principle of 'polluter pays'.

33. The actual cost of remediation proposed at site can be given separately, duly certified by the environmental consultant which can be considered by SEAC and SEIAA before considering the amount which can be reduced from the cost arrived at above. However, such remediation is not expected to cover mandatory requirements of compliance or EMP, and needs to cover only exclusive efforts of environmental damage remediation.

34. Based on discussions with stakeholders, following areas have been identified for resource allocation through such EMP cost, which are subject to final decision, for both activities and allocation, by SEIAA and Govt of Maharashtra;

Sr. No	Description of Activity	% allocation	Implementing agency	Remarks
1	Afforestation (can include plantation, garden development)	25	Social forestry and Local body	The afforestation can be either through social forestry or the Local body. Preferably within 50 km from project site
2	Water conservation program (Jalyukt shivar, etc)	25		Preferably within 50 km radius of project site
3	Urban environment and sanitation (can include swatccha Bharat, playground development, urban ground-water recharge schemes etc)	20	Local body	
4	Sewerage lines and STP, solid waste management,	20	Local body	

5	Urban air/noise pollution control initiatives	10	Local body	

35. Implementation strategy: The notification envisages the project proponents to carry out the remedial works. As discussed above the project proponent would not be in a position to carry out such remedial works on his own. And therefore, in order to effectively implement the restoration program, it was proposed that the PP can deposit such costs with District collector or Municipal Commissioner, who can spend such amount on identified projects and certify the work completion and/or utilisation of amount. However, such a proposal could not get concurrence from MoEFCC as the proposal is `*stricto senso'* not as per the notification, which envisages submission of bank guarantee by PP and also, carrying the works directly.

Still however, as it is finally SEAC and SEIAA, who need to verify and accept the completion of restoration program, it is necessary to streamline such process of environment restoration in order to have an objective and consistent approach for such post-implementation assessment. It is therefore proposed that the concerned Municipal commissioner (in case of Municipal corporation areas) or the District Collector (for remaining areas) where the project is located shall identify suitable projects as per broad guidelines presented in above table within 5 km from the project site, in consultation with MPCB officials, if necessary, and the project proponent can either carry out such work on his own or can contribute to civic or government funds for such ongoing projects. The PP will need to submit the equivalent BG independently as per provisions of notifications. The Municipal Commissioner or the District Collector can take any other specific project related to environmental restoration in consultation with MPCB. They are further required to take review of implementation of such projects on monthly basis and, on the utilisation of the funds contributed by PP, a utilisation certificate need to be issued for the purpose. Such a certificate can be the basis of verification by Regional office MOEFCC and SEAC for further approval of SEIAA. It is expected that such contribution would be effectively utilised within maximum 2 years.

MPCB/ROP/ 220127-FTS-0177 Date: 27.01.2022

To,
M/s. Bramha Corp Ltd.,
Exuberance, Elite,
Sr No. 13/1, 13/2, 13/3, Vill. Kondhwa – Khurd,
Tal. Haveli, Dist. Pune.

Sub: - Directions under section 33A of the Water (Prevention & Control of Pollution) Act, 1974 & under section 31A of the Air (Prevention & Control of Pollution) Act, 1981 and Authorization / Renewal of Authorization under Rule 6 of the Hazardous & Other Wastes (Management & Transboundary Movement) Rules 2016

Ref:- 1) Original Application No. 65/2019, filed before Hon'ble NGT, Pune by applicant Ajay Bhosale against you.
2) The report submitted by Joint Committee of SEIAA, GoM and MPCB in O.A. No. 65/2019 dated 07.01.2020.
3) Directions issued by the Board vide No. MPCB/ROP/PD/200104002 dated 04.01.2020
4) Proposal submitted by Sub Regional Officer, Pune – I vide no. MPCB-LEGAL_ACTIONS-180122008.

WHEREAS, Mr. Ajay Jayvantaro Bhosale has filed an Application bearing No 65/2019 against you before the Hon'ble National Green Tribunal, West Zone, Pune for carried out construction activities without obtaining prior Environment Clearance and without obtaining consent to establish and consent to operate from the Board.

AND WHEREAS, Hon'ble NGT vide order dtd. 22/10/2019 constituted a Joint Committee of SEIAA and MPCB and directed the committee to verify the facts and circumstances set out in the Original Application and submit Report.

AND WHEREAS, in compliance of the Order passed by Hon'ble NGT, the joint committee carried out the visit to your project on 15.12.2019 and noted the violations of provisions of Environmental laws.

AND WHEREAS, you have failed to comply with the provisions of the EIA Notification, 2006 and various environmental enactments.

AND WHEREAS, based on the observations of violations noted by the joint committee, Board had issued Directions on 04.01.2020 as above ref.3.

AND WHEREAS, you have failed to comply all the non compliances already mentioned in Board Directions dtd. 4.01.2020 and completed building construction without obtaining Environment Clearance and consent to establish and consent to operate from the Board.

NOW THEREFORE, in compliance of the Order passed by the Hon'ble NGT on 6.12.2021, the M.P.C. Board has assessed Environment compensation of Rs. 26,83,96,875/- (Rs. Twenty Six Crores Eighty Three Lakh Ninety Six Thousand Eight Hundred and Seventy Five only) towards the damages already caused to environment and recovery of environmental compensation as per 'Polluters Pay' Principle. In view of above non compliances, you are hereby directed to pay the compensation of Rs. 26,83,96,875/- (Rs. Twenty Six Crores Eighty Three Lakh Ninety Six Thousand Eight Hundred and Seventy Five only) in the name of Maharashtra Pollution Control Board, Mumbai, within a period of **7** days from date of receipt of these directions, failing which, the Board will have no option than to initiate further appropriate legal action against you, which please note.

This is issued with the post facto approval of the Hon'ble Member Secretary of the Board.

For and on behalf of the
Maharashtra Pollution Control Board

Nitin Shinde 27/5/22

(Nitin Shinde)
I/c. Regional Officer, Pune.

Copy submitted to:
1. Hon'ble Member Secretary, MPCB, Mumbai- for favour of information.
2. Joint Director (WPC), M. P. C. Board, Sion, Mumbai.
3. Law Officer (P& L Div.), M. P. C. Board, Sion, Mumbai.

Copy for information and necessary follow up:
Sub-Regional Officer, Pune-I M. P. C. Board, Pune.

Final Document on Revised Classification of Industrial Sectors Under

Red, Orange, Green and White Categories

(February 29, 2016)

Central Pollution Control Board

Delhi

Executive Summary

Categorization of Industrial Sectors under Red, Orange, Green and White Category

The Ministry of Environment, Forest and Climate Change (MoEFCC) had brought out notifications in 1989, with the purpose of prohibition/ restriction of operations of certain industries to protect ecologically sensitive Doon Valley. The notification introduced the concept of categorization of industries as " Red", "Orange "and "Green" with the purpose of facilitating decisions related to location of these industries. Subsequently, the application of this concept was extended in other parts of the country not only for the purpose of location of industries, but also for the purpose of Consent management and formulation of norms related to surveillance / inspection of industries.

The concept of categorization of industries continued to evolve and as different State Pollution Control Boards interpreted it differently, a need arose to bring about necessary uniformity in its application across the country. In order to harmonize the 'Criteria of categorization', Directions were issued by CPCB under Section 18(1)(b) of the Water (Prevention & Control of Pollution) , Act, 1974 to all SPCBs/PCCs to maintain uniformity in categorization of industries as red, green and orange as per list finalized by CPCB, which identified 85 types of industrial sectors as 'Red', 73 industrial sectors as 'Orange' and 86 sectors as 'Green'.

The process of categorization thus far was primarily based on the size of the industries and consumption of resources. The pollution due to discharge of emissions & effluents and its likely impact on health was not considered as primary criteria. There was demand from the SPCBs / PCCs and industrial associations for categorization of the industrial sectors in a more transparent manner. Accordingly, the issue was discussed thoroughly during the national level conference of the Environment Ministers of the States, held in New Delhi during April 06-07, 2015 and a 'Working Group' comprising of the members from CPCB, APPCB, TNPCB, WBPCB, PPCB, MPPCB and Maharashtra PCB is constituted to revisit the criteria of categorization of industries and recommend measures for making the system transparent and rational.

The Working Group has developed the criteria of categorization of industrial sectors based on the Pollution Index which is a function of the emissions (air pollutants), effluents (water pollutants), hazardous wastes generated and consumption of resources. For this purpose the references are taken from the the Water (Prevention and Control of Pollution) Cess (Amendment) Act, 2003, Standards so far prescribed for various pollutants under Environment (Protection) Act , 1986 and Doon Valley Notification, 1989 issued by MoEFCC. The Pollution Index PI of any industrial sector is a number from 0 to 100 and the increasing value of PI denotes the increasing degree of pollution load from the industrial sector. Based on the series of brain storming sessions among CPCB, SPCBs and MoEFCC , the following criteria on 'Range of Pollution Index 'for the purpose of categorization of industrial sectors is finalized.

- Industrial Sectors having Pollution Index score of 60 and above – Red category
- Industrial Sectors having Pollution Index score of 41 to 59 –Orange category
- Industrial Sectors having Pollution Index score of 21 to 40 –Green category
- Industrial Sectors having Pollution Index score incl.&upto 20 -White category

The newly introduced White category of industries pertains to those industrial sectors which are practically non-polluting such as Biscuit trays etc. from rolled PVC sheet (using automatic vacuum forming machines), Cotton and woolen hosiers making (Dry process only without any dying/washing operation), Electric lamp (bulb) and CFL manufacturing by assembling only, Scientific and mathematical instrument manufacturing, Solar power generation through photovoltaic cell, wind power and mini hydel power (less than 25 MW).

The salient features of the 'Re-categorization' Exercise are as follows :

- Due importance has been given to relative pollution potential of the industrial sectors based on scientific criteria . Further, wherever possible, splitting of the industrial sectors is also considered based on the use of raw materials, manufacturing process adopted and in-turn pollutants expected to be generated.
- The Red category of industrial sectors would be 60.
- The Orange category of industrial sectors would be 83.
- The Green category of industrial sectors would be 63.
- Newly introduced White category contains 36 industrial sectors which are practically non-polluting.
- There shall be no necessity of obtaining the Consent to Operate'' for White category of industries. An intimation to concerned SPCB / PCC shall suffice.
- No Red category of industries shall normally be permitted in the ecologically fragile area / protected area.

The purpose of categorization is to ensure that the industry is established in a manner which is consistent with the environmental objectives. The new criteria will prompt industrial sectors willing to adopt cleaner technologies, ultimately resulting in generation of fewer pollutants. Another feature of the new categorization system lies in facilitating self-assessment by industries as the subjectivity of earlier assessment has been eliminated. This 'Re-categorization' is a part of the efforts, policies and objective of present government to create a clean & transparent working environment in the country and promote the Ease of Doing Business.

Other similar efforts include installation of Continuous Online Emissions/ Effluent Monitoring Systems in the polluting industries, Revisiting of the CEPI (Comprehensive Environment Pollution Index) concept for assessment of polluted industrial clusters, Revision of existing industrial Emission/Effluent discharge standards, initiation of special drive on pollution control activities in Ganga River basin and many more in coming future.

Revised Criteria of Categorization of Industries

"Securing industrial pollution control in accordance with the Water (Prevention & Control of Pollution) Act, 1974 and Air (Prevention & Control of Pollution) Act, 1981 by linking with categorization of industries, consent management and vigilance – 'In context of Red, Orange, Green and White categories of industries"

A: Genesis of Categorization:

- The Ministry of Environment, Forest and Climate Change (MoEFCC) had brought out notifications, which inter-alia refers to Prohibition/ Restriction on operation of industries to protect ecologically sensitive areas or areas of specific importance. This has for the first time brought the concept of categorization of industries to" Red", "Orange "and "Green" and restrict their operation in certain areas of importance. Therefore, it is at-once interpreted that Red, Orange and Green categorization is linked with location specific needs.
- The notification of MoEF was first brought on 2nd February,1989 in case of "Restriction on location of industries, mining operations and other developmental activities in Doon Valley in "Uttarakhand" and thereafter another notification on 24th February 1999 regarding restriction on the setting up of industries in Dahanu Taluka in Maharashtra. The categorization had been made mainly on the basis of size of the industries, man power and consumption of resources.
- However, in other parts of the country, there have been variations in context to the classification of industries under Red, Orange and Green categories. SPCBs / PCCs were following their own criteria in different States thereby creating confusion.
- In order to harmonize the 'Criteria of categorization', a 'Working Group' was formed as per resolution passed during the 57th Conference of the Chairmen & Member Secretaries of CPCB and SPCBs. Based on the recommendations of the Working Group, Directions dated 4/6/2012 under Section 18(1)(b) of the Water

(Prevention & Control of Pollution) , Act, 1974 were issued to all SPCBs/PCCs with the effects to maintain uniformity in categorization of industries as red, green and orange as per list finalized by the Working Group. This indicative list included 85 types of industrial sectors as 'Red', 73 industrial sectors as 'Orange' and 86 sectors as 'Green'. However, these identified categories have not been assigned with scores as per existing criteria/ or any new criteria

B: Categorization criteria used by SPCBs/PCCs:

SPCBs and PCCs use the criteria of Red, Orange and Green categories for consent management and vigilance purposes for carrying out inspections to verify compliance to the stipulated standards. However the above categorization do not emphasize on sector-specific plan for control of pollution in accordance with priority based on pollution index.

C: Gap in the process:

1. The categorization has been made mainly on the basis of size of the industries and consumption of resources. The pollution due to discharge of emissions & effluents and its impact on health was not considered as primary criteria.
2. Categorization was on random basis, no scoring system was adopted.

D: Resolutions made during National Level Conferences

The issue was discussed thoroughly during the following national level conferences held in New Delhi:

- Conference of the Environment Ministers of Central Government and State Governments during April 06-07, 2015
- 59th Conference of Chairmen & Member Secretaries of Pollution Control Boards / Pollution Control Committees held on April 08, 2015

Accordingly following resolutions were made during the Conferences:

1. *A 'Working Group' comprising of the members from CPCB, APPCB, TNPCB, WBPCB, PPCB, MPPCB and Maharashtra PCB is constituted.*
2. *This WG shall revisit the categorization of industries that is based on pollution index criteria & environmental issues such as generation of emission, effluent and hazardous wastes.*
3. *The categorization will be done on the basis of composite score (0-100 marks) of Pollution Index given in accordance with the following weightage.*

Air Pollution Score based on parameters namely PM, CO, NOx, SOx, HMs , Benzene, Ammonia and other toxic parameters relevant to the industry.	*40 Marks*
Water Pollution Score based on parameters namely pH, TSS, NH_3-N, BOD, Phenol and other toxic pollutants relevant to the industry.	*40 Marks*
Hazardous wastes (land fillable, incinerable, recyclable) as generated by the industry.	*20 Marks*
Note : • *Parameters to be decided on the basis of the nature of the wastes generating from the industrial sector.* • *Industries having only either water pollution or air pollution, the score will be normalized wrt 100.*	

4. *Based on the score of the Pollution Index, following categorization be made :*
   - *Type of industries, if scores 60 and above be categorized as Red*
   - *Type of industries, if scores from 30 to 59 be categorized as Orange*
   - *Type of industries, if scores from 15 to 29 be categorized as Green*
   - *Type of industries, if less than 15 be categorized as White or non-polluting industry.*
5. *SPCBs/PCCs may issue consent to the industries*
   - *Red category of industries for 5 years.*
   - *Orange category of industries for 10 years.*
   - *Green category of industries for 15 years.*
   - *No necessity of consent for non-polluting industries.*
6. *No red categories of industries will be permitted to establish in eco-sensitive areas and protected areas.*

E: Follow-up Actions made on the Resolutions :-

- Accordingly, a Committee comprising the Chairmen of CPCB, APPCB, TNPCB, MPPCB, MPCB, PPCB, WBPCB and MS, CPCB was constituted vide CPCB OM dated

23.04.2015 to review & classify industrial sectors into different categories based on criteria of respective pollution potential.

- The categorization is made on the basis of following:
    - Quality of emissions (air pollutants) generated
    - Quality of effluents (water pollutants) generated
    - Types of hazardous wastes generated
    - Consumption of resources

- Reference is taken from the following :
    - The Water (Prevention and Control of Pollution) Cess Act, 1977
    - Standards so far prescribed for various pollutants under the Environment (Protection) Act , 1986
    - Doon Valley Notification, 1989 issued by MoEF.

F : Scoring Methodology :

The details on the scoring methodology in respect of the aforesaid 3 components is presented in the following tables F-1 to F-4 .

Table F-1 : Water Pollution Scoring Methodology

Sl. No.	Activity / Types of Discharges	Score
Part A : Score W1 : Score based on types of expected criteria water-pollutants present in industrial processes waste waters. **Maximum of the following seven categories is to be taken.**		
W11	Waste-water which is polluted and the pollutants are - • not easily biodegradable (very high strength waste waters having BOD > 5000 mg/l); or • toxic; or • both toxic and not easily biodegradable. (Presence of criteria water pollutants having prescribed standard limits up-to 10 mg/l or having BOD > 5000 mg/l). For details appendix 1 may be referred)	30
W12	Non-toxic high strength polluted waste-water having BOD in the range of 1000-5000 mg/l and the pollutants are biodegradable. (Presence of criteria water pollutants having prescribed standard limits from 11 mg/l to 250 mg/l and having BOD strength in the range of 1000-5000 mg/l) . For details appendix 1 may be referred)	25
W13	Non toxic- polluted waste-water having BOD below 1000 mg/l and the pollutants are easily biodegradable. (Presence of criteria water pollutants having prescribed standard limits from 11mg/l to 250 mg/l and having BOD strength below 1000 mg/l) . For details appendix 1 may be referred)	20
W14	Waste-water generated from the chemical processes and which is polluted due to presence of high TDS (total dissolved solids) of inorganic nature. (Presence of criteria water pollutants having prescribed standard limits more than 250 mg/l. For details appendix 1 may be referred)	15
W15	Waste-water generated from the physical unit operations / processes and which is polluted due to presence of TDS (total dissolved solids) of inorganic nature and of natural origin like fresh-water RO rejects, boiler blow-downs, brine solution rejects etc. (Presence of criteria water pollutants having prescribed standard limits more than 250 mg/l. For details appendix 1 may be referred)	12
W16	Non-toxic polluted waste-water from those units which are: • Having the overall waste-water generation less than 10 KLD and • The pollutants are easily bio-degradable having BOD below 200 mg/l which can be easily treated in a single stage ASP (activated	12

	sludge process) based Effluent Treatment Plant. Note : This is a special category and is applicable to only those units having over-all liquid waste generation less than 10 KLD with low strength organic load.	
W17	Waste-water from cooling towers and cooling-re-circulation processes	10
Part B : Score W2 : Score based on huge discharges of any kind (Penalty Clause)		
W2	Industry having overall liquid waste generation of 100 KLD or more including industrial & domestic waste-water.	10
Overall Water Pollution Score W = W1+W2		

Appendix 1

- **<u>Water Pollutants covered under Group W11:</u>**

  - ✓ Free available Chlorine , Total residual chlorine, Fluoride (as F), Sulphide (as S), Free Ammonical Nitrogen, Dissolved phosphates (as P), Free ammonia (as NH3), Nitrate Nitrogen, Mercury (As Hg), Selenium (as Se), Hexa-valent chromium (as Cr + 6), Lead (as Pb), Tin , Vanadium (as V), Cadmium (as Cd), Manganese (as Mn), Total chromium (as Cr), Copper (as Cu), Iron (as Fe), Nickel (as Ni), Zinc (as Zn), Benzene, Arsenic (as As), Benzo-a-pyrene, Cyanide (as CN), Phenolic compounds (as C_6H_5OH) , Adsorbable Organic Halogens (AOX), Boron and /or
  - ✓ BOD strength of waste water > 5000 mg/l

- **<u>Water Pollutants covered under Group W12:</u>**

  - ✓ Sodium Absorption Ratio (SAR) , Biochemical oxygen demand (3 days at 27°C), Total Kjeldahl nitrogen (TKN), Ammonical nitrogen (as N), Suspended solids, Total nitrogen (as N), Chemical oxygen demand, Oils & grease and
  - ✓ BOD strength of waste water is in the range of 1000-5000 mg/l

- **<u>Water Pollutants covered under Group W13:</u>**

  - ✓ Sodium Absorption Ratio (SAR), Biochemical oxygen demand (3 days at 27°C), Total Kjeldahl nitrogen (TKN), Ammonical nitrogen (as N), Suspended solids, Total nitrogen (as N), Chemical oxygen demand and
  - ✓ BOD strength of waste water is below 1000 mg/l

- **<u>Water Pollutants covered under Group W14 and W15:</u>**

  Chlorides as Cl, Colour , Total dissolved solids (TDS - Inorganic)

- **<u>Water Pollutants covered under Group W16</u>**

  - ✓ BOD strength of waste water is below 200 mg/l and overall discharge is less than 10 KLD.

Table F-2 : Air Pollution Score

Sl. No.	Air Pollutants Group	'Range of Prescribed Standard ' of criteria pollutants	Marks
Part 1 : Score A1 = Score based on types of expected criteria Air Pollutants present in the emissions . Maximum of the following seven categories is to be taken. For details appendix 2 may be referred.			
1	Group A1A	Presence of criteria air pollutants having prescribed standard limits up-to 2 mg/Nm3	30
2	Group A1B	Presence of criteria air pollutants having prescribed standard from 3 to10 mg/Nm3	25
3	Group A1C	Presence of criteria air pollutants having prescribed standard from 11 to 50 mg/Nm3	20
4	Group A1D	Presence of criteria air pollutants having prescribed standard from 51 to 250 mg/Nm3	15
5	Group A1E	Presence of criteria air pollutants having prescribed standard from 251mg/Nm3 & above.	10
6	Group A1F	• Generation of fugitive emissions of Particulate Matters which are: o Not generated as a result of combustion of any kind of fossil-fuel. o Generated due to handling / processing of materials without involving the use of any kind of chemicals. o Which can be easily contained /controlled with simple conventional methods	10
7	Group A1G	• Generation of Odours which are : o Generated due to application of binding gums / cements /adhesives /enamels o Which can be easily contained /controlled with simple conventional methods	10
Part 2 : Score A2 = Score based on consumption of fuels and technologies required for air pollution control :			
6	Group A2F1	• All such industries in which the daily consumption of coal/fuel is more than 24 MT/day and the particular (Particulate/gaseous/process) emissions from which can be controlled only with high level equipments / technology like ESPs, Bag House Filters, High Efficiency chemical wet scrubbers etc.	10
7	Group A2F2	• All such industries in which the daily consumption of coal/fuel is from 12 MT/day to 24 MT/day and the particular (Particulate/gaseous/process) emissions from which can be controlled with suitable proven technology.	5
Overall Air Pollution Score –A = A1 + A2			

Appendix 2

- **<u>Air pollutants covered under Group A1A:</u>**

  Cd+Th, Dioxins & Furans, Mercury, Asbestos

- **<u>Air Pollutants covered under Group A1B:</u>**

  HF, Nickel+ Vanadium, HBr, Manganese, Lead, H_2S, P_2O_5 as H_3PO_4

- **<u>Air Pollutants covered under Group A1C:</u>**

  Chlorine, Pesticide compounds, CH_3Cl, TOC, Total Fluoride, Hydrocarbons, NH_3, HCL vapour & Mist, H_2SO_4 Mist, SO_2

- **<u>Air Pollutants covered under Group A1D:</u>**

  CO, PM, CO, NOx

- **<u>Air Pollutants covered under Group A1E:</u>**

  NOx with liquid-fuel, SO_2 with liquid-fuel

Table F-3: Hazardous Waste Generation Score

Sl.No.	**Types of Hazardous Waste Generated as** per Schedule 1 / Schedule 2 of Hazardous Waste (Management, Handling & Trans-boundary Movement) Rules , 2008 . **Maximum of the following four categories is to be taken**	**Score**
HW1	• Land disposable HW which require special care & treatment for stabilization before disposal.	20
HW2	• Incinerable HW	15
HW3	• Land disposable HW which doesn't require treatment & stabilization before disposal. • High volume low effect wastes such as fly-ash, phspho-gypsum, red-mud, slags from pyro-metallurgical operations, mine tailings and ore beneficiation rejects)	10
HW4	• Recyclable HW, which are easily recyclable with proven technologies.	10

Table F-4 : Calculation Sheet

Industrial Sector - .....

1. Water Pollution Score (W)			
Scores	Waste Water Category	Value	
Score on W1			
Score on W2			
Water Pollution Score = W1+W2			
2. Air Pollution Score (A)			
Scores	Air Pollutant Category	Value	
Score on A1			
Score on A2	-	-	
Air Pollution Score = A1+A2			
3. Hazardous Waste Score (HW)			
Score	HW Category	Value	
HW			
Grand Total = W + A + HW			

Note :

1. Any of the industrial sector having only either air pollution (A) or water pollution (W) , the score will be normalized to 100 as per the following formula –

   Normalized Score = {100 x W (or A)} / 40

2. Any of the industrial sector having air pollution (A) and water pollution (W) both but no hazardous waste generation (H) , the joint score of air & water pollution will be normalized to 100 as per the following formula –

   Normalized Score = {100 x (W+A)} / 80

3. Any of the industrial sector having air pollution (A) & hazardous waste generation (H) but no water pollution (W), the joint score of air pollution & hazardous waste generation will be normalized to 100 as per the following formula –

   Normalized Score = {100 x (A+H)} / 60

4. Any of the industrial sector having water pollution (W) and hazardous waste generation (H) but no air pollution (A), the joint score of water pollution & hazardous waste generation will be normalized to 100 as per the following formula –

   Normalized Score = {100 x (W+H)} / 60

G : Developments :

i. The existing Red (85 sectors) , Orange (73 sectors) and Green (86 sectors) i.e a total of 244 industrial sectors have been assessed as per the proposed formula by the Working Group. For this purpose, concerned Engineers / Scientists from the Member SPCBs were also involved & consulted during May 28-29, 2015.

ii. After careful examination and consideration of the suggestions of concerned stake-holders the "Draft Document on Revised Concept of Categorization of Industrial Sectors " was prepared by the Committee and circulated to all the SPCBs, PCCs and concerned Ministries for their information & comments. The ' Draft Document ' was uploaded on the website of CPCB also for information & comments of one & all.

iii. The matter was discussed during the 170th Board Meeting also and issues raised by the Board Members pertaining to some of the industrial sectors were clarified.

iv. Responses were received from various concerned Ministries, SPCBs, Industrial Associations including individuals.

v. Based on the above, final meeting was convened by the Secretary , MoEFCC with CPCB and senior officers of MoEFCC on January 06, 2016 to resolve the issues appropriately and finalize the 'Re-categorization'. Accordingly , following modifications in the 'Range of Pollution Index 'for the purpose of categorization of industrial sectors were suggested :

- Industrial Sectors having Pollution Index score of 60 and above – Red category
- Industrial Sectors having Pollution Index score of 41 to 59 –Orange category
- Industrial Sectors having Pollution Index score of 21 to 40 –Green category
- Industrial Sectors having Pollution Index score incl.& upto 20 –White category

vi. Based on the final criteria as described in v above , the final categorization is as follows :

Category of Industrial Sector	Existing Categorization	Proposed (New) categorization
Red	85	60
Orange	73	83
Green	86	63
White	---	36
Total	244	242

vii. In the proposed categorization, some of the industrial sectors have been either deleted due to duplication or merged with similar type of sectors on account of same

characteristics of pollution generation. In a similar way, some of the industrial sectors are split into more sectors on account of variation in the raw materials / manufacturing process. As a result final totals of the existing and proposed categorization are different.

viii. The industrial sector which doesn't fall under any of the above four categories (Red, Orange, Green and White) , decision with regard to its categorization will be taken at the level of concerned SPCB/PCC by a committee headed by the Member Secretary , SPCB/PCC and comprising of two senior cadre Engineers / Scientists of the SPCB / PCC in accordance with the scoring-criteria specified in this document.

ix. The summary is presented in the following Table G-1 and final lists of Red, Orange, Green and White categories of industries are presented in Tables G-2, G-3, G-4 and G-5 respectively, which are self explanatory.

Table G-1: Final Summary Table Red , Orange, Green and White Categories of Industries (16-01-16)

Sl No.	Original Categorization	Initial Nos.	Addition by Splitting into further classes	Deletion/ Shifting to foot-note due to vague term / Merger / other reasons	Re-categorization to Red	Re-categorization to Orange	Re-categorization to Green	Re-categorization to White	Check
		1	2	3	4	5	6	7	(1+2) = (3 to 7)
1	Red	85	11	7	60	26	3	Nil	96=96
2	Orange	73	2	3	Nil	51	19	2	75=75
3	Green	86	Nil	3+2=5	Nil	6	41	34	86=86
Final Categorization		244	13	15	60 (Red)	83 (Orange)	63 (Green)	36 (White)	257 =257 (Total categories including in foot-note)

Table G-2 : Final List of Red Category of Industrial Sectors

Sl No.	Orgnl Sl.No	Industry Sector	W1	W2	W	A1	A2	A	H	W+A+H	Revised Category	REMARKS
1.	38	Isolated storage of hazardous chemicals (as per schedule of manufacturing, storage of hazardous chemicals rules ,1989 as amended)									R-R	As per provisions of Rules, to be kept under Red category especially for safety purposes.
2.	4	Automobile Manufacturing (integrated facilities)	30	-	30	20	-	20	10	60	**R-R**	i. Such types of plants are having either one or combinations of polluting activities viz. washing, metal surface finishing operations, pickling, plating, electro-plating , phosphating, painting , heat treatment etc. ii. Some of such plants may outsource some /all of the polluting activities. In such cases, after thorough inspection of such units by concerned SPCB, re-categorization of the industry shall be made accordingly.
3.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Spent cleared metal catalyst containing copper,, Spent cleared metal catalyst containing zinc,,	30	-	30	20	-	20	10	60	**R-R**	All the three types of pollutants are expected.
4.	44	Manufacturing of lubricating oils ,grease and petroleum based products	20	-	20	20	-	20	20	60	**R-R**	Generates all sorts of pollution.
5.	66 E	DG Set of capacity > 5 MVA	-	-	-	20	5	25	-	62.5	**R-R**	i. Mainly air polluting. ii. DG sets consume the diesel @ 0.21 litres/hr/KVA at full load. iii. Average running is taken @ 12 hrs / day although many of the DG sets run for more than this period.
6.	31	Industrial carbon including electrodes and graphite blocks, activated carbon, carbon black	10	-	-	20	5	25	10	62.5	**R-R**	Mainly air polluting. Air pollution score is normalized to 100.

7.	39	Lead acid battery manufacturing(excluding assembling and charging of lead-acid battery in micro scale)	10	-	10	25	-	25	10	62.5	**R-R**	i. Mainly air polluting. Air pollution scores are normalized to 100. ii. Lead Acid Battery manufacturing consists of various stages which broadly involve (after producing or receiving lead oxide): Paste Mixing , Grid Casting , Grid Pasting & Curing , Hydro-setting, parting & enveloping , Stacking, grouping & inter-cell welding , Formation. iii. Exposure of workmen to lead during all or any of the processes outlined above exceeds the prescribed standards if appropriate equipment in this respect is not installed at any Battery Manufacturing Unit. iv. All of the above processes, some more than others, involve release of lead particles or fumes into the environment. Pollution from the above processes can be grouped into two possible types, viz: (a) Lead Oxide becomes airborne and there is Particulate Pollution (b) Fumes are generated and there is Gaseous Pollution
8.	62	Phosphate rock processing plant	30	-	30	20	-	20	-	62.5	**R-R**	i. The separation of phosphate rock from impurities and non-phosphate materials for use in fertilizer manufacture consists of beneficiation, drying or calcining at some operations, and grinding. Phosphate rock from the mines is first sent to beneficiation units to separate sand and day and to remove impurities. Steps used in beneficiation depend on the type of rock. ii. The water & air pollution scores are normalized to 100.

9.	66	Power generation plant [except Wind and Solar renewable power plants of all capacities and Mini Hydel power plant of capacity <25MW]	10	-	10	15	10	25		62.5	**R-R**	1. Mainly air polluting. It uses a mixture of biomass (agro based) and coal (< 10 %) as a fuel. Almost, round the year operation. 2 . In case of DG sets of 5 MVA & more and emissions of SO2 will take place due to use of liquid fuel. Air pollution score will be =20 + 10 = 30, Normalized score will be 75. 3. In case of 'Waste to Energy Plants' , water will be used for cooling and air score will be - 30+10 = 40.
10.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Spent catalyst containing nickel, cadmium, Zinc, copper, arsenic, vanadium and cobalt,	30	-	30	25	-	25	10	65	**R-R**	All the three types of pollutants are expected.
11.	67	Processes involving chlorinated hydrocarbons	30	-	30	20	-	20	15	65	**R-R**	Chlorinated hydrocarbons are used in the manufacture of insecticides, pesticides and organo chloro pesticides. Effluents & emissions are toxic in nature.
12.	74	Sugar (excluding Khandsari)	20	10	30	15	10	25	10	65	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Sugar mills generate all sorts of pollution problems.
13.	22	Fibre glass production and processing (excluding moulding)	-	-	-	20	-	20	20	67	**R-R**	i. The use of styrene in most methods of fiberglass production causes hazardous air pollution that is harmful to breathe at excessive levels. ii. It is mainly air polluting & HW generating industry. The air pollution & HW scores are normalized to 100. iii. In case of lead containing glass, the score of A1 will be 25 and final normalized score will be 75 and shall be categorized as Red.
14.	23	Fire crackers manufacturing and bulk storage facilities	-	-	-	20	-	20	20	67	**R-R**	i. This is the normalized score based on air pollution & HW generation. ii. Various hazardous chemicals are used in the manufacturing process. iii. These chemicals are namely Potassium Nitrate , Potassium per-chlorate, Barium Nitrate, Aluminium compounds, Copper Chloride etc.

												iv. These chemicals are highly hazardous and cause serious diseases among the workers. especially ability of blood to carry oxygen leading to headaches, methemoglobinemia and kidney problems , skin problems, thyroid metal fume etc.
15.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Dismantlers Recycling Plants -- Components of waste electrical and electronic assembles comprising accumulators and other batteries included on list A, mercury-switches, activated glass cullets from cathode-ray tubes and other activated glass and PCB-capacitors, or any other component contaminated with Schedule 2 constituents (e.g. cadmium, mercury, lead, polychlorinated biphenyl) to an extent that they exhibit hazard characteristics indicated in part C of this Schedule.	-	-	-	30	0	30	10	67	R-R	Mainly air polluting and hazardous waste generating. Air & HW pollution scores are jointly normalized to 100.
16.	47	Milk processes and dairy products(integrated project)	20	10	30	20	5	25	-	68.75	**R-R**	i. Water as well as air polluting due to use of boilers. ii. Water & air pollution scores are normalized to 100.
17.	63	Phosphorous and its compounds	30	-	30	25	-	25	-	68.75	**R-R**	Water pollution & air pollution containing compounds of phosphorous are expected
18.	61	Pulp & Paper (waste paper based without bleaching process to manufacture Kraft paper)	20	10	30	15	10	25	0	68.75	**R-R**	Mainly water & air polluting . Water & air pollution scores are normalized to 100.
19.	13	Coke making , liquefaction, coal tar distillation or fuel gas making	30	-	30	20	-	20	20	70	**R-R**	It is a kind of petrochemical industry.

20.	41	Manufacturing of explosives, detonators, fuses including management and handling activities	30	-	30	20	-	20	20	70	**R-R**	i. Explosives manufacture and use contribute some measure of hazardous waste to the environment. ii. Nitroglycerin produces several toxic byproducts such as acids, caustics, and oils contaminated with heavy metals. These must be disposed of properly by neutralization or stabilization and transported to a hazardous waste landfill. iii. The use of explosives creates large amounts of dust and particulate from the explosion, and, in some cases, releases asbestos, **lead,** and other hazardous materials into the atmosphere.
21.	45	Manufacturing of paints varnishes, pigments and intermediate (excluding blending/mixing)	30	-	30	25	-	25	15	70	**R-R**	i. The process may cause considerable emissions of volatile organic compounds (VOC). VOC contribute to the creation of ozone in the lower layers of the atmosphere (photochemical air pollution) and can present danger to health. ii. Dust and odour may also be a problem. iii. Washing of vessels will contribute waste-waters. iv. Large quantity of HWs are also produced.
22.	56	Organic Chemicals manufacturing	30	-	30	20	-	50	20	70	**R-R**	Such types of industrial sectors generate all sorts of pollution.
23.	1	Airports and Commercial Air Strips	20	10	30	-	-	-	10	75	**R-R**	i. The Airports are generating mainly the waste-waters. ii. This is the water pollution normalized score for airports having discharge more than 100 KLD. iii. The airports / strips having discharge less than 100 KLD will have score of 50 and hence orange category. iv. If the score is normalized wrt water + HW both, then all the airports will come under Orange category (score - 58.33).
24.	3	Asbestos and asbestos based industries	-	-	-	30	-	30	10	75	**R-R**	i. This is mainly air polluting industry. ii. Final score is based on air pollution score only. iii. Asbestos is carcinogenic and banned in many countries.
25.	5	Basic chemicals and electro chemicals and its derivatives including manufacturing of acid	30	-	30	-	-	-	10	75	**R-R**	i. Standards prescribed for Inorganic Chemicals are adopted. ii. It is mainly water polluting industry having effluents which are toxic and not easily biodegradable.

												iii. Water pollution score normalized to 100 is undertaken. iv. The earlier Red category industrial sector namely "Hydrocyanic acid and its derivatives " is also merged under this industrial sector.
26.	7	Cement	-	-	-	20	10	30	-	75	**R-R**	This is mainly air polluting industry & hence normalized air pollution score.
27.	9	Chlorates, per-chlorates & peroxides	30	-	30	-	-	-	-	75	**R-R**	i. It is mainly water polluting industry having effluents which are toxic and not easily biodegradable. ii. Water pollution score normalized to 100 is undertaken.
28.	10	Chlorine, fluorine, bromine, iodine and their compounds	30	-	30	-	-	-	-	75	**R-R**	i. It is mainly water polluting industry having effluents which are toxic and not easily biodegradable. ii. Water pollution score normalized to 100 is undertaken.
29.	16	Dyes and Dye- Intermediates	30	-	30	20	5	25	20	75	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Such types of industrial sectors generate all sorts of pollution.
30.	26	Health-care Establishment (as defined in BMW Rules)	20	10	30	-	-	-	-	75	**R-R**	i. Mainly water polluting. ii. The water pollution score is normalized to 100 & valid for Hospitals having total waste-water generation > 100 KLD. iii. The hospitals with incinerator will be categorized as Red irrespective of the quantity of the waste-water generation. iv. The hospitals having total waste-water generation less than 100 KLD and without incinerator, the normalized water pollution score will be 50 and will be categorized as Orange category.
31.	29	Hotels having overall waste-water generation @ 100 KLD and more.	20	10	30	15	-	15	-	75	**R-R**	i. Mainly water polluting. Small boiler may be installed. ii. The water pollution score is normalized to 100 & valid for Hotels having waste-water generation > 100 KLD. iii. The hotels having more than 20 rooms and waste-water generation less than 100 KLD and having a coal / oil fired boiler , the pollution score will be 35/40 & are categorized as Orange. iv. The hotels having more than 20 rooms and waste-water generation less than 10 KLD and

												having no-boiler & no hazardous waste generation, the pollution score will be 20 & are categorized as Green.
32.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Lead acid battery plates and other lead scrap/ashes/residues not covered under Batteries (Management and Handling) Rules, 2001. [* Battery scrap, namely: Lead battery plates covered by ISRI, Code word "Rails" Battery lugs covered by ISRI, Code word "Rakes". Scrap drained/dry while intact, lead batteries covered by ISRI, Code word "rains".	30	-	30	25	--	25	20	75	**R-R**	All the three types of pollutants are generated.
33.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Integrated Recycling Plants -- Components of waste electrical and electronic assembles comprising accumulators and other batteries included on list A, mercury-switches, activated glass cullets from cathode-ray tubes and other activated glass and PCB-capacitors, or any other component contaminated with Schedule 2 constituents (e.g. cadmium, mercury, lead, polychlorinated biphenyl) to an extent that they exhibit hazard characteristics indicated in part C of this Schedule.	30	-	30	25	-	25	20	75	**R-R**	All the three types of pollutants are expected.
34.	43	Manufacturing of glue and gelatin	30	10	40	20	-	20	-	75	**R-R**	Highly water polluting & obnoxious air polluting.
35.	49	Mining and ore beneficiation	30	10	40	15	5	20	-	75	**R-R**	Both air and water polluting. Score is normalized with air & water pollution.

36.	52	Nuclear power plant	10	-	10	30	-	30	15	75	**R-R**	i. Mainly air polluting due to incinerator. Others - cooling water. ii. Air pollution score is normalized to 100.
37.	58	Pesticides (technical) (excluding formulation)	30	-	30	25	-	25	20	75	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Such types of industrial sectors generate all sorts of pollution.
38.	64	Photographic film and its chemicals	30	-	30	-	-	-	-	75	**R-R**	i. Silver salts and other chemicals are used in preparation. Slight quantity of effluents is generated. ii. Water pollution scores are normalized to 100.
39.	68	Railway locomotive work shop/Integrated road transport workshop/Authorized service centers	20	10	30	-	-	-	10	75	**R-R**	i. Mainly water polluting industry . Water is used in the washing of locomotives, road transport vehicles during servicing. ii. This score is valid for those Centers having discharge more than 100 KLD. iii. Service Centers having waste-water generation < 100 KLD, the normalized score will be =(100*20)/40= 50.
40.	84	Yarn / Textile processing involving any effluent/emission generating processes including bleaching, dyeing, printing and colouring	30	10	40	15	-	15	20	75	**R-R**	In this sector all sorts of pollution are generated.
41.	8	Chlor Alkali	30	10	40	20	10	30	10	80	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Chlor-alkali units are having different section like NaOH, Cl2, SBP etc which are having toxic effluents. Additionally , fuel consumption is also on higher-side.
42.	70	Ship Breaking Industries	30	-	30	30	-	30	20	80	**R-R**	i. The ship-breaking industry creates numerous hazards for the coastal and marine environment. ii. Ship-breaking releases a large number of dangerous pollutants, including toxic waste, oil, poly-chlorinated biphenyls, and heavy metals, into the waters and sea bed. iii. While most of the oil is removed before a ship is scrapped, sand used to mop up the remaining oil is thrown into the sea. High concentrations of oil and grease are then found in the coastal waters, choking marine life.

												iv. Solid waste strewn on the shore, 45 tonnes on any given day according to a study by the Central Pollution Control Board, also finds its way into the sea. v. Adding to the stress on coastal waters, the organic load from the thousands of workers living in cramped conditions with little or no sanitary facilities results in unacceptably high levels of BOD.
43.	53	Oil and gas extraction including CBM (offshore & on-shore extraction through drilling wells)	30	-	30	-	-	-	20	83	**R-R**	i. Mainly water polluting & hazardous waste generating. ii. The water pollution & HW generation scores are normalized to 100.
44.	36	Industry or process involving metal surface treatment or process such as pickling/ electroplating/paint stripping/ heat treatment using cyanide bath/ phosphating or finishing and anodizing / enamellings/ galvanizing	30	-	30	-	-	-	20	83	**R-R**	Mainly water polluting & toxic hazardous waste generating industry. Scores are normalized to 100.
45.	80	Tanneries	30	-	30	-	-	-	20	83	**R-R**	Mainly water polluting & hazardous waste generating industry. Scores are normalized to 100.
46.	65	Ports and harbour, jetties and dredging operations	30	10	40	15	10	25	20	85	**R-R**	This category contain all sorts of pollution.
47.	77	Synthetic fibers induding rayon ,tyre cord, polyester filament yarn	30	10	40	25	10	35	10	85	**R-R**	This sector generates all sorts of pollution problems.
48.	81	Thermal Power Plants	30	10	40	20	10	30	15	85	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. TPP generate all sorts of pollution problems.
49.	71	Slaughter house (as per notification S.O.270(E)dated 26.03.2001)and meat processing industries, bone mill, processing of animal horn, hoofs and other body parts	25	10	35	-	-	-	-	87.5	**R-R**	Mainly water polluting and obnoxious odour generating industry. The water pollution score is normalized to 100
50.	2	Aluminium Smelter	30	10	40	20	10	30	20	90	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. This sector is generating all sorts of pollution i.e. air, water and HW.
51.	12	Copper Smelter	30	10	40	20	10	30	20	90	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Integrated Copper Smelters contain all sorts of

												pollution.
52.	20	Fertilizer (basic) (excluding formulation)	30	10	40	20	10	30	20	90	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Generates all sorts of pollution.
53.	37	Iron & Steel (involving processing from ore/ integrated steel plants) and or Sponge Iron units	30	10	40	20	10	30	20	90	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Such types of industrial sectors generate all sorts of pollution.
54.	61	Pulp & Paper (waste paper based units with bleaching process to manufacture writing & printing paper)	25	10	35	25	10	35	20	90	**R-R**	Waste paper based Pulp & Paper mills with bleaching process generate all sorts of pollution.
55.	85	Zinc Smelter	30	10	40	20	10	30	20	90	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Integrated Zinc smelter generates all sorts of pollution problems.
56.	55	Oil Refinery (mineral Oil or Petro Refineries)	30	10	40	25	10	35	20	95	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Such types of industrial sectors generate all sorts of pollution.
57.	59	Petrochemicals Manufacturing (including processing of Emulsions of oil and water)	30	10	40	25	10	35	20	95	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Such types of industrial sectors generate all sorts of pollution. iii. The earlier red category industrial sector namely "Processing of Emulsions of Oil & Water " is merged with this industrial sector.
58.	60	Pharmaceuticals	30	10	40	30	5	35	20	95	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Such types of industrial sectors generate all sorts of pollution.
59.	61	Pulp & Paper (Large-Agro + wood) , Small Pulp & Paper (agro based-wheat straw/rice husk)	30	10	40	25	10	35	20	95	**R-R**	i. This industrial sector is the one among the '17 categories of Highly Polluting Industries'. ii. Large /Small Agro based Pulp & Paper mills contribute all sorts of pollution problems.
60.	15	Distillery (molasses / grain / yeast based)	30	10	40	-	-	-	-	100	**R-R**	Mainly water polluting industry. Final score is the normalized water pollution score.

Note :

i. *Under the column Revised Category, the full forms of the abbreviations are as follows :*
   a. *R-R means original category was Red and revised category is also Red*
   b. *R-O means original category was Red and revised category is Orange*
   c. *O-O means original category was Orange and revised category is also Orange*
   d. *O-G means original category was Orange and revised category is Green*
   e. *O-W means original category was Orange and revised category is White*
   f. *G-O means original category was Green and revised category is Orange*
   g. *G-G means original category was Green and revised category is also Green*
   h. *G-W means original category was Green and revised category is White*

ii. *There are specific remarks in respect of some of the industrial sectors. These sectors are either merged with other relevant sectors or deleted due to duplication. The overall details are as follows :*

Sl No.	Original Sl No.	Industry Sector	Original Category	Remarks
1	14	Common treatment and disposal facilities(CETP, TSDF, E-waste recycling, CBMWTF, effluent conveyance project, incinerator, solvent/acid recovery plant, MSW sanitary land fill site)	R	i. All such facilities are classified as Red but special category projects as these are parts of pollution control facilities. ii. In case of CETP , the categorization will depend upon the category of member industries being served.
2	18	Processing of Emulsions of Oil & Water		It is a part of Petrochemical industries. Transferred and merged with the industrial sector namely 'Petrochemicals' at Sl. No. 54.
3	27	Heavy engineering including ship building (with investment on Plant & Machineries more than Rs 10 crores)	R	Most of the pollution generating processes / operations under this category are similar to the industry category namely "Automobile Manufacturing (integrated facilities)" at Sl . No. 1 and may be referred accordingly.
4	30	Hydrocyanic acid and its derivatives	R	Have been merged with the red category industrial sector namely " Basic chemicals and electro chemicals and its derivatives including manufacturing of acid " at Sl. No. 24
5	32	Industrial estates/ parks / complexes/ areas/ export processing zones/ SEZs/ Biotech parks/ leather complex	R	The classification will depend upon the category(ies) of the industries operating / proposed to be permitted in the area. In this context, guidelines prescribed in EIA Notification, 2006 shall be followed.
6	33	Industrial inorganic gases namely- a) Chemical gas- Acetylene, hydrogen, chlorine, fluorine, ammonia, sulphur dioxide, ethylene, hydrogen-sulphide, phosphine b) Hydrocarbon gases- Methane , ethane, propane	R	These gases are generally secondary products and produced alongwith other main products. To be classified as per the main parent plant.
7	69	Reprocessing of used oils & waste oils	R	i. The industry generates mainly the air pollution and oil bearing hazardous wastes. The normalized (air pollution & HW generation score is 58.33. ii. To be deleted as already covered under HW Recyclers / Re-processors (Used oils / Waste Oils) under Orange Category

Table G-3 : Final List of Orange Category of Industrial Sectors

Final Sl. No.	Orgnl S.No	Industry Sector	W1	W2	W	A1	A2	A	H	W+A+H	Revised category	Remarks
1.	20	Dismantling of rolling stocks (wagons/ coaches)	--	--	--	15	--	15	10	41.67	O-O	Emissions of dust and generation of waste oils take place during dismantling. Air pollution & HW generation scores (15+10=25) are normalized to 100.
2.	5	Bakery and confectionery units with production capacity > 1 TPD. (With ovens / furnaces)	20	--	20	15	--	15	--	43.75	O-O	
3.	10	Chanachur and ladoo from puffed and beaten rice(muri and shira) using husk fired oven	20	--	20	15	--	15	--	43.75	O-O	Normal water and air polluting.
4.	23	Coated electrode manufacturing	15	0	15	20	0	20	0	43.75	**G-O**	Preparation of core wire / rod, preparation of dry mix, preparation of wet mix, application of coating by extrusion, baking of coated electrodes
5.	24	Compact disc computer floppy and cassette manufacturing / Reel manufacturing	15	0	15	20	0	20	0	43.75	**G-O**	Generates waste-water and process emissions.
6.	24	Flakes from rejected PET bottle	20	-	20	15	-	15	-	43.75	R-O	Normal water & air pollutions are generated.
7.	30	Food and food processing including fruits and vegetable processing	20	--	20	15	--	15	--	43.75	O-O	Normal water and air polluting.
8.	40	Jute processing without dyeing	20	--	20	15	--	15	--	43.75	O-O	CPCB has notified standards for this category. Both air and water pollutions are generated.
9.	56	Manufacturing of silica gel	15	0	15	20	0	20	0	43.75	**G-O**	Waste-waters containing TDS and emissions of H_2SO_4 are generated.

10.	45	Manufacturing of tooth powder, toothpaste, talcum powder and other cosmetic items	20	--	20	15	--	15	--	43.75	O-O	Both air and water pollution are generated.
11.	55	Printing or etching of glass sheet using hydrofluoric acid	15	--	15	20	--	20	--	43.75	O-O	Both air and water pollution are generated.
12.	65	Silk screen printing, sari printing by wooden blocks	20	--	20	15	--	15	--	43.75	O-O	Wash-water and PM emissions from boilers .
13.	76	Synthetic detergents and soaps(excluding formulation)	20	-	20	15	-	15	-	43.75	R-O	i. This is the score for units having generation of waste-waters less than 100 KLD. ii. The units having waste-water generation more than 100 KLD will become mainly water polluting and accordingly normalized water pollution score will be 75 and be categorized as Red.
14.	71	Thermometer manufacturing	15	--	15	20	--	20	--	43.75	O-O	Process - making glass bulb, forming reservoir in the glass tube for fluid, inserting fluid, scale marking. Use of fuel to heat the glass tubes and hydrofluoric acid to seal the scaling. Small quantities of spent acids are generated.
15.	14	Cotton spinning and weaving (medium and large scale)	--	--	--	15	--	37.5	10	47.5	O-O	Mainly air polluting industry. Sources of air pollution (PM) are the fine particles of cotton from spinning process. Air pollution score is normalized to 100.
16.	1	Almirah, Grill Manufacturing (Dry Mechanical Process)	--	--	--	20	--	20	--	50	O-O	Air pollution due to spray painting (emissions of VOCs). Units without painting operations shall be categorized as White.

17.	2	Aluminium & copper extraction from scrap using oil fired furnace (dry process only)	--	--	--	20	--	20	10	50	O-O	i. Normalized Air pollution score. ii. Significant air pollution due to melting (emissions of SO2, PM).
18.	3	Automobile servicing, repairing and painting (excluding only fuel dispensing)	20	--	20	20	--	20	10	50	O-O	Normal water & air polluting and recyclable waste oil generating. If the waste water generation is more than 100 KLD, it will become mainly water polluting and Red category unit.
19.	4	Ayurvedic and homeopathic medicine	20	--	20	15	--	15	15	50	O-O	
20.	7	Brickfields (excluding fly ash brick manufacturing using lime process)	--	--	--	20	--	20	--	50	O-O	Significantly air polluting.
21.	8	Building and construction project more than 20,000 sq. m built up area	20	--	20	20	--	20	--	50	O-O	1. In the pre-construction stage , it is mainly air polluting due to generation of dust (PM) emissions. 2. After construction, it is mainly water polluting. If the discharge is more than 100 KLD, it will be having the normalized score of 75 and be categorized as Red.
22.	6	Ceramics and Refractories	-	-	-	20	-	20	-	50	R-O	i. Mainly air polluting industry. ii. This score is for the units having coal consumption < than 12 MT/day. iii. For the units having coal consumption > 12 MT /day, the normalized air pollution score will be 62.5 and shall be categorized as Red.

23.	11	Coal washeries	15	10	25	15	-	15	-	50	R-O	i. Wet washeries are mainly water polluting industry generating effluents which are having inorganic SS & TDS. Additionally, air pollution due to PM emissions is also generated. ii. Water & air pollution scores are jointly normalized to 100.
24.	16	Dairy and dairy products (small scale)	20	--	20	20	--	20	--	50	O-O	Water and air polluting both.
25.	18	DG set of capacity >1MVA but < 5MVA	--	--	--	20	--	20	--	50	O-O	Mainly air polluting . air pollution score is normalized to 100.
26.	17	Dry coal processing, mineral processing, industries involving ore sintering, pelletisating, grinding & pulverization	-	-	-	20	-	20	-	50	R-O	Mainly air polluting industry. Final score is the normalized air pollution score.
27.	19	Fermentation industry including manufacture of yeast, beer, distillation of alcohol (Extra Neutral Alcohol)	20	-	20	-	-	-	-	50	R-O	i. Mainly water polluting industry. This is the normalized water pollution score for units having discharge < 100 KLD. ii. For the units having discharge > 100 KLD, the normalized water pollution score will be 75 and shall be accordingly categorized as Red.
28.	21	Ferrous and Non- ferrous metal extraction involving different furnaces through melting, refining, re-processing, casting and alloy-making	-	-	-	15	5	20	10	50	R-O	i. Mainly air polluting. ii. This score is applicable to secondary production of ferrous & non-ferrous metals (excluding lead) up-to 1 MT/hour production.

												iii. For lead, the normalized air pollution score will be = (100*25)/40= 62.5 and is categorized as Red. iv. For Induction Furnace clubbed with AOD furnace – separate calculation shall be made based on the capacity of the furnaces. In such industries, the molten metal from induction furnace is transferred to AOD furnace where other metals like manganese and nickel are added to get the metal of desired constituents. The lime and silicon are also added for reduction of the metal oxides to the base metal. the normalized air pollution score will be = (100*25)/40= 62.5 and is categorized as Red.
29.	26	Fertilizer (granulation / formulation / blending only)	--	--	--	20	--	20	--	50	O-O	Air polluting.
30.	27	Fish feed, poultry feed and cattle feed	--	--	--	20	--	20	--	50	O-O	Obnoxious odour , H2S etc. AP score is normalized to 100
31.	28	Fish processing and packing (excluding chilling of fishes)	20	--	20	--	--	--	--	50	O-O	Mainly water polluting. WP score is normalized to 100.

32.	31	Forging of ferrous and non- ferrous metals (using oil and gas fired furnaces)	--	--	--	20	--	20	--	50	O-O	Heating furnace. Mainly air polluting.
33.	32	Formulation/pelletization of camphor tablets, naphthalene balls from camphor/ naphthalene powders.	--	--	--	20	--	20	--	50	O-O	Mainly air polluting. Emissions of Benzene, HC are expected.
34.	33	Glass ceramics, earthen potteries and tile manufacturing using oil and gas fired kilns, coating on glasses using cerium fluorides and magnesium fluoride etc.	--	--	--	20	--	20	--	50	O-O	Mainly air polluting. Emissions of SO2 are expected.
35.	35	Gravure printing, digital printing on flex, vinyl	20	--	20	20	--	20	10	50	O-O	Waste waters , emissions of VOCs
36.	36	Heat treatment using oil fired furnace (without cyaniding)	--	--	--	20	--	20	--	50	O-O	Mainly air polluting and noise generating. AP Score is normalized to 100.
37.	28	Hot mix plants	-	-	-	20	-	20	-	50	R-O	Mainly air polluting. Air pollution scores are normalized to 100.
38.	37	Hotels (< 3 star) or hotels having > 20 rooms and less than 100 rooms.	20	--	20	20	--	20	--	50	O-O	Mainly water polluting. WP score is normalized to 100.
39.	38	Ice cream	20	--	20	20	--	20	--	50	O-O	Wash-water and boilers / oven for pasteurization.
40.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Paint and ink Sludge/residues	-	-	-	20	0	20	0	50	R-O	Mainly air polluting. Air pollution score is normalized to 100
41.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Brass Dross „ Copper Dross„ Copper Oxide Mill Scale„ Copper Reverts, Cake & Residues„ Waste Copper and copper alloys in	10	-	10	20	-	20	10	50	R-O	Mainly air polluting.

		dispersible form,, Slags from copper processing for further processing or refining ,, Insulated Copper Wire,, Scrap/copper with PVC sheathing including ISRI-code material namely "Druid" ,, Jelly filled Copper cables ,, Zinc Dross-Hot dip Galvanizers SLAB,, Zinc Dross-Bottom Dross,, Zinc ash/Skimming arising from galvanizing and die casting operations,, Zinc ash/Skimming/other zinc bearing wastes arising from smelting and refining,, Zinc ash and residues including zinc alloy residues in dispersible from ,,										
42.	35	Industry or processes involving foundry operations	-	-	-	20	-	20	-	50	R-O	i. This score is valid for the foundries having capacity < 5 MT/hr as such units require the coal/coke @ < 500 kg/hr. ii. The units having capacity of 5 MT/hr and more, the coal/coke consumption will be more than 500 kg/hr and the normalized score will be 62.5 and classified accordingly as Red.
43.	40	Lime manufacturing (using lime kiln)	-	-	-	20	-	20	-	50	R-O	Mainly air polluting
44.	41	Liquid floor cleaner, black phenyl, liquid soap, glycerol mono-stearate manufacturing	20	--	20	20	--	20	--	50	O-O	Both air and water pollution are generated.

45.	42	Manufacturing of glass	10	-	-	20	-	20	-	50	R-O	i. Mainly air polluting (melting at 1500ºC and refining . ii. In case of lead glass , the score of A1 will be 25 and accordingly the normalized scores will be 62.5 i.e. Red .
46.	43	Manufacturing of iodized salt from crude/ raw salt	12	--	12	20	--	20	--	50	O-O	Boiling in Evaporators (multiple effect evaporators), centrifuging, iodization with KIO3 mixing . Mainly air polluting. Air pollution score is normalized to 100.
47.	42	Manufacturing of mirror from sheet glass	--	--	--	20	--	20	--	50	O-O	Evaporator & furnace for heating the metal to be applied as reflector on mirror. Mainly air polluting.
48.	44	Manufacturing of mosquito repellent coil	--	--	--	20	--	20	--	50	O-O	Mainly air polluting. Toxic fumes are expected.
49.	46	Manufacturing of Starch/Sago	25	-	25	15	-	15	-	50	R-O	i. Water and air polluting industry. Boiler is used for steam generation. ii. Water & air pollution scores are normalized to 100
50.	46	Mechanized laundry using oil fired boiler	20	--	20	20	--	20	--	50	O-O	Both air and water pollution are generated.
51.	47	Modular wooden furniture from particle board, MDF< swan timber etc, Ceiling tiles/ partition board from saw dust, wood chips etc., and other agricultural waste using synthetic adhesive resin, wooden box making (With boiler)	--	--	--	20	--	20	--	50	O-O	1. Mainly air polluting. Boiler as well as VOCs from use of adhesives. 2. Without boiler, it will be a Green category industry.
52.	50	New highway construction project	-	-	-	20	-	20	-	50	R-O	Mainly air polluting project.

53.	51	Non-alcoholic beverages(soft drink) & bottling of alcohol/non alcoholic products	20	-	20	15	5	20	-	50	R-O	i. Both air and water polluting. Score is normalized with air & water pollution. This score is valid for industries having waste-water generation < 100 KLD. ii. For the units having waste-water generation > 100 KLD the , normalized score would be 62.5 and categorized as Red.
54.	49	Paint blending and mixing (Ball mill)	20	--	20	20	--	20	10	50	O-O	Both air and water pollution are generated.
55.	62	Paints and varnishes (mixing and blending)	20	0	0	20	0	20	0	50	**G-O**	Waste-waters as well as fumes of VOCs due to solvents, pigments, varnishes.
56.	51	Ply-board manufacturing(including Veneer and laminate) with oil fired boiler/ thermic fluid heater(without resin plant)	0	--	0	20	--	20	--	50	O-O	Mainly air polluting because of use of boiler. AP score is normalized to 100
57.	52	Potable alcohol (IMFL) by blending, bottling of alcohol products	20	--	20	--	--	--	--	50	O-O	Mainly water polluting. WP score is normalized to 100.
58.	54	Printing ink manufacturing	20	--	20	20	--	20	--	50	O-O	1. Pigments, binders and solvents are used. 2. Boiler is also used. 3. Emissions of VOCs take place.
59.	70	Printing press	20	0	20	20	0	20	0	50	**G-O**	Colored waste-waters containing dyes and VOC emissions are generated.
60.	59	Reprocessing of waste plastic including PVC	20	--	20	20	--	20	--	50	O-O	Large quantities of wash-water and fugitive emissions are generated.
61.	61	Rolling mill (oil or coal fired) and cold rolling mill	10	--	10	20	--	20	--	50	O-O	Mainly air polluting. Air pollution score is normalized to 100. Others - cooling water and recyclable waste oils etc. are generated.
62.	67	Spray painting, paint baking, paint shipping	--	--	--	20	--	20	10	50	O-O	Mainly air polluting. Emissions of VOCs and HC are generated.

63.	72	Steel and steel products using various furnaces like blast furnace /open hearth furnace/induction furnace/arc furnace/submerged arc furnace / basic oxygen furnace /hot rolling reheated furnace	10	-	10	20	-	20	10	50	R-O	i. Mainly air polluting. In the emissions, oxides of manganese, nickel etc. are also present. ii. Air pollution score is normalized to 100.
64.	73	Stone crushers	-	-	-	20	-	20	-	50	R-O	Mainly air polluting. Air pollution score is normalized to 100.
65.	75	Surgical and medical products including prophylactics and latex	20	-	20	20	-	20	-	50	R-O	Both air as well as water polluting. Air and water pollution scores are normalized to 100.
66.	85	Tephlon based products	0	0	0	20	0	20	0	50	**G-O**	Due to spraying applications, emissions (HC) are generated
67.	70	Thermocol manufacturing (with boiler)	--	--	--	20	--	20	--	50	O-O	Polystyrene is heated. Mainly air polluting with boiler.
68.	82	Tobacco products including cigarettes and tobacco/opium processes	20	-	20	20	-	20	-	50	R-O	Such industries generate both air as well as water pollution. These scores are normalized to 100.
69.	72	Transformer repairing/ manufacturing (dry process only)	--	--	--	20	--	20	10	50	O-O	Mainly air polluting because of ovens, shot-blasting etc.
70.	73	Tyres and tubes vulcanization/ hot retreating	10	--	10	20	--	20	--	50	O-O	Mainly air polluting . Emissions of PM, VOCs and obnoxious odour are generated.
71.	83	Vegetable oil manufacturing including solvent extraction and refinery /hydrogenated oils	20	-	20	15	5	20	10	50	R-O	i. All sorts of pollution are generated. ii. This score is valid for plants having waste-water generation < 100 KLD. iii. If the waste-water generation is more than 100 KLD, the unit shall be classified as Red.
72.	74	Wire drawing and wire netting	20	--	20	--	--	--	--	50	O-O	Mainly water polluting. WP score is normalized to 100.

73.	21	Dry cell battery (excluding manufacturing of electrodes) and assembling & charging of acid lead battery on micro scale	30	--	30	15	--	15	10	55	O-O	Water and air polluting both.
74.	50	Pharmaceutical formulation and for R & D purpose (For sustained release/ extended release of drugs only and not for commercial purpose)	20	--	20	20	--	20	15	55	O-O	i. All sorts of pollution are generated. ii. R&D activities are to be shifted to Red category.
75.	78	Synthetic resins	20	-	20	20	-	20	15	55	R-O	All sorts of pollution are generated.
76.	79	Synthetic rubber excluding molding	20	-	20	20	-	20	15	55	R-O	i. Most synthetic rubber is created from two materials, styrene and butadiene. Both are currently obtained from petroleum. ii. Process is similar to a part of Petrochemical plants.
77.	9	Cashew nut processing	25	--	25	20	--	20	--	56	O-O	Normal water and air polluting.
78.	12	Coffee seed processing	25	--	25	20	--	20	--	56	O-O	Normal water & air polluting industry.
79.	57	Parboiled Rice Mills	25	-	25	20	-	20	-	56	R-O	i. Rice Mills are generating both air and water pollution. Waste-waters are having high strength in respect of BOD. ii. This is the normalized air & water pollution score for units having waste-water generation < 100 KLD and fuel consumption less than 12 MTD. iii. For units having waste-water generation > 100 KLD or fuel consumption > 12 MTD or both , the unit shall be classified as Red.

80.	29	Foam manufacturing	--	--	--	20	--	20	15	58	O-O	i. Raw material is polyurethane, latex etc. ii. Emissions of VOCs and HAPs. CH3Cl2 and similar compounds as blowing agents. iii. Outdated raw materials and spoiled slots are discarded as HW.
81.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Used Oil – As per specifications prescribed from time to time.	10	0	10	20	0	20	15	58.33	R-O	Mainly air polluting and hazardous waste generating industry. Air pollution & HW scores are normalized to 100
82.	34	Industries engaged in recycling / reprocessing/ recovery/reuse of Hazardous Waste under schedule iv of HW(M, H& TBM) rules, 2008 - Items namely - Waste Oil ---As per specifications prescribed from time to time.	-	-	-	20	0	20	15	58.33	R-O	Mainly air polluting and hazardous waste generating industry. Air pollution & HW scores are normalized to 100.
83.	56	Producer gas plant using conventional up drift coal gasification (linked to rolling mills glass and ceramic industry refectories for dedicated fuel supply)	--	--	--	20	--	20	15	58.33	O-O	Mainly air polluting & tar (HW) generating. SO2, CO, NOx are generated. Tar is the by-product and utilized by other industries in co-processing.

Note :

i. Under the column Revised Category, the full forms of the abbreviations are as follows :

a. R-R means original category was Red and revised category is also Red
b. R-O means original category was Red and revised category is Orange
c. O-O means original category was Orange and revised category is also Orange
d. O-G means original category was Orange and revised category is Green
e. O-W means original category was Orange and revised category is White
f. G-O means original category was Green and revised category is Orange
g. G-G means original category was Green and revised category is also Green
h. G-W means original category was Green and revised category is White

ii. *There are specific remarks in respect of some of the industrial sectors. These sectors are either merged with other relevant sectors or deleted due to duplication / vague category. The overall details are as follows:*

Sl No.	Original Sl No.	Industry Sector	Original Category	Remarks
1	24	Excavation of sand from the river bed (excluding manual excavation)	O	Since such types of activities cause ecological disturbances, the instructions issued by the government from time to time be followed. To be categorized by MoEF&CC.
2	39	Infrastructure Development Project	O	Vast variety of such projects come under such category. This is to be decided by the concerned SPCB in line of EIA Notification , 2006.
3	53	Power press	O	Very vague term hence deleted. Such types of general engineering units have already been covered.

Table G-4 : Final List of Green Category of Industrial Sectors

Sl. No.	Orgnl Sl. No.	**Industry Sector**	W1	W2	W	A1	A2	A	H	W+A+H	Revised Category	Remarks
1.	2	Aluminium utensils from aluminium circles by pressing only (dry mechanical operation)	--	--	--	10	--	10	--	25	**G-G**	Minor air pollution due to some fugitive PM emissions from buffing operations.
2.	6	Ayurvedic and homeopathic medicines (without boiler)	10	--	10	--	--	--	--	25	**G-G**	Small quantities of waste-waters are generated from washing operations.
3.	8	Bakery /confectionery /sweets products (with production capacity <1tpd (with gas or electrical oven)	10	--	10	--	--	--	--	25	**G-G**	Small quantities of waste-waters are generated from washing operations.
4.	6	Bi-axially oriented PP film along with metalizing operations	10	--	10	--	--	--	--	25	**O-G**	Mainly extrusion process involving Cooling water recirculation
5.	10	Biomass briquettes (sun drying) without using toxic hazardous wastes	--	--	--	10	--	10	--	25	**G-G**	Minor air pollution due to some fugitive PM emissions from pulverization / mixing operations.
6.	13	Blending of melamine resins & different powder, additives by physical mixing	--	--	--	10	--	10	--	25	**G-G**	Minor air pollution due to some fugitive PM emissions from pulverization / mixing operations.
7.	15	Brass and bell metal utensils manufacturing from circles(dry mechanical operation without re-rolling facility)	--	--	--	10	--	10	--	25	**G-G**	Minor air pollution due to some fugitive PM emissions from buffing operations.
8.	16	Candy	10	--	10	10	--	10	--	25	**G-G**	Small quantities of waste-water and minor

												PM emissions are generated.
9.	17	Cardboard or corrugated box and paper products (excluding paper or pulp manufacturing and without using boilers)	--	--	--	10	--	10	--	25	**G-G**	This score is valid with Small gas / electricity operated oven / furnace for making glue.
10.	18	Carpentry & wooden furniture manufacturing (excluding saw mill) with the help of electrical (motorized) machines such as electrical wood planner, steel saw cutting circular blade, etc.	--	--	--	10	--	10	--	25	**G-G**	Minor air pollution due to some fugitive PM emissions from cutting operations.
11.	19	Cement products (without using asbestos / boiler / steam curing) like pipe ,pillar, jafri, well ring, block/tiles etc.(should be done in closed covered shed to control fugitive emissions)	--	--	--	10	--	10	--	25	**G-G**	Minor air pollution due to some fugitive PM emissions from mixing operations.
12.	20	Ceramic colour manufacturing by mixing & blending only (not using boiler and wastewater recycling process)	--	--	--	10	--	10	--	25	**G-G**	Minor air pollution due to some fugitive PM emissions.
13.	11	Chilling plant, cold storage and ice making	10	--	10	--	--	--	--	25	**O-G**	Cooling water recirculation only.
14.	13	Coke briquetting (sun drying)	--	--	--	10	--	10	--	25	**O-G**	Mainly air polluting industry. Sources of air pollution (PM) are pulverizes and mixers. Air pollution score is normalized to 100.
15.	28	Cotton spinning and weaving (small scale)	--	--	--	10	--	10	--	25	**G-G**	Minor PM emissions from spinning process.
16.	17	Dal Mills	--	--	--	10	--	10	--	25	**O-G**	Some fugitive emissions of PM.

17.	29	Decoration of ceramic cups and plates by electric furnace	--	--	--	10	--	10	--	25	**G-G**	Fumes of enamels. Minor air pollution.
18.	19	Digital printing on PVC clothes	--	--	--	10	--	10	--	25	**O-G**	Minor emissions / odour generations are expected.
19.	25	Facility of handling, storage and transportation of food grains in bulk	--	--	--	10	--	10	--	25	**O-G**	Some fugitive emissions of PM during handling of grains.
20.	36	Flour mills (dry process)	--	--	--	10	--	10	--	25	**G-G**	Fugitive dust emissions.
21.	41	Glass , ceramic, earthen potteries, tile and tile manufacturing using electrical kiln or not involving fossil fuel kiln	--	--	--	10	--	10	--	25	**G-G**	Minor fugitive emissions only.
22.	34	Glue from starch (physical mixing) with gas / electrically operated oven /boiler.	--	--	--	10	--	10	--	25	**O-G**	Some fugitive emissions of PM during mixing of raw materials.
23.	42	Gold and silver smithy (purification with acid smelting operation and sulphuric acid polishing operation) (using less or equal to 1 litre of sulphuric acid/ nitric acid per month)	--	--	--	10	--	10	--	25	**G-G**	Minor fumes from cleaning process.
24.	36	Heat treatment with any of the new technology like ultrasound probe , induction hardening , ionization beam, gas carburizing etc.	10	--	10	10	--	10	--	25	**O-G**	• Cooling waters and minor heat fumes. • Finalization of categorization subject to field verification.
25.	46	Insulation and other coated papers (excluding paper or pipe manufacturing)	--	--	--	10	--	10	--	25	**G-G**	Minor fumes due to application of poly-urethane
26.	49	Leather foot wear and leather products (excluding tanning and hide processing except cottage scale)	--	--	--	10	--	10	--	25	**G-G**	Minor fumes due to use of adhesives / gums.

27.	50	Lubricating oil, greases or petroleum based products (only blending at normal temperature)	--	--	--	10	--	10	--	25	**G-G**	Minor fumes at the time of transfers from one container to other.
28.	54	Manufacturing of pasted veneers using gas fired boiler or thermic fluid heater and by sun drying	--	--	--	10	--	10	--	25	**G-G**	1. Minor fumes due to application of gums / adhesives / pastes etc. 2. This score is valid only for gas fired boiler.3. The units having coal fired boilers shall be categorized as Orange.
29.	59	Oil mill Ghani and extraction (no hydrogenation / refining)	10	--	10	--	--	--	--	25	**G-G**	Small quantities of floor washings & equipments washings are generated.
30.	48	Packing materials manufacturing from non asbestos fibre, vegetable fibre yarn	--	--	--	10	--	10	--	25	**O-G**	Some fugitive emissions of PM are expected.
31.	65	Phenyl/toilet cleaner formulation and bottling	--	--	--	10	--	10	--	25	**G-G**	Minor fumes of VOCs in the work zone
32.	67	Polythene and plastic processed products manufacturing (virgin plastic)	10	--	10	10	--	10	--	25	**G-G**	Cooling water & emissions due to mixing of raw materials.
33.	68	Poultry, Hatchery and Piggery	--	--	--	10	--	10	--	25	**G-G**	Obnoxious odour containing H_2S, CH_4 etc. and fugitive PM emissions
34.	69	Power looms (without dye and bleaching)	--	--	--	10	--	10	--	25	**G-G**	Minor emissions of PM.
35.	71	Puffed rice (muri) (using gas or electrical heating system)	--	--	--	10	--	10	--	25	**G-G**	Minor emissions of PM.
36.	57	Pulverization of bamboo and scrap wood	--	--	--	10	--	10	--	25	**O-G**	Some fugitive emissions of PM are expected.
37.	72	Ready mix cement concrete	--	--	--	10	--	10	--	25	**G-G**	PM emissions.
38.	73	Reprocessing of waste cotton	--	--	--	10	--	10	--	25	**G-G**	PM emissions.
39.	60	Rice mill (Rice hullers only)	--	--	--	10	--	10	--	25	**O-G**	PM emissions are generated. Mainly air

												polluting. AP score is normalized to 100
40.	62	Rolling mill (gas fired) and cold rolling mill	10	--	10	10	--	10	--	25	**O-G**	Mainly air polluting. AP score is normalized to 100
41.	75	Rubber goods industry (with gas operated baby boiler)	--	--	--	10	--	10	--	25	**G-G**	Some PM emissions and obnoxious odour.
42.	63	Saw mills	--	--	--	10	--	10	--	25	**O-G**	Mainly air polluting. PM and noise are generated.
43.	77	Soap manufacturing (hand made without steam boiling / boiler)	10	--	10	--	--	--	--	25	**G-G**	Small quantities of waste-water are generated.
44.	80	Spice grinding (upto-20 HP motor)	--	--	--	10	--	10	--	25	**G-G**	Small quantities of fugitive emissions of raw materials.
45.	66	Spice grinding (>20 hp motor)	--	--	--	10	--	10	--	25	**O-G**	Mainly air polluting. Fugitive emissions of PM.
46.	81	Steel furniture without spray painting	--	--	--	10	--	10	--	25	**G-G**	Obnoxious gases from welding as well as noise pollution.
47.	82	Steeping and processing of grains	10	--	10	--	--	--	--	25	**G-G**	Washing waters are generated.
48.	86	Tyres and tube retreating (without boilers)	--	--	--	10	--	10	--	25	**G-G**	Due to applications of binding gum / adhesives / cement, some obnoxious fumes may generate.
49.	22	Chilling plant and ice making without using ammonia	12	--	12	--	--	--	--	30	**G-G**	Cooling water and brine water circuits. Spillages / blow down may take place
50.	26	CO2 recovery	12	--	12	--	--	--	--	30	**G-G**	Normal water pollution from scrubbing action
51.	32	Distilled water (without boiler) with electricity as source of heat	12	--	12	--	--	--	--	30	**G-G**	TDS as distillation residues

52.	45	Hotels (up to 20 rooms and without boilers)	12	--	12	--	--	--	--	30	**G-G**	This score is valid for hotels having overall waste-water generation less than 10 KLD.
53.	53	Manufacturing of optical lenses (using electrical furnace)	12	--	12	--	--	--	--	30	**G-G**	Small quantities of waste-waters containing TDS, SS are generated.
54.	58	Mineralized water	12	--	12	--	--	--	--	30	**G-G**	RO Rejects.
55.	68	Tamarind powder manufacturing	12	--	12	15	--	15	--	33.75	O-G	• Dried tamarind fruits - cleaned and after soaking them in water they are boiled in steam jacketed kettle for about 40-45 minutes. Then pulp is extracted in pulper and dried in drum type drier and on cooling, the final product is packed. • Generates small quantities of waste waters and air emissions. Joint score is normalized to 100.
56.	15	Cutting, sizing and polishing of marble stone	15	--	15	--	--	--	--	37.5	O-G	Mainly water polluting . Water pollution score is normalized to 100.
57.	22	Emery powder (fine dust of sand) manufacturing	--	--	--	15	--	15	--	37.5	O-G	Air polluting. PM emissions take place during various stages of grindings of naturally occurring minerals.
58.	25	Flyash export, transport & disposal facilities	-	-	-	15	-	15	-	37.5	R-G	• This is mainly air polluting activity. • This is the normalized score based on air pollution.
59.	48	Mineral stack yard / Railway sidings	15	-	15	15	-	15	-	37.5	R-G	• Mainly air pollution due to loading, unloading, storage and transportation of the minerals.

												• Waste-water generation mainly during rains only.
60.	54	Oil and gas transportation pipeline	-	-	-	10	5	15	-	37.5	R-G	• Contains small gas based power plants up-to 5 MWs. • Air pollution score is normalized to 100. • In case , if these power plants are bigger / liquid fuel / oil based, scores will be calculated accordingly.
61.	64	Seasoning of wood in steam heated chamber	--	--	--	15	--	15	--	37.5	O-G	Air pollution due to use boiler for supply of steam. Air pollution score is normalized to 100.
62.	84	Synthetic detergent formulation	--	--	--	15	--	15	--	37.5	**G-G**	• This score is valid for the industries which are not manufacturing LABSA. It is procured from outside. • Small quantities of emissions are generated from mini boiler. • Air pollution score is normalized to 100.
63.	69	Tea processing (with boiler)	--	--	--	15	--	15	--	37.5	O-G	With boiler, it is an orange category industry. Without boiler, it will be green category industry.

Note :

i. *Under the column Revised Category, the full forms of the abbreviations are as follows :*
   a. *R-R means original category was Red and revised category is also Red*
   b. *R-O means original category was Red and revised category is Orange*
   c. *O-O means original category was Orange and revised category is also Orange*
   d. *O-G means original category was Orange and revised category is Green*
   e. *O-W means original category was Orange and revised category is White*
   f. *G-O means original category was Green and revised category is Orange*
   g. *G-G means original category was Green and revised category is also Green*
   h. *G-W means original category was Green and revised category is White*

ii. *There are specific remarks in respect of some of the industrial sectors. These sectors are either merged with other relevant sectors or deleted due to duplication. The overall details are as follows :*

Sl No.	Original Sl No.	Industry Sector	Original Category	Remarks
1	47	Jobbing and Machining	G	Vague category to be deleted, as such activities have already been covered in other categories.
2	66	Reel manufacturing	G	Already covered in other categories. Hence, deleted
3	1	Assembling of acid lead batteries (up to 10 batteries per day excluding lead plate casting)	G	Already covered in Orange category. Hence, deleted
4	5	Automobile fuel outlets (only dispensing)	G	Minor air pollution due to some fugitive emissions during fuel filling operations. May be exempted from the purview of Consent management.
5	30	Diesel generator sets (15 KVA to 1 MVA)	G	• Normal operation – 12 hrs a day. • Consumption of diesel = 1680 litres for 1 MVA DG set at full load @ 0.21 litres / KVA / hr. • Stand-alone DG Sets having total capacity 1 MVA or less and equipped with acoustic enclosures alongwith adequate stack height may be exempted from the purview of Consent management. Higher capacity DG sets have already been covered under Red / Orange categories .

Table G-5: Final List of White Category of Industries

Sl. No.	Orgnl Sl. No.	**Industry Sector**	W1	W2	W	A1	A2	A	H	W+A+H	Revised Category

No. B-29012/ESS/CPA/2015-16

19.08.2015

Sub: "Harmonization of Classification of industries under Red / Orange / Green / White Categories".

During the Conference of the Environment Ministers of States held in New Delhi during April 06-07, 2015, it was resolved to adopt pollution potential criteria for categorization of Red, Orange & Green categories of industries and that a Committee be constituted with State representatives. Further, in the 59th Conference of Chairmen & Member Secretaries of Pollution Control Boards/PCCs held in New Delhi on April 08, 2015, it was agreed to constitute a Committee to look into categorization system of industries based on their respective pollution potential index.

2. Accordingly, a Committee comprising the Chairmen of CPCB, APPCB, TNPCB, MPPCB, MPCB, PPCB, WBPCB and MS, CPCB was constituted vide CPCB OM dated 23.04.2015 to review & classify industrial sectors into different categories based on criteria of respective pollution potential indices.

3. The existing Red (85 sectors) , Orange (73 sectors) and Green (86 sectors) industrial sectors have been assessed as per the proposed formula by a group of Scientists from CPCB . For this purpose , concerned Engineers / Scientists from the Member SPCBs of the Committee were also involved & consulted during May28-29, 2015.

4. After careful examination and consideration of the suggestions of concerned stake-holders the "Draft Document on Revised Concept of Categorization of Industrial Sectors " is prepared by the Committee .

In this context, the Undersigned is directed to forward a copy of the " Draft Document on Revised Concept of Categorization of Industrial Sectors to all the SPCBs, PCCs and concerned Ministries for their comments. Accordingly, the same is enclosed herewith and all the SPCBs, PCCs and concerned Ministries are, hereby requested to provide their comments by 04.09.2015. The comments may kindly be sent through hard copy as well as soft copy at e-mail: nkgupta.cpcb@nic.in , nkgcpcb@hotmail.com .

(2004) 6 Supreme Court Cases 402 : 2004 SCC OnLine SC 624

(BEFORE S. RAJENDRA BABU, C.J. AND G.P. MATHUR, J.)

DEEPAK NITRITE LTD. . . Appellant;

Versus

STATE OF GUJARAT AND OTHERS . . Respondents.

Civil Appeals No. 1521 of 2001[±] with Nos. 1522-28 of 2001, decided on May 5, 2004

A. **Environment Protection and Pollution Control — Polluter-Pays Principle — Applicability — Held, compensation/damages can be awarded under, only if damage has been caused to the environment by the person concerned — To say that mere violation of the law in not observing the norms would result in damage/degradation of the environment, is not correct — There must be a finding that such damage has in fact resulted — Since, on facts, there was no such finding, High Court directed to further investigate the matter in each of the cases — Such investigation not to be as if it were in an action in tort, but as an action in public law — A broad conclusion in this regard by the High Court would be sufficient — Other directions also given — Environment (Protection) Act, 1986 — S. 3**

B. **Environment Protection and Pollution Control — Polluter-Pays Principle — Compensation — Measure of — Percentage of annual turnover of polluter as a method — If permissible — Held, compensation to be awarded must have some broad correlation not only with the magnitude and capacity of the enterprise but also with the harm caused by it — Maybe, in a given case the percentage of turnover itself may be a proper measure, because the method to be adopted in awarding damages on the basis of the said principle has got to be practical, simple and easy in application — Environment (Protection) Act, 1986 — S. 3 — Torts — Compensation — Measure of**

A petition was filed before the High Court in public interest alleging large-scale pollution caused by industries located in Gujarat Industrial Development Corporation (GIDC) Industrial Estate at Nandesari. It is alleged that effluents discharged by the said industries into the effluent-treatment project had exceeded certain parameters fixed by the Gujarat Pollution Control Board (GPCB), thereby causing damage to the environment. On 9-5-1997 the High Court passed an order directing the industries to pay 1% of the maximum annual turnover of any of the preceding three years towards compensation and betterment of environment within a stipulated time. The appeal was against this order.

Disposing of the appeals in the terms below, the Supreme Court

Held :

The fact that the industrial units in question have not conformed with the standards prescribed by GPCB, cannot be seriously disputed in these cases. But the question is whether that circumstance by itself can lead to the conclusion that such lapse has caused damage to the environment. No finding is given on that aspect which is necessary to be ascertained because compensation to be awarded

Page: 403

must have some broad correlation not only with the magnitude and capacity of the enterprise but also with the harm caused by it. Maybe, in a given case the percentage of the turnover itself may be a proper measure because the method to be adopted in awarding damages on the basis of "polluter-to-pay" principle has got to be practical, simple and easy in application. The appellants also do not contest the legal position that if there is a finding that there has been degradation of environment or any damage caused to any of the victims by the activities of the industrial units certainly damages have to be paid. However, to say that mere violation of the law in not observing the norms would result in degradation of environment would not be correct.

(Para 6)

Therefore, the High Court is directed to further investigate in each of these cases and find out broadly whether there has been any damage caused by any of the industrial units by their activities in not observing the norms prescribed by GPCB as reported by the Modi Committee appointed by the High Court or by an expert body like NEERI and that exercise need not be undertaken by the High Court as if the present proceeding is an action in tort but an action in public law. A broad conclusion in this regard by the High Court would be sufficient. Therefore the High Court is directed to re-examine this aspect of the matter as to whether there is degradation of environment and as a result thereof any damage is caused to any victim, and what norms should be adopted in the matter of awarding compensation in that regard. In this process it is open to the High Court to consider whether 1% of the turnover itself would be an appropriate formula or not as applicable to the present cases.

The Judgment of the Court was delivered by

S. RAJENDRA BABU, C.J. These appeals arise out of a series of orders made by the High Court of Gujarat. A petition was filed before the High Court in public interest alleging large-scale pollution caused by industries located in Gujarat Industrial Development Corporation (GIDC) Industrial Estate at Nandesari. It is alleged that effluents discharged by the said industries into the effluent-treatment project had exceeded certain parameters fixed by the Gujarat Pollution Control Board (GPCB), thereby causing damage to the environment. Some of the industries have set up their own effluent-treatment plants in their factory premises, while some of them have not. The High Court, by an order made on 17-4-1995, directed that the chemical industries in Nandesari should be made parties to the proceedings; thereby 252 industrial units located in Nandesari Industrial Estate, Baroda were made parties to the proceedings, apart from the State of Gujarat, the Central Pollution Control Board, Gujarat Industrial Development Corporation and Nandesari Industries Association. The High Court also issued notices to financial institutions or banks in respect of these proceedings.

2. On 5-5-1995 the High Court appointed a Committee under the Chairmanship of Dr. V.V. Modi to ascertain the position with regard to the extent of pollution in Nandesari Industrial Estate. A common effluent-treatment plant (CETP) was erected by GIDC in Nandesari Industrial Estate on the contribution made by the industrial units in Nandesari Industrial Estate to the extent of about Rs 300 lakhs. Inasmuch as CETP was not achieving the required parameters laid down by GPCB, the High Court, by an order made on 7-8-1996, appointed NEERI as a consultant to assess the treatment facilities and to provide suitable rectification measures for upgrading CETP and effluent-treatment plant facilities. Dr. Modi Committee made a report on 7-9-1996. The High Court restrained several industries from removing their products from their plant without prior permission of the High Court and thereafter, by an order made on 13-9-1996, the High Court permitted them to dispatch materials by depositing a certain sum of money which was the value of the materials. NEERI submitted its report on 31-10-1996. The High Court, while granting permission to some of the industries to carry on their activities, called for turnover figures and profitability data. On 9-5-1997 the High Court passed an order directing the industries to pay 1% of the maximum annual turnover of any of the preceding three years towards compensation and betterment of environment within a stipulated time. It is against this order that the appellants are before us.

3. The High Court in its impugned order followed a decision of the High Court of Gujarat in *Pravinbhai Jashbhai Patel* v. *State of Gujarat*[1] wherein it was noticed that the industrial units though aware of the requirements of law had not complied with the same nor did they meet the GPCB parameters and they were irresponsible in not wanting or caring to set up effluent-treatment

plants but continued to manufacture, and pollute the environment and the concern shown now in meeting with the pollution-control norms is only because of the threatened court order; that pollution caused by these industrial units was adversely affecting a large number of citizens residing in the adjacent cities or villages; that in particular water and air pollution is not only continued in the immediate area in which

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

the pollution is generated, but the same affects other areas as well wherever water or air went; that this Court in *M.C. Mehta* v. *Union of India*[2], *Virender Gaur* v. *State of Haryana*[3] and *Consumer Education & Research Centre* v. *Union of India*[4] invoked the provisions of Article 21 of the Constitution of India to declare that the citizens have a fundamental right to live decently, unaffected by pollution. After noticing various contentions, the High Court took the view that 1% of the turnover would be a good measure of assessing damages for the pollution caused by the industrial units and that amount should be kept apart by the Ministry of Environment and should be utilised for the works of socio-economic upliftment of the population of the aforesaid affected areas and for the betterment of educational, medical and veterinary facilities and the betterment of the agriculture and livestock in the said villages with certain additional directions in this regard.

4. It is now submitted before us by the appellants that a court has no power to either impose penalty or fine or make any levy for general betterment unless the statute authorised the same; that, however, in awarding damages it is permissible to make the same exemplary or penal; that award of damages is by way of restitution for the damage caused to victims and for restoration or restitution and for restoration of ecology by way of punishment; that, unless a finding is given by the High Court that there had been degradation of environment, question of restitution or awarding damages could not arise; that there is no finding of degradation of environment and, therefore, it is not open to the High Court to impose 1% of the turnover by way of damages. The appellants relied upon a decision of this Court in *Vellore Citizens' Welfare Forum* v. *Union of India*[5] in support of this contention. Their argument is that the principle of "polluter to pay" cannot be applied unless a finding has been given that the industrial unit concerned is the polluter. In what manner pollution has been caused should have been ascertained, particularly when a separate common effluent-treatment plant had been erected and a channel was provided through which water would flow into the river which would reach the sea thereby not causing any damage anywhere. They seek to bring about difference between *Pravinbhai Jashbhai Patel case*[1] and the present proceedings to contend that in those cases there was direct evidence of damage having taken place and by way of rule of thumb the High Court adopted the standard of 1% of turnover to be paid by way of damages and that this principle cannot always uniformly be

applied. They commend us to apply the principle set out by this Court in *Vellore Citizens' Welfare Forum case*[5] wherein the principle of "polluter to pay" has been applied and wherein it is noticed that any principle evolved in this behalf should be simple, practical and suited to the conditions obtaining in this country; once the activity carried on is hazardous or inherently dangerous, the person carrying on such activity is liable to make good the loss caused to any other person by his activity irrespective of the fact whether he took reasonable care while carrying on his activity; consequently, the polluting industries are absolutely liable to compensate for the harm caused by them to villagers in the affected areas, to the soil and to the underground water and hence, they are bound to take all necessary measures to remove sludge and other pollutants lying in the affected areas; that the "polluter-pays principle" as interpreted by this Court means that the absolute liability for harm to the environment extends not only to compensate the victims of pollution but also the cost of restoring the environmental degradation; that remediation of the damaged environment is part of the process of sustainable development and as such the polluter is liable to pay the

cost to the individual sufferers as well as the cost of reversing the damaged ecology.

5. Shri T.R. Andhyarujina, learned Senior Advocate, who assisted this Court as amicus curiae with great ability, explained to us the background in which the High Court had passed the impugned order. He submitted that the High Court had followed the earlier decision in *Pravinbhai Jashbhai Patel case*[1] wherein standard of 1% of turnover was adopted for closure of polluting units and payment of compensation by such units for polluting river and land; that the basis of this decision in that case was that the polluting industrial units were not meeting the GPCB norms and the continued violation of the law by industrial units had become a habit; that after elaborate discussion, the High Court had concluded that these industries had caused pollution and, therefore, gave certain directions, including for closure of the industrial units until they observed the GPCB norms; that the directions given by the High Court regarding closure and payment of compensation were complied with by the industrial units and this Court did not interfere with the order made by the High Court, therefore, the methodology adopted by the High Court in *Pravinbhai Jashbhai Patel case*[1] can be applied to other industrial units which are causing pollution; that, after investigation made by the Committee or by an expert body there were reports that the industrial units were causing pollution by not complying with the norms prescribed by GPCB and the High Court, in fact, noticed that a number of units have voluntarily agreed to pay 1% of the turnover of a year out of the last three years and there was consensus between all the industries and for betterment of environment, they voluntarily stated before the Court that 1% shall be paid; that one may say that even some of the units having no treatment plant or having inadequate facilities appeared before the High Court stating that they would voluntarily stop manufacturing till installation of proper treatment plant and were in a position to discharge trade effluent meeting with the GPCB norms. Thus, in these cases, the High Court

restrained firstly, several industries from removing their products from their plant without prior permission of the High Court and thereafter, such units themselves suspended operation of the polluting activities. The High Court, after having considered further reports of the Committee, NEERI and GPCB permitted to restart activities on a trial basis and at the same time, directed that "*with regard to 1% payment an order will be passed after the details furnished by the learned counsel*". The High Court thereafter adopted payment of 1% of the turnover method as indicated in *Pravinbhai Jashbhai Patel case*[1]. He submitted that in these cases the High Court has through its investigation either by the Committee appointed by itself or expert agency like NEERI found that the industrial units in question were polluting units and had not conformed with the norms prescribed by GPCB and each of the units was discharging effluents into the effluent-channel project constructed by GIDC which in turn discharged the effluents into Mahi river which ultimately reached the sea. Thus the High Court had found that there was extensive environmental degradation as a result of the pollution because of the violation of the pollution laws and on account of such damage, the High Court ordered the payment of 1% compensation as a one-time payment for pollution and damage for a number of years from 1993 to 1996. He further submitted that in no case the High Court ordered compensation without giving a finding that there was environmental degradation and damage as a result of violation or prescribed norms. He also adverted to various decisions of this Court in *M.C. Mehta* v. *Union of India*[6] to support the proposition that the measure of compensation must be correlated to the magnitude and capacity of the enterprise

because such compensation must have a deterrent effect and such damage not only extends to restitution for the harm to the environment to compensate the victims of the pollution but also cost of restoring the environment by degradation. This Court reiterated the principle of "polluter to pay" to the effect that one of the principles is to levy damages of a certain percentage of total turnover and the right to a clean and hazardless environment has been recognised as a fundamental right under Article 21 of the Constitution. The Court has innovated new methods and strategies for the purpose of securing enforcement of fundamental rights.

6. The fact that the industrial units in question have not conformed with the standards prescribed by GPCB, cannot be seriously disputed in these cases. But the question is whether that circumstance by itself can lead to the conclusion that such lapse has caused damage to environment. No finding is given on that aspect which is necessary to be ascertained because compensation to be awarded must have some broad correlation not only with the magnitude and capacity of the enterprise but also with the harm caused by it. Maybe, in a given case the percentage of the turnover itself may be a proper measure because the method to be adopted in awarding damages on the basis of "polluter-to-pay" principle has got to be practical, simple and easy in application. The appellants also do not contest the legal position that

if there is a finding that there has been degradation of environment or any damage caused to any of the victims by the activities of the industrial units certainly damages have to be paid. However, to say that mere violation of the law in not observing the norms would result in degradation of environment would not be correct.

7. Therefore, we direct the High Court to further investigate in each of these cases and find out broadly whether there has been any damage caused by any of the industrial units by their activities in not observing the norms prescribed by GPCB as reported by the Modi Committee appointed by the High Court or by an expert body like NEERI and that exercise need not be undertaken by the High Court as if the present proceeding is an action in tort but an action in public law. A broad conclusion in this regard by the High Court would be sufficient. We, therefore, direct the High Court to re-examine this aspect of the matter as to whether there is degradation of environment and as a result thereof any damage is caused to any victim, and what norms should be adopted in the matter of awarding compensation in that regard. In this process it is open to the High Court to consider whether 1% of the turnover itself would be an appropriate formula or not as applicable to the present cases.

8. We record our appreciation and gratitude to Shri T.R. Andhyarujina in assisting this Court as amicus curiae.

9. With these observations, these appeals stand disposed of.

Date: 27th September, 2016

ORDER/JUDGMENT

1. This Application, numbered as 184/2015 invoking jurisdiction of this Tribunal, is under Section 14 and 15 of the National Green Tribunal Act, 2010

(for short 'NGT Act'). The Applicant Tanaji Balasaheb Gambhire has sought certain directions against the 9th Respondent – Project Proponent (PP) M/s Goel Ganga Developers India Private Limited who is said to have envisaged construction venture to construct a commercial and residential complex.

2. In the Application, the Applicant has sought following directions:

A. Direct the Respondents to demolish the illegal structures at the site in question and restore the area to its original position.

B. Direct the State Level Impact Assessment Authority and the Maharashtra State Pollution Control Board to initiate appropriate action against the project proponent for violation of the provisions of EIA notification, 2006 and other applicable laws.

C. Direct Respondent No.2 to take appropriate action against the State Level Impact Assessment Authority for granting environment clearance in violation of the provisions of EIA Notification, 2006.

D. Direct the State Level Impact Assessment Authority and the Maharashtra State Pollution Control Board to disclose all such projects which have been granted post facto clearance or have been constructed without taking prior environment clearance.

E. Having regard to the damage to the public health, property and environment, principles of sustainable development and polluter pays principles and direct the Respondent No.9 to

deposit a heavy amount of compensation to the environment relief fund.

3. In support of the reliefs so sought, he has averred factual and legal aspects to which we shall refer briefly now.

a. The 9th Respondent obtained Environmental Clearnace (for short 'EC') for its project at Survery Nos.35 to 40 in Village Vadgaon Budruk, Sinhagad Road, Pune. The project conceived and approved by said EC is to construct 12 buildings with stilt, basment plus 11 floors vertically for 552 flats, 50 shops and 34 offices. The total plot area is 79,100 sq.mts while the total built-up area is to 57,658.42 sq.mtrs.

b. The EC was obtained by the 9th Respondent-PP on 4th April, 2008 and thereafter, PP has commenced construction activity. The Applicant has not brought in question the EC dated 4th April, 2008 but has other serious grievances.

c. The Applicant would contend that after the project of 9th Respondent–PP has sufficiently progressed, the Member Secretray of Maharashtra Pollution Control Board (MPCB) caused inspection of the construction activity on 31st August, 2015 and thereafter, granted a personal hearing to the Respondent No.9-PP in respect of MPCB findings. The Minutes of the Meeting held on 31st August, 2015 show that the Regional Officer of the MPCB had reported non-compliance of the terms on which EC was granted to the 9th Respondent. In that, there is clear statement that though the EC was for construction of 12 buildings but the Respondent No.9-PP has built 15 buildings and increased

number of flats from 552 to 738 as also the number of shops was increased from 84 to 111.

d. The Minutes of the Meeting further show that the representative of PP had accepted the non-compliance to the conditions of EC in increasing the construction of number of buildings, number of flats, offices and shops.

e. The Minutes of the Meeting would also record that consent for additional building of Ground plus 30 Floor was not taken though the civil work of its construction was in progress.

4. The Applicant relies on such material information recorded in the Meeting to contend that there was clear finding on inspection by the competent authority i.e. MPCB that the Respondent No.9-PP had not complied with the conditions of the EC granted. Reference is also made to the fact that MPCB having noticed such non-compliance had directed the Respondent No.9-PP to voluntarily stop construction activity till modified EC is obtained. Consequently, having noticed deliberate violation of the conditions of EC and non-compliance of its voluntary closure directions, MPCB had issued direction not only for stopping further construction activity but directed disconnection of electricity to the project by its Order dated 30th September, 2015.

5. The Applicant further points out that despite such lapses on the part of the Respondent No.9-PP, it

managed to get the Occupancy Certificate for part of the project which is complete and has virtually occupied it. This, according to the Applicant, is in total violation of the legal mandate that mandatory consent of operate should be obtained before the project activity is undertaken.

6. Amongst other issues raised he points out to the fact that building plan for construction activity of the project was revised by Respondent No.9-PP nine times. This, according to him, illustrates the significant modification in the scale of construction in terms of area, plinth area and floor heights, besides change in lay-out scheme. Refering to condition No.5 of the EC. It is alleged that the scope of the project in terms of built up area has changed. Moreover, the project lay-out as well as number of buildings also has substantially changed. Thus, the Respondent No.9-PP was obliged to obtain modified EC before undertaking such activity which is in total deviation to the original EC. Citing numerous statistical data, the Applicant would further claim that the construction activity carried out by the Repsondent-9 PP has grossly exceeded the scope of the project as approved by EC in terms of built up area and configuration of project.

7. Based on these facts, he would contend that the project activity is not as per the proposal which

was considered and approved by Ministry of Environment and Forest while granting the original EC on 4th April, 2008 and therefore there is gross violation of EC condition.

8. The other contention urged by the Applicant is to indicate failure on the part of the Statutory Authorities like Pune Municipal Corporation (PMC), State Level Environment Impact Assessment Authority (SEIAA), Department of Environment, State of Maharashtra (DoE) in discharge of its statutory functions. In this regard, he contends that Pune Municipal Corporation (for short 'PMC') was well aware of such violations but granted Completion Certificate. Reference was made to page-36 of the Rejoinder where it is stated that violation of non-compliance of EC was well within the knowledge of the concerned officer of PMC. He then refers to the action taken by Deputy Engineer of Building Construction Department of PMC who having realised the blanket violation of EC then, had directed Respondent No.9-PP on 20.2.2015 not to continue construction activity without obtaining amended EC. It is alleged, despite such clear direction of the Deputy Engineer, the Respondent No.9-PP continued construction as per its revised approved lay-out by PMC which depended totally on the validity of the EC. Thus, he contends

that grant of revised lay-out plan by PMC itself is not tenable and consequently the construction activity being illegal needs to be restrained.

9. In this regard he would refer to the order passed by PMC imposing fine of Rs.1,57,00,000/- for illegal occupancy of part of the project building which Respondent No.9-PP without remorse has accepted and deposited on 23rd October, 2015.

10. The Applicant has further alleged total inaction on the part of SEAC and SEIAA and to substantiate his contention refers to the material on record which shows that SEAC sub-committee visited the project site on 29th February, 2014 with an object to verify compliance of the 2008 EC conditions. During such visit, it noticed non-compliance of the EC by Respondent No.9-PP but conveniently failed to record that Respondent No.9-PP had increased the project activity in terms of buildings, built-up area, etc. The report of SEAC Committee is described as cursory, casual, unscientific and against realities. It is only later that SEIAA on the basis of query/complaint of Applicant, on 3rd August, 2015 took action and in this regard proposed directions were issued under provisions of Section 5 of Environment (Protection) Act, 1986, by State Department of Environment (DOE) in August 2015 and thereafter, no follow up action

was taken in terms of the directions. SEIAA which is competent to take independent decision and action against the violators of EC conditions and Project Proponents has failed to initiate any action. What he tries to say is that SEIAA, being specialised body, should have used its conferred power to take action rather than referring or depending on the action taken by Department of Environment. Thus, he contends that SEAC, SEIAA and DOE have jointly and severally failed to discharge its statutory function in taking appropriate legal permissible action against Respondent No.9-PP restraining such illegal activity for non-compliance thereby enabling the Respondent No.9-PP to further violate the EC mandate. He would contend that by keeping the proceedings before it, SEIAA has virtually allowed the Project Proponent to proceed with the illegal construction thereby wandering DoE direction issued on 3rd August, 2015.

11. On above set of facts, he has sought certain reliefs as recorded by us in the para supra.

12. On admission of this Application, Notice was caused to all the Respondents who are total nine in numbers. Amongst them Union of India through Ministry of Environment and Forest -1st Respondent, The Principal Secretary, Environment Department – 2nd Respondent, State Level Environment Impact

Assessment Authority – 3rd Respondent, Maharashtra Pollution Control Board – 3rd Respondent, Regional Officer, Maharashtra Pollution Control Board – 5th Respondent, Pune Municipal Corporation – 6th Respondent, City Engineer, Pune Municipal Corporation – 7th Respondent, District Collector, Pune – 8th Respondent, M/s. Goel Ganga Developers India Pvt. Ltd. – 9th Respondent. Amongst all, initially the Respondent No.9-PP resisted the proceedings but we have noticed a very strange conduct of the Secretary of Department of Environment falling in line with the Respondent No.9-PP as could be seen from the conduct.

13. The record would show that all the Respondents have responded to the Notice in this Application as recorded by us on 23rd December, 2015. Certain observations made in the preamble of that Order at paragraph Nos.1 and 2, would itself show that this Tribunal had taken a note o6 the manner in which the Respondents reacted to initiation of the action by the Applicant. In para No 2-3 at page-2 of the Order and the last para on the same page, we have summarised what we noticed. Ultimately being convinced that the Applicant had made out prima facie case for grant of interim relief, lest, the Respondent No.9-PP emboldened by the inaction on

the part of Statutory Authorities as likely to proceed with the construction activity which was shown by the Applicant to be legally impermissible if restrained, orders were passed against Respondent-9 PP. We had also simultaneously directed PMC to ensure that no further construction of whatsoever nature is carried out and called for report from it regarding what is the status of construction at the site within 10 days. As is expected, Respondent No.9-PP entered contest and sought vacating the Interim Order but when confronted with certain factual aspects, made a statement that no construction activity is going on and it has stopped the construction. We feel it will be worth to record that we have taken into consideration contention urged on behalf of the Respondent No.9-PP to seek vacating of the order but we opined that let the pleadings be completed to allow all stakeholders who virtually prosecute and defend action through this Application. We also see from proceeding, considering the urgency, this Application was initially heard on merit in part. This is exactly what the Respondent No.9-PP also submitted on 16th March, 2016 persuading us to expedite the hearing.

14. We have thus heard substantially the learned Counsel for the Applicant, Respondent Nos.1 to 8 and

the learned Senior Counsel Mr. Mishra assisted by Mr. Sachin Bhalerao for the Respondent No.9-PP.

15. We have given our careful consideration to all the legal and factual contentions urged by learned Advocates. While the learned Counsel for the Applicant relies mainly on the original EC dated 4th April, 2008 and present factual aspect showing there is marked difference in the project itself and the project has virtually changed from what it was originally conceived in terms of increase of number of buildings, plinth area, shops and other commercial activities. We have summarized the contentions of the Applicant and would like to repeat it as the same is relied upon by the Applicant.

16. Now, we need to refer to contentions of Mr. Mishra, the learned Senior Counsel for Respondent No.9-PP who in his persuasive eloquence asserted that project as conceived itself was legally permissible and during construction activity they have ensured there is absolutely no violation of any statutory regulations. He would contend that present construction activity, in terms of the FSI i.e BUA, is within the legally permissible limit and thus, refers to the numerical numbers by which the extent is measured. The affidavit filed in this case by Mr. Atul Jaiprakash Goel representing Respondent No.9-PP contains a

statement in para-14 to the fact that EC dated 4th April, 2008 issued by MoEF was to allow construction activity comprising of the utilization of the F.S.I (Floor Space Index)/BUA, to the extent of 57,658.42 sq.mtrs., based on the conceptual plan prepared by Respondent No.9. He further states that granting of permission to utilize FSI to the extent of 57,658.42 sq.mtrs was will within the EC limits.

17. On the basis of such statement, Mr. Mishra would submit that at any stretch of imagination, the contention of the Applicant cannot be sustained because he is trying to allege violation when the constructed structure is well within sanctioned FSI/BUA of 57,658.42 sq.mtrs.

18. He would further rely on an order passed by Secretary, Department of Environment on 31st May, 2016 No.C.A.-2015/CR-6/TC-3 which is produced before this Tribunal after this case was reserved for judgment on 23rd May 2016. Relying on it, he would submit that SEIAA who had issued direction on 30th August, 2015 to stop construction activity had referred the matter to Department of Environment for considering explanation of Respondent No.9-PP and pass appropriate order. He submitted that such an exercise by DOE/SEIAA was in terms of the Order

passed by this Tribunal on 23rd February, 2016 in M.A. No.21/2016 to the following effect:

"Heard. Perused record.

Service of Notice is waived on behalf of MoEF&CC. Replies have been filed by Respondent Nos.2, 3, 4, 5,6, 7 & 9. Law Officer appearing on behalf of Respondent No.8 submits that reply filed by Respondent No.5 MPCB is adopted as the reply of Respondent No.8. Rejoinder dated 22nd February, 2016 to the reply of Respondent No.9 is tendered. Copies of the rejoinder have been furnished to the Respondents.

M.A. No.21/2016

This Application has been moved for a mandate not to issue ex-post facto environmental clearance to Project Proponent Respondent No.9. Learned Counsel appearing on behalf of Authorities Respondent Nos.2 and 3 makes a statement that they will be dealing with the application moved by Respondent No.9 for grant of environmental clearance strictly in accordance with law. In view of the statement made, we do not wish to interfere in the process of law.

Learned Counsel appearing for the Applicant submits that the Application be disposed of in terms of the statement made by the concerned Authorities Respondent Nos.2 and 3. Accordingly, this Applications stands disposed of with no order as to costs.

M.A. No.21/2016 thus stands disposed of.

E.A.No. 5/2016

As regards Execution Application No.5/2016, learned counsel appearing on behalf of Applicant seeks liberty to carry out amendment in the Application so as to bring into focus the violation of the interim order dated 23rd December 2015, in relation to specific building construction and remedy available under the National Green Tribunal Act, 2010, before this Tribunal. Liberty granted to the Applicant to make necessary amendment in E.A.. Amendment shall be made within a week. Copies of the amended Application shall be furnished to the learned counsel appearing on behalf of Respondents. Respondents may file replies to the amended Application within a week thereafter. Advance copies of the replies be furnished to the Applicant who may file re-joinder thereto, if any, within three (3) days thereafter.

List this case for further consideration on 16th March 2016."

19. Thus he contends that this Tribunal itself had directed the SEIAA to consider request of the Respondent No.9-PP for modification of the EC and

thus SEIAA being competent authority in that process thought fit to refer the case of the Respondent No.9-PP to Environment Department to take a decision about the violation before considering the request of the Respondent No.9-PP for modification of the EC to allow a larger construction activity.

20. He would submit that extent of 57,658.42 sq.mtrs structure cannot be described as being in excess of the permissible limit of the EC dated 4th April, 2008.

21. With reference to what transpired later, he would submit that Respondent No.9-PP having satisfied the PMC has received the Completion Certificate in respect of part of the building that itself is sufficient to establish its project is assessed as valid, permitting grant of Completion Certificate.

22. At this juncture, we would emphasise that the Applicant had seriously challenged the order passed by Secretary, Environment Department on 31st May, 2016 describing the order as a result of direct collusion between the officer concerned and Respondent No.9-PP to defeat any order that would be passed in this proceedings. He had through his Counsel sought opportunity to file an affidavit against the affidavit of the Respondent No.9-PP who wanted this Tribunal to take note of the order dated 31st May, 2016.

23. We have perused the proceedings with reference to the relevant date on which the arguments were heard on merit and date of posting of case reserved for judgment. The application was heard on merit on 23rd May, 2016 and reserved for judgment. During such period the order dated 31st May, 2016 has been passed by the Officer referred to above. Besides, the Learned Counsel Mr. Misra on behalf of project proponent requested us to take on record the order dated 31st May, 2016 before passing the Judgment. We took notice of the said order. In these circumstances the Learned Counsel for the applicant took opportunity to file counter to the affidavit filed by the project proponent producing the order dated 31st May, 2016. It is quite evident that the officer concerned who has passed the order in question is representing the respondent no. 2 in this case. Thus, he is deemed to have knowledge of all the stages which this case has passed and the fact that the case was reserved for judgment by the Tribunal. It is in this context the order dated 31st May, 2016 passed during the period case is pending final decision generates questionable circumstances. Further, it is seen that this order i.e. 31st May, 2016 has been passed several months after the DoE issued directions to the project proponent to stop constructions activity on the basis that the project

activity is contravening the conditions of EC dated 4th April, 2008. In these circumstances we have heard the case again on merit with reference to order passed by Principal Secretary, DoE dated 31st May, 2016 as desired by the project proponent himself.

24. We had allowed sufficient opportunity to Respondent No.9-PP and also Department of Environment and PMC represented by Mr. D.M.Gupte, learned Counsel respectively.

25. It is material to incorporate the relevant portion of the order dated 31st May, 2016 passed by Secretary DoE, Government of Maharashtra for clarity which reads thus:

> *" We also refer to the clarification issued by the MoEF, G.O.I. by amendment in EIA Notification 2006 dtd. 4-4-2011, wherein the BUA was defined. Prior to the amendment in EIA Notification 2006 dtd. 4-4-2011 there was an ambiguity in definition of BUA. The EC granted by the MoEF, GOI vide letter dtd. 4-4-2008 for construction of total BUA 57658.42 sq.m. at site was prior to clarification issued by the MoEF, GOI dtd. 4-4-2011 and on the basis of the conceptual plan. Therefore, the same will apply prospectively and not with the retro-prospective effect.*
>
> *Therefore, it reveals that even though you have constructed 18 buildings at site instead of 12 buildings by changing configuration of buildings, the total BUA (i.e.FSI) constructed at site is 48617.14 sq.m. which is within E.C. limit. It also reveals from the inspection report of the Pune Municipal Corporation dtd. 2-1-2016 that the actual construction carried out at site is 99416.72 sq.m. at plot No.1 and 2 (i.e. FSI-48617.14 sq.m. + Non-FSI – 50799.58 sq.m.) but the FSI constructed at site is 48617.14 sq.m. which is less than the total BUA admeasuring 57658.42 sq.m. permitted in the previous EC granted by the MoEF, GOI dtd. 4-4-2008. Hence, it is hereby concluded that there is no case of violation as prescribed in the EIA Notification, 2006 and accordingly the Proposed Directions issued vide above referred (1) is hereby withdrawn."*

26. From the extracted portion of the order it is clear that Secretary, DOE as virtually declared the activity of the Respondent No.9-PP has wholly legal, permissible and in support thereof has virtually granted a clean chit and certified the project as of now to be well within the permissible limits. It is material to note that the officer concerned has referred to FSI and BUA being same synonym of one aspect. How far this assertion in the order of the officer is legal and factually correct. Hence it needs to be dealt with in detail for the reason, the decision as to whether the construction activity of the Respondent No.9-PP is legal or contravenes any of the environment clearance depend upon clear definition of FSI and BUA in terms of its extent. We had thus called upon PMC to file a statement explaining the distinction between the extent of area covered under BUA (built-up area). We are dismayed at the fact that neither the PMC nor the Environment Department has seriously examined what is F.S.I and BUA. Thus, we gave one more opportunity to which PMC responded through its affidavit dated 17th August, 2016 to which we shall refer.

27. The Deputy Engineer, PMC report which has been relied by Principal Secretary, DOE contains the present level of construction, the comparison of the

F.S.I and Non F.S.I area gives startling factual information. It needs reference and as is extracted herein:

PMC report. Dy. Engineer (BP) dated. 19-12-2015.	PMC Report dt. 17-08-2016		
Total BUA (i.e. FSI) = 48617.14 sq.m.	Built-up Area		
	Plot	F.S.I.	Non F.S.I
	1	48424.66	46088.47
	2	630.55	4858.57

28. We shall now refer to what the term Built-up area and Floor Spacing Index (F.S.I.) would mean in the domain of assessment of permissibility of the project activity with reference to the environment clearance certificate granted. It would be therefore pertinent to refer to the provisions of Development Building Rules of PMC and the project activity approved by the EC of 2008.

29. The Environment Clearance dated 4th April 2008, has clear project description which unambiguously set the project limits.

> *The project proponent is proposing for construction of group housing project at S.No.35 to 40. Village Vadgaon Budruk, Singhad Road, Pune, Maharashtra at a cost of Rs.10,737.14 lakh. The project involves construction of 12 building with Stilt, basement plus 11 floors for 502 flats, 50 shops and 34 offices. The total plot area is 79,100.0 sq.m. Total built up area as indicated is 57,658.42 sq. m. Total water requirement will be 745 KLD and 400 KLD of waste water will be generated from the buildings which will be treated in Sewage Treatment Plant. The treated wastewater will be used for landscaping, DG set cooling and Horticulture purpose. The solid waste generated from the buildings will be 1500 kg./day and disposed as per the MSW Rules, 2000. The parking space is proposed for parking of 1072 cars. (Emphasis provided)*

30. It is manifest from the above referred EC that while granting the EC, the authority had appraised the project with certain configuration and more pertinently, the Total Built up area. There is no reference to the term FSI area i.e. floor space index area. There is no ambiguity in the contents of EC and therefore, what can be seen from the plain reading of the EC is that the EC granted is circumscribed by the project description including its configuration and the Total built up area.

31. The term built up area has been well established in the parlance of Civil Engineering and Town Planning. The MRTP Act, which regulate Regional and Town Planning in the state, authorise Municipal Corporation to have its own Rules, and PMC has notified the development control rules under the MRTP act in order to regulate the development activities in the corporation area. In order to clarify the existing position and the understanding of the terms, Built-up area and F.S.I., it would be pertinent to refer to the 'Development Control Rules of the PMC, Pune, 1982'. Undoubtedly, both Respondent No.9-PP and PMC are required to comply with the Environment Clearance Regulations in terms of the building permissions granted by PMC to Respondent No.9-PP under the powers conferred upon PMC by the above

said rules. The said Rules define 'built up area' and FAR/FSI and the relevant definitions from these rules are abstracted below :

2.1.3 : Built up area *– Area covered immediately above the plinth level by the building or external area of upper floor whichever is more accepting the areas covered by Rule 15.4.2.*

2.39 : Floor area Ratio (F.A.R.) *-- The quotient obtained by dividing the total covered area (plinth area) on all floors excluding exempted areas as given in Rule No.15.4.2 by the area of the plot.*

$$F.A.R. = \frac{\text{Total covered area on all floors.}}{\text{Plot area.}}$$

Note : The term F.A.R. is synonymous with floor Space Index (F.S.I.)

32. From these definitions it is manifestly clear that the terms "built up area" and FSI/FAR are distinct and have different interpretation altogether. This would further negate the contention of Respondent No.9-PP that the term "built up area" was not clarified until the clarification issued by MoEF on 4th April, 2011. There could be ambiguity in calculation of built up area as per earlier Environment Clearance Regulations, but this cannot be stretched under any circumstances to take a plea that the built up area and FSI are synonymous and inter-changeable terminologies. We cannot accept but reject in totality the submissions made by PMC and the Respondent No.9-PP in this regard.

33. Though, much has been claimed by Respondent No.9-PP regarding the clarificatory notification of MoEF dated 4th April 2011, wherein the term built up area has been clarified, we do not find any confusion or contradiction in definition of terms BUA and FSI. The Respondent No.9-PP is a major developer and must be well versed with these terminologies.

34. From the material referred to above, it leaves no scope for doubt that F.S.I. and BUA are two terms which apply with a distinction defining different extent of area.

35. It will shake the conscious of all concerned when we see a deliberate attempt on the part of DoE, SEAC and SEIAA to confuse the issue virtually falling in line with misleading statements of Respondent No.9-PP and Deputy Engineer, PMC. It is astonishing that both Respondent No.9-PP and Deputy Engineer, PMC refer to BUA as F.S.I. Despite such clear distinction in definitions and interpretations of BUA and FSI, they had attempted to mislead DoE, SEAC and SEIAA in believing that BUA and F.S.I are same. We expect an officer conferred with professional duty as 06 an engineer in the Department of Building Permission of PMC to be very meticulous in at least understanding the terms which make lot of difference

to the fact of construction. We least expected 06 him as to know the distinction between BUA and FSI, as administration of Corporation would depend upon his professional advice and technical expertise to take action against the erring parties who contravene the mandate of law for safeguarding the interest of citizens which the Corporation is required to protect. We are also constrained to observe that the higher authorities of Building permission department had closed their eyes even when such incorrect affidavits are filed before the Tribunal and such misleading reports are sent to state authorities like DoE, SEAC and SEIAA.

36. Therefore, un-hesitatingly we could observe that the report dated 19th December, 2015 of the Deputy Engineer is a compromised statement to paint a wrong picture of the project firstly to suppress deviation and secondly to create ambiguity in definition of the terms of F.S.I. and BUA to help Respondent No.9-PP to obtain orders from the other authorities. This is unveiled from the affidavit filed by PMC dated 17th August, 2016 in pursuance to our Order dated 2nd August, 2016. The details mentioned therein are as follows:

	Built-up Area	
Plot	F.S.I.	Non F.S.I

1 2	48424.66 630.55	46088.47 4858.57

37. We have also taken a judicial note of the fact that considering such complexity in Environment issues, MoEF had constituted Multi-disciplinary SEAC/SEIAA and had authorised it to take action against violation. SEAC and SEIAA have the necessary experience and expertise to identify violations independently by expert advice and application of mind, based on inputs from field authorities. What we observe here is that Principal Secretary of DoE just relied upon a report filed by junior most official of PMC and without any independent appraisal PS, DoE has held that construction of 18 buildings at site instead of 12 buildings, is allowed within the allowable BUA as per Environment Clearance. We do not find any environment impact appraisal or reasoning for such a finding. When openly excavation of the soil and damage to underground water is being impating the environment. No independent assessment or appraised is done.

38. We are, therefore clear in our mind that Applicant has substantiated that the original project conceived by Respondent No.9-PP had to confine to what was sanctioned under the EC dated 4th April, 2008 and any extra construction or increase in

building, plinth commercial structures, shops and flats should have support of modified EC. As of now, since no modified EC has been granted, the extent of project activity cannot increase beyond the limit circumscribed by EC dated 4th April, 2008. Any such activity or construction beyond permissible limits cannot be saved by jugglery of words, misinterpreting against the statutory definition of F.S.I. and BUA.

39. We are further satisfied that the Principal Secretary, Environment Department who has authored the order dated 31st May, 2016 has lot to explain for the reason the ultimate declaration made by him in the order declaring construction activity of Respondent No.9-PP to be in permissible limit of F.S.I. is result of his mis-interpretation of the terms F.S.I. and BUA and reflects non-application of mind.

40. The prime issue that arises for consideration in this case is as to whether the construction activity of Respondent No.9-PP, is exceeding the sanction accorded by the EC. Could the Respondent No.9-PP proceed with construction without obtaining modified EC. The answer is obviously No.

41. For the reasons aforesaid, we answer the above issue in the negative hold that the construction activity of Respondent No.9-PP to the extent it exceeds the permissible limits as per EC cannot be saved and

shall stop, subject to the grant of modified EC by competent authority.

42. From the extracted portion of the order dated 31st May, 2016 of Principal Secretary, Environment Department, it is seen that he has declared construction of 18 buildings on the site instead of 12 buildings is permissible which, according to him, only a changes on configuration of buildings. This opinion undoubtedly is based on his erroneous conclusion that total BUA which is nothing but F.S.I. consumed i.e. 48617.14 sq.mts which is within the EC limit as against the actual construction activity which has exceeded over 100000 sq.mtrs BUA. Hence we set aside that order/communication dated 31st May, 2016.

43. Besides, another issue which confronts us based on these violations is what should be the consequence of such violation. Un-hesitatingly, it can be held that the consequences of such contravention and illegal construction will be adverse on the environment and ultimately it will lead to several incidental causes of action. That will follow if the Respondent No.9-PP is allowed to continue the illegal activity as has been done by order dated 31st May, 2016. The complexity in environmental issues therefore requires a meticulous examination and dispassionately conclusion and finding.

44. Apart from the legal issues, we further notice that if not illegality in the order of PS DoE in question, it is certainly impropriety because the officer is deemed to have been informed of the fact that this Tribunal is seized of the matter and has reserved the case for judgment on 23.5.2016 after giving full opportunity to Department which the officer in question represents as Respondent No.2. Hence, he cannot plead ignorance of the fact that the case was posted for judgment in the circumstances he should have allowed adjudication by the Tribunal to take final decision on the main issue about the violation of the EC conditions based on the alleged enlarged construction activity. We also do not find merit in contention of learned Sr. counsel Shri. Mishra that such an order is line with the liberty given to SEIAA by Tribunal on 23.2.2016 to deal the application of PP for expansion of project on merit because the order in question is not related to EC but a decision of the proceedings of proposed directions under Environment (Protection) Act, 1986, which were issued by department in August 2015.

45. With these findings, it is now necessary to consider the reliefs sought by the Applicant in this Application. He has sought demolition of the illegal structures and other consequential reliefs. Learned

counsel appearing for the Applicant has strenuously argued that all these violations have been done by the repsonent-9 PP in total connivance with the authorities mainly the PMC and DoE. He has even cited a visit report of SEAC expert committee to suggest the gross inadequacy in the visit report the committee.

46. It is now a matter of record that the construction of the project in question is near completion and even the occupancy certificate is granted partially. We need to consider the fact that the project in question is primarily a residential project and many individuals have invested their money in the project for meeting need for residential accommodation by having a house in city like Pune. Any order to demolish structure would also adversely affect them. The Respondent-9 has already created 3rd party rights. Though the Respondent-9 has blatantly violated the conditions of EC, we also note the total lack of supervision and enforcement at PMC level has resulted in such illegal activity.

47. The Tribunal is expected to apart on the principles of Sustainable Development and Polluter pays principle. We are conscious of the fact that Polluter pays Principle shall not be construed as 'pay and pollute principle', and the payment has therefore

to be exemplary and deterrent in order to pass a clear message that environmental compliance is supreme and the party which is non-complying the environmental standards shall be at economic disadvantage.

48. In this regard, we would like to refer to approach taken by the Hon'ble Principal Bench of National Green Tribunal, New Delhi in Original Application No.24/2011 "Samir Mehta Vrs. Union of India & Ors." Where the Bench has noted that :

> *"The Supreme Court of India, in the case of Sterlite Industries India Ltd. V. Union of India 2013 (4) SCC 575 had held that where the industry had violated the provisions of the Water (Prevention and Control of Pollution) Act, 1974 and had operated without obtaining consent, it was liable to pay damages of Rs.100 crores for the default period. The Court applied the Rule of Strict Liability but did not strictly compute the damages with exactitude. It only enforced the liability on general principle for awarding of damages for non-compliance to the law in force. In fact, any other approach would run contra to the Principle of Strict Liability. This judgment has been followed by the Tribunal in a large number of cases. Reference can be made to the cases of S.P. Muthuraman 2015 ALL (I) NGT Reporter (2) (Delhi) 170, Krishan Kant Singh V. National Ganga River Basin Authority (2014) ALL (I) NGT Reporter 3 (Delhi) 1 and M.C. Mehta V. Kamal Nath & Ors. AIR 2002 SC 1515. Thus, we are of the considered view that the determined damages of Rs.100 crores should be paid by and recovered from Respondents No.5, 7 and 11, jointly and severally while Respondent No.6 is held liable to pay Rs.5 crores as environmental compensation for dumping of the cargo in the sea and then failing to take any precautionary or preventive measures. The consignment of 60054 MT of coal has caused marine pollution and continues to be a cause and concern for environmental pollution. The Respondents are defaulting entities which have not complied with law and have adopted a most careless and reckless attitude in relation to protecting the marine environment."*

49. We also refer to the judgment of Hon'ble Principal Bench in the matter of Krishnlal Gera Vrs.

State of Haryana (Appeal No.22 of 2015 dated 25th August 2015) wherein the Tribunal has dealt with a matter regarding construction activities without the necessary prior environmental clearance. In para 58 and 59 of the judgment after discussing the legal framework, the Tribunal has imposed environmental compensation cost of 5 % (percent) of the total cost for restoration and restitution of the environment, in addition to payment of Rs.5 crores for violating the Law and starting and completing the project without obtaining environmental clearance, on the project proponent. These directions were issued in consonance with the dictum of Hon'ble Supreme Court.

> *"Since the Project Proponent may not be directed to demolish the structure at this stage, but, shall strictly comply with the directions that we propose to pass in the present case. The scope and ambit of such directions has to be in terms of the Act of 1986 circumscribed by the statutory jurisdiction of this Tribunal. Upon detailed discussion of the laws in force, the Tribunal in the case of S.P. Muthuraman (supra) has clearly held that such directions can be issued by the Tribunal."*

50. The Principal Bench in "*Appeal No.7/2015 in the matter of Jalbiradari and Others Vrs. MoEF*" pronounced on 31st May 2016, has also considered the legal consequences in case of quashing the environmental clearance for construction project, particularly with regard to the "*fate accompli*" situation.

16. ----------

---------- -The inevitable consequence could be the Tribunal has dealt with quashing of the Environmental Clearance and set the project at in or they be directed to maintain status quo as on the date of determination. The Tribunal has dealt with large number of cases filing under the category "fate-accompli situation". There are large numbers of projects which have started their construction activity or other activities without even complying Environmental Clearance and the projects were largely completed and then either Environmental Clearance was granted or their cases for granting Environmental Clearance were delisted. In those cases following the principle of Sustainable Development and Polluter Pays Principal, the Tribunal imposed Environmental Compensation on the project proponent for degrading/damaging the environment for starting the project without complying with the provisions of law and for violating the orders and directions. The works of those projects were stopped and a Committee was appointed to revisit for grant/consideration of the Environmental Clearance and fresh Environmental Clearance orders were issued. Even where demolition was required the same was directed. All these cases have been decided by the larger bench of the Tribunal and clearly state the binding precedent. References can be mad made to S.P. Muthuraman v. Union of India & Ors., 2015 ALL (I) NGT REPORTER (2) (DELHI) 170; Krishan Lal Gera v. State of Haryana & Ors., Appeal No. 22 of 2015 (pronounced on 25th August, 2015) & Forward Foundation & Ors. v State of Karnataka & Ors., O.A. No. 222 of 2014 (pronounced on 7th May, 2015). In these judgments, various judgments of the Hon'ble Supreme Court have been considered by the Bench. The purpose and object of the law including CRZ Notification, Environmental Clearance is to strictly regulate the development so as to prevent causing of damage of the nature and ecology. The cases are not the cases of irreparable or irreversible situations. Largely, the

> *90 per cent of the projects were has already been completed except some other parts of the project. There can be proper regulations on these projects, as otherwise it will only lead to colossal waste of public funds. It will result in dual disadvantage, firstly, wastage of public funds and secondly, and more importantly the demolition of the project itself would generate so much of waste and other materials that this will become a huge environmental hazard itself. The cases are not one, which are incapable of reprisal or re-appreciation. Damage to the environment and ecology to some extent has already been caused. It will be more useful to take remedial and restorative steps. They have acted in breach of the law and carried on with their activity in an unauthorized and illegal manner.* ----------

51. We are also inclined to adopt the approach taken by the Bench in the interest of justice and fair play and based on the facts and circumstances of the case. The construction activity is not a prohibited activity in the subject, but a regulated activity. We also take a judicial note of the fact that the demolition of structures in question would also result in further environmental damage and generation of construction waste. Other option which could have been explored is asking the government to take over the additional construction and use it for public purpose but as noted above, already third party rights have been created, may be partially.

52. The purpose and object of the law including Environmental Clearance is to strictly regulate the

development so as to prevent causing of damage of the environment and ecology. Though in the present case substantial damage has been caused to the environment and ecology, it will be more useful to take remedial and restorative steps.

53. The Respondent-9 is a defaulting entity which has not complied with law and has adopted a most careless and reckless attitude in relation to protecting the environment. The other Respondents, particularly the PMC and DoE have been the either the mute spectator or have not performed their statutory duties. However, we would note with appreciation that it is only MPCB that has acted on the complaints of the Applicants and have diligently taken legal actions besides bringing on record the non-compliances by Respondent-9 PP.

54. For the aforesaid reasons, the Applicant succeeds in his legal pursuit to challenge the non-compliance of EC conditions by the Respondent-9 and obtain certain directions. Hence the Application is allowed and we issue following directions:

1. The Respondent No.9-PP shall pay environmental compensation cost of Rs.100 crores or 5 % (Five percent) of the total cost of project to be assessed by SEAC whichever is less for restoration and restitution of environment damages and degradation caused by the project proponent by carrying out the construction activities without the necessary prior

environmental clearance within a period of one month. In addition to this, it shall also pay a sum of Rs. 5 crores for contravening mandatory provision of several Environment Laws in carrying out the construction activities in addition to and exceeding limit of the available environment clearance and for not obtaining the consent from the Board.

2. In view of our finding that there has been manifest, deliberate or otherwise suppression of facts of illegality in the project activity of Respondent No.9-PP by the officer of PMC, we impose fine of Rs.5 Lakhs upon the PMC and direct Commissioner PMC to take appropriate action against the erring officers. The amount of Rs. 5 Lakh shall be paid within one month.

3. We direct the Chief Secretary, State of Maharashtra and the competent authority to take notice of the conduct of the officers concerned who have misled the Department of Environment in the matter relating to interpretation of F.S.I. and BUA in terms of which order dated 31st May, 2016 has been issued in particular the Principal Secretary, Department of Environment who has authored the order dated 31st May, 2016

4. PMC, DoE and SEIAA are directed to pay cost of Rs. 1 lakh each to the Applicant within 4 weeks.

55. The Application alongwith connected Misc. Applications and Execution Application is therefore disposed accordingly.

.....,JM

Date – 8th January, 2018

JUDGMENT / ORDER

1.One Tanaji Gambhire, Applicant in Original Application No.184/2015 is seeking Review of the Judgment and Order dated 27th September 2016 passed in the said Application.

2.Original Application No.184/2015 was moved for seeking directions to the Respondents therein to demolish the illegal structures constructed by the Respondent No.9 M/s. Goel Ganga Developers India Pvt. Ltd. therein at Survey No.35 to 40 of village Wadgaon Bk. Sinhagad Road, Pune on account of several infractions of Law including Environment Clearance Regulations, 2006, and inter-alia for payment of damages/environmental compensation.

3. After hearing the parties, this Tribunal declined to demolish the structures in question but taking cognizance of its adverse impact on the environment directed the Respondent No.9- M/s. Goel Ganga

Developers India Pvt. Ltd. to pay environmental compensation of Rs.100 Crores or 5 % (five percent) of the total cost of the project to be assessed by SEAC, whichever being less, for restoration and restitution of environment damage and degradation caused by the construction activities carried out by the project proponent, and in addition to pay sum of Rs.5 Crores for contravening several environmental laws in carrying out the construction activities including exceeding the limits of available Environment Clearance without obtaining the consent from the both. It is this decision which the Review Applicant implores us to revisit and review the same for the reason of the error apparent on the face of record having crept in the said decision.

4. The Review Applicant submits that this Tribunal failed to consider:

1. Illegal Reduction in Cultural Centre Reservation Area due to encroachment of Tower Buildings A & B on Reserved Plot admeasuring 2250 sq.mts.

2. Construction of three basements without obtaining EC.

3. Utilization of excess FSI.

4. Suppression of Reservation for primary school in the lay out.

5.Violation of EC conditions dated 4th April 2008.

6. Illegal construction of shops and commercial premises.

and erroneously declined to direct demolition of the illegal constructions. The Review Applicant further submits that the Tribunal erred in imposing trivial amount of environmental compensation totally ignoring the unrebutted affidavit dated 18th May 2016 of the Applicant giving scientific basis for proper quantification of the environmental compensation due in the present case.

5.Perusal of the Judgment and order in question reveals that this Tribunal after having noticed misleading statements of Respondent No.9 M/s. Goel Ganga Developers Pvt. Ltd. and Dy. Engineer of Pune Municipal Corporation devised to paint wrong picture of the project-- firstly, to suppress deviation and secondly, to create ambiguity of FSI and BUA to help the Respondent No.9 M/s.Goel Ganga Developers to obtain convenient orders from other authorities clearly recorded its observations in following words :

> ***38.*** *We are, therefore clear in our mind that Applicant has substantiated that the original project conceived by Respondent No.9-PP had to confine to what was sanctioned under the EC dated 4th April,2008 and any extra construction or increase in building, plinth commercial structures, shops and flats should have support of modified EC. As of now, since no modified*

EC has been granted, the extent of project activity cannot increase beyond the limit circumscribed by EC dated 4th April, 2008. Any such activity or construction beyond permissible limits cannot be saved by jugglery of words, misinterpreting against the statutory definition of F.S.I. and BUA.

6. This Tribunal further held that the construction activity of Respondent No.9-project proponent to the extent it exceeds the permissible limits as per Environment Clearance cannot be saved and shall stop subject to the grant of modified EC by the Competent Authority; and the consequence of such contravention and illegal construction would be adverse on the environment and it would ultimately lead to several incidental causes of action, if the Respondent No.9 was allowed to continue the illegal activity. In this backdrop, however, this Tribunal declined to demolish the structures in question for the reasons recorded in para Nos.46 and 51 in the judgment and quoted herein below for ready reference:

"46. *It is now a matter of record that the construction of the project in question is near completion and even the occupancy certificate is granted partially. We need to consider the fact that the project in question is primarily a residential project and many individuals have invested their money in the project for meeting need for residential accommodation by having a house in city like Pune. Any order to demolish structure would also adversely*

affect them. The Respondent-9 has already created 3rd party rights. Though the Respondent-9 has blatantly violated the conditions of EC, we also note the total lack of supervision and enforcement at PMC level has resulted in such illegal activity.

51. *We are also inclined to adopt the approach taken by the Bench in the interest of justice and fair play and based on the facts and circumstances of the case. The construction activity is not a prohibited activity in the subject, but a regulated activity. We also take a judicial note of the fact that the demolition of structures in question would also result in further environmental damage and generation of construction waste. Other option which could have been explored is asking the government to take over the additional construction and use it for public purpose but as noted above, already third party rights have been created, may be partially."*

7. Mindful of the provision in Section 20 of the National Green Tribunal Act, 2010 guiding the course of decision making with the application of Principles of Sustainable Development, Precautionary Principle and Polluter Pays Principle and conscious of the care necessary to avoid misconstruction of 'Polluter Pays Principle' as 'Pay and Pollute Principle', the Tribunal found the imposition of exemplary and deterrent environmental compensation to be just and necessary to pass "a clear message that environmental compliance is supreme and the party which is non-complying the

environmental standards shall be at economic disadvantage". (para 47 of the Judgment).

8. Both the Review Applicant and the Respondent Nos.2, 3 and 9 have filed written submissions countering each other on the merits and demerits of the Review Application. Learned counsel appearing on behalf of the Respondent No.2-Environment Department, Govt. of Maharashtra and Respondent No.3 SEIAA questioned the mode of quantification of environmental compensation through computation of Carbon Foot Print on the premise that it nowhere finds place in EIA Manual, Terms Reference, Environment Clearance Regulations, 2006 and amendments thereto, Environment (Protection) Act, 1986, National Green Tribunal, 2010 or Rules framed thereunder and it is not scientifically tenable. Citing common judgment dated 2nd August, 2017 delivered by Hon'ble Supreme Court of India in ***"Writ Petition (Civil) No.114/2014; Common Cause Vrs. Union of India and Ors"., and "Writ Petition (Civil) No.194/201; Prafulla Samantra Vrs. Union of India and Ors"*** discussing the issue of damages on environment, learned counsel Mr. R.B. Mahabal, appearing on behalf of Respondent Nos.2 and 3 submitted that nowhere the concept of Carbon Foot Print has been mentioned. Learned counsel appearing on behalf of Respondent No.3 M/s. Goel Ganga Developers,

besides questioning the propriety of applying concept of Carbon Foot Print to the quantification of environmental compensation in the matter of construction carried out beyond what have been permissible under the environmental clearance on the identical grounds as those propounded by the Respondent Nos.2 and 3,reminded us of the limitations of Review jurisdiction and the procedural lapses the Review Applicant had committed in raising the plea for the application of concept of 'Carbon Foot Print' in the matter of quantification of environmental compensation in the present case.

9. Learned counsel appearing on behalf of Respondent No.9 pointed out that the Tribunal had declined to pass the directions for demolition of construction for the reasons, more particularly stated in para Nos.46 and 51 of the judgment dated 27th September 2016,after giving due consideration to all facts and application on record. Reading of the judgment dated 27th September 2016 reveals that the Tribunal took into consideration the fact situation and considered the comparative harm, both to the individuals seeking residential accommodation in the said project and to the environment in terms of multiple compounding of the environmental damage due to generation of construction waste upon the demolition of the construction in

question, and the fact that the construction activity is not prohibited activity but regulated activity. In our considered opinion, there is no mistake or error apparent on the face of the record nor any other sufficient reason to depart from the view expressed by the Bench for declining the plea for issuance of directions to demolish the structures in question. To take a view in favour of the plea for demolition, one will have to exceed the limitations of Order 47 Rule 1 of Code of Civil Procedure, 1908 read with Section 94(f) of the National Green Tribunal Act, 2010. However, as regards quantification of Environmental Compensation, the judgment dated 27th September 2016 has left enough room to raise a contention that certain material and relevant facts on record were not at all considered resulting in the mistake or error apparent on the face of the record. No wherein the Judgment under review we find mention of the affidavit dated 18th May 2016 voicing the concept of Carbon Foot Print. Straightaway, despite favourably considering the need for imposing exemplary and deterrent environmental compensation, the Tribunal without bothering to consider the concept of the 'Carbon Foot Print' proceeded to toe line of the judgment passed by the Principal Bench of this Tribunal in "***O.A. No. 24/2011, Sameer Mehta vrs. Union of India and Ors***"

giving goby to computation of damages with some amount of exactitude.

10. It appears from the reading of the said judgment delivered in 'Samir Mehta's case' and the parent judgment delivered in "***Sterlite Industries India Ltd." Case (Sterlite Industries India Ltd. Vrs. Union of India; 2013(4) SCC. 575***) generating thesis of notional damages based on 5 % of capital cost that there was no enough material on record to enable computation of environmental damages with exactitude. However, in the instant case the record does show affidavit dated 18th May 2016, which remained un-rebutted in its contents and unnoticed by the Bench, giving view of the mode of computation of environmental compensation with some exactitude on the basis of available data and upon application of the concept of Carbon Foot Print. We are, therefore, obliged to examine its worth in order to assess whether any mistake or error apparent on the face of record has crept in the judgment under Review on account of such affidavit dated 18th May 2016 having been left unnoticed.

11. One of the exception taken to the affidavit dated 18th May 2016 is that it cannot be taken into consideration as there are no substantial pleadings in the Orig. Application and there is non-compliance of Rules 8(1) and 12 of the National Green Tribunal (Practice and

Procedure) Rules 2011. These Rules have been framed by the Central Government in exercise of powers conferred by Section 4 read with Section 35 of the National Green Tribunal Act, 2010 for carrying out the provisions of the said Act enacted for effective and expeditious disposal of cases relating to Environmental Protection and Conservation of forests and other natural resources including enforcement of any legal right relating to environment and giving relief and compensation for damages to persons and properties. Rule 8(1) of the National Green Tribunal Rules, 2011, requires the Application for relief and compensation to be made in Form No.II and Rule 12 prescribes fee of equivalent to 1 (one) per cent of amount of compensation claimed subject to minimum of Rs.1000/-. Perusal of O.A. No. 184/2015 reveals that the Applicant without quoting the amount of environmental compensation simply prayed for the following directions:

> **"E.** Having regard to the damage to the public health, property and environment, principles of sustainable development and polluter pays principles and direct the Respondent No.9 to deposit a heavy amount of compensation to the environment relief fund."

and exhaustively quoted the violations of Law including the violation of enactments specified in Schedule 1 of the National Green Tribunal Act, 2010.

The unspecified claim for environmental compensation was made vis-a-vis the injury sustained by the environment on account of the various violations of Law as quoted in the Application. Substantially, therefore, we find facts needed to be pleaded in the Application as per Form II prescribed under National Green Tribunal Rules 2011 in the Application. No Court fees on the unspecified environmental compensation claimed, in our considered view, are payable, more so as the Applicant is not claiming any compensation for himself. Moreover, Section 19 of the National Green Tribunal Act, 2010 gives freedom to the Tribunal to regulate its own procedure subject, however, to the observance of the Principles of Natural Justice. In the instant case, the record reveals that the exhaustive affidavit dated 18th May 2016 was placed on record with opportunity to the contending parties to rebut it. However, the contending parties including the Respondent no.9 did not rebut it with any cogent material and through their submissions made before the Tribunal.

12. It can therefore be clearly seen that the Tribunal ignored the vital material on record and proceeded to pass the following direction:

> *"1. The Respondent No.9-PP shall pay environmental compensation cost of Rs.100 crores or 5 % (Five percent) of the total cost of project to be assessed by SEAC whichever is less for restoration and restitution of environment damages and degradation caused by the*

project proponent by carrying out the construction activities without the necessary prior environmental clearance within a period of one month. In addition to this, it shall also pay a sum of Rs. 5 crores for contravening mandatory provision of several Environment Laws in carrying out the construction activities in addition to and exceeding limit of the available environment clearance and for not obtaining the consent from the Board."

This direction, with respect, is patently erroneous for two reasons. Firstly, the Tribunal having come to the conclusion that the project proponent needs to be saddled with exemplary and deterrent compensation (paragraph No.47 of the Judgment) yet had leaned towards soft approach in imposing the compensation either amounting to Rs.100 Crores or 5% of the total cost of the project to be assessed by SEAC whichever is less. To say the least, if the amount assessed is less than Rs.100 Crores then it will amount to taking a soft approach contrary to the judicially accepted view to impose exemplary and deterrent environmental compensation which has to be more than the estimated one. Secondly, the word of the Hon'ble Supreme Court of India is Law of the Land and if 5% of the total cost of the project happens to be assessed more than Rs.100 Crores by SEAC, even then by virtue of the direction passed by the Tribunal the compensation of Rs.100 Crores being lower than the one as computed in terms of the Judgment of the Hon'ble Supreme Court of India will be payable. This is undermining the rigour of Law of the Land.

13. Commentary on the Law of Tort by Ratanlal and Dhirajlal 27th Edition classifies the damage for the wrong done in four kinds – (i) Contemptuous (ii) Nominal (iii) Ordinary and (iv) Exemplary. Page 205 of the said Commentary sheds light on the concept of "Exemplary Damages" in following terms:

> **EXEMPLARY DAMAGES** are awarded not to compensate the plaintiff but to punish the defendant and to deter him from similar conduct in future. The House of Lords has ruled that exemplary damages can be allowed in three categories of cases. The first category is oppressive, arbitrary or unconstitutional action of the Government or its servants. Cases in the second category are those in which the defendant's conduct has been calculated by him to make a profit for himself which may well exceed the compensation payable to the plaintiff. Third category consists of cases in which exemplary damages are expressly authorized by statute.

14. In this backdrop, it would have been prudent to consider the approach of quantifying the environmental compensation as suggested in the Affidavit dated 18th May, 2016 filed by the Applicant, particularly when the amount of Rs.100crs.compensation suffers from vice of arbitrariness.

15. It is true that the concept of "Carbon Foot Print" does not find place in EIA Manual, MoEF/SEIAA Guidelines for presentation of standard terms of reference, Environment (Protection) Act, 1986 and Rules framed thereunder, Environment Clearance Regulations, 2006 and amendments thereto and National Green

Tribunal Act, 2010 and Rules framed thereunder, but this does not *per se* lessen its importance in computation of environmental compensation without giving thought to its scientific merits. Admittedly it is equivalent to Carbon-di-oxide units which are added to the environment in the process of releasing the energy necessary for production of the material used in development. In the instant case, the Tribunal came to the conclusion while passing the Judgment dated 27th September, 2016 that the project proponent raised illegal construction beyond the permissible limits circumscribed by the EC dated 4th April, 2008. Evidently the energy was spent with a corresponding burden on the environment in form of CO_2 emissions for raising illegal construction beyond the permissible limits prescribed by law besides putting burden on natural resources. This, therefore, could have been a just measure for quantifying the loss sustained by the environment in terms of undue burden cast upon it due to CO_2 emissions. Scientifically, this concept therefore cannot be faulted and can be one of the measures for quantifying the environmental compensation/damages eschewing the ignorance cast upon everybody due to its absence from legal texts.

16. Affidavit dated 18th May, 2016 deals with the project in question phase-wise and makes reference to the construction on Plot Nos.1 and 2 respectively. It gives

total damages with reference to these phases in following terms:

Total Damages

Plot No.1 Damages	**149.17 Crores**
Plot No.2 Damages	**40.86 Crores**
Total Damages	**190.03 Crores**

17. Learned Counsel appearing on behalf of Respondent No.9 – Project Proponent could not point out any mathematical mistake/error either in computation of the quantities of the material used for construction for Phase-I and/or in arriving at the quantum of damages therefrom as revealed in the Affidavit dated 18th May, 2016. He contends that the Review Applicant resorted to method of computation of the damages as suggested by the Hon'ble Supreme Court of India i.e. 5% of the value of the construction/project as regards the development of Plot No.2 and did not adopt the same approach while computing the damages as regards the construction of Plot No.1.

18. Learned Counsel appearing on behalf of Review Applicant countered these submissions. He submitted that exception in application of concept of Carbon Foot Print as regards the development on Plot No.2 was made as the development of Plot No.2 is/was not complete and is/was in "intermediate stage" and, therefore the

Applicant had no sufficient data to calculate the carbon emission/footprint. The record justifies his explanation and, therefore, it does not lie in the mouth of the Respondent No.9 – Project Proponent that the Applicant has not explained the computation of damages as regards Phase-II with application of the concept of 5% of the project cost and not the concept of 'Carbon Foot Print'.

19. As observed hereinabove, nothing concrete has been put forth to demonstrate any flaw in the application of concept of 'Carbon Foot Print' for calculating the environmental compensation with reasonable amount of exactitude. If choice has to be made between notional and reasonable in order to give what is due to the environment and be just, the choice must fall in favour of reasonable and not notional.

20. Learned Counsel appearing on behalf of Respondent No.9 – M/s Goel Ganga Construction cited Judgment of the Hon'ble Supreme Court of India reported in ***AIR 1960 Supreme Court 137; Satyanarayan Vs. Mallikarjun*** and of the Hon'ble Bombay High Court reported in ***2009(4) Bom CR 653; The Executive Engineer, Lower Wana Project Division Vs Vasant Nattuji Kosare and The Member, Industrial Court*** and of our Principal Bench in ***Review Application No.32/2015 arising in O.A. No.179/2014 Social Action for Forest and Environment (SAFE) Vs. Union of India and 5 Ors.*** All

these Judgments singularly guide Reviewing Courts to limit the exercise of review powers to correct the error/mistake apparent on the face of the record and not simply to correct the erroneous judgment. There can be no two opinions about this *Rationale* expounding the law spelt out in Order XLVII Rule 1 of the Code of Civil Procedure, 1908 which governs the Tribunal like any other Civil Court in view of Section 19(4)(f) of the National Green Tribunal Act, 2010. However, the aforesaid discussion clearly reveals that the error apparent on the face of the record did creep in the judgment and there is need to correct it. We, therefore, pass the following order:

The Direction No.1in the Judgement dt.27th September 2016 passed inO.A.no.184 of 2015 is modified, other directions remaining the same, and shall be read as:

> "1. The Respondent No.9-PP shall pay environmental compensation cost of Rs.190 crores or 5 % (Five percent) of the total cost of project to be assessed by SEAC, whichever is more, for restoration and restitution of environment damage and degradation caused by the project proponent by carrying out the construction activities without the necessary prior environmental clearance within a period of one month. In addition to this, it shall also pay a sum of Rs. 5 crores for contravening mandatory provision of several Environment Laws in carrying out the construction activities in addition to and exceeding limit of the available environment clearance and for not obtaining the consent from the Board."

Review Application No.35/2016 stands disposed off accordingly.

NATIONAL GREEN TRIBUNAL, NEW DELHI
NGT

REPORTABLE

IN THE SUPREME COURT OF INDIA
CIVIL APPELLATE JURISDICTION

CIVIL APPEAL NO. 10854 OF 2016

M/S. GOEL GANGA DEVELOPERS
INDIA PVT. LTD. ... Appellant (s)

Versus

UNION OF INDIA THROUGH SECRETARY
MINISTRY OF ENVIRONMENT
AND FORESTS & ORS. ...Respondent(s)

With

CIVIL APPEAL NO. 10901 OF 2016

CIVIL APPEAL NO. 5157-5158 OF 2018

J U D G M E N T

Deepak Gupta, J.

Applications for intervention/impleadment are allowed. Application for amendment of grounds of appeal in Civil Appeal No.10854 of 2016 allowed.

2. These matters are being decided by one judgment since they all arise out of one original application filed by Shri Tanaji Balasaheb Gambhire (hereinafter referred to as 'the original applicant') before the National Green Tribunal ('the NGT' for short) being Application No. 184 of 2015.

3. The original applicant filed an application before the NGT claiming that the project proponent i.e. M/s. Goel Ganga Developers India Pvt. Ltd., had raised construction in violation of the Environmental Clearance ('EC' for short) granted for the project and also in violation of the various municipal laws. It was prayed that the illegal structures be demolished; the State Level Environment Impact Assessment Authority (SEIAA) and the Maharashtra State Pollution Control Board be directed to initiate appropriate action against the project proponent for violation of the Environment Impact Assessment (EIA) Notification, 2006; the Union of India be directed to take action against the SEIAA; and lastly it was prayed that the project proponent be directed to pay/deposit a heavy amount of compensation in the environment relief fund. The NGT

vide its order dated 27.09.2016 allowed the application in the following terms:

> "54. For the aforesaid reasons, the Applicant succeeds in his legal pursuit to challenge the noncompliance of EC conditions by the Respondent-9 and obtain certain directions. Hence the Application is allowed and we issue following directions:
>
> 1. The Respondent No.9-PP shall pay environmental compensation cost of Rs. 100 crores or 5% (Five percent) of the total cost of project to be assessed by SEAC whichever is less for restoration and restitution of environment damages and degradation caused by the project proponent by carrying out the construction activities without the necessary prior environmental clearance within a period of one month. In addition to this, it shall also pay a sum of Rs. 5 crores for contravening mandatory provision of several Environmental Laws in carrying out the construction activities in addition to and exceeding limit of the available environment clearance and for not obtaining the consent from the Board.
> 2. In view of our finding that there has been manifest, deliberate or otherwise suppression of facts of illegality in the project activity of Respondent No. 9-PP by the officer of PMC, we impose fine of Rs. 5 Lakhs upon the PMC and direct Commissioner PMC to take appropriate action against the erring officers. The amount of Rs. 5 Lakh shall be paid within one month.
> 3. We direct the Chief Secretary, State of Maharashtra and the competent authority to take notice of the conduct of the officers concerned who have misled the Department of Environment in the matter relating to interpretation of F.S.I and BUA in terms of which order dated 31st May, 2016 has been issued in particular the Principal Secretary, Department of Environment who has authored the order dated 31st May, 2016.
> 4. PMC, DoE and SEIAA are directed to pay cost of Rs. 1 lakh each to the Applicant within 4 weeks."

4. Aggrieved by the aforesaid order of the NGT, the project proponent filed Civil Appeal No. 10854 of 2016. The Pune Municipal Corporation ('PMC' for short) also challenged the said order in so far as it adversely affects the PMC by filing Civil Appeal No. 10901 of 2016.

5. Review application being Application No. 35 of 2016 was filed by the original applicant before the NGT. This application was partly allowed on 08.01.2018 and direction No. 1 in the original order dated 27.09.2016 was modified and substituted as under:

> "1. The Respondent No.9-PP shall pay environmental compensation cost of Rs.190 crores or 5% (Five percent) of the total cost of project to be assessed by SEAC, whichever is more, for restoration and restitution of environment damage and degradation caused by the project proponent by carrying out the construction activities without the necessary prior environmental clearance within a period of one month. In addition to this, it shall also pay a sum of Rs. 5 crores for contravening mandatory provision of several Environment Laws in carrying out the construction activities in addition to and exceeding limit of the available environment clearance and for not obtaining the consent from the Board."

6. Thereafter, the project proponent filed I.A. No. 8000 of 2018 for permission to amend its appeal permitting it to challenge the

order passed in review application dated 08.01.2018, which we have allowed.

7. Appeal being Diary No. 3911 of 2018 was filed by the original applicant challenging the original order dated 27.09.2016 as well as the order dated 08.01.2018 passed in review application praying that demolition of the illegal structures be ordered and the compensation be enhanced to Rs.500 crores.

The Factual Matrix

8. The facts briefly stated are that the project proponent purchased 79,100 sq. mtrs. or 7.91 hectare of land comprised in six Survey Nos. 35, 36, 37, 38 39 and 40 in Vadgaon, Pune. These survey numbers were amalgamated in accordance with the rules and the plot became one plot of 79,100 sq. mtrs. From the documents placed on record it is apparent that as per the Development Control Plan for the city of Pune, 3 roads of the width of 36 mtrs., 30 mtrs. and 18 mtrs. bisected this plot into two which for the sake of convenience were referred to as Plot No. 1 and Plot No. 2. As per the Development Plan, there are certain statutory

reservations in addition to the roads and some land has to be left out or reserved for schools, cultural centres, open areas etc.. The remaining area is referred to as the 'Balance Plot Area' which in this case works out to 46,993.79 sq. mtrs.. Out of this 'Balance Plot Area' 15% is to be reserved for amenity space and another 10% area is to be compulsorily left out as open space leaving 'Net Plot Area' of 41,455.21 sq. mtrs.. *Prima facie* these calculations do not appear to be correct. However, this will not impact the merits of the case. Be that as it may, the undisputed fact is that FSI has to be calculated on the 'Net Plot Area'. We may, at this stage, point out that the aforesaid figures are based on the written submissions submitted on behalf of the Union of India by the learned Additional Solicitor General and these figures have not been disputed before us.

9. On 12.03.2007, the project proponent applied for sanction of lay out and building proposal plan on an area of 15,141.70 sq. mtrs., originally depicted as Plot No. 3 and the sanctioned FSI was 15313.16 sq. mtrs.. Thereafter, on 05.09.2007, revised lay out plan was submitted for an area measuring 28,233.23 sq. mtrs. and the

sanctioned FSI was 39,526.54 sq. mtrs.. The project proponent applied for EC for the project and in the proposal dated 27.06.2007, he had shown that he would be erecting/constructing 12 buildings having 552 flats, 50 shops and 34 offices. The 12 buildings were to have stilts with basement and 11 floors. The total built up area was indicated as 57,658.42 sq. mtrs.. The EC was granted to the project proponent on 04.04.2008. Paras 2 and 3 of the communication granting EC read as under:

> "2. The project proponent is proposing for construction of group housing project at S.No.35 to 40, village Vadgaon Budruk, Singhad Road, Pune, Maharashtra at a cost of Rs. 10,737.14 lakh. The project involves construction of 12 Building with Stilt, Basement plus 11 floors for 552 flats, 50 shops and 34 offices. The total plot area is 79,100.00 sq. m. Total built up area as indicated is 57,658.42 sq. m. Total water requirement will be 745 KLD and 400 KLD of waste water will be generated from the buildings which will be treated in sewage treatment plant. The treated waste water will be used for landscaping, DG set cooling and Horticulture purpose. The solid waste generated from the buildings will be 1500 Kg/day and disposed as per the MSW Rules, 2000. The parking space is proposed for parking of 1072 cars.
>
> "3. The EAC after due consideration of the relevant documents submitted by the project proponent and additional clarifications furnished in response to its observations have recommended the grant of environmental clearance for the project mentioned above subject to compliance with the EMP and other stipulated conditions. Accordingly, the Ministry hereby accords necessary environmental clearance for the project under category 8 (a)

of EIA Notification 2006 subject to the strict compliance with the specific and general conditions mentioned below:"

10. The EC was granted subject to certain conditions. We may refer to certain relevant conditions which read as under:

"PART A- SPECIFIC CONDITIONS

I. Construction Phase

xxx xxx xxx

v. Permission to draw and use ground water for construction work shall be obtained from competent authority prior to construction/operation of the project."

"5. In the case of any change(s) in the scope of the project, the project would require a fresh appraisal by this Ministry."

Concept of 'Built up Area' under the notification dated 14.09.2006:

11. It is not disputed that the EC was granted for built up area of 57,658.42 sq. mtrs.. The main dispute is with regard to the interpretation of the term 'built-up area'. The case of the project proponent is that the term 'built up area' is synonymous with 'Floor Space Index' or FSI and that the constructed area, which is exempted from FSI area or is a non-FSI area is not a part of the 'built up area'. On the other hand, the submission made by the

original applicant as well as by the learned Additional Solicitor General appearing for the Ministry of Environment, Forest and Climate Change is that the built up area will cover all constructed area and the concept of FSI area or non-FSI area is totally alien to environmental laws. Learned senior counsel for the project proponent has drawn our attention to the Development Control Rules for Pune Municipal Corporation, Pune, 1982 ('DCR' for short). Under the DCR, no building can be constructed without grant of building permission/commencement certificate by the Pune Municipal Corporation. There is a detailed procedure for obtaining the building permission/commencement certificate wherein lay out plans, building plans etc. have to be submitted. The main emphasis was on Rule 2.13 of the DCR, which defines built up area as follows:-

> "2.13 **Built-up Area** – Area covered immediately above the plinth level by the building or external area of any upper floor whichever is more excepting the areas covered by Rule No. 15.4.2."

Rule 2.39 defines Floor Area Ratio as follows:-

> "2.39 **Floor Area Ratio (F.A.R.)** – The quotient obtained by dividing the total covered area (plinth area) on all floors excluding exempted areas as given in Rule No. 15.4.2 by the area of the plot.

F.A.R. = Total covered area on all floors
Plot Area

NOTE – The term F.A.R. is synonymous with Floor Space Index (F.S.I.)"

Strong reliance is placed on Rule 15.4.2 which reads as under:-

"15.4.2 In addition to Rule No. 15.4.1.1 (a) (b) and (c) and 17.7.3 the following shall not be included in covered area or F.A.R. and Built-up Area calculations."

(a) A basement or cellar space under a building constructed on stilts and used as parking space, and air-conditioning plant rooms used as accessory to the principal use;

(b) Electric cabin or substation, watchman's booth of maximum size of 1.6 sq.m. with minimum width or diameter of 1.2 m, pump house, garage shaft, space required for location of fire hydrants, electric fittings and water tanks;

(c) Projections as specifically exempted under these rules.

(d) Stair case room and/or lift rooms above the top most storey, architectural features, chimneys, elevated tanks of dimensions as permissible under these rules.

Note: The shaft provided for lift shall be taken for covered area calculations only on one floor upto the minimum required as per these rules.

(e) One room admeasuring 2m x 3m on the ground floor of co-operative housing societies or apartment owners/co-operative societies buildings and other multistoreyed building as office-cum-letter box room.

(f) Rockery, well and well structures, plant, nursery, water-pool, swimming pool, (if uncovered) platform round a tree, tank fountain, bench, chabutra with open top and unenclosed sides by walls, ramps, compound wall, gate, slide, swing, overhead water tank on top buildings;

(g) Deleted.

(h) Sanitary block subject to provision of rules no. 15.4.1 (a) and Built-up area not more than 4 sq. m."

12. The contention of learned senior counsel appearing for the project proponent is that while calculating the built up area the constructions mentioned in Rules 15.4.1.1 (a), (b) and (c) and Rule 17.7.3 in addition to the areas specifically exempted under Rule 15.4.2 are to be excluded. He submits that if the built up area is calculated in accordance with the DCR then the project proponent has till date not constructed the built up area of 57,658.42 sq. mtrs., which it was permitted to construct under the EC granted to it on 04.04.2008. On the other hand, the stand of the Union of India and the original applicant is that built up area means all area which is covered regardless of the area being FSI or non FSI in terms of the EIA Notification of 2006. The Building/Construction projects are covered by Item No. 8 of the Schedule to the EIA Notification dated 14.09.2006. Construction of a project which is

covered under the schedule can be commenced only after obtaining EC in terms of Para 2 of the said notification. The schedule itself categorises the various projects and activities into two categories being 'Category A' and 'Category B'. 'Category A' projects require clearance by the Central Government in the Ministry of Environment, Forest and Climate Change on the recommendation of the Expert Appraisal Committee to be constituted by the Central Government whereas those activities which form 'Category B' of the schedule including modernization and expansion of such projects require EC from the State/Union Territory Environment Impact Assessment Authority (SEIAA) and such authority is required to base its decision on the recommendation of the State/Union Territory Level Expert Appraisal Committee (SEAC). There is further division of 'Category B' into B1 and B2. B1 projects require Environmental Impact Assessment (EIA) report to be prepared and scoping to be done whereas B2 projects do not require any Environmental Impact Assessment report. Item No. 8 of the Schedule, with which we are concerned, reads as follows:

(1)	(2)	(3)	(4)	(5)
8		**Building/Construction projects/Area Development projects and Townships**		

8(a)	Building and Construction projects		≥20000 sq. mtrs. And <1,50,000 sq. mtrs. Of built-up area#	#(built up area for covered construction; in the case of facilities open to the sky, it will be the activity area)
8(b)	Townships and Area Development projects		Covering an area ≥50 ha and or built up area ≥1,50,000 sq. mtrs. ++	++All projects under Item 8(b) shall be appraised as Category B1.

13. From a bare perusal of the two hash tags (#) in Column 4 and 5 of Item 8(a), it is apparent that what is shown under Column 5 is actually a continuation of Column 4 and basically it describes or defines 'built up area' to mean covered construction and if the facilities are open to the sky, it will be taken to be the activity area. This by itself clearly shows that under the notification of 2006, all constructed area, which is covered and not open to the sky has to be treated as 'built up area'. There is no exception for non-FSI area.

14. Indeed, the concept of FSI or non-FSI has no concern or connection with grant of EC. The same may be relevant for the purposes of building plans under municipal laws and regulations but it has no linkage or connectivity with the grant of EC. When EC

is to be granted, the authority which has to grant such clearance is only required to ensure that the project does not violate environmental norms. While projects and activities, as mentioned in the notification, may be allowed to go on, the authority while granting permission should ensure that the adverse impact on the environment is kept to the minimum. Therefore, the authority granting EC may lay down conditions which the project proponent must comply with. While doing so, such authority is not concerned whether the area to be constructed is FSI area or non-FSI area. Both will have an equally deleterious effect on the environment. Construction implies usage of a lot of materials like sand, gravel, steel, glass, marble etc., all of which will impact the environment. Merely because under the municipal laws some of this construction is excluded while calculating the FSI is no ground to exclude it while granting the EC. Therefore, when EC is granted for a particular construction it includes both FSI and non-FSI areas. As far as environmental laws are concerned, all covered construction, which is not open to the sky is to be treated as built up area in terms of the EIA Notification dated 14.09.2006.

Notification of 04.04.2011

15. Our attention has been drawn to the notification dated 04.04.2011 issued by the Ministry of Environment and Forests. By means of this notification, the words of Column 5 against Item 8(a) have been replaced and substituted as under:

> "The built up area for the purpose of this Notification is defined as "the built up or covered area on all the floors put together including basement(s) and other service areas, which are proposed in the building/construction projects"."

This notification clearly defines built up area as all constructed area including basement and service areas without any exception.

16. Learned senior counsel appearing for the project proponent has submitted that this notification is only prospective in nature and, therefore, will not affect the notification of 2006. On the other hand, it has been submitted by the original applicant that this is only a clarificatory notification and as such it will come into force with effect from 2006. In our opinion, it is not at all necessary to decide whether this notification is clarificatory or is in substitution of the original notification of 2006. We say this because as held by us above, there is no ambiguity with regard to the definition of 'built up area' even under the notification of 2006 and it covers all

constructed area not open to the sky. The notification of 2011 only provides that the built up area or covered area shall be the area of all floors put together including basement(s) and other service areas. We may again re-emphasize that this definition also is in consonance with the concept of grant of EC for construction as explained above and it is obvious that the concept of FSI or non-FSI area is alien to environmental laws.

Clarification dated 07.07.2017

17. Strong reliance has been placed by the project proponent on the office memorandum dated 07.07.2017 issued by Dr. Ashish Kumar, Joint Director, Ministry of Environment, Forest and Climate Change. The said office memorandum reads as follows:-

F.No. 22-35/2017-IA.III
Government of India
Ministry of Environment, Forest and Climate Change
(Impact Assessment Division)
******

Indira Paryavaran Bhawan
Jor Bag Road, Aliganj,
New Delhi-110 003

Dated 7th July, 2017

OFFICE MEMORANDUM

Sub: Clarification on the date of applicability of notification S.O.(E) 695 dated 04.04.2011 issued by MoEF & CC defining 'Built Up Area' of the project

The Ministry is in receipt of a reference dated 03.04.2017 from Confederation of Real Estate Developers Association of India (CREDAI) seeking clarification on above mentioned subject. The CREDAI has requested that the definition of Built Up Area (BUA) given vide notification S.O.695(E) dated 04.04.2011 should have prospective effect.

2. The matter has been examined in the Ministry. The BUA defined in the notification S.O. 1533 (E) dated 14th September, 2006 mentions at Item 8 (a) columns 4 and 5 "built up area for covered construction, in the case of facilities open to sky, it will be the activity area".

3. The Ministry has further defined BUA vide its notification S.O.695 (E) dated 04.04.2011 which reads as, "the built up or covered area on all the floors put together including its basement and other service areas, which are proposed in the building or construction project."

4. The definition provided in the Ministry's notification will have its effect from the prospective date of the notification only. The projects which are not covered in the period of above notifications should be assessed as per the definition of built up area provided in the building bye-laws or Development Control Regulation (DCR) of the local authorities in the States.

5. This issues with approval of Competent Authority.

Sd/-
(Dr. Ashish Kumar)
Joint Director
Ph:011-24695474
Email:ashish.k@nic.in

All States/UTs/SIEAAs/MoEF & CC Divisions

It is urged on the basis of the aforesaid memorandum that prior to the notification dated 04.04.2011, the built up area had to be calculated and assessed as per the building bye-laws or the Development Control Regulations of the local authorities in the States. On behalf of the original applicant it has been urged that

this memorandum is meaningless and that it has been issued when the matter was pending before the NGT, at the instance of one of the Directors of the project proponent, Shri Atul Goel, who was Joint Secretary of Confederation of Real Estate Developers Association of India (CREDAI), Pune.

18. Without going into this aspect of the matter, we are clearly of the view that such an office memorandum could not and should not have been issued. The notification dated 14.09.2006 is a statutory notification issued in terms of Rule 5(3) of the Environment (Protection) Rules, 1986 which provides that before such a notification is issued the Central Government has to give notice of its intention of issuing a notification and objections to the same are invited. No doubt the Central Government is empowered in public interest to dispense with the requirement of notice but this obviously has to be done in exceptional cases. The notification dated 14.09.2006 was issued by the Central Government and published in the gazette after inviting objections from the public. The first clarification with regard to this notification was issued on 04.04.2011 to which we have adverted above. These two decisions

of the Central Government which were notified as per the provisions of law could not have been set at naught by the Joint Director even if it was issued with the approval of a higher authority. We are of the view that since such decision has not been notified in the gazette the statutory notification dated 14.09.2006 and its subsequent clarification dated 04.04.2011 could not have been virtually set aside by this office memorandum.

19. We are also of the view that the so called office memorandum is not at all clarificatory in nature. As held by us above the notification of 2006 with regard to 'built up area' was absolutely clear and needed no clarification. We fail to understand how the concept of built up area as understood in the building bye-laws or DCR could be introduced into the notification of 2006 by this office memorandum which virtually made the notification of 2006 totally redundant. Therefore, we quash the office memorandum dated 07.07.2017.

20. This is not the first time that we have noticed such clarificatory communications being issued by the officials of the Ministry of Environment, Forest and Climate Change, which

virtually have the effect of nullifying the statutory provisions and notifications. We have adverted to some of these communications in our judgment in ***Common Cause*** vs. ***Union of India***[1]**.** We expect the officials of the Ministry of Environment, Forest and Climate Change to take a stand which prevents the environment and ecology from being damaged, rather than issuing clarifications which actually help the project proponents to flout the law and harm the environment.

21. In view of the above, we are clearly of the view that the EC granted to the project proponent on 04.04.2008 was for constructing a total built up area of 57,658.42 sq.mtrs. and this would include all covered construction not open to the sky. No artificial division on the basis of FSI and non-FSI area can be made. Therefore, the NGT was fully justified in coming to the conclusion that the construction raised by the project proponent was in total violation of the EC granted to it.

[1] (2017) 9 SCC 499

Environmental Clearance dated 20.11.2017

22. The project proponent has drawn our attention to the EC for expansion of the project in question granted to it by the State Level Environment Impact Assessment Authority (SEIAA) on 20.11.2017. We may note that this clearance indicates that the existing construction comprises of 738 flats and 115 shops which have been completed, 69 flats and 2 shops which are under construction, meaning thereby that 807 flats and 117 shops are already in existence and in addition thereto 454 more flats and cultural centre are sought to be constructed. This will take the total number of flats to 1261 and number of shops to 117. We may also notice that the SEIAA has laid down general conditions for pre-construction phase and the first condition is as follows :-

> "(1) This environmental clearance (EC) is issued for total built up area of 147219.45 m^2 as approved by local planning authority. It is noted that the total proposed construction area is 147219.45 m^2 which includes the area of previous EC (dated 04.04.2008) 57,658.42 m^2 and the proposed expansion area of 89,561.03 sq.m. However the above area of 147219.45 sq.m. is notional as the NON FSI area component of the previous EC is not included in 1,47,219.45 m^2. After considering the NON FSI area of the previous EC the total built up area becomes 1,81,230.94 m^2. SEIAA has also taken note of the clarification issued by MOEF and CC vide office memorandum dated 7th July, 2017, stating the definition of built up area will be assessed as per the building bye-laws or DCR of the local authorities in the states."

The aforementioned condition itself clearly shows that the non-FSI area constructed by the project proponent under first EC of 04.04.2008 has not been taken into consideration. The project proponent has raised construction in Plot No. 1 of an FSI area measuring 48,424.66 sq. mtrs., and non-FSI area measuring 46,088.47 sq. mtrs.. Therefore, the total construction raised in Plot No. 1 is 94,513.13 sq. mtrs.. In Plot No. 2 the construction raised on an FSI area is 630.55 sq. mtrs. and on the non-FSI area is 4,858.57 sq. mtrs. and, therefore, the total construction already raised in Plot No. 2 is 5,489.12 sq. mtrs.. The total construction raised by the project proponent is 1,00,002.25 sq. mtrs. against the built up area of 57,658.42 sq. mtrs. mentioned in the EC of 04.04.2008. This could not have been ignored by the SEIAA.

23. In case the total construction raised by the project proponent is taken as 1,00,002.25 sq. mtrs. and if the area of the proposed construction is added then the project will fall in B1 category and, therefore, the SEIAA had no authority to grant EC by treating the project as falling under Category B2. Furthermore, the EC dated

20.11.2017 is also illegal as the same has been granted on the presumption of the order dated 31.05.2016 passed by the Principal Secretary, Environment Department, State of Maharashtra holding that the construction of 18 buildings instead of 12 buildings is permissible. The EC completely lost sight of the fact that the order dated 31.05.2016 was quashed and set aside by the NGT in its order dated 27.09.2016. We may note that the official who passed the order on 31.05.2016 was the same official, who held the office of Member Secretary of SEIAA, which granted environmental clearance on 20.11.2017. Therefore, the EC dated 20.11.2017 was beyond the authority of SEIAA and was granted under a totally false assumption and the same is therefore quashed and set aside.

Allegations made by the original applicant against various officials

24. The NGT in its order dated 27.09.2016, has found that there was suppression of facts by the officers of PMC. The NGT also directed the Chief Secretary to the State of Maharashtra to take notice of the conduct of the officers who were misleading the Department of Environment. Costs were imposed on the PMC,

Department of Environment and the SEIAA. This has been challenged before us by the PMC.

25. The original applicant both in his original application filed before the NGT and in appeal filed before us as well as in other proceedings has made serious allegations against individual officers of the PMC as well as the SEIAA and specially the Principal Secretary, Environment Department, Govt. of Maharashtra. However, for reasons best known to the original applicant none of these individuals has been made a party in personal capacity in these proceedings. The law is well settled that no person can be condemned unheard. It would, therefore, not be fair on our part, to deal with allegations made against individuals who are not parties to the petition and who have had no chance to reply to the allegations levelled against them. Therefore, we refrain from commenting on the conduct of the officials in their individual capacity.

26. However, as far as their official capacity is concerned, we are of the view that the NGT was fully justified in coming to the conclusion that certain officials of PMC were going out of their way

to help the project proponent and we, therefore, uphold the directions given by the NGT in its order dated 27.09.2016 in this regard. In view of what we have discussed above, it is more than apparent that despite notifications of 2006 and 2011 being clear and unambiguous, the officials of PMC have given an interpretation which was tailor-made to suit the project proponent. This was being done even before the clarification of 07.07.2017 was issued. This clearly indicates that some officials of the PMC were espousing the case of the project proponent at the cost of the environment.

27. We may also observe that *prima facie* we are of the view that the Principal Secretary, Environment Department, Govt. of Maharashtra has not acted in a fair and transparent manner. The allegations made by the original applicant cannot be lightly brushed aside. In the original order dated 27.09.2016, the NGT held as follows :-

> "**42.** From the extracted portion of the order dated 31st May, 2016 of Principal Secretary, Environment Department, it is seen that he has declared construction of 18 buildings on the site instead of 12 buildings is permissible which, according to him, only a changes on configuration of buildings. This opinion undoubtedly is based on his erroneous conclusion that total BUA which is nothing but F.S.I. consumed i.e. 48617.14 sq.mts which is within the EC limit as against the actual construction activity which has

> exceeded over 100000 sq.mtrs BUA. Hence we set aside that order/communication dated 31st May, 2016."

The official holding the post of Principal Secretary must have been aware of these directions because he was a party to the proceedings before the NGT. Despite that, while granting fresh EC on 20.11.2017, this official noticed that reference to the Environment Department for verification of files was withdrawn vide letter dated 31.05.2016 and the matter has been considered afresh. When the letter dated 31.05.2016 had been quashed the obvious result would be that action had to be taken in accordance with the earlier directions in the 27th meeting of SEAC III (Non-MMR) held from 10th to 13th March, 2015 and the 87th meeting of SEIAA held on 10th to 12th August, 2015. This was not done. His actions need to be looked into and, therefore, we uphold the direction given by the NGT directing the Chief Secretary to the State of Maharashtra to take notice of the conduct of the concerned officers. We further direct the Chief Secretary to file detailed report in respect of the conduct of the then Principal Secretary, Department of Environment to the NGT within 3 months which will thereafter pass appropriate directions in the matter.

Challenge to the order dated 08.01.2018 passed in Review Application No.35 of 2016:

28. This order has been challenged both by the project proponent by amending the appeal and by the original applicant by filing a separate appeal.

29. Section 19(4)(f) of the National Green Tribunal Act, 2010 provides that the Tribunal shall have the same powers as are vested in Civil Courts while trying a suit in respect of matters relating to review of its decisions. Therefore, the power of review vested with the NGT is akin to the power vested with the Civil Court. As such, the principles which govern the exercise of review jurisdiction before a Civil Court will apply with equal force to the NGT.

30. Rule 22(2) of the National Green Tribunal (Practices and Procedure) Rules, 2011 provides that a review application shall ordinarily be heard by the Tribunal at the same place of sitting which has passed the order unless the Chairperson may, for reasons to be recorded in writing, direct it to be heard by the Tribunal sitting at any other place. Sub-rule(3) of Rule 22 provides

that ordinarily review application shall be disposed of by circulation.

31. Since the powers of review which the NGT exercises are akin to those of a Civil Court it would be pertinent to refer to relevant portions of ***Order XLVII of Civil Procedure Code, 1908,*** which read as follows:-

> "**1. Application for review of judgment.-** (1) Any person considering himself aggrieved—
>
> (a) by a decree or order from which an appeal is allowed, but from which no appeal has been preferred,
>
> (b) by a decree or order from which no appeal is allowed, or
>
> (c) by a decision on a reference from a Court of Small Causes,
>
> and who, from the discovery of new and important matter or evidence which, after the exercise of due diligence was not within his knowledge or could not be produced by him at the time when the decree was passed or order made, or on account of some mistake or error apparent on the face of the record, or for any other sufficient reason, desires to obtain a review of the decree passed or order made against him, may apply for a review of judgment to the Court which passed the decree or made the order.
>
> (2) A party who is not appealing from a decree or order may apply for a review of judgment notwithstanding the pendency of an appeal by some other party except where the ground of such appeal is common to the applicant and the appellant, or when, being respondent, he can present to the Appellate Court the case on which he applies for the review.
>
> xxx xxx xxx

> **5. Application for review in court consisting of two or more Judges.-** Where the Judge or Judges, or any one of the Judges, who passed the decree or made the order, a review of which is applied for, continues or continue attached to the court at the time when the application for a review is presented, and is not or are not precluded by absence or other cause for a period of six months next after the application from considering the decree or order to which the application refers, such Judge or Judges or any of them shall hear the application, and no other Judge or Judges of the Court shall hear the same."

32. The project proponent has urged various grounds to challenge the order passed in the review application. The first ground is that whereas the original order was passed by a Bench comprising of Dr. Justice Jawad Rahim and Dr. Ajay A. Deshpande, the review application was heard and decided by a Bench comprising of Justice U.D. Salvi and Dr. Nagin Nanda. It has been urged that Dr. Justice Jawad Rahim continues to be a Judicial Member of the NGT and, in fact, was sitting in the Western Bench at Pune on 08.01.2018 when the impugned judgment in review was pronounced by the NGT.

33. We are clearly of the view that a review petition should normally be heard by the same Bench which originally decided the matter. A review petition should not be heard by any other Bench

unless it is impossible or totally impracticable for the earlier Bench to hear the matter. In a review petition, like in the present case, where the review petitioner contends that certain arguments raised by him have not been considered then it is only the judges who originally heard the matter who can decide whether such point was urged or not. In the present case the review application was based mainly on the contention that the affidavit dated 18.05.2016 was not taken into consideration by the Bench.

34. It is well known that parties raise various contentions in their pleadings or in their evidence. On many occasions when arguments are heard many of the pleas are not urged. Any judicial authority including the NGT which is presided over by a judicial member who may be a retired judge of this Court or of a High Court is expected to deal with all contentions raised before it. There is a presumption that judicial authorities must have dealt with all the contentions raised before them. If a party urges that some of the contentions urged by it have not been taken into consideration then it has to file a review application and it is but obvious that such review

application should be heard by the same Bench which had originally heard the matter.

35. Sub-rule (3) of Rule 22 of the National Green Tribunal (Practices and Procedure) Rules, 2011 clearly lays down that a review application shall be disposed of by circulation. If the review application is to be disposed of by circulation then there is no problem in the matter being circulated before the very same Bench which had earlier heard the matter. This can be done even at a place which may be different from the original place of hearing. It is only if the Bench decides to give oral hearing in the review application and notice is issued to the opposite party that sub-rule(2) of Rule 22 will come into operation. According to sub-rule(2) the matter should ordinarily be heard at the same place of sitting where it was originally decided. However, this is not a mandatory direction because sub-rule(2) itself contemplates that the matter shall 'ordinarily' be heard at the same place. In tribunals like the NGT where members may be transferred from one Bench to another or may be attending a Bench on circuit then problems can sometimes arise. These issues can be easily resolved by resorting to

the latest technology and if necessary the arguments in such cases can be heard by video conferencing. The normal rule that the same Bench should hear the review application should not be disturbed unless it is virtually impossible for the original Bench to hear the matter or the members of the Bench themselves opt not to hear the matter.

36. In this behalf, we must remind ourselves that the power of review is a power to be sparingly used. As pithily put by Justice V.R. Krishna Iyer, J., "A plea for review, unless the first judicial view is manifestly distorted, is like asking for the moon"[2]. The power of review is not like appellate power. It is to be exercised only when there is an error apparent on the face of the record. Therefore, judicial discipline requires that a review application should be heard by the same Bench. Otherwise, it will become an intra court appeal to another Bench before the same court or tribunal. This would totally undermine judicial discipline and judicial consistency.

[2] (1980) 2 SCC 167

37. We may refer to the judgment of this Court in ***Malthesh Gudda Pooja*** vs. ***State of Karnataka and Ors***. [3]. In that case a writ appeal was disposed of by a Division Bench comprising of Hon. V. Gopala Gowda and L. Narayana Swamy, JJ., at the Dharwad Circuit Bench of the Karnataka High Court. Thereafter, a review petition was filed before a Bench comprising of Hon. K. Sreedhar Rao and Ravi Malimath, JJ.. An objection was raised that the review petition should be heard by the same judges who had originally heard the matter but this objection was overruled and the review petition was allowed and the appeal was ordered to be listed afresh before the Division Bench. This appeal was listed before the Dharwad Circuit Bench consisting of Hon. D.V. Shailendra Kumar and N. Ananda, JJ.. This Bench held that the order of review passed was a nullity since the judges who had heard the review should not have heard the same especially when the judges of the original Bench were available. The matter came to this Court and this Court after referring to Order XLVII Rule 5 of CPC and Rule 5 of High Court of Karnataka Rules, 1959 and taking note of the fact that the Chief Justice of the Karnataka High

[3] (2011) 15 SCC 330

Court had passed an order that the review petition be listed as per roster held as follows :-

> "**18.** Order 47 Rule 5 of the Code and Chapter 3 Rule 5 of the High Court Rules require, and in fact mandate that if the Judges who made the order in regard to which review is sought continue to be the Judges of the Court, they should hear the application for review and not any other Judges unless precluded by death, retirement or absence from the Court for a period of six months from the date of the application. An application for review is not an appeal or a revision to a superior court but a request to the same court to recall or reconsider its decision on the limited grounds prescribed for review. The reason for requiring the same Judges to hear the application for review is simple. Judges who decided the matter would have heard it at length, applied their mind and would know best, the facts and legal position in the context of which the decision was rendered. They will be able to appreciate the point in issue, when the grounds for review are raised. If the matter should go before another Bench, the Judges constituting that Bench will be looking at the matter for the first time and will have to familiarise themselves about the entire case to know whether the grounds for review exist. Further, when it goes before some other Bench, there is always a chance that the members of the new Bench may be influenced by their own perspectives, which need not necessarily be that of the Bench which decided the case.
>
> **19.** Benjamin Cardozo's celebrated statement in *The Nature of Judicial Process*, (pp. 12-13) is relevant in this context:
>
> "There is in each of us a stream of tendency, whether you choose to call it philosophy or not, which gives coherence to thought and action. Judges cannot escape that current any more than other mortals. All their lives, forces which they do not recognise and cannot name, have been tugging at them—inherited instincts, traditional beliefs, acquired convictions; … In this mental background every problem finds its setting. We may try to see things as objectively as we please. Nonetheless, we can never see them with any eye except our own."
>
> **20.** Necessarily therefore, when a Bench other than the Bench which rendered the judgment, is required to consider

> an application for review, there is every likelihood of some tendency on the part of a different Bench to look at the matter slightly differently from the manner in which the authors of the judgment looked at it. Therefore the rule of consistency and finality of decisions, makes it necessary that subject to circumstances which may make it impossible or impractical for the original Bench to hear it, the review applications should be considered by the Judge or Judges who heard and decided the matter or if one of them is not available, at least by a Bench consisting of the other Judge. It is only where both Judges are not available (due to the reasons mentioned above) the applications for review will have to be placed before some other Bench as there is no alternative. But when the Judges or at least one of them, who rendered the judgment, continues to be members or member of the court and available to perform normal duties, all efforts should be made to place it before them. The said requirement should not be routinely dispensed with."

38. A perusal of the above judgment leaves no manner of doubt that this Court has held that in terms of Order XLVII Rule 5 of CPC, a review should normally be heard by the same Bench which passed the original order. We may reiterate the reasons given by this Court. These are :-

1) The judges who heard the matter originally have applied their mind and would know best the facts and legal position;

2) They will be in the best position to appreciate the matter in issue when a review is filed;

3) If the matter goes before another Bench that Bench will have to virtually hear the matter afresh;

4) Most importantly, when the matter goes to a new Bench the members of the new Bench may go by their own perspective and philosophy which may be totally different to that of the Bench which originally heard the matter.

We may again re-emphasize that judicial discipline, judicial traditions and consistency in pronouncements require that the Bench which heard the matter originally should hear the review petition unless it is virtually impractical for the original Bench to hear the matter, or where the members of the original Bench recuse.

39. Another ground raised is that the statutory appeal was already pending in this Court against the original order when the review application was taken up for hearing. It is contended, on the basis of Order XLVII Rule 1(2) of CPC, that review application should not have been taken up for hearing because the original applicant could have before this Court taken up all the points which he had taken in his review application. It is also contended that this is not a case where there is an error apparent on record and as such the power of review could not have been exercised. As far as the facts of this

case are concerned we are clearly of the view that the original applicant could have raised all issues which he raised in review application even by filing a counter affidavit in the appeal filed by the project proponent or by challenging the original order in this Court as he has done now. In this context, once this Court was seized of the matter and all issues were being urged, the NGT should not have proceeded to hear the review application.

40. We may add that on 21.12.2016, the review application itself was listed before the Bench of Dr. Justice Jawad Rahim and Dr. Ajay A. Deshpande, which adjourned the matter to 25.01.2017 to hear it regarding maintainability of the review application in view of the statutory appeal provided under the National Green Tribunal Act, 2010. However, the matter got listed before the other Bench and on 25.07.2017, the said Bench considered this objection raised by the project proponent in terms of Order XLVII Rule 1 of the CPC and the Bench held as follows:

> "Having perused the record, we find that the Appellant is seeking quashing of the order of compensation in totality and the Review Applicant is seeking enhancement of the compensation granted by the Tribunal. We do not see any commonality in the grounds resorted to by the Applicant and Appellant in the said Appeal. Exception to Sub-clause 2 of Order 47 Rule 1 of Code of Civil Procedure, therefore, does

> not come to the help of Respondent No.9. We are, therefore, of the considered opinion that the Review Application is maintainable. Plea of non-maintainability of the Review Application is rejected."

41. We are of the view that the aforesaid finding is incorrect. The project proponent had not only challenged the original order of the NGT on the ground that he had not violated the EC but also on the ground that the damages awarded were highly excessive. Therefore, the question that what should be the extent of damages was specifically before this Court. We are therefore, clearly of the opinion that the Bench hearing the review application erred in holding that the review application was maintainable despite the appeal pending before this Court.

42. We may also note that the Bench which heard the review has rejected all other grounds of review mainly on the ground that there is no error apparent on the face of the record but has only dealt with the issue of enhancement of damages to be imposed on the basis of 'Carbon Footprint' relying on the affidavit dated 18.05.2016. The Bench noted that this affidavit had not been taken into consideration by the earlier Bench. How could the latter Bench

hearing the review application know whether any reference was made to this affidavit at the time of original hearing or not? In fact, the project proponent urges that this affidavit was never filed on 18.05.2016.

43. Here, it would be pertinent to mention that according to the original applicant he was given oral permission by the Bench to file such an affidavit on 23.02.2016. We have perused the order dated 23.02.2016 and find that it makes no mention of any such request being made. If there is no such request then the question of issuing an oral direction to file such an affidavit does not arise. We may also add that after 23.02.2016, the matter was listed on numerous occasions i.e. 16.03.2016, 05.04.2016, 18.04.2016, 22.04.2016, 02.05.2016 and 05.05.2016 before the NGT. In none of the orders there is any reference to Carbon Footprint or to any affidavit to be filed by the original applicant. If an oral permission had been given, obviously the original applicant would have either filed an application or would have made a request that he wants to file such an affidavit.

44. The affidavit in question is dated 18.05.2016 and it is alleged that it was filed on 18.05.2016. The matter was listed for hearing on 19.05.2016 on which date also there is no reference to any such affidavit. It would be pertinent to note that in between the project proponent had filed an M.A. No. 389 of 2016 before the Principal Bench stating that an interim order dated 23.12.2015 had been passed against it and the matter was not being heard and, therefore, it may be heard by a Bench presided over by Dr. Justice Jawad Rahim, who apparently was holding Court in the Pune Bench at that time and the Principal Bench allowed the same on 02.05.2016 directing that the matter be listed before the Bench presided over by Dr. Justice Jawad Rahim. On 19.05.2016, the original applicant sought time stating that he had filed review application against the order dated 02.05.2016 before the Principal Bench praying that the matter should be heard by the earlier Bench presided over by Justice U.D. Salvi and, therefore, the matter could not be heard by Dr. Justice Jawad Rahim on that day and was further adjourned to 23.05.2016. There is no reference to Carbon Footprint in the order dated 19.05.2016. On 23.05.2016, the matter was heard by the Bench presided over by Dr. Justice Jawad

Rahim and the orders reserved. In this order also there is no reference to the affidavit with regard to Carbon Footprint. If the filing of the affidavit would have been brought to the notice of the Bench, it would have recorded in the order that some fresh affidavit had been filed. Subsequently, the project proponent, who is the contesting respondent, filed an application on 20.07.2016 praying that in the meantime he had obtained permission of the Environment Department and the SEIAA to which we have adverted hereinabove.

45. The original applicant sought time to file counter affidavit. The matter was adjourned to 28.07.2016 for re-hearing deleting the same from reserved list since there were subsequent developments. On 28.07.2016 the matter was got adjourned to 02.08.2016 on which date some execution application for implementation of the interim orders was taken up and direction was issued to the PMC. The matter was again taken up on 08.08.2016, 19.08.2016 and 24.08.2016 when the hearing was closed and judgment was pronounced through video conferencing on 27.09.2016. In none of these orders any mention was made for Carbon Footprint or to the

affidavit on the basis of which the review application was filed. On 23.05.2016 the project proponent filed reply to the affidavit dated 18.05.2016 filed by the original applicant in which they raised objections that such affidavit was not filed on 18.05.2016 and the copy of the same was handed over to them on 20.05.2016 and the original applicant had no permission to file such an affidavit. All these disputed issues as to whether such an affidavit was filed with the permission of the Court or it was referred to in the first hearing or in the second hearing could only be decided by the Bench which had heard the matter on 23.05.2016 or on 24.08.2016 on which dates the original application was reserved for orders.

46. We are of the considered view that the review application should have been heard by a Bench headed by Dr. Justice Jawad Rahim who was admittedly available and in fact continues to be a member of the NGT. Therefore, we are constrained to set aside the order passed in Review Application No.35 of 2016 dated 08.01.2018

Is Demolition the only answer?:

47. The next issue which arises is that what we should do with the construction. A large number of flats are already occupied and a large number of persons have paid money for occupying these flats. Learned counsel appearing for those persons who have purchased the flats urged that the flats should not be demolished otherwise they shall be put to great monetary loss. As pointed out above now there are 807 flats and 117 shops which are either constructed or under construction. These flats are 1, 1.5 and 2 BHK flats and small shops and offices. The project proponent has already taken money from these persons and a large number of flats and shops have already been occupied and even where the remaining flats and shops are not occupied, persons belonging to the middle class have invested their life's earnings in this project. Keeping in view the interest of these third parties who were not parties before the NGT, we are of the view that in the peculiar facts and circumstances of the case, demolition is not the answer. This would put innocent people at loss. Normally, this Court is loathe to legalize illegal constructions but in the present case we have no option but to do so.

48. We hasten to clarify that the project proponent cannot be permitted to build any more flats. What we are permitting him to do is to only complete construction of 807 flats, 117 shops/offices and cultural centre including the club house. We make it clear that he shall not be allowed to build the two buildings in which he was to construct 454 tenements, and will obviously have to return the money with interest at the rate of 9% per annum to the individual(s) who have invested in the same. There is no equity in favour of these persons since the plan to raise this construction was submitted only after 2014 when the validity of the earlier EC had already ended. Therefore, though we uphold the order of the NGT dated 27.09.2016 that demolition is not the answer in the peculiar facts of the case, we also make it clear that the project proponent cannot be permitted to build nothing more than 807 flats, 117 shops/offices, cultural centre and club house.

Whether the Original Applicant is entitled to Special Damages:

49. On behalf of the original applicant various issues were raised before us which had not been raised before the NGT and find no

mention either in the original order or even in the order under review. We are not considering those issues. It was urged that the project proponent has reduced the area of Cultural Centre. This averment is not correct as pointed by senior counsel appearing for the Union of India. The development plan is not only for the area under the project but covers a much larger area where more than one builder and projects may be involved. It is not the responsibility of only one builder to provide the entire community services and these have to be provided pro rata by all developers of projects in the area. It was also alleged that the builder had built 3 basements which are illegal. On the other hand it was contended by the learned senior counsel for the project proponent that one of the basements has already been blocked and the other two basements shall also not be put in use and would be completely blocked off. We make it clear that PMC and SEIAA will ensure that the project proponent blocks the basements in such a manner that they can never be put to any use. Another argument raised by the original applicant was that the project proponent had stated that though he would not use any ground water, however it has utilized the ground water and violated the condition of the EC. Reliance is

placed on certain photographs showing water being pumped. On the other hand on behalf of the project proponent it has been urged that this water was being pumped out from the excavated area when the building was built and the water level had risen. We cannot decide this disputed question of fact in these proceedings.

50. We may also point out that in this case the original applicant has tried to project the case as if he is filing the case in the public interest and has prayed for certain general directions. He has also claimed special damages for himself. The main grievance of the original applicant is with regard to the violation of the EC and according to him these violations started in the year 2009. The original applicant had applied for a flat in the project in question and had issued notice to the project proponent on 21.10.2011 about deficiency in service. This notice was replied to on 17.11.2011. Thereafter, the original applicant filed Consumer Complaint No. 95 of 2012 on 22.02.2012. This complaint was decided on 20.11.2014. Thereafter, the order of the District Consumer Disputes Redressal Forum was challenged before the State Consumer Redressal Commission both by the project

proponent and original applicant in February, 2015. It appears that thereafter there were complaints and counter complaints filed by the parties against each other and the project proponent filed a civil suit for defamation against the original applicant on 02.12.2015 and it was only thereafter on 07.12.2015 an application was filed in the NGT by the original applicant. We are highlighting these facts only to emphasize the fact that this litigation is obviously not a Public Interest Litigation. Therefore, the claim of the original applicant to award him special damages cannot be accepted.

Quantification of damages:

51. We need to decide and re-assess the issue of damages since the original applicant has also challenged the original order of the NGT. While assessing the damages we may note certain facts:-

1) The EC was granted on 04.04.2008 but construction commenced after issuance of consent to establish dated 20.06.2009 and the EC would be valid for a period of 5 years from the date of such consent, i.e. upto 19.06.2014;

2) The EC dated 04.04.2008 was granted for construction of built up area 57,658.42 sq.mtrs., whereas admittedly, as of now the constructed built up area is 1,00,002.25 sq. mtrs.. Therefore, there is clear-cut violation of the terms of the EC;

3) Any construction raised after 19.06.2014 is without any EC especially since we have held that EC granted on 20.11.2017 is invalid.

Carbon Footprint:

52. The main case of the original applicant is that the damages should be assessed on a scientific basis by calculating the damage caused to the environment by the project proponent on the basis of 'Carbon Footprint'. In the absence of detailed submissions, we find ourselves totally unequipped to go into this aspect of the matter.

53. In the original application filed by the original applicant before the NGT, there is no reference to Carbon Footprint. Even when evidence was initially led, no reference was made to the same. The concept of Carbon Footprint was introduced by the original

applicant only in his affidavit dated 18.05.2016. In fact, according to the project proponent this affidavit was not even filed on 18.05.2016. It appears to us that there is no order of the NGT specifically permitting the original applicant to file such an affidavit. The submission of original applicant is that he was orally permitted to file the same. These disputed questions would have been only decided by the Original Bench and, therefore, we have already set aside the order passed in the review application dated 08.01.2018.

54. Courts cannot introduce a new concept of assessing and levying damages unless expert evidence in this behalf is led or there are some well established principles. We find that no such principles have been accepted or established in the present case. When there are no pleadings in this regard we fail to understand how the concept of Carbon Footprint can be introduced after evidence has been closed, at the stage of arguments. We cannot assess the impact in actual terms and, therefore, we can only impose damages or costs on principles which have been well settled by law.

55. We may also note that the method to which the original applicant referred to is not part of any law, rule or executive instructions. This method is no doubt used to compensate and impose damages on nations but we cannot apply this method while imposing damages on a person who violates the EC. We may also add that the calculation made by the original applicant in his affidavit dated 18.05.2016 filed before the NGT are based on assumptions some of which we have not found to be correct namely – (1) use of ground water; (2) reduction of Cultural Centre space; (3) construction of basements etc..

56. We may make it clear that we are not laying down the law that damages cannot be assessed on the basis of Carbon Footprint. In a case where expert evidence in this behalf is led or on the basis of empirical data it is established that by applying the principles of Carbon Footprint damages can be assessed, the Court may, in the facts and circumstances of the case, rely upon such data but, in the present case, there is no such reliable material.

57. Having held so we are definitely of the view that the project proponent who has violated law with impunity cannot be allowed to go scot-free. This Court has in a number of cases awarded 5% of the project cost as damages. This is the general law. However, in the present case we feel that damages should be higher keeping in view the totally intransigent and unapologetic behaviour of the project proponent. He has maneuvered and manipulated officials and authorities. Instead of 12 buildings, he has constructed 18; from 552 flats the number of flats has gone upto 807 and now two more buildings having 454 flats are proposed. The project proponent contends that he has made smaller flats and, therefore, the number of flats has increased. He could not have done this without getting fresh EC. With the increase in the number of flats the number of persons, residing therein is bound to increase. This will impact the amount of water requirement, the amount of parking space, the amount of open area etc.. Therefore, in the present case, we are clearly of the view that the project proponent should be and is directed to pay damages of Rs.100 crores or 10% of the project cost whichever is more. We also make it clear that while calculating the project cost the entire cost of the land based

on the circle rate of the area in the year 2014 shall be added. The cost of construction shall be calculated on the basis of the schedule of rates approved by the Public Works Department (PWD) of the State of Maharashtra for the year 2014. In case the PWD of Maharashtra has not approved any such rates then the Central Public Works Department rates for similar construction shall be applicable. We have fixed the base year as 2014 since the original EC expired in 2014 and most of the illegal construction took place after 2014. In addition thereto, if the project proponent has taken advantage of Transfer of Development Rights (for short 'TDR') with reference to this project or is entitled to any TDR, the benefit of the same shall be forfeited and if he has already taken the benefit then the same shall either be recovered from him or be adjusted against its future projects. The project proponent shall also pay a sum of Rs. 5 crores as damages, in addition to the above for contravening mandatory provisions of environmental laws.

58. Normally, this Court is not inclined to grant *ex post facto* EC. However, in the peculiar facts of this case we direct that once the project proponent deposits the amount of damages as directed by

us then the project proponent may approach the appropriate authority for grant of EC. The authority may impose such conditions for grant of EC as it deems necessary.

Findings and Directions:

59. We summarise our findings and directions as follows:

(i) That built up area under the notification of 14.09.2006 means all constructed area which is not open to the sky;

(ii) Built up area under the notification of 04.04.2011 means all covered area including basement and service areas;

(iii) The communication dated 07.07.2017 is totally illegal and accordingly quashed;

(iv) The original application cannot be treated as a public interest litigation;

(v) We are not taking note of the allegations levelled against the individuals who have not been arrayed as parties;

(vi) That the order dated 27.09.2016 of the NGT is upheld except in so far as Direction No. 1 is concerned;

(vii) The order in review application passed by the NGT on 08.01.2018 is held to be totally illegal and is accordingly set aside;

(viii) We uphold the original order dated 27.09.2016 holding that the construction raised by the project proponent was in violation of the environmental clearance granted to it on 04.04.2008. We uphold the fine imposed upon the PMC and the direction given to the PMC to take appropriate action against the erring officials. We also uphold the direction given to the Chief Secretary to the State of Maharashtra and in addition, direct that the Chief Secretary to the State of Maharashtra shall look into the conduct of the official holding the post of Principal Secretary (Environment) to the Government of Maharashtra on 27.09.2016 and will submit his report to the NGT within three months from today;

(ix) We impose damages of Rs.100 crores or 10% of the project cost, whichever is higher on the project proponent and in addition thereto, project proponent will pay Rs.5 crores as levied by the NGT in its order dated 27.09.2016;

(x) Project proponent shall not be permitted to raise construction of two buildings having 454 tenements;

(xi) We direct that the project proponent shall only be permitted to complete construction of a total 807 flats, 117 shops/offices and cultural centre including club house;

(xii) The project proponent will only be permitted to seek environmental clearance for completion of the project subject to payment of costs in the aforesaid terms and it may be granted *ex post facto* environmental clearance in the peculiar facts of the case, on such terms and conditions as the environmental authority deems fit and proper;

(xiii) The project proponent is granted six months' time to deposit the amount of damages imposed in terms of

direction no. (ix) *supra* in the Registry of this Court. In case the project proponent does not deposit the amount within six months then all the assets of the project proponent i.e. M/s. Goel Ganga Developers India Pvt. Ltd. as well as its Directors shall be attached and the amount of damages shall be recovered by sale of those assets. It is further directed that in case this amount is not deposited within the period of six months then the licence/registration/permission granted to M/s. Goel Ganga Developers India Pvt. Ltd. to develop any "real estate project" within the meaning of the Real Estate (Regulation and Development) Act, 2016 shall be cancelled and the project proponent i.e. M/s. Goel Ganga Developers India Pvt. Ltd. and its Directors shall not be granted permission to develop any "real estate project" under the Real Estate (Regulation and Development) Act, 2016 without permission of this Court.

(xiv) The matter be listed on 22.10.2018 for issuing appropriate directions as to how the amount of damages are to be utilised;

60. All the appeals are disposed of in the aforesaid terms. Pending application(s) if any, shall also stand disposed of.

Ax.N 2016

MINISTRY OF ENVIRONMENT, FOREST AND CLIMATE CHANGE

NOTIFICATION

New Delhi, the 9th December, 2016

S.O. 3999(E).—Whereas, by notification of the Government of India in the erstwhile Ministry of Environment and Forests number S.O.1533 (E), dated the 14th September, 2006 issued under sub-section (1) read with clause (v) of sub-section (2) of section (3) of the Environment (Protection) Act, 1986 and clause (d) of the sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986, the Central Government directed that on and from the date of its publication, the required construction of new projects or activities or the expansion or modernisation of existing projects or activities listed in the Schedule to the said notification entailing the capacity addition with change in process or technology and or product mix shall be undertaken in any part of India only after prior environmental clearance from the Central Government or as the case may be, by the State Level Environment Impact Assessment Authority, duly constituted by the Central Government under sub-section (3) of section 3 of the said Act, in accordance with the procedure specified therein;

And whereas, the said Ministry has received suggestions for ensuring Ease of Doing Responsible Business; and streamlining the permissions for buildings and construction sector which is important for providing houses and for this purpose the scheme of Housing for all by 2022 with an objective of making available affordable housing to weaker sections in urban area has ambitious target;

And whereas clause (a) of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 provides that, whenever the Central Government considers that prohibition or restrictions of any industry or carrying on any processes or operation in any area should be imposed, it shall give notice of its intention to do so;

And whereas, a draft notification for making amendments in the Environment Impact Assessment Notification, 2006 issued in exercise of the powers conferred under sub-section (1) and clause (v) of sub-section (2) of section (3) of the Environment (Protection) Act, 1986 read with clause (d) of the sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 was published, vide number S.O.1595 (E) dated the 29th April 2016, inviting objections and suggestions from all the persons likely to be affected thereby, within a period of sixty days from the date of publication of said notification in the Gazette of India;

And whereas, all objections and suggestions received in response to the above mentioned draft notification have been duly considered by the Central Government;

Now, therefore, in exercise of powers conferred by sub-section (1) and clause (v) of sub-section (2) of section 3 of the Environment (Protection) Act, 1986 (29 of 1986), read with clause (d) of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986, the Central Government hereby makes the following further amendments in the Environment Impact Assessment Notification, 2006 namely:-

In the said Notification,-

(I) after paragraph 13, the following paragraph shall be inserted, namely:-

"14 . Integration of environmental condition in building bye-laws.-

(1) The integrated environmental conditions with the building permission being granted by the local authorities and the construction of buildings as per the size shall adhere to the objectives and monitorable environmental conditions as given at Appendix-XIV.

(2) The States adopting the objectives and monitorable environmental conditions referred to in sub-paragraph (1), in the building bye-laws and relevant State laws and incorporating these conditions in the approvals given for building construction making it legally enforceable shall not require a separate environmental clearance from the Ministry of Environment, Forest and Climate Change for individual buildings.

(3) The States may forward the proposed changes in their bye-laws and rules to the Ministry of Environment, Forest and Climate Change, who in turn will examine the said draft bye-laws and rules and convey the concurrence to the State Governments.

(4) When the State Governments notifies the bye-laws and rules concurred by the Ministry of Environment, Forest and Climate Change, the Central Government may issue an order stating that no separate environmental clearance is required for buildings to be constructed in the States or local authority areas.

(5) The local authorities like Development Authorities, Municipal Corporations, may certify the compliance of the environmental conditions prior to issuance of Completion Certificate, as applicable as per the requirements stipulated for such buildings based on the recommendation of the Environmental Cell constituted in the local authority.

(6) The State Governments where bye-laws or rules are not framed may continue to follow the existing procedure of appraisal for individual projects and grant of Environmental Clearance for buildings and constructions as per the provisions laid down in this notification.

(7) For the purpose of certification regarding incorporation of environmental conditions in buildings, the Ministry of Environment, Forest and Climate Change may empanel through competent agencies, the Qualified Building Environment Auditors (QBEAs) to assess and certify the building projects, as per the requirements of this notification and the procedure for accreditation of Qualified Building Auditors and their role as given at Appendix-XV.

(8) In order to implement the integration of environmental condition in building bye-laws, the State Governments or Local Authorities may constitute the Environment Cell (herein after called as Cell), for compliance and monitoring and to ensure environmental planning within their jurisdiction.

(9) The Cell shall monitor the implementation of the bye-laws and rules framed for Integration of environmental conditions for construction of building and the Cell may also allow the third part auditing process for oversight, if any.

(10) The Cell shall function under the administrative control of the Local Authorities.

(11) The composition and functions of the Cell are given at Appendix-XVI.

(12) The Local Authorities while integrating the environmental concerns in the building bye-laws, as per their size of the project, shall follow the procedure, as given below:

BUILDINGS CATEGORY '1' (5,000 to < 20,000 Square meters)

A Self declaration Form to comply with the environmental conditions (Appendix XIV) along with Form 1A and certification by the Qualified Building Environment Auditor to be submitted online by the project proponent besides application for building permission to the local authority along with the specified fee in separate accounts. Thereafter, the local authority may issue the building permission incorporating the environmental conditions in it and allow the project to start based on the self declaration and certification along with the application. After completion of the construction of the building, the project proponent may update Form 1A online based on audit done by the Qualified Building Environment Auditor and shall furnish the revised compliance undertaking to the local authority. Any non-compliance issues in buildings less than 20,000 square meters shall be dealt at the level of local body and the State through existing mechanism.

OTHER BUILDINGS CATEGORIES (≥ 20,000 Square meters)

The project proponent may submit online application in Form 1 A alongwith specified fee for environmental appraisal and additional fee for building permission. The fee for environmental appraisal will be deposited in a separate account. The Environment Cell will process the application and present it in the meeting of the Committee headed by the authority competent to give building permission in that local authority. The Committee will appraise the project and stipulate the environmental conditions to be integrated in the building permission. After recommendations of the Committee, the building permission and environmental clearance will be issued in an integrated format by the local authority.

The project proponent shall submit Performance Data and Certificate of Continued Compliance of the project for the environmental conditions parameters applicable after completion of construction from Qualified Building Environment Auditors every five years to the Environment Cell with special focus on the following parameters:-

(a) Energy Use (including all energy sources).

(b) Energy generated on site from onsite Renewable energy sources.

(c) Water use and waste water generated, treated and reused on site.

(d) Waste Segregated and Treated on site.

(e) Tree plantation and maintenance.

After completion of the project, the Cell shall randomly check the projects compliance status including the five years audit report. The State Governments may enact the suitable law for imposing penalties for non-compliances of the

environmental conditions and parameters. The Cell shall recommend financial penalty, as applicable under relevant State laws for non-compliance of conditions or parameters to the local authority. On the basis of the recommendation of the Cell, the local authority may impose the penalty under relevant State laws. The cases of false declaration or certification shall be reported to the accreditation body and to the local body for blacklisting of Qualified Building Environment Auditors and financial penalty on the owner and Qualified Building Environment Auditors.

No Consent to Establish and Operate under the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 will be required from the State Pollution Control Boards for residential buildings up to 1,50,000 square meters.";

(II) In the Schedule, for item 8 and the entries relating thereto, the following item and entries shall be substituted, namely:-

(1)	(2)	(3)	(4)	(5)
"8		Building / Construction projects / Area Development projects and Townships		
8 (a)	Building and Construction projects		≥ 20,000 sq. mtrs and < 1,50,000 sq. mtrs of built up area	The term "built up area" for the purpose of this notification is the built up or covered area on all floors put together including its basement and other service areas, which are proposed in the buildings and construction projects. Note 1. The projects or activities shall not include industrial shed, universities, college, hostel for educational institutions, but such buildings shall ensure sustainable environmental management, solid and liquid and implement environmental conditions given at Appendix-XIV. Note 2.-General Condition shall not apply. Note 3.-The exemptions granted at Note 1 will be available only for industrial shed after integration of environmental norms with building permissions at the level of local authority.
8 (b)	Townships and Area Development projects	≥ 3,00,000 sq. mtrs of built up area or Covering an area ≥ 150 ha	≥1,50,000 sq. mtrs and < 3,00,000 sq. mtrs built up area or covering an area ≥ 50 ha and < 150 ha	Note.- General Condition shall not apply".

[F. No. 19-2/2013-IA-III (Pt.)]

MANOJ KUMAR SINGH, Jt. Secy.

Note: The principal notification was published in the Gazette of India, Extraordinary, Part II, Section 3, Sub-section(ii) vide number S.O. 1533(E), dated the 14th September, 2006 and subsequently amended vide numbers S.O.1737(E) dated the 11th October, 2007, S.O. 3067(E), dated the 1st December, 2009, S.O.695(E), dated the 4th April, 2011, S.O.2896(E), dated the 13th December, 2012 , S.O.674(E), dated the 13th March, 2013, S.O.2559(E), dated the 22nd August, 2013, S.O. 2731(E), dated the 9th September, 2013, S.O. 562(E), dated the 26th February, 2014, S.O.637(E), dated the 28th February, 2014, S.O.1599(E), dated the 25th June, 2014, S.O. 2601 (E), dated 7th October, 2014, S.O. 2600(E) dated 9th October, 2014, S.O. 3252(E) dated 22nd December, 2014, S.O. 382 (E), dated 3rd February, 2015, and S.O. 811(E), dated 23rd March, 2015, S.O. 996 (E) dated 10th April, 2015, S.O. 1142 (E) dated 17th April, 2015, S.O. 1141 (E) dated 29th April, 2015, S.O. 1834(E) dated 6th July, 2015 and S.O. 2572(E) dated 14th September, 2015, S.O. 141(E) dated 15th January, 2016, S.O. 190(E) dated 20th January, 2016, S.O. 648(E) dated 3rd March, 2016 and S.O. 2269(E) dated 1st July, 2016.

APPENDIX –XIV

ENVIRONMENTAL CONDITIONS FOR BUILDINGS AND CONSTRUCTIONS

(CATEGORY '1': 5,000 to less than 20,000 Square meters)

MEDIUM	S.N.	ENVIRONMENTAL CONDITIONS
Topography and Natural Drainage	1	The natural drain system should be maintained for ensuring unrestricted flow of water. No construction shall be allowed to obstruct the natural drainage through the site. No construction is allowed on wetland and water bodies. Check dams, bio-swales, landscape, and other sustainable urban drainage systems (SUDS) are allowed for maintaining the drainage pattern and to harvest rain water.
Water Conservation, Rain Water Harvesting, and Ground Water Recharge	2	Use of water efficient appliances shall be promoted. The local bye-law provisions on rain water harvesting should be followed. If local bye-law provision is not available, adequate provision for storage and recharge should be followed as per the Ministry of Urban Development Model Building Bye-Laws, 2016. A rain water harvesting plan needs to be designed where the recharge bores (minimum one recharge bore per 5,000 square meters of built up area) is recommended. Storage and reuse of the rain water harvested should be promoted. In areas where ground water recharge is not feasible, the rain water should be harvested and stored for reuse. The ground water shall not be withdrawn without approval from the Competent Authority. All recharge should be limited to shallow aquifer.
	2(a)	At least 20% of the open spaces as required by the local building bye-laws shall be pervious. Use of Grass pavers, paver blocks with at least 50% opening, landscape etc. would be considered as pervious surface.
Waste Management	3	Solid waste: Separate wet and dry bins must be provided in each unit and at the ground level for facilitating segregation of waste. Sewage: In areas where there is no municipal sewage network, onsite treatment systems should be installed. Natural treatment systems which integrate with the landscape shall be promoted. As far as possible treated effluent should be reused. The excess treated effluent shall be discharged following the CPCB norms. Sludge from the onsite sewage treatment, including septic tanks, shall be collected, conveyed and disposed as per the Ministry of Urban Development, Central Public Health and Environmental Engineering Organisation (CPHEEO) Manual on Sewerage and Sewage Treatment Systems, 2013. The provisions of the Solid Waste (Management) Rules 2016 and the e-waste (Management) Rules 2016, and the Plastics Waste (Management) Rules 2016 shall be followed.
Energy	4	Compliance with the Energy Conservation Building Code (ECBC) of Bureau of Energy Efficiency shall be ensured. Buildings in the States which have notified their own ECBC, shall comply with the State ECBC. Outdoor and common area lighting shall be Light Emitting Diode (LED). Solar, wind or other Renewable Energy shall be installed to meet electricity generation equivalent to 1% of the demand load or as per the state level/ local building bye-laws requirement, whichever is higher. Solar water heating shall be provided to meet 20% of the hot water demand of the commercial and institutional building or as per the requirement of the local building bye-laws, whichever is higher. Residential buildings are also recommended to meet its hot water demand from solar water heaters, as far as possible. Concept of passive solar design that minimize energy consumption in buildings by using design elements, such as building orientation, landscaping, efficient building envelope, appropriate fenestration, increased day lighting design and thermal mass etc. shall be incorporated in the building design. Wall, window, and roof u-values shall be as per ECBC specifications.

Air Quality and Noise	5	Dust, smoke & other air pollution prevention measures shall be provided for the building as well as the site. These measures shall include screens for the building under construction, continuous dust/ wind breaking walls all around the site (at least 3 meter height). Plastic/tarpaulin sheet covers shall be provided for vehicles bringing in sand, cement, murram and other construction materials prone to causing dust pollution at the site as well as taking out debris from the site. Sand, murram, loose soil, cement, stored on site shall be covered adequately so as to prevent dust pollution. Wet jet shall be provided for grinding and stone cutting. Unpaved surfaces and loose soil shall be adequately sprinkled with water to suppress dust. All construction and demolition debris shall be stored at the site (and not dumped on the roads or open spaces outside) before they are properly disposed. All demolition and construction waste shall be managed as per the provisions of the Construction and Demolition Waste Rules 2016. All workers working at the construction site and involved in loading, unloading, carriage of construction material and construction debris or working in any area with dust pollution shall be provided with dust mask. For indoor air quality the ventilation provisions as per National Building Code of India shall be made.
	5 (a)	The location of the DG set and exhaust pipe height shall be as per the provisions of the CPCB norms.
Green Cover	6	A minimum of 1 tree for every 80 square meters of land should be planted and maintained. The existing trees will be counted for this purpose. Preference should be given to planting native species.
	6 (a)	Where the trees need to be cut, compensatory plantation in the ratio of 1:3 (i.e. planting of 3 trees for every 1 tree that is cut) shall be done and maintained.

(Category '2': 20,000 to less than 50,000 Square meters)

MEDIUM	S.N.	ENVIRONMENTAL CONDITIONS
Topography and Natural Drainage	1	The natural drain system should be maintained for ensuring unrestricted flow of water. No construction shall be allowed to obstruct the natural drainage through the site. No construction is allowed on wetland and water bodies. Check dams, bio-swales, landscape, and other sustainable urban drainage systems (SUDS) are allowed for maintaining the drainage pattern and to harvest rain water. Buildings shall be designed to follow the natural topography as much as possible. Minimum cutting and filling should be done.
Water Conservation, Rain Water Harvesting, and Ground Water Recharge	2	A complete plan for rain water harvesting, water efficiency and conservation should be prepared. Use of water efficient appliances should be promoted with low flow fixtures or sensors. The local bye-law provisions on rain water harvesting should be followed. If local bye-law provision is not available, adequate provision for storage and recharge should be followed as per the Ministry of Urban Development Model Building Bye-laws, 2016. A rain water harvesting plan needs to be designed where the recharge bores of minimum one recharge bore per 5,000 square meters of built up area and storage capacity of minimum one day of total fresh water requirement shall be provided. In areas where ground water recharge is not feasible, the rain water should be harvested and stored for reuse. The ground water shall not be withdrawn without approval from the Competent Authority. All recharge should be limited to shallow aquifer
	2(a)	At least 20% of the open spaces as required by the local building bye-laws shall be pervious. Use of Grass pavers, paver blocks with at least 50% opening, landscape etc. would be considered as pervious surface.

Waste Management	3	Solid waste: Separate wet and dry bins must be provided in each unit and at the ground level for facilitating segregation of waste. Sewage: Onsite sewage treatment of capacity of treating 100% waste water to be installed. Treated waste water shall be reused on site for landscape, flushing, cooling tower, and other end-uses. Excess treated water shall be discharged as per CPCB norms. Natural treatment systems shall be promoted. Sludge from the onsite sewage treatment, including septic tanks, shall be collected, conveyed and disposed as per the Ministry of Urban Development, Central Public Health and Environmental Engineering Organisation (CPHEEO) Manual on Sewerage and Sewage Treatment Systems, 2013. The provisions of the Solid Waste (Management) Rules 2016 and the e-waste (Management) Rules 2016, and the Plastics Waste (Management) Rules 2016 shall be followed.
	3 (a)	All non-biodegradable waste shall be handed over to authorized recyclers for which a written tie up must be done with the authorized recyclers.
	3(b)	Organic waste compost/ Vermiculture pit with a minimum capacity of 0.3 kg /person/day must be installed.
Energy	4	Compliance with the Energy Conservation Building Code (ECBC) of Bureau of Energy Efficiency shall be ensured. Buildings in the States which have notified their own ECBC, shall comply with the State ECBC. Outdoor and common area lighting shall be LED. Concept of passive solar design that minimize energy consumption in buildings by using design elements, such as building orientation, landscaping, efficient building envelope, appropriate fenestration, increased day lighting design and thermal mass etc. shall be incorporated in the building design. Wall, window, and roof u-values shall be as per ECBC specifications.
	4 (a)	Solar, wind or other Renewable Energy shall be installed to meet electricity generation equivalent to 1% of the demand load or as per the state level/ local building bye-laws requirement, whichever is higher.
	4 (b)	Solar water heating shall be provided to meet 20% of the hot water demand of the commercial and institutional building or as per the requirement of the local building bye-laws, whichever is higher. Residential buildings are also recommended to meet its hot water demand from solar water heaters, as far as possible.
	4 (c)	Use of environment friendly materials in bricks, blocks and other construction materials, shall be required for at least 20% of the construction material quantity. These include flyash bricks, hollow bricks, AACs, Fly Ash Lime Gypsum blocks, Compressed earth blocks, and other environment friendly materials. Fly ash should be used as building material in the construction as per the provisions of the Fly Ash Notification of September, 1999 as amended from time to time.
Air Quality and Noise	5	Dust, smoke & other air pollution prevention measures shall be provided for the building as well as the site. These measures shall include screens for the building under construction, continuous dust/ wind breaking walls all around the site (at least 3 meter height). Plastic/tarpaulin sheet covers shall be provided for vehicles bringing in sand, cement, murram and other construction materials prone to causing dust pollution at the site as well as taking out debris from the site. Sand, murram, loose soil, cement, stored on site shall be covered adequately so as to prevent dust pollution. Wet jet shall be provided for grinding and stone cutting. Unpaved surfaces and loose soil shall be adequately sprinkled with water to suppress dust. All construction and demolition debris shall be stored at the site (and not dumped on the roads or open spaces outside) before they are properly disposed. All demolition and construction waste shall be managed as per the provisions of the Construction and Demolition Waste Rules 2016. All workers working at the construction site and involved in loading, unloading, carriage of construction material and construction debris or working in any area with

		dust pollution shall be provided with dust mask. For indoor air quality the ventilation provisions as per National Building Code of India.
	5 (a)	The location of the DG set and exhaust pipe height shall be as per the provisions of the CPCB norms.
Green Cover	6	A minimum of 1 tree for every 80 sq.mt. of land should be planted and maintained. The existing trees will be counted for this purpose. Preference should be given to planting native species.
	6 (a)	Where the trees need to be cut, compensatory plantation in the ratio of 1:3 (i.e. planting of 3 trees for every 1 tree that is cut) shall be done and maintained.
Top Soil preservation and reuse	7	Topsoil should be stripped to a depth of 20 cm from the areas proposed for buildings, roads, paved areas, and external services. It should be stockpiled appropriately in designated areas and reapplied during plantation of the proposed vegetation on site.
Transport	8	A comprehensive mobility plan, as per MoUD best practices guidelines (URDPFI), shall be prepared to include motorized, non-motorized, public, and private networks. Road should be designed with due consideration for environment, and safety of users. The road system can be designed with these basic criteria. 1. Hierarchy of roads with proper segregation of vehicular and pedestrian traffic. 2. Traffic calming measures. 3. Proper design of entry and exit points. 4. Parking norms as per local regulation.

(Category '3': 50000 to 150000 m^2)

MEDIUM	S.N.	ENVIRONMENTAL CONDITIONS
Topography and Natural Drainage	1	The natural drain system should be maintained for ensuring unrestricted flow of water. No construction shall be allowed to obstruct the natural drainage through the site. No construction is allowed on wetland and water bodies. Check dams, bio-swales, landscape, and other sustainable urban drainage systems (SUDS) are allowed for maintaining the drainage pattern and to harvest rain water. Buildings shall be designed to follow the natural topography as much as possible. Minimum cutting and filling should be done.
Water conservation - Rain Water Harvesting, and Ground Water Recharge	2	A complete plan for rain water harvesting, water efficiency and conservation should be prepared. The local bye-law provisions on rain water harvesting should be followed. If local bye-law provisions are not available, adequate provision for storage and recharge should be followed as per the Ministry of Urban Development Model Building Bye-laws, 2016. A rain water harvesting plan needs to be designed where the recharge bores of minimum one recharge bore per 5,000 square meters of built up area and storage capacity of minimum one day of total fresh water requirement shall be provided. In areas where ground water recharge is not feasible, the rain water should be harvested and stored for reuse. The ground water shall not be withdrawn without approval from the Competent Authority. All recharge should be limited to shallow aquifer.
	2(a)	At least 20% of the open spaces as required by the local building bye-laws shall be pervious. Use of Grass pavers, paver blocks with at least 50% opening, landscape etc. would be considered as pervious surface.
	2 (b)	Use of water efficient appliances should be promoted. Low flow fixtures or sensors be used to promote water conservation.

	2 (c)	Separation of grey and black water should be done by the use of dual plumbing system. In case of single stack system separate recirculation lines for flushing by giving dual plumbing system be done.
Solid Waste Management	3	Solid waste: Separate wet and dry bins must be provided in each unit and at the ground level for facilitating segregation of waste. The provisions of the Solid Waste (Management) Rules 2016 and the e-waste (Management) Rules 2016, and the Plastics Waste (Management) Rules 2016 shall be followed.
	3 (a)	All non-biodegradable waste shall be handed over to authorized recyclers for which a written tie up must be done with the authorized recyclers.
	3(b)	Organic waste composter/Vermiculture pit with a minimum capacity of 0.3 kg /person/day must be installed.
Sewage Treatment Plant	4	Onsite sewage treatment of capacity of treating 100% waste water to be installed. Treated waste water shall be reused on site for landscape, flushing, cooling tower, and other end-uses. Excess treated water shall be discharged as per CPCB norms. Natural treatment systems shall be promoted. Sludge from the onsite sewage treatment, including septic tanks, shall be collected, conveyed and disposed as per the Ministry of Urban Development, Central Public Health and Environmental Engineering Organisation (CPHEEO) Manual on Sewerage and Sewage Treatment Systems, 2013.
Energy	5	Compliance with the Energy Conservation Building Code (ECBC) of Bureau of Energy Efficiency shall be ensured. Buildings in the States which have notified their own ECBC, shall comply with the State ECBC. Outdoor and common area lighting shall be LED. Concept of passive solar design that minimize energy consumption in buildings by using design elements, such as building orientation, landscaping, efficient building envelope, appropriate fenestration, increased day lighting design and thermal mass etc. shall be incorporated in the building design. Wall, window, and roof u-values shall be as per ECBC specifications.
	5 (a)	Solar, wind or other Renewable Energy shall be installed to meet electricity generation equivalent to 1% of the demand load or as per the state level/ local building bye-laws requirement, whichever is higher.
	5 (b)	Solar water heating shall be provided to meet 20% of the hot water demand of the commercial and institutional building or as per the requirement of the local building bye-laws, whichever is higher. Residential buildings are also recommended to meet its hot water demand from solar water heaters, as far as possible.
	5 (c)	Use of environment friendly materials in bricks, blocks and other construction materials, shall be required for at least 20% of the construction material quantity. These include flyash bricks, hollow bricks, AACs, Fly Ash Lime Gypsum blocks, Compressed earth blocks, and other environment friendly materials. Fly ash should be used as building material in the construction as per the provisions of the Fly Ash Notification of September, 1999 as amended from time to time.
Air Quality and Noise	6	Dust, smoke & other air pollution prevention measures shall be provided for the building as well as the site. These measures shall include screens for the building under construction, continuous dust/ wind breaking walls all around the site (at least 3 meter height). Plastic/tarpaulin sheet covers shall be provided for vehicles bringing in sand, cement, murram and other construction materials prone to causing dust pollution at the site as well as taking out debris from the site. Wheel washing for the vehicles used be done. Sand, murram, loose soil, cement, stored on site shall be covered adequately so as to prevent dust pollution. Wet jet shall be provided for grinding and stone cutting. Unpaved surfaces and loose soil shall be adequately sprinkled with water to suppress dust. All construction and demolition debris shall be stored at the site (and not dumped on the roads or open spaces outside) before they are properly disposed. All demolition and construction waste shall be managed as per the provisions of the Construction

		and Demolition Waste Rules 2016. All workers working at the construction site and involved in loading, unloading, carriage of construction material and construction debris or working in any area with dust pollution shall be provided with dust mask. For indoor air quality the ventilation provisions as per National Building Code of India.
	6 (a)	The location of the DG set and exhaust pipe height shall be as per the provisions of the CPCB norms.
Green Cover	7	A minimum of 1 tree for every 80 sq.mt. of land should be planted and maintained. The existing trees will be counted for this purpose. Preference should be given to planting native species.
	7 (a)	Where the trees need to be cut, compensatory plantation in the ratio of 1:3 (i.e. planting of 3 trees for every 1 tree that is cut) shall be done and maintained.
Top Soil Preservation and Reuse	8	Topsoil should be stripped to a depth of 20 cm from the areas proposed for buildings, roads, paved areas, and external services. It should be stockpiled appropriately in designated areas and reapplied during plantation of the proposed vegetation on site.
Transport	9	A comprehensive mobility plan, as per MoUD best practices guidelines (URDPFI), shall be prepared to include motorized, non-motorized, public, and private networks. Road should be designed with due consideration for environment, and safety of users. The road system can be designed with these basic criteria. 1. Hierarchy of roads with proper segregation of vehicular and pedestrian traffic. 2. Traffic calming measures. 3. Proper design of entry and exit points. 4. Parking norms as per local regulation.
Environment Management Plan	10	An environmental management plan (EMP) shall be prepared and implemented to ensure compliance with the environmental conditions specified in item number 1 to 9 above. A dedicated Environment Monitoring Cell with defined functions and responsibility shall be put in place to implement the EMP. The environmental cell shall ensure that the environment infrastructure like Sewage Treatment Plant, Landscaping, Rain Water Harvesting, Energy efficiency and conservation, water efficiency and conservation, solid waste management, renewable energy etc. are kept operational and meet the required standards. The environmental cell shall also keep the record of environment monitoring and those related to the environment infrastructure.

APPENDIX-XV

Accreditation of Environmental Auditors (Qualified Building Auditors)

The Ministry of Environment, Forest and Climate Change (MoEFCC), through qualified agencies shall accredit the Qualified Building Environment Auditors (QBEAs). The Qualified Building Environment Auditors could be a firm / organization or an individual expert, who fulfils the requirements. The Ministry will implement this process of accreditation through Quality Council of India (QCI), National Productivity Council or any other organization identified by the Government. The organizations like Indian Green Building Council, Bureau of Energy Efficiency etc. can also be associated in the process of accreditation, training, and renewal. The environmental consultants accredited by the QCI for building sector will be qualified as QBEAs. The QBEAs will meet the following criteria. The accrediting agency can improvise on these criteria.

Qualifications of the Auditor:

a. Education: Architect (Degree or Diploma), Town Planners (Degree), Civil Engineer / Mechanical Engineer (Degree or Diploma), PG in Environmental Science or any other qualification as per the scheme of the accreditation.

Training:

b. Mandatory training to be given by the accreditation body or their approved training providers. This will be as per the scheme of the accreditation.

Experience:

c. At least 3 years of work experience in the related field or building sector Environment Impact Assessment consultants accredited by QCI or any other experience criteria as per the scheme of the accreditation.

Infrastructure and equipment:

d. As per the scheme of the accreditation

Renewal:

e. The accreditation will be valid for 5 years and will be renewed as per the process developed under the accreditation scheme.

Accountability/Complaint redressal mechanism: Any complaints regarding the quality of the work of QBEAs shall be made to the accreditation body. The accreditation body shall evaluate the complaint and take appropriate action including black listing or cancellation of the accreditation with wide public notice. This will be in addition to the action at the level of local authority for penalty and blacklisting. The Ministry can also take such action in case of specific complaint or feedback.

APPENDIX-XVI

Environmental Cell at the level of Local Authority:

An Environmental Cell shall be setup at the local authority level to support compliance and monitoring of environmental conditions in buildings. The Cell shall also provide assistance in environmental planning and capacity building within their jurisdiction. The responsibility of this cell would be monitoring the implementation of this notification and providing an oversight to the Third-Party Auditing process. The cell will operate under the local authority.

Constitution of the cell:

The cell will comprise of at least 3 dedicated experts in following fields:

a. Waste management (solid and liquid)

b. Water conservation and management

c. Resource efficiency including Building materials

d. Energy Efficiency and renewable energy

e. Environmental planning including air quality management.

f. Transport planning and management.

The Cell shall induct at least two outside experts as per the requirements and background of dedicated experts. Existing environmental cells at the level of local authority can be co-opted and trained for this Cell.

Financial Support:

An additional fee may be charged along with processing fee for building permission for integrating environmental conditions and it's monitoring. The local authority can fix and revise this additional fee from time to time. The amount of this fee shall be deposited in a separate bank account, and used for meeting the requirement of salary / emoluments of experts and running the system of online application, verifications and the Environmental Cell.

Functions of the Cell:

1. The cell shall be responsible for assessing and appraising the environmental concerns of the area under their jurisdiction where building activities are proposed. The Cell can evolve and propose additional environmental conditions as per requirements. These conditions may be area specific and shall be notified in advance from time to time. These additional conditions shall be approved following a due consultation process. These environmental conditions will be integrated in building permissions by the sanctioning authority.

2. Develop and maintain an online system for application and payment of fees. The Cell shall maintain an online database of all applications received, projects approved, the compliance audit report, random inspections made. The Cell shall maintain a portal for public disclosure of project details including self certification and compliance audit reports filed by the Qualified Building Environment Auditors for public scrutiny of compliance of environmental conditions by the project.

3. Monitoring the work of Environmental Audit process carried by the Qualified Building Auditors.

4. The Cell shall review the applications; finalize the additional environmental conditions if required within 30 days of the submission of the application to the local authority.

5. The Cell shall adopt risk based random selection of projects for verifying on site for certification of QBA, compliance of environmental conditions and five yearly audit report.

6. The Cell shall recommend to the local authority for financial penalty for non-compliance of environmental conditions by the project proponent.

7. The Cell shall recommend to the accrediting body and the local authority against any Qualified Building Environment Auditor, if any lapse is found in their work.

JUDGMENT

PRESENT:
HON'BLE MR. JUSTICE SWATANTER KUMAR (CHAIRPERSON)
HON'BLE DR. JUSTICE JAWAD RAHIM (JUDICIAL MEMBER)
HON'BLE MR. BIKRAM SINGH SAJWAN (EXPERT MEMBER)

Reserved on: 8th November, 2017
Pronounced on: 8th December, 2017

1. Whether the judgment is allowed to be published on the net?
2. Whether the judgment is allowed to be published in the NGT Reporter?

JUSTICE SWATANTER KUMAR (CHAIRPERSON)

By this judgement, we shall dispose of all the five cases connected with Original Application No. 677 of 2016 as a common question of law and fact arises for consideration before the Tribunal in all these cases. However, it is not necessary for us to notice the facts of each case in greater detail and it would be sufficient to refer to the factual matrix of the lead application only, i.e., Original Application No. 677 of 2016, *Society for Protection of Environment & Biodiversity vs. Union of India and ors.*

2. The Applicant-Society claims that it works in the area of environmental conservation and aims at protection of the environment, ecology, natural resources, wildlife and bio-diversity existing on earth. It has filed various cases raising several environmental issues and concerns before the Courts as well as before this Tribunal. According to the Applicant, there is pathetic condition

of urban local bodies in the area under their jurisdiction more particularly in Ghaziabad. The exemption granted from Environmental Clearance for building and construction projects would be a huge retrograde step in the area of environment conservation. It would take us back to a pre- 2004 scenario, i.e., prior to issuance of EIA framework pursuant to specific orders of the Hon'ble Supreme Court. The Applicant believes that such a step will have a disastrous effect on the environment and would cause irreversible damage to the environment. The magnitude of the environmental footprint would be immense and unregulated building and construction activity would cause immense environmental damage. The Ministry of Environment, Forest & Climate Change (for short, "MoEF&CC"), Respondent No. 1 had issued a draft notification dated 29th April, 2016 with regard to amendment of the Notification of 2006 providing exemption to various construction projects all over the country. At that stage, the Applicant had filed an application bearing Original Application No. 168 of 2016 expressing its apprehension and raising serious objections to the draft Notification. The principal contention raised at that time was that the proposed Notification intends to dilute and exempt prior Environmental Clearance for buildings and construction projects through Model Building Bye Laws, 2016, as issued by the Town & Country Planning Organizing, Ministry of Urban Development and the subsequent Notification by Delhi Development Authority of the Unified Building Bye Laws for Delhi, 2016 which were notified vide Notification dated 22nd March, 2016 in pursuance to Chapter-XIV of the Model Building Bye Laws, 2016 and in concurrence with the impugned Notification of MoEF&CC. These amendments and Bye

Laws sought to defeat and do away with the substantive provisions of EIA Notification, 2006 that require prior Environmental Clearance by building and construction projects under item no. 8(a) of the Schedule to EIA Notification, 2006. Original Application No. 168 of 2016 was disposed of by the Tribunal vide its order dated 30th September, 2016 directing MoEF&CC to consider the objections filed by the Applicant prior to issuance of the final Notification. The order dated 30th September, 2016 of the Tribunal reads as under:

> "Learned Counsel appearing for the Ministry of Environment, Forests and Climate Change submits that they are in the process of amending the EIA Notification, 2006. According to her the draft Notification has already been published and objections/suggestions have been invited and after expiry of the Statutory period they would issue the final Notification after considering the objections filed.
>
> Learned Counsel appearing for the DDA on instruction from Director of Planning submits that DDA has already notified the unified building bye laws, however, the chapter on environment conditions for sanctioning building plans would not be put into practice/implemented till Ministry of Environment, Forests and Climate Change give its approval/concurrence.
>
> The Learned Counsel appearing for the applicant has raised an issue with regard to the unified bye laws being in conflict with the Notification of EIA, 2006. According to the applicant these objections should be considered.
>
> In view of the statement made by the Learned Counsel appearing for the respective parties, we are of the considered view that nothing survives in this application. The respective authorities will abide by their statements. We also direct the Ministry of Environment, Forests and Climate Change to consider the objections of the applicant before issuing final Notification so that the unified building bye laws are not in conflict with EIA Notification, 2006.
>
> In view of the above, the Original Application No.168 of 2016 stands disposed of with no order as to cost."

3. After passing of the above order, Respondent no. 1 issued the final Notification on 9th December, 2016. Though, the objections to the draft Notification was filed by the Applicant on 23rd November, 2016 but no intimation for hearing was given to the Applicant except when the Applicant was invited through Counsel for meeting with Shri Manoj Kumar Singh, Joint Secretary, MoEF&CC, Government of India on 8th December, 2016 to discuss and make presentation on behalf of the Applicant. The discussion went on for about an hour or so and the Applicant was assured that the objections would be considered objectively by the Ministry. However, the final Notification was issued on 9th December, 2016 making substantial changes even in the draft Notification dated 29th April, 2016 which were in total derogation to the environmental laws in force.

4. The Applicant, thus, in the present case prays that the Notification dated 9th December, 2016 should be quashed and set-aside, inter-alia, but primarily on the following grounds:

I. The Impugned Notification not only dilutes but also renders otiose the substantive provisions of Environmental Impact Assessment Notification, 2006 and even that of Environment (Protection) Act, 1986 (for short, "Act of 1986"). The provisions of the impugned Notification, if implemented would potentially destroy the environment and ecology due to unregulated building and construction activities and will have disastrous effect on environment and would cause irreversible damage to the environment. The magnitude of Environmental footprint would be immense. The objections filed by the Applicant and

others have not been considered objectively and appropriately by the Ministry. The impugned Notification, thus suffers, from the element of non-application of mind as well as is violative of Principle of Natural Justice.

II. The Impugned final Notification is not only at variance with the draft Notification but even introduces new provisions which are diametrically opposite, beyond the scope and purview of the Draft Notification and even had destructive essence to the draft Notification. In this regard, the following significant variance can be noticed:

(a). Draft Notification did not contain any provision with regard to grant of exemption to the construction building projects from the provisions of Air (Prevention and Control of Pollution) Act, 1981 (for short, "Air Act, 1981) and Water (Prevention and Control of Pollution) Act, 1974 (for short, "Water Act, 1974) in relation to Consent to Establish and Consent to Operate.

(b). The composition of the Environmental Cells to monitor the conditions particularly in reference to Environmental Clearance is entirely at variance to the draft Notification.

(c). Accreditation of Environmental auditors in terms of Appendix XV to the impugned Notification is also at variance from the one proposed in the Draft Notification.

III. In exercise of subordinate legislative power, a delegatee cannot affect the application of another legislation enacted by the Parliament. In other words, while amending the Notification of 2006 in exercise of subordinate legislation, the delegated authority cannot render the provisions of Water Act, 1974 and Air Act, 1981 as inapplicable and also take away the powers of the Pollution Control Boards under the said Acts, to grant/refuse consent to establish and/or operate to a project.

IV. Neither any comprehensive study was carried out nor any data collected to support the drastic changes being made by the impugned Notification and also ignored the Precautionary Principle, the fundamental cannon of environmental jurisprudence.

V. The impugned Notification has several deficiencies which are against the basic letter and spirit of the Act of 1986 and the Notification of 2006.

VI. 'Ease of doing responsible business' cannot be in fact and in law the ground for making amendment to the environmental laws, as it primarily falls beyond the scope of the object and purposes of the environmental laws in force. It is only a ploy to circumvent the provisions of the environmental assessment. The comprehensive process for evaluating the impact on environment due to various projects has been negated by the said amendment.

VII. Under the impugned Notification, local authority is responsible for development and passing the development

plan vested through the environment cell with the power to impose conditions relating to environmental protection and ensure their compliance. The local authorities which are the sanctioning authorities would also become adjudicatory authorities under the impugned Notification. This dual functioning by the same authority make them judge in their own cause in contravention with the Principle of Natural Justice, *nemo judex in sua causa*, as well as give rise to the plea of conflicting interest.

VIII. Exemption granted under the amended Notification has no nexus to the object sought to be achieved, i.e., the environmental protection.

IX. The impugned Notification is in derogation of India's international commitment and obligation under the Rio Declaration (1992), particularly Principle 15 to 17 and the Paris Agreement, 2015.

X. The impugned Notification, if given effect to, as framed would result in wiping out the effect of environmental laws in force and hence would not be in consonance with the doctrine of non-regression.

XI. In addition to above, Applicant has also contended that the impugned Notification has an impact of disturbing the federal structure as provided in the Constitution of India. The Central Government cannot exercise power, authority and control in relation to subject matter of the Notification over the local authorities. The Environmental Cell, constituted under the amended Notification, would be under control of the local

authority or the State Government, as the case may be and, therefore, it will have apparent conflict with the Central Regulating Authority.

XII. In terms of the Notification, the violations of environmental conditions would be punishable and action would be taken under local laws, thus, divesting the CPCB or the State Regulatory Authority from taking punitive action against the defaulters and, therefore, would not be in consonance with the scheme of 1986 Act. The Notification is a manifest ploy for ousting of the application of the Environmental Acts and even the jurisdiction of the Tribunal. Furthermore, power under Section 3(1) of the Act of 1986 can be exercised in harmony and consonance with other provisions of the Act. The power under Section 3 is to be exercised for the purpose of protecting and improving the quality of the environment and preventing, controlling and abating environmental pollution. The measures contemplated under Section 3 can only be taken in that behalf. Thus, power cannot be exercised for purposes beyond Section 3(1) and the provisions of the Act of 1986.

XIII. It is also contended by Applicant that MoEF has not provided any appropriate answer to the questions formulated by the Tribunal in its order dated 21st December, 2016 and 28th July, 2017.

XIV. There is no power with the Central Government to transfer its responsibility to the local authorities. The impugned

Notification does not provide power of refusal or rejection of the application seeking Environmental Clearance. The impugned Notification which introduces Paragraph no. 14 to the Notification of 2006, would be in apparent conflict with Para 1 to 13 of the Notification 2006. The Environmental Cell would not be able to function independently, fairly and in a transparent manner.

XV. The impugned Notification is unsustainable as on one hand it is not based on any study and on the other it ignores the recommendations made in the various studies conducted by the Ministry itself including Dr. Kasturirangan's reports. The positive suggestions and recommendations made in these reports have been ignored**.** The Notification attempts to hide behind the poor for the benefit of the builders. It also lacks in providing for requisite expertise of the members constituting the environmental cell in the interest of environment. No, criteria or qualifications have been fixed for the Member of environmental cell unlike the law in existence, which certainly would have adverse impacts as there will be massive construction activity causing serious environmental degradation.

5. From the above grounds, the applicants in all these applications pray that the impugned Notification dated 9th December, 2016 should be declared as *ultra vires* and be quashed. The challenge to the Notification is on legal grounds as well as on other reasons that it will have an adverse impact on environment, ecology and natural resources. In fact, it is contended that it will also have serious

repercussion on climate change. The Notification though claims to serve social cause of providing housing for the poor but, in fact, result of its enforcement would be contrary. It would permit construction of huge buildings and apartments without strictly complying with the environmental norms.

6. It will be appropriate to commonly state the response of various respondents together to the applications filed by the applicants. The preliminary objection has been raised as to the maintainability of the applications. It is contended that the validity of the Notification dated 9th December, 2016, has been challenged which is amending the EIA Notification, 2006 in exercise of the power conferred under Section 3 of the Environment (Protection) Act, 1986 (for short, the 'act of 1986') on the ground that it is violative of Articles 21 and 14 of the Constitution of India, which is beyond the ambit of Section 14 read with Section 18 of the NGT Act and the Tribunal has no jurisdiction to examine the validity of the subordinate legislations. The object of Notification is to delegate the power to Urban Local Bodies to grant Environmental Clearance. The scope of the Environmental Clearance has been widened as, now, Environmental Clearance is required even for building size having a built-up area 5000 sq. mtr. to 20,000 sq. mtr. While under the earlier Notification the built-up area of 20,000 sq. mtr. and above was covered. Urban Local Bodies and Urban Development Authorities are involved in the building plan approval and while granting approval, the process of granting Environmental Clearance can very well be integrated and can be given online. This will hasten the grant of clearances and there would not be any adverse impact on the construction projects. The Notification attempts to

decentralize the clearance process and has also attempted to integrate the environmental conditions along with building permissions. The local authorities would be conferred with the responsibility with support from expert bodies to discharge the important function. It is proposed to have a system of Qualified Building Environment Auditors (QBEA) providing for Third Party Auditing of environmental plans and its implementation. The QBEA will undertake certification that whether the environmental conditions have been adequately planned in the building design or not, it will thoroughly check its implementation during construction and regularly monitor its performance every five years. The setting up of an Environmental Cell at the level of Local Authority has been directed after taking into consideration lack of capacity at the level of Local Authorities. The Environmental Cell will comprise of three dedicated experts in the field of Waste Management (Solid and Liquid), Water Conservation and Management, Resource Efficiency including Building Materials, Energy Efficiency and Renewal Energy, Environmental Planning including Air Quality Management, Transport Planning and Management. The environment cell will also perform various other functions. The Local Authorities will prescribe the fee for environmental appraisal along with the fee for building permissions. Relying upon the judgement of the High Court of Delhi in the case of *Delhi Pollution Control Committee vs. Splendor Landbase Ltd.* in LPA 1/2011 and C.M. No. 6781/2011, the Notification has been issued to grant exemption to the residential complexes from the operation of Air and Water Act, respectively. The High Court expressed the view that residential complexes do not require any permission to establish or

operate under the said Acts. The QBEA is to be accredited by the MoEF&CC through qualified agency which would assess and certify building projects. The project proponent shall submit performance data and certificate of continued compliance of the project for the environmental conditions and parameters applicable after completion of construction from QBEA every five years to the environment cell focusing on different issues. If, there were violations committed by the builders who failed to take prior Environment Clearance in terms of the EIA Notification, 2006 and to deal with the violation in excess, the Ministry had issued certain Office Memorandums granting one time exemption which came to be set aside by the Tribunal *vide* its judgement dated 7th July, 2015 in the case of *S.P. Muthuraman v. Union of India and Ors.* (2015) ALL(I) NGT REPORTER (2) (DELHI) 170. 400 cases were kept on hold at different stages and in order to deal with the same, the present Notification had been issued. The purpose is to bring the entities under Environmental Compliance Regime at the earliest. The Notification provides various stages to be followed for granting prior Environmental Clearance which protects the environment in all respects. The Notification dated 9th December, 2016, provides that the States adopting the environmental conditions prescribed in appendix XIV of the Notification and incorporating it in the building bye laws and relevant state laws and incorporating the said conditions in the approvals given for building construction and making it legally enforceable, shall not require a separate Environmental Clearance from the MoEF&CC. The proposed changes by the State Government in its bylaws are to be examined by MoEF&CC and only after the concurrence of MoEF&CC to the changes

made by the State Government, that the requirement of separate environmental Clearance by the Central government for buildings to be constructed in the State or Local Authority areas, is dispensed with. Appendix XVI provides setting up of Environmental Cell in terms thereof the cell shall be responsible for assessing and appraising the environmental concerns for the area under its jurisdiction where building activities are proposed. The environmental cell can evolve and propose additional environmental conditions as per requirement. The procedure for seeking building permission incorporating environmental conditions has been made more stringent in comparison to the earlier provisions. The burden lies on the project proponent for furnishing requisite information and the Local Authorities are expected to take greater caution and care in assessing them. The comparative analysis of the Notification dated 14th September, 2006 and 9th December, 2016 shows that the later is more comprehensive in terms of prescription of environmental protection standards and conditions. The Notification dated 9th December, 2016 was issued in view of the policy decision taken by the Government of India to provide affordable housing to weaker sections in Urban areas in terms of scheme of 'Housing for All by 2022'. The general conditions that were provided under the Notification of 14th September, 2006 in substance continue but only change that has been brought about is that instead of obtaining prior Environmental Clearance from the Central Government the same shall be obtained from the State/Union Territory Environmental Impact Assessment Authority. The requirement of obtaining prior Environmental Clearance has not been dispensed with. The Draft Notification was

also challenged by the applicant which was disposed of *vide* order dated 30th September, 2016. The suggestions and objections were invited and after considering the same the final Notification was issued. The reliance placed by the applicants on the judgement of *Dr. Avinash Ramkrishna Kashiwar vs. State of Maharashtra;* (2015) 5 Mh. L.J. is of no consequence as on facts that judgement has no applicability in relation to the examination of the present Notification.

JURISDICTION OF THE TRIBUNAL:

7. According to the respondents, reliance placed by the applicant on the judgement in the case of *Dr. Avinash Ramkrishna Kashiwar vs. State of Maharashtra* (supra) is misplaced as that judgement has no application to the facts of the present case and particularly, for examining the validity of the impugned Notification. The respondents, therefore, prayed that the application requires to be dismissed on merits as well as on the preliminary objections taken by them.

8. In light of the above factual matrix of the case, we have to examine the merit or otherwise of the preliminary objections taken by the respondents in regard to the jurisdiction of this Tribunal to examine the validity of the impugned Notification. To examine this issue, we do not have to refer to the facts in any detail suffices it to notice that challenge in the present case is to the legality and validity of the Notification dated 9th December, 2016. The contentions of the respondents are that this Tribunal has been constituted under the provisions of the National Green Tribunal Act, 2010 (for short, Act of 2010') and it being a statutory Tribunal is not vested with the powers to examine the validity or constitutionality of a subordinate

legislation, i.e., Notification dated 9th December, 2016. Such aspects can only be examined by a constitutional Court, i.e., the Hon'ble Supreme Court of India or Hon'ble High Court. Reliance in this regard has been placed by them upon the judgement of the Division Bench of the Bombay High Court in the case of *Central India Ayush Drugs Manufacturers Association, Nagpur & Ors. v. State of Maharashtra,* AIR 2016 BOM 261. The respondents also relied upon the judgement of Hon'ble Supreme Court of India in the case of *Alpha Chem & Anr. v. State of Uttar Pradesh & Ors.,* 1991 Supp (1) SCC 518, wherein it was held that challenge to the constitutionality of a statute is maintainable in proceedings initiated under Articles 226 and 32 of the Constitution of India and not in appeal or revision before High Court or in proceedings initiated under a statute before an authority constituted under the said statute itself. Contrary to this, the contention of the applicant is that the Tribunal is competent and is vested with the jurisdiction and power of judicial review. In exercise of such powers it can examine the constitutionality, validity and legality of a subordinate legislation, particularly, when the Notification issued in exercise of the subordinate legislation is for the implementation of the enactments specified in Schedule I of the Act of 2010. Under the provision of the Act of 2010, such power of the Tribunal is neither expressly nor impliedly barred. On the contrary, the scheme of the Act clearly demonstrates that the Tribunal is competent to examine the correctness of a Notification issued under any of the Scheduled Acts in so far as the Notification implement or impliedly implement the provisions, object and purpose of the scheduled Act under which it is issued. In support of their contention, the applicants rely upon

the judgements of the Hon'ble Supreme Court of India in the case of *L. Chandra Kumar v. Union of India & Ors.,* 1997 (2) SCR 1186, *SP Sampath Kumar v. Union of India & Ors.,* (1987) 1 SCC 124, *State of West Bengal v. Ashish Kumar Roy & Ors.,* (2005) 10 SCC 110 and judgements of this Tribunal in the case of *Wilfred J. v. Union of India* 204 ALL (I) NGT REPORTER 2013, *SP Muthuraman v. Union of India,* 2015 ALL (I) NGT REPORTER (2) DELHI 170 and *Himmat Singh Shekhawat v. State of Rajasthan & Ors.,* ALL (I) NGT REPORTER (1) DELHI 44.

9. As far as this bench of the Tribunal is concerned the question of jurisdiction is no longer *res integra*. It has been conclusively decided by larger bench of the Tribunal in the case of *Wilfred J.* (supra), where the Tribunal held as under:

> "39. Having dealt with the constitution of the Tribunal and having established its independence, now let us proceed to examine the scope of power of the Tribunal, with particular reference to examining a subordinate or delegated legislation as being ultra vires, unconstitutional or illegal. Judicial review is the power of the court to review statutes or administrative acts or determine their constitutionality or validity according to a written constitution. In a wider sense, judicial review is not only concerned with the merits of the decision but also the decision making process. It tends to protect individuals against the misuse or abuse of power by a wide range of authorities. Judicial review is a protection to the individual and not a weapon. It is the doctrine under which legislative and/or executive actions are subject to review (and possible invalidation) by the judiciary. A specific court with the power of judicial review may annul the acts of the State, when it finds them incompatible with a higher authority (such as the terms of a written constitution). Judicial review is an example of checks and balances in a modern governmental system, where the judiciary checks the other branches of government. This principle is interpreted differently in different jurisdictions, which also have differing views on the different hierarchy of

governmental norms. As a result, the procedure and scope of judicial review may differ from country to country and State to State. Unlike in England, where the judiciary has no power to review the statutes/Acts made by the Parliament, the United States Supreme Court in terms of Article III and Article VI exercises the power of judicial review of the Acts passed by the Congress and has struck down several statutes as unconstitutional. In India, the Supreme Court and the High Courts have frequently exercised the power of judicial review keeping intact the 'doctrine of separation of power'. Challenge to legislation before the Courts in India has primarily been permitted on a very limited ground. The legislation in question should either be unconstitutional, or should lack legislative competence. Challenge to such legislation as being unreasonable has also been permitted, if it violates or unreasonably restricts the fundamental rights, particularly under Article 14 and 19 adumbrated in our Constitution.

40. The Courts are vested with the power of judicial review in relation to legislative acts and even in relation to judgments of the Courts. The power of judicial review has been exercised by the Courts in India sparingly and within the prescribed constitutional limitations. The Courts have also taken a view that functions of the Tribunal being judicial in nature, the public have a major stake in its functioning, for effective and orderly administration of justice. A Tribunal should have judicial autonomy and its administration relating to dispensation of justice should be free of opinions. (Ajay Gandhi v. B. Singh, (2004) 2 SCC 120). The National Green Tribunal has complete control over its functioning and all the administrative powers, including transfer of cases, constitution of benches and other administrative control over the functioning of the Tribunal, are vested in the Chairperson of the NGT under the provisions of the NGT Act".

10. The Tribunal in the case of *S.P. Muthuraman* (supra) also held that:

"This Tribunal has been vested with Original, Appellate and Special jurisdiction in regard to directing payment of compensation for damage to and for restitution and restoration of the environment. The legislature in its wisdom worded the provisions relating to the jurisdiction of the Tribunal (Sections 14 to 17 of the Act

> of 2010) very widely, and with a clear intent to provide this Tribunal with jurisdiction of a very wide magnitude. Upon reading the various provisions of the Act of 112 2010 cumulatively and in light of the underlying scheme of the Act of 2010, including the definition of 'environment' in terms of Section 2(c) of the Act of 2010, it is quite clear that this Tribunal is having all the trappings of a Court and is conferred with the twin powers of judicial as well as merit review. There is no provision in the Act of 2010 which curtails the jurisdiction of the Tribunal to examine the validity and correctness of a delegated legislation and/or administrative or executive order passed by the Government including any of its instrumentalities or authorities. The fundamental principle for invoking the jurisdiction of this Tribunal is that, the question raised should be a substantial question relating to environment and should arise out of the implementation of the enactments specified in Schedule I of the Act of 2010. It could even relate to enforcement of any legal right relating to environment with regard to these enactments. Delegated or subordinate legislation, executive orders and/or administrative orders in so far as they relate to the implementation of the Scheduled Acts would be open to challenge before the Tribunal and hardly any argument can be raised that the documents like Office Memoranda would not be subject to judicial scrutiny before the Tribunal".

11. The parties to the *lis* had preferred statutory appeal against the above cited judgement of the Tribunal before the Hon'ble Supreme Court of India. The Hon'ble Supreme Court of India had issued notice on the appeals and *vide* its order dated 21st January, 2015 in Civil Appeal No. 7884-7885 of 2014 had directed that further proceedings qua the appellants shall remain stay till further orders. However, in the same order the Hon'ble Supreme Court also directed that this Tribunal shall continue to exercise its powers in terms of Section 14, 16 and 18 of the NGT Act, 2010 in other cases. *Vide* order dated 3rd

February, 2016, passed by the Hon'ble Supreme Court of India in another set of appeals being Appeals No. 8550-8551 of 2014 passed an order by modifying order dated 21st January, 2015. The order dated 3rd February, 2016 reads as under:

> ".....By our Order dated 21.01.2015, we had stayed further proceedings in Appeals No. 14 of 2014, 17 of 2014 and 88 of 2014 and Original Application No. 74 of 2014 pending before the National Green Tribunal, Principal Bench at Delhi.
> Having heard learned counsel for the parties at some length, we are inclined to modify the said order so as to permit the Tribunal to proceed with the hearing of the Appeals and the Original Application for an expeditious disposal of the same. Learned counsel for the parties also agree that the appeals and the original application could be finally heard and that neither party shall pray for any interim direction in the said matters nor seek any adjournment which may unnecessarily procrastinate the entire controversy.
> In the circumstances, therefore, we modify our Order dated 21.01.2015 and permit the National Green Tribunal, Principal Bench at Delhi to proceed with the hearing of the appeals and Original Application and make an endeavour to dispose of the same as far as possible within a period of six weeks from the date a copy of this 3 order is placed before it. We make it clear that hearing of the Appeals and O.A. on merits pending before the Tribunal shall be without prejudice to the contentions open to the parties in these appeals which shall await the final hearing and disposal of the matter by the Tribunal. These appeals shall accordingly stand over for being listed after the disposal of the matters by the Tribunal. Liberty is given to the parties to mention the matter once the Tribunal passes final orders in the case before it."

In terms of the above order, the matters were finally heard by the Tribunal and disposed of *vide* order dated 2nd September, 2016. The parties had approached the Hon'ble Supreme Court after the final judgement by the Tribunal. The matter was heard by the Hon'ble Supreme Court and the Appeals were disposed of *vide* order dated 3rd

July, 2017. The order dated 3rd July, 2017 while leaving the question of law open, reads as under:

> "……Pursuant to the order dated 3rd February, 2016, the National Green Tribunal has delivered judgment and order dated 2nd September, 2016. A review petition filed against that decision was disposed of on 30th November, 2016.
> We are told by the learned Attorney General that the project has been upheld by the National Green Tribunal. Under the circumstances, we dispose of these appeals leaving open the question decided by the National Green Tribunal on its jurisdiction to set aside subordinate legislation.
> In the event any of the aggrieved parties raises a dispute against the final order passed by the National Green Tribunal, it will be open to the appellant as well as the State of Kerala to agitate the issue of a 2 challenge to the subordinate legislation.
> Pending applications, if any, are disposed of."

In terms of the above order, it is clear that the law stated by the Tribunal in its judgement in the case of *Wilfred J. (*supra) was not disturbed by the Hon'ble Supreme Court either at the interim stage or while finally disposing of the appeals. Interim stay granted by the Hon'ble Supreme Court was limited to the appeals with a specific dictum that the Tribunal could decide other cases in terms of the provisions of the Act thereby clearly stating that the judgement in the case of *Wilfred J.* (supra) on the question of law was neither interfered nor stayed. Thus the law stated by the larger bench of the Tribunal attains finality and is binding on this bench. In any case, we have no reason not to accept the mandate of the larger bench and apply to the present case. The reliance placed by the respondents upon the judgement of the High Court of Bombay in the case of *Central India Ayush* (supra) will not be of any benefit to the respondents. Firstly,

the judgement of the High Court of Bombay does not consider the larger bench of the Tribunal in the case of *Wilfred J.* (supra). It also does not refer to the judgements of the Hon'ble Supreme Court in *L. Chandra Kumar* (supra) wherein Hon'ble Supreme Court had clearly stated that the Tribunals are competent to hear matters challenging *vires* of the statutory provisions or *vires* of the subordinate legislation. Of course such jurisdiction falls in a limited compass. In the case of *SP Sampat Kumar* (supra), the Hon'ble Supreme Court clearly stated that the Tribunal has power of the judicial review and even vested with the powers of the Civil Courts so it has wide jurisdiction including the power of judicial review. There are other judgements from other High Courts which have taken entirely a different view than the view taken by the High Court of Bombay. These High Courts have specifically referred to the Tribunal for adjudication of cases involving challenge to the Notifications issued in exercise of subordinate legislation with regard to noise pollution, plastic bags and other such matters. In this regard, we may refer to the judgement of the High Court of Delhi in the case of *All India Plastic Industries Association & Anr. v. Govt. of NCT of Delhi and Ors,* Writ Petition No. 7012 of 2012 decided on 5th December, 2016. The Division Bench of the High Court while relying upon the judgement of *L Chandra Kumar* (supra) of the Hon'ble Supreme Court of India and the provisions of the Schedule I to the Act of 2010, held that the matter before it challenging the Notification issued under Section 5 of the Environment (Protection) Act, 1986 (for short, 'act of 1986') imposing a ban on manufacture, import, store, sale or transport of any kind of plastic, carrying bags etc be transferred to this Tribunal for deciding

the same on merits including the question, validity of the Notification. It may be noticed that High Court of Delhi would be the jurisdictional High Court for the Principal Bench, National Green Tribunal.

12. The Punjab & Haryana High Court, Tripura High Court and Jharkhand High Court has also transferred the cases of *Goodwill Plastic Industries & Ors. v. Union Territory of Chandigarh & Ors., All India Plastic Industries Association v. Tripura* and *RDS Bricks v. State of Jharkhand,* respectively to the Tribunal. In all these cases, *vires* to the Notifications dated 30th July, 2008 and 3rd July, 2013 both relating to banning of plastic and Notification dated 29th March, 2012 relating to eco-sensitive zone were challenged. To put it simply all these High Courts have taken a view that the Tribunal can examine the validity of a Notification issued for implementation of a subordinate legislation.

In the another judgment of the Tribunal in the case of *SP Muthuraman v. Union of India & Anr.* (supra), wherein the office memorandums issued by the MoEF&CC dated 12th December, 2012 and 27th June, 2013 were quashed. The Tribunal took the view that it had the limited power of judicial review and it can examine the office memorandums issued in furtherance to the rules framed by MoEF&CC. A review application was filed by the different project proponents in that case, which was also dismissed *vide* order dated 1st September, 2015. The orders of the Tribunal were challenged before the Hon'ble Supreme Court of India and the Hon'ble Supreme Court *vide* its order dated 24th September, 2015, stayed the order of the Tribunal. *Vide* order dated 23rd November, 2015 and upon application

of MoEF&CC the Hon'ble Supreme Court of India clarified its order and stated that stay was applicable only to the appellant's before it. During the pendency of the appeals, some directions were passed by the Hon'ble Supreme court in relation to deposit of the environmental compensation imposed by the Tribunal. The Hon'ble Supreme Court *vide* order dated 4th July, 2016 made it clear that the Tribunal could proceed by passing of directions as contained in para 163(13) of its order dated 7th July, 2015 and parties were granted liberty to raise all submissions open to them on fact and law before the Tribunal. Even the judgement of the Tribunal on the question of jurisdiction has not been stayed by the Hon'ble Supreme Court. However, the parties have been granted liberty to raise all pleas of facts and law. The Tribunal had also passed similar judgments in the case of *Himmat Singh Shekhawat v. State of Rajasthan* (supra) and *Kalpvriksha & Ors. v. Union of India*, in OA No. 116 of 2013 (T_{HC}) decided on 17th July, 2014. All these orders have attained finality and remain undisturbed.

13. Another aspect that needs specific mentioning by us is that this Tribunal is a special and unique Tribunal constituted under the legislation enacted by the Parliament in exercise of its powers under Article 253 of the Constitution of India. It needs to be distinguished from other Tribunals enacted under Article 323(A) and 323(B) of the Constitution. This Tribunal has been constituted for the purpose of implementing the decisions at the United Nations Conference on the Human Environment held at Stockholm in June 1972, where India also participated. 186th Law Commission Report also noticed that the environmental Tribunal constituted under Article 253 could be traced

as an act of implementation of the decisions taken at the International Conference with reference to Rio-declaration of 1992. The purpose of implementing the decisions at Rio conference & Stockholm Conference and constituting the Tribunal was to provide speedy adjudicatory body in respect of the disputes arising in environmental matters. In the case of *Braj Foundation vs. State Government of UP & Ors.,* Application No. 278 of 2013 decided on 5th August, 2014, the bench of the Tribunal held that one is to remember that the Tribunal is created in furtherance to the enactment of the Parliament to give effect to the true spirit of the terms of Article 253 of the Constitution of India and, therefore, there is no iota of doubt in our mind that the Tribunal has inherent power of not only enforcing its orders but also dealing with any person who either disobeys or violates its orders. The inherent power would co-exist with the Tribunal examining the correctness of any office order or subordinate legislation whether it is in consonance or not with the provisions of the environmental laws in force particularly when it is issued under those very legislations.

In light of the above position of law and the fact that the judgments of the Tribunal in the case of *Wilfred J.* (supra) and *S.P. Muthuraman* (supra) are binding upon this bench. We have no hesitation in rejecting the objection raised by the respondents as without merit.

DISCUSISON ON MERITS OF THE CONTENTIONS RELATING TO VALIDITY OF THE NOTIFICATION

14. The draft Notification dated 29th April, 2016 was published by the Respondent inviting objections and suggestions thereto. After

considering the objections/suggestions received by the MoEF&CC, it had issued the final Notification dated 9th December, 2016. According to the Applicant, not only the Notification dated 9th December, 2016 but also the entire process of finalizing the Notification suffers from factual and legal infirmities. It is also the contention that it defeats the very object and purpose of the Act of 1986, EIA Notification of 2006 and is also opposed to the federal scheme under the Constitution of India. The detailed objections raised by the Applicant has already been noticed by us in paragraph no. 4 of the judgment (supra). According to the respondent, the notification does not suffer from any error much less legal infirmity or validity. The contentions of the respondents have also been noticed above. And within the ambit of the contentions raised before us, now, we will proceed to deliberate on these issues. First and foremost, we may refer to the comparative study of the existing and proposed regime in terms of the Notifications dated 14th September, 2006 and 9th December, 2016. The useful reference can be made to the following chart:

Sl. No.	Particulars	EIA Notification dated 14 September,2006	EIA Notification dated 09 December, 2016
1.	Consent to Establish & Operate	• Prior to the actual construction activities, the project proponent has to obtain Consent to Establish from the Board under the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981for all construction projects having BUA above 20,000 m^2 • After completion of the construction activity, the proponent has to obtain Consent to Operate from the Board under the Water	• No Consent to Establish and Operate under the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 will be required from the State Pollution Control Boards for residential buildings up to 1,50,000 square meters

		(Prevention No Consent to Establish and Operate under the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 will be required from the State Pollution Control Boards for residential buildings up to 1,50,000 square meters and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981for all construction projects having BUA above 20,000 m^2.	
2.	Construction projects having built up area below 20,000 m^2	• Projects having built up area below 20,000 m2 not require prior environmental clearance from MoEF	• BUILDINGS CATEGORY '1' (5,000 to < 20,000 Square meters) ¬ A Self declaration Form to comply with the environmental conditions (Appendix XIV– attached below) along with Form 1A and certification by the Qualified Building Environment Auditor to be submitted online by the project proponent besides application for building permission to the local authority along with the specified fee in separate accounts ¬ Thereafter, the local authority shall issue the building permission incorporating the environmental conditions in it and allow the project to start based on the self declaration and certification along with the application ¬ After completion of the construction of the building, the project proponent may update Form 1A online based on audit done by the Qualified Building Environment Auditor and shall furnish the revised compliance undertaking to the local authority. ¬ Any non-compliance issues in buildings less than

			20,000 square meters shall be dealt at the level of local body and the State through existing mechanism
3.	Construction Projects having built up area above 20,000 m^2	• An application seeking prior environmental clearance in all cases shall be made in the prescribed Form 1 annexed herewith and ¬The project proponent to submit online application in Form 1 A along with specified fee for environmental appraisal and additional fee for building permission ¬The fee for environmental appraisal will be deposited in a separate account Supplementary Form 1A, if applicable, as given in Appendix II, after the identification of prospective site(s) for the project and/or activities to which the application relates, before commencing any construction activity, or preparation of land, at the site by the applicant.	• The project proponent to submit online application in Form 1 A along with specified fee for environmental appraisal and additional fee for building permission ¬the fee for environmental appraisal will be deposited in a separate account. • The Environment Cell will process the application and present it in the meeting of the Committee headed by the authority competent to give building permission in that local authority ¬The Committee will appraise the project and stipulate the environmental conditions to be integrated in the building permission ¬After recommendations of the Committee, the building permission and environmental clearance will be issued in an integrated format by the local authority ¬The project proponent to submit Performance Data and Certificate of Continued Compliance of the project for the environmental conditions parameters applicable after completion of construction from Qualified Building Environment Auditors every five years to the Environment Cell with special focus on the following parameters; 1.Energy Use (including all energy sources) 2.Energy generated on site from onsite Renewable energy sources 3.Water use and waste water generated,

			treated and reused on site 4.Waste Segregated and Treated on site 5.Tree plantation and maintenance ¬After completion of the project, the Cell shall randomly check the projects compliance status including the five years audit report ¬The State Governments may enact the suitable law for imposing penalties for non-compliances of the environmental conditions and parameters ¬The Cell shall recommend financial penalty, as applicable under relevant State laws for noncompliance of conditions or parameters to the local authority. • On the basis of the recommendation of the Cell, the local authority may impose the penalty under relevant State laws ¬The cases of false declaration or certification shall be reported to the accreditation body and to the local body for blacklisting of Qualified Building Environment Auditors and financial penalty on the owner and Qualified Building Environment Auditors
4.	Built up Area considered for EC	• Built up area for covered construction; in the case of facilities open to the sky, it will be the activity area	• The term "built up area" for the purpose of this notification is the built up or covered area on all floors put together including its basement and other service areas, which are proposed in the buildings and construction projects
5.	Monitoring of environmental compliances	• Earlier, it was mandatory for the project proponent to submit compliance report every six months.	• Project proponent shall submit performance data & certificate of continued compliance of the project for the environmental conditions after completion of construction every five years.

6.	Process of granting permission for construction and building projects	• Under 2006 notification prior Environment clearance from SEIAA was mandatorily required even before <u>starting of the construction work or preparation of land.</u> SEIAA was to screen scope and appraise projects before granting of environment clearance. • The environmental clearance process before SEIAA comprises of four stages, all of which may not apply to particular cases as set forth. These four stages in sequential order are:- • Stage (1) Screening (Only for Category 'B' projects and activities) • Stage (2) Scoping •Stage (3) Public Consultation • Stage (4) Appraisal	• Under 2016 notification Environmental conditions are to be imposed by Environmental cell at the level of local authority. The cell will then process the application and place it before the committee headed by the authority competent to give building permissions. The committee will then appraise the project and stipulate environmental conditions without any provisions of public consultation which is an integral part of 2006 notification. • Therefore, the environmental cells work under the building permit issuing authority therefore not a independent authority to impose environmental conditions. Moreover building permit authority is not a scientifically sound body as SEIAA or SEAC.
7.	Environment Clearance Authority concerning Building and Construction projects	• Clearance was given after screening and appraising of the projects by government constituted bodies' i.e. SEIAA or SEAC who are independent bodies.	• Imposition of environmental conditions by local authority on the basis of assessment and certification by Qualified Building Environment Auditors (QBEAs) which could be a firm /Organization or an individual expert accredited by the accreditation authority.
8.	Violation of environmental conditions	• Violation of environmental conditions and parameters are dealt under section 15 and section 19 of EPA, Act 1986.	• The state Government may enact suitable laws for imposing penalties for non compliance. The local Authorities shall impose penalties based on the recommendation of environmental cell of local body.
9.	Qualification of Experts	• Multi sectoral / Multi disciplinary experts in SEAC. • Qualification as per the Schedule 6 of the	• Experts of limited sectors like Water, Air, Solid Waste, Energy and transport in environmental cell.

		current EIA notification.	

From the above comparative study of the two regimes, it is clear that the regime in terms of the Notification dated 9th December, 2016 would considerably dilute the environmental safeguards provided not only under the Regulation of 2006 but even under the Act of 1986. The Applicants have rightly placed reliance on the Principle of Non-regression. Under the International law, the doctrine of Non-regression is an accepted norm. It is founded on the idea that environmental law should not be modified to the detriment of environmental protection. This principle needs to be brought into play because today environmental law is facing a number of threats such as deregulation, a movement to simplify and at the same time diminish, environmental legislation perceived as too complex and an economic climate which favours development at the expense of protection of environment. The draft amendment of the existing environmental laws should be done with least impact on environment protection that was available under the existing law or regime. The present amendment in the Notification particularly few clauses that we will refer hereinafter can lead to severe environmental impacts.

15. The Precautionary Principle as propounded by the Hon'ble Apex Court is a cornerstone of environmental jurisprudence in the country as the environmental conditions imposed are not comprehensive enough and are only a tick-box exercise taken by the project proponent without any prior environment assessment process especially its impact on ecologically sensitive area and other environmental vulnerable area.

The impugned notification, takes away the power of the Pollution Control Boards and Committee to grant/refuse Consent to Establish and Consent to Operate for building and construction projects up to an area of 1,50,000 sq meter. It further dilutes the entire environmental assessment framework under the EIA notification 2006, which has been periodically strengthened and amended by the numerous orders of this Hon'ble Tribunal.

The impugned notification has several deficiencies that go against the basic letter and spirit of EPA Act, 1986 and the EIA notification issued there under. Power under Section 3 read with Rule 5 of Environment (Protection) Act, 1986 can only be exercised by the central government or the authorities constituted by it. Whereas the impugned notification gives power to the State Government for constitution of an authority to exercise and perform such of the powers and functions as provide under Environment Protection Act, 1986, which Includes assessment and granting of environment clearance to the projects. This would be apparently in conflict with the provisions of the Act of 1986. In this regard reference can also be made to the judgement of the constitutional bench of the Hon'ble Supreme Court in the case of *LIC v. Escorts Ltd.,* (1986) 1 SCC 264, where the Hon'ble Supreme Court held that it may be open to a subordinate legislating body to make appropriate rules and regulations to regulate the exercise of a power which the Parliament has vested in it, or as to carry out the purposes of the legislation, but it cannot divest itself of the power.

It is further stated that these conditions fall substantially below the prior environmental assessment procedure which was much detailed and brought within EIA framework after the direction of the Hon'ble Supreme Court in the *Maily Yamuna Case* (W.P.C No. 725 of 1994).

16. The impugned notification provides that the local authorities such as the development authorities and Municipal Corporation may certify compliance of Environmental Conditions prior to issuance of completion certificate based on recommendations of the Environmental Cell to be constituted in the local authority. Further, the purpose of notification regarding integration of environmental conditions, the MoEF&CC through competent agencies would accredit Qualified Building Environmental Auditor (QBEA's) to assess and certify the building projects. It is clear from the above that the entire assessment procedure has been replaced over which the MoEF&CC has no control.

17. The MoEF&CC has failed to produce any study, literature, evaluation of the reason for taking such a retrograde decision to go back to a pre-2004 situation wherein the failure of the local bodies was considered to be the primary reason for bringing building and constructions activity within the EIA framework. In pre-2004 the position was that the construction sector projects were only regulated through Bye Laws and no Environmental Clearance was required.

18. The proposal for exemption of Environmental Clearance for construction and building project with built-up area to 1,50,000 Sq mtrs. is baseless as there is no study that indicates any improvement

in environment quality with regard to all environmental facets/ availability of natural resources, following which there can be a consideration for relaxation of current norms.

The said amendment notification is only a ploy to circumvent the provisions of environmental assessment under the EIA Notification, 2006 in the name of 'ease of doing responsible business' and there is no mechanism laid down under the amendment notification for evaluation, assessment or monitoring of the environment impact of the building and construction activity. The construction industry consumes enormous resources and has a significant energy footprint; the sector emits 22 per cent of India's total annual carbon-dioxide emission. The Hon'ble Tribunal in the matter of *S.P. Muthuraman vs. Union of India & Anr.* (supra) Observed:

> *"In recent past, building construction activities in our country have been carried out without much attention to environmental issues and this has caused tremendous pressure on various finite natural resources. The green cover, water bodies and ground water resources have been forced to give way to the rapid construction activities. Modern buildings generally have high levels of energy consumption because of requirements of air-conditioning and lighting in addition to water consumption. In this scenario, it is necessary to critically assess the utilization of natural resources in these activities."*

19. The very purpose of including the construction projects in the EIA Notification was the failure of the local bodies to ensure compliance with environmental norms. The ULB's/DA's have always had specific stipulation on environmental concerns. However, such conditions were never adhered to or made a pre-requisite to such sanction. It was therefore the case of MoEF&CC that the local body have been approving new construction projects without adhering to

environmental norms. Now, the MoEF&CC itself is taking a step in backward direction without there being any changes brought about in the capacity and technical competence of the local body to assess, evaluate and monitor the environmental norms or to ensure compliance.

20. The EIA Notification, 2006, has a comprehensive process for evaluating the impact on environment which will not be the case after the said notification. For instance, the EIA Notification, 2006 provides Expert Appraisal Committee at the Centre and the State Expert Appraisal Committee at the State level. The composition of these committees comprises as per Appendix-VI to EIA Notification, 2006 of independent experts, such as, Environment Quality Expert, Sectoral Expert in Project Management etc. But as per the amendment notification the same local body which is responsible for the stipulation of the condition would be responsible for ensuring the compliance of the same with the help of Environmental cell and QBEAs. This is in contravention of the principle of *nemo judex in sua causa,* which is a principle of natural justice, meaning that a person cannot be judge of his own cause. Also, there is no technical expertise or competence within the local bodies to either evaluate impact or to ensure compliance of environmental conditions.

As per the EIA Notification 2006, clause 1.3 states "*what are the likely impacts of the proposed activity on the existing facilities adjacent to the proposed site? (Such as open spaces, community facilities).* But as per the amended notification of 2016, no such provision is laid down.

21. This Hon'ble Tribunal in O.A. No. 171 of 2013 (*NGT Bar Association vs. MoEF*) vide Order dated 13.01.2015 stated *"We direct Secretary, MoEF along with such experts and the States Afore referred will also consider the possibility of constituting the branches of SEIAA at the district or at least, division levels to ensure easy accessibility to encourage the mine holders to take EC".* Similarly, the O.M. dated 19.06.2013 states that "*In case of a large pendency case the concerned state Government feels that there is need for another SEAC, the State Government may accordingly send the proposal to MoEF&CC for setting up/notifying another SEAC and MoEF may consider the same".* However instead of adhering to their own O.M.'s and the categorical judgement of the this Tribunal, they have chosen to completely dilute EC process and violate the EIA Notification, 2006 and thereby Act of 1986.

22. A bare perusal of amendment notification would show that there is complete dilution of the norms as provided under the EIA Notification, 2006. For instance, totality of issues related to conservation of water is completely ignored for building of built-up area up to 5000 sq.mtr. There is no sewage treatment or municipal solid waste processing facilities stipulated within the premises for building up to 5000 sq. mtr. of built up area.

23. The MoEF&CC has failed to fulfil its statutory responsibilities. By transferring the powers to ULBs/ Development Authority, it has created a situation of conflict of interest as all the powers have been vested with the same authority. National documents (CAG Report, 2016) also discourage such an integration of environment condition to

the sanctioning authority under the urban local bodies instead of independent assessment by environmental experts of building and construction projects. Thus for example, the report by Comptroller and Auditor General of India (CAG Report, 2016) clearly states that urban local bodies have not been performing on environmental parameters. In most compliance audit, the environmental parameters including MSW, Waste minimisation, e-waste etc have been grossly violated.

It is submitted that on para wise comparison of the draft notification and final notification are entirely different. The main addition which were not part of draft notification but found place in the final notification are as follows:

- *Consent to establish and Consent to Operate under Water Pollution Act, 1974 and Air Pollution Act, 1981 will not be required from SPCB for residential buildings up to 1,50,000 sq.m.*
- *Stripping of building construction projects of built up area of 20,000 sq.m upto 1,50,000 sq.m. from the purview of EPA Act, 1986 and bringing under the concerned State Laws.*
- *The draft Notification specifically mentions that the exclusion/amendments mentioned in the draft notification are not intended for hospitals whereas the final notification clearly excludes hospitals also from the purview of EIA Notification and EPA Act, 1986.*
- *Addition of Appendix-XV, Accreditation of Environmental Auditors. (qualified Building Auditors).*
- *Addition of Appendix-XVI, Environmental Cell at the level of Local Authority.*

When the residential building construction projects of built up area more than 20,000 sq.m up to 1,50,000 sq.m are excluded from

the requirement of "Consent to Establish" or "Consent to Operate" then these building construction projects will be out of the purview of these statutes, what will be the relevance of CPCB norms and this will encourage indiscriminate discharge of untreated sewage into river and drains.

24. In the said notification, there is no definition of "Area". In the absence of such a definition, the "Area" can be for the whole of the State or District or Region. In this connection, attention is brought to the EIA Notification, 2006 wherein the word "built-up area" was introduced. There was no definition of "built up area" in the impugned Notification and which leads to confusion in the building construction sector.

The said notification is contrary to the recommendations of the report of the committee constituted by MoEF&CC on 11.12.2012 (The Kasturirangan report) to review the provisions of EIA Notification, 2006 relating to buildings, etc which was then accepted by MoEF&CC. The MoEF&CC vide OM dated 10.11.2015, reiterated and vetted the recommendations of Kasturirangan Committee among other things. If the MoEF&CC is now changing its stand, it is duty bound to produce back-up study or research material to prove that the local bodies have concern towards environment.

25. Besides noticing the above mentioned deficiencies in and dilutions of the existing laws by the impugned Notification, we must also notice a very strong legal infirmity in it. Admittedly, the notification has been issued by the MoEF&CC in exercise of its powers under sub-section (1) read with clause (V) of sub-section (2) of Section

(3) of the Act of 1986 and clause (d) of sub-rule (3) of Rule (5) of the Environment (Protection) Rules, 1986. By the impugned Notification, paragraph 14 is sought to be inserted after paragraph 13 of the existing Notification/Regulations of 2006. The powers under these provisions can be exercised under Section 3(2)(5) of the Act of 1986 which empowers the Central Government to take measures to protect and improvement of the quality of environment in regard to restrictions of areas in which any industry/operations or process or class of industries operations or processes shall not be carried out or shall be carried out subject to certain safeguards. In terms of section 3 (1)of the Act, this power of taking measures is to be exercised by the Central Government when it deems necessary and expedient for the purpose of protecting and improving the quality of environment and preventing, controlling and abating environmental pollution (emphasis supplied). Rule 5 deals with the prohibition and restriction on the locations of industries and the carrying on process and operations in different areas. It gives power to the Central Government to take into consideration the factors while prohibiting or restricting the locations of industries and carrying on of process/operations in different areas. Sub-rule 3 of this Rule contemplates the procedure to be followed by the Central Government while issuing the notification for imposing prohibition or restriction as stated in Sub-rule (1) of Rule 5.

Thus, both the sections and the rule gives power for issuing of any notification and placing prohibition / restriction in their terms, subject to the conditions, i.e., while issuing notification the procedure under Rule 5 (3) should be followed and more importantly it should be

exercised only for the purpose of protecting and improving the quality of the environment and preventing pollution. Once any of these essential statutory features are missing the notification issued would be liable to be interfered with. The major part of the Notification does not satisfy these ingredients.

26. The amended clause 14 while dealing with the other building category more than 20000 sq. meter also provides that no Consent to Establish and Operate under the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 will be required from the State Pollution Control Boards for residential buildings upto 150000 sq. meter. This amendment is *ex-facie* opposed to the above objects and in fact lacks legislative competence. While exercising powers under a subordinate legislation in furtherance to Section 3 and Rule 5, the authority cannot in exercise of its subordinate legislation exclude the operation of a substantive law that is Water Act, 1974 and Air Act, 1981 enacted by the Parliament. This would suffer from the *vires* of excessive legislation. It is strange that the MoEF&CC, a delegatee under the said provision could venture upon excluding the application and enforcing of a Parliament Act without even making any amendment under that act or the rules framed under that act. This action of the MoEF&CC cannot stand the scrutiny of law.

27. The Environmental Cell is to be constituted by the local authority or the State Government, whereas the implementation of the environmental law is vested with the Central Government. The Environmental Clearance is expected to be issued by the authorities

in an integrated format. Any offence or violation thereto which is punishable under the Act of the Parliament, i.e., the Act of 1986 thus subordinate legislative amendment takes away that power and requires a local authority to take precedence in relation to providing punishment for such violation or offence. There is clear ambiguity and uncertainty in the Constitution of the Environmental Cell and its functions. There is no clarity as to the qualification which the Member of the Environmental Cell should possess. A Cell, primary duty of which is to protect the environment would have to work in subordination to a local authority whose primary object is to permit development. Thus, the possibility of conflicting interest arising in the functioning of the local authority and the Environmental Cell cannot be ruled out. It may arise even then thus defeating the very purpose of the amendment.

28. Another serious objection raised to the Notification is that the final Notification has been issued without considering the objections filed to the draft Notification. Of course, in terms of the procedure prescribed under Rule 5(3) of the Rules of 1986 the procedure must be strictly adhered to. The MoEF&CC had invited objections which were filed and even the Applicant was heard. There cannot be a doubt that requirement of considering objections effectively is not a mere formality. It should be done objectively and in accordance with law as held in the case of *Dr. Avinash Ramkrishna Kashiwar vs. the State of Maharashtra (supra):*

> 17."*It could thus be seen that it appears to be settled position of law that the requirement of previous publication inviting objections and suggestions is not*

an empty formality. It is with an intention to enable persons likely to be affected , to be informed, so that they may take steps as may be open to them and the objections/ suggestions made would be required to be taken into consideration by the authorities before issuing a final notification".

26. *"In the result, we hold that the impugned notification dated 26.07.2013 is not sustainable in law and, therefore, quashed and set aside. Rule is, therefore, made absolute in the aforesaid terms with no orders as to costs."*

The Applicant had filed objections which were duly considered by the MoEF&CC and even the Applicant was heard. There is nothing on record before us that would show that there is no application of mind and that the objections were not considered objectively by the MoEF&CC. In light of this, we are unable to accept this contention raised on behalf of the Applicants.

29. The other argument of the Applicant which deserves to be considered with some merit is that the final impugned Notification is at substantial variance to the draft Notification. This has not only resulted in prejudice to the environment but has also defeated the purpose of Rule 5(3) of the Environment (Protection) Rules, 1986. Following are few examples of such variance and which have significant effect on the environmental laws:

(a). The exclusion of application of the Water Act and the Air Act was never proposed or stated in the draft Notification, while it has been introduced in the final Notification.

(b). Role of the State Pollution Control Boards to monitor and verify the environmental conditions is eliminated in the final notification. The construction of built up area upto area of 20,000 sq. meter upto 1,50,000 sq. meter which were

otherwise covered under the Act of 1986 now have been brought under the State Laws without specifying them in the draft notification. The draft Notification specifically mentions that the exclusion/amendment benefits mentioned in the draft Notification are not intended for hospitals whereas the final notification clearly excludes hospitals from the purview of the EIA Notification, 2006 and Environment (Protection) Act, 1986. It is at substantial variance as the hospitals fall under red category under the Central Pollution Control Board categorization dated 7th March, 2016. So, provision of dealing with the environmental conditions of hospitals falling under the environmental norms.

(C). Addition of Appendix XV, accreditation of environmental auditor (Qualified Building Environment Auditor).

(D). Addition of Appendix XVI, Environmental Cell at the level of local authority.

On the above premises, it is contended that on the one hand, there is substantial difference between the draft and the final notifications while on the other hand Applicants were deprived of the right to file objections on these aspects. Reliance is placed on the judgement of the Hon'ble Supreme Court of India in the case of *State of Punjab vs. Tehal Singh & Ors,* AIR 2002 SC 533 wherein the Supreme Court held that Principle of Natural Justice to subordinate legislation may be applied but where the legislature provides an

opportunity of hearing and filing objections then it must be adhered to *senso stricto*.

30. From the records before the Tribunal, it is clear that there are variations even of substantial nature between the draft and the final Notification dated 9th December, 2016 issued by the respondent. One of the significant failures of the same is that the applicants or public at large has lost substantive right to file objections on these aspects to the draft Notification. They have also lost the right to be heard in terms of Rule 5(3) of the Rules of 1986. Incorporation of such provisions from the draft Notification into the final Notification would not be permissible.

31. Some of the portions of the impugned Notification; particularly, relating to granting of exemption from the application of Water and Air Acts; Rendering the provisions of the central law for taking action, penalizing defaulters and offenders of the environmental law being rendered ineffective; ambiguity and deficiencies in constitution of the Environmental Cell are some of the patent features of the impugned Notification which dilutes the environmental impacts on the one hand, while on the other, they are in derogation to India's international commitments to the Rio Declaration, 1992 and Paris Agreement, 2015. If principle 15 to 17 of the Rio Declaration is read along with clauses of the Paris Agreement, 2015, particularly, in face of precautionary approach, preventing irreparable damage forming definite environmental impact assessment to examine adverse impact on the environment, reduction on the growth of is carbon emission and to adopt best practices and achieve the ambitious targets between

the stipulated time then the adopting cumulative effect of the Notification dated 9th December, 2016 would have some element of derogation. The Notification also ignores some essential features like source of water, source of raw material, urban ecology, provision of no development zone and construction face impacts. These aspects have a direct bearing on protection of environment and keeping in line with the Principle of Sustainable Development. It is important that there should be development and particularly, when the development is guided by the social cause but that development should not be permitted to cause irreparable loss to the environment and ecology. Sustainable development has to be the ultimate criteria. The Hon'ble Supreme Court in the case of *N.D. Dayal v. Union of India,* (2004) 9 SCC 362 deliberated upon the Doctrine of Sustainable Development and while comparing with the economic growth and well being held as under:

> "24.The right to development cannot be treated as a mere right to economic betterment or cannot be limited to as a misnomer to simple construction activities. The right to development encompasses much more than economic well being, and includes within its definition the guarantee of fundamental human rights. The 'development' is not related only to the growth of GNP. In the classic work - *'Development As Freedom'* the Nobel prize winner Amartya Sen pointed out that 'the issue of development cannot be separated from the conceptual framework of human right'. This idea is also part of the UN Declaration on the Right to Development. The right to development includes the whole spectrum of civil, cultural, economic, political and social process, for the improvement of peoples' well being and realization of their full potential. It is an integral part of human right. Of course, construction of a dam or a mega project is definitely an attempt to achieve the goal of wholesome development. Such works could very well be treated as integral component for development.

25. Therefore, the adherence of sustainable development principle is a sine qua non for the maintenance of the symbiotic balance between the rights to environment and development. Right to environment is a fundamental right. On the other hand right to development is also one. Here the right to 'sustainable development' cannot be singled out. Therefore, the concept of 'sustainable development' is to be treated an integral part of 'life' under Article 21. The weighty concepts like intergenerational equity (*State of Himachal Pradesh v. Ganesh Wood Products*, [1995] 6 SCC 363), public trust doctrine (*MC Mehta v. Kamal Nath*, [1997] 1 SCC 388 and precautionary principle (*Vellore Citizens*), which we declared as inseparable ingredients of our environmental jurisprudence, could only be nurtured by ensuring sustainable development.

26. To ensure sustainable development is one of the goals of Environmental Protection Act, 1986 (for short 'the Act') and this is quiet necessary to guarantee 'right to life' under Article 21. If the Act is not armed with the powers to ensure sustainable development, it will become a barren shell. In other words, *sustainable development is one of the means to achieve the object and purpose of the Act as well as the protection of 'life' under Article 21.*Acknowledgment of this principle will breath new life into our environmental jurisprudence and constitutional resolve. Sustainable development could be achieved only by strict compliance of the directions under the Act. The object and purpose of the Act-"to provide for the protection and improvement of environment" could only be achieved by ensuring the strict compliance of its directions. The concerned authorities by exercising its powers under the Act will have to ensure the acquiescence of sustainable development. Therefore, the directions or conditions put forward by the Act need to be strictly complied with. Thus the power under the Act cannot be treated as a power simpliciter, but it is a power coupled with duty. It is the duty of the State to make sure the fulfilment of conditions or direction under the Act. Without strict compliance, right to environment under Article 21 could not be guaranteed and the purpose of the Act will also be defeated. The commitment to the conditions thereof is an obligation both under Article 21 and under the Act. The conditions glued to the environmental clearance for the Tehri Dam Project given by the Ministry of Environment vide its Order dated July 19, 1990 has to be viewed from this perspective".

Despite the above shortcomings of the Notification and some clauses suffering from legal infirmity, the impugned Notification has certainly good and effective aspects as well. As already noticed by us, it brings into effect a social cause of providing affordable housing to the poor strata of the society. It also proposes to decentralize and bring authorities granting environmental clearance and those granting building permission together under a single window system so as to address environmental concerns. The concept of one window system is sought to be introduced. The Notification specifically provides for emphasis on the aspects that are required to be considered by the environmental cell with special focus on energy use, energy generated on site from on site renewable energy sources, water use and waste water generated, treated on site, waste segregated and treated on site, waste segregation and treated on site, tree plantation and maintenance. These are the few good features of the Notification which also do not suffer from element of illegality. 'Housing for all by 2022' is a purpose and object in conformity with the constitutional mandate. There would be collective and coordinated effort by the Environmental Cell, local and other authorities at the State level to expeditiously deal with environmental clearance.

ORDER/DIRECTIONS

32. The object of the Notification is laudable that is providing housing to the poor. The provisions of the existing regime under the Regulation/Notification of 2006 are sought to be liberalized and expanded for obtaining that object. Some of the provisions of the Notification are being amended to provide for decentralized regulation

in relation to building projects. Certain specified building and construction projects of specified area are proposed to be exempted from the rigours of the Notification. But these amendments would have to be in consonance with the law, where certain provisions of the amended Notification dated 9th December, 2016 are in consonance with the provisions of the Act of 1986 and do not suffer from the *vires* of illegality. Thus, some other provisions of the same Notification *ex-facie* suffer from legal infirmities and are incapable of being implemented in accordance with the scheme of federal structure under the Constitution of India. Out of them, some provisions are directly opposed to the Principle of Non-regression as they considerably dilute the existing environmental laws and standards to the prejudice of the environment. Thus, in the facts and circumstances of the present case, the Tribunal can safely take recourse to the doctrine of severability to declare some of the provisions of the Notification as *ultra-vires* or ineffective while holding the other part of the Notification as legally sound and sustainable.

33. In view of the above, we pass the following order/directions:

1. We hold and declare that this Tribunal has jurisdiction to examine the legality, validity and correctness of a Notification issued by the competent forum in exercise of its power of subordinate legislation with regard to acts stated in Schedule-I to the National Green Tribunal Act, 2010.
2. We hold and declare that (i) clause 14(8), (ii) the provisions relating to exclusion of Consent to Operate and Consent to Establish under Water (Prevention and Control of Pollution)

Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 in clause 14 of the impugned Notification; (iii) Appendix-XVI relating to constitution and functioning of Environmental Cell, cannot be sustained and are liable to be quashed for the reasons afore-stated. Thus, we direct MoEF&CC to re-examine its Notification dated 9th December, 2016 and take appropriate steps to delete, amend and rectify the clauses of the said Notification in light of this judgement.

3. As a result of the above, the byelaws amended by the DDA vide its Notification dated 22nd March, 2016 can also not be given effect to, unless the Notification dated 9th December, 2016 is amended in terms of this judgement.

4. Till the time the Ministry comply with the above directions and notify the amended provisions of Regulations of 2006, it will not implement the impugned Notifications. However, once the amended regulations are notified, MoEF&CC/SEIAA /Local Authorities can give effect to that, without any further reference to the Tribunal.

5. MoEF&CC shall, particularly take care that the laudable social cause of 'providing Housing to the poor' does not get defeated by business, economic profitability with reference to 'ease of doing business', while particularly protecting the environment.

34. With the above order/directions, the Original Applications No. 677 of 2016, 01 of 2017, 07 of 2017, 55 of 2017 and 67 of 2017 stand disposed of, with no order as to costs.

35. All the Miscellaneous Applications No. 148 of 2017, 03 of 2017, 445 of 2017, 879 of 2017 and 620 of 2017 have become infructuous and are accordingly disposed of.

ACT:
Code of Criminal Procedure 1973, s. 133 & M. P. Municipalities Act 1961, s. 123-Municipality not providing sanitary facilities and construction of public conveniences for slum dwellers-Whether Courts can compel municipal body to carry out its duty to the community to provide amenities and abate nuisance.

HEADNOTE:
The residents (respondents) of a prominent residential locality of the Municipality (petitioner) in their complaint under s. 133 Criminal Procedure Code to the Sub-Divisional Magistrate averred that the Municipality had failed despite several pleas, to meet its basic obligations, like provision of sanitary facilities on the roads, public conveniences for slum dwellers who were using the road for that purpose, and prevention of the discharge from the nearby Alcohol Plant of maladorous fluids into the public street, and that the

Municipality was oblivious to the statutory obligation envisaged in s. 123 M. P. Municipalities Act, 1961

The Municipal Council contested the petition on the ground that the owners of houses had gone to that locality on their own choice, fully aware of the insanitary conditions and therefore they could not complain. It also pleaded financial difficulties in the construction of drains and provision of amenities.

The Magistrate found the facts proved, and ordered the municipality to provide the amenities and to abate the nuisance by constructing drain pipes with flow of water to wash the filth and stop the stench and that failure would entail prosecution under s. 188 I.P.C.

The order of the Magistrate was found unjustified by the Sessions Court, but upheld by the High Court.

In the Special Leave Petition by the Municipality to this Court on the question whether a Court can by affirmative action compel a statutory body to carry out its duty to the community by constructing sanitation facilities at great cost and on a time-bound basis.

^

HELD : 1. Wherever there is a public nuisance, the presence of s. 133 Criminal Procedure Code must be felt and any contrary opinion is contrary to the law. [112D]

2. The public power of the Magistrate under the Code is a public duty to the members of the public who are victims of the nuisance and so he shall exercise, it when the jurisdictional facts are present. [107G]

98

3. The Magistrate's responsibility under s. 133 Cr.P.C. is to order removal of such nuisance within a time to be fixed in the order. This is a public duty implicit in the public power to be exercised on behalf of the public and pursuant to a public proceeding. Failure to comply with the direction will be visited with a punishment contemplated by s. 188 I.P.C. [109C-D]

4. The Municipal Commissioner or other executive authority bound by the order under s. 133 Criminal Procedure Code shall obey the direction because disobedience, if causes obstruction or annoyance or injury to any persons lawfully pursuing their employment, shall be punished with simple imprisonment or fine as prescribed in the section. The offence is aggravated if the disobedience tends to cause danger to human health or safety. [109E]

5. Public nuisance, because of pollutants being discharged by big factories to the detriment of the poorer sections, is a challenge to the social justice component of the rule of law. [110C]

6. The imperative tone of s. 133 Criminal Procedure Code read with the punitive temper of s. 188 I.P.C. make the prohibitory act a mandatory duty. [109E]

7. The Criminal Procedure Code operates against statutory bodies and others regardless of the cash in their

coffers, even as human rights under Part III of the Constitution have to be respected by the State regardless of budgetary provision. [108H]

8. Section 123 M. P. Municipalities Act 1961 has no saving clause when the municipal council is penniless. [108H]

9. Although the Cr.P.C. and I.P.C. are of ancient vintage the new social justice orientation imparted to them by the Constitution of India makes them a remedial weapon of versatile use. Social Justice is due to the people and, therefore, the people must be able to trigger off the jurisdiction vested for their benefit in any public functionary like a Magistrate under s. 133 Criminal Procedure Code. In the exercise of such power, the judiciary must be informed by the broader principle of access to justice necessitated by the conditions of developing countries and obligated by Art. 38 of the Constitution. [109F-G]

10. A responsible municipal council constituted for the precise purpose of preserving public health and providing better finances cannot run away from its principal duty by pleading financial inability. Decency and dignity are non-negotiable facets of human rights and are a first charge on local self-governing bodies. Similarly, providing drainage systems not pompous and attractive, but in working condition and sufficient to meet the needs of the people-cannot be evaded if the municipality is to justify its existence. [110E]

11. The Court, armed with the provisions of the two Codes and justified by the obligation under s. 123 of the Act, must adventure into positive directions as it has done in the present case. Section 133 Criminal Procedure Code authorises the prescription of a time-limit for carrying out the order. The same provision spells out the power to give specific directives. [111A-B]

Govind Singh v. Shanti Sarup, [1979] 2 SCC 267, 279 referred to.

12. The state will realise that Art. 47 makes it a paramount principle of governance that steps are taken for the improvement of public health as amongst its primary duties. The municipality also will slim its budget on
99
low priority items and elitist projects to use the savings on sanitation and public health. [114C]

13. Where Directive Principles have found statutory expression in Do's and Don'ts the court will not sit idly by and allow municipal government to become a statutory mockery. The law will relentlessly be enforced and the plea of poor finance will be poor alibi when people in misery cry for justice. The dynamics of the judicial process have a new `enforcement' dimension not merely through some of the provisions of the Criminal Procedure Code (as here) but also through activated tort consciousness. The officers in charge

and even the elected representatives will have to face the penalty of the law if what the Constitution and follow up legislation direct them to do are defied or denied wrongfully. The wages of violation is punishment, corporate and personal. [114G-115A]

[The Court approved a scheme of construction work to be undertaken by the Municipality for the elimination of the insanitary conditions and directed that the work be commenced within two months and that the Magistrate inspect the progress of the work every three months and see that it is implemented. [113 D-114 B]

JUDGMENT:

CRIMINAL APPELLATE JURISDICTION: Special Leave Petition (Crl.) No. 2856 of 1979.

From the Judgment and Order dated 6-8-1979 of the Madhya Pradesh High Court in Crl. Revision No. 392/76.

Sobhag Mal Jain and S. K. Jain for the Petitioner. C. S. Chhazed, Miss Manisha Gupta and M. S. Gupta for Respondents 1-5.

S. K. Gambhir for the State.

The Order of the Court was delivered by KRISHNA IYER, J.-`It is procedural rules', as this appeal proves, `which infuse life into substantive rights, which activate them to make them effective'. Here, before us, is what looks like a pedestrian quasi-criminal litigation under s. 133 Cr.P.C., where the Ratlam Municipality-the appellant-challenges the sense and soundness of the High Court's affirmation of the trial court's order directing the construction of drainage facilities and the like, which has spiralled up to this Court. The truth is that a few profound issues of processual jurisprudence of great strategic significance to our legal system face us and we must zero-in on them as they involve problems of access to justice for the people beyond the blinkered rules of `standing' of British Indian vintage. If the centre of gravity of justice is to shift, as the Preamble to the Constitution mandates, from the traditional individualism of locus standi to the community orientation of public interest litigation, these issues must be considered. In that sense, the case before us between the Ratlam Municipality and the citizens of a ward, is a path-finder in the field of people's involvement in the justicing process, sans which as Prof. Sikes points out,(1) the system may `crumble under the burden of its own insensitivity'. The key question we have to answer is whether by affirmative action a court can compel a statutory body to carry out its duty to the community by constructing sanitation facilities at great cost and on a time-bound basis. At issue is the coming of age of that branch of public law bearing on community actions and the court's power to force public bodies under public duties to implement specific plans in response to public grievances.

The circumstances of the case are typical and overflow the particular municipality and the solutions to the key questions emerging from the matrix of facts are capable of universal application, especially in the Third World humanscape of silent subjection of groups of people to squalor and of callous public bodies habituated to deleterious inaction. The Ratlam municipal town, like many Indian urban centres, is populous with human and sub-human species, is punctuated with affluence and indigence in contrasting co-existence, and keeps public sanitation a low priority item. what with cesspools and filth menacing public health. Ward No. 12, New Road, Ratlam town is an area where prosperity and poverty live as strange bedfellows. The rich have bungalows and toilets, the poor live on pavements and litter the street with human excreta because they use roadsides as latrines in the absence of public facilities. And the city fathers being too busy with other issues to bother about the human condition, cesspools and stinks, dirtied the place beyond endurance which made the well-to-do citizens protest, but the crying demand for basic sanitation and public drains fell on deaf ears. Another contributory cause to the insufferable situation was the discharge from the Alcohol Plant of malodorous fluids into the public street. In this lawless locale, mosquitoes found a stagnant stream of stench so hospitable to breeding and flourishing, with no municipal agent disturbing their stinging music at human expense. The local denizens, driven by desperation, at long last, decided to use the law and call the bluff of the municipal body's bovine indifference to its basic obligations under s. 123 of the M. P. Municipalities Act, 1961 (the Act, for short). That provision casts a mandate:

> 123. Duties of Council.-(1) In addition to the duties imposed upon it by or under this Act or any other enactment for the time being in force, it shall be the duty of a Council to undertake and make reasonable and adequate provision for the following matters within the limits of the Municipality, namely:
>
> XX XX XX
>
> (b) cleansing public streets, places and sewers, and all places, not being private property, which are open to the enjoyment of the public whether such places are vested in the Council or not; removing noxious vegetation, and abating all public nuisances:
>
> (c) disposing of night-soil and rubbish and preparation of compost manure from night-soil and rubbish.

And yet the municipality was obvious to this obligation towards human well-being and was directly guilty of breach of duty and public nuisance and active neglect. The Sub Divisional Magistrate, Ratlam, was moved to take action under s. 133 Cr.P.C., to abate the nuisance by ordering the municipality to construct drain pipes with flow of water to wash the filth and stop the stench. The Magistrate found the facts proved, made the direction sought and scared by the prospect of prosecution under s. 188 I.P.C., for violation of the order under s. 133 Cr.P.C., the municipality rushed from court to court till, at last, years after, it reached this Court as the last refuge of lost causes. Had the municipal council and its executive officers spent half this litigative zeal on cleaning up the street and constructing the drains by rousing the people's sramdan resources and laying out

the city's limited financial resources, the people's needs might have been largely met long ago. But litigation with other's funds is an intoxicant, while public service for common benefit is an inspiration; and, in a competition between the two, the former overpowers the latter. Not where a militant people's will takes over people's welfare institutions, energises the common human numbers, canalises their community consciousness, forbids the offending factories from polluting the environment, forces the affluent to contribute wealth and the indigent their work and thus transforms the area into a healthy locality vibrant with popular participation and vigilance, not neglected ghettoes noisy with squabbles among the slimy slum-dwellers nor with electoral 'sound and fury signifying nothing.' The Magistrate, whose activist application of s. 133 Cr.P.C., for the larger purpose of making the Ratlam municipal body to do its duty and abate the nuisance by affirmative action, has our appreciation. He has summed up the concrete facts which may be usefully quoted in portions:

> "New Road, Ratlam, is a very important road and so many prosperous and educated persons are living on this Road. On the southern side of this Road some houses are situated and behind these houses and attached to the College boundary, the Municipality has constructed a road and this new Road touches the Government College and its boundary. Just in between the said area a dirty Nala is flowing which is just in the middle of the main road i.e. New Road. In this stream (nala) many a time dirty and filthy water of Alcohol Plant having chemical and obnoxious smell, is also released for which the people of that locality and general public have to face most obnoxious smell. This Nala also produces filth which causes a bulk of mosquitoes breeding. On this very southern side of the said road a few days back municipality has also constructed a drain but it has (?) constructed it completely but left the construction in between and in some of the parts the drain has not at all been constructed because of this the dirty water of half constructed drain and septic tank is flowing on the open land of applicants, where due to insanitation and due to non-removing the obstructed earth the water is accumulated in the pits and it also creates dirt and bad smell and produces mosquitoes in large quantities. This water also goes to nearby houses and causes harm to them. For this very reason the applicants and the other people of that locality are unable to live and take rest in their respective houses. This is also injurious to health".

There are more dimensions to the environmental pollution which the magistrate points out:

"A large area of this locality is having slums where no facility of lavatories is supplied by the municipality. Many such people live in these slums who relieve their lateral dirt on the bank of drain or on the adjacent land. This way an open latrine is created by these people. This creates heavy dirt and mosquitoes. The drains constructed in other part of this Mohalla are also not proper it does not flow the water properly and it creates the water obnoxious. The Malaria Department of the State of M.P. also pays no attention in this direction. The non-applicants have not managed the drains, Nallahs and Naliyan properly and due to incomplete construction the non-applicants have left no outlet for the rainy water. Owing to above reasons the water is accumulated on the main road, it passes through living houses, sometimes snakes and scorpions come out and this obstruct the

people to pass through this road. This also causes financial loss to the people of this area. The road constructed by Nagarpalika is on a high level and due to this, this year more water entered the houses of this locality and it caused this year more harm and loss to the houses also. This way all works done by the non-applicants i.e. construction of drain, canal and road come within the purview of public nuisance. The non-applicants have given no response to the difficulties of the applicants, and non-applicants are careless in their duties towards the public, for which without any reason the applicants are facing the intolerable nuisance. In this relation the people of this locality submitted their returns, notices and given their personal appearance also to the non-applicants but the non-applicants are shirking from their responsibilities and try to avoid their duty by showing other one responsible for the same, whereas all the non- applicants are responsible for the public nuisance." Litigation is traumatic and so the local people asked first for municipal remedies failing which they moved for magisterial remedies:

> "At the last the applicants requested to remove all the nuisance stated in their main application and they also requested that under-mentioned works must be done by the non-applicants and for which suitable orders may be issued forthwith:
>
> 1. The drains constructed by Municipality are mismanaged and incomplete, they should be managed and be completed and flow of water in the drains should be made so that the water may pass through the drain without obstruction.
>
> 2. The big pits and earthen drains which are situated near the College boundary and on the corners of the road where dirty water usually accumulates, they should be closed and the filth shall be removed therefrom.
>
> 3. The big 'Nala' which is in between the road, should be managed and covered in this way that it must not create overflow in the rainy season.
>
> 4. The Malaria Department should be ordered to sprinkle D.D.T. and act in such a manner and use such means so that the mosquitoes may be eradicated completely from the said locality."

The proceedings show the justness of the grievances and the indifference of the local body:

> "Both the parties heard. The court was satisfied on the facts contained in their application dated 12-5- 72 and granted conditional order against non-applicants No. 1 and 2 u/s 133 of Cr. P.C. (Old Code). In this order all the nuisances were described (which were there in their main application) and the court directed to remove all the nuisances within 15 days and if the non- applicants have any objection or dissatisfaction against the order then they must file it on the next date of hearing in the court."
>
> XX XX XX "The applicants got examined the following witnesses in their evidence and after producing following documents they closed their evidence."

XX XX XX "No evidence has been produced by the non- applicants in spite of giving them so many opportunities. Both the parties heard and I have also inspected the site."

XX XX XX "The non-applicant (Municipal Council) has sought six times to produce evidence but all in vain. Likewise non-applicant (Town Improvement Trust) has also produced no evidence."

The Nallah comes into picture after the construction of road and bridge. It has shown that Nallah is property of Nagarpalika according to Ex.p.

10. Many applications were submitted to remove the nuisance but without result. According to Sec. 32 to 43 of the Town Improvement Trust Act, it is shown, that it has only the provisions to make plans. Many a time people tried to attract the attention of Municipal Council and the Town Improvement Trust but the non-applicants always tried to throw the responsibility on one another shoulder.

XX XX XX It is submitted by non-applicant (Municipality) that the said Nallah belongs to whom, it is still disputed i.e. whether it belongs to non-applicant 1 or

2. Shastri Colony is within the area of Town Improvement Trust. The Nagarpalika (non-applicant No.

1) is financially very weak. But Municipal Council is not careless towards its duties.

Non-applicant (Town Improvement Trust) argued that primary responsibility lies with the Municipal Council only. There is no drainage system.

At the end of it all, the Court recorded: ..... after considering all the facts I come to this conclusion that the said dirty Nallah is in between the main road of Ratlam City. This dirty Nallah affects the Mohalla of New Road, Shastri Colony, Volga Talkies and it is just in the heart of the city. This is the very important road and is between the Railway Station and the main city. In these mohallas, cultured and educated people are living. The Nallah which flows in between the New Road and Shastri Colony the water is not flowing rapidly and on many places there are deep pits in which the dirty water is accumulated. The Nallah is also not straight that is also the reason of accumulation of dirty water. The Nallah is not managed properly by the non- applicants. It is unable to gush the rainy water and due to this the adjoining areas always suffer from over-flowing of the water and it causes the obstruction to the pedestrians.

XX XX XX It is also proved by the evidence given by the applicants that from time to time the Power Alcohol factory which is situated outside the premises of the Municipal Council and it flows its dirty and filthy water into the said Nallah, due to

> this also the obnoxious smell is spreading throughout the New Road or so it is the bounden duty of the Municipal Council and the Town Improvement Trust to do the needful in this respect.

XX XX XX The dirty water which flows from the lavatories and urinals of the residential houses have no outlet and due to this reason there are many pits on the southern side of the New Road and all the pits are full of dirty and stinking water. So it is quite necessary to construct an outlet for the dirty water in the said locality.

In this area many a places have no drainage system and if there is any drain it has no proper flow and water never passes through the drain properly. That causes the accumulation of water and by the time it becomes dirty and stink and then it produces mosquitoes there.

The Magistrate held in the end:

Thus after perusing the evidence I come to this conclusion and after perusing the applications submitted by the persons residing on the New Road area from time to time to draw the attention of the non- applicants to remove the nuisance, the non-applicants have taken no steps whatsoever to remove all these public nuisances.

He issued the following order which was wrongly found unjustified by the Sessions Court, but rightly upheld by the High Court:

> Therefore, for the health and convenience of the people residing in that particular area of all the nuisance must be removed and for that the following order is hereby passed:
>
> (1) The Town Improvement Trust with the help of Municipal Council must prepare a permanent plan to make the proper flow in the said Nallah which is flowing in between Shastri Colony and New Road. Both the non- applicants must prepare the plan within six months and they must take proper action to give it a concrete form.
>
> (2) According to para 13 a few places are described which are either having the same drains and the other area is having no drain and due to this the water stinks there; so the Municipal Council and the Town Improvement Trust must construct the proper drainage system and within their own premises where there is no drain it must be constructed immediately and all this work should be completed within six months.
>
> (3) The Municipal Council should construct drains from the jail to the bridge behind the southern side of the houses so that the water flowing from the septic tanks and the other water flowing outside the residential houses may be channellised and it may stop stinking and it should have a proper flow so that the water may go easily towards the main Nallah. All these drains should be constructed completely within six months by the Municipal Council.

(4) The places where the pits are in existence the same should be covered with mud so that the water may not accumulate in those pits and it may not breed mosquitoes. The Municipal Council must complete this work within two months.

A notice under Section 141 of the Criminal Procedure Code (Old Code) may be issued to the non- applicants Nos. 1 and 2 so that all the works may be carried out within the stipulated period. Case is hereby finalised.

Now that we have a hang of the case we may discuss the merits, legal and factual. If the factual findings are good- and we do not re-evaluate them in the Supreme Court except in exceptional cases- one wonders whether our municipal bodies are functional irrelevances, banes rather than booms and 'lawless' by long neglect, not leaders of the people in local self-government. It may be a cynical obiter of pervasive veracity that municipal bodies minus the people and plus the bureaucrats are the bathetic vogue-no better than when the British were here:

We proceed on the footing, as we indicated even when leave to appeal was sought, that the malignant facts of municipal callousness to public health and sanitation, held proved by the Magistrate, are true. What are the legal pleas to absolve the municipality from the court's directive under s. 133 Cr.P.C. ? That provision reads:

s. 133(1) whenever a District Magistrate or a Sub- Divisional Magistrate or any other Executive Magistrate specially empowered in this behalf by the State Government, on receiving the report of a police officer or other information and on taking such evidence (if any) as he thinks fit, considers-

(a) that any unlawful obstruction or nuisance should be removed from any public place or from any way, river or channel which is or may be lawfully used by the public;

XX XX XX such Magistrate may make a conditional order requiring the person causing such obstruction or nuisance, or carrying on such trade or occupation, or keeping any such goods or merchandise, or owning, possessing or controlling such building, tent, structure, substance, tank, well or excavation or owning or possessing such animal or tree, within a time to be fixed in the order-

(i) to remove such obstruction or nuisance; or XX XX XX

(iii) to prevent or stop the construction of such building, or to alter the disposal of such substance; or if he objects so to do, to appear before himself or some other Executive Magistrate subordinate to him at a time and place to be fixed by the order, and show cause, in the manner hereinafter provided. why the order should not be made absolute.

So the guns of s. 133 go into action wherever there is public nuisance. The public power of the Magistrate under the Code is a public duty to the members of the public who are victims of the nuisance, and so he shall exercise it when the jurisdictional facts are present as here. "All power is a trust-that we are accountable for its exercise- that, from the people, and for the people, all springs, and all must exist."(i) Discretion becomes a duty when the beneficiary brings home the circumstances for its benign exercise.

If the order is defied or ignored, s. 188 I.P.C. comes into penal play:

> 188. Whoever, knowing that, by an order promulgated by a public servant lawfully empowered to promulgate such order, he is directed to obtain from a certain act, or to take certain order with certain property in his possession or under his management, disobeys such direction and if such disobedience causes or tends to cause danger to human life health or safety, or causes or tends to cause a riot or affray, shall be punished with imprisonment of either description for a term which may extend to six months, or with fine which may extend to one thousand rupees, or with both.

There is no difficulty in locating who has the obligation to abate the public nuisance caused by absence of primary sanitary facilities. Section 123, which is mandatory, (we repeat), reads:

> 123. Duties of Council :-(1) In addition to the duties imposed upon it by or under this Act or any other enactment for the time being in force, it shall be the duty of a Council to undertake and make reasonable and adequate provision for the following matters within the limits of the Municipality, namely:-
>
> (a).....
>
> (b) cleansing public streets, places and sewers, and all places not being private property, which are open to the enjoyment of the public whether such places are vested in the Council or not; removing noxious vegetation, and abating all public nuisances;
>
> (c) disposing of night-soil and rubbish and preparation of compost manure from night-soil and rubbish.

The statutory setting being thus plain, the municipality cannot extricate itself from its responsibility. Its plea is not that the facts are wrong but that the law is not right because the municipal funds being insufficient it cannot carry out the duties under s. 123 of the Act. This 'alibi' made us issue notice to the State which is now represented by counsel, Shri Gambhir, before us. The plea of the municipality that notwithstanding the public nuisance financial inability validly exonerates it from statutory liability has no juridical basis. The Criminal Procedure Code operates against statutory bodies and others regardless of the cash in their coffers, even as human rights under Part III of the Constitution have to be respected by the State regardless of budgetary provision. Likewise, s. 123 of

the Act has no saving clause when the municipal council is penniless. Otherwise, a profligate statutory body or pachydermic governmental agency may legally defy duties under the law by urging in self-defence a self-created bankruptcy or perverted expenditure budget. That cannot be.

Section 133 Cr.P.C. is categoric, although reads discretionary. Judicial discretion when facts for its exercise are present, has a mandatory import. Therefore, when the sub-Divisional Magistrate, Ratlam, has, before him, information and evidence, which disclose the existence of a public nuisance and, on the materials placed, he considers that such unlawful obstruction or nuisance should be removed from any public place which may be lawfully used by the public, he shall act. Thus, his judicial power shall, passing through the procedural barrel, fire upon the obstruction or nuisance, triggered by the jurisdictional facts. The Magistrate's responsibility under s. 133 Cr.P.C. is to order removal of such nuisance within a time to be fixed in the order. This is a public duty implicit in the public power to be exercised on behalf of the public and pursuant to a public proceeding. Failure to comply with the direction will be visited with a punishment contemplated by s. 188 I.P.C. Therefore, the Municipal Commissioner or other executive authority bound by the order under s. 133 Cr.P.C. shall obey the direction because disobedience, if it causes obstruction or annoyance or injury to any persons lawfully pursuing their employment, shall be punished with simple imprisonment or fine as prescribed in the Section. The offence is aggravated if the disobedience tends to cause danger to human health or safety. The imperative tone of s. 133 Cr.P.C. read with the punitive temper of s. 188 I.P.C. make the prohibitory act a mandatory duty.

Although these two Codes are of ancient vintage, the new social justice orientation imparted to them by the Constitution of India makes it a remedial weapon of versatile use. Social justice is due to the people and, therefore, the people must be able to trigger off the jurisdiction vested for their benefit in any public functionary like a Magistrate under s. 133 Cr.P.C. In the exercise of such power, the judiciary must be informed by the broader principle of access to justice necessitated by the conditions of developing countries and obligated by Art. 38 of the Constitution. This brings Indian public law, in its processual branch, in line with the statement of Prof. Kojima :(1) "the urgent need is to focus on the ordinary man-one might say the little man..." "Access to Justice" by Cappelletti and B. Garth summarises the new change thus:(2) "The recognition of this urgent need reflects a fundamental change in the concept of "procedural justice"... The new attitude to procedural justice reflects what Professor Adolf Homburger has called "a radical change in the hierarchy of values served by civil procedure"; the paramount concern is increasingly with "social justice," i.e., with finding procedures which are conducive to the pursuit and protection of the rights of ordinary people. While the implications of this change are dramatic-for instance, insofar as the role of the adjudicator is concerned-it is worth emphasizing at the outset that the core values of the more traditional procedural justice must be retained. "Access to justice" must encompass both forms of procedural justice."

Public nuisance, because of pollutants being discharged by big factories to the detriment of the poorer sections, is a challenge to the social justice component of the rule of law. Likewise, the grievous failure of local authorities to provide the basic amenity of public conveniences drives the miserable slum-dwellers to ease in the streets, on the sly for a time, and openly thereafter, because under Nature's pressure, bashfulness becomes a luxury and dignity a difficult art. A responsible

municipal council constituted for the precise purpose of preserving public health and providing better finances cannot run away from its principal duty by pleading financial inability. Decency and dignity are non-negotiable facets of human rights and are a first charge on local self-governing bodies. Similarly, providing drainage systems- not pompous and attractive, but in working condition and sufficient to meet the needs of the people- cannot be evaded if the municipality is to justify its existence. A bare study of the statutory provisions makes this position clear.

In this view, the Magistrate's approach appears to be impeccable although in places he seems to have been influenced by the fact that "cultured and educated people" live in this area and "New Road, Ratlam" is a very important road and so many prosperous and educated persons are living on this road. In India 'one man, one value' is the democracy of remedies and rich or poor the law will call to order where people's rights are violated. What should also have been emphasised was the neglect of the Malaria Department of the State of Madhya Pradesh to eliminate mosquitoes, especially with open drains, heaps of dirt, public excretion by humans for want of lavatories and slums nearby, had created an intolerable situation for habitation. An order to abate the nuisance by taking affirmative action on a time- bound basis is justified in the circumstances. The nature of the judicial process is not purely adjudicatory nor is it functionally that of an umpire only.

Affirmative action to make the remedy effective is of the essence of the right which otherwise becomes sterile. Therefore, the court, armed with the provisions of the two Codes and justified by the obligation under s. 123 of the Act, must adventure into positive directions as it has done in the present case. Section 133 Cr.P.C. authorises the prescription of a time-limit for carrying out the order. The same provision spells out the power to give specific directives. We see no reason to disagree with the order of the Magistrate.

The High Court has taken a correct view and followed the observations of this Court in Govind Singh v. Shanti Sarup(1) where it has been observed:

> "We are of the opinion that in a matter of this nature where what is involved is not merely the right of a private individual but the health, safety and convenience of the public at large, the safer course would be to accept the view of the learned Magistrate, who saw for himself the hazard resulting from the working of the bakery."

We agree with the High Court in rejecting the plea that the time specified in the order is unworkable. The learned judges have rightly said.

> "It is unfortunate that such contentions are raised in 1979 when these proceedings have been pending since 1972. If in seven year's time the Municipal Council intended to remedy such a small matter there would have been no difficulty at all. Apart from it, so far as the directions are concerned, the learned Magistrate, it appears, was reasonable. So far as direction No. 1 is concerned, the learned Magistrate only expected the Municipal Council and the Town Improvement Trust to evolve a plan and to start planning about it within six months: the learned Magistrate has rightly not fixed the time limit within which that plan will be completed. Nothing more

> reasonable could be said about direction No. 1."

A strange plea was put forward by the Municipal Council before the High Court which was justly repelled, viz., that the owners of houses had gone to that locality on their own choice with eyes open and, therefore, could not complain if human excreta was flowing, dirt was stinking, mosquitoes were multiplying and health was held hostage. A public body constituted for the principal statutory duty of ensuring sanitation and health cannot outrage the court by such an ugly plea.

Luckily, no such contention was advanced before us. The request for further time for implementation of the Magistrate's order was turned down by the High Court since no specific time-limit was accepted by the municipality for fulfillment of the directions. A doleful statement about the financial difficulties of the municipality and the assurance that construction of drains would be taken up as soon as possible had no meaning. The High Court observed:

> "Such assurances, it appears, are of no avail as unfortunately these proceedings for petty little things like clearing of dirty water, closing the pits and repairing of drains have taken more than seven years and if these seven years are not sufficient to do the needful, one could understand that by granting some more time it could not be done."

The High Court was also right in rejecting the Additional Sessions Judge's recommendation to quash the Magistrate's order on the impression that s. 133 Cr.P.C. did not provide for enforcement of civic rights. Wherever there is a public nuisance, the presence of s. 133 Cr.P.C. must be felt and any contrary opinion is contrary to the law. In short, we have no hesitation in upholding the High Court's view of the law and affirmation of the Magistrate's order.

Before us the major endeavour of the municipal council was to persuade us to be pragmatic and not to force impracticable orders on it since it had no wherewithal to execute the order. Of course, we agree that law is realistic and not idealistic and what cannot be performed under given circumstances cannot be prescribed as a norm to be carried out. From that angle it may well be that while upholding the order of the Magistrate, we may be inclined to tailor the direction to make it workable. But first things first and we cannot consent to a value judgment where people's health is a low priority. Nevertheless, we are willing to revise the order into a workable formula the implementation of which would be watch-dogged by the court.

Three proposals have been put forward before us in regard to the estimated cost of the scheme as directed by the Magistrate. The Magistrate had not adverted to the actual cost of the scheme nor the reasonable time that would be taken to execute it. As stated earlier it is necessary to ascertain how far the scheme is feasible and how heavy the cost is likely to be. The Court must go further to frame a scheme and then fix time-limits and even oversee the actual execution of the scheme in compliance with the court's order.

Three schemes placed before us, together with tentative estimates of the costs, have been looked into by us. Judges are laymen and cannot put on expert airs. That was why we allowed the

municipality and the respondents to produce before us schemes prepared by expert engineers so that we may modify the directions issued by the Magistrate suitably. Scheme 'A' is stated to cost an estimated amount of Rs. 1.016 crores. The State Government has revised this proposal and brought down the cost. In our view, what is important is to see that the worst aspects of the insanitary conditions are eliminated, not that a showy scheme beyond the means of the municipality must be undertaken and half done. From that angle we approve scheme 'C' which costs only around Rs. 6 lakhs. We fix a time limit of one year for completing execution of the work according to that scheme. We further direct that the work shall be begun within two months from to-day and the Magistrate shall inspect the progress of the work every three months broadly to be satisfied that the order is being implemented bona fide. Breaches will be visited with the penalty of s. 188 I.P.C.

We make the further supplementary directions which we specifically enjoin upon the municipal authority and the State Government to carry out.

1. We direct the Ratlam Municipal Council (R1) to take immediate action, within its statutory powers, to stop the effluents from the Alcohol Plant flowing into the street. The State Government also shall take action to stop the pollution. The Sub Divisional Magistrate will also use his power under s. 133 I.P.C., to abate the nuisance so caused. Industries cannot make profit at the expense of public health. Why has the Magistrate not pursued this aspect ?

2. The Municipal Council shall, within six months from to-day, construct a sufficient number of public latrines for use by men and women separately, provide water supply and scavenging service morning and evening so as to ensure sanitation. The Health Officer of the Municipality will furnish a report, at the end of the six- monthly term, that the work has been completed. We need hardly say that the local people will be trained in using and keeping these toilets in clean condition. Conscious cooperation of the consumers is too important to be neglected by representative bodies.

3. The State Government will give special instructions to the Malaria Eradication Wing to stop mosquito breeding in Ward 12. The Sub Divisional Magistrate will issue directions to the officer concerned to file a report before him to the effect that the work has been done in reasonable time.

4. The municipality will not merely construct the drains but also fill up cesspools and other pits of filth and use its sanitary staff to keep the place free from accumulations of filth. After all, what it lays out on prophylactic sanitation is a gain on its hospital budget.

5. We have no hesitation in holding that if these directions are not complied with the Sub Divisional Magistrate will prosecute the officers responsible. Indeed, this court will also consider action to punish for contempt in case of report by the Sub Divisional Magistrate of willful breach by any officer.

We are sure that the State Government will make available by way of loans or grants sufficient financial aid to the Ratlam Municipality to enable it to fulfil its obligations under this order. The State will realise that Art. 47 makes it a paramount principle of governance that steps are taken 'for the improvement of public health as amongst its primary duties'. The municipality also will slim its

budget on low priority items and elitist projects to use the savings on sanitation and public health. It is not our intention that the ward which has woken up to its rights alone need be afforded these elementary facilities. We expect all the wards to be benefited without litigation. The pressure of the judicial process, expensive and dilatory, is neither necessary nor desirable if responsible bodies are responsive to duties. Cappelletti holds good for India when he observes :(1) "Our judicial system has been aptly described as follows:

> Admirable though it may be, (it) is at once slow and costly. It is a finished product of great beauty, but entails an immense sacrifice of time, money and talent.
>
> This "beautiful" system is frequently a luxury; it tends to give a high quality of justice only when, for one reason or another, parties can surmount the substantial barriers which it erects to most people and to many types of claims."

Why drive common people to public interest action ? Where Directive Principles have found statutory expression in Do's and Dont's the court will not sit idly by and allow municipal government to become a statutory mockery. The law will relentlessly be enforced and the plea of poor finance will be poor alibi when people in misery cry for justice. The dynamics of the judicial process has a new 'enforcement' dimension not merely through some of the provisions of the Criminal Procedure Code (as here), but also through activated tort consciousness. The officers in charge and even the elected representatives will have to face the penalty of the law if what the Constitution and follow-up legislation direct them to do are defied or denied wrongfully. The wages of violation is punishment, corporate and personal.

We dismiss this petition subject to the earlier mentioned modifications.

N.V.K. Petition dismissed.

2021 SCC OnLine SC 1133

In the Supreme Court of India

(BEFORE R. SUBHASH REDDY AND HRISHIKESH ROY, JJ.)

Civil Appeal No. 595 of 2021

Sai Baba Sales Pvt. Ltd. ... Appellant(s);

Versus

Union of India and Others ... Respondent(s).

With

Civil Appeal No. 5768 of 2021

Civil Appeal No. 595 of 2021 and Civil Appeal No. 5768 of 2021

Decided on November 26, 2021

The Judgment of the Court was delivered by

HRISHIKESH ROY, J.:— Heard Mr. Huzefa Ahmadi, learned senior counsel appearing for the appellant in Civil Appeal No. 595/2021. Mr. Lonkar Nitin representing the Original Applicant before the National Green Tribunal. Ms. Aishwarya Bhati, learned Additional Solicitor General of India appears for the Ministry of Environment & Forest. The Government of Maharashtra and the State Pollution Control Board are represented by Mr. Rahul Chitnis and Mr. Mukesh Verma, learned counsel respectively.

2. These two appeals are filed under Section 22 of the National Green Tribunal Act, 2010 (for short "the NGT Act") assailing the judgment and final order dated 18.1.2021 in the OA No. 83/2019. Under the impugned judgment, the NGT held that further construction cannot be made without environment impact assessment, but protected the constructions already made by the appellant, M/s Sai Baba Sales Pvt. Ltd. ("Project Proponent") on the basis of the Environmental Clearance ("EC" for short) issued by the Pimpri Chinchwad Municipal Corporation ("PCMC" for short) as per the notification dated 9.12.2016. The Original Applicant, on the other hand, is aggrieved by the decision of the NGT to protect the standing construction and limiting the impact of the impugned judgment on further construction to be made by the project proponent.

3. The main issue that arises for consideration in these matters is whether the Project Proponent herein possesses a validly granted Environmental Clearance (EC) under the Environmental Impact Assessment (EIA) notification dated 14.9.2006. The 2006 EIA notification provided that the projects above 20,000 sq. meter and below 1,50,000 sq. meter should obtain an EC from the State Environment Impact Assessment Authority (SEIAA) of the Ministry of Environment, Forest and Climate Change (MoEFCC).

4. For deciding the issue, the necessary facts in brief are that the Project Proponent initially conceived a project of 15,040 sq. mtrs. (below the EC threshold limit of 20,000 sq. mtrs.) and it approached the PCMC for a lay out order which was a prerequisite, to obtain an EC from the SEIAA of the MoEFCC. The application was processed and the Building Permission Department of the PCMC granted the commencement certificate to the Project Proponent for an area of 15,040 sq. mtrs. and approved the plan under the sanction letter dated 14.5.2013. With such permission, the Project Proponent could construct the permitted structures, and since the built up area was less than the threshold limit of 20000 sq. mtrs., the EC permission was not needed for the intended construction.

5. The Project Proponent builder then applied and was granted additional FSI as it intended to expand the project to one with built up area of 49,012 sq. mtrs. and for

this they approached the PCMC for a lay out order, which as noted earlier was essential to obtain an EC from the SEIAA of the Ministry of Environment, Forest and Climate Change (MoEFCC). The required approval was issued by the Corporation on 28.11.2016.

6. Under the Ministry's notification dated 9.12.2016, the EIA regime was altered to indicate that the EC could be obtained from the Environmental Cell of a local authority, such as the PCMC. The State of Maharashtra opted for the new regime and adopted the environmental condition stipulated in the MoEFCC notification dated 9.12.2016. This was followed by the communication of the MoEFCC on 7.7.2017 which clarified that separate environmental clearance is not required for projects upto 1,50,000 sq. mtrs. built up area in respect of municipal corporations in Pune and Konkan division.

7. The Project Proponent then filed an application for EC under the 2016 notification which was considered by the Environmental Cell of the PCMC which appraised the project, as contemplated in the notification dated 9.12.2016. The necessary permission for construction to the builder was issued on 28.11.2017, stipulating the environmental conditions for buildings and constructions and this permission was accorded as per the amended regime under the notification dated 9.12.2016 of the MoEFCC and consequential one dated 13.4.2017 of the Maharashtra Government.

8. While the matter stood thus, the NGT while considering the challenge by certain applicants to the exemption from EC, in a batch matter, quashed certain portions of the MoEFCC notification dated 9.12.2016. The NGT in the analogous judgment dated 8.12.2017 in the OA No. 677/2016 (*Society for Protection of Environment and Biodiversity* v. *Union of India*) and other cases, directed the MoEFCC to revisit its notification dated 9.12.2016 and to take appropriate steps to amend/rectify certain clauses in the Ministry's notification, in terms of the NGT's judgment.

9. Nearly two years after the Project Proponent secured construction permission on 8.12.2017 from the PCMC, the OA No. 83/2019 was filed by the Pune resident (respondent No. 10) with the allegation that the Project Proponent had made construction without obtaining any EC. In this proceeding the NGT constituted a three Member Committee comprising the SEIAA - Maharashtra, the State PCB and the Municipal Commissioner, Pune. The Committee, after spot verification, in its Report dated 18.8.2020 noted that construction of total built up area of 22930.17 sq. mtrs. is already completed for Building Nos. A, E, B, D and the Club House. Thereafter, the NGT considered the submission of the original applicant, who contended that while the authority to grant EC is SEIAA as per the EIA notification dated 14.9.2006, the EC for the project in question was granted by the PCMC. The NGT in its order on 17.11.2020, in the first round, opined that the constructions were irregular and remedial measures were directed for the project in question.

10. The above order of the NGT was challenged before this Court and the Project Proponent's CA No. 3893/2020 was allowed on 11.12.2020 whereby, the NGT's order was set aside and the matter was remitted back to the NGT to afford hearing to the appellants and to pass a fresh order.

11. The case of the Project Proponent as can be seen from the pleadings was that he had initially commenced construction on 14.5.2013 with a sanction plan of 15040.05 sq. mtrs., which, being lesser than the threshold limit of 20,000 sq. mtrs, did not require a prior EC. Thereafter, for the proposed expansion of the project, for total constructed area of 49,012 sq. mtrs., the Project Proponent approached the concerned authority on 7.11.2016 for issuance of "*Proposed Development Certificate*", which is a prerequisite to apply for EC, and the said certificate was granted on 28.11.2016 for the purpose of obtaining the EC from the SEIAA. But at that stage, by virtue of the MoEFCC notification dated 9.12.2016, the concerned local authority was designated as the sanctioning authority for projects between 20,000 sq. mtrs. and

SCC Online Web Edition: http://www.scconline.com
© 2022 EBC Publishing Pvt. Ltd., Lucknow.

50,000 sq. mtrs. and accordingly under the changed regime the Project Proponent applied to PCMC on 10.7.2017 and was sanctioned EC by the competent local authority, on 28.11.2017.

12. It is the further contention of the Project Proponent that when the NGT on 8.12.2017 had invalidated certain portions of the 2016 notification, it did not issue any order nullifying those ECs which were granted by the local authority under the altered regime.

13. The original applicant on the other hand, contended that when the NGT struck down certain provisions of the MoEFCC's 2016 notification, the 28.11.2017 EC granted by the Municipal Corporation, would not legitimize the construction and therefore the Project Proponent should be prevented from proceeding with the construction and also be penalized for the unauthorized construction.

14. The NGT then observed that because of the invalidation of certain clauses in the 2016 notification, the EC obtained from the PCMC is unacceptable and accordingly rendered a finding that the Project Proponent had failed to obtain the valid EC. The maintainability challenge of the OA on the ground of limitation was however rejected by observing that the cause of action arose only in 2017 when the builder allegedly exceeded the threshold limit of 20,000 sq. mtrs. Accordingly, the authorities were directed to take coercive action against the Project Proponent for construction done after 8.12.2017, when the NGT's judgment was rendered in the OA No. 677/2016. However, even with such finding having regard to the regime that existed at the relevant time and adverting to the ratio in *Goan Real Estate and Construction Ltd.* v. *Union of India*,[1] the NGT held that the construction already raised should be protected. However, further construction should be permitted only after securing the EC from the competent authority, under the current regime.

15. The picture which emerges from the above discussion is that when the Project Proponent initially wanted to apply for the EC it had obtained the requisite layout sanction for applying to the SEIAA. As such, it was operating well within the applicable procedure, prior to the amendment. After grant of such sanction, while the construction was underway, the amendment came about on 9.12.2016 whereby, the local authority such as the Municipal Corporation was made the competent authority to grant EC. In the changed circumstances, the Project Proponent necessarily had to apply to the PCMC as during the interregnum before the NGT's judgment on 8.12.2017, SEIAA was not the competent authority to consider application for EC. The Project Proponent was therefore, complying with the regime set out by the amended notification. It is apposite to note that the Committee appointed by the NGT, in its report dated 11.8.2020 had clearly indicated that when the Project Proponent had received the EC on 28.11.2017, the competent authority to issue the EC was the Environmental Cell of the PCMC. Thus, it is the discernible understanding as part of the NGT's own expert Committee that the Project Proponent had obtained the EC from the competent authority of the relevant time i.e. the PCMC. Interestingly, the constituted Committee also included a member of the SEIAA.

16. Moreover, only after the earlier judgment of the NGT on 8.12.2017 in the OA No. 677/2016, the State of Maharashtra issued a clarification on 29.1.2018 directing that the Municipal authorities should not process pending applications. But neither the decision of the NGT nor of the Maharashtra Government categorically gave any guidance as to the implication on the EC obtained by the Project Proponent, on the strength of which, a substantial measure of construction was already made. It is also necessary to note that in the subsequent notification issued on 14.11.2018 and 15.11.2018 by the MoEFCC, the power to grant EC continued to vest in the local authority such as the PCMC, with the only change being that it is the municipality itself and not its Environmental Cell which is empowered to grant the EC. For the sake

SCC Online Web Edition: http://www.scconline.com
© 2022 EBC Publishing Pvt. Ltd., Lucknow.

of completion, it may be recorded that the said notifications of the MoEFCC is stayed by the Delhi High Court on 26.11.2018 in the WP(C) No. 12517/2018.

17. It is important to bear in mind that the Committee constituted by the NGT to report on the building project did not underscore any major deviation but instead found that the Project Proponent had made substantial compliance by obtaining the EC from the competent local authority. Moreover the OA, neither before the NGT or this Court, ever contended that appraisal done by the PCMC's Environmental Cell was defective or any different from one done by SEIAA. Both processes are also similarly structured. This may be the reason why the NGT in the impugned judgment itself protected the already made construction. However, the Project Proponent was restrained from making any further construction without obtaining clearance from the statutory EC and adhering to the environmental norms.

18. The project of the appellant comprises six buildings of which three were constructed in full, and the super structure of the fourth building is completed and only the internal works remains to be done. In the fourth building, 40 out of the 64 apartments have already been sold. In this context, it would be appropriate to advert to the submission of Ms. Aishwarya Bhati, the learned ASG who had clearly stated that at the relevant time, the competent authority to grant EC is the PCMC and not the SEIAA and therefore the internal works for the fourth constructed building, can be allowed to be completed.

19. Considering the above circumstances, the NGT rightly protected the already erected buildings and this protection in our view, should not be impacted by the earlier judgment of the NGT on 8.12.2017 in the OA No. 677/2016 whereby certain portions of the MoEFCC's 9.12.2016 notification were invalidated and direction was issued to the Ministry to revisit the said notification. Importantly, neither the NGT's invalidation order nor the subsequent clarifications by the State of Maharashtra, have suggested any adverse action against the pre-existing structures. As the expert body exclusively occupying the environmental field, the NGT has assessed the factual circumstances to consciously lean towards protecting the already constructed structures. Nothing more need be added on this aspect. It is also not necessary in this appeal to venture into the question of the retrospective implication of the invalidation of certain parts of the 2016 Notification for other project proponents, which may have gained their ECs in the interregnum.

20. In situations of this nature, the Doctrine of *Legitimate Expectation* is attracted. The principle of the rule of law as explained in *De Smith's Judicial Review*, such as, Regularity, Predictability and Certainty in Government's dealings with the Public, must operate in the present matter. The Project Proponent can legitimately expect a certain degree of stability in the manner in which environmental regime is set and how the applications are processed. The actions of the authorities are expected to adhere to the prevalent norms only, without the element of uncertainty for the executed project.

21. In the above context we may benefit by referring to the seminal case of *Attorney General of Hong Kong* v. *Ng Yuen Shiu*[2], where Lord Fraser speaking for the Privy Council, appositely observed thus,

> "... when a public authority has promised to follow a certain procedure, it is in the interest of good administration that it should act fairly and should implement its promise, so long as implementation does not interfere with its statutory duty."

22. This Court in *Sethi Auto Service Station* v. *Delhi Development Authority*[3], speaking through Justice D.K. Jain, has cited other opinions and elucidated on the concept of *legitimate expectation*, in the following manner,

> "24. The House of Lords in *Council of Civil Service Unions* v. *Minister for the Civil Service*, a locus classicus on the subject, wherein for the first time an attempt was made to give a comprehensive definition to the principle of legitimate expectation.

Enunciating the basic principles relating to legitimate expectation, Lord Diplock observed that for a legitimate expectation to arise, the decision of the administrative authority must affect such person either

(a) **** **** **** **** ****

(b) **by depriving him of some benefit or advantage which either : (i) he has in the past been permitted by the decision maker to enjoy and which he can legitimately expect to be permitted to continue to do until some rational ground for withdrawing it has been communicated to him and he has been given an opportunity to comment thereon or** (ii) he has received assurance from the decisionmaker that they will not be withdrawn without first giving him an opportunity of advancing reasons for contending that they should be withdrawn."

(emphasis supplied)

23. The Doctrine of *Legitimate Expectation* is further explained in *Food Corporation of India* v. *Kamdhenu Cattle Feed Industries*[4] where for a Three-Judge Bench of this Court Justice J.S. Verma observed thus:—

"The mere reasonable or legitimate expectation of a citizen, in such a situation, may not by itself be a distinct enforceable right, but failure to consider and give due weight to it may render the decision arbitrary, and this is how the requirement of due consideration of a legitimate expectation forms part of the principle of non-arbitrariness, a necessary concomitant of the rule of law. Every legitimate expectation is a relevant factor requiring due consideration in a fair decision-making process. Whether the expectation of the claimant is reasonable or legitimate in the context is a question of fact in each case. Whenever the question arises, it is to be determined not according to the claimant's perception but in larger public interest wherein other more important considerations may outweigh what would otherwise have been the legitimate expectation of the claimant. A bona fide decision of the public authority reached in this manner would satisfy the requirement of non-arbitrariness and withstand judicial scrutiny. The doctrine of legitimate expectation gets assimilated in the rule of law and operates in our legal system in this manner and to this extent."

24. The more compelling public interest might possibly diminish the degree of *legitimate expectation* for a party but a balance has to be found. In the present matter the appellant has acted on the EC and made substantial investments. They cannot be pushed to a precipice and be made to fall. Doing so would be inequitable particularly when, the appellant has scrupulously adhered to the applicable legal framework during the concerned period. Moreover, third-party interests have also cropped up in the interregnum.

25. A Project Proponent is not expected to anticipate the changes in EC regimes, especially as a result of judicial interventions, and keep revisiting the sanctioned clearances by the competent authority or even raze down validly constructed structures. Neither can it be expected to knock the doors of an authority, not empowered at the relevant time, to process its applications. Such a scenario would render the process akin to a *Sisyphean task*, eternally inconclusive and never ending.

26. As seen, the NGT in the impugned judgment has protected the completed construction and, on this aspect, we deem it appropriate to endorse the same, by accepting the submission of the appellant's Counsel and the learned ASG. The four constructed buildings are resultantly to be treated to be under a valid EC with all legal consequences. It is, however, made clear that if any further construction is proposed by the appellant with the sanctioned layout, the same should not be done on the strength of the EC granted on 28.11.2017 by the PCMC. In other words, if the Project Proponent wishes to construct the remaining buildings, they must secure fresh

2021 SCC OnLine SC 1247

In the Supreme Court of India

(BEFORE INDIRA BANERJEE AND J.K. MAHESHWARI, JJ.)

Electrosteel Steels Limited ... Petitioner(s);

Versus

Union of India and Others ... Respondent(s).

Civil Appeal Nos. 7576-7577 of 2021 [Arising out of SLP (C.) Nos. 11226-11227 of 2020]

Decided on December 9, 2021

The Judgment of the Court was delivered by

INDIRA BANERJEE, J.:— Leave granted.

2. These Appeals are against an order dated 16th September 2020 passed by a Single Bench of the High Court of Jharkhand in W.P. (C) No. 1873 of 2018 and W.P. (C) No. 4850 of 2018, discontinuing the interim orders earlier passed by the High Court, allowing the Appellant to operate its unit under the supervisory regulatory control of the Respondent - Jharkhand State Pollution Control Board, hereinafter referred to as "JSPCB", which had been in force for over two years.

3. The Appellant owns and runs a 1.5 MTPA integrated steel plant in Bokaro District in Jharkhand. The said steel plant in Bokaro, which employs 3,000 regular employees and 7000 contractual employees, produced steel worth Rs. 4,200 crores in the financial year 2019-20.

4. The Appellant claims that about 30,000 persons other than those actually employed by the steel plant as regular or contractual employees depend on the steel plant for their livelihood.

5. Corporate Insolvency Resolution Process (CIRP) had commenced against the Appellant under the Insolvency and Bankruptcy Code 2016. As successful Resolution Applicant, Vedanta Ltd. took over the Appellant on or about 4th June 2018 upon payment of Rs. 5,320 crores for discharge of its debts.

6. Pollution and consequential deterioration of environment has been assuming alarming proportions, and has become a cause of universal concern. Fumes, smoke, emission of green house gases by use of motors and machines and operation of mills, factories and plants cause environmental degradation.

7. Under the aegis of the United Nations discussions and deliberations have been held to protect and improve environment and prevent pollution.

8. In 1972, the United Nations Conference on the Human Environment was convened in Stockholm to work out ways and means to protect and improve the environment. In course of deliberations, it was felt that there was need to enact law to tackle environmental pollution. India participated in the conference and strongly voiced environmental concerns.

9. The Environment (Protection) Act, 1986, hereinafter referred to as "*the 1986 Act*", has been enacted as a consequence of decisions taken at the United Nations Conference on the Human Environment held in Stockholm in June, 1972.

10. The statement of objects and reasons for enactment of the 1986 Act declares that the Act has been prompted by concern over environment, that has grown the world over, since the sixties.

11. Sub-Section (1) of Section 3 of the 1986 Act empowers the Central Government to take all such measures as it might deem necessary or expedient for the

SCC Online Web Edition, © 2022 EBC Publishing Pvt. Ltd.

purpose of protecting and improving the quality of the environment and preventing, controlling and abating environmental pollution.

12. Sub-section (2) of Section 3 of the 1986 Act enables the Central Government to take, *inter alia*, the following measures:

"(i) co-ordination of actions by the State Governments, officers and other authorities—

(a) under this Act, or the rules made thereunder; or

(b) under any other law for the time being in force which is relatable to the objects of this Act;

(ii) planning and execution of a nation-wide programme for the prevention, control and abatement of environmental pollution;

(iii) laying down standards for the quality of environment in its various aspects;

(iv) laying down standards for emission or discharge of environmental pollutants from various sources whatsoever:

Provided that different standards for emission or discharge may be laid down under this clause from different sources having regard to the quality or composition of the emission or discharge of environmental pollutants from such sources;

(v) restriction of areas in which any industries, operations or processes or class of industries, operations or processes shall not be carried out or shall be carried out subject to certain safeguards;

(vi) laying down procedures and safeguards for the prevention of accidents which may cause environmental pollution and remedial measures for such accidents;

(vii) laying down procedures and safeguards for the handling of hazardous substances;

(viii) examination of such manufacturing processes, materials and substances as are likely to cause environmental pollution;

(ix) carrying out and sponsoring investigations and research relating to problems of environmental pollution;

(x) inspection of any premises, plant, equipment, machinery, manufacturing or other processes, materials or substances and giving, by order, of such directions to such authorities, officers or persons as it may consider necessary to take steps for the prevention, control and abatement of environmental pollution;

(xi) establishment or recognition of environmental laboratories and institutes to carry out the functions entrusted to such environmental laboratories and insitutes under this Act;

(xii) collection and dissemination of information in respect of matters relating to environmental pollution;

(xiii) preparation of manuals, codes or guides relating to the prevention, control and abatement of environmental pollution;

(xiv) such other matters as the Central Government deems necessary or expedient for the purpose of securing the effective implementation of the provisions of this Act."

13. Sub-section (3) of Section 3 of the 1986 Act provides as follows:

"The Central Government may, if it considers it necessary or expedient so to do for the purposes of this Act, by order, published in the Official Gazette, constitute an authority or authorities by such name or names as may be specified in the order for the purpose of exercising and performing such of the powers and functions (including the power to issue directions under Section 5) of the Central Government under this Act and for taking measures with respect to such of the matters referred

to in sub-section (2) as may be mentioned in the order and subject to the supervision and control of the Central Government and the provisions of such order, such authority or authorities may exercise the powers or perform the functions or take the measures so mentioned in the order as if such authority or authorities had been empowered by this Act to exercise those powers or perform those functions or take such measures."

14. Subject to the provisions of the 1986 Act, the Central Government has power under sub-section (1) of section 3 to take all such measures as it deems necessary or expedient for the purpose of protecting and improving the quality of the environment and preventing, controlling and abating environmental pollution.

15. Section 5 of the 1986 Act provides that notwithstanding anything contained in any other law, but subject to the provisions of the 1986 Act, the Central Government may, in exercise of its powers and performance of its functions under the 1986 Act, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions.

16. In exercise of powers conferred by Sub-Section (1) and clause (v) of sub-section (2) of Section 3 of the 1986 Act read with Rule 5(3)(d) of the Environment (Protection) Rules, 1986 the Central Government issued the Environmental Impact Assessment Notification dated 27th January 1994 directing that on and from the date of publication of the said notification in the Official Gazette, expansion or modernisation of any activity or a new project listed in Schedule I of the Notification shall not be undertaken in any part of India, unless it has been accorded Environmental Clearance (EC) by the Central Government in accordance with the procedure specified in the Notification.

17. Under Clause (2)(I) of the said Notification, any person who desires to undertake any new project listed in Schedule I is required to submit an application to the Secretary, Ministry of Environment and Forests (MoEF), New Delhi in the pro forma specified in Schedule II, accompanied by a project report which is to include the EIA (Environmental Impact Assessment) Report/Environment Management Plan (EMP) prepared in accordance with the guidelines issued by MoEF. Another Environmental Impact Notification was issued in 2006, for grant of Terms and Environmental Clearance *inter alia* for projects which had started work on site.

18. The EIA Report submitted with the application of the project proponent is to be evaluated and assessed by the Impact Assessment Agency (IAA), that is MoEF, and if deemed necessary, it may consult a Committee of Experts constituted in the manner prescribed in Schedule III. The Committee of Experts shall have full right of entry and inspection of the site. The Impact Assessment Agency is to prepare a set of recommendations based on technical assessment of documents and data, furnished by the project proponent, supplemented by data collected during visits to sites, interaction with the affected population and environmental groups, if necessary. The summary of the reports, the recommendations and the conditions, subject to which EC is given shall, subject to public interest, be made available to the parties concerned or environmental groups on request. The IAA may solicit comments of the public within the specified period by arranging public hearings for that purpose. The public shall, subject to public interest, be provided access, to the summary of the EIA Report/Environment Management Plan (EMP). The clearance granted for commencement of the construction or operation of the plant, is to be valid for five years. Clause IV of the Environmental Impact Assessment Notification provides for the monitoring of the implementation of the conditions of EC and/or the recommendations and conditions laid down by IAA.

19. A minor amendment was made to the said Environmental Impact Assessment Notification dated 27th January 1994, by a Notification dated 10th April 1997, which

SCC Online Web Edition, © 2022 EBC Publishing Pvt. Ltd.

prescribes a detailed procedure for public hearing.

20. By a notification being S.O. 327(E), dated 10th April 2001, published in the Gazette of India, Extra., Pt.II, Sec.3(ii), dated 12th April 2001, the Central Government has delegated the powers vested in it under Section 5 of the 1986 Act, to the Chairpersons of the respective State Pollution Control Boards/Committees to issue directions to any industry or any local or other authority for the violations of the standards and rules relating to biomedical waste, hazardous chemicals, industrial solid waste and municipal solid waste including plastic waste notified under the Environment (Protection) Act, 1986 subject to the condition that the Central Government may revoke such delegation of powers or may itself invoke the provisions of Section 5 of the said Act, if in the opinion of the Central Government such a course of action is necessary in the public interest.

21. On or about 8th January 2007, the Appellant applied to the Ministry of Environment, Forest and Climate Change, Government of India, hereinafter referred to as "MoEF&CC" for grant of EC to establish 3 MTPA integrated steel plant at Mauza South Parbatpur of Chandankiyari Block of Bokaro District.

22. In its application, the Appellant stated that 1350 acres of land were required for establishing the said plant at the Mauza South Parbatpur of Chandankiyari Block of Bokaro District and that no forest land was involved in the project.

23. By a letter No. F. No. J-11011/137/2006-1A-II (i) dated 21st February 2008, the Appellant was granted EC. After obtaining EC, the Appellant applied to the JSPCB, for grant of 'Consent to Establish' (CTE) under the Air (Prevention and Control of Pollution) Act, 1981, hereinafter referred to as the Air Pollution Act, and Water (Prevention and Control of Pollution) Act 1974, hereinafter referred to as the Water Pollution Act.

24. On 5th May 2008, the JSPCB granted CTE to the Appellant to establish the 3 MTPA integrated steel plant at Mauza South Parbatpur of Chandankiyari Block of Bokaro District. The CTE was granted on the basis of the EC granted by the MoEF&CC.

25. The CTE was extended from time to time till 4th May 2011. Even though CTE was granted to the Appellant to establish a steel plant at Mauza South Parbatpur of Chandankiyari Block of Bokaro District, the Appellant established steel plant in Mauza Bhagabandh in the Chas Block in Bokaro District, 5.3 Kms away from the site for which EC and CTE had been granted.

26. A Circular No. J-11013/41/2006-1A.2(i) dated 22nd January, 2010 was issued by the Ministry of Environment and Forest (MoEF) of the Government of India which provided as follows:

> *"Instances have come to the notice of this Ministry wherein the project proponents have changed the project site after the said project has been granted environmental clearance or after the public hearing has been held. The project proponents have approached this Ministry to revalidate the environmental clearance so granted without undergoing afresh the procedure prescribed for obtaining environmental clearance. The matter has been considered in the ministry. The change in project site would lead to change in project affected people as well as the change in study area and the impact zone. As such the Environment Impact Assessment Report and Public Hearing conducted for a particular location cannot be taken valid for the changed location.*
>
> *Accordingly, it has been decided that any shift in project site location after holding of public hearing will be deemed to be a new proposal and will be appraised afresh as per the procedure prescribed under EIA Notification 2006 provided the respective Expert Appraisal Committee is satisfied that the shift is so minor as to have no change in EIA/EMP, duly recorded in the minutes and prior approval of advisor (In-charge)/SEIAA for Category 'A'/Category 'B' projects respectively is*

obtained for not holding the public hearing for the changed location afresh.

This issues with the approval of the Competent Authority."

27. By a communication being Reference No. 1142 dated 4th May 2010, the District DFO (District Forest Officer) Bokaro requested JSPCB to take action against the Appellant for setting up its integrated steel plant on forest land in Mauza Bhagabandh of Chas Block of Bokaro District, in violation of the Forest Conservation Act 1980 and Indian Forest Act 1927. The DFO, Bokaro reported encroachment of 220.88 acres of notified forest land by the Appellant to JSPCB.

28. It appears that cases had been initiated against the officials of the Appellant under the Indian Forest Act, 1927, Forest Conservation Act, 1980 and the Bihar Public Land Encroachment Act, 1955 which have been quashed by the Jharkhand High Court, by an order dated 25th January 2011.

29. On or about 23rd September 2010 the Appellant applied for Consent to Operate (CTO) under the Air Pollution Act and the Water Pollution Act for its 350 m3 blast furnace. Later on 9th September 2011, the Appellant applied for CTO in respect of its entire plant.

30. By a letter dated 2nd December 2011, addressed to the Appellant, the MoEF confirmed that the lay out of the Appellant's 3 MTPA Integrated Steel Plant was well within the Environment Impact Area and that the affected people had the opportunity to participate in a public hearing.

31. By letter dated 18th May 2012, the JSPCB reported encroachment by the Appellant upon forest land and alleged violation by the Appellant of the Forest Conservation Act, 1980 to the MoEF&CC, New Delhi. The MoEF&CC was also informed of the unauthorized shifting of the integrated steel plant from Mauza South Parbatpur of Chandankiyari Block of Bokaro District to Mauza Bhagabandh of Chas Block of Bokaro District in violation of the conditions of Environment Clearance granted by the MoEC&CC.

32. Pursuant to the report of JSPCB, MoEF&CC issued a Show Cause Notice dated 6th June 2012 to the Appellant under Section 5 of the 1986 Act. The Appellant submitted its reply to the Show Cause Notice on 20th June 2012.

33. On 10th September 2012, the Appellant once again applied to JSPCB for CTO for one year under the Water Pollution Act and Air Pollution Act. According to the Appellant, several reminders were sent to MoEF&CC requesting MoEF&CC to intimate JSPCB of the outcome of the Show Cause Notice issued to the Appellant. However, JSPCB has not been informed of the decision of MoEF&CC.

34. The Appellant filed a Writ Petition being W.P. No. 2247/2012 in the Jharkhand High Court for orders on JSPCB to grant the Appellant CTO. The said writ petition was disposed of by an order dated 5th November 2012, the operative part whereof is set out hereinbelow:—

"Respondent 1& 2 to consider the petitioner's application and as assured by them, if so required, give an opportunity of hearing to the petitioners and after taking into consideration the facts and provisions of law and the related decisions, shall dispose of the petitioner's application within five weeks from the date of receipt/production of a copy of this order."

35. On or about 27th November 2013, the application of the Appellant for CTO was rejected on the ground that the Appellant had shifted the site of its steel Plant and had encroached upon forest land in violation of the Forest Conservation Act, 1980. The operative part of the order dated 27th November 2013 reads:—

"at this stage subject to final outcome of the decision of MoEF&CC, New Delhi with respect to show cause notice dated 6.6.2012, we dispose the application for CTO in exercise of power conferred u/s 21(4) of Air (Prevention and Control of

SCC Online Web Edition, © 2022 EBC Publishing Pvt. Ltd.

SCC Online Web Edition: http://www.scconline.com
© 2022 EBC Publishing Pvt.Ltd., Lucknow.

Pollution) Act, 1981 & u/s 25(4) of Water (Prevention and Control of Pollution) Act, 1974 by "refusing" the CTO to the unit for the reason aforesaid."

36. The Appellant filed an application for contempt being Contempt Case (C) No. 939 of 2013 in W.P.(C) No. 2247 of 2012 in the Jharkhand High Court. Pursuant to an order dated 29th November 2013 in the Contempt Petition, the JSPCB disposed of the applications for grant of CTO to the Appellant.

37. By a letter dated 17th April 2013, the MoEF&CC had called for a status report from the State of Jharkhand in respect of forest land encroached by the Appellant. The Forest Department submitted a report to the MoEF&CC on 13th May, 2014.

38. Thereafter, by a letter dated 20th October 2014, the MoEF&CC, New Delhi directed the Department of Forest, Environment and Climate Change, Government of Jharkhand to take action against the Appellant for violating the provisions of Indian Forest Act, 1927 and Forest Conservation Act, 1980. In compliance with the aforesaid order, JSPCB directed the Appellant to close down its plant under Section 31(A) of the Air Pollution Act and Section 33(A) of Water Pollution Act.

39. By a Memo No. 521 dated 6th February 2015, the Department of Forest, Environment and Climate Change, Government of Jharkhand directed the DGP, Jharkhand, Ranchi and the Deputy Commissioner, Bokaro to take action against the Appellant in the light of the letter dated 20th October, 2014 of the MoEF&CC, Government of India and to submit an action taken report.

40. The aforesaid order of JSPCB was challenged by the Appellant by filing a Writ Petition being WP(C) No. 2033 of 2015 in the Jharkhand High Court. By an order dated 5th February 2016 the High Court set aside the order of the JSPCB holding that the same had been passed in violation of principles of natural justice. The High Court however, held that JSPCB would be at liberty to pass an order in accordance with law after giving the Appellant an opportunity of hearing.

41. Thereafter, a show cause notice dated 25th April 2016, was issued to the Appellant. The Appellant replied to the show cause notice on 28th September 2016, contending that the Appellant had not set up its plant on any forest land and that all pollution control measures had been taken. However, the Principal Chief Conservator of Forests (PCCF), Jharkhand had by a communication No. 2966 dated 8th August 2016 informed JSPCB that the Appellant had encroached forest land. Thereafter JSPCB once again called upon the Appellant to show cause in the light of information provided by the PCCF, Jharkhand. The Appellant by a letter dated 28th September 2016 reiterated that there was no forest land in the plant premises.

42. JSPCB passed an order No. B-319 dated 13th February 2017 disposing of the show cause notice in the light of the direction dated 5th February 2016 of the Jharkhand High Court and the applications for CTO. JSPCB granted CTO to the Appellant which was valid till 31st December, 2017.

43. The MoEF&CC and the State Environment Impact Assessment Authorities had, in the meanwhile been receiving proposals under the Environment Impact Assessment Notification, 2006 for grant of Terms of Reference and Environmental Clearance for projects which had started the work on site, expanded the production beyond the limit of environmental clearance or changed the product mix without obtaining prior environmental clearance.

44. The MoEF&CC deemed it necessary that all entities not complying with the environmental regulation under Environment Impact Assessment Notification, 2006, be brought to comply with the environmental laws in expedient manner, for the purpose of protecting and improving the quality of the environment and reducing environmental pollution.

45. The MoEF&CC deemed it necessary to bring such projects and activities in compliance with the environmental laws at the earliest point of time, rather than

leaving them unregulated and unchecked, which would be more damaging to the environment.

46. In furtherance of this objective, the Government of India deemed it essential to establish a process for appraisal of cases of violation of norms, and prescribing such adequate environmental safeguards that would deter violation of the provisions of Environment Impact Assessment Notification, 2006 and ensure that damage to environment was adequately compensated for.

47. In *Indian Council for Enviro-Legal Action* v. *Union of India*[1], the Supreme Court analyzed relevant provisions of environmental laws and concluded that damages might be recovered under the provisions of the 1986 Act, inter alia, to implement measures that were necessary or expedient for protecting and promoting the environment. This Court affirmed that the power of the Central Government under Section 3 of the 1986 Act was wide and included the power to prohibit an activity, close an industry, direct to carry out remedial measures, and wherever necessary impose the cost of remedial measures upon the offending industry. The question of liability of the respondents to defray the costs of remedial measures could also be looked into from the principle "polluter pays."

48. In exercise of power under Section 3(1) and Section 3(2)(v) of the 1986 Act read with Rule 5(3)(d) of the Environment (Protection) Rules, 1986, the Central Government has issued a Notification being S.O. 804(E) dated 14th March 2017 which provides for grant of ex post facto EC for project proponents who have commenced, continued or completed a project without obtaining EC under the 1986 Act or the EIA notification issued under it.

49. Paragraphs 3, 4 and 5 of the said notification, read as follows:

"(3) In cases of violation, action will be taken against the project proponent by the respective State or State Pollution Control Board under the provisions of section 19 of the Environment (Protection) Act, 1986 and further, no consent to operate or occupancy certificate will be issued till the project is granted the environmental clearance.

(4) The cases of violation will be appraised by respective sector Expert Appraisal Committees constituted under subsection (3) of Section 3 of the Environment (Protection) Act, 1986 with a view to assess that the project has been constructed at a site which under prevailing laws is permissible and expansion has been done which can be run sustainably under compliance of environmental norms with adequate environmental safeguards; and in case, where the finding of the Expert Appraisal Committee is negative, closure of the project will be recommended along with other actions under the law.

(5) In case, where the findings of the Expert Appraisal Committee on point at sub-para(4) above are affirmative, the projects under this category will be prescribed the appropriate Terms of Reference for undertaking Environment Impact Assessment and preparation of Environment Management Plan. Further, the Expert Appraisal Committee will prescribe a specific Terms of Reference for the project on assessment of ecological damage, remediation plan and natural and community resource augmentation plan and it shall be prepared as an independent chapter in the environment impact assessment report by the accredited consultants. The collection and analysis of data for assessment of ecological damage, preparation of remediation plan and natural and community resource augmentation plan shall be done by an environmental laboratory duly notified under Environment (Protection) Act, 1986, or a environmental laboratory accredited by National Accreditation Board for Testing and Calibration Laboratories or a laboratory of a Council of Scientific and Industrial Research institution working in the field of environment."

50. On or about 24th August 2017, the Appellant applied for CTO for five years. On

SCC Online Web Edition, © 2022 EBC Publishing Pvt. Ltd.

© 2022 EBC Publishing Pvt.Ltd., Lucknow.

13th November 2017, JSPCB issued a Show Cause Notice to the Appellant pointing out alleged contraventions of the conditions of Consent to Operate (CTO) earlier granted to the Appellant. The Appellant was called upon to show cause whether conditions of the CTO had been contravened while the application of the Appellant for CTO for five year was pending.

51. On 23rd November 2017, the Appellant submitted its online reply to the Show Cause Notice showing compliance of the conditions of the CTO.

52. By a communication No. 2105 dated 18th December 2017 JSPCB requested MoEF&CC to inform JSPCB of the decision on the show cause notice issued to the Appellant under Section 5 of the 1986 Act for revocation of the EC for non compliance of the conditions for grant of EC for the integrated plant at Parbatpur, Jharkhand.

53. Aggrieved by the failure of JSPCB to issue/renew the CTO to the Appellant, pursuant to its application made on 24th August 2017, the Appellant filed a writ petition being W.P.(C) No. 1873 of 2018 in the Jharkhand High Court on or about 12th April 2018 seeking directions on the JSPCB to issue CTO to the Appellant.

54. By an order dated 16th July 2018, the High Court directed the JSPCB to take a final decision on the application of renewal/grant of CTO filed by the Appellant on 24th August 2017 within the time stipulated in the said order.

55. The High Court further passed an interim order directing that the Appellant be allowed to operate its unit under the supervisory and regulatory control of the JSPCB, who might carry out periodical check as to adherence by the Appellant of pollution control laws.

56. JSPCB passed an order dated 21st August, 2018, rejecting at that stage the request of the Appellant for CTO, subject to the decision of MoEF&CC on the show cause notice issued to the appellant. The operative part of the said order is set out hereinbelow:

> *"at this stage subject to final outcome of the decision of MoEF&CC, New Delhi with respect to show cause notice dated 6.6.2012, we dispose the application for CTO in exercise of power conferred u/s 21(4) of Air (Prevention and Control of Pollution) Act, 1981 & u/s 25(40 of Water (Prevention and Control of pollution) Act, 1974 by "refusing" the CTO to the unit for the reason aforesaid."*

57. The Appellant, thereafter approached the High Court with a prayer for amendment of Writ Petition No. 1873 of 2018. By an order dated 25th August 2018, the High Court allowed the application for amendment of the Writ Petition and directed the respondent to file their response to the amended writ petition. The High Court further directed:—

> *"10. So far as interim relief is concerned, this court finds that the order passed by the respondent-Jharkhand State Pollution Control Board dated 23.08.2018 appears to be directly dependent on the final decision which is yet to be taken by the Ministry of Environment, Forest & Climate Change on the show cause issued to the petitioner as back as in the year 2012. As per the submission made by the counsel appearing on behalf of Union of India, they are shortly going to take a final decision in the matter after hearing the petitioner. Accordingly the operation, implementation and execution of the order dated 23.08.2018 passed by Jharkhand State Pollution Control Board is hereby stayed till 27.09.2018 and the interim order dated 16.07.2018 is hereby extended till 27.09.2018.*
>
> *11. So far as decision of the Ministry of Environment, Forest & Climate Change are concerned, considering the fact that the unit of the petitioner is running unit and large number of employees are working in this unit of the petitioner, this court consider it appropriate that the issue regarding the environmental clearance of the petitioner should be decided at the earliest.*
>
> *12. It is further observed that it is open to the petitioner to approach the Union*

of India with their proposal/application for regularization of the alleged violation, without prejudice to their rights (including right, title, interest, possession and nature of property of the petitioner) and advance submissions before the respondent authority of Union of India pursuant to the show cause notice issued to them dated 6.6.2012 and the appropriate authority may, if possible, simultaneously consider the aforesaid application of the petitioner for regularization along with the show cause reply of the petitioner such that entire dispute is decided and the petitioner may also have a clarity about the fate of its unit. The decision which is to be taken by the Union of India be brought on record by either of the parties by filing supplementary affidavit latest by 25.09.2018.

13. I.A. No. 7610 of 2018 and I.A No. 7613 OF 2018 are hereby disposed of.

14. It is made clear that this court has not gone into the merits of the claim of the petitioner and it will be open to the respondent no 3 to take decision as per law."

58. By the aforesaid order dated 25th August 2018, the High Court directed MoEF to take a decision on the application of the Appellant for EC as also a decision regarding violation by the Appellant of the provisions of EC by encroachment upon forest land by shifting the location of the plant.

59. On 31st August 2018, MoEF&CC issued a show cause notice No. F. No. J-11011/137/2006-1A Pt.II (i) dated 31st August 2018 to the Appellant for violating the provisions of the EC by shifting the location of its plant and encroaching upon forest land.

60. The Respondent No. 1 was also accorded personal hearing on 10th September 2018. On 12th September 2018 Mr. Gyanesh Bharti who presided over the personal hearing was transferred from MoEF&CC.

61. On 20th September 2018 the Respondent No. 1 issued an order bearing No. F. No. J-11011/137/2006-IA.II(I) revoking the EC of the Appellant on the ground that the Appellant had encroached upon 220 acres of forest land and had shifted the location of its plant from Parbatpur to Bhagabandh, violating the conditions stipulated in the EC.

62. The Appellant filed Writ petition being W.P. (C) No. 4850 of 2018 in the Jharkhand High Court challenging the revocation of the EC granted to the Appellant.

63. On 27th September 2018 the High Court passed an interim order staying the operation, implementation and execution of the impugned order dated 20th September 2018. The Court prima facie found that the impugned order, passed in violation of principles of natural justice, had serious repercussions on the unit of the Appellant which was a running unit, and had caused prejudice to the Appellant.

64. On 4th October 2018, the Appellant applied for ex post facto Forest Clearance (FC) without prejudice to its rights and contentions. On 27th November 2019 the Appellant applied for a "revised" EC without prejudice to its rights and contentions. In the meanwhile, the Interim order passed by the High Court on 27th September 2018 was extended from time to time. Such extensions were granted on 10.10.2018, 5.11.2018, 11.12.2018, 8.1.2019, 23.1.2019, 16.5.2019, 25.7.2019 and 17.10.2019.

65. On 17th December 2019, MoEF&CC passed an order according ex post facto in principle approval for the forest diversion/clearance proposal of the Appellant. The operative part of the said order reads:—

"After careful examination of the proposal of the State Government and on the basis of the recommendations of the Forest Advisory Committee and approval of the same by the competent authority of the MoEF&CC, New Delhi, the Central Government hereby accords ex-post facto 'in-principle' approval under Section-2 of the Forest (Conservation) Act, 1980 for diversion of 184.23 ha of forest land

(174.39 ha encroached (ex-post facto) and 9.84 ha virgin land) in favour of M/s Electrosteel Steels Limited in the State of Jharkhand subject to fulfilment of following conditions:—

(i) Legal status of the diverted forest land shall remain unchanged;…"

66. By an order dated 26th February 2020, the Jharkhand High Court directed that the pendency of W.P. (C) No. 4850 of 2018 and W.P. (C) No. 1873 of 2018 would not come in the way of consideration by the MoEF&CC of grant or refusal of restoration of EC and it would be open to the Ministry to take appropriate decision in accordance with law. The interim orders in force were extended.

67. Thereafter by a letter dated 2nd March 2020, the Appellant requested MoEF&CC to consider the application of the Appellant for revised EC. In the meanwhile, the interim orders passed by the High Court were further extended. The interim orders were extended by orders passed on 26.2.2020, 7.4.2020 and 29.5.2020.

68. The Writ Petition was called for hearing on 19th June 2020 whereupon it was submitted on behalf of the Respondent No. 1 that the revised EC application of the Appellant would be placed before the Expert Appraisal Committee (EAC) for consideration on merit and Violation Committee would decide on the action to be taken against the Appellant for violation of Environment (Protection) Act, 1986.

69. On 6th August 2020 and 7th August 2020, the case of the Appellant was placed before the EAC at its 35th meeting. The Appellant was invited to present its proposal online before the Committee.

70. After detailed deliberation, the EAC appraised the proposal on merits and recommended issuance of Standard Terms of Reference along with Specific Terms of Reference for undertaking Environmental Impact Assessment (EIA) and preparation of Environment Management Plan (EMP). The EAC noted that the plant was a running unit and the EC was subject to the conditions imposed in the Terms of Reference.

71. On 4th September 2020, the Jharkhand High Court extended the interim orders till 8th September 2020 while awaiting response from the Respondents. On 8th September 2020, the High Court reserved orders on the extension of interim orders dated 16th July 2018 and 27th September 2018 while listing the writ petitions for final hearing on 16th September 2020.

72. On 15th September 2020, the Respondent No. 1 filed an affidavit stating that it had no objection to extension of the interim orders considering that the steel plant employed a large workforce. At the hearing on 16th September 2020 JSPCB also consented to extension of the interim order. However, the High Court passed the impugned order dated 16th September 2021 dis-continuing the earlier interim orders on, *inter alia*, the following grounds:

(i) The Expert Appraisal Committee of the MoEF&CC had, after detailed deliberations, found that the Appellant had been in violation of the EIA Notification 2006 and general condition no. (ii) of the EC dated 21.02.2008.

(ii) The MoEF&CC had while issuing ToR for grant of EC recommended action against the Appellant under Section 19 of the 1986 Act for past violations. Extension of the interim orders would amount to staying action.

(iii) In *Alembic Pharmaceuticals Ltd.* v. *Rohit Prajapati*[2], this Court had deprecated ex post facto Ecs but passed certain directions in exercise of powers under Article 142 of the Constitution.

73. By an Office Memorandum, being F. No. 22-21/2020-1A III, dated 7th July 2021, the MoEF&CC issued Standard Operating Procedure (SOP) for Identification and Handing of violation cases under EIA Notification 2006.

74. The said Office Memorandum, *inter alia*, reads:

"The Ministry had issued a notification number S.O.804(E), dated the 14th March,

2017 detailing the process for grant of Terms of Reference and Environmental Clearance in respect of projects or activities which have started the work on site and/or expanded the production beyond the limit of Prior EC or changed the product mix without obtaining Prior EC under the EIA Notification, 2006.

2. This Notification was applicable for six months from the date of publication i.e. 14.03.2017 to 13.09.2017 and further based on court direction from 14.03.2018 to 13.04.2018.

3. Hon'ble NGT in Original Application No. 287 of 2020 in the matter of Dastak N.G.O. *v.* Synochem Organics Pvt. Ltd. *and in applications pertaining to same subject matter in Original Application No. 298 of 2020 in* Vineet Nagar *v.* Central Ground Water Authority, *vide order dated 03.06.2021 held that* ***"(...) for past violations, the concerned authorities are free to take appropriate action in accordance with polluter pays principle, following due process".***

4. Further, the Hon'ble National Green Tribunal in O.A No. 34/2020 WZ in the matter of Tanaji B. Gambhire *v.* Chief Secretary, Government of Maharashtra, *vide order dated 24.05.2021 has directed that* ***"... a proper SoP be laid down for grant of EC in such cases so as to address the gaps in binding law and practice being currently followed. The MoEF may also consider circulating such SoP to all SEIAAs in the country".***

5. Therefore, in compliance to the directions of the Hon'ble NGT a Standard Operating Procedure (SoP) for dealing with violation cases is required to be drawn. The Ministry is also seized of different categories of 'violation' cases which have been pending for want of an approved structural/procedural framework based on 'Polluter Pays Principle' and 'Principle of Proportionality'. It is undoubtedly important that action under statutory provisions is taken against the defaulters/violators and a decision on the closure of the project or activity or otherwise is taken expeditiously.

6. In the list of the above directions of the Hon'ble Tribunal and the issues involved, the matter has accordingly been examined in detail in the Ministry. A detailed SoP has accordingly been framed and is outlined herein. The SoP is also guided by the observations/decisions of the Hon'ble Courts wherein principles of proportionality and polluters pay have been outlined."

75. The Standard Operating Procedure formulated by the said Office Memorandum dated 7th July 2021 refers to and gives effect to various judicial pronouncements including the judgment of this Court in *Alembic Pharmaceuticals* (supra).

76. In terms of the Standard Operating Procedure, the proposal for grant of EC in cases of violation are to be considered on merits, with prospective effect, applying principles of proportionality and the principle that the polluter pays and is liable for costs of remedial measures.

77. By an interim order passed on 15th July 2021 in WP(MD) 11757 of 2021 in *Fatima* v. *Union of India*, the Madurai Bench of Madras High Court has stayed the operation of the Standard Operating Procedure.

78. By an order dated 25th August 2021, MoEF&CC rejected the application of the Appellant for the time being. The application has, in effect, been kept in abeyance.

79. The MoEF apparently did not take any decision on the application of the Appellant for EC, since the Standard Operating Procedure issued by it has been stayed by the Madurai Bench of Madras High Court, by the said order dated 15th July 2021, citing the judgment of this Court in *Alembic Pharmaceuticals* (supra).

80. The Appellant has filed an application being I.A No. 125221 of 2021 in this appeal seeking directions on the Respondent No. 1 to process the Appellant's application dated 5th August 2020 for revised EC.

81. There can be no doubt that the need to comply with the requirement to obtain

Environment Clearance is non-negotiable. A project can be set up or allowed to expand subject to compliance of the requisite norms. Environmental clearance is granted on condition of the suitability of the site to set up the project from the environmental angle, and existence of necessary infrastructural facilities and equipment for compliance of environmental norms. To protect future generations, it is imperative that pollution laws be strictly enforced. Under no circumstances, can industries which pollute be allowed to operate unchecked and degrade the environment.

82. The question is whether an establishment contributing to the economy of the country and providing livelihood to hundreds of people should be closed down for the technical irregularity of shifting its site without prior environmental clearance, without opportunity to the establishment to regularize its operation by obtaining the requisite clearances and permissions, even though the establishment may not otherwise be violating pollution laws, or the pollution, if any, can conveniently and effectively be checked. The answer has to be in the negative.

83. The Central Government is well within the scope of its powers under Section 3 of the 1986 Act to issue directions to control and/or prevent pollution including directions for prior Environmental Clearance before a project is commenced. Such prior Environmental Clearance is necessarily granted upon examining the impact of the project on the environment. Ex-Post facto Environmental Clearance should not ordinarily be granted, and certainly not for the asking. At the same time ex post facto clearances and/or approvals and/or removal of technical irregularities in terms of Notifications under the 1986 Act cannot be declined with pedantic rigidity, oblivious of the consequences of stopping the operation of a running steel plant.

84. The 1986 Act does not prohibit ex post facto Environmental Clearance. Some relaxations and even grant of ex post facto EC in accordance with law, in strict compliance with Rules, Regulations Notifications and/or applicable orders, in appropriate cases, where the projects are in compliance with, or can be made to comply with environment norms, is in over view not impermissible. The Court cannot be oblivious to the economy or the need to protect the livelihood of hundreds of employees and others employed in the project and others dependent on the project, if such projects comply with environmental norms.

85. As held by a three Judge Bench of this Court in *Lafarge Umiam Mining Private Limited* v. *Union of India*[3] ("Lafarge") reported in (2011) 7 SCC 338:

> *"119.* ***The time has come for us to apply the constitutional "doctrine of proportionality" to the matters concerning environment as a part of the process of judicial review in contradistinction to merit review. It cannot be gainsaid that utilization of the environment and its natural resources has to be in a way that is consistent with principles of sustainable development and intergenerational equity, but balancing of these equities may entail policy choices****. In the circumstances, barring exceptions, decisions relating to utilization of natural resources have to be tested on the anvil of the well-recognized principles of judicial review. Have all the relevant factors been taken into account? Have any extraneous factors influenced the decision? Is the decision strictly in accordance with the legislative policy underlying the law (if any) that governs the field? Is the decision consistent with the principles of sustainable development in the sense that has the decision-maker taken into account the said principle and, on the basis of relevant considerations, arrived at a balanced decision? Thus, the Court should review the decision-making process to ensure that the decision of MoEF is fair and fully informed, based on the correct principles, and free from any bias or restraint. Once this is ensured, then the doctrine of "margin of appreciation" in favour of the decision-maker would come into play."*

86. In *Alembic Pharmaceuticals* (supra) this Court observed:—

"27. The concept of an ex post facto EC is in derogation of the fundamental principles of environmental jurisprudence and is an anathema to the EIA notification dated 27 January 1994. It is, as the judgment in Common Cause holds, detrimental to the environment and could lead to irreparable degradation. The reason why a retrospective EC or an ex post facto clearance is alien to environmental jurisprudence is that before the issuance of an EC, the statutory notification warrants a careful application of mind, besides a study into the likely consequences of a proposed activity on the environment. An EC can be issued only after various stages of the decision-making process have been completed. Requirements such as conducting a public hearing, screening, scoping and appraisal are components of the decision-making process which ensure that the likely impacts of the industrial activity or the expansion of an existing industrial activity are considered in the decision-making calculus. Allowing for an ex post facto clearance would essentially condone the operation of industrial activities without the grant of an EC. In the absence of an EC, there would be no conditions that would safeguard the environment. Moreover, if the EC was to be ultimately refused, irreparable harm would have been caused to the environment. In either view of the matter, environment law cannot countenance the notion of an ex post facto clearance. This would be contrary to both the precautionary principle as well as the need for sustainable development.

87. In *Alembic Pharmaceuticals* (supra), this Court deprecated ex-post facto clearances, but this Court did not pass orders for closure of the three industries concerned, on consideration of the consequences of their closure. This court proceeded to observe and held:—

44. The issue which must now concern the Court is the consequence which will emanate from the failure of the three industries to obtain their ECs until 14 May 2003 in the case of Alembic Pharmaceuticals Limited, *17 July 2003 in the case of* United Phosphorous Limited, *and 23 December 2002 in the case of* Unique Chemicals Limited. *The functioning of the factories of all three industries without a valid EC would have had an adverse impact on the environment, ecology and biodiversity in the area where they are located. The Comprehensive Environmental Pollution Index[4] report issued by the Central Pollution Control Board for 2009-2010 describes the environmental quality at 88 locations across the country. Ankleshwar in the State of Gujarat, where the three industries are located showed critical levels of pollution[5]. In the Interim Assessment of CEPI for 2011, the report indicates similar critical figures[6] of pollution in the Ankleshwar area. The CEPI scores for 2013[7] and 2018[8] were also significantly high. This is an indication that industrial units have been operating in an unregulated manner and in defiance of the law. Some of the environmental damage caused by the operation of the industrial units would be irreversible. However, to the extent possible some of the damage can be corrected by undertaking measures to protect and conserve the environment.*

45. Even though it is not possible to individually determine the exact extent of the damage caused to the environment by the three industries, several circumstances must weigh with the Court in determining the appropriate measure of restitution. First, it is not in dispute that all the three industries did obtain ECs, though this was several years after the EIA notification of 1994 and the commencement of production. Second, subsequent to the grant of the ECs, the manufacturing units of all the three industries have also obtained ECs for an expansion of capacity from time to time. Third, the MoEF had issued a circular on 5 November 1998 permitting applications for ECs to be filed by 31 March 1999, which was extended subsequently to 30 June 2001. On 14 May 2002, the deadline was extended until 31 March 2003 subject to a deposit commensurate to the investment made. The circulars issued by the MoEF extending time for obtaining ECs came to

SCC Online Web Edition, © 2022 EBC Publishing Pvt. Ltd.

© 2022 EBC Publishing Pvt.Ltd., Lucknow.

the notice of this Court in Goa Foundation (I) *v.* Union of India[9]. *Fourth, though in the context of the facts of the case, this Court in* Lafarge Umiam Mining Private Limited *v.* Union of India[10] *("Lafarge") has upheld the decision to grant ex post facto clearances with respect to limestone mining projects in the State of Meghalaya. In* ***Lafarge****, the Court dealt with the question of whether ex post facto clearances stood vitiated by alleged suppression of the nature of the land by the project proponent and whether there was non-application of mind by the MoEF while granting the clearances. While upholding the ex post facto clearances, the Court held that the native tribals were involved in the decision-making process and that the MoEF had adopted a due diligence approach in reassuring itself through reports regarding the environmental impact of the project."*

(Emphasis supplied)

46. After adverting to the decision in Lafarge, *another Bench of three learned judges of this Court in* Electrotherm (India) Limited *v.* Patel Vipulkumar Ramjibhai[11], *dealt with the issue of whether an EC granted for expansion to the appellant without holding a public hearing was valid in law. Justice Uday U. Lalit speaking for the Bench held thus:*

> *"19…the decision-making process in doing away with or in granting exemption from public consultation/public hearing, was not based on correct principles and as such the decision was invalid and improper."*

47. The Court while deciding the consequence of granting an EC without public hearing did not direct closure of the appellant's unit and instead held thus:

> *"20. At the same time, we cannot lose sight of the fact that in pursuance of environmental clearance dated 27-1-2010, the expansion of the project has been undertaken and as reported by CPCB in its affidavit filed on 7-7-2014, most of the recommendations made by CPCB are complied with. In our considered view, the interest of justice would be subserved if that part of the decision exempting public consultation/public hearing is set aside and the matter is relegated back to the authorities concerned to effectuate public consultation/public hearing.* ***However, since the expansion has been undertaken and the industry has been functioning, we do not deem it appropriate to order closure of the entire plant as directed by the High Court****. If the public consultation/public hearing results in a negative mandate against the expansion of the project, the authorities would do well to direct and ensure scaling down of the activities to the level that was permitted by environmental clearance dated 20-2-2008. If public consultation/public hearing reflects in favour of the expansion of the project, environmental clearance dated 27-1-2010 would hold good and be fully operative.* ***In other words, at this length of time when the expansion has already been undertaken, in the peculiar facts of this case and in order to meet ends of justice, we deem it appropriate to change the nature of requirement of public consultation/public hearing from pre-decisional to post-decisional. The public consultation/public hearing shall be organised by the authorities concerned in three months from today****."*

(Emphasis supplied)

48. Guided by the precepts that emerge from the above decisions, this Court has taken note of the fact that though the three industries operated without an EC for several years after the EIA notification of 1994, each of them had subsequently received ECs including amended ECs for expansion of existing capacities. These ECs have been operational since 14 May 2003 (in the case of Alembic Pharmaceuticals Limited), *17 July 2003 (in the case of* United Phosphorous Limited), *and 23 December 2002 (in the case of* Unique Chemicals Limited). *In addition, all the three units have made infrastructural investments and employed significant numbers of*

© 2022 EBC Publishing Pvt.Ltd., Lucknow.

workers in their industrial units.

49. In this backdrop, this Court must take a balanced approach which holds the industries to account for having operated without environmental clearances in the past without ordering a closure of operations. The directions of the NGT for the revocation of the ECs and for closure of the units do not accord with the principle of proportionality. At the same time, the Court cannot be oblivious to the environmental degradation caused by all three industries units that operated without valid ECs. The three industries have evaded the legally binding regime of obtaining ECs. They cannot escape the liability incurred on account of such noncompliance. Penalties must be imposed for the disobedience with a binding legal regime. The breach by the industries cannot be left unattended by legal consequences. The amount should be used for the purpose of restitution and restoration of the environment. Instead and in place of the directions issued by the NGT, we are of the view that it would be in the interests of justice to direct the three industries to deposit compensation quantified at Rs. 10 crores each. The amount shall be deposited with GPCB and it shall be duly utilised for restoration and remedial measures to improve the quality of the environment in the industrial area in which the industries operate. Though we have come to the conclusion, for the reasons indicated, that the direction for the revocation of the ECs and the closure of the industries was not warranted, we have issued the order for payment of compensation as a facet of preserving the environment in accordance with the precautionary principle. These directions are issued under Article 142 of the Constitution. Alembic Pharmaceuticals Limited, United Phosphorous Limited and Unique Chemicals Limited shall deposit the amount of compensation with GPCB within a period of four months from the date of receipt of the certified copy of this judgment. This deposit shall be in addition to the amount directed by the NGT. Subject to the deposit of the aforesaid amount and for the reasons indicated, we allow the appeals and set aside the impugned judgment of the NGT dated 8 January 2016 in so far as it directed the revocation of the ECs and closure of the industries as well as the order in review dated 17 May 2016."

88. The Notification being SO 804(E) dated 14th March, 2017 was not an issue in *Alembic Pharmaceuticals* (supra). This Court was examining the propriety and/or legality of a 2002 circular which was inconsistent with the EIA Notification dated 27th January, 1994, which was statutory. Ex post facto environmental clearance should not however be granted routinely, but in exceptional circumstances taking into account all relevant environmental factors. Where the adverse consequences of ex post facto approval outweigh the consequences of regularization of operation of an industry by grant of ex post facto approval and the industry or establishment concerned otherwise conforms to the requisite pollution norms, ex post facto approval should be given in accordance with law, in strict conformity with the applicable Rules, Regulations and/or Notifications. Ex post facto approval should not be withheld only as a penal measure. The deviant industry may be penalised by an imposition of heavy penalty on the principle of 'polluter pays' and the cost of restoration of environment may be recovered from it.

89. We are of the view that the High Court erred in passing the impugned order, vacating interim orders which had been in force for two years. The impugned order is not in conformity with the principle of proportionality. This is not a case where the steel plant was started without environmental clearance or consent of JSPCB. The Appellant had applied for and obtained environmental clearance to set up an integrated steel plant (3MTPA) on 1350 acres of land at Mauza South Parbatpur, as observed above. Environmental Clearance had been granted on 21st February 2008 and Consent to Operate had been granted by JSPCB on 5th May 2008.

90. The Appellant established its steel plant in Mauza Bhagaband, 5.3 kms away

SCC Online Web Edition, © 2022 EBC Publishing Pvt. Ltd.

SCC Online Web Edition: http://www.scconline.com
© 2022 EBC Publishing Pvt.Ltd., Lucknow.

from the site for which EC and CTE had been granted. It is the contention of the Appellant that the shift is minor and makes no change in the EIA/EMP on the basis of which EC has been granted. The shift did not require fresh public hearing in terms of the Circular dated 22nd January 2010 of the MoEF.

91. As aforesaid, by a letter dated 2.12.2011 addressed to the Appellant, the MoEF confirmed that the steel plant of the Appellant was within the Environment Impact Area and the affected people had the opportunity to air their views in a public hearing. The question is whether the Petitioner was required to obtain fresh prior clearance for shifting or was covered by the exemption under the said Notification dated 22nd January 2010.

92. The Appellant has all along asserted that no part of the premises of the integrated steel plant is in any forest. As such there was no violation of the Indian Forest Act, 1927 or the Forest Conservation Act, 1980. The MoEF had also confirmed that the steel plant in question was well within the Environment Impact Area and the affected people had the opportunity in a public hearing. Be that as it may, whether the shifting of the site has really made any difference from the environmental impact angle requires consideration by the appropriate authority/forum.

93. In any case, the Appellant has duly applied for ex post facto forest clearance approval without prejudice to its rights and contentions that its steel plant is not on forest land and also applied for revised EC. On 17th December 2019, MoEF&CC accorded ex post facto in principle approval to the forest clearance proposal on the recommendations of the Forest Advisory Committee. The application for revised clearance is pending consideration. No final decision has however been taken, ostensibly in view of the interim order passed by the Madras High Court staying the operation of the Standard Operation Procedures issued vide Memorandum dated 7th July 2021.

94. The interim order passed by the Madras High Court appears to be misconceived. However, this Court is not hearing an appeal from that interim order. The interim stay passed by the Madras High Court can have no application to operation of the Standard Operating Procedure to projects in territories beyond the territorial jurisdiction of Madras High Court. Moreover, final decision may have been taken in accordance with the Orders/Rules prevailing prior to 7th July, 2021.

95. In passing the impugned order the High Court overlooked the consequences of closure of an integrated steel plant with a work force of 300 regular and 700 contractual workers. The High Court also failed to appreciate that the judgment of this Court in *Alembic Pharmaceuticals* (supra) was distinguishable on facts. Furthermore, continuance of the interim orders allowing operation of an industrial establishment or even the grant of revised EC to the industrial establishment cannot stand in the way of action against that establishment for contraventions, including the imposition of penalty, on the principle 'polluter pays'. The scope and effect of Section 32A of the IBC is a different issue. This Court need not examine into the question of whether penal action can be initiated against the Appellant or, whether compensation can be recovered from the Appellant, at this stage. The issue may be decided by the appropriate authority at the appropriate stage when it adjudicates an action for penalization of the Appellant or recovery of compensation from the Appellant. The application of the Appellant for revised EC, CTO etc. shall be considered strictly in accordance with environmental norms.

96. The appeals are allowed. The impugned order is set aside. The Respondent No. 1 shall take a decision on the application of the Appellant for revised EC in accordance with law, within three months from date. Pending such decision, the operation of the steel plant shall not be interfered with on the ground of want of EC, FC, CTE or CTO.

2022 SCC OnLine SC 362

In the Supreme Court of India

(BEFORE INDIRA BANERJEE AND J.K. MAHESHWARI, JJ.)

Pahwa Plastics Pvt. Ltd. and Another ... Appellants;

Versus

Dastak NGO and Others ... Respondents.

Civil Appeal No. 4795 of 2021

Decided on March 25, 2022

The Judgment of the Court was delivered by

INDIRA BANERJEE, J.:— This appeal under Section 22 of the National Green Tribunal Act, 2010, is against an order dated 3rd June 2021 passed by the Principal Bench of the National Green Tribunal (NGT) in O.A No. 287/2020 at New Delhi, *inter alia*, holding that establishments such as the manufacturing units of the Appellants, which did not have prior Environmental Clearance (EC) could not be allowed to operate.

2. The question of law involved in this appeal is, whether an establishment employing about 8000 workers, which has been set up pursuant to Consent to Establish (CTE) and Consent to Operate (CTO) from the concerned statutory authority and has applied for ex post facto EC can be closed down pending issuance of EC, even though it may not cause pollution and/or may be found to comply with the required pollution norms.

3. With increasing industrialization and the establishment of factories which emitted smoke and other pollutants, there was worldwide concern for protection of environment. In June 1972, the United Nations Conference on the Human Environment was held in Stockholm, where decisions were taken to take appropriate steps for preservation of the natural resources of the earth, which, among other things, included preservation of the quality of air and water by controlling pollution.

4. In 1974, Parliament enacted the Water (Prevention and Control of Pollution) Act, 1974, with a view to prevent and control water pollution and to maintain and restore wholesomeness of water.

5. In furtherance of the decisions taken at Stockholm, Parliament enacted the Air (Prevention and Control of Pollution) Act, 1981, hereinafter referred to as "the Air Pollution Act", to provide for prevention, control and abatement of air pollution.

6. The Air Pollution Act provides for the constitution of a Central Pollution Control Board (CPCB) and State Pollution Control Boards (SPCB) to deal with the problem of air pollution. Section 16 of the Air Pollution Act enables the Central Pollution Control Board to take steps to improve the quality of air and to prevent, control or abate air pollution in the country. Section 17 of the Air Pollution Act enables the State Pollution Control Boards to plan comprehensive programmes for the prevention, control or abatement of air pollution, inter alia, by laying down standards for emission of air pollutants.

7. Section 18 of the Air Pollution Act enables the Central Government to give directions by which the CPCB is to be bound. Similarly, every SPCB is to be bound by directions in writing as might be given by the CPCB or the State Government.

8. Where a notification is issued under the Air Pollution Act, placing an area within the control area of air pollution, permission is necessary to set up and operate any factory or plant thereat. No person operating any factory or plant in any air pollution control area is to discharge or cause or permit to be discharged the emission of any air pollutants, in excess of the standards laid down by the SPCB under Clause (g) of sub-

Section (1) of Section 17.

9. The Environment (Protection) Act, 1986, hereinafter referred to as "the EP Act" was also enacted pursuant to the decisions taken at the United Nations Conference on the Human Environment, held in Stockholm in June, 1972. As per the Statement of Objects and Reasons for enactment of the EP Act, the said Act has been prompted by concern over the environment, that has grown all over the world since the 60s.

10. Sub-section (1) of Section 3 of the EP Act empowers the Central Government to take all such measures as it might deem necessary or expedient for the purpose of protecting and improving the quality of the environment and preventing, controlling and reducing environmental pollution.

11. Sub-section (2) of Section 3 of the EP Act enables the Central Government to take, inter alia, the following measures:

"(i) co-ordination of actions by the State Governments, officers and other authorities—

(a) under this Act, or the rules made thereunder; or

(b) under any other law for the time being in force which is relatable to the objects of this Act;

(ii) planning and execution of a nation-wide programme for the prevention, control and abatement of environmental pollution;

(iii) laying down standards for the quality of environment in its various aspects;

(iv) laying down standards for emission or discharge of environmental pollutants from various sources whatsoever:

Provided that different standards for emission or discharge may be laid down under this clause from different sources having regard to the quality or composition of the emission or discharge of environmental pollutants from such sources;

(v) restriction of areas in which any industries, operations or processes or class of industries, operations or processes shall not be carried out or shall be carried out subject to certain safeguards;

(vi) laying down procedures and safeguards for the prevention of accidents which may cause environmental pollution and remedial measures for such accidents;

(vii) laying down procedures and safeguards for the handling of hazardous substances;

(viii) examination of such manufacturing processes, materials and substances as are likely to cause environmental pollution;

(ix) carrying out and sponsoring investigations and research relating to problems of environmental pollution;

(x) inspection of any premises, plant, equipment, machinery, manufacturing or other processes, materials or substances and giving, by order, of such directions to such authorities, officers or persons as it may consider necessary to take steps for the prevention, control and abatement of environmental pollution;

(xi) establishment or recognition of environmental laboratories and institutes to carry out the functions entrusted to such environmental laboratories and institutes under this Act;

(xii) collection and dissemination of information in respect of matters relating to environmental pollution;

(xiii) preparation of manuals, codes or guides relating to the prevention, control and abatement of environmental pollution;

(xiv) such other matters as the Central Government deems necessary or expedient for the purpose of securing the effective implementation of the provisions

of this Act."

12. Sub-section (3) of Section 3 of the EP Act provides as follows:

"3. Power of Central Government to take measures to protect and improve environment.—

...

(3) The Central Government may, if it considers it necessary or expedient so to do for the purposes of this Act, by order, published in the Official Gazette, constitute an authority or authorities by such name or names as may be specified in the order for the purpose of exercising and performing such of the powers and functions (including the power to issue directions under Section 5) of the Central Government under this Act and for taking measures with respect to such of the matters referred to in sub-section (2) as may be mentioned in the order and subject to the supervision and control of the Central Government and the provisions of such order, such authority or authorities may exercise the powers or perform the functions or take the measures so mentioned in the order as if such authority or authorities had been empowered by this Act to exercise those powers or perform those functions or take such measures."

13. Subject to the provisions of the EP Act, the Central Government has power under sub-Section (1) of Section 3, to take all such measures, as it deems necessary or expedient, for the purpose of protecting and improving the quality of environment and preventing, controlling or reducing environmental pollution.

14. Section 5 of the EP Act provides that notwithstanding anything contained in any other law, but subject to the provisions of the EP Act, the Central Government may, in exercise of its powers and performance of its functions under the EP Act, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions.

15. In exercise of powers conferred by Sections 6 and 25 of the EP Act, the Central Government has made the Environment (Protection) Rules, 1986, hereinafter referred to as "the EP Rules".

16. The Central Government issued an Environmental Impact Assessment Notification dated 27th January 1994 in exercise of powers conferred by sub-section (1) and clause (v) of sub-section (2) of Section 3 of the EP Act read with clause (d) of sub -rule (3) of Rule 5 of the EP Rules, directing that on and from the date of publication of the said notification in the Official Gazette, expansion or modernization of any activity or a new project listed in Schedule I to the said notification shall not be undertaken in any part of India, unless it has been accorded EC by the Central Government in accordance with the procedures specified in the said notification.

17. In exercise of powers conferred by sub-section (1) and clause (v) of sub-section (2) of Section 3 of the EP Act read with clause (d) of sub-rule (3) of Rule 5 of the EP Rules and in supersession of notification number S.O. 60 (E) dated 27th January 1994, except in respect of things done or omitted to be done before such supersession, the Central Government issued a notification dated 14th September 2006, being Notification S.O. 1533 (E) requiring prior environmental clearance from the Central Government or as the case may be, by the State-Level Environment Assessment Authority, duly constituted by the Central Government under sub-section (3) of Section 3 of the EP Act.

18. In terms of the said notification dated 14th September 2006, the process of environmental clearance for new projects was to comprise of a maximum of four stages, all of which might not apply to particular cases. The stages were (1) Screening, (2) Scoping, (3) Public Consultation and (4) Appraisal.

19. In the meanwhile, by a notification being S.O. 327 (E) dated 10th April 2001, published in the Gazette of India on 12th April 2001, the Central Government has

delegated the powers vested in it under the EP Act, to the Chairpersons of the respective State Pollution Control Boards/Committees to issue directions to any industry or any local or other authority to prevent violation of the Rules.

20. The Appellants carry on business, *inter alia*, of manufacture and sale of basic organic chemicals, namely, Formaldehyde. The Appellant No. 1, M/s. Pahwa Plastics Private Limited has two manufacturing units, one at village Kharawar in Rohtak, hereinafter referred to as the "Rohtak Unit" and the other at village Jathlana, Jagadhri in Yamuna Nagar in Haryana, hereinafter referred to as the "Yamuna Nagar Unit". The Appellant No. 2 has a manufacturing unit at village Ghespur in Yamuna Nagar, Haryana which is hereinafter referred to as the "Yamuna Nagar Unit". The manufacturing units established, run and operated by the respective Appellants fall in the category of Micro, Small and Medium Enterprise (MSME) as defined under the Micro, Small and Medium Enterprises Development Act, 2006, hereinafter referred to as "the MSME Act".

21. On or about 31st March 2014, the Appellant No. 1, M/s. Pahwa Plastics Ltd. applied for Consent to Establish (CTE) its Yamuna Nagar unit for manufacture of Formaldehyde.

22. By a communication No. HSPCB/Consent/ : 2846616YAMCTE 3087415 dated 2nd June 2016, the Haryana State Pollution Control Board (HSPCB) granted Consent to Establish (CTE) to the Appellant No. 1 M/s. Pahwa Plastics Private Limited in respect of its Yamuna Nagar Unit. The CTE was to remain valid for 60 months from the date of its issue, to be extended for another year at the discretion of the Board or till the time the unit started its trial production, whichever was earlier.

23. Some of the terms and conditions on which CTE was granted are set out hereinbelow:

> *"3. The officer/official of the Board shall have the right to access and inspection of the industry in connection with the various processes and the treatment facilities being provided simultaneously with the construction of building/machinery. The effluent should conform the effluent standards as applicable.*
>
> *4. That necessary arrangement shall be made by the industry for the control of Air Pollution before commissioning the plant. The emitted pollutants will meet the emission and other standards as laid/will be prescribed by the Board from time to time.*
>
> *5. The applicant will obtain consent under section 25/26 of the Water (Prevention & Control of Pollution) Act, 1974 and under section 21/22 of the Air (Prevention & Control of Pollution) Act, 1981 as amended to-date-even before starting trial production.*
>
> *6. The above Consent to Establish is further subject to the conditions that the unit complies with all the laws/rules/decisions and competent directions of the Board/Government and its functionaries in all respect before commissioning of the operation and during its actual working strictly.*
>
> * * *
>
> *8. The Electricity Department will give only temporary connection and permanent connection to the unit will be given after verifying the consent granted by the Board, both under Water Act and Air Act.*
>
> * * *
>
> *12. That there is no discharge directly or indirectly from the unit or the process into any interstate river or Yamuna River or River Ghaggar.*
>
> *13. That the industry or the unit concerned is not sited within any prohibited distances according to the Environmental Laws and Rules, Notification, Orders and Policies of Central Pollution Control Board and Haryana State Pollution Control*

Board.

* * *

17. In case of change of name from previous Consent to Establish granted, fresh Consent to Establish fee shall be levied.

18. Industry should adopt water conservation measures to ensure minimum consumption of water in their Process. Ground water based proposals of new industries should get clearance from Central Ground Water Authority for scientific development of previous resources.

19. That the unit will take all other clearances from concerned agencies, whenever required.

20. That the unit will not change its process without the prior permission of the Board.

21. That the Consent to Establish so granted will be invalid, if the unit falls in Aravali Area or non conforming area.

22. That the unit will comply with the Hazardous Waste Management Rules and will also make the non-leachate pit for storage of Hazardous waste and will undertake not to dispose off the same except for pit in their own premises or with the authorized disposal authority.

23. That the unit will submit an undertaking that it will comply with all the specific and general conditions as imposed in the above Consent to Establish within 30 days failing which Consent to Establish will be revoked."

24. By another communication No. HSPCB/Consent/ : 2846618YAMCTO3098246 dated 26th March 2018, HSPCB granted consent to the Appellant No. 1 to operate its Yamuna Nagar Unit from 8th February 2018 to 31st March 2022.

25. By an order No. HSPCB/YMN/2242, dated 31st March 2010, the Appellant No. 2, M/s. Apcolite Polymer Private Limited was granted CTE to establish its Yamuna Nagar Unit for manufacture of Formaldehyde with the manufacturing capacity of 80 tonnes per day.

26. By another communication Nos. HSPCB/Consent/ : HSPCB/YMN/DLC/2011/4027 & HSPCB/YMN/DLC/2011/4029 dated 16th January 2012, HSPCB granted the Appellant No. 2, M/s. Apcolite Polymers Private Limited, Consent to Operate (CTO) its Yamuna Nagar Unit. The CTO has been extended from 1st April 2016 till 31st March 2026, by a letter dated 13th March 2016. The CTO is valid till March 2026.

27. By a communication No. HSPCB/Consent/ : 2846616YAMCT OHWM2630357 dated 13th March 2016, HSPCB granted consent for emission of AIR to Appellant No. 2, M/s. Apcolite Polymers Private Limited in respect of its Yamuna Nagar Unit on, inter alia, the terms and conditions specified in the said letter, some of which are extracted hereinbelow:—

"10. The air pollution control equipment of such specification which shall keep the emissions within the emission standard as approved by the State Board from time to time shall be installed and operated in the premises where the industry is carrying on/proposed to carry on its business.

11. The existing air pollution control equipment if required shall be alerted or replaced in accordance with the direction on the Board.

12. All solid wastes arising in the factory premises shall be properly graded and disposed of by:—

(i) In case of Land fill material, care should be taken to ensure that the material does not give rise to leachate which may percolate in ground water of carried away with storm run off.

(ii) Composting in case of bio degradable materials.

© 2023 EBC Publishing Pvt. Ltd., Lucknow.

(iii) If the method of incineration is used for the disposal of solid waste the consent application should be processed separately and it should be taken up which consent is granted.

13. The industry shall submit an undertaking to the effect that the above conditions shall be complied with by them.

14. The applicant shall submit its undertaking to the effect that the above conditions shall be complied with by them.

15. The applicant shall make an application for grant of fresh consent at least 90 days before the date of expiry of this consent.

* * *

18. There should not be any fugitive emission from the premises.

19. The liquid effluent arising out of the operation of the air pollution control equipment shall also be treated in a manner and to the standards stipulated in the consent granted under Water (Prevention & Control of Pollution) Act, 1974 by this Board.

* * *

21. If the industry fails to adhere to any of the condition of this consent order the consent so granted shall automatically lapse.

* * *

33. The industry shall submit Environment Audit report once in a year.

* * *

38. In case of by passing the emissions, the consent shall be deemed revoked."

28. It is the case of the Appellants that at the time when CTE was granted to the Appellants, it was thought that EC was not required for units which manufactured Formaldehyde. Even HSPCB itself was not sure of whether EC was required for such units.

29. Mr. Gupta argued that the Appellants were *bona fide* under the impression that the Appellants were not required to obtain prior EC for setting up this establishment to manufacture Formaldehyde. On the basis of CTE granted by HSPCB, the Appellants set up their units taking huge loans from banks for which repayments have to be paid in installments.

30. In exercise of power under Section 3(1) and Section 3(2)(v) of the EP Act read with Rule 5(3)(d) of the EP Rules, the Central Government issued a notification being S.O. 804(E) dated 14th March 2017 which provides for grant of *ex post facto* EC for project proponents who had commenced, continued or completed a project without obtaining EC under the EP Act/EP Rules or the Environmental Impact Notification issued thereunder. Paragraphs 3, 4 and 5 of the said notification, read as hereunder:

"(3) In cases of violation, action will be taken against the project proponent by the respective State or State Pollution Control Board under the provisions of section 19 of the Environment (Protection) Act, 1986 and further, no consent to operate or occupancy certificate will be issued till the project is granted the environmental clearance.

(4) The cases of violation will be appraised by respective sector Expert Appraisal Committees constituted under sub-section (3) of Section 3 of the Environment (Protection) Act, 1986 with a view to assess that the project has been constructed at a site which under prevailing laws is permissible and expansion has been done which can be run sustainably under compliance of environmental norms with adequate environmental safeguards; and in case, where the finding of the Expert Appraisal Committee is negative, closure of the project will be recommended along with other actions under the law.

(5) In case, where the findings of the Expert Appraisal Committee on point at

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 7 Thursday, July 06, 2023

SCC Online Web Edition: http://www.scconline.com
© 2023 EBC Publishing Pvt. Ltd., Lucknow.

sub-para(4) above are affirmative, the projects under this category will be prescribed the appropriate Terms of Reference for undertaking Environment Impact Assessment and preparation of Environment Management Plan. Further, the Expert Appraisal Committee will prescribe a specific Terms of Reference for the project on assessment of ecological damage, remediation plan and natural and community resource augmentation plan and it shall be prepared as an independent chapter in the environment impact assessment report by the accredited consultants. The collection and analysis of data for assessment of ecological damage, preparation of remediation plan and natural and community resource augmentation plan shall be done by an environmental laboratory duly notified under Environment (Protection) Act, 1986, or a environmental laboratory accredited by National Accreditation Board for Testing and Calibration Laboratories, or a laboratory of a Council of Scientific and Industrial Research institution working in the field of environment."

31. The Notification of 2017 is a valid statutory notification issued by the Central Government in exercise of power under Sections 3(1) and 3(2)(v) of the EP Act read with Rule 5(3)(d) of the EP Rules in the same manner as the EIA Notification dated 27th January 1994 and the Notification dated 14th September 2006.

32. Section 21 of the General Clauses Act, 1897 provides that where any Central Act or Regulations confer a power to issue notifications, orders, rules or bye-laws, that power includes the power, exercisable in like manner, and subject to like sanction and conditions, if any, to add to, amend, vary or rescind any notification, order, rule or bye-law so issued. The authority, which had the power to issue Notifications dated 27th January 1994 and 14th September 2006 undoubtedly had, and still has the power to rescind or modify or amend those notifications in like manner. As held by this Court in *Shree Sidhbali Steels Ltd.* v. *State of Uttar Pradesh*[1], power under Section 21 to amend, vary or rescind notifications, orders, rules or bye-laws can be exercised from time to time having regard to the exigency.

33. Puducherry Environment Protection Association filed a Writ Petition being W.P. No. 11189 of 2017 in the High Court of Madras assailing the said notification dated 14th March 2017. By a judgment and order dated 13th October 2017, a Division Bench of the High Court refused to interfere with the said notification, holding that the impugned notification did not compromise with the need to preserve environmental purity.

34. The Ministry of Environment, Forest and Climate Change (MoEF&CC) issued a draft notification dated 23rd March 2020 which was duly published in the Gazette of India Extraordinary Part II. The Notification was proposed to be issued in exercise of powers conferred by subsection (1) and clause (v) of sub-section (2) of Section 3 of the EP Act for dealing with cases of violation of the notification with regard to EC. It was proposed that cases of violation would be appraised by the Appraisal Committee with a view to assess whether the project had been constructed or operated at a site which was permissible under prevailing laws and could be run sustainably on compliance of environmental norms with adequate environmental safeguards. Closure was to be recommended if the findings of the Appraisal Committee were in the negative. If the Appraisal Committee found that such unit had been running sustainably upon compliance of environmental norms with adequate environment safeguards, the unit would be prescribed appropriate Terms of Reference (TOR) after which the procedure for grant of EC would follow.

35. On 10th November 2020, the Department of Environment and Climate Change of the Government of Haryana issued an order which is extracted hereinbelow for convenience:

"Whereas the process of manufacturing of Formaldehyde is covered under the provisions of 5(f) of Schedule of Environment Impact Assessment Notification (EIA),

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 8 Thursday, July 06, 2023

SCC Online Web Edition: http://www.scconline.com
© 2023 EBC Publishing Pvt. Ltd., Lucknow.

2006 of Government of India, and requires the prior Environmental Clearance (EC) from the competent authority State Environment Impact Assessment Authority (SEIAA)/Ministry of Environment, Forest and Climate Change, Government of India, before establishment and operation of such units, besides other mandatory clearance, as applicable;

Whereas, it has come to the notice of Government that around 15 such units have been permitted to establish/operate in the State of Haryana, without obtaining the necessary Prior Environmental Clearances, but with the Consent of the Haryana State Pollution Control Bureau (HSPCB), which misinterpreted the category of such units and on realising the requirement of EC in these cases, has revoked its consents issued earlier to these units recently;

Whereas, some of these units approached the Government explaining their hardship due to such sudden revocation of their consents and have sought time for obtaining the necessary EC from the competent authority as the process is likely to take a minimum of 6 months to one year period, and to allow them to operate with all pollution control measures, following the pollution control norms applicable, and,

Whereas, the Government has carefully considered their request and the competent authority has decided that these units shall be allowed to continue their operations for a period of six months, without prejudice to any legal action taken against the violations committed by them, by the competent authorities, with the conditions that they will immediately apply for Environmental Clearance from the competent authority and provide the proof of such application within 60 days from the issuance of this communication to Environment and Climate Change Department and to Haryana State Pollution Control Board.

Therefore, it is ordered accordingly."

36. Referring to the Counter Affidavit filed by HSPCB before the NGT, Mr. Gupta pointed out that, since HSPCB itself was under the misconception that prior EC was not necessary for units such as the Yamunanagar units of the Appellants Nos. 1 and 2 respectively. HSPCB took a policy decision to allow the units which did not have prior EC to operate for six months, on condition that they would apply for EC within sixty days.

37. The Appellants duly applied for EC in respect of their manufacturing units. After scrutinizing their applications and after finding the units suitable for grant of EC in terms of the prevailing guidelines, the Expert Appraisal Committee constituted by the MoEF&CC conducted a public hearing to finalize the cases of the Appellants for issuance of Terms of Reference (TOR).

38. By an Office Memorandum, being F. No. 22-21/2020-1A III, dated 7th July 2021, the MoEF&CC issued Standard Operating Procedure (SOP) for identification and handling of violation cases under EIA Notification 2006.

39. The said Office Memorandum, inter alia, reads:

"The Ministry had issued a notification number S.O.804(E), dated the 14th March, 2017 detailing the process for grant of Terms of Reference and Environmental Clearance in respect of projects or activities which have started the work on site and/or expanded the production beyond the limit of Prior EC or changed the product mix without obtaining Prior EC under the EIA Notification, 2006.

2. This Notification was applicable for six months from the date of publication i.e. 14.03.2017 to 13.09.2017 and further based on court direction from 14.03.2018 to 13.04.2018.

3. Hon'ble NGT in Original Application No. 287 of 2020 in the matter of Dastak N.G.O. *v.* Synochem Organics Pvt. Ltd. *and in applications pertaining to same subject matter in Original Application No. 298 of 2020 in* Vineet Nagar *v.* Central Ground Water Authority, *vide order dated 03.06.2021 held that "(…) for past*

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

SCC Online Web Edition: http://www.scconline.com
© 2023 EBC Publishing Pvt. Ltd., Lucknow.

violations, the concerned authorities are free to take appropriate action in accordance with polluter pays principle, following due process".

4. Further, the Hon'ble National Green Tribunal in O.A. No. 34/2020 WZ in the matter of Tanaji B. Gambhire *v.* Chief Secretary, Government of Maharashtra, *vide order dated 24.05.2021 has directed that"****.... a proper SoP be laid down for grant of EC in such cases so as to address the gaps in binding law and practice being currently followed. The MoEF may also consider circulating such SoP to all SEIAAs in the country".***

5. Therefore, in compliance to the directions of the Hon'ble NGT a Standard Operating Procedure (SoP) for dealing with violation cases is required to be drawn. The Ministry is also seized of different categories of 'violation' cases which have been pending for want of an approved structural/procedural framework based on 'Polluter Pays Principle' and 'Principle of Proportionality'. It is undoubtedly important that action under statutory provisions is taken against the defaulters/violators and a decision on the closure of the project or activity or otherwise is taken expeditiously.

6. In the light of the above directions of the Hon'ble Tribunal and the issues involved, the matter has accordingly been examined in detail in the Ministry. A detailed SoP has accordingly been framed and is outlined herein. The SoP is also guided by the observations/decisions of the Hon'ble Courts wherein principles of proportionality and polluters pay have been outlined."

40. The SOP formulated by the said Office Memorandum dated 7th July 2021 refers to and gives effect to various judicial pronouncements including the judgment of this Court in *Alembic Pharmaceuticals Ltd.* v. *Rohit Prajapati*[2].

41. In terms of the SOP, the proposal for grant of EC in cases of violation are to be considered on merits, with prospective effect, applying principles of proportionality and the principle that the polluter pays and is liable for costs of remedial measures.

42. By an order dated 9th July 2021, the MoEF&CC confirmed the minutes of an earlier meeting of the Expert Appraisal Committee and recommended issuance of terms of reference to the Appellant No. 1, M/s. Pahwa Plastics Private Limited for expansion of its Formaldehyde Manufacturing unit from 60 TPD to 150 TPD.

43. In the meanwhile, on or about 26th November 2020, the Respondent No. 1, a Non-Governmental Organisation (NGO) hereinafter referred to as "Dastak" filed an application being O.A. No./287/2020 before the NGT praying that the order dated 10th November 2020 passed by the State of Haryana be quashed and units which were operating without EC be closed. The NGT disposed of the said application of Dastak by the impugned order dated 3rd June 2021.

44. A Public Interest Litigation being W.P. (MD) No. 11757 of 2021 (*Fatima* v. *Union of India*) was filed before the Madurai Bench of the Madras High Court challenging the said Memorandum dated 7th July 2021. By an interim order dated 15th July 2021 a Division Bench of the Madras High Court admitted the Writ Petition and stayed the said memorandum.

45. The Madurai Bench of the Madras High Court observed and held:—

"This writ petition has been filed as a public interest litigation challenging the validity of the office memorandum dated 07.07.2021, issued by the respondent.

2. We have heard Mr. A. Yogeshwaran, learned counsel appearing for the writ petitioner and Mr. L. Victoria Gowri, learned Assistant Solicitor General of India, accepts notice for the respondent.

3. The impugned office memorandum is challenged as being wholly without jurisdiction, contrary to the Environment Impact Assessment Notification, 2006, ultra vires the powers of the respondent under the Environment (Protection) Act, 1986 and violative of the various principles enunciated by the Hon'ble Supreme

Court, while interpreting Article 21 and Article 48-A of the Constitution of India.

4. Further, it is submitted that the impugned notification is in gross violation of the undertaking given before the Hon'ble Full Bench of this Court in W.P. No. 11189 of 2017, wherein, the Court took note of the submissions made on behalf of the Government of India, that the notification impugned therein is only a one-time measure. Further, it is submitted that the respondent failed to see that concept of ex-post facto approval is alien to environment jurisprudence and it is anathema to the Environment Impact Assessment Notification, 2006.

5. Further, it is submitted that the impugned notification is in gross violation of the judgment of the Hon'ble Supreme Court in the case of Alembic Pharmaceuticals Ltd. *v.* Rohit Prajapati, *2020 SCC OnLine SC 347 and the orders passed by the National Green Tribunal, Principal Bench, New Delhi, in the case of* S.P. Muthuraman *v.* Union of India, *2015 SCC OnLine NGT 169.*

6. Identical grounds were considered by us in a challenge to an office memorandum dated 19.02.2021, which provided a procedure for granting post facto clearance under Coastal Regulation Zone (CRZ) Notification 2011, on the ground that despite no such provisions in the notification and being contrary to the earlier judgments and undertaking. The said writ petition in W.P(MD). No. 8866 of 2021 was admitted and by order dated 30.04.2021, the said office memorandum dated 19.02.2021 has been stayed.

7. The core issue in this writ petition is whether the Government of India could have issued the office memorandum and brought about the Standard Operating Procedure for dealing with violators, who failed to comply with the mandatory condition of obtaining prior environment clearance under the Environment Impact Assessment Notification 2006, read with the provisions of Environment (Protection) Act, 1986. This issue was considered by the Hon'ble Supreme Court in Alembic Pharmaceuticals Ltd. *(cited supra), and it was held that such office memorandum in the nature of circular is without jurisdiction. The operative portion of the judgment reads as follows:*

> *"...What is sought to be achieved by the administrative circular dated 14 May 2002 is contrary to the statutory notification dated 27 January 1994. The circular dated 14 May 2002 does not stipulate how the detrimental effects on the environment would be taken care of if the project proponent is granted an ex post facto EC. The EIA notification of 1994 mandates a prior environmental clearance. The circular substantially amends or alters the application of the EIA notification of 1994. The mandate of not commencing a new project or expanding or modernising an existing one unless an environmental clearance has been obtained stands diluted and is rendered ineffective by the issuance of the administrative circular dated 14 May 2002. This discussion leads us to the conclusion that the administrative circular is not a measure protected by Section 3. Hence there was no jurisdictional bar on the NGT to enquire into its legitimacy or vires. Moreover, the administrative circular is contrary to the EIA Notification 1994 which has a statutory character. The circular is unsustainable in law."*

8. Despite the above decision, once again the Government of India, Ministry of Environment, Forest and Climate Change have chosen to adopt the route of issuing the office memorandum and virtually setting at naught the provisions of the Environment Impact Assessment Notification and the Environment (Protection) Act.

9. Before the Hon'ble First Bench, a public interest litigation was filed by the Puducherry Environment Protection Association, challenging the notification dated 14.03.2017, on identical grounds and the Hon'ble First Bench by judgment dated 13.10.2017, recorded the submissions of the learned Assistant Solicitor General of India that the said notification was a one-time measure and accordingly, disposed

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

© 2023 EBC Publishing Pvt. Ltd., Lucknow.

of the writ petition.

10. Once again, the Ministry of Environment, Forest and Climate Change have issued the impugned office memorandum. Thus, from what we have noted above, we are of the clear view that the petitioner has made out a prima facie case for entertaining the writ petition. Accordingly, the writ petition is ***admitted*** *and there shall be an order of interim stay."*

46. It is true that in the case of *Puducherry Environment Protection Association* v. *Union of India*[3], the Division Bench of Madras High Court took note of and recorded the submission made on behalf of the Union of India that the relaxation was a one time relaxation. In view of such submission, this Court held that a one time relaxation was permissible.

47. It is, however, well settled that words and phrases and/or sentences in a judgment cannot be read in the manner of a statute, and that too out of context. The observation of the Division Bench that a one time relaxation was permissible, is not to be construed as a finding that relaxation cannot be made more than once. If power to amend or modify or relax a notification and/or order exists, the notification and/or order may be amended and/or modified as many times, as may be necessary. A statement made by counsel in Court would not prevent the authority concerned from making amendments and/or modifications provided such amendments and/or modifications were as per the procedure prescribed by law.

48. The Division Bench of Madras High Court fell in error in staying the said office memorandum, by relying on observations made by this Court in *Alembic Pharmaceuticals Ltd.* (supra), in the context of a circular which was contrary to the statutory Environment Impact Notification of 1994. The attention of the High Court was perhaps not drawn to the fact that the notification of 7th July 2021 was in pursuance of the statutory notification of 2017 which was valid. The judgment of this Court in *Alembic Pharmaceuticals Ltd.* (supra), was clearly distinguishable and could have no application to the office memorandum dated 7th July 2021 which was issued pursuant to the notification dated 14th March 2017.

49. The Appellants have already applied for EC. The Expert Appraisal Committee of the MoEF&CC has, after scrutinizing the application of the Appellants and finding them eligible for grant of EC, recommended their cases for grant of Terms of Reference (ToR). ToR was granted to the Appellants and a public hearing had also been conducted. Only last procedural step of issuance of EC is left.

50. It is claimed that the units of the Appellants are totally non-polluting units having "Zero Trade discharge". They have been in operation for many years. In the reply affidavit filed by the State before the NGT, it was mentioned that the units were operating in good faith with valid CTOs granted by the HSPCB. It was stated that the units were not causing pollution hazards. The only thing against the units was the procedural lapse of not obtaining EC.

51. By a communication No. F. No. IA-J-110011/185/2020-IA-II(I) dated 20th July 2021 issued to the Appellant No. 1, the MoEF&CC rejected the proposal for terms of reference on the purported ground that the activity of the Appellant No. 1 was covered under category "A" of item 5(f) "Synthetic Organic Chemicals" of the Schedule to the EIA Notification, 2006. A similar communication was issued in respect of M/s. Apcolite Polymers Pvt. Ltd. Significantly, by an order dated 9th July 2021, the MoEF&CC had confirmed the minutes of an earlier meeting of the Expert Appraisal Committee and recommended issuance of ToR to the Appellant No. 1, as observed above. The proposal for Terms of Reference has obviously been rejected at the final stage after the public hearing, by reason of the impugned order dated 3rd June 2021 passed by the NGT on the application of Dastak, which is under appeal.

52. This appeal was listed for admission on 30th September 2021, along with an

application for interim relief being I.A. No. 110064 of 2021 praying for orders permitting the Appellants to operate their units during the pendency of the appeal. The appeal was heard at length at the admission stage and reserved for judgment along with the interim application by an order dated 30th September 2021.

53. After receiving the communication dated 20th July 2021 rejecting the proposal for Terms of Reference, the Appellants requested HSPCB to forward to the Appellants the proceedings of public hearing in respect of the manufacturing units of the Appellants. By a communication No. HSPCB/YR/2021/2830 dated 15th February 2022, HSPCB forwarded proceedings of the public hearing in respect of the Yamuna Nagar unit of the Appellant No. 1. By another Communication No. HSPCB/YR/29021/2829 dated 15th February 2022 the HSPCB forwarded to the Appellant No. 2 the proceedings of the public hearing held on 3rd February 2022 in connection with the Yamuna Nagar Unit of the Appellant No. 2.

54. The manufacturing units of the Appellants appoint about 8,000 employees and have a huge annual turnover. An establishment contributing to the economy of the country and providing livelihood ought not to be closed down only on the ground of the technical irregularity of not obtaining prior Environmental Clearance irrespective of whether or not the unit actually causes pollution.

55. In *Electrosteel Steels Limited* v. *Union of India*[4], this Court held:—

> ***"82. The question is whether an establishment contributing to the economy of the country and providing livelihood to hundreds of people should be closed down for the technical irregularity of shifting its site without prior environmental clearance, without opportunity to the establishment to regularize its operation by obtaining the requisite clearances and permissions, even though the establishment may not otherwise be violating pollution laws, or the pollution, if any, can conveniently and effectively be checked. The answer has to be in the negative.***
>
> *83. The Central Government is well within the scope of its powers under Section 3 of the 1986 Act to issue directions to control and/or prevent pollution including directions for prior Environmental Clearance before a project is commenced. Such prior Environmental Clearance is necessarily granted upon examining the impact of the project on the environment. Ex-Post facto Environmental Clearance should not ordinarily be granted, and certainly not for the asking.* ***At the same time ex post facto clearances and/or approvals and/or removal of technical irregularities in terms of Notifications under the 1986 Act cannot be declined with pedantic rigidity, oblivious of the consequences of stopping the operation of a running steel plant.***
>
> ***84. The 1986 Act does not prohibit ex post facto Environmental Clearance****. Some relaxations and even grant of ex post facto EC in accordance with law, in strict compliance with Rules, Regulations Notifications and/or applicable orders, in appropriate cases, where the projects are in compliance with, or can be made to comply with environment norms, is in over view not impermissible. The Court cannot be oblivious to the economy or the need to protect the livelihood of hundreds of employees and others employed in the project and others dependent on the project, if such projects comply with environmental norms.*
>
> * * *
>
> *88. The Notification being SO 804(E) dated 14th March, 2017 was not an issue in* Alembic Pharmaceuticals *(supra). This Court was examining the propriety and/or legality of a 2002 circular which was inconsistent with the EIA Notification dated 27th January, 1994, which was statutory. Ex post facto environmental clearance should not however be granted routinely, but in exceptional circumstances taking*

into account all relevant environmental factors. Where the adverse consequences of ex post facto approval outweigh the consequences of regularization of operation of an industry by grant of ex post facto approval and the industry or establishment concerned otherwise conforms to the requisite pollution norms, ex post facto approval should be given in accordance with law, in strict conformity with the applicable Rules, Regulations and/or Notifications. ***Ex post facto approval should not be withheld only as a penal measure****. The deviant industry may be penalised by an imposition of heavy penalty on the principle of 'polluter pays' and the cost of restoration of environment may be recovered from it.*

* * *

96. The appeals are allowed. The impugned order is set aside. The ***Respondent No. 1 shall take a decision on the application of the Appellant for revised EC in accordance with law, within three months from date. Pending such decision, the operation of the steel plant shall not be interfered with on the ground of want of EC, FC, CTE or CTO."***

56. As held by this Court in *Electrosteel Steels Limited* (supra) *ex post facto* Environmental Clearance should not ordinarily be granted, and certainly not for the asking. At the same time *ex post facto* clearances and/or approvals and/or removal of technical irregularities in terms of a Notification under the EP Act cannot be declined with pedantic rigidity, oblivious of the consequences of stopping the operation of mines, running factories and plants.

57. The 1986 Act does not prohibit *ex post facto* Environmental Clearance. Grant of ex post facto EC in accordance with law, in strict compliance with Rules, Regulations, Notifications and/or applicable orders, in appropriate cases, where the projects are in compliance with, or can be made to comply with environment norms, is in our view not impermissible. The Court cannot be oblivious to the economy or the need to protect the livelihood of hundreds of employees and others employed in the project and others dependent on the project, if such projects comply with environmental norms.

58. As held by a three Judge Bench of this Court in *Lafarge Umiam Mining Private Limited* v. *Union of India*[5]:—

"119. The time has come for us to apply the constitutional "doctrine of proportionality" to the matters concerning environment as a part of the process of judicial review in contradistinction to merit review. It cannot be gainsaid that utilization of the environment and its natural resources has to be in a way that is consistent with principles of sustainable development and intergenerational equity, but balancing of these equities may entail policy choices. In the circumstances, barring exceptions, decisions relating to utilisation of natural resources have to be tested on the anvil of the well-recognized principles of judicial review. Have all the relevant factors been taken into account? Have any extraneous factors influenced the decision? Is the decision strictly in accordance with the legislative policy underlying the law (if any) that governs the field? Is the decision consistent with the principles of sustainable development in the sense that has the decision-maker taken into account the said principle and, on the basis of relevant considerations, arrived at a balanced decision? Thus, the Court should review the decision-making process to ensure that the decision of MoEF is fair and fully informed, based on the correct principles, and free from any bias or restraint. Once this is ensured, then the doctrine of "margin of appreciation" in favour of the decision-maker would come into play."

59. In *Alembic Pharmaceuticals Ltd.* (supra), this Court observed:—

"27. The concept of an ex post facto EC is in derogation of the fundamental principles of environmental jurisprudence and is an anathema to the EIA notification

SCC ONLINE

© 2023 EBC Publishing Pvt. Ltd., Lucknow.

dated 27 January 1994. It is, as the judgment in Common Cause holds, detrimental to the environment and could lead to irreparable degradation. The reason why a retrospective EC or an ex post facto clearance is alien to environmental jurisprudence is that before the issuance of an EC, the statutory notification warrants a careful application of mind, besides a study into the likely consequences of a proposed activity on the environment. An EC can be issued only after various stages of the decision-making process have been completed. Requirements such as conducting a public hearing, screening, scoping and appraisal are components of the decision-making process which ensure that the likely impacts of the industrial activity or the expansion of an existing industrial activity are considered in the decision-making calculus. Allowing for an ex post facto clearance would essentially condone the operation of industrial activities without the grant of an EC. In the absence of an EC, there would be no conditions that would safeguard the environment. Moreover, if the EC was to be ultimately refused, irreparable harm would have been caused to the environment. In either view of the matter, environment law cannot countenance the notion of an ex post facto clearance. This would be contrary to both the precautionary principle as well as the need for sustainable development."

60. Even though this Court deprecated ex post facto clearances, in *Alembic Pharmaceuticals Ltd.* (supra), this Court did not direct closure of the units concerned but explored measures to control the damage caused by the industrial units. This Court held:—

"However, since the expansion has been undertaken and the industry has been functioning, we do not deem it appropriate to order closure of the entire plant as directed by the High Court."

61. The Notification being SO. 804(E) dated 14th March 2017 was not in issue in *Alembic Pharmaceuticals Ltd.* (supra). In *Alembic Pharmaceuticals Ltd.* (supra) this Court was examining the propriety and/or legality of a 2002 circular which was inconsistent with the EIA Notification dated 27th January 1994, which was statutory. The EIA Notification dated 27th January 1994 has, as stated above, been superseded by the Notification dated 14th September 2006.

62. There can be no doubt that the need to comply with the requirement to obtain EC is non-negotiable. A unit can be set up or allowed to expand subject to compliance of the requisite environmental norms. EC is granted on condition of the suitability of the site to set up the unit, from the environmental angle, and also existence of necessary infrastructural facilities and equipment for compliance of environmental norms. To protect future generations and to ensure sustainable development, it is imperative that pollution laws be strictly enforced. Under no circumstances can industries, which pollute, be allowed to operate unchecked and degrade the environment.

63. *Ex post facto* environmental clearance should not be granted routinely, but in exceptional circumstances taking into account all relevant environmental factors. Where the adverse consequences of denial of *ex post facto* approval outweigh the consequences of regularization of operations by grant of ex post facto approval, and the establishment concerned otherwise conforms to the requisite pollution norms, ex post facto approval should be given in accordance with law, in strict conformity with the applicable Rules, Regulations and/or Notifications. The deviant industry may be penalised by an imposition of heavy penalty on the principle of 'polluter pays' and the cost of restoration of environment may be recovered from it.

64. The question in this case is, whether a unit contributing to the economy of the country and providing livelihood to hundreds of people, which has been set up pursuant to requisite approvals from the concerned statutory authorities, and has

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 15 Thursday, July 06, 2023

SCC Online Web Edition: http://www.scconline.com
© 2023 EBC Publishing Pvt. Ltd., Lucknow.

applied for *ex post facto* EC, should be closed down for the technical irregularity of want of prior environmental clearance, pending the issuance of EC, even though it may not cause pollution and/or may be found to comply with the required norms. The answer to the aforesaid question has to be in the negative, more so when the HSPCB was itself under the misconception that no environment clearance was required for the units in question. HSPCB has in its counter affidavit before the NGT clearly stated that a decision was taken to regularize units such as the Apcolite Yamuna Nagar and Pahwa Yamuna Nagar Units, since requisite approvals had been granted to those units, by the concerned authorities on the misconception that no EC was required.

65. It is reiterated that the 1986 Act does not prohibit ex post facto EC. Some relaxations and even grant of ex post facto EC in accordance with law, in strict compliance with Rules, Regulations, Notifications and/or applicable orders, in appropriate cases, where the projects are in compliance with environment norms, is not impermissible. As observed by this Court in *Electrosteel Steels Limited* (supra), this Court cannot be oblivious to the economy or the need to protect the livelihood of hundreds of employees and others employed in the units and dependent on the units in their survival.

66. *Ex post facto* EC should not ordinarily be granted, and certainly not for the asking. At the same time *ex post facto* clearances and/or approvals cannot be declined with pedantic rigidity, regardless of the consequences of stopping the operations. This Court is of the view that the NGT erred in law in directing that the units cannot be allowed to function till compliance of the statutory mandate.

67. Accordingly, the appeal is allowed. The impugned order is set aside in so far as the same is applicable to the units of the Appellants established and operated pursuant to CTE and CTO from the HSPCB in respect of which applications for *ex post facto* EC have been filed. The Respondent shall take a decision on the applications of the Appellants for EC in accordance with law within one month from date. Pending decision, the operation of the Pahwa Yamuna Nagar Unit and the Apcolite Yamuna Nagar Unit, in respect of which consents have been granted and even public hearing held in connection with grant of EC, shall not be interfered with.

68. The Appellants will be allowed to operate the units. Electricity, if disconnected, shall be restored subject to payment of charges, if any. If the application for EC is rejected on the ground of any contravention on the part of the Appellants, it will be open to the Respondents to disconnect the supply of electricity.

69. The Union of India had proceeded with the application for EC and even public hearing had been held. Counsel appearing on behalf of the Union of India contended that the Appellant had not submitted its final application for EC, after public hearing. It is not clear what more was required of the Appellants. Be that as it may, the Union of India shall, within three working days from the date of receipt of a copy of this judgment and order, inform the Appellants in writing of whether anything further is required to be done by the Appellants, and if so what is required to be done. The Appellants shall, within a week thereafter do the needful. The final decision on the application of the Appellants for EC shall be taken within three weeks thereafter.

70. The application being I.A. No. 110064/2021 and other pending applications, if any, in this appeal are disposed of accordingly.

view that the conduct of the election in the circumstances was not valid in law.

5. Though the learned counsel for the appellant seeks to rely upon Rule 14-A of the Punjab Gram Panchayat Election Rules, we do not think that the facts of the case fall in any of the grounds enumerated in that rule. She cannot file an election petition equally. However, in view of the facts stated above, it being a case of unlawful prevention of the appellant from contesting the election, the election to the office of Sarpanch held is clearly in violation of the law. Therefore, the election of the 7th respondent as Sarpanch is set aside. He may, however, continue till the re-poll is held. The authorities are directed to conduct the election according to the rules within four weeks from the date of the receipt of this order.

6. The appeal is allowed. Writ is issued accordingly. No costs.

(1996) 3 Supreme Court Cases 212

(BEFORE B.P. JEEVAN REDDY AND B.N. KIRPAL, JJ.)

INDIAN COUNCIL FOR ENVIRO-LEGAL ACTION AND OTHERS .. Petitioners;

Versus

UNION OF INDIA AND OTHERS .. Respondents.

Writ Petitions (C) No. 967 of 1989 with Nos. 94 of 1990, 824 of 1993 and 76 of 1994†, decided on February 13, 1996

A. **Constitution of India — Arts. 32, 21, 48-A and 51-A(g) — PIL — Petition alleging environmental pollution caused by private industrial units — Maintainability — Writ petition filed by an environmentalist organisation, not for issuance of writ, order or direction against such units but against Union of India, State Govt. and State Pollution Board concerned to compel them to perform their statutory duties on ground that their failure to carry on such duties violated rights guaranteed under Art. 21 of the residents of the affected area — Held, maintainable — Court can, after ascertaining that the alleged industrial units were responsible for causing ecological fragility in the area, direct the authorities concerned to perform their statutory duties — Environment (Protection) Act, 1986, Ss. 3, 4, 5 — Water (Prevention and Control of Pollution) Act, 1974, Ss. 24(1), 25(1) (as amended by Act 53 of 1988), 33, 33-A (as introduced by Act 53 of 1988) — Air (Prevention and Control of Pollution) Act, 1981 — Hazardous Wastes (Management and Handling) Rules, 1989**

B. **Constitution of India — Arts. 32, 21, 48-A, 51-A(g) — Environmental pollution — Compensation — Imposition of cost of remedial measures — Principles of Strict Liability and Polluter Pays — Applicability — Hazardous and inherently dangerous activity carried on by industrial units — Principle laid down by Supreme Court in *Oleum Gas Leak case* regarding strict and absolute liability of such units to compensate to persons adversely affected thereby, held, not obiter but binding — Rule in *Rylands* v. *Fletcher*, which is**

subject to exceptions of 'foreseeability' and 'non-natural user', not suitable for Indian conditions and hence not applicable — Discharge of highly toxic effluents viz. waste water and sludge, both iron-based and gypsum-based, from respondents' chemical factories manufacturing 'H' Acid, poisoning earth, underground water, wells, agriculture and other vegetation and rendering the village, where the factories located, ecologically fragile — Respondents operating contrary to law without obtaining clearances from authorities concerned and also disobeying orders of authorities as well as of Supreme Court — Respondents alone found to be responsible for such extensive damages — Held on facts, principles of Strict Liability and Polluter Pays applicable — Power of Central Govt. to direct such industries to defray costs for undertaking remedial measures implicit under Ss. 3 and 4 of Environment (Protection) Act — Determination of the amount required for carrying out the remedial measures, recovery/realisation thereof and undertaking such measures are functions of Central Govt. — Court can therefore issue appropriate directions to the Central Govt. to invoke and exercise the powers under Ss. 3 and 4 of the said Act — Environment (Protection) Act, 1986, Ss. 3 to 5 — Water (Prevention and Control of Pollution) Act, 1974, Ss. 24(1), 25(1) (as amended by Act 53 of 1988), 33, 33-A (as introduced by Act 53 of 1988) — Air (Prevention and Control of Pollution) Act, 1981 — Hazardous Wastes (Management and Handling) Rules, 1989 — Tort

C. **Constitution of India — Art. 32 — PIL — Reports submitted by experts pursuant to court's orders — Absence of opportunity to respondents to cross-examine the experts — Plea regarding raised at very late stage, unacceptable**

The units/factories of Respondents 4 to 8, located in an industrial complex in village Bichhri in Udaipur (Rajasthan), were all chemical industries and were controlled by the same group of individuals. Respondent 4 started producing in 1987 certain chemicals like Oleum (concentrated form of sulphuric acid) and Single Super Phosphate. Respondent 5 (Silver Chemicals) and Respondent 8 (Jyoti Chemicals) commenced production of 'H' acid. Respondents 6 and 7 were producing fertilizers and a few other products. The respondents had not obtained the requisite clearances/consents/licences; nor did they install any equipment for treatment of highly toxic effluents discharged by them. 'H' acid was meant for export exclusively. Its manufacture gives rise to enormous quantities of highly toxic effluents — in particular, iron-based and gypsum-based sludge — which if not properly treated, pose grave threat to Mother Earth. It poisons the earth, the water and everything that comes in contact with it. The chemicals produced by Respondents 5 and 8 gave birth to about 2400-2500 MT of highly toxic sludge (iron-based sludge and gypsum-based sludge) besides other pollutants. Since the toxic untreated waste waters were allowed to flow out freely and because the untreated toxic sludge was thrown in the open in and around the complex, the toxic substances percolated deep into the bowels of the earth polluting the aquifers and the subterranean supply of water. The water in the wells and the streams turned dark and dirty rendering it unfit for human consumption, unfit for cattle to drink and for irrigating the land. The soil became polluted rendering it unfit for cultivation, the mainstay of the villagers. It spread diseases, death and disaster in the village and the surrounding areas. The villagers then rose in virtual revolt leading to the imposition of Section 144 CrPC by the District Magistrate in the area. It was averred by the respondents that both the units, Silver Chemicals and Jyoti Chemicals had stopped manufacturing 'H' acid since January 1989 were closed. Yet the consequences of their action remained — the sludge, the long-lasting damage to earth, to underground water, to human beings, to cattle and the village economy. An environmentalist organisation filed the present

writ petition before the Supreme Court by way of social action litigation, complaining precisely of the above situation and requesting for appropriate remedial action. Pursuant to notice issued by the Supreme Court, the Government of India, Government of Rajasthan, Rajasthan Pollution Control Board (RPCB) and Respondents 4 to 8 filed counter-affidavits. The Court by its order dated 11-12-1989 requested the National Environmental Engineering Research Institute (NEERI) to study the situation in and around Bichhri village and submit their report "as to the choice and scale of the available remedial alternatives". From the affidavits of the parties, various orders of the Court, technical reports and other data, it was found that out of 2440 tonnes of sludge, about 720 tonnes had been stored in the pits provided by the respondents. The remaining sludge was still there either within the area of the complex of the respondents or outside their complex. With a view to conceal it from the eyes of the inspection teams and other authorities, the respondents dispersed it all over the area and covered it with earth. In some places, the sludge was lying in mounds. The units continued to function even after and in spite of the closure orders of the RPCB. They never did carry out the orders of the Supreme Court fully (e.g., entombing the sludge), nor did they fulfil the undertaking given by them to the court (in the matter of removal of sludge and de-watering of the wells). In spite of repeated reports of officials and expert bodies, they persisted in their illegal course of action in a brazen manner exhibiting their contempt for law, for the lawful authorities and the courts. Allowing the writ petition with costs

Held :

The contention that the respondents being private corporate bodies and not 'State' within the meaning of Article 12, a writ petition under Article 32 would not lie against them, cannot be accepted. If the Supreme Court finds that the Government/authorities concerned have not taken the action required of them by law and that their inaction is jeopardising the right to life of the citizens of this country or of any section thereof, it is the duty of the Supreme Court to intervene. If it is found that the respondents are flouting the provisions of law and the directions and orders issued by the lawful authorities, the Court can certainly make appropriate directions to ensure compliance with law and lawful directions made thereunder. This is a social action litigation on behalf of the villagers whose right to life, is invaded and seriously infringed by the respondents as is established by the various reports of the experts called for, and filed before, the Court. If an industry is established without obtaining the requisite permission and clearances and if the industry is continued to be run in blatant disregard of law to the detriment of life and liberty of the citizens living in the vicinity, the Supreme Court has power to intervene and protect the fundamental right to life and liberty of the citizens of this country. (Para 54)

The contention of respondents that the reports submitted by various expert bodies could not be relied upon by the Court in absence of opportunity to cross-examine the experts cannot be accepted. These reports were called by the Court and several orders passed on the basis of those reports. It was never suggested on behalf of offending industrial units (Respondents 4 to 8) that unless they are permitted to cross-examine the experts or the persons who made those reports, their reports cannot be acted upon. This objection, urged at this late stage of proceedings — after a lapse of several years — is wholly unacceptable. The persons who made the said reports are all experts in their field and under no obligation either to the State Pollution Control Board or for that matter to any other person or industry. It is in view of their independence and competence that their reports were relied upon and made the basis of passing orders by the Supreme Court from time to time. (Para 54)

Relying on the reports submitted by the National Environmental Engineering Research Institute by the Central team (experts from the Ministry of Environment

and Forests, Government of India) and the Rajasthan PCB, it must be held that the respondents alone were responsible for all the damage to the soil, to the underground water and to the village in general. (Paras 54 and 57)

[*See also* 'Conclusions' at para 69]

The question is whether and to what extent can the respondents be made responsible for defraying the cost of remedial measures in these proceedings under Article 32. (Para 57)

Any principle evolved in this behalf should be simple, practical and suited to the conditions obtaining in this country. According to the rule laid down by the Constitution Bench of the Supreme Court in *Oleum Gas Leak case*, once the activity carried on is hazardous or inherently dangerous, the person carrying on such activity is liable to make good the loss caused to any other person by his activity *irrespective* of the fact whether he took reasonable care while carrying on his activity. The rule is premised upon the very nature of the activity carried on. In the words of the Constitution Bench, such an activity "... can be tolerated only on condition that the enterprise engaged in such hazardous or inherently dangerous activity indemnifies all those who suffer on account of the carrying on of such hazardous or inherently dangerous activity regardless of whether it is carried on carefully or not". The Constitution Bench has also assigned the reason for stating the law in the said terms. It is that the enterprise (carrying on the hazardous or inherently dangerous activity) alone has the resource to discover and guard against hazards or dangers — and not the person affected *and* the practical difficulty (on the part of the affected person) in establishing the absence of reasonable care or that the damage to him was foreseeable by the enterprise. The Bench also observed that such liability is not subject to any of the exceptions which operate vis-à-vis the tortious principle of strict liability under the rule in *Rylands* v. *Fletcher*. The twin tests laid down in *Rylands* v. *Fletcher* — apart from the proof of damage to the plaintiff by the act/negligence of the defendants — which must be satisfied to attract its rule are 'foreseeability' and 'non-natural' user of the land. The observation of Ranganath Misra, C.J. in his concurring opinion in *Union Carbide Corpn. case* that the view declared in *Oleum* was only obiter cannot be accepted. It does not appear to be unnecessary for the purposes of that case. Thus the law stated by the Supreme Court in *Oleum Gas Leak case* is by far the more appropriate one — apart from the fact that it is binding. (Paras 65, 58 and 62)

M.C. Mehta v *Union of India*, (1987) 1 SCC 395 : 1987 SCC (L&S) 37, *affirmed*

Rylands v. *Fletcher*, (1868) LR 3 HL 330 : (1861-73) All ER Rep 1, *disapproved*

Union Carbide Corpn. v. *Union of India*, (1991) 4 SCC 584, paras 14 and 15, *overruled on this aspect*

Cambridge Water Co. Ltd. v. *Eastern Counties Leather, plc*, (1994) 2 WLR 53 : (1994) 1 All ER 53; *Burnie Port Authority* v. *General Jones Pty Ltd.*, (1994) 68 Aus LJ 331, *considered*

Pravinbhai Jashbhai Patel v. *State of Gujarat*, (1995) 2 GLR 1210 : (1995) 2 GLH 352, *referred to*

Ballard v. *Tomlinson*, (1885) 29 Ch D 115 : (1881-5) All ER Rep 688, *cited*

The question of liability of the respondents to defray the costs of remedial measures can also be looked into from another angle, which has now come to be accepted universally as a sound principle, viz., the "Polluter Pays" principle. According to this principle, the responsibility for repairing the damage is that of the offending industry. (Para 67)

Carolyn Shelbourn: "*Historic Pollution — Does the Polluter Pay*"? — Journal of Planning and Environmental Law, Aug. 1974 issue), *approved*

TruePrint™ source: Supreme Court Cases, © 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

Read with the wide definition of 'environment' in Section 2(*a*), Sections 3 and 5 clothe the Central Government with all such powers as are "necessary or expedient for the purpose of protecting and improving the quality of the environment". The Central Government is empowered to take all measures and issue all such directions as are called for for the above purpose. Levy of costs required for carrying out remedial measures is implicit in Sections 3 and 4. (Para 60)

In the present case, the said powers will include giving directions for the removal of sludge, for undertaking remedial measures and also the power to impose the cost of remedial measures on the offending industry and utilise the amount so recovered for carrying out remedial measures. The Supreme Court can certainly give directions to the Central Government or its delegate to take all such measures, if in a given case the Court finds that such directions are warranted. Therefore, appropriate directions can be given by the Court to the Central Government to invoke and exercise those powers with such modulations as are called for in the facts and circumstances of this case. (Paras 60 and 66)

Indian Council for Enviro-Legal Action v. *Union of India*, (1995) 3 SCC 77 : (1995) 5 Scale 578, *relied on*

Further, in this case, there is a clear violation of law and disobedience to the orders of the Supreme Court apart from the orders of the lawful authorities. In this respect it is distinct from *Oleum Gas Leak case*. The Supreme Court has to ensure the observance of law and of its orders as a part of enforcement of fundamental rights That power cannot be disputed. If so, the Court is competent to make orders necessary for a full and effective implementation of its orders — and that includes the imposition and recovery of cost of all measures including remedial measures. (Para 60)

However, in all the circumstances, it is appropriate that the task of determining the amount required for carrying out the remedial measures, its recovery/realisation and the task of undertaking the remedial measures is placed upon the Central Government in the light of the provisions of the Environment (Protection) Act, 1986. It is, of course, open to the Central Government to take the help and assistance of State Government, the Rajasthan Pollution Control Board or such other agency or authority, as they think fit. It is but appropriate that an estimate of the cost of remedial measures be made now with notice to the respondents, which amount should be paid to Central Government and/or recovered from them by the Central Government. Other directions are also called for in the light of the facts and circumstances mentioned above. (Paras 67 and 68)

The Judgment of the Court was delivered by

B.P. JEEVAN REDDY, J.—

Writ Petition (C) No. 967 of 1989

1. This writ petition filed by an environmentalist organisation brings to light the woes of people living in the vicinity of chemical industrial plants in India. It highlights the disregard, nay, contempt for law and lawful authorities on the part of some among the emerging breed of entrepreneurs, taking advantage, as they do, of the country's need for industrialisation and export earnings. Pursuit of profit has absolutely drained them of any feeling for fellow human beings — for that matter, for anything else. And the law seems to have been helpless. Systemic defects? It is such instances which have led many people in this country to believe that disregard of law pays and that the consequences of such disregard will never be visited upon them — particularly, if they are men with means. Strong words indeed — but nothing less would reflect the deep sense of hurt, the hearing of this case has instilled in us. The facts of the case will bear out these opening remarks.

2. Bichhri is a small village in Udaipur District of Rajasthan. To its north is a major industrial establishment, Hindustan Zinc Limited, a public sector concern. That did not affect Bichhri. Its woes began somewhere in 1987 when the fourth respondent herein, Hindustan Agro Chemicals Limited started producing certain chemicals like Oleum (said to be the concentrated form of sulphuric acid) and Single Super Phosphate. The real calamity occurred when a sister concern, Silver Chemicals (Respondent 5), commenced production of 'H' acid in a plant located within the same complex. 'H' acid was meant for export exclusively. Its manufacture gives rise to enormous quantities of highly toxic effluents — in particular, iron-based and gypsum-based sludge — which if not properly treated, pose grave threat to Mother Earth. It poisons the earth, the water and everything that comes in contact with it. Jyoti Chemicals (Respondent 8) is another unit established to produce 'H' acid, besides some other chemicals. Respondents 6 and 7 were established to produce fertilizers and a few other products.

3. All the units/factories of Respondents 4 to 8 are situated in the same complex and are controlled by the same group of individuals. All the units are what may be called "chemical industries". The complex is located within the limits of Bichhri village.

4. Because of the pernicious wastes emerging from the production of 'H' acid, its manufacture is stated to have been banned in the western countries. But the need of 'H' acid continues in the West. That need is catered to by the industries like the Silver Chemicals and Jyoti Chemicals in this part of the world. (A few other units producing 'H' acid have been established in Gujarat, as would be evident from the decision of the Gujarat High Court in *Pravinbhai Jashbhai Patel* v. *State of Gujarat*[1], a decision rendered by one of us, B.N. Kirpal, J. as the Chief Justice of that Court.) Silver Chemicals is stated to have produced 375 MT of 'H' acid. The quantity of 'H' acid produced by Jyoti Chemicals is not known. It says that it produced only 20 MT, as trial production, and no more. Whatever quantity these two units may have produced, it has given birth to about 2400-2500 MT of highly toxic sludge (iron-based sludge and gypsum-based sludge) besides other pollutants. Since the toxic untreated waste waters were allowed to flow out freely and because the untreated toxic sludge was thrown in the open in and around the complex, the toxic substances have percolated deep into the bowels of the earth polluting the aquifers and the subterranean supply of water. The water in the wells and the streams has turned dark and dirty rendering it unfit for human consumption. It has become unfit for cattle to drink and for irrigating the land. The soil has become polluted rendering it unfit for cultivation, the mainstay of the villagers. The resulting misery to the villagers needs no emphasis. It spread disease, death and disaster in the village and the surrounding areas. This sudden degradation of earth and water had an echo in Parliament too. An Hon'ble Minister said, action was

being taken, but nothing meaningful was done on the spot. The villagers then rose in virtual revolt leading to the imposition of Section 144 CrPC by the District Magistrate in the area and the closure of Silver Chemicals in January 1989. It is averred by the respondents that both the units, Silver Chemicals and Jyoti Chemicals have stopped manufacturing 'H' acid since January 1989 and are closed. We may assume it to be so. Yet the consequences of their action remain — the sludge, the long-lasting damage to earth, to underground water, to human beings, to cattle and the village economy. It is with these consequences that we are to contend with in this writ petition.

5. The present social action litigation was initiated in August 1989 complaining precisely of the above situation and requesting for appropriate remedial action. To the writ petition, the petitioner enclosed a number of photographs illustrating the enormous damage done to water, cattle, plants and to the area in general. A good amount of technical data and other material was also produced supporting the averments in the writ petition.

Counter-affidavits of the Respondents

6. On notice being given, counter-affidavits have been filed by the Government of India, Government of Rajasthan, Rajasthan Pollution Control Board (RPCB) and Respondents 4 to 8. Since the earliest *counter-affidavit* in point of time is that of RPCB, we shall refer to it in the first instance. It was filed on 26-10-1989. The following are the averments:

(*a*) Re Hindustan Agro Chemicals Limited (R-4): The unit obtained "No Objection Certificate" from the PCB for manufacturing sulphuric acid and alumina sulphate. The Board granted clearance subject to certain conditions. Later "No Objection Certificate" was granted under the Water (Prevention and Control of Pollution) Act, 1974 (Water Act) and Air (Prevention and Control of Pollution) Act, 1981 (Air Act), again subject to certain conditions. However, this unit changed its product without clearance from the Board. Instead of sulphuric acid, it started manufacturing Oleum and Single Super Phosphate (SSP). Accordingly, consent was refused to the unit on 16-2-1987. Directions were also issued to close down the unit.

(*b*) Re Silver Chemicals (R-5): This unit was promoted by the fourth respondent without obtaining "No Objection Certificate" from the Board for the manufacture of 'H' acid. The waste water generated from the manufacture of 'H' acid is highly acidic and contains very high concentration of dissolved solids along with several dangerous pollutants. This unit was commissioned in February 1988 without obtaining the prior consent of the Board and accordingly, notice of closure was served on 30-4-1988. On 12-5-1988, the unit applied for consent under Water and Air Acts which was refused. The Government was requested to issue directions for cutting off the electricity and water

to this unit but no action was taken by the Government. The unit was found closed on the date of inspection, viz., 2-10-1989.

(*c*) Re Rajasthan Multi Fertilizers (R-6): This unit was installed without obtaining prior "No Objection Certificate" from the Board and without even applying for consent under Water and Air Acts. Notice was served on this unit on 20-2-1989. In reply whereto, the Board was informed that the unit was closed since last three years and that electricity has also been cut off since 12-2-1988.

(*d*) Re Phosphates India (R-7): This unit was also established without obtaining prior "No Objection Certificate" from the Board nor did it apply for consent under the Water and Air Acts. When notice dated 20-2-1989 was served upon this unit, the Management replied that this unit was closed for a long time.

(*e*) Re Jyoti Chemicals (R-8): This unit applied for "No Objection Certificate" for producing ferric alum. "No Objection Certificate" was issued imposing various conditions on 8-4-1988. The "No Objection Certificate" was withdrawn on 30-5-1988 on account of non-compliance with its conditions. The consent applied for under Water and Air Acts by this unit was also refused. Subsequently, on 9-2-1989, the unit applied for fresh consent for manufacturing 'H' acid. The consent was refused on 30-5-1989. The Board has been keeping an eye upon this unit to ensure that it does not start the manufacture of 'H' acid. On 2-10-1989, when the unit was inspected, it was found closed.

7. The Board submitted further (in its counter-affidavit) that the sludge lying in the open in the premises of Respondents 4 to 8 ought to be disposed of in accordance with the provisions contained in the Hazardous Wastes (Management and Handling) Rules, 1989 framed under Environment (Protection) Act, 1986. According to the Board, the responsibility for creating the said hazardous situation was squarely that of Respondents 4 to 8. The Board enclosed several documents to its counter in support of the averments contained therein.

8. *The Govt. of Rajasthan filed its counter-affidavit* on 20-1-1990. It made a curious statement in para 3 to the following effect:

> "(T)hat the State Government is *now* aware of the pollution of underground water being caused by liquid effluents from the firms arrayed as Respondents 4 to 8 in the writ petition. Therefore, the State Government has initiated action through the Pollution Control Board to check further spread of pollution."

The State Government stated that the water in certain wells in Bichhri village and some other surrounding villages has become unfit for drinking by human beings and cattle, though in some other wells, the water remains unaffected.

9. *The Ministry of Environment and Forests, Government of India filed its counter* on 8-2-1990. In their counter, the Government of India stated that Silver Chemicals was merely granted a Letter of Intent but it never applied

TruePrint™ source: Supreme Court Cases, © 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

for conversion of the Letter of Intent into industrial licence. Commencing production before obtaining industrial licence is an offence under Industries (Development and Regulation) Act, 1951. So far as Jyoti Chemicals is concerned, it is stated that it has not approached the Government at any time even for a Letter of Intent. The Government of India stated that in June 1989, a study of the situation in Bichhri village and some other surrounding villages was conducted by the Centre for Science and Environment. A copy of their report is enclosed to the counter. The report states the consequences emanating from the production of 'H' acid and the manner in which the resulting wastes were dealt with by Respondents 4 to 8 thus:

> "The effluents are very difficult to treat as many of the pollutants present are refractory in nature. Setting up such highly polluting industry in a critical groundwater area was essentially ill-conceived. The effluents seriously polluted the nearby drain and overflowed into Udaisagar main canal, severely corroding its cement-concrete lined bed and banks. The polluted waters also seriously degraded some agricultural land and damaged standing crops. On being ordered to contain the effluents, the industry installed an unlined holding pond within its premises and resorted to spraying the effluent on the nearby hill slope. This only resulted in extensive seepage and percolation of the effluents into groundwater and their spread down the aquifer. Currently about 60 wells appear to have been significantly polluted but every week a few new wells, down the aquifer start showing signs of pollution. This has created serious problems for water supply for domestic purposes, cattle-watering crop irrigation and other beneficial uses, and it has also caused human illness and even death, degradation of land and damage to fruit, trees and other vegetation. There are serious apprehensions that the pollution and its harmful effects will spread further after the onset of the monsoon as the water percolating from the higher parts of the basin moves down carrying the pollutants lying on the slopes — in the holding pond and those already underground."

10. Each of the *Respondents 4 to 8 filed separate counter-affidavits*. All the affidavits filed on behalf of these respondents are sworn to by Lt. Gen. M.L. Yadava, who described himself as the President of each of these units. In the counter-affidavit filed on behalf of the fourth respondent, it is stated that it is in no way responsible for the situation complained of. It is engaged in the manufacture of sulphuric acid and had commenced its operations on 6-1-1987. It has been granted "No Objection Certificates" from time to time. The consent obtained from RPCB is valid up to 15-8-1988. Application for extension of consent has already been filed. This counter-affidavit was filed on 18-1-1990.

11. In the counter-affidavit filed on behalf of the fifth respondent (Silver Chemicals), it is stated that the manufacture of 'H' acid which was commenced in February 1988 has been completely stopped after January 1989. The respondent is fully conscious of the need to conserve and protect

environment and is prepared fully to cooperate in that behalf. It is ready to comply with any stipulations or directions that may be made for the purpose. It, however, submitted that the real culprit is Hindustan Zinc Limited. The Archaeological Department of the Government of Rajasthan had issued environmental clearance for its unit (rather surprising statement). "No Objection Certificates" had also been issued by the Executive Engineer (Irrigation), Udaipur Division and the Wild Life Warden. So far as the requirement of 'consent' under Water and Air Acts is concerned, it merely stated that it had applied for it. Its closure in January 1989 was on account of promulgation of an order under Section 144 CrPC by the District Magistrate in view of widespread agitation by the villagers against its functioning.

12. In the counter-affidavit filed on behalf of the sixth respondent (Rajasthan Multi Fertilizers), it is stated that it commenced production on 14-3-1982 and closed down in December 1985. Electrical connection to it was disconnected on 13-2-1988. It was submitted that since it is a small-scale industry, no consent was asked for from anyone. It denied that it was causing any pollution, either ground, air or water.

13. In the counter-affidavit filed on behalf of the seventh respondent (Phosphates India), it is stated that this unit commenced production on 15-5-1988 but was closed on and with effect from 1-9-1988 for want of support from the Central Government in the form of subsidies. It submitted that it has merged with the fourth respondent in 1987-88.

14. In the counter-affidavit filed on behalf of the eighth respondent (Jyoti Chemicals), it is stated that it has no electrical connection, that it had commenced production in April 1987 and closed down completely in January 1989. It is stated that the unit produced 'H' acid to an extent of 20 MT as a trial measure for one month with the permission of the Industries Department. It is no longer manufacturing 'H' acid and, therefore, is not responsible for causing any pollution. It is further submitted that it is a small-scale industry and was registered with the District Industry Centre, Udaipur for the manufacture of ferric alum and 'H' acid. It began its operation simultaneously with the fifth respondent, Silver Chemicals, and several of the clearances are common to both, as both of them are located together. The trial production of 'H' acid, it is stated, took place in January 1987.

15. *Hindustan Zinc Limited* was impleaded as the ninth respondent at the instance of Respondents 4 to 8. It has *filed a counter-affidavit* denying that it is responsible in any manner for causing any pollution in Bichhri village or the surrounding areas. According to it, its plants are situated downstream, towards north of Bichhri village. We do not think it necessary to refer to this affidavit in any detail inasmuch as we are not concerned, in this writ petition, with the pollution, if any, caused by the ninth respondent in other villages but only with the pollution caused by Respondents 4 to 8 in Bichhri or surrounding villages.

Orders passed and steps taken during the period 1989-1992

16. The first considered order made, after hearing the parties, by this Court is of 11-12-1989. Under this order, the court requested the National Environmental Engineering Research Institute (NEERI) to study the situation in and around Bichhri village and submit their report "as to the choice and scale of the available remedial alternatives". NEERI was requested to suggest both short-term and long-term measures required to combat the hazard already caused. Directions were also made for *supply of drinking water* to affected villages by the State of Rajasthan. The RPCB was directed to make available to the court the Report it had prepared concerning the situation in Bichhri village.

17. On the next date of hearing, i.e., 5-3-1990, the court took note of the statements made on behalf of Respondents 4 to 8 that they have completely stopped the manufacture of 'H' acid in their plants and that they did not propose to resume its manufacture. The court also took note of the petitioner's statement that though the manufacture of 'H' acid may have been stopped, a large quantity of highly dangerous effluent waste/sludge has accumulated in the area and that unless properly treated, stored and removed, it constitutes a serious danger to the environment. Directions were given to the RPCB to arrange for its transportation, treatment and safe storage according to the technically accepted procedures for disposal of chemical wastes of that kind. All reasonable expenses for the said operation were to be borne by Respondents 4 to 8 (hereinafter referred to in this judgment as the 'respondents'). So far as the polluted water in the wells was concerned, the court noted the offer made by the learned counsel for the respondents that they will themselves undertake the de-watering of the wells. The RPCB was directed to inspect and indicate the number and location of the wells to be de-watered.

18. The matter was next taken up on 4-4-1990. It was brought to the notice of the court that no meaningful steps were taken for removing the sludge as directed by this Court in its order dated 5-3-1990. Since the monsoon was about to set in, which would have further damaged the earth and water in the area, the court directed the respondents to immediately remove the sludge from the open spaces where it was lying and store it in safe places to avoid the risk of seepage of toxic substances into the soil during the rainy season. The respondents were directed to complete the task within five weeks therefrom.

19. It is not really necessary to refer to the contents of the various orders passed in 1990 and 1991, i.e., subsequent to the order dated 4-4-1990 for the present purposes. Suffice it to say that the respondents did not comply with the direction to store the sludge in safe places. The de-watering of wells did not prove possible. There was good amount of bickering between the respondents on one side and the RPCB and the Ministry of Environment and Forests on the other. They blamed each other for lack of progress in the

matter of removal of sludge. Meanwhile, years rolled by and the hazard continued to rise. NEERI submitted an interim report. (We are, however, not referring to the contents of this interim report inasmuch as we would be referring to the contents of the final report presently after referring to a few more relevant orders of this Court.)

20. On 17-2-1992, this Court passed a fairly elaborate order observing that Respondents 5 to 8 are responsible for discharging the hazardous industrial wastes; that the manufacture of 'H' acid has given rise to huge quantities of iron sludge and gypsum sludge — approximately 2268 MT of gypsum-based sludge and about 189 MT of iron-based sludge; that while the respondents blamed Respondent 9 as the main culprit, Respondent 9 denied any responsibility therefor. The immediate concern, said the Court, was the appropriate remedial action. The report of the RPCB presented a disturbing picture. It stated that the respondents have deliberately spread the hazardous material/sludge all over the place which has only heightened the problem of its removal and that they have failed to carry out the order of this Court dated 4-4-1990. Accordingly, the court directed the Ministry of Environment and Forests, Government of India to depute its experts immediately to inspect the area to ascertain the existence and extent of gypsum-based and iron-based sludge, to suggest the handling and disposal procedures and to prescribe a package for its transportation and safe storage. The cost of such storage and transportation was to be recovered from the respondents.

21. Pursuant to the above order, a team of experts visited the area and submitted a report along with an affidavit dated 30-3-1992. The report presented a highly disturbing picture. It stated that the sludge was found inside a shed and also at four places outside the shed but within the premises of the complex belonging to the respondents. It stated further that sludge has been mixed with soil and at many places it is covered with earth. A good amount of sludge was said to be lying exposed to sun and rain. The report stated:

> "Above all, the extent of pollution in groundwater seems to be very great and the entire aquifer may be affected due to the pollution caused by the industry. The organic content of the sludge needs to be analysed to assess the percolation property of the contents from the sludge. It is also possible that the iron content in the sludge may be very high which may cause the reddish colouration. As the mother liquor produced during the process (with pH-1) was highly acidic in nature and was indiscriminately discharged on land by the unit, it is possible that this might have eroded soil and caused the extensive damage. It is also possible that the organic contents of the mother liquor would have gone into soil with water together with the reddish colour."

The report also suggested the mode of disposal of sludge and measures for reconditioning the soil.

22. In view of the above report, the court made an order on 6-4-1992 for entombing the sludge under the supervision of the officers of the Ministry of

Environment and Forests, Government of India. Regarding revamping of the soil, the court observed that for this purpose, it might become necessary to stop or suspend the operation of all the units of the respondent but that, the court said, requires to be examined further.

23. The work of entombment of sludge again faced several difficulties. While the respondents blamed the government officers for the delay, the government officials blamed the said respondents of non-cooperation. Several orders were passed by this Court in that behalf and ultimately, the work commenced.

Orders passed in 1993, filing of Writ Petition (C) No. 76 of 1994 by Respondent 4 and the orders passed therein

24. With a view to find out the connection between the wastes and sludge resulting from the production of 'H' acid and the pollution in the underground water, the court directed on 20-8-1993, that samples should be taken of the entombed sludge and also of the water from the affected wells and sent for analysis. Environment experts of the Ministry of Environment and Forests were asked to find out whether the pollution in the well water was on account of the said sludge or not. Accordingly, analysis was conducted and the experts submitted the Report on 1-11-1993. Under the heading 'Conclusion', the report stated:

> "5.0 *Conclusion*
>
> 5.1 On the basis of the observations and analysis results, it is concluded beyond doubt that the sludge inside the entombed pit is the contaminated one as evident from the number of parameters analysed.
>
> 5.2 The groundwater is also contaminated due to discharge of H-acid plant effluent as well as H-acid sludge/contaminated soil leachates as shown in the photographs and also supported by the results. The analysis results revealed good correlation between the colour of well water and H-acid content in it. The analysis results show high degree of impurities in sludge/soil and also in well water *which is a clear indication of contamination of soil and groundwater due to disposal of H-acid waste.*"

The report which is based upon their inspection of the area in September 1993 revealed many other alarming features. It represents a commentary on the attitude and actions of the respondents. In para 2, under the heading "Site Observations and Collection of Sludge/Contaminated Soil Samples", the following facts are stated:

> "2.1. The Central team, during inspection of the premises of M/s HACL, observed that *H-acid sludge (iron/gypsum) and contaminated soil are still lying at different places, as shown in Fig. 1, within the industrial premises* (Photograph 1) which are the leftovers. The area, where the solar evaporation pond was existing with H-acid sludge dumped here and there, was observed to have been levelled with borrowed soil (Photograph 2). It was difficult to ascertain whether the

sludge had been removed before filling. However, there are visual evidences of contaminated soil in the area.

2.2 As reported by the Rajasthan Pollution Control Board (RPCB) representatives, *about 720 tonnes out of the total contaminated soil and sludge scraped from the sludge dump sites is disposed of in six lined entombed pits* covered by lime/flyash mix, brick soling and concrete (Photographs 3 and 4). *The remaining scraped sludge and contaminated soil was lying near the entombed pits for want of additional disposal facility*. However, during the visit, the left over sludge and contaminated soil could not be traced at site. Inspection of the surrounding area revealed that *a huge heap of foreign soil of 5 metre height (Photograph 5) covering a large area, as also indicated in Fig. 1, was raised on the slopy ground at the foothill within the industry premises.* The storm water run-off pathway over the area showed indication of H-acid sludge leachates coming out of the heap. Soil in the area was sampled for analysis.

2.3 *M/s HACL has a number of other industrial units which are operating within the same premises without valid consents* from the Rajasthan Pollution Control Board (RPCB). These plants are sulphuric acid (H_2SO_4), fertilizer (SSP) and vegetable oil extraction. *The effluent of these units are not properly treated and the untreated effluent particularly from the acid plant is passing through the sludge dump area playing havoc* (Photograph 7). The final effluent was collected at the outlet of the factory premises during operation of these units, at the time of groundwater monitoring in September 1993, by the RPCB. Its quality was observed to be highly acidic (pH: 1.08, Conductivity: 37,100 mg/1, SO_4: 21,000 mg/1, Fe: 392 mg/1, COD: 167 mg/1) which was also revealed in the earlier visits of the Central teams. However, these units were not in operation during the present visit."

Under para 4.2.1, the report stated inter alia:

"The sludge samples from the surroundings of the (presently non-existent) solar evaporation and the contaminated soil due to seepage from the newly raised dump site also exhibited very high values of the above-mentioned parameters. This revealed that the contaminated soil is buried under the new dump found by the team."

25. So much for the waste disposal by the respondents and their continuing good conduct! To the same effect is the report of the RPCB which is dated 30-10-1993.

26. In view of the aforesaid reports, all of which unanimously point out the consequences of the 'H' acid production, the manner in which the highly corrosive waste water (mother liquor) and the sludge resulting from the production of 'H' acid was disposed of and the continuing discharge of highly toxic effluents by the remaining units even in the year 1993, the authorities (RPCB) passed orders closing down, in exercise of their powers under Section 33-A of the Water Act, the operation of the Sulphuric Acid

TruePrint™ source: Supreme Court Cases, © 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

Plant and the solvent extraction plant including oil refinery of the fourth respondent with immediate effect. Orders were also passed directing disconnection of electricity supply to the said plants. The fourth respondent filed Writ Petition (C) No. 76 of 1994 in this Court, under Article 32 of the Constitution, questioning the said orders in January 1994. The main grievance in this writ petition was that without even waiting for the petitioner's (Hindustan Agro Chemicals Limited) reply to the show-cause notices, orders of closure and disconnection of electricity supply were passed and that this was done by the RPCB with a mala fide intent to cause loss to the industry. It was also submitted that sudden closure of its plants is likely to result in disaster and, may be, an explosion and that this consideration was not taken into account while ordering the closure. In its Order dated 7-3-1994, this Court found some justification in the contention of the industry that the various counter-affidavits filed by the RPCB are self-contradictory. The Board was directed to adopt a constructive attitude in the matter. By another order dated 18-3-1994, the RPCB was directed to examine the issue of grant of permission to restart the industry or to permit any interim arrangement in that behalf. On 8-4-1994, a 'consent' order was passed whereunder the industry was directed to deposit a sum of Rupees sixty thousand with RPCB before 11-4-1994 and the RPCB was directed to carry on the construction work of storage tank for storing and retaining ten days' effluents from the Sulphuric Acid Plant. The construction of temporary tank was supposed to be an interim measure pending the construction of an ETP on permanent basis. The order dated 28-4-1994 noted the report of the RPCB stating that the construction of temporary tank was completed on 26-4-1994 under its supervision. The industry was directed to comply with such other requirements as may be pointed out by RPCB for prevention and control of pollution and undertake any work required in that behalf forthwith. Thereafter, the matter went into a slumber until 13-10-1995.

NEERI Report

27. At this juncture, it would be appropriate to refer to the report submitted by NEERI on the subject of "Restoration of Environmental Quality of the affected area surrounding Village Bichhri due to past Waste Disposal Activities". This report was submitted in April 1994 and it states that it is based upon the study conducted by it during the period November 1992 to February 1994. Having regard to its technical competence and reputation as an expert body on the subject, we may be permitted to refer to its report at some length.

28. At p. 7, the report mentions the industrial wastes emerging from the manufacture of 'H' acid. It reads:

> "Solid wastes generated from H-acid manufacturing process are:
>
> Gypsum sludge produced during the neutralisation of acidic solution with lime after nitration stage (around 6 tonnes/tonne of H-acid manufactured)

2981

TruePrint™ source: Supreme Court Cases, © 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

Iron sludge produced during the reduction stage (around 0.5 tonnes/tonne of H-acid manufactured)

Gypsum sludge contains mostly calcium sulphate along with sodium salts and organics. Iron sludge constitutes unreacted iron powder, besides ferric salts and organics.

It is estimated that, for each tonne of H-acid manufactured, about 20 m^3 of highly corrosive waste water was generated as mother liquor, besides the generation of around 2.0 m^3 of wash water. The mother liquor is characterised by low pH (around 2.0) and high concentration of total dissolved solids (80-280 g/L). High COD of the waste water (90 g/L) could be attributed to organics formed during various stages of manufacture. These include naphthalene trisulphonic acid, nitro naphthalene sulphonic acid, Koch acid and H-acid, besides several other intermediates."

29. At pp. 8 and 9, the report describes the manner in which the sludge and other industrial wastes were disposed of by the respondents. It states inter alia:

"The total quantities of waste water and that of sludge generated were around 8250 m^3 and 2440 tonnes respectively for a production of 375 tonnes by M/s Silver Chemicals Ltd. and M/s Jyoti Chemicals Ltd....

Majority of sludge brought back from disposal sites located outside the plant was transferred inside a covered shed.

The sludge lying in the plant premises was entombed in the underground pit by RPCB as per the directions of the Hon'ble Supreme Court. It may be mentioned that *only 720 MT of sludge out of the estimated quantity of 2440 MT could be entombed as the capacity of the underground tanks provided by the industry for the purpose was only to that extent.*

Remaining sludge and sludge-mixed soil were, however, present in the plant premises as these could not be transferred into underground tanks. It has also been observed that only sludge above the soil was removed from the six sites and transferred to the plant site. Sub-surface soil of these sites appears to have been contaminated as the soil has reddish colour akin to that of the sludge.

A fertilizer plant (single superphosphate), a sulphuric acid plant and an oil extraction and oil refining plant were in operation in the same premises where H-acid was earlier manufactured. *The acidic waste water (around pH 1.0) presently generated from these units was flowing over the abandoned dump site. This leaches the sludge-mixed soil from the abandoned dump site and the contaminated water flows by gravity towards east and finds its way into a nullah flowing through the compound and conveys the contaminated water to an irrigation canal which originates from Udaisagar Lake (Pate 1.4).*" (emphasis added)

30. At p. 10, the report mentions the six dump sites outside the 'H' acid plant premises where the sludge was lying in the open. At pp. 26 and 27, the

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

TruePrint™ source: Supreme Court Cases, © 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

report states on the basis of VES investigations that while certain wells were found contaminated, others were not. At p. 96, the report states thus:

"DAMAGE TO CROPS AND TREES

The field surveys in contaminated fields *in Zones I and II showed that no crops were coming in the fields particularly in low-lying areas.* On some elevated areas, crops like jowar, maize were growing; however the growth and yield were very poor.

Further it was also observed that even trees like eucalyptus planted in contaminated fields show leaf burning and stunted growth. Many old trees which were badly affected due to contamination are still growing under stress conditions as a result of soil contamination.

The top soils at the old dump sites outside the plant premises are still contaminated and require de-contamination before the land is used for other purposes.

It was observed that even after the operation of hauling the sludge back to the industry premises, some sludge-mixed soil was still lying in the premises of a primary school (Table 1.1), which needs de-contamination."

31. In Chapter 6, the report mentions the remedial measures. Para 6.1, titled INTRODUCTION, states:

"As could be seen from the data reported in Chapters 4 and 5, *the groundwater and soils within 2 kms from the plant have been contaminated.* After critically scrutinising the data, it was concluded that there is an *urgent need to work out a de-contamination strategy* for the affected area. This strategy includes the de-contamination of the soil, contaminated groundwater and abandoned dump sites. This chapter details the remedial measures that can be considered for implementation to restore the environmental quality of the affected area."

32. The chapter then sets out the various remedial measures, including land treatment, soil washing, revegetation, control over the flow of the contaminated water to adjoining lands through canals, leaching of soluble salts, design of farm to development of agro-forestry and/or forestry plantation with salt tolerant crops/plants and groundwater de-contamination. Inter alia, the report states:

"The entire contaminated area comprising of 350 ha of contaminated land and six abandoned dump sites outside the industrial premises has been found to be ecologically fragile due to reckless past disposal activities practised by M/s Silver Chemicals Ltd. and M/s Jyoti Chemicals Ltd. Accordingly, it is suggested that the whole of the contaminated area be developed as a green belt at the expense of M/s Hindustan Agrochemicals Ltd. during the monsoon of 1994."

33. Under para 6.3.2, the report suggests "De-contamination Alternatives for Groundwater" including bioremediation, degradation of H-

acid by *Azotobacter Vinelandii*, isolation of bacterial population from H-acid contaminated soil and several other methods.

34. Under para 6.4.2, the report mentions the several de-contamination alternatives including containment of contaminated soil, surface control, groundwater control, leachate collection and treatment, gas migration control and direct waste treatment.

35. At pp. 157 and 158, the report mentions the continuing discharge of effluents in an illegal and dangerous manner. It reports:

> "It was also observed by NEERI's team during the current study that the industry *has not provided adequate effluent treatment facilities* and the waste waters (pH<1.5) from the existing plants (sulphuric acid, fertilizer, and oil extraction) are being discharged, without treatment, on land within the plant premises. This indiscriminate and wilful disposal activity is *further aggravating the contamination problem in the area. Acidic effluent leaches the pollutants from the dumped sludge and the contaminated soil and facilitates their penetration through the ground* and thereby increasing the concentration of sulphates and dissolved solids in groundwater. *What is most serious is the fact that the industry produced chlorosulfonic acid for a few months during late 1992 which is a hazardous and toxic substance as per MEF Notification* titled 'Manufacture, Storage and Import of Hazardous Chemical Rules, 1989' and even floated public shares for the manufacture of this obnoxious chemical. *The production was however ceased due to the intervention of the Rajasthan Pollution Control Board in December 1992 as the industry was operating without obtaining site clearance, No Objection Certificate (NOC)/Consent from the concerned appropriate regularity (regulatory?) authorities and without providing for any pollution-control measures*. It is, therefore, essential for M/s Hindustan Agrochemicals Ltd. to comply with these requirements for carrying out the present industrial activities. *The abatement of further contamination warrants the closure of all industrial operations till an appropriate effluent treatment plant is installed,* and certified by RPCB for its functionality in keeping with the provisions of Water Act."

The report adds:

> "The Industry management in the past (during 1988-89) has shown scant respect for Pollution Control and Environment Protection Acts. Not only this, the management *continues industrial activity producing obnoxious waste waters and dumping the same without any treatment, contaminating land and groundwater without any concern for ecology and public health.* It is necessary that the provisions of relevant legislations are imposed on the industry to avoid environmental damage and harm to public welfare." (emphasis added)

36. We do not think that the above report requires any emphasis at our hands. It speaks for itself — and it speaks volumes of the "high regard" the respondents have for law!

(1996) 3 Supreme Court Cases 212

(BEFORE B.P. JEEVAN REDDY AND B.N. KIRPAL, JJ.)

INDIAN COUNCIL FOR ENVIRO-LEGAL ACTION AND OTHERS . . Petitioners;

Versus

UNION OF INDIA AND OTHERS . . Respondents.

Writ Petitions (C) No. 967 of 1989 with Nos. 94 of 1990, 824 of 1993 and 76 of 1994†, decided on February 13, 1996

A. Constitution of India — Arts. 32, 21, 48-A and 51-A(g) — PIL — Petition alleging environmental pollution caused by private industrial units — Maintainability — Writ petition filed by an environmentalist organisation, not for issuance of writ, order or direction against such units but against Union of India, State Govt. and State Pollution Board concerned to compel them to perform their statutory duties on ground that their failure to carry on such duties violated rights guaranteed under Art. 21 of the residents of the affected area — Held, maintainable — Court can, after ascertaining that the alleged industrial units were responsible for causing ecological fragility in the area, direct the authorities concerned to perform their statutory duties — Environment (Protection) Act, 1986, Ss. 3, 4, 5 — Water (Prevention and Control of Pollution) Act, 1974, Ss. 24(1), 25(1) (as amended by Act 53 of 1988), 33, 33-A (as introduced by Act 53 of 1988) — Air (Prevention and Control of Pollution) Act, 1981 — Hazardous Wastes (Management and Handling) Rules, 1989

B. Constitution of India — Arts. 32, 21, 48-A, 51-A(g) — Environmental pollution — Compensation — Imposition of cost of remedial measures — Principles of Strict Liability and Polluter Pays — Applicability — Hazardous and inherently dangerous activity carried on by industrial units — Principle laid down by Supreme Court in *Oleum Gas Leak case* regarding strict and absolute liability of such units to compensate to persons adversely affected thereby, held, not obiter but binding — Rule in *Rylands* v. *Fletcher*, which is

Page: 213

subject to exceptions of 'foreseeability' and 'non-natural user', not suitable for Indian conditions and hence not applicable — Discharge of highly toxic effluents viz. waste water and sludge, both iron-based and gypsum-based, from respondents' chemical factories manufacturing 'H' Acid, poisoning earth, underground water, wells, agriculture and other vegetation and rendering the village, where the factories located, ecologically fragile — Respondents operating contrary to law without obtaining clearances from authorities concerned and also disobeying orders of authorities as well as of Supreme Court — Respondents alone found to be responsible for such extensive damages — Held on facts, principles of Strict Liability and Polluter Pays applicable — Power of Central Govt. to direct such industries to defray costs for undertaking remedial measures implicit under Ss. 3 and 4 of Environment (Protection) Act — Determination of the amount required for carrying out the remedial measures, recovery/realisation thereof and undertaking such measures are functions of Central Govt. — Court can therefore issue appropriate directions to the Central Govt. to invoke and exercise the powers under Ss. 3 and 4 of the said Act — Environment (Protection) Act, 1986, Ss. 3 to 5 — Water (Prevention and Control of Pollution) Act, 1974, Ss. 24(1), 25(1) (as amended by Act 53 of 1988), 33, 33-A (as introduced by Act 53 of 1988) — Air (Prevention and Control of Pollution) Act, 1981 — Hazardous Wastes (Management and Handling) Rules, 1989 — Tort

C. Constitution of India — Art. 32 — PIL — Reports submitted by experts pursuant to court's orders — Absence of opportunity to respondents to cross-examine the experts — Plea regarding raised at very late stage, unacceptable

The units/factories of Respondents 4 to 8, located in an industrial complex in village Bichhri in Udaipur (Rajasthan), were all chemical industries and were controlled by the same group of

individuals. Respondent 4 started producing in 1987 certain chemicals like Oleum (concentrated form of sulphuric acid) and Single Super Phosphate. Respondent 5 (Silver Chemicals) and Respondent 8 (Jyoti Chemicals) commenced production of 'H' acid. Respondents 6 and 7 were producing fertilizers and a few other products. The respondents had not obtained the requisite clearances/consents/licences; nor did they install any equipment for treatment of highly toxic effluents discharged by them. 'H' acid was meant for export exclusively. Its manufacture gives rise to enormous quantities of highly toxic effluents — in particular, iron-based and gypsum-based sludge — which if not properly treated, pose grave threat to Mother Earth. It poisons the earth, the water and everything that comes in contact with it. The chemicals produced by Respondents 5 and 8 gave birth to about 2400-2500 MT of highly toxic sludge (iron-based sludge and gypsum-based sludge) besides other pollutants. Since the toxic untreated waste waters were allowed to flow out freely and because the untreated toxic sludge was thrown in the open in and around the complex, the toxic substances percolated deep into the bowels of the earth polluting the aquifers and the subterranean supply of water. The water in the wells and the streams turned dark and dirty rendering it unfit for human consumption, unfit for cattle to drink and for irrigating the land. The soil became polluted rendering it unfit for cultivation, the mainstay of the villagers. It spread diseases, death and disaster in the village and the surrounding areas. The villagers then rose in virtual revolt leading to the imposition of Section 144 CrPC by the District Magistrate in the area. It was averred by the respondents that both the units, Silver Chemicals and Jyoti Chemicals had stopped manufacturing 'H' acid since January 1989 were closed. Yet the consequences of their action remained — the sludge, the long-lasting damage to earth, to underground water, to human beings, to cattle and the village economy. An environmentalist organisation filed the present

Page: 214

writ petition before the Supreme Court by way of social action litigation, complaining precisely of the above situation and requesting for appropriate remedial action. Pursuant to notice issued by the Supreme Court, the Government of India, Government of Rajasthan, Rajasthan Pollution Control Board (RPCB) and Respondents 4 to 8 filed counter-affidavits. The Court by its order dated 11-12-1989 requested the National Environmental Engineering Research Institute (NEERI) to study the situation in and around Bichhri village and submit their report "as to the choice and scale of the available remedial alternatives". From the affidavits of the parties, various orders of the Court, technical reports and other data, it was found that out of 2440 tonnes of sludge, about 720 tonnes had been stored in the pits provided by the respondents. The remaining sludge was still there either within the area of the complex of the respondents or outside their complex. With a view to conceal it from the eyes of the inspection teams and other authorities, the respondents dispersed it all over the area and covered it with earth. In some places, the sludge was lying in mounds. The units continued to function even after and in spite of the closure orders of the RPCB. They never did carry out the orders of the Supreme Court fully (e.g., entombing the sludge), nor did they fulfil the undertaking given by them to the court (in the matter of removal of sludge and de-watering of the wells). In spite of repeated reports of officials and expert bodies, they persisted in their illegal course of action in a brazen manner exhibiting their contempt for law, for the lawful authorities and the courts. Allowing the writ petition with costs

Held :

The contention that the respondents being private corporate bodies and not 'State' within the meaning of Article 12, a writ petition under Article 32 would not lie against them, cannot be accepted. If the Supreme Court finds that the Government/authorities concerned have not taken the action required of them by law and that their inaction is jeopardising the right to life of the citizens of this country or of any section thereof, it is the duty of the Supreme Court to intervene. If it is found that the respondents are flouting the provisions of law and the directions and orders issued by the lawful authorities, the Court can certainly make appropriate directions to ensure compliance with law and lawful directions made thereunder. This is a social action litigation on behalf of the villagers whose right to life, is invaded and seriously infringed by the respondents as is established by the various reports of the experts called for, and filed before, the Court. If an industry is established without obtaining the requisite permission and clearances and if the industry is continued to be run in blatant disregard of law to the detriment of life and liberty of the citizens living in the vicinity, the Supreme Court has power to intervene and protect the fundamental right to life and liberty of the citizens of

this country.

(Para 54)

The contention of respondents that the reports submitted by various expert bodies could not be relied upon by the Court in absence of opportunity to cross-examine the experts cannot be accepted. These reports were called by the Court and several orders passed on the basis of those reports. It was never suggested on behalf of offending industrial units (Respondents 4 to 8) that unless they are permitted to cross-examine the experts or the persons who made those reports, their reports cannot be acted upon. This objection, urged at this late stage of proceedings — after a lapse of several years — is wholly unacceptable. The persons who made the said reports are all experts in their field and under no obligation either to the State Pollution Control Board or for that matter to any other person or industry. It is in view of their independence and competence that their reports were relied upon and made the basis of passing orders by the Supreme Court from time to time.

(Para 54)

Relying on the reports submitted by the National Environmental Engineering Research Institute by the Central team (experts from the Ministry of Environment

Page: 215

and Forests, Government of India) and the Rajasthan PCB, it must be held that the respondents alone were responsible for all the damage to the soil, to the underground water and to the village in general.

(Paras 54 and 57)

[*See also* 'Conclusions' at para 69]

The question is whether and to what extent can the respondents be made responsible for defraying the cost of remedial measures in these proceedings under Article 32.

(Para 57)

Any principle evolved in this behalf should be simple, practical and suited to the conditions obtaining in this country. According to the rule laid down by the Constitution Bench of the Supreme Court in *Oleum Gas Leak case*, once the activity carried on is hazardous or inherently dangerous, the person carrying on such activity is liable to make good the loss caused to any other person by his activity irrespective of the fact whether he took reasonable care while carrying on his activity. The rule is premised upon the very nature of the activity carried on. In the words of the Constitution Bench, such an activity "… can be tolerated only on condition that the enterprise engaged in such hazardous or inherently dangerous activity indemnifies all those who suffer on account of the carrying on of such hazardous or inherently dangerous activity regardless of whether it is carried on carefully or not". The Constitution Bench has also assigned the reason for stating the law in the said terms. It is that the enterprise (carrying on the hazardous or inherently dangerous activity) alone has the resource to discover and guard against hazards or dangers — and not the person affected and the practical difficulty (on the part of the affected person) in establishing the absence of reasonable care or that the damage to him was foreseeable by the enterprise. The Bench also observed that such liability is not subject to any of the exceptions which operate vis-à-vis the tortious principle of strict liability under the rule in *Rylands* v. *Fletcher*. The twin tests laid down in *Rylands* v. *Fletcher* — apart from the proof of damage to the plaintiff by the act/negligence of the defendants — which must be satisfied to attract its rule are 'foreseeability' and 'non-natural' user of the land. The observation of Ranganath Misra, C.J. in his concurring opinion in *Union Carbide Corpn. case* that the view declared in Oleum was only obiter cannot be accepted. It does not appear to be unnecessary for the purposes of that case. Thus the law stated by the Supreme Court in *Oleum Gas Leak case* is by far the more appropriate one — apart from the fact that it is binding.

Ballard v. *Tomlinson*, (1885) 29 Ch D 115 : (1881-5) All ER Rep 688, *cited*

The question of liability of the respondents to defray the costs of remedial measures can also be looked into from another angle, which has now come to be accepted universally as a sound principle, viz., the "Polluter Pays" principle. According to this principle, the responsibility for repairing the damage is that of the offending industry.

(Para 67)

Carolyn Shelbourn: "*Historic Pollution — Does the Polluter Pay*"? — Journal of Planning and Environmental Law, Aug. 1974 issue), *approved*

Page: 216

Read with the wide definition of 'environment' in Section 2(a), Sections 3 and 5 clothe the Central Government with all such powers as are "necessary or expedient for the purpose of protecting and improving the quality of the environment". The Central Government is empowered to take all measures and issue all such directions as are called for for the above purpose. Levy of costs required for carrying out remedial measures is implicit in Sections 3 and 4.

(Para 60)

In the present case, the said powers will include giving directions for the removal of sludge, for undertaking remedial measures and also the power to impose the cost of remedial measures on the offending industry and utilise the amount so recovered for carrying out remedial measures. The Supreme Court can certainly give directions to the Central Government or its delegate to take all such measures, if in a given case the Court finds that such directions are warranted. Therefore, appropriate directions can be given by the Court to the Central Government to invoke and exercise those powers with such modulations as are called for in the facts and circumstances of this case.

(Paras 60 and 66)

Indian Council for Enviro-Legal Action v. *Union of India*, (1995) 3 SCC 77 : (1995) 5 Scale 578, *relied on*

Further, in this case, there is a clear violation of law and disobedience to the orders of the Supreme Court apart from the orders of the lawful authorities. In this respect it is distinct from *Oleum Gas Leak case*. The Supreme Court has to ensure the observance of law and of its orders as a part of enforcement of fundamental rights. That power cannot be disputed. If so, the Court is competent to make orders necessary for a full and effective implementation of its orders — and that includes the imposition and recovery of cost of all measures including remedial measures.

(Para 60)

However, in all the circumstances, it is appropriate that the task of determining the amount required for carrying out the remedial measures, its recovery/realisation and the task of undertaking the remedial measures is placed upon the Central Government in the light of the provisions of the Environment (Protection) Act, 1986. It is, of course, open to the Central Government to take the help and assistance of State Government, the Rajasthan Pollution Control Board or such other agency or authority, as they think fit. It is but appropriate that an estimate of the cost of remedial measures be made now with notice to the respondents, which amount should be paid to Central Government and/or recovered from them by the Central Government. Other directions are also called for in the light of the facts and circumstances mentioned above.

(Paras 67 and 68)

The Judgment of the Court was delivered by

B.P. JEEVAN REDDY, J.—

Writ Petition (C) No. 967 of 1989

1. This writ petition filed by an environmentalist organisation brings to light the woes of people living in the vicinity of chemical industrial plants in India. It highlights the disregard, nay, contempt for law and lawful authorities on the part of some among the emerging breed of entrepreneurs, taking advantage, as they do, of the country's need for industrialisation and export earnings. Pursuit of profit has absolutely drained them of any feeling for fellow human beings — for that matter, for anything else. And the law seems to have been helpless. Systemic defects? It is such instances which have led many people in this country to believe that disregard of law pays and that the consequences of such disregard will never be visited upon them — particularly, if they are men with means. Strong words indeed — but nothing less would reflect the deep sense of hurt, the hearing of this case has instilled in us. The facts of the case will bear out these opening remarks.

2. Bichhri is a small village in Udaipur District of Rajasthan. To its north is a major industrial establishment, Hindustan Zinc Limited, a public sector concern. That did not affect Bichhri. Its woes began somewhere in 1987 when the fourth respondent herein, Hindustan Agro Chemicals Limited started producing certain chemicals like Oleum (said to be the concentrated form of sulphuric acid) and Single Super Phosphate. The real calamity occurred when a sister concern, Silver Chemicals (Respondent 5), commenced production of 'H' acid in a plant located within the same complex. 'H' acid was meant for export exclusively. Its manufacture gives rise to enormous quantities of highly toxic effluents — in particular, iron-based and gypsum-based sludge — which if not properly treated, pose grave threat to Mother Earth. It poisons the earth, the water and everything that comes in contact with it. Jyoti Chemicals (Respondent 8) is another unit established to produce 'H' acid, besides some other chemicals. Respondents 6 and 7 were established to produce fertilizers and a few other products.

3. All the units/factories of Respondents 4 to 8 are situated in the same complex and are controlled by the same group of individuals. All the units are what may be called "chemical industries". The complex is located within the limits of Bichhri village.

4. Because of the pernicious wastes emerging from the production of 'H' acid, its manufacture is stated to have been banned in the western countries. But the need of 'H' acid continues in the West. That need is catered to by the industries like the Silver Chemicals and Jyoti Chemicals in this part of the world. (A few other units producing 'H' acid have been established in Gujarat, as would be evident from the decision of the Gujarat High Court in *Pravinbhai Jashbhai Patel* v. *State of Gujarat*[1], a decision

rendered by one of us, B.N. Kirpal, J. as the Chief Justice of that Court.) Silver Chemicals is stated to have produced 375 MT of 'H' acid. The quantity of 'H' acid produced by Jyoti Chemicals is not known. It says that it produced only 20 MT, as trial production, and no more. Whatever quantity these two units may have produced, it has given birth to about 2400-2500 MT of highly toxic sludge (iron-based sludge and gypsum-based sludge) besides other pollutants. Since the toxic untreated waste waters were allowed to flow out freely and because the untreated toxic sludge was thrown in the open in and around the complex, the toxic substances have percolated deep into the bowels of the earth polluting the aquifers and the subterranean supply of water. The water in the wells and the streams has turned dark and dirty rendering it unfit for human consumption. It has become unfit for cattle to drink and for irrigating the land. The soil has become polluted rendering it unfit for cultivation, the mainstay of the villagers. The resulting misery to the villagers needs no emphasis. It spread disease, death and disaster in the village and the surrounding areas. This sudden degradation of earth and water had an echo in Parliament too. An Hon'ble Minister said, action was

Page: 219

being taken, but nothing meaningful was done on the spot. The villagers then rose in virtual revolt leading to the imposition of Section 144 CrPC by the District Magistrate in the area and the closure of Silver Chemicals in January 1989. It is averred by the respondents that both the units, Silver Chemicals and Jyoti Chemicals have stopped manufacturing 'H' acid since January 1989 and are closed. We may assume it to be so. Yet the consequences of their action remain — the sludge, the long-lasting damage to earth, to underground water, to human beings, to cattle and the village economy. It is with these consequences that we are to contend with in this writ petition.

5. The present social action litigation was initiated in August 1989 complaining precisely of the above situation and requesting for appropriate remedial action. To the writ petition, the petitioner enclosed a number of photographs illustrating the enormous damage done to water, cattle, plants and to the area in general. A good amount of technical data and other material was also produced supporting the averments in the writ petition.

Counter-affidavits of the Respondents

6. On notice being given, counter-affidavits have been filed by the Government of India, Government of Rajasthan, Rajasthan Pollution Control Board (RPCB) and Respondents 4 to 8. Since the earliest *counter-affidavit* in point of time is that of RPCB, we shall refer to it in the first instance. It was filed on 26-10-1989. The following are the averments:

(*a*) Re Hindustan Agro Chemicals Limited (R-4): The unit obtained "No Objection Certificate" from the PCB for manufacturing sulphuric acid and alumina sulphate. The Board granted clearance subject to certain conditions. Later "No Objection Certificate" was granted under the Water (Prevention and Control of Pollution) Act, 1974 (Water Act) and Air (Prevention and Control of Pollution) Act, 1981 (Air Act), again subject to certain conditions. However, this unit changed its product without clearance from the Board. Instead of sulphuric acid, it started manufacturing Oleum and Single Super Phosphate (SSP). Accordingly, consent was refused to the unit on 16-2-1987. Directions were also issued to close down the unit.

(*b*) Re Silver Chemicals (R-5): This unit was promoted by the fourth respondent without obtaining "No Objection Certificate" from the Board for the manufacture of

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 8 Wednesday, July 26, 2023

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

'H' acid. The waste water generated from the manufacture of 'H' acid is highly acidic and contains very high concentration of dissolved solids along with several dangerous pollutants. This unit was commissioned in February 1988 without obtaining the prior consent of the Board and accordingly, notice of closure was served on 30-4-1988. On 12-5-1988, the unit applied for consent under Water and Air Acts which was refused. The Government was requested to issue directions for cutting off the electricity and water

to this unit but no action was taken by the Government. The unit was found closed on the date of inspection, viz., 2-10-1989.

(*c*) Re Rajasthan Multi Fertilizers (R-6): This unit was installed without obtaining prior "No Objection Certificate" from the Board and without even applying for consent under Water and Air Acts. Notice was served on this unit on 20-2-1989. In reply whereto, the Board was informed that the unit was closed since last three years and that electricity has also been cut off since 12-2-1988.

(*d*) Re Phosphates India (R-7): This unit was also established without obtaining prior "No Objection Certificate" from the Board nor did it apply for consent under the Water and Air Acts. When notice dated 20-2-1989 was served upon this unit, the Management replied that this unit was closed for a long time.

(*e*) Re Jyoti Chemicals (R-8): This unit applied for "No Objection Certificate" for producing ferric alum. "No Objection Certificate" was issued imposing various conditions on 8-4-1988. The "No Objection Certificate" was withdrawn on 30-5-1988 on account of non-compliance with its conditions. The consent applied for under Water and Air Acts by this unit was also refused. Subsequently, on 9-2-1989, the unit applied for fresh consent for manufacturing 'H' acid. The consent was refused on 30-5-1989. The Board has been keeping an eye upon this unit to ensure that it does not start the manufacture of 'H' acid. On 2-10-1989, when the unit was inspected, it was found closed.

7. The Board submitted further (in its counter-affidavit) that the sludge lying in the open in the premises of Respondents 4 to 8 ought to be disposed of in accordance with the provisions contained in the Hazardous Wastes (Management and Handling) Rules, 1989 framed under Environment (Protection) Act, 1986. According to the Board, the responsibility for creating the said hazardous situation was squarely that of Respondents 4 to 8. The Board enclosed several documents to its counter in support of the averments contained therein.

8. *The Govt. of Rajasthan filed its counter-affidavit* on 20-1-1990. It made a curious statement in para 3 to the following effect:

"(T)hat the State Government is *now* aware of the pollution of underground water being caused by liquid effluents from the firms arrayed as Respondents 4 to 8 in the writ petition. Therefore, the State Government has initiated action through the Pollution Control Board to check further spread of pollution."

The State Government stated that the water in certain wells in Bichhri village and some other surrounding villages has become unfit for drinking by human beings and cattle, though in some other wells, the water remains unaffected.

9. *The Ministry of Environment and Forests, Government of India filed its counter* on 8-2-1990. In their counter, the Government of India stated that Silver Chemicals was merely granted a Letter of Intent but it never applied

Page: 221

for conversion of the Letter of Intent into industrial licence. Commencing production before obtaining industrial licence is an offence under Industries (Development and Regulation) Act, 1951. So far as Jyoti Chemicals is concerned, it is stated that it has not approached the Government at any time even for a Letter of Intent. The Government of India stated that in June 1989, a study of the situation in Bichhri village and some other surrounding villages was conducted by the Centre for Science and Environment. A copy of their report is enclosed to the counter. The report states the consequences emanating from the production of 'H' acid and the manner in which the resulting wastes were dealt with by Respondents 4 to 8 thus:

> "The effluents are very difficult to treat as many of the pollutants present are refractory in nature. Setting up such highly polluting industry in a critical groundwater area was essentially ill-conceived. The effluents seriously polluted the nearby drain and overflowed into Udaisagar main canal, severely corroding its cement-concrete lined bed and banks. The polluted waters also seriously degraded some agricultural land and damaged standing crops. On being ordered to contain the effluents, the industry installed an unlined holding pond within its premises and resorted to spraying the effluent on the nearby hill slope. This only resulted in extensive seepage and percolation of the effluents into groundwater and their spread down the aquifer. Currently about 60 wells appear to have been significantly polluted but every week a few new wells, down the aquifer start showing signs of pollution. This has created serious problems for water supply for domestic purposes, cattle-watering crop irrigation and other beneficial uses, and it has also caused human illness and even death, degradation of land and damage to fruit, trees and other vegetation. There are serious apprehensions that the pollution and its harmful effects will spread further after the onset of the monsoon as the water percolating from the higher parts of the basin moves down carrying the pollutants lying on the slopes — in the holding pond and those already underground."

10. Each of the *Respondents 4 to 8 filed separate counter-affidavits*. All the affidavits filed on behalf of these respondents are sworn to by Lt. Gen. M.L. Yadava, who described himself as the President of each of these units. In the counter-affidavit filed on behalf of the fourth respondent, it is stated that it is in no way responsible for the situation complained of. It is engaged in the manufacture of sulphuric acid and had commenced its operations on 6-1-1987. It has been granted "No Objection Certificates" from time to time. The consent obtained from RPCB is valid up to 15-8-1988. Application for extension of consent has already been filed. This counter-affidavit was filed on 18-1-1990.

11. In the counter-affidavit filed on behalf of the fifth respondent (Silver Chemicals), it is stated that the manufacture of 'H' acid which was commenced in February 1988 has been completely stopped after January 1989. The respondent is fully conscious of the need to conserve and protect

Page: 222

environment and is prepared fully to cooperate in that behalf. It is ready to comply with any stipulations or directions that may be made for the purpose. It, however, submitted that the real culprit is Hindustan Zinc Limited. The Archaeological Department of the Government of Rajasthan had issued environmental clearance for its unit (rather surprising statement). "No Objection Certificates" had also been issued

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

by the Executive Engineer (Irrigation), Udaipur Division and the Wild Life Warden. So far as the requirement of 'consent' under Water and Air Acts is concerned, it merely stated that it had applied for it. Its closure in January 1989 was on account of promulgation of an order under Section 144 CrPC by the District Magistrate in view of widespread agitation by the villagers against its functioning.

12. In the counter-affidavit filed on behalf of the sixth respondent (Rajasthan Multi Fertilizers), it is stated that it commenced production on 14-3-1982 and closed down in December 1985. Electrical connection to it was disconnected on 13-2-1988. It was submitted that since it is a small-scale industry, no consent was asked for from anyone. It denied that it was causing any pollution, either ground, air or water.

13. In the counter-affidavit filed on behalf of the seventh respondent (Phosphates India), it is stated that this unit commenced production on 15-5-1988 but was closed on and with effect from 1-9-1988 for want of support from the Central Government in the form of subsidies. It submitted that it has merged with the fourth respondent in 1987-88.

14. In the counter-affidavit filed on behalf of the eighth respondent (Jyoti Chemicals), it is stated that it has no electrical connection, that it had commenced production in April 1987 and closed down completely in January 1989. It is stated that the unit produced 'H' acid to an extent of 20 MT as a trial measure for one month with the permission of the Industries Department. It is no longer manufacturing 'H' acid and, therefore, is not responsible for causing any pollution. It is further submitted that it is a small-scale industry and was registered with the District Industry Centre, Udaipur for the manufacture of ferric alum and 'H' acid. It began its operation simultaneously with the fifth respondent, Silver Chemicals, and several of the clearances are common to both, as both of them are located together. The trial production of 'H' acid, it is stated, took place in January 1987.

15. *Hindustan Zinc Limited* was impleaded as the ninth respondent at the instance of Respondents 4 to 8. It has *filed a counter-affidavit* denying that it is responsible in any manner for causing any pollution in Bichhri village or the surrounding areas. According to it, its plants are situated downstream, towards north of Bichhri village. We do not think it necessary to refer to this affidavit in any detail inasmuch as we are not concerned, in this writ petition, with the pollution, if any, caused by the ninth respondent in other villages but only with the pollution caused by Respondents 4 to 8 in Bichhri or surrounding villages.

Orders passed and steps taken during the period 1989-1992

16. The first considered order made, after hearing the parties, by this Court is of 11-12-1989. Under this order, the court requested the National Environmental Engineering Research Institute (NEERI) to study the situation in and around Bichhri village and submit their report "as to the choice and scale of the available remedial alternatives". NEERI was requested to suggest both short-term and long-term measures required to combat the hazard already caused. Directions were also made for *supply of drinking water* to affected villages by the State of Rajasthan. The RPCB was directed to make available to the court the Report it had prepared concerning the situation in Bichhri village.

17. On the next date of hearing, i.e., 5-3-1990, the court took note of the

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 11 Wednesday, July 26, 2023

SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

statements made on behalf of Respondents 4 to 8 that they have completely stopped the manufacture of 'H' acid in their plants and that they did not propose to resume its manufacture. The court also took note of the petitioner's statement that though the manufacture of 'H' acid may have been stopped, a large quantity of highly dangerous effluent waste/sludge has accumulated in the area and that unless properly treated, stored and removed, it constitutes a serious danger to the environment. Directions were given to the RPCB to arrange for its transportation, treatment and safe storage according to the technically accepted procedures for disposal of chemical wastes of that kind. All reasonable expenses for the said operation were to be borne by Respondents 4 to 8 (hereinafter referred to in this judgment as the 'respondents'). So far as the polluted water in the wells was concerned, the court noted the offer made by the learned counsel for the respondents that they will themselves undertake the de-watering of the wells. The RPCB was directed to inspect and indicate the number and location of the wells to be de-watered.

18. The matter was next taken up on 4-4-1990. It was brought to the notice of the court that no meaningful steps were taken for removing the sludge as directed by this Court in its order dated 5-3-1990. Since the monsoon was about to set in, which would have further damaged the earth and water in the area, the court directed the respondents to immediately remove the sludge from the open spaces where it was lying and store it in safe places to avoid the risk of seepage of toxic substances into the soil during the rainy season. The respondents were directed to complete the task within five weeks therefrom.

19. It is not really necessary to refer to the contents of the various orders passed in 1990 and 1991, i.e., subsequent to the order dated 4-4-1990 for the present purposes. Suffice it to say that the respondents did not comply with the direction to store the sludge in safe places. The de-watering of wells did not prove possible. There was good amount of bickering between the respondents on one side and the RPCB and the Ministry of Environment and Forests on the other. They blamed each other for lack of progress in the

matter of removal of sludge. Meanwhile, years rolled by and the hazard continued to rise. NEERI submitted an interim report. (We are, however, not referring to the contents of this interim report inasmuch as we would be referring to the contents of the final report presently after referring to a few more relevant orders of this Court.)

20. On 17-2-1992, this Court passed a fairly elaborate order observing that Respondents 5 to 8 are responsible for discharging the hazardous industrial wastes; that the manufacture of 'H' acid has given rise to huge quantities of iron sludge and gypsum sludge — approximately 2268 MT of gypsum-based sludge and about 189 MT of iron-based sludge; that while the respondents blamed Respondent 9 as the main culprit, Respondent 9 denied any responsibility therefor. The immediate concern, said the Court, was the appropriate remedial action. The report of the RPCB presented a disturbing picture. It stated that the respondents have deliberately spread the hazardous material/sludge all over the place which has only heightened the problem of its removal and that they have failed to carry out the order of this Court dated 4-4-1990. Accordingly, the court directed the Ministry of Environment and Forests, Government of India to depute its experts immediately to inspect the area to ascertain the existence and extent of gypsum-based and iron-based sludge, to suggest the handling and disposal procedures and to prescribe a package for its transportation and safe storage. The cost of such storage and transportation was to be recovered from the

respondents.

21. Pursuant to the above order, a team of experts visited the area and submitted a report along with an affidavit dated 30-3-1992. The report presented a highly disturbing picture. It stated that the sludge was found inside a shed and also at four places outside the shed but within the premises of the complex belonging to the respondents. It stated further that sludge has been mixed with soil and at many places it is covered with earth. A good amount of sludge was said to be lying exposed to sun and rain. The report stated:

> "Above all, the extent of pollution in groundwater seems to be very great and the entire aquifer may be affected due to the pollution caused by the industry. The organic content of the sludge needs to be analysed to assess the percolation property of the contents from the sludge. It is also possible that the iron content in the sludge may be very high which may cause the reddish colouration. As the mother liquor produced during the process (with pH-1) was highly acidic in nature and was indiscriminately discharged on land by the unit, it is possible that this might have eroded soil and caused the extensive damage. It is also possible that the organic contents of the mother liquor would have gone into soil with water together with the reddish colour."

The report also suggested the mode of disposal of sludge and measures for reconditioning the soil.

22. In view of the above report, the court made an order on 6-4-1992 for entombing the sludge under the supervision of the officers of the Ministry of

Environment and Forests, Government of India. Regarding revamping of the soil, the court observed that for this purpose, it might become necessary to stop or suspend the operation of all the units of the respondent but that, the court said, requires to be examined further.

23. The work of entombment of sludge again faced several difficulties. While the respondents blamed the government officers for the delay, the government officials blamed the said respondents of non-cooperation. Several orders were passed by this Court in that behalf and ultimately, the work commenced.

Orders passed in 1993, filing of Writ Petition (C) No. 76 of 1994 by Respondent 4 and the orders passed therein

24. With a view to find out the connection between the wastes and sludge resulting from the production of 'H' acid and the pollution in the underground water, the court directed on 20-8-1993, that samples should be taken of the entombed sludge and also of the water from the affected wells and sent for analysis. Environment experts of the Ministry of Environment and Forests were asked to find out whether the pollution in the well water was on account of the said sludge or not. Accordingly, analysis was conducted and the experts submitted the Report on 1-11-1993. Under the heading 'Conclusion', the report stated:

> "5.0 *Conclusion*
>
> 5.1 On the basis of the observations and analysis results, it is concluded beyond doubt that the sludge inside the entombed pit is the contaminated one as evident from the number of parameters analysed.
>
> 5.2 The groundwater is also contaminated due to discharge of H-acid plant effluent as well as H-acid sludge/contaminated soil leachates as shown in the photographs and also supported by the results. The analysis results revealed good

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

correlation between the colour of well water and H-acid content in it. The analysis results show high degree of impurities in sludge/soil and also in well water *which is a clear indication of contamination of soil and groundwater due to disposal of H-acid waste."*

The report which is based upon their inspection of the area in September 1993 revealed many other alarming features. It represents a commentary on the attitude and actions of the respondents. In para 2, under the heading "Site Observations and Collection of Sludge/Contaminated Soil Samples", the following facts are stated:

"2.1. The Central team, during inspection of the premises of M/s HACL, observed that *H-acid sludge (iron/gypsum) and contaminated soil are still lying at different places, as shown in Fig. 1, within the industrial premises* (Photograph 1) which are the leftovers. The area, where the solar evaporation pond was existing with H-acid sludge dumped here and there, was observed to have been levelled with borrowed soil (Photograph 2). It was difficult to ascertain whether the

sludge had been removed before filling. However, there are visual evidences of contaminated soil in the area.

2.2 As reported by the Rajasthan Pollution Control Board (RPCB) representatives, *about 720 tonnes out of the total contaminated soil and sludge scraped from the sludge dump sites is disposed of in six lined entombed pits* covered by lime/flyash mix, brick soling and concrete (Photographs 3 and 4). *The remaining scraped sludge and contaminated soil was lying near the entombed pits for want of additional disposal facility*. However, during the visit, the left over sludge and contaminated soil could not be traced at site. Inspection of the surrounding area revealed that *a huge heap of foreign soil of 5 metre height (Photograph 5) covering a large area, as also indicated in Fig. 1, was raised on the slopy ground at the foothill within the industry premises*. The storm water run-off pathway over the area showed indication of H-acid sludge leachates coming out of the heap. Soil in the area was sampled for analysis.

2.3 *M/s HACL has a number of other industrial units which are operating within the same premises without valid consents* from the Rajasthan Pollution Control Board (RPCB). These plants are sulphuric acid (H_2SO_4), fertilizer (SSP) and vegetable oil extraction. *The effluent of these units are not properly treated and the untreated effluent particularly from the acid plant is passing through the sludge dump area playing havoc* (Photograph 7). The final effluent was collected at the outlet of the factory premises during operation of these units, at the time of groundwater monitoring in September 1993, by the RPCB. Its quality was observed to be highly acidic (pH: 1.08, Conductivity: 37,100 mg/1, SO_4: 21,000 mg/1, Fe: 392 mg/1, COD: 167 mg/1) which was also revealed in the earlier visits of the Central teams. However, these units were not in operation during the present visit."

Under para 4.2.1, the report stated inter alia:

"The sludge samples from the surroundings of the (presently non-existent) solar evaporation and the contaminated soil due to seepage from the newly raised dump site also exhibited very high values of the above-mentioned parameters. This revealed that the contaminated soil is buried under the new dump found by the team."

25. So much for the waste disposal by the respondents and their continuing good conduct! To the same effect is the report of the RPCB which is dated 30-10-1993.

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 14 Wednesday, July 26, 2023

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

26. In view of the aforesaid reports, all of which unanimously point out the consequences of the 'H' acid production, the manner in which the highly corrosive waste water (mother liquor) and the sludge resulting from the production of 'H' acid was disposed of and the continuing discharge of highly toxic effluents by the remaining units even in the year 1993, the authorities (RPCB) passed orders closing down, in exercise of their powers under Section 33-A of the Water Act, the operation of the Sulphuric Acid

Plant and the solvent extraction plant including oil refinery of the fourth respondent with immediate effect. Orders were also passed directing disconnection of electricity supply to the said plants. The fourth respondent filed Writ Petition (C) No. 76 of 1994 in this Court, under Article 32 of the Constitution, questioning the said orders in January 1994. The main grievance in this writ petition was that without even waiting for the petitioner's (Hindustan Agro Chemicals Limited) reply to the show-cause notices, orders of closure and disconnection of electricity supply were passed and that this was done by the RPCB with a mala fide intent to cause loss to the industry. It was also submitted that sudden closure of its plants is likely to result in disaster and, may be, an explosion and that this consideration was not taken into account while ordering the closure. In its Order dated 7-3-1994, this Court found some justification in the contention of the industry that the various counter-affidavits filed by the RPCB are self -contradictory. The Board was directed to adopt a constructive attitude in the matter. By another order dated 18-3-1994, the RPCB was directed to examine the issue of grant of permission to restart the industry or to permit any interim arrangement in that behalf. On 8-4-1994, a 'consent' order was passed whereunder the industry was directed to deposit a sum of Rupees sixty thousand with RPCB before 11-4-1994 and the RPCB was directed to carry on the construction work of storage tank for storing and retaining ten days' effluents from the Sulphuric Acid Plant. The construction of temporary tank was supposed to be an interim measure pending the construction of an ETP on permanent basis. The order dated 28-4-1994 noted the report of the RPCB stating that the construction of temporary tank was completed on 26-4-1994 under its supervision. The industry was directed to comply with such other requirements as may be pointed out by RPCB for prevention and control of pollution and undertake any work required in that behalf forthwith. Thereafter, the matter went into a slumber until 13-10-1995.

NEERI Report

27. At this juncture, it would be appropriate to refer to the report submitted by NEERI on the subject of "Restoration of Environmental Quality of the affected area surrounding Village Bichhri due to past Waste Disposal Activities". This report was submitted in April 1994 and it states that it is based upon the study conducted by it during the period November 1992 to February 1994. Having regard to its technical competence and reputation as an expert body on the subject, we may be permitted to refer to its report at some length.

28. At p. 7, the report mentions the industrial wastes emerging from the manufacture of 'H' acid. It reads:

> "Solid wastes generated from H-acid manufacturing process are:
>
> Gypsum sludge produced during the neutralisation of acidic solution with lime after nitration stage (around 6 tonnes/tonne of H-acid manufactured)

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 15 Wednesday, July 26, 2023
Printed For: Raghunath Mahabal
SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

Iron sludge produced during the reduction stage (around 0.5 tonnes/tonne of H-acid manufactured)

Gypsum sludge contains mostly calcium sulphate along with sodium salts and organics. Iron sludge constitutes unreacted iron powder, besides ferric salts and organics.

It is estimated that, for each tonne of H-acid manufactured, about 20 m^3 of highly corrosive waste water was generated as mother liquor, besides the generation of around 2.0 m^3 of wash water. The mother liquor is characterised by low pH (around 2.0) and high concentration of total dissolved solids (80-280 g/L). High COD of the waste water (90 g/L) could be attributed to organics formed during various stages of manufacture. These include naphthalene trisulphonic acid, nitro naphthalene sulphonic acid, Koch acid and H-acid, besides several other intermediates."

29. At pp. 8 and 9, the report describes the manner in which the sludge and other industrial wastes were disposed of by the respondents. It states inter alia:

"The total quantities of waste water and that of sludge generated were around 8250 m^3 and 2440 tonnes respectively for a production of 375 tonnes by M/s Silver Chemicals Ltd. and M/s Jyoti Chemicals Ltd....

Majority of sludge brought back from disposal sites located outside the plant was transferred inside a covered shed.

The sludge lying in the plant premises was entombed in the underground pit by RPCB as per the directions of the Hon'ble Supreme Court. It may be mentioned that *only 720 MT of sludge out of the estimated quantity of 2440 MT could be entombed as the capacity of the underground tanks provided by the industry for the purpose was only to that extent.*

Remaining sludge and sludge-mixed soil were, however, present in the plant premises as these could not be transferred into underground tanks. It has also been observed that only sludge above the soil was removed from the six sites and transferred to the plant site. Sub-surface soil of these sites appears to have been contaminated as the soil has reddish colour akin to that of the sludge.

A fertilizer plant (single superphosphate), a sulphuric acid plant and an oil extraction and oil refining plant were in operation in the same premises where H-acid was earlier manufactured. *The acidic waste water (around pH 1.0) presently generated from these units was flowing over the abandoned dump site. This leaches the sludge-mixed soil from the abandoned dump site and the contaminated water flows by gravity towards east and finds its way into a nullah flowing through the compound and conveys the contaminated water to an irrigation canal which originates from Udaisagar Lake (Pate 1.4)*."

(emphasis added)

30. At p. 10, the report mentions the six dump sites outside the 'H' acid plant premises where the sludge was lying in the open. At pp. 26 and 27, the

report states on the basis of VES investigations that while certain wells were found contaminated, others were not. At p. 96, the report states thus:

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 16 Wednesday, July 26, 2023

SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

"DAMAGE TO CROPS AND TREES

The field surveys in contaminated fields in *Zones I and II showed that no crops were coming in the fields particularly in low-lying areas*. On some elevated areas, crops like jowar, maize were growing; however the growth and yield were very poor.

Further it was also observed that even trees like eucalyptus planted in contaminated fields show leaf burning and stunted growth. Many old trees which were badly affected due to contamination are still growing under stress conditions as a result of soil contamination.

The top soils at the old dump sites outside the plant premises are still contaminated and require de-contamination before the land is used for other purposes.

It was observed that even after the operation of hauling the sludge back to the industry premises, some sludge-mixed soil was still lying in the premises of a primary school (Table 1.1), which needs de-contamination."

31. In Chapter 6, the report mentions the remedial measures. Para 6.1, titled INTRODUCTION, states:

"As could be seen from the data reported in Chapters 4 and 5, *the groundwater and soils within 2 kms from the plant have been contaminated*. After critically scrutinising the data, it was concluded that there is an *urgent need to work out a de-contamination strategy* for the affected area. This strategy includes the de-contamination of the soil, contaminated groundwater and abandoned dump sites. This chapter details the remedial measures that can be considered for implementation to restore the environmental quality of the affected area."

32. The chapter then sets out the various remedial measures, including land treatment, soil washing, revegetation, control over the flow of the contaminated water to adjoining lands through canals, leaching of soluble salts, design of farm to development of agro-forestry and/or forestry plantation with salt tolerant crops/plants and groundwater de-contamination. Inter alia, the report states:

"The entire contaminated area comprising of 350 ha of contaminated land and six abandoned dump sites outside the industrial premises has been found to be ecologically fragile due to reckless past disposal activities practised by M/s Silver Chemicals Ltd. and M/s Jyoti Chemicals Ltd. Accordingly, it is suggested that the whole of the contaminated area be developed as a green belt at the expense of M/s Hindustan Agrochemicals Ltd. during the monsoon of 1994."

33. Under para 6.3.2, the report suggests "De-contamination Alternatives for Groundwater" including bioremediation, degradation of H-

acid by *Azotobacter Vinelandii*, isolation of bacterial population from H-acid contaminated soil and several other methods.

34. Under para 6.4.2, the report mentions the several de-contamination alternatives including containment of contaminated soil, surface control, groundwater control, leachate collection and treatment, gas migration control and direct waste treatment.

35. At pp. 157 and 158, the report mentions the continuing discharge of effluents in an illegal and dangerous manner. It reports:

"It was also observed by NEERI's team during the current study that the industry *has not provided adequate effluent treatment facilities* and the waste

SCC ONLINE

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

waters (pH<1.5) from the existing plants (sulphuric acid, fertilizer, and oil extraction) are being discharged, without treatment, on land within the plant premises. This indiscriminate and wilful disposal activity is *further aggravating the contamination problem in the area. Acidic effluent leaches the pollutants from the dumped sludge and the contaminated soil and facilitates their penetration through the ground* and thereby increasing the concentration of sulphates and dissolved solids in groundwater. *What is most serious is the fact that the industry produced chlorosulfonic acid for a few months during late 1992 which is a hazardous and toxic substance as per MEF Notification* titled 'Manufacture, Storage and Import of Hazardous Chemical Rules, 1989' and even floated public shares for the manufacture of this obnoxious chemical. *The production was however ceased due to the intervention of the Rajasthan Pollution Control Board in December 1992 as the industry was operating without obtaining site clearance, No Objection Certificate (NOC)/Consent from the concerned appropriate regularity (regulatory?) authorities and without providing for any pollution-control measures*. It is, therefore, essential for M/s Hindustan Agrochemicals Ltd. to comply with these requirements for carrying out the present industrial activities. *The abatement of further contamination warrants the closure of all industrial operations till an appropriate effluent treatment plant is installed*, and certified by RPCB for its functionality in keeping with the provisions of Water Act."

The report adds:

"The Industry management in the past (during 1988-89) has shown scant respect for Pollution Control and Environment Protection Acts. Not only this, the management *continues industrial activity producing obnoxious waste waters and dumping the same without any treatment, contaminating land and groundwater without any concern for ecology and public health*. It is necessary that the provisions of relevant legislations are imposed on the industry to avoid environmental damage and harm to public welfare."

(emphasis added)

36. We do not think that the above report requires any emphasis at our hands. It speaks for itself — and it speaks volumes of the "high regard" the respondents have for law!

Page: 231

37. From p. 179 onwards, the report refers to the damage to the crops and the land and to the psychological and mental torture inflicted upon the villagers by the respondents and suggests that the principle of "Polluter Pays" should be applied in this case inasmuch as "*the incident involved deliberate release of untreated acidic process waste water and negligent handling of waste sludge knowing fully well the implication of such acts*". The report suggests that compensation should be paid under two heads, viz., (*a*) for the losses due to damage and (*b*) towards the cost of restoration of environmental quality. It then works out the total cost of restoration of environmental quality at Rs 3738.5 lakhs — i.e., Rs 37.385 crores.

38. Para 7.4 states the conclusions flowing from the material in Chapter 6 thus:

"The cost of damage to be disbursed to the affected villagers is estimated at Rs 342.8 lakhs and remediation of impacted well waters and soil at Rs 3738.5 lakhs. This cost needs to be borne by the management of the industry in keeping with the Polluter Pays principle and the doctrine of Strict/Absolute liability, as applied to Shri

Ram Food and Fertilizers Industry in the case of *Oleum leak*[2] in 1985."

Report of RPCB submitted in January 1996 during the final hearing of these matters

39. When all these matters were posted before the court on 13-10-1995, we realised that the matter requires to be heard on a priority basis. Having regard to the voluminous data gathered by this Court and the several orders passed from time to time, the matter was listed for regular hearing. We heard all the parties at length on 10th, 11th, 16th and 17th January, 1996. We have been taken through the voluminous record. Submissions have also been made on the questions of law arising herein.

40. At the end of the first day of regular hearing, we made an order calling upon the RPCB to send a team of high officials to the spot and report to us the latest position on the following aspects:

(*i*) Whether the factories of Silver Chemicals, Rajasthan Multi Fertilizers and Jyoti Chemicals are still working and whether the machinery installed in the said plant is still existing? (This information was required to check the statement of the respondents that the said units are lying closed since last several years.)

(*ii*) To report whether the factory or factories of Respondent 4, Hindustan Agrochemicals Limited, are working and if they are working, what are the products being manufactured by them? The Board was also directed to report whether the seventh respondent, Phosphate India, which was said to have merged with the fourth respondent, is having a separate factory and if so, what is being produced therein?

(*iii*) The approximate quantity of sludge — whether "iron sludge" or "gypsum sludge" — lying in the area. The report was to indicate what quantity was entombed pursuant to the orders of this Court and whether any further sludge was lying in the area or in the premises of the respondents' complex, its approximate quantity and the time, effort and cost required to remove the same.

(*iv*) The Board was also to take samples of the water in wells and tanks in the area and have them analysed and tell us whether it is fit for drinking by cattle and/or fit for irrigation purposes.

41. Accordingly, the RPCB officials visited the site and have filed a report dated 16-1-1996 along with an affidavit. The report discloses the following facts:

(1) The two units, Silver Chemicals and Jyoti Chemicals, do not exist now. There is no machinery. A godown and a Ferric Alum Plant have been constructed at the site of the said plant. The Ferric Alum Plant was not in operation at the time of inspection though plant and machinery for manufacturing it was found installed therein. Certain old stock of Ferric Alum was also found lying within the plant premises.

(2) Hindustan Agrochemicals Limited (R-4) has seven industrial plants, viz., Rajasthan Multi Fertilizers [manufacturing Granulated Single Super Phosphate (GSSP)], a Sulphuric Acid Plant, a Chlorosulphonic Acid Plant, Edible Oil Solvent Extraction Plant, Edible Oil Refinery and a Ferric Alum Plant (known as M/s Jyoti Chemicals), all of which are located within the same premises. All these seven plants were found not operating on the date of inspection by the RPCB officials though in many cases the machinery and the other equipment was in place.

So far as the sludge still remaining in the area is concerned, the report stated:

> "3. Village Bichhri and other adjoining areas were visited by the undersigned officials to know whether gypsum and iron sludge is still lying in the aforesaid area. In area adjoining the irrigation canal, sludge mixed with soil were found on an area of about 3000 sq.ft. The area was covered with foreign soil. Sample of the sludge-mixed soil was collected for the perusal of the Hon'ble Court. Entire premises of M/s Hindustan Agrochemicals Ltd. was also inspected and sludge mixed with soil was observed in a large area. It was further observed that fresh soil in the varying depth has been spread over in most of the area. In view of the fact that sludge was mixed with the soil and difficult to separate out of the soil it is very difficult to estimate the exact quantity of the sludge required to be removed. Samples of sludge mixed with soil were collected from different parts of this area after serving due notices under Environment Protection Act, 1986."

So far as the water in the wells was concerned, the report mentioned that they took samples from the wells from Bichhri and other surrounding villages, i.e., from thirty-two different locations and that water in sixteen

locations was found to "contain colour of varying intensities ranging from very dark brown to light pink which apparently shows that these wells/handpumps are still polluted".

42. Shri K.N. Bhat, learned counsel for the respondents, however, submitted that the RPCB officials have throughout been hostile to the respondents and that, therefore, the reports submitted by them should not be acted upon. He also submitted that respondents have had no opportunity to file objections to the said report or to produce material to contradict the statements made therein. While taking note of these submissions, we may, however, refer to the letter dated 13-1-1996 written by the fourth respondent to the RPCB. In this letter, the particulars of the stocks remaining in each of its seven plants are mentioned along with the date of the last production in each of those plants. The last dates of production are the following: Sulphuric Acid Plant — 10-11-1995, SSP Plant (Phosphate India) — 11-11-1995, GSSP Plant (Rajasthan Multi Fertilizers) — 7-7-1995, Solvent Extraction Plant and Refinery — 2-12-1993, Jyoti Chemicals — October 1990 and Chlorosulphonic Acid Plant — 29-9-1995. It is worthy of note that these dates are totally at variance with the dates of closure mentioned in the counter-affidavits filed by these units in 1990-91.

Contentions of the parties

43. Shri M.C. Mehta, learned counsel appearing for the petitioner, brought to our notice the several reports, orders and other material on record. He submitted that the abundant material on record clearly establishes the culpability of the respondents for the devastation in Village Bichhri and surrounding areas and their responsibility and obligation to properly store the remaining sludge, stop discharge of all untreated effluents by taking necessary measures and defray the total cost required for remedial measures as suggested by NEERI (Rupees forty crores and odd). Learned counsel suggested that in view of the saga of repeated and continuous violation of law and lawful orders on the part of the respondents, they must be closed forthwith. So far as the legal propositions are concerned, the learned counsel relied strongly upon the Constitution Bench decision in *M.C. Mehta* v. *Union of India* (*Oleum Gas Leak case*[2]) as well as the recent order of this Court in *Indian Council for Enviro-Legal Action* v. *Union of India*[3]. Learned counsel also invited our attention to quite a few foreign decisions

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

and text books on the subject of environment. Shri Altaf Ahmad, the learned Additional Solicitor General appearing for the Union of India, also stressed the need for urgent appropriate directions to mitigate and remedy the situation on the spot in the light of the expert reports including the one made by the Central team of experts.

44. The learned counsel for the State of Rajasthan, Shri Aruneshwar Gupta, expressed the readiness of the State Government to carry out and

enforce such orders as this Court may think fit and proper in the circumstances.

45. Shri K.B. Rohatgi, learned counsel for the RPCB, invited our attention to the various orders passed, action taken, cases instituted and reports submitted by the Board in this matter. He submitted that until recently the Board had no power to close down any industry for violation of environmental laws and that after conferment of such power, they did pass orders of closure. He denied the allegations of mala fides or hostile intent on the part of the Board towards the respondents. Learned counsel lamented that despite its best efforts, the Board has not yet been successful in eradicating the pollution in the area and hence asked for stringent orders for remedying the appalling conditions in the village due to the acts of the respondents.

46. Shri K.N. Bhat, learned counsel for the respondents, made the following submissions:

(1) The respondents are private corporate bodies. They are not 'State' within the meaning of Article 12 of the Constitution. A writ petition under Article 32 of the Constitution, therefore, does not lie against them.

(2) The RPCB has been adopting a hostile attitude towards these respondents from the very beginning. The reports submitted by it or obtained by it are, therefore, suspect. The respondents had no opportunity to test the veracity of the said reports. If the matter had been fought out in a properly constituted suit, the respondents would have had an opportunity to cross-examine the experts to establish that their reports are defective and cannot be relied upon.

(3) Long before the respondents came into existence, Hindustan Zinc Limited was already in existence close to Bichhri village and has been discharging toxic untreated effluents in an unregulated manner. This had affected the water in the wells, streams and aquifers. This is borne out by the several reports made long prior to 1987. Blaming the respondents for the said pollution is incorrect as a fact and unjustified.

(4) The respondents have been cooperating with this Court in all matters and carrying out its directions faithfully. The report of the RPCB dated 13-11-1992 shows that the work of entombment of the sludge was almost over. The report states that the entire sludge would be stored in the prescribed manner within the next two days. In view of this report, the subsequent report of the Central team, RPCB and NEERI cannot be accepted or relied upon. There are about 70 industries in India manufacturing 'H' acid. Only the units of the respondents have been picked upon by the Central and State authorities while taking no action against the other units. Even in the matter of disposal of sludge, the directions given for its disposal in the case of other units are not as stringent as have been prescribed in the case of respondents. The decision of the Gujarat High Court in *Pravinbhai Jashbhai Patel*[1] shows

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

that the method of disposal prescribed there is different and less elaborate than the one prescribed in this case.

(5) The reports submitted by the various so-called expert committees that sludge is still lying around within and outside the respondents' complex and/or that the toxic wastes from the Sulphuric Acid Plant are flowing through and leaching the sludge and creating a highly dangerous situation is untrue and incorrect. The RPCB itself had constructed a temporary ETP for the Sulphuric Acid Plant pursuant to the orders of this Court made in Writ Petition (C) No. 76 of 1994. Subsequently, a permanent ETP has also been constructed. There is no question of untreated toxic discharges from this plant leaching with sludge. There is no sludge and there is no toxic discharge from the Sulphuric Acid Plant.

(6) The case put forward by the RPCB that the respondents' units do not have the requisite permits/consents required by the Water Act, Air Act and the Environment (Protection) Act is again unsustainable in law and incorrect as a fact. The respondents' units were established before the amendment of Section 25 of the Water Act and, therefore, did not require any prior consent for their establishment.

(7) The proper solution to the present problem lies in ordering a comprehensive judicial enquiry by a sitting Judge of the High Court to find out the causes of pollution in this village and also to recommend remedial measures and to estimate the loss suffered by the public as well as by the respondents. While the respondents are prepared to bear the cost of repairing the damage, if any, caused by them, the RPCB and other authorities should be made to compensate for the huge losses suffered by the respondents on account of their illegal and obstructionist policy adopted towards them.

(8) The decision in *Oleum Gas Leak case*[2] has been explained in the opinion of Ranganath Misra, C.J., in the decision in *Union Carbide Corpn.* v. *Union of India*[4]. The law laid down in *Oleum Gas Leak case*[2] is at variance with the established legal position in other Commonwealth countries.

47. Shri Bhat suggested that in the larger interests of environment, industry and public, this Court may direct the Government of India to constitute, by proper legislation, environment courts all over the country — which courts alone should be empowered to deal with such cases, to give appropriate directions including orders of closure of industries wherever necessary, to make necessary technical and scientific investigations, to suggest remedial measures and to oversee their implementation. Proceedings by way of a writ in this Court under Article 32 or in the High Court under Article 226, the learned counsel submitted, are not appropriate to deal with such matters, involve as they do several disputed questions of fact and technical issues.

48. Before we proceed to deal with the submissions of the learned counsel, it would be appropriate to notice the relevant provisions of law.

Relevant statutory provisions

49. Article 48-A is one of the Directive Principles of State Policy. It says that the State shall endeavour to protect and improve the environment and to safeguard the forests and wildlife of the country. Article 51-A sets out the fundamental duties of the

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

citizens. One of them is "(*g*) to protect and improve the natural environment including forests, lakes, rivers and wild life, and to have compassion for living creatures;"

50. The problem of increasing pollution of rivers and streams in the country — says the Statement of Objects and Reasons appended to the Bill which became the Water (Prevention and Control of Pollution) Act, 1974 — attracted the attention of the State legislatures and Parliament. They realised the urgency of ensuring that domestic and industrial effluents are not allowed to be discharged into water courses without adequate treatment and that pollution of rivers and streams was causing damage to the country's economy. A committee was set up in 1962 to draw a draft enactment for prevention of water pollution. The issue was also considered by the Central Council of Local Self-Government in September 1963. The Council suggested the desirability of having a single enactment for the purpose. A Draft Bill was prepared and sent to various States. Several expert committees also made their recommendations meanwhile. Since an enactment on the subject was relatable to Entry 17 read with Entry 6 of List II in the Seventh Schedule to the Constitution — and, therefore, within the exclusive domain of the States — the State Legislatures of Gujarat, Kerala, Haryana and Mysore passed resolutions as contemplated by Article 252 of the Constitution enabling Parliament to make a law on the subject. On that basis, Parliament enacted the Water (Prevention and Control of Pollution) Act, 1974. (The State of Rajasthan too passed the requisite resolution.) Section 24(1) of the Water Act provides that:

> "24. (1) Subject to the provisions of this section,—
>
> (*a*) no person shall knowingly cause or permit any poisonous, noxious or polluting matter determined in accordance with such standards as may be laid down by the State Board to enter (whether directly or indirectly) into any stream or well…."

Section 25(1), before it was amended by Act 53 of 1988, provided that:

> "25. (1) Subject to the provisions of this section, no person shall, without the previous consent of the State Board, bring into use any new or altered outlet for the discharge of sewage or trade effluent into a stream or well or begin to make any new discharge of sewage or trade effluent into a stream or well."

As amended by Act 53 of 1988, Section 25 now reads:

> "25. (1) Subject to the provisions of this section, no person shall, without the previous consent of the State Board,—

> (*a*) establish or take any steps to establish any industry, operation or process, or any treatment and disposal system or an extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land (such discharge being hereafter in this section referred to as 'discharge of sewage'); or
>
> (*b*) bring into use any new or altered outlets for the discharge of sewage; or
>
> (*c*) begin to make any new discharge of sewage…."

(It is stated that the Rajasthan Assembly passed resolution under Article 252 of the Constitution adopting the said Amendment Act vide Gazette Notification dated 9-5-1990.) Section 33 empowers the Pollution Control Board to apply to the court, not inferior to that of a Metropolitan Magistrate or a Judicial Magistrate of the First Class, to restrain any person causing pollution if the said pollution is likely to prejudicially

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

affect water in a stream or a well. Section 33-A, which has been introduced by Amendment Act 53 of 1988, empowers the Board to order the closure of any industry and to stop the electricity, water and any other service to such industry if it finds such a direction necessary for effective implementation of the provisions of the Act. Prior to the said Amendment Act, the Pollution Control Board had no such power and the course open to it was to make a recommendation to the Government to pass appropriate orders including closure.

51. The Air (Prevention and Control of Pollution) Act, 1981 contains similar provisions.

52. In the year 1986, Parliament enacted a comprehensive legislation, Environment (Protection) Act. The Act *defines 'environment'* to include "water, air and land and the interrelationship which exists among and between water, air and land, and human beings, other living creatures, plants, micro-organism and property". The preamble to the Act recites that the said Act was made pursuant to the decisions taken at the United Nations Conference on Human Environment held at Stockholm in June 1972 in which India also participated. Section 3 empowers the Central Government "*to take all such measures as it deems necessary or expedient for the purpose of protecting and improving the quality of the environment* and preventing, controlling and abating environmental pollution". Sub-section (2) elucidates the several powers inhering in the Central Government in the matter of protection and promotion of environment. Section 5 empowers the Central Government to issue appropriate directions to any person, officer or authority to further the objects of the enactment. Section 6 confers rule-making power upon the Central Government in respect of matters referred to in Section 3. Section 7 says that "no person carrying on any industry, operation or process shall discharge or emit or permit to be discharged or emitted any environmental pollutant in excess of such standards as may be prescribed".

Page: 238

53. The Central Government has made the Hazardous Wastes (Management and Handling) Rules, 1989 in exercise of the power conferred upon it by Section 6 of the Environment (Protection) Act prescribing the manner in which the hazardous wastes shall be collected, treated, stored and disposed of.

Consideration of the submissions

54. Taking up the objections urged by Shri Bhat first, we find it difficult to agree with them. This writ petition is not really for issuance of appropriate writ, order or directions against the respondents but is directed against the Union of India, Government of Rajasthan and RPCB to compel them to perform their statutory duties enjoined by the Acts aforementioned on the ground that their failure to carry out their statutory duties is seriously undermining the right to life (of the residents of Bichhri and the affected area) guaranteed by Article 21 of the Constitution. If this Court finds that the said authorities have not taken the action required of them by law and that their inaction is jeopardising the right to life of the citizens of this country or of any section thereof, it is the duty of this Court to intervene. If it is found that the respondents are flouting the provisions of law and the directions and orders issued by the lawful authorities, this Court can certainly make appropriate directions to ensure compliance with law and lawful directions made thereunder. This is a social action litigation on behalf of the villagers of Bichhri whose right to life, as elucidated by this Court in several decisions, is invaded and seriously infringed by the respondents as is

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

established by the various reports of the experts called for, and filed before, this Court. If an industry is established without obtaining the requisite permission and clearances and if the industry is continued to be run in blatant disregard of law to the detriment of life and liberty of the citizens living in the vicinity, can it be suggested with any modicum of reasonableness that this Court has no power to intervene and protect the fundamental right to life and liberty of the citizens of this country. The answer, in our opinion, is self-evident. We are also not convinced of the plea of Shri Bhat that RPCB has been adopting a hostile attitude towards his clients throughout and, therefore, its contentions or the reports prepared by its officers should not be relied upon. If the respondents establish and operate their plants contrary to law, flouting all safety norms provided by law, the RPCB was bound to act. On that account, it cannot be said to be acting out of animus or adopting a hostile attitude. Repeated and persistent violations call for repeated orders. That is no proof of hostility. Moreover, the reports of RPCB officials are fully corroborated and affirmed by the reports of the Central team of experts and of NEERI. We are also not prepared to agree with Shri Bhat that since the report of NEERI was prepared at the instance of RPCB, it is suspect. This criticism is not only unfair but is also uncharitable to the officials of NEERI who have no reason to be inimical to the respondents. If, however, the actions of the respondents invite the concern of the experts and if they depict the correct situation in their reports, they cannot be accused of any bias. Indeed, it is this Court that asked NEERI to suggest remedial measures and it is in compliance with

Page: 239

those orders that NEERI submitted its interim report and also the final report. Similarly, the objection of Shri Bhat that the reports submitted by the NEERI, by the Central team (experts from the Ministry of Environment and Forests, Government of India) and RPCB cannot be acted upon is equally unacceptable. These reports were called by this Court and several orders passed on the basis of those reports. It was never suggested on behalf of Respondents 4 to 8 that unless they are permitted to cross-examine the experts or the persons who made those reports, their reports cannot be acted upon. This objection, urged at this late stage of proceedings — after a lapse of several years — is wholly unacceptable. The persons who made the said reports are all experts in their field and under no obligation either to the RPCB or for that matter to any other person or industry. It is in view of their independence and competence that their reports were relied upon and made the basis of passing orders by this Court from time to time.

55. Now coming to the question of alleged pollution by Hindustan Zinc Limited (R-9), it may be that Respondent 9 is also responsible for discharging untreated effluents at one or the other point of time but that is not the issue we are concerned with in these writ petitions. These writ petitions are confined to the pollution caused in Bichhri village on account of the activities of the respondent. No report among the several reports placed before us in these proceedings says that Hindustan Zinc Limited is responsible for the pollution at Bichhri village. Shri Bhat brought to our notice certain reports stating that the discharges from Hindustan Zinc Limited were causing pollution in certain villages but they are all downstream, i.e., to the north of Bichhri village and we are not concerned with the pollution in those villages in these proceedings. The bringing in of Hindustan Zinc Limited in these proceedings is, therefore, not relevant. If necessary, the pollution, if any, caused by Hindustan Zinc Limited can be the subject-matter of a separate proceeding.

56. We may now deal with the contentions of Shri Bhat based upon the affidavit of

SCC ONLINE

SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

RPCB dated 13-11-1992 which has been repeatedly and strongly relied upon by the learned counsel in support of his submission that the entire sludge has been properly stored by or at the expense of his clients. It is on the basis of this affidavit that Shri Bhat says that the subsequent reports submitted showing the existence of sludge within and outside their complex should not be accepted or acted upon. Let us turn to the affidavit of RPCB dated 13-11-1992 and see how far does it support Shri Bhat's contention. It is in para 2(*b*) that the sentence, strongly relied upon by Shri Bhat occurs, viz., "remaining work is likely to be completed by 15-11-1992". For a proper appreciation of the purport of the said sentence, it would be appropriate to read the entire para 2(*b*), which is to the following effect:

> "(*b*) that all the six tanks have been entombed with brick toppings. Roofing is complete on all tanks which have also been provided with proper outlets for the exit of gases which may form as a result of possible chemical reactions in the sludge mass. The tanks have also been

provided with reinforced concrete to prevent drooping of the roof. Remaining work is likely to be completed by 15-11-1992."

We find it difficult to read the said sentence as referring to the storage of the remaining about 1700 MT of sludge. When the storage of 720 MT itself took up all the six tanks provided by the respondent, where was the remaining 1700 tonnes stored? Except relying upon the said sentence repeatedly, Shri Bhat has not been able to tell us where this 1700 MT has been stored, whether in tanks and if so, who constructed the tanks and when and how were they covered and sealed. He is also not able to tell us on what dates the remaining sludge was stored. It is evident that the aforesaid sentence occurring in clause 2(*b*) refers to the proper sealing and completion of the said tanks wherein 720 MT of sludge was stored. If, in fact, the said 1700 MT has also been entombed, it was not difficult for the respondents to give the particulars of the said storage. We are, therefore, unable to agree with Shri Bhat that the subsequent reports which repeatedly and uniformly speak of the presence of sludge within and outside the complex of the respondents should not be accepted. It may be recalled that the report of the team of Central experts was submitted on 1-11-1993 based upon the inspection made by them in September/October 1993. To the same effect is the affidavit of RPCB dated 30-10-1993 and the further affidavit dated 1-12-1993. These reports together with the report of NEERI clearly establish that huge quantities of sludge were still lying around either in the form of mounds or placed in depressions, or spread over the contiguous areas and covered with local soil to conceal its existence. It is worth reiterating that the said sludge is only part of the pernicious discharges emanating from the manufacture of 'H' acid. The other part, which is unfortunately not visible now (except in its deleterious effects upon the soil and underground water) is the "mother liquor" produced in enormous quantities which has either flowed out or percolated into the soil.

57. So far as the responsibility of the respondents for causing the pollution in the wells, soil and the aquifers is concerned, it is clearly established by the analysis report referred to in the report of the Central experts' team dated 1-11-1993 (p. 1026 of Vol. II). Indeed, number of orders passed by this Court, referred to hereinbefore, are premised upon the finding that the respondents are responsible for the said pollution. It is only because of the said reason that they were asked to defray the cost of removal and storage of sludge. It is precisely for this reason that, at one stage, the respondents had also undertaken the de-watering of polluted wells. Disclaiming the

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 26 Wednesday, July 26, 2023

SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

responsibility for the pollution in and around Bichhri village, at this stage of proceedings, is clearly an afterthought. We accordingly hold and affirm that the respondents alone are responsible for all the damage to the soil, to the underground water and to Village Bichhri in general, damage which is eloquently portrayed in the several reports of the experts mentioned hereinabove. NEERI has worked out the cost for repairing the damage at more than Rupees forty crores. Now, the question is

whether and to what extent can the respondents be made responsible for defraying the cost of remedial measures in these proceedings under Article 32. Before we advert to this question, it may perhaps be appropriate to clarify that so far as removal of remaining sludge and/or the stoppage of discharge of further toxic wastes are concerned, it is the absolute responsibility of the respondents to store the sludge in a proper manner (in the same manner in which 720 MT of sludge has already been stored) and to stop the discharge of any other or further toxic wastes from its plants including Sulphuric Acid Plant and to ensure that the wastes discharged do not flow into or through the sludge. Now, turning to the question of liability, it would be appropriate to refer to a few decisions on the subject.

58. In *Oleum Gas Leak case*[2], a Constitution Bench discussed this question at length and held thus: (SCC pp. 420-21, paras 31-32)

> "We are of the view that an enterprise which is engaged in a hazardous or inherently dangerous industry which poses a potential threat to the health and safety of the persons working in the factory and residing in the surrounding areas owes an absolute and non-delegable duty to the community to ensure that no harm results to anyone on account of hazardous or inherently dangerous nature of the activity which it has undertaken. The enterprise must be held to be under an obligation to provide that the hazardous or inherently dangerous activity in which it is engaged must be conducted with the highest standards of safety and if any harm results on account of such activity, the enterprise must be absolutely liable to compensate for such harm and it should be no answer to the enterprise to say that it had taken all reasonable care and that the harm occurred without any negligence on its part. Since the persons harmed on account of the hazardous or inherently dangerous activity carried on by the enterprise would not be in a position to isolate the process of operation from the hazardous preparation of substance or any other related element that caused the harm the enterprise must be held strictly liable for causing such harm as a part of the social cost of carrying on the hazardous or inherently dangerous activity. If the enterprise is permitted to carry on an hazardous or inherently dangerous activity for its profit, the law must presume that such permission is conditional on the enterprise absorbing the cost of any accident arising on account of such hazardous or inherently dangerous activity as an appropriate item of its overheads. Such hazardous or inherently dangerous activity for private profit can be tolerated only on condition that the enterprise engaged in such hazardous or inherently dangerous activity indemnifies all those who suffer on account of the carrying on of such hazardous or inherently dangerous activity regardless of whether it is carried on carefully or not. … We would therefore hold that where an enterprise is engaged in a hazardous or inherently dangerous activity and harm results to anyone on account of an accident in the operation of such

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

hazardous or inherently dangerous activity resulting, for example, in escape of toxic gas the enterprise is strictly and absolutely liable to compensate all those who are affected by the accident and such liability is not subject to any of the exceptions which operate vis-à-vis the tortious principle of strict liability under the rule in *Rylands* v. *Fletcher*[5].

> We would also like to point out that the measure of compensation in the kind of cases referred to in the preceding paragraph must be correlated to the magnitude and capacity of the enterprise because such compensation must have a deterrent effect. The larger and more prosperous the enterprise, the greater must be the amount of compensation payable by it for the harm caused on account of an accident in the carrying on of the hazardous or inherently dangerous activity by the enterprise."

59. Shri Bhat, however, points out that in the said decision, the question whether the industry concerned therein was a 'State' within the meaning of Article 12 and, therefore, subject to the discipline of Part III of the Constitution including Article 21 was left open and that no compensation as such was awarded by this Court to the affected persons. He relies upon the observations in the concurring opinion of Ranganath Misra, C.J., in *Union Carbide Corpn.*[4] The learned Chief Justice referred in the first instance, to the propositions enunciated in *Oleum Gas Leak case*[2] and then made the following observations in paras 14 and 15: (SCC pp. 607-08)

> "14. In *M.C. Mehta case*[2], no compensation was awarded as this Court could not reach the conclusion that Shriram (the delinquent company) came within the meaning of 'State' in Article 12 so as to be liable to the discipline of Article 21 and to be subjected to a proceeding under Article 32 of the Constitution. Thus what was said was essentially obiter.
>
> 15. The extracted part of the observations from *M.C. Mehta case*[2] perhaps is a good guideline for working out compensation in the cases to which the ratio is intended to apply. The statement of the law ex facie makes a departure from the accepted legal position in *Rylands* v. *Fletcher*[5]. We have not been shown any binding precedent from the American Supreme Court where the ratio of *M.C. Mehta decision*[2] has in terms been applied. In fact Bhagwati, C.J. clearly indicates in the judgment that his view is a departure from the law applicable to western countries."

60. The majority judgment delivered by M.N. Venkatachaliah, J. (on behalf of himself and two other learned Judges) has not expressed any opinion on this issue. We on our part find it difficult to say, with great respect to the learned Chief Justice, that the law declared in *Oleum Gas Leak case*[2] is obiter. It does not appear to be unnecessary for the purposes of that case. Having declared the law, the Constitution Bench directed the parties and other organisations to institute actions on the basis of the law so

declared.[**] Be that as it may, we are of the considered opinion that even if it is assumed (for the sake of argument) that this Court cannot award damages against the respondents in these proceedings that does not mean that the Court cannot direct the Central Government to determine and recover the cost of remedial measures from the respondents. Section 3 of the Environment (Protection) Act, 1986 expressly empowers the Central Government (or its delegate, as the case may be) to "*take all such measures as it deems necessary or expedient for the purpose of protecting and*

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

improving the quality of environment…". Section 5 clothes the Central Government (or its delegate) with the power to issue directions for achieving the objects of the Act. Read with the wide definition of 'environment' in Section 2(*a*), Sections 3 and 5 clothe the Central Government with all such powers as are "necessary or expedient for the purpose of protecting and improving the quality of the environment". The Central Government is empowered to take all measures and issue all such directions as are called for for the above purpose. In the present case, the said powers will include giving directions for the removal of sludge, for undertaking remedial measures and also the power to impose the cost of remedial measures on the offending industry and utilise the amount so recovered for carrying out remedial measures. This Court can certainly give directions to the Central Government/its delegate to take all such measures, if in a given case this Court finds that such directions are warranted. We find that similar directions have been made in a recent decision of this Court in *Indian Council for Enviro-Legal Action*[3]. That was also a writ petition filed under Article 32 of the Constitution. Following is the direction:

> "It appears that the Pollution Control Board had identified as many as 22 industries responsible for the pollution caused by discharge of their effluents into Nakkavagu. They were responsible to compensate to farmers. It was the duty of the State Government to ensure that this amount was recovered from the industries and paid to the farmers."

It is, therefore, idle to contend that this Court cannot make appropriate directions for the purpose of ensuring remedial action. It is more a matter of form.

61. Shri K.N. Bhat submitted that the rule of absolute liability is not accepted in England or other Commonwealth countries and that the rule evolved by the House of Lords in *Rylands* v. *Fletcher*[5] is the correct rule to be applied in such matters. Firstly, in view of the binding decision of this Court in *Oleum Gas Leak case*[2], this contention is untenable, for the said decision expressly refers to the rule in *Rylands*[5] but refuses to apply it saying that it is not suited to the conditions in India. Even so, for the sake of completeness, we may discuss the rule in *Rylands*[5] and indicate why that rule is inappropriate and unacceptable in this country. The rule was first stated by Blackburn, J. (Court of Exchequer Chamber) in the following words: (All ER p. 7)

> "We think that the true rule of law is that the person who, for his own purposes, brings on his land and collects and keeps there anything likely to do mischief if it escapes, must keep it in at his peril, and, if he does not do so, he is prima facie answerable for all the damage which is the natural consequence of its escape. He can excuse himself by showing that the escape was owing to the plaintiff's default, or perhaps, that the escape was the consequence of vis major, or the act of God; … and it seems but reasonable and just that the neighbour who has brought something on his own property which was not naturally there, harmless to others so long as it is confined to his own property, but which he knows will be mischievous if it gets on his neighbour's, should be obliged to make good the damage which ensues if he does not succeed in confining it to his own property."

62. The House of Lords, however, added a rider to the above statement, viz., that the user by the defendant should be a "non-natural" user to attract the rule. In other words, if the user by the defendant is a natural user of the land, he would not be liable for damages. Thus, the twin tests — apart from the proof of damage to the plaintiff by

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

the act/negligence of the defendants — which must be satisfied to attract this rule are 'foreseeability' and 'non-natural' user of the land.

63. The rule in *Rylands*[5] has been approved by the House of Lords in the recent decision in *Cambridge Water Co. Ltd.* v. *Eastern Counties Leather, plc*[6]. The plaintiff, Cambridge Water Company, was a statutory corporation engaged in providing public water supply within a certain area including the city of Cambridge. It was lifting water from a bore well situated at some distance from Sawstyn. The defendant-Company Eastern Leather, was having a tannery in Sawstyn. Tanning necessarily involves degreasing of pelts. For that purpose, the defendant was using an organo chlorine called PCE. PCE was stored in a tank in the premises of the defendant. The plaintiff's case was that on account of the PCE percolating into the ground, the water in its well became contaminated and unfit for human consumption

and that on that account it was obliged to find an alternative source at a substantial cost. It sued the defendant for the resulting damages. The plaintiff based his claim on three alternative grounds, viz., negligence, nuisance and the rule in *Rylands*[5]. The trial Judge (High Court) dismissed the action in negligence and nuisance holding that the defendant could not have reasonably foreseen that such damage could occur to the plaintiff. So far as the rule in *Rylands*[5] was concerned, the trial Judge held that the user by the defendant was not a non-natural user and hence, it was not liable for damages. On appeal, the Court of Appeal declined to decide the matter on the basis of the rule in *Rylands*[5]. It relied strongly upon the ratio in *Ballard* v. *Tomlinson*[7] holding that no person having a right to use a common source is entitled to contaminate that source so as to prevent his neighbour from having a full value of his right of appropriation. The Court of Appeal also opined that the defendant's use of the land was not a natural use. On appeal by the defendant, the House of Lords allowed the appeal holding that *foreseeability* of the harm of the relevant type by the defendant was a pre-requisite to the right to recover damages both under the heads of *nuisance* and also under the rule in *Rylands*[5] and since that was not established by the plaintiff, it has to fail. The House of Lords, no doubt, held that the defendant's use of the land was a non-natural use *but dismissed the suit*, as stated above, *on the ground that the plaintiff has failed to establish that pollution of their water supply by the solvent used by the defendant in his premises was in the circumstances of the case foreseeable by the defendant*.

64. The Australian High Court has, however, expressed its disinclination to treat the rule in *Rylands*[5] as an independent head for claiming damages or as a rule rooted in the law governing the law of nuisance in *Burnie Port Authority* v. *General Jones Pty Ltd.*[8] The respondent, General Jones Limited, had stored frozen vegetables in three cold storage rooms in the building owned by the appellant, Burnie Port Authority (Authority). The remaining building remained under the occupation of the Authority. The Authority wanted to extend the building. The extension work was partly done by the Authority itself and partly by an independent contractor (Wildridge and Sinclair Pty. Ltd.). For doing its work, the contractor used a certain insulating material called EPS, a highly inflammable substance. On account of negligent handling of EPS, there was a fire which inter alia damaged the rooms in which General Jones had stored its vegetables. On an action by General Jones, the Australian High Court held by a majority that the rule in *Rylands*[5] having attracted many difficulties, uncertainties, qualifications and exceptions, should now be seen, for the purposes of Australian Common Law, as absorbed by the principles of ordinary *negligence*. The Court held

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

further that under the rules governing negligence, if a person in control of a premises, introduces a dangerous substance to carry on a dangerous activity, or allows another to do one of those things, owes a duty of reasonable care to

avoid a reasonably foreseeable risk of injury or damage to the person or property of another. In a case where a person or the property of that other is lawfully in a place outside the premises, the duty of care varies in degree according to the magnitude of the risk involved and extends to ensuring that such care is taken. Applying the said principle, the court held that the authority allowed the independent contractor to introduce or retain a dangerous substance or to engage in a dangerous activity in its premises which substance and activity caused a fire that destroyed the goods of General Jones. The evidence, the court held, established that the independent contractor's work was a dangerous activity in that it involved real and foreseeable risk of a serious conflagration unless special precautions were taken. In the circumstances, it was held that *the authority owed a non-delegable duty of care to General Jones to ensure that its contractor took reasonable steps to prevent the occurrence of a fire and the breach of that duty attracted liability pursuant to the ordinary principles of negligence for the damage sustained by the respondent*.

65. On a consideration of the two lines of thought (one adopted by the English courts and the other by the Australian High Court), we are of the opinion that any principle evolved in this behalf should be simple, practical and suited to the conditions obtaining in this country. We are convinced that the law stated by this Court in *Oleum Gas Leak case*[2] is by far the more appropriate one — apart from the fact that it is binding upon us. (We have disagreed with the view that the law stated in the said decision is *obiter*.) According to this rule, once the activity carried on is hazardous or inherently dangerous, the person carrying on such activity is liable to make good the loss caused to any other person by his activity *irrespective* of the fact whether he took reasonable care while carrying on his activity. The rule is premised upon the very nature of the activity carried on. In the words of the Constitution Bench, such an activity: (SCC p. 421, para 31)

> "... can be tolerated only on condition that the enterprise engaged in such hazardous or inherently dangerous activity indemnifies all those who suffer on account of the carrying on of such hazardous or inherently dangerous activity regardless of whether it is carried on carefully or not".

The Constitution Bench has also assigned the reason for stating the law in the said terms. It is that the enterprise (carrying on the hazardous or inherently dangerous activity) alone has the resource to discover and guard against hazards or dangers — and not the person affected *and* the practical difficulty (on the part of the affected person) in establishing the absence of reasonable care or that the damage to him was foreseeable by the enterprise.

66. Once the law in *Oleum Gas Leak case*[2] is held to be the law applicable, it follows, in the light of our findings recorded hereinbefore, that Respondents 4 to 8 are absolutely liable to compensate for the harm caused by them to the villagers in the affected area, to the soil and to the underground water and hence, they are bound to take all necessary measures to remove the sludge and other pollutants lying in the affected area (by affected area, we mean the area of about 350 ha indicated in the sketch at

Page: 247

p. 178 of NEERI report) and also to defray the cost of the remedial measures required to restore the soil and the underground water sources. Sections 3 and 4 of Environment (Protection) Act confers upon the Central Government the power to give directions of the above nature and to the above effect. Levy of costs required for carrying out remedial measures is implicit in Sections 3 and 4 which are couched in very wide and expansive language. Appropriate directions can be given by this Court to the Central Government to invoke and exercise those powers with such modulations as are called for in the facts and circumstances of this case.

67. The question of liability of the respondents to defray the costs of remedial measures can also be looked into from another angle, which has now come to be accepted universally as a sound principle, viz., the "Polluter Pays" principle.[9]

> "The Polluter Pays principle demands that the financial costs of preventing or remedying damage caused by pollution should lie with the undertakings which cause the pollution, or produce the goods which cause the pollution. Under the principle it is not the role of Government to meet the costs involved in either prevention of such damage, or in carrying out remedial action, because the effect of this would be to shift the financial burden of the pollution incident to the taxpayer. The 'Polluter Pays' principle was promoted by the Organisation for Economic Cooperation and Development (OECD) during the 1970s when there was great public interest in environmental issues. During this time there were demands on Government and other institutions to introduce policies and mechanisms for the protection of the environment and the public from the threats posed by pollution in a modern industrialised society. Since then there has been considerable discussion of the nature of the Polluter Pays principle, but the precise scope of the principle and its implications for those involved in past, or potentially polluting activities have never been satisfactorily agreed.
>
> Despite the difficulties inherent in defining the principle, the European Community accepted it as a fundamental part of its strategy on environmental matters, and it has been one of the underlying principles of the four Community Action Programmes on the Environment. The current Fourth Action Programme [(1987) OJC 328/1] makes it clear that 'the cost of preventing and eliminating nuisances must in principle be borne by the polluter', and the Polluter Pays principle has now been incorporated into the European Community Treaty as part of the new articles on the environment which were introduced by the Single European Act of 1986. Article 130-R(2) of the Treaty states that environmental considerations are to play a part in all the policies of the community, and that action is to be based on three principles: the need

Page: 248

for preventive action; the need for environmental damage to be rectified at source; and that the polluter should pay."

Thus, according to this principle, the responsibility for repairing the damage is that of the offending industry. Sections 3 and 5 empower the Central Government to give directions and take measures for giving effect to this principle. In all the circumstances of the case, we think it appropriate that the task of determining the amount required for carrying out the remedial measures, its recovery/realisation and

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

the task of undertaking the remedial measures is placed upon the Central Government in the light of the provisions of the Environment (Protection) Act, 1986. It is, of course, open to the Central Government to take the help and assistance of State Government, RPCB or such other agency or authority, as they think fit.

68. The next question is what is the amount required for carrying out the necessary remedial measures to repair the damage and to restore the water and soil to the condition it was in before the respondents commenced their operations. The report of NEERI has worked out the cost at more than Rupees forty crores. The estimate of cost of remedial measures is, however, not a technical matter within the expertise of NEERI officials. Moreover, the estimate was made in the year 1994. Two years have passed by since then. Situation, if at all, must have deteriorated further on account of the presence of — and dispersal of the sludge — in and around the complex of the respondents by them. They have been discharging other toxic effluents from their other plants, as reported by NEERI and the Central team. It is but appropriate that an estimate of the cost of remedial measures be made now with notice to the respondents, which amount should be paid to Central Government and/or recovered from them by the Central Government. Other directions are also called for in the light of the facts and circumstances mentioned above.

Conclusions

69. From the affidavits of the parties, orders of this Court, technical reports and other data, referred to above (even keeping aside the latest report of the RPCB), the following facts emerge:

(I) Silver Chemicals (R-5) and Jyoti Chemicals (R-8) had manufactured about 375 MT of 'H' acid during the years 1988-89. This had given rise to about 8250 m^3 of waste water and 2440 tonnes of sludge (both iron-based and gypsum-based). The waste water had partly percolated into the earth in and around Bichhri and part of it had flowed out. Out of 2440 tonnes of sludge, about 720 tonnes has been stored in the pits provided by the respondents. The remaining sludge is still there either within the area of the complex of the respondents or outside their complex. With a view to conceal it from the eyes of the inspection teams and other authorities, the respondents have dispersed it all over the area and covered it with earth. In some places, the sludge is lying in mounds. The story of entombing the entire quantity of sludge is untrue.

The units manufacturing 'H' acid — indeed most of the units of the respondents — had started functioning, i.e., started manufacturing

various chemicals without obtaining requisite clearances/consents/licences. They did not instal any equipment for treatment of highly toxic effluents discharged by them. They continued to function even after and in spite of the closure orders of the RPCB. They never did carry out the orders of this Court fully, (e.g., entombing the sludge) nor did they fulfil the undertaking given by them to the court (in the matter of removal of sludge and de-watering of the wells). In spite of repeated reports of officials and expert bodies, they persisted in their illegal course of action in a brazen manner, which exhibits their contempt for law, for the lawful authorities and the courts.

(II) That even after the closure of 'H' acid plant, the fourth respondent had not taken adequate measures for treating the highly toxic waste water and other wastes emanating from the Sulphuric Acid Plant. The untreated highly toxic waste water

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

was found — by NEERI as well as the Central team — flowing through the dumps of iron/gypsum sludge creating a highly potent mix. The letter of the fourth respondent dated 13-1-1996, shows that the Sulphuric Acid Plant was working till 10-11-1995. An assertion is made before us that permanent ETP has also been constructed for the Sulphuric Acid Plant in addition to the temporary tank which was constructed under the orders of this Court. We express no opinion on this assertion, which even if true, is valid only for the period subsequent to April 1994.

(III) The damage caused by the untreated highly toxic wastes resulting from the production of 'H' acid — and the continued discharge of highly toxic effluent from the Sulphuric Acid Plant, flowing through the sludge (H-acid waste) — is indescribable. It has inflicted untold misery upon the villagers and long lasting damage to the soil, to the underground water and to the environment of that area in general. The report of NEERI contains a sketch, at p. 178, showing the area that has been adversely affected by the production of 'H' acid by the respondents. The area has been divided into three zones on the basis of the extent of contamination. A total area of 350 ha has become seriously contaminated. The water in the wells in that area is not fit for consumption either by human beings or cattle. It has seriously affected the productivity of the land. According to NEERI report, Rupees forty crores is required for repairing the damage caused to men, land, water and the flora.

(IV) This court has repeatedly found and has recorded in its orders that it is the respondents who have caused the said damage. The analysis reports obtained pursuant to the directions of the court clearly establish that the pollution of the wells is on account of the wastes discharged by Respondents 4 to 8, i.e., production of 'H' acid. The report of the environment experts dated 1-11-1993 has already been referred to hereinbefore. Indeed, several orders of this Court referred to *supra* are also based upon the said finding.

(V) Sections 3 and 5 of the Environment (Protection) Act, 1986, apart from other provisions of Water and Air Acts, empower the Government to make all such directions and take all such measures as are necessary or expedient for protecting and promoting the 'environment', which expression has been defined in very wide and expansive terms in Section 2(*a*) of the Environment (Protection) Act. This power includes the power to prohibit an activity, close an industry, direct and/or carry out remedial measures, and wherever necessary impose the cost of remedial measures upon the offending industry. The principle "Polluter Pays" has gained almost universal recognition, apart from the fact that it is stated in absolute terms in *Oleum Gas Leak case*[2]. The law declared in the said decision is the law governing this case.

Directions

70. Accordingly, the following directions are made:

1. The Central Government shall determine the amount required for carrying out the remedial measures including the removal of sludge lying in and around the complex of Respondents 4 to 8, in the area affected in Village Bichhri and other adjacent villages, on account of the production of 'H' acid and the discharges from the Sulphuric Acid Plant of Respondents 4 to 8. Chapters VI and VII in NEERI report (submitted in 1994) shall be deemed to be the show-cause notice issued by

SCC Online Web Edition, © 2023 EBC Publishing Pvt. Ltd.
Page 34 Wednesday, July 26, 2023

SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

the Central Government proposing the determination of the said amount. Within six weeks from this day, Respondents 4 to 8 shall submit their explanation, along with such material as they think appropriate in support of their case, to the Secretary, Ministry of Environment and Forests, Government of India, (MEF). The Secretary shall thereupon determine the amount in consultation with the experts of his Ministry within six weeks of the submission of the explanation by the said respondents. The orders passed by the Secretary, (MEF) shall be communicated to Respondents 4 to 8 — and all concerned — and shall also be placed before this Court. Subject to the orders, if any, passed by this Court, the said amount shall represent the amount which Respondents 4 to 8 are liable to pay to improve and restore the environment in the area. For the purpose of these proceedings, the Secretary, (MEF) and Respondents 4 to 8 shall proceed on the assumption that the affected area is 350 ha, as indicated in the sketch at p. 178 of NEERI report. In case of failure of the said respondents to pay the said amount, the same shall be recovered by the Central Government in accordance with law. The factories, plant, machinery and all other immovable assets of Respondents 4 to 8 are attached herewith. The amount so determined and recovered shall be utilised by the MEF for carrying out all necessary remedial measures to restore the soil, water sources and the environment in general of the affected area to its former state.

2. On account of their continuous, persistent and insolent violations of law, their attempts to conceal the sludge, their discharge of toxic

effluents from the Sulphuric Acid Plant which was allowed to flow through the sludge, and their non-implementation of the orders of this Court — all of which are fully borne out by the Expert Committee's reports and the findings recorded hereinabove — Respondents 4 to 8 have earned the dubious distinction of being characterised as "rogue industries". They have inflicted untold misery upon the poor, unsuspecting villagers, de-spoiling their land, their water sources and their entire environment — all in pursuance of their private profit. They have forfeited all claims for any consideration by this Court. Accordingly, we herewith order the closure of all the plants and factories of Respondents 4 to 8 located in Bichhri village. The RPCB is directed to seal all the factories/units/plants of the said respondents forthwith. So far as the Sulphuric Acid Plant is concerned, it will be closed at the end of one week from today, within which period Respondent 4 shall wind down its operations so as to avoid risk of any untoward consequences, as asserted by Respondent 4 in Writ Petition (C) No. 76 of 1994. It is the responsibility of Respondent 4 to take necessary steps in this behalf. The RPCB shall seal this unit too at the end of one week from today. The reopening of these plants shall depend upon their compliance with the directions made and obtaining of *all* requisite permissions and consents from the relevant authorities. Respondents 4 to 8 can apply for directions in this behalf after such compliance.

3. So far as the claim for damages for the loss suffered by the villagers in the affected area is concerned, it is open to them or any organisation on their behalf to institute suits in the appropriate civil court. If they file the suit or suits in *forma pauperis*, the State of Rajasthan shall not oppose their applications for leave to sue in *forma pauperis*.

4. The Central Government shall consider whether it would not be appropriate, in the light of the experience gained, that chemical industries are treated as a category apart. Since the chemical industries are the main culprits in the matter of polluting the environment, there is every need for scrutinising their establishment

and functioning more rigorously. No distinction should be made in this behalf as between a large-scale industry and a small-scale industry or for that matter between a large-scale industry and a medium-scale industry. All chemical industries, whether big or small, should be allowed to be established only after taking into consideration all the environmental aspects and their functioning should be monitored closely to ensure that they do not pollute the environment around them. It appears that most of these industries are water-intensive industries. If so, the advisability of allowing the establishment of these industries in arid areas may also require examination. Even the existing chemical industries may be subjected to such a study and if it is found on such scrutiny that it is necessary to take any steps in the interests of environment, appropriate directions in that behalf may be issued under Sections 3 and 5 of the

Environment Act. The Central Government shall ensure that the directions given by it are implemented forthwith.

5. The Central Government and the RPCB shall file quarterly reports before this Court with respect to the progress in the implementation of Directions 1 to 4 aforesaid.

6. The suggestion for establishment of environment courts is a commendable one. The experience shows that the prosecutions launched in ordinary criminal courts under the provisions of the Water Act, Air Act and Environment Act never reach their conclusion either because of the workload in those courts or because there is no proper appreciation of the significance of the environment matters on the part of those in charge of conducting of those cases. Moreover, any orders passed by the authorities under Water and Air Acts and the Environment Act are immediately questioned by the industries in courts. Those proceedings take years and years to reach conclusion. Very often, interim orders are granted meanwhile which effectively disable the authorities from ensuring the implementation of their orders. All this points to the need for creating environment courts which alone should be empowered to deal with all matters, civil and criminal, relating to environment. These courts should be manned by legally trained persons/judicial officers and should be allowed to adopt summary procedures. This issue, no doubt, requires to be studied and examined in depth from all angles before taking any action.

7. The Central Government may also consider the advisability of strengthening the environment protection machinery both at the Centre and the States and provide them more teeth. The heads of several units and agencies should be made personally accountable for any lapses and/or negligence on the part of their units and agencies. The idea of an environmental audit by specialist bodies created on a permanent basis with power to inspect, check and take necessary action not only against erring industries but also against erring officers may be considered. The idea of an environmental audit conducted periodically and certified annually, by specialists in the field, duly recognised, can also be considered. The ultimate idea is to integrate and balance the concern for environment with the need for industrialisation and technological progress.

71. Respondents 4 to 8 shall pay a sum of Rupees fifty thousand by way of costs to the petitioner which had to fight this litigation over a period of over six years with its own means. Voluntary bodies, like the petitioner, deserve encouragement wherever their actions are found to be in furtherance of public interest. The said sum shall be

** A distinction between the *Oleum Gas Leak case* and the present case may be noticed. That was not a case where the industry was established or was being operated contrary to law as in the present case. That was also not a case where the orders of lawful authorities and courts were violated with impunity as in this case. In this case, there is a clear violation of law and disobedience to the orders of this Court apart from the orders of the lawful authorities. The facts stated above and findings recorded by us hereinafter bear it out. This Court has to ensure the observance of law and of its orders as a part of enforcement of fundamental rights. That power cannot be disputed. If so, a question may arise why is this Court not competent to make orders necessary for a full and effective implementation of its orders — and that includes the imposition and recovery of cost of all measures including remedial measures. Above all, the Central Government has the power under the provisions of Sections 3 and 5 of the Environment (Protection) Act, 1986 to levy and recover the cost of remedial measures — as we shall presently point out. If the Central Government omits to do that duty, this Court can certainly issue appropriate directions to it to take necessary measures. Is it not open to the court, in an appropriate situation, to award damages against private parties as part of relief granted against public authorities. This is a question upon which we do not wish to express any opinion in the absence of a full debate at the Bar.

(1996) 5 Supreme Court Cases 647

(BEFORE KULDIP SINGH, FAIZAN UDDIN AND K. VENKATASWAMI, JJ.)

VELLORE CITIZENS' WELFARE FORUM . . Petitioner;

Versus

UNION OF INDIA AND OTHERS . . Respondents.

Writ Petition (C) No. 914 of 1991[†], decided on August 28, 1996

A. Constitution of India — Arts. 32, 21, 47, 48-A, 51-A(g) — Environmental pollution by tannery industries — While the industries are vital for country's development, but having regard to pollution caused by them, principle of Sustainable Development has to be adopted as a balancing concept — Precautionary Principle and Polluter Pays Principle acceptable as part of the law of the country and should be implemented — Precautionary environmental measures should be taken by State Govt. and statutory authorities and lack of scientific certainty cannot be a ground for postponing such measures where there are serious threats to ecology — Onus on polluter industries to prove that their actions were environmentally benign — Polluter industries liable to pay compensation to individuals affected as well as to make good the ecological damage — Discharge of untreated effluent by tanneries in State of T.N. rendering river water unfit for human consumption, contaminating the subsoil water and spoiling the physico-chemical properties of the soil making it unfit for agricultural purposes — Held, such industries cannot be permitted to continue their operation unless they set up pollution control devices — Such industries liable to compensate for the past pollution generated by them — Pollution fine of Rs 10,000 imposed on each tannery — Amount to be deposited in Environment Protection Fund which shall be utilised for compensating the affected persons and restoring the ecological balance — Environment (Protection) Act, 1986 — Ecology — Damage to — Compensation

B. Ecology — Environment (Protection) Act, 1986 — S. 3(3) — Authority under — Directed to be constituted by Central Govt. before 30-9-1996 — Authority to be headed by a retired High Court Judge — Authority to have all powers necessary to deal with the situation created by the polluting industries — Authority also to implement the Precautionary Principle and the principle of Polluter Pays — Authority to compute compensation payable by the polluting industries to individuals affected and that payable for restoring the damage it caused to the environment — Authority also to frame a scheme in consultation with expert bodies like NEERI, Central Board and State Board for reversing the ecological damage and environmental pollution

C. Constitution of India — Arts. 32, 226 & 21 — PIL — Ecology — Green Bench — Environmental pollution caused by tanneries in State of T.N. — Suitable directions issued by Supreme Court — However, instead of itself monitoring the matter any further Madras High Court advised to constitute a Green Bench to deal with all the environmental matters — Such Green Benches already functioning in some other High Courts

D. International Law — Customary international law — If not contrary to the municipal law, deemed to be incorporated in domestic law

E. Judicial activism — Inaction on the part of the Govt. to set up regulatory/adjudicatory statutory authorities as directed by the Act makes it imperative for the Court to pass suitable necessary directions

and provides employment avenues it has no right to destroy the ecology, degrade the environment and pose as a health-hazard. It cannot be permitted to expand or even to continue with the present production unless it tackles by itself the problem of pollution created by the said industry.

(Para 9)

The traditional concept that development and ecology are opposed to each other is no longer acceptable. "Sustainable Development" is the answer. In the international sphere, "Sustainable Development" has come to be accepted as a viable concept to eradicate poverty and improve the quality of human life while living within the carrying capacity of the supporting ecosystems. "Sustainable Development" as defined by the Brundtland Report means "Development that meets the needs of the present without compromising the ability of the future generations to meet their own needs". "Sustainable Development" as a balancing concept between ecology and development has been accepted as a part of the customary international law though its salient features have yet to be finalised by the international law jurists.

(Para 10)

"The Precautionary Principle" and "the Polluter Pays Principle" are essential features of "Sustainable Development". The "Precautionary Principle" — in the context of the municipal law — means:

(i) Environmental measures — by the State Government and the statutory authorities — must anticipate, prevent and attack the causes of environmental degradation.

(ii) Where there are threats of serious and irreversible damage, lack of scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.

(iii) The "onus of proof" is on the actor or the developer/industrialist to show that his action is environmentally benign.

"The Polluter Pays Principle" has been held to be a sound principle. The "Polluter Pays Principle" as interpreted by the Supreme Court means that the absolute liability for harm to the environment extends not only to compensate the victims of pollution but also the cost of restoring the environmental degradation. Remediation of the damaged environment is part of the process of "Sustainable Development" and as such the polluter is liable to pay the cost to the individual sufferers as well as the cost of reversing the damaged ecology. Apart from the constitutional mandate to protect and improve the environment there are plenty of post-independence legislations on the subject. In view of the constitutional and statutory provisions it must be held that the Precautionary Principle and the Polluter Pays Principle are part of the environmental law of the country.

(Paras 11 to 14)

Indian Council for Enviro-Legal Action v. *Union of India*, (1996) 3 SCC 212 : JT (1996) 2 SC 196, *relied on*

Even otherwise, once these principles are accepted as part of the customary international law there would be no difficulty in accepting them as part of the domestic law. The rules of customary international law which are not contrary to the municipal law shall be deemed to have been incorporated in the domestic law and shall be followed by the courts of law.

(Para 15)

A.D.M. v. *Shivakant Shukla*, (1976) 2 SCC 521 : AIR 1976 SC 1207; *Jolly George Varghese* v. *Bank of Cochin*, (1980) 2 SCC 360 : AIR 1980 SC 470; *Gramophone Co. of India Ltd.* v. *Birendra Bahadur Pandey*, (1984) 2 SCC 534 : 1984 SCC (Cri) 313 : AIR 1984 SC 667, *relied on*

The constitutional and statutory provisions protect a person's right to fresh air, clean water and pollution-free environment, but the source of the right is the

inalienable common law right of clean environment. Our legal system having been founded on the British common law the right of a person to a pollution-free environment is a part of the basic jurisprudence of the land.

(Paras 16 and 17)

Commentaries on the Laws of England of Sir William Blackstone Vol. III, Fourth Edn. published in 1876. Chapter XIII, *relied on*

The Environment Act contains useful provisions for controlling pollution. The main purpose of the Act is to create an authority or authorities under Section 3(3) of the Act with adequate powers to control pollution and protect the environment. It is a pity that till date no authority has been constituted by the Central Government. The work which is requiredy to be done by an authority in terms of Section 3(3) read with other provisions of the Act is being done by the Supreme Court and the other courts in the country. It is high time that the Central Government realises its responsibility and statutory duty to protect the degrading environment in the country. If the conditions in the five districts of Tamil Nadu, where tanneries are operating, are permitted to continue then in the near future all rivers/canals shall be polluted, underground waters contaminated, agricultural lands turned barren and the residents of the area exposed to serious diseases. It is, therefore, necessary for the Supreme Court to direct the Central Government to take immediate action under the provisions of the Environment Act.

(Para 20)

There are more than 900 tanneries operating in the five districts of Tamil Nadu. Some of them may, by now, have installed the necessary pollution control measures; they have been polluting the environment for over a decade and in some cases even for a longer period. The Supreme Court has in various orders indicated that these tanneries are liable to pay pollution fine. The polluters must compensate the affected persons and also pay the cost of restoring the damaged ecology.

(Para 21)

The Board has the power under the Environment Act and the Rules to lay down standards for emissions or discharge of environmental pollutants. Rule 3(2) of the Rules even permits the Board to specify more stringent standards from those provided under the Rules. The NEERI having justified the standards stipulated by the Board, it is directed that these standards are to be maintained by the tanneries and other industries in the State of Tamil Nadu.

(Para 24)

[Keeping in view the above position the Supreme Court gave specific directions in para 25.]

However, it is not necessary for the Supreme Court to monitor these mattes any further. The Madras High Court would be in a better position to monitor these matters hereinafter. Therefore, the Chief Justice of the Madras High Court is directed to constitute a Special Bench — "Green Bench" — to deal with this case and other environmental matters. However, it would be open to the Bench to pass any appropriate order/orders keeping in view the directions issued by "Green Benches" already functioning in Calcutta, Madhya Pradesh and some other High Courts.

(Para 26)

The Judgment of the Court was delivered by

KULDIP SINGH, J.— This petition — public interest — under Article 32 of the Constitution of India has been filed by Vellore Citizens' Welfare Forum and is directed against the pollution which is being caused by enormous discharge of untreated effluent by the tanneries and other industries in the State of Tamil Nadu. It is stated that the tanneries are discharging untreated effluent into agricultural fields, roadsides, waterways and open lands. The untreated effluent is finally discharged in River Palar which is the main source of water supply to the residents of the area. According to the petitioner the entire surface and subsoil water of River Palar has been polluted resulting in non-availability of potable water to the residents of the area. It is stated that the tanneries in the State of Tamil Nadu have caused environmental degradation in the area. According to the preliminary survey made by the Tamil Nadu Agricultural University Research Centre, Vellore nearly 35,000 hectares of agricultural land in the tanneries belt has become either partially or totally unfit for cultivation. It has been further stated in the petition that the tanneries use about 170 types of chemicals in the chrome tanning processes. The said chemicals include sodium chloride, lime, sodium sulphate, chlorium (*sic*) sulphate, fat, liquor, ammonia and sulphuric acid besides dyes which are used in large quantities. Nearly 35 litres of water is used for processing one kilogram of finished leather, resulting in dangerously enormous quantities of toxic effluents being let out in the open by the tanning industry. These effluents have spoiled the physico-chemical properties of the soil and have contaminated groundwater by percolation. According to the petitioner an independent survey conducted by Peace Members, a non-governmental organisation, covering 13 villages of Dindigul and Peddiar Chatram Anchayat Unions, reveals that 350 wells out of total of 467 used for drinking and irrigation purposes have been polluted. Women and children have to walk miles to get drinking water. Legal Aid and Advice Board of Tamil Nadu requested two lawyers namely, M.R. Ramanan and P.S. Subramanium to visit the area and submit a report indicating the extent of pollution caused by the tanneries. Relevant part of the report is as under:

> "As per the Technical Report dated 28-5-1983 of the hydrological investigations carried out in Solur village near Ambur it was noticed that 176 chemicals including acids were contained in the tannery effluents. If 40 litres of water with chemicals are required for one kilo of leather, with the production of 200 tons of leather per day at present and likely to

be increased multifold in the next four to five years with the springing up of more tanneries like mushroom in and around Ambur town, the magnitude of the effluent water used with chemicals and acids let out daily can be shockingly imagined. … The effluents are let out from the tanneries in the nearby lands, then to Goodar and Palar

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

rivers. The lands, the rivulet and the river receive the effluents containing toxic chemicals and acids. The subsoil water is polluted ultimately affecting not only arable lands, wells used for agriculture but also drinking-water wells. The entire Ambur town and the villages situated nearby do not have good drinking water. Some of the influential and rich people are able to get drinking water from a far-off place connected by a few pipes. During rainy days and floods, the chemicals deposited into the rivers and lands spread out quickly to other lands. The effluents thus let out affect cultivation; either crops do not come up at all or if produced the yield is reduced abnormally too low. … The tanners have come to stay. The industry is a foreign exchange earner. But one moot point is whether at the cost of the lives of lakhs of people with increasing human population the activities of the tanneries should be encouraged on monetary considerations. We find that the tanners have absolutely no regard for the healthy environment in and around their tanneries. The effluents discharged have been stored like a pond openly in most of the places adjacent to cultivable lands with easy access for the animals and the people. The Ambur Municipality, which can exercise its powers as per the provisions of the Madras District Municipalities Act, 1920 (5 of 1920) more particularly under Sections 226 to 231, 249 to 253 and 338 to 342 seems to be a silent spectator. Probably it does not want to antagonise the highly influential and stupendously rich tanners. The powers given under Section 63 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974) have not been exercised in the case of tanneries in Ambur and the surrounding areas."

2. Along with the affidavit dated 21-7-1992 filed by Deputy Secretary to Government, Environment and Forests Department of Tamil Nadu, a list of villages affected by the tanneries has been attached. The list mentions 59 villages in the three divisions of Thirupathur, Vellore and Ranipet. There is acute shortage of drinking water in these 59 villages and as such alternative arrangements were being made by the Government for the supply of drinking water.

3. In the affidavit dated 9-1-1992 filed by Member Secretary, Tamil Nadu Pollution Control Board (the Board), it has been stated as under:

> "It is submitted that there are 584 tanneries in North Arcot Ambedkar District vide Annexures 'A' and 'D', out of which 443 tanneries have applied for consent of the Board. The Government were concerned with the treatment and disposal of effluent from tanneries. The Government gave time up to 31-7-1985 to tanneries to put up Effluent Treatment Plant (ETP). So far 33 tanneries in North Arcot

Ambedkar District have put up Effluent Treatment Plants. The Board has stipulated standards for the effluent to be disposed of by the tanneries."

4. The affidavits filed on behalf of the State of Tamil Nadu and the Board clearly indicate that the tanneries and other polluting industries in the State of Tamil Nadu are being persuaded for the last about 10 years to control the pollution generated by them. They were given option either to construct common effluent treatment plants for a cluster of industries or to set up individual pollution control devices. The Central Government agreed to give substantial subsidy for the construction of Common Effluent Treatment Plants (CETPs). It is a pity that till date most of the tanneries operating in the State of Tamil Nadu have not taken any step to control the pollution caused by the discharge of effluent. This Court on 1-5-1995 passed a detailed order. In the said order this Court noticed various earlier orders passed by this Court and

finally directed as under:

"Mr R. Mohan, the learned Senior Counsel for the Tamil Nadu Pollution Control Board, has placed before us a consolidated statement dividing the 553 industries into three parts. The first part in Statement 1 and the second part in Statement 2 relate to those tanneries who have set up the Effluent Treatment Plants either individually or collectively to the satisfaction of the Tamil Nadu Pollution Control Board. According to the report placed on the record by the Board, these industries in Statements 1 and 2 have not achieved the standard or have not started functioning to the satisfaction of the Board. So far as the industries in Statements 1 and 2 are concerned, we give them three months' notice from today to complete the setting up of Effluent Treatment Plant (either individually or collectively) failing which they shall be liable to pollution fine on the basis of their past working and also liable to be closed. We direct the Tamil Nadu Pollution Control Board to issue individual notices to all these industries within two weeks from today. The Board is also directed to issue a general notice on three consecutive days in a local newspaper which has circulation in the district concerned.

So far as the 57 tanneries listed in Statement III (including 12 industries who have filed writ petition, numbers of which have been given above) are concerned, these units have not installed and commissioned the Effluent Treatment Plants despite various orders issued by this Court from time to time. Mr R. Mohan, the learned Senior Counsel appearing for Tamil Nadu Pollution Control Board, states that the Board has issued separate notices to these units directing them to set up the Effluent Treatment Plants. Keeping in view the fact that this Court has been monitoring the matter for the last about four years and various orders have been issued by this Court from time to time, there is no justification to grant any further time to these industries. We, therefore, direct the 57 industries listed hereunder to be closed with immediate effect. … We direct the District Collector and the Senior Superintendent of Police of the district to have our orders complied with

Page: 653

immediately. Both these officers shall file a report in this Court within one week of the receipt of the order.

We give opportunity to these 57 industries to approach this Court as and when any steps towards the setting up of Effluent Treatment Plants and their commissioning have been taken by these industries. If any of the industries wish to be relocated to some other area, they may come out with a proposal in that respect."

5. On 28-7-1995 this Court suspended the closure order in respect of seven industries mentioned therein for a period of eight weeks. It was further observed as under:

"Mr G. Ramaswamy, the learned Senior Advocate appearing for some of the tanneries in Madras, states that the setting up of the Effluent Treatment Plants is progressing satisfactorily. According to him several lakhs have already been spent and in a short time it would start operating. Mr Mohan, the learned counsel for the Tamil Nadu Pollution Control Board, states that the team of the Board will inspect the project and file a report by 3-8-1995."

6. This Court on 8-9-1995 passed the following order:

"The Tamil Nadu Pollution Control Board has filed its report. List No. I relates to about 299 industries. It is stated by Mr G. Ramaswamy, Mr Kapil Sibal and Mr G.L.

Sanghi, the learned Senior Advocates appearing for these industries, that the setting up of the projects is in progress. According to the learned counsel Tamil Nadu Leather Development Corporation (TALCO) is in charge of the project. The learned counsel state that the project shall be completed in every respect within 3 months from today. The details of these industries and the projects undertaken by TALCO as per List No. I are as under. … We are of the view that it would be in the interest of justice to give a little more time to these industries to complete the project. Although the industries have asked for three months' time, we give them time till 31-12-1995. We make it clear that in case the projects are not completed by that time, the industries shall be liable to be closed forthwith. Apart from that, these industries shall also be liable to pollution fine for the past period during which they had been operating.

We also take this opportunity to direct TALCO to take full interest in these projects and have the projects completed within the time granted by us.

Mr Kapil Sibal, the learned counsel appearing for the tanneries, stated that Council for Indian Finished Leather Manufacturers' Export Association is a body which is collecting 5 per cent on all exports. This body also helps the tanneries in various respects. We issue notice to the Association to be present in this Court and assist this Court in all the matters pertaining to the leather tanneries in Madras. Mr Sampath takes notice.

Page: 654

So far as List No. II is concerned, it relates to about 163 tanneries (except M/s Vibgyor Tanners & Co., Kailasagiri Road, Mittalam-635 811, Ambur (via). The Pollution Control Board has inspected all these tanneries and placed its report before us. According to the report most of these tanneries have not even started primary work at the spot. Some of them have not even located the land. The tanneries should have themselves set up the pollution control devices right at the time when they started working. They have not done so. They are not even listening to various orders passed by this Court from time to time during the last more than 2 years. It is on the record that these tanneries are polluting the area. Even the water around the area where they are operating is not worth drinking. We give no further time to these tanneries. We direct all the following tanneries which are numbering about 162 to be closed with immediate effect."

It may be mentioned that this Court suspended the closure orders in respect of various industries from time to time to enable the said industries to install the pollution control devices.

7. This Court by the order dated 20-10-1995 directed the National Environmental Engineering Research Institute, Nagpur (NEERI) to send a team of experts to examine, in particular, the feasibility of setting up of CETPs for cluster of tanneries situated at different places in the State of Tamil Nadu where the work of setting up of the CETPs has not started and also to inspect the existing CETPs including those where construction work was in progress. NEERI submitted its first report on 9-12-1995 and the second report on 12-2-1996. This Court examined the two reports and passed the following order on 9-4-1996:

"Pursuant to this Court's order dated December 15, 1995, NEERI has submitted Final Examination Report dated February 12, 1996 regarding CETPs constructed/under construction by the tanneries in various districts of the State of

Tamil Nadu. A four-member team constituted by the Director, NEERI inspected the CETPs from January 27, 1996 to February 12, 1996. According to the report, at present, 30 CETP sites have been identified for tannery clusters in the five districts of Tamil Nadu viz., North Arcot Ambedkar, Erode Periyar, Dindigul Anna, Trichi and Chengai M.G.R. All the 30 CETPs were inspected by the team. According to the report, only 7 CETPs are under operation, while 10 are under construction and 13 are proposed. The following 7 CETPs are under operation:

1. M/s TALCO Ranipet Tannery Effluent Treatment Co. Ltd., Ranipet, District North Arcot Ambedkar.

2. M/s TALCO Ambur Tannery Effluent Treatment Co. Ltd., Thuthipet Sector, Ambur, District North Arcot Ambedkar.

3. M/s TALCO Vaniyambadi Tanners Enviro Control Systems Ltd., Vaniyambattu, Vaniyambadi, District North Arcot.

Page: 655

4. M/s Pallavaram Tanners Industrial Effluent Treatment Co., Chrompet Area, District Chengai MGR.

5. M/s Ranipet SIDCO Finished Leather Effluent Treatment Co. Pvt. Ltd., Ranipet, District North Arcot Ambedkar.

6. M/s TALCO Vaniyambadi Tanners Enviro Control Systems Ltd., Udayendiram, Vaniyambadi, District North Arcot Ambedkar.

7. M/s TALCO Pernambut Tannery Effluent Treatment Co. Ltd., Bakkalapalli, Pernambut, District North Arcot Ambedkar.

The CETPs mentioned at Sl. Nos. 5, 6 and 7 were commissioned in January 1996 and were on the date of report passing through stabilization period. The report indicates that so far as the above CETPs are concerned, although there is improvement in the performance, they are still not operating at their optimal level and are not meeting the standards as laid down by the Ministry of Environment and Forests and the Tamil Nadu Pollution Control Board for inland surface water discharge. The NEERI has given various recommendations to be followed by the above-mentioned units. We direct the units to comply with the recommendations of NEERI within two months from today. The Tamil Nadu Pollution Control Board shall monitor the directions and have the recommendations of the NEERI complied with. So far as the three units which are under stabilization are concerned, the NEERI Team may inspect the same and place a final report before this Court within the period of two months.

Apart from the tanneries which are connected with the above-mentioned 7 units, there are large number of other tanneries operating in the 5 districts mentioned above which have not set up any satisfactory pollution control devices. Mr Mohan, the learned counsel for the Tamil Nadu Pollution Control Board, states that notices were issued to all those tanneries from time to time directing them to set up the necessary pollution control devices. It is mandatory for the tanneries to set up the pollution control devices. Despite notices it has not been done. This Court has been monitoring these matters for the last about 4 years. There is no awakening or realisation to control the pollution which is being generated by these tanneries.

The NEERI has indicated the physico-chemical characteristics of groundwater from dug wells near tannery clusters. According to the report, water samples show that well waters around the tanneries are unfit for drinking. The report also shows

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

that the quality of water in Palar river downstream from the place where effluent is discharged is highly polluted. We, therefore, direct that all the tanneries in the districts of North Arcot Ambedkar, Erode Periyar, Dindigul Anna, Trichi and Chengai M.G.R. which are not connected with the seven CETPs mentioned above, shall be closed with immediate effect. None of these tanneries shall be permitted to operate till the time the CETPs are constructed to the satisfaction of the Tamil Nadu Pollution Control

Board. We direct the District Magistrate and the Superintendent of Police of the area concerned, to have all these tanneries closed with immediate effect. Mr Mehta has placed on record the report of Tamil Nadu Pollution Control Board. In Statement I of the Index, there is a list of 30 industries which have also not been connected with any CETPs. According to the report, these industries have not, till date set up pollution control devices. We direct the closure of these industries also. List is as under. … The Tamil Nadu Pollution Control Board has filed another report dated January 18, 1996 pertaining to 51 tanneries. There is dispute regarding the permissible limit of the quantity of total dissolved solids (TDS). Since the NEERI Team is visiting these tanneries, they may examine the TDS aspect also and advise this Court accordingly. Meanwhile, we do not propose to close any of the tanneries on the ground that it is discharging more than 2001 TDS.

The report indicates that except the 17 units, all other units are non-complaint units in the sense that they are not complying with the BOD standards. Excepting these 17 industries, the remaining 34 tanneries listed hereunder are directed to be closed forthwith. … We direct the District Magistrate and the Superintendent of Police of the area concerned to have all these industries mentioned above closed forthwith. The tanneries in the 5 districts of Tamil Nadu referred to in this order have been operating for a long time. Some of the tanneries are operating for a period of more than two decades. All this period, these tanneries have been polluting the area. Needless to say that the total environment in the area has been polluted. We issue show-cause notice to these industries through their learned counsel who are present in Court, why they be not subjected to heavy pollution fine. We direct the State of Tamil Nadu through the Industry Ministry, the Tamil Nadu Pollution Control Board and all other authorities concerned and also the Government of India through the Ministry of Environment and Forests, not to permit the setting up of further tanneries in the State of Tamil Nadu.

Copy of this order be communicated to the authorities concerned within three days. To come up for further consideration after the replies to the show-cause. There are a large number of tanneries in the State of Tamil Nadu which have set up individual pollution control devices and which according to the Tamil Nadu Pollution Control Board are operating satisfactorily. The fact, however, remains that all these tanneries are discharging the treated effluents within the factory precincts itself. We direct NEERI Team which is visiting this area to find out as to whether the discharge of the effluent on the land within the factory premises is permissible environmentally. *M/s Nandeem Tanning Company, Valayampet Vaniyambadi* is one of such industries. Copy of the report submitted by the Tamil Nadu Pollution Control Board be forwarded to the NEERI. NEERI may inspect this industry within ten days and file a report in this Court. Copy of this order be communicated to NEERI.

Matters regarding distilleries in the State of Tamil Nadu

The Tamil Nadu Pollution Control Board has placed on record the factual report regarding 6 distilleries mentioned in page 4 of the Index of its Report dated April 5, 1996. The learned counsel for the Board states that the Board shall issue necessary notices to these industries to set up pollution control devices to the satisfaction of the Board, failing which these distilleries shall be closed. The Pollution Control Board shall place a status report before this Court."

The NEERI submitted two further reports on 1-5-1996 and 11-6-1996 in respect of CETPs set up by various industries. The NEERI reports indicate that the physico-chemical characteristics of groundwater from dug wells in Ranipet, Thuthipeth, Valayambattu, Vaniyambadi and various other places do not conform to the limits prescribed for drinking purposes.

8. This Court has been monitoring this petition for almost five years. The NEERI, Board and the Central Pollution Control Board (Central Board) have visited the tanning and other industries in the State of Tamil Nadu several times. These expert bodies have offered all possible assistance to these industries. The NEERI reports indicate that even the seven operational CETPs are not functioning to its satisfaction. NEERI has made several recommendations to be followed by the operational CETPs. Out of the 30 CETP sites which have been identified for tannery clusters in the five districts of North Arcot Ambedkar, Erode Periyar, Dindigul Anna, Trichi and Chengai M.G.R., 7 are under operation, 10 are under construction and 13 are proposed. There are a large number of tanneries which are not likely to be connected with any CETP and are required to set up pollution control devices on their own. Despite repeated extensions granted by this Court during the last five years and prior to that by the Board the tanneries in the State of Tamil Nadu have miserably failed to control the pollution generated by them.

9. It is no doubt correct that the leather industry in India has become a major foreign exchange earner and at present Tamil Nadu is the leading exporter of finished leather accounting for approximately 80 per cent of the country's export. Though the leather industry is of vital importance to the country as it generates foreign exchange and provides employment avenues it has no right to destroy the ecology, degrade the environment and pose as a health-hazard. It cannot be permitted to expand or even to continue with the present production unless it tackles by itself the problem of pollution created by the said industry.

10. The traditional concept that development and ecology are opposed to each other is no longer acceptable. "Sustainable Development" is the answer. In the international sphere, "Sustainable Development" as a concept came to be known for the first time in the Stockholm Declaration of 1972. Thereafter, in 1987 the concept was given a definite shape by the World Commission on Environment and Development in its report called "Our Common Future". The Commission was chaired by the then Prime Minister of Norway, Ms G.H. Brundtland and as such the report is popularly known

as "Brundtland Report". In 1991 the World Conservation Union, United Nations Environment Programme and Worldwide Fund for Nature, jointly came out with a

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

document called "Caring for the Earth" which is a strategy for sustainable living. Finally, came the Earth Summit held in June 1992 at Rio which saw the largest gathering of world leaders ever in the history — deliberating and chalking out a blueprint for the survival of the planet. Among the tangible achievements of the Rio Conference was the signing of two conventions, one on biological diversity and another on climate change. These conventions were signed by 153 nations. The delegates also approved by consensus three non-binding documents namely, a Statement on Forestry Principles, a declaration of principles on environmental policy and development initiatives and Agenda 21, a programme of action into the next century in areas like poverty, population and pollution. During the two decades from Stockholm to Rio "Sustainable Development" has come to be accepted as a viable concept to eradicate poverty and improve the quality of human life while living within the carrying capacity of the supporting ecosystems. "Sustainable Development" as defined by the Brundtland Report means "Development that meets the needs of the present without compromising the ability of the future generations to meet their own needs". We have no hesitation in holding that "Sustainable Development" as a balancing concept between ecology and development has been accepted as a part of the customary international law though its salient features have yet to be finalised by the international law jurists.

11. Some of the salient principles of "Sustainable Development", as culled out from Brundtland Report and other international documents, are Inter-Generational Equity, Use and Conservation of Natural Resources, Environmental Protection, the Precautionary Principle, Polluter Pays Principle, Obligation to Assist and Cooperate, Eradication of Poverty and Financial Assistance to the developing countries. We are, however, of the view that "The Precautionary Principle" and "The Polluter Pays Principle" are essential features of "Sustainable Development". The "Precautionary Principle" — in the context of the municipal law — means:

(*i*) Environmental measures — by the State Government and the statutory authorities — must anticipate, prevent and attack the causes of environmental degradation.

(*ii*) Where there are threats of serious and irreversible damage, lack of scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.

(*iii*) The "onus of proof" is on the actor or the developer/industrialist to show that his action is environmentally benign.

12. "The Polluter Pays Principle" has been held to be a sound principle by this Court in *Indian Council for Enviro-Legal Action* v. *Union of India*[1]. The Court observed: (SCC p. 246, para 65)

"... we are of the opinion that any principle evolved in this behalf should be simple, practical and suited to the conditions obtaining in this country."

The Court ruled that: (SCC p. 246, para 65)

"... once the activity carried on is hazardous or inherently dangerous, the person carrying on such activity is liable to make good the loss caused to any other person by his activity *irrespective* of the fact whether he took reasonable care while carrying on his activity. The rule is premised upon the very nature of the activity

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

carried on".

Consequently the polluting industries are "absolutely liable to compensate for the harm caused by them to villagers in the affected area, to the soil and to the underground water and hence, they are bound to take all necessary measures to remove sludge and other pollutants lying in the affected areas". The "Polluter Pays Principle" as interpreted by this Court means that the absolute liability for harm to the environment extends not only to compensate the victims of pollution but also the cost of restoring the environmental degradation. Remediation of the damaged environment is part of the process of "Sustainable Development" and as such the polluter is liable to pay the cost to the individual sufferers as well as the cost of reversing the damaged ecology.

13. The Precautionary Principle and the Polluter Pays Principle have been accepted as part of the law of the land. Article 21 of the Constitution of India guarantees protection of life and personal liberty. Articles 47, 48-A and 51-A(*g*) of the Constitution are as under:

> "47. *Duty of the State to raise the level of nutrition and the standard of living and to improve public health*.—The State shall regard the raising of the level of nutrition and the standard of living of its people and the improvement of public health as among its primary duties and, in particular, the State shall endeavour to bring about prohibition of the consumption except for medicinal purposes of intoxicating drinks and of drugs which are injurious to health.
>
> 48-A. *Protection and improvement of environment and safeguarding of forests and wildlife*.—The State shall endeavour to protect and improve the environment and to safeguard the forests and wildlife of the country.
>
> 51-A. (*g*) to protect and improve the natural environment including forests, lakes, rivers and wildlife, and to have compassion for living creatures."

Apart from the constitutional mandate to protect and improve the environment there are plenty of post-independence legislations on the subject but more relevant enactments for our purpose are: the Water (Prevention and Control of Pollution) Act, 1974 (the Water Act), the Air (Prevention and Control of Pollution) Act, 1981 (the Air Act) and the Environment (Protection) Act, 1986 (the Environment Act). The Water Act provides for the constitution of the Central Pollution Control Board by the

Central Government and the constitution of the State Pollution Control Boards by various State Governments in the country. The Boards function under the control of the Governments concerned. The Water Act prohibits the use of streams and wells for disposal of polluting matters. It also provides for restrictions on outlets and discharge of effluents without obtaining consent from the Board. Prosecution and penalties have been provided which include sentence of imprisonment. The Air Act provides that the Central Pollution Control Board and the State Pollution Control Boards constituted under the Water Act shall also perform the powers and functions under the Air Act. The main function of the Boards, under the Air Act, is to improve the quality of the air and to prevent, control and abate air pollution in the country. We shall deal with the Environment Act in the latter part of this judgment.

14. In view of the above-mentioned constitutional and statutory provisions we have no hesitation in holding that the Precautionary Principle and the Polluter Pays Principle are part of the environmental law of the country.

15. Even otherwise once these principles are accepted as part of the Customary

SCC Online Web Edition: http://www.scconline.com
© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

International Law there would be no difficulty in accepting them as part of the domestic law. It is almost an accepted proposition of law that the rules of Customary International Law which are not contrary to the municipal law shall be deemed to have been incorporated in the domestic law and shall be followed by the courts of law. To support we may refer to Justice H.R. Khanna's opinion in *A.D.M.* v. *Shivakant Shukla*[2], *Jolly George Varghese case*[3] and *Gramophone Co. case*[4].

16. The constitutional and statutory provisions protect a person's right to fresh air, clean water and pollution-free environment, but the source of the right is the inalienable common law right of clean environment. It would be useful to quote a paragraph from Blackstone's commentaries on the Laws of England (*Commentaries on the Laws of England of Sir William Blackstone*) Vol. III, fourth edition published in 1876. Chapter XIII, "Of Nuisance" depicts the law on the subject in the following words:

> "Also, if a person keeps his hogs, or other noisome animals, or allows filth to accumulate on his premises, so near the house of another, that the stench incommodes him and makes the air unwholesome, this is an injurious nuisance, as it tends to deprive him of the use and benefit of his house. A like injury is, if one's neighbour sets up and exercises any offensive trade; as a tanner's, a tallow-chandler's, or the like; for though these are lawful and necessary trades, yet they should be exercised in remote places; for the rule is, 'sic utere tuo, ut alienum non leadas'; this

therefore is an actionable nuisance. And on a similar principle a constant ringing of bells in one's immediate neighbourhood may be a nuisance.

> ... With regard to other corporeal hereditaments; it is a nuisance to stop or divert water that used to run to another's meadow or mill; to corrupt or poison a watercourse, by erecting a dye-house or a lime-pit, for the use of trade, in the upper part of the stream; to pollute a pond, from which another is entitled to water his cattle; to obstruct a drain; or in short to do any act in common property, that in its consequences must necessarily tend to the prejudice of one's neighbour. So closely does the law of England enforce that excellent rule of gospel-morality, of 'doing to others, as we would they should do unto ourselves'."

17. Our legal system having been founded on the British common law the right of a person to a pollution-free environment is a part of the basic jurisprudence of the land.

18. The Statement of Objects and Reasons to the Environment Act, inter alia, states as under:

> "The decline in environmental quality has been evidenced by increasing pollution, loss of vegetal cover and biological diversity, excessive concentrations of harmful chemicals in the ambient atmosphere and in food-chains, growing risks of environmental accidents and threats to life-support systems. The world community's resolve to protect and enhance the environmental quality found expression in the decisions taken at the United Nations Conference on the Human Environment held in Stockholm in June 1972. The Government of India participated in the Conference and strongly voiced the environmental concerns. While several measures have been taken for environmental protection both before and after the Conference, the need for a general legislation further to implement the decisions of the Conference has become increasingly evident.
>
> Existing laws generally focus on specific types of pollution or on specific

categories of hazardous substances. Some major areas of environmental hazards are not covered. There also exist uncovered gaps in areas of major environmental hazards. There are inadequate linkages in handling matters of industrial and environmental safety. Control mechanisms to guard against slow, insidious build-up of hazardous substances especially new chemicals in the environment, are weak. Because of a multiplicity of regulatory agencies, there is need for an authority which can assume the lead role for studying, planning and implementing long-term requirements of environmental safety and to give direction to, and coordinate a system of speedy and adequate response to emergency situations threatening the environment.

In view of what has been stated above, there is urgent need for the enactment of a general legislation on environmental protection which inter alia, should enable coordination of activities of the various regulatory agencies, creation of an authority or authorities with adequate

Page: 662

powers for environmental protection, regulation of discharge of environmental pollutants and handling of hazardous substances, speedy response in the event of accidents threatening the environment and deterrent punishment to those who endanger human environment, safety and health."

Sections 3, 4, 5, 7 and 8 of the Environment Act which are relevant are as under:

"3. *Power of Central Government to take measures to protect and improve environment*.—(1) Subject to the provisions of this Act, the Central Government shall have the power to take all such measures as it deems necessary or expedient for the purpose of protecting and improving the quality of the environment and preventing, controlling and abating environmental pollution.

(2) In particular, and without prejudice to the generality of the provisions of sub-section (1), such measures may include measures with respect to all or any of the following matters, namely—

(*i*) coordination of actions by the State Governments, officers and other authorities—

(*a*) under this Act, or the rules made thereunder; or

(*b*) under any other law for the time being in force which is relatable to the objects of this Act;

(*ii*) planning and execution of a nation-wide programme for the prevention, control and abatement of environmental pollution;

(*iii*) laying down standards for the quality of environment in its various aspects;

(*iv*) laying down standards for emission or discharge of environmental pollutants from various sources whatsoever:

Provided that different standards for emission or discharge may be laid down under this clause from different sources having regard to the quality or composition of the emission or discharge of environmental pollutants from such sources;

(*v*) restriction of areas in which any industries, operations or processes or class of industries, operations or processes shall not be carried out or shall be carried out subject to certain safeguards;

(*vi*) laying down procedures and safeguards for the prevention of accidents

which may cause environmental pollution and remedial measures for such accidents;

(*vii*) laying down procedures and safeguards for the handling of hazardous substances;

(*viii*) examination of such manufacturing processes, materials and substances as are likely to cause environmental pollution;

(*ix*) carrying out and sponsoring investigations and research relating to problems of environmental pollution;

(*x*) inspection of any premises, plant, equipment, machinery, manufacturing or other processes, materials or substances and giving, by order, of such directions to such authorities, officers or persons as it may consider necessary to take steps for the prevention, control and abatement of environmental pollution;

(*xi*) establishment or recognition of environmental laboratories and institutes to carry out the functions entrusted to such environmental laboratories and institutes under this Act;

(*xii*) collection and dissemination of information in respect of matters relating to environmental pollution;

(*xiii*) preparation of manuals, codes or guides relating to the prevention, control and abatement of environmental pollution;

(*xiv*) such other matters as the Central Government deems necessary or expedient for the purpose of securing the effective implementation of the provisions of this Act.

(3) The Central Government may, if it considers it necessary or expedient so to do for the purposes of this Act, by order, published in the Official Gazette, constitute an authority or authorities by such name or names as may be specified in the order for the purpose of exercising and performing such of the powers and functions (including the power to issue directions under Section 5) of the Central Government under this Act and for taking measures with respect to such of the matters referred to in sub-section (2) as may be mentioned in the order and subject to the supervision and control of the Central Government and the provisions of such order, such authority or authorities may exercise the powers or perform the functions or take the measures so mentioned in the order as if such authority or authorities had been empowered by this Act to exercise those powers or perform those functions or take such measures.

4. *Appointment of officers and their powers and functions*.—(1) Without prejudice to the provisions of sub-section (3) of Section 3, the Central Government may appoint officers with such designations as it thinks fit for the purposes of this Act and may entrust to them such of the powers and functions under this Act as it may deem fit.

(2) The officers appointed under sub-section (1) shall be subject to the general control and direction of the Central Government or, if so directed by that Government, also of the authority or authorities, if any, constituted under sub-section (3) of Section 3 or of any other authority or officer.

5. *Power to give directions*.—Notwithstanding anything contained in any other law but subject to the provisions of this Act, the Central Government may, in the

exercise of its powers and performance of its functions under this Act, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions.

Explanation.—For the avoidance of doubts, it is hereby declared that the power to issue directions under this section includes the power to direct—

(*a*) the closure, prohibition or regulation of any industry, operation or process; or

(*b*) stoppage or regulation of the supply of electricity or water or any other service.

7. *Persons carrying on industry, operation, etc., not to allow emission or discharge of environmental pollutants in excess of the standards*.—No person carrying on any industry, operation or process shall discharge or emit or permit to be discharged or emitted any environmental pollutant in excess of such standards as may be prescribed.

8. *Persons handling hazardous substances to comply with procedural safeguards*.—No person shall handle or cause to be handled any hazardous substance except in accordance with such procedure and after complying with such safeguards as may be prescribed."

19. Rules 3(1), 3(2) and 5(1) of the Environment (Protection) Rules, 1986 (the Rules) are as under:

"3. *Standards for emission or discharge of environmental pollutants*.—(1) For the purposes of protecting and improving the quality of the environment and preventing and abating environmental pollution, the standards for emission or discharge of environmental pollutants from the industries, operations or processes shall be as specified in Schedules I to IV.

3. (2) Notwithstanding anything contained in sub-rule (1), the Central Board or a State Board may specify more stringent standards from those provided in Schedules I to IV in respect of any specific industry, operation or process depending upon the quality of the recipient system and after recording reasons therefor in writing.

5. *Prohibition and restriction on the location of industries and the carrying on of processes and operations in different areas*.—(1) The Central Government may take into consideration the following factors while prohibiting or restricting the location of industries and carrying on of processes and operations in different areas—

(*i*) Standards for quality of environment in its various aspects laid down for an area.

(*ii*) The maximum allowable limits of concentration of various environmental pollutants (including noise) for an area.

(*iii*) The likely emission or discharge of environmental pollutants from an industry, process or operation proposed to be prohibited or restricted.

(*iv*) The topographic and climatic features of an area.

(*v*) The biological diversity of the area which, in the opinion of the Central Government needs to be preserved.

(*vi*) Environmentally compatible land use.

(*vii*) Net adverse environmental impact likely to be caused by an industry, process or operation proposed to be prohibited or restricted.

(*viii*) Proximity to a protected area under the Ancient Monuments and Archaeological Sites and Remains Act, 1958 or a sanctuary, National Park, game reserve or closed area notified as such under the Wild Life (Protection) Act, 1972 or places protected under any treaty, agreement or convention with any other country or countries or in pursuance of any decision made in any international conference, association or other body.

(*ix*) Proximity to human settlements.

(*x*) Any other factor as may be considered by the Central Government to be relevant to the protection of the environment in an area."

20. It is thus obvious that the Environment Act contains useful provisions for controlling pollution. The main purpose of the Act is to create an authority or authorities under Section 3(3) of the Act with adequate powers to control pollution and protect the environment. It is a pity that till date no authority has been constituted by the Central Government. The work which is required to be done by an authority in terms of Section 3(3) read with other provisions of the Act is being done by this Court and the other courts in the country. It is high time that the Central Government realises its responsibility and statutory duty to protect the degrading environment in the country. If the conditions in the five districts of Tamil Nadu, where tanneries are operating, are permitted to continue then in the near future all rivers/canals shall be polluted, underground waters contaminated, agricultural lands turned barren and the residents of the area exposed to serious diseases. It is, therefore, necessary for this Court to direct the Central Government to take immediate action under the provisions of the Environment Act.

21. There are more than 900 tanneries operating in the five districts of Tamil Nadu. Some of them may, by now, have installed the necessary pollution control measures; they have been polluting the environment for over a decade and in some cases even for a longer period. This Court has in various orders indicated that these tanneries are liable to pay pollution fine. The polluters must compensate the affected persons and also pay the cost of restoring the damaged ecology.

22. Mr M.C. Mehta, the learned counsel for the petitioner has invited our attention to the notification GOMs No. 213 dated 30-3-1989 which reads as under:

"In the government order first read above, the Government have ordered, among other things, that no industry causing serious water

pollution should be permitted within one kilometre from the embankments of rivers, streams, dams, etc. and that the Tamil Nadu Pollution Control Board should furnish a list of such industries to all local bodies. It has been suggested that it is necessary to have a sharper definition for water sources so that ephemeral water collections like rainwater ponds, drains, sewerages (bio-degradable) etc. may be excluded from the purview of the above order. The Chairman, Tamil Nadu Pollution Control Board has stated that the scope of the government order may be restricted to reservoirs, rivers and public drinking-water sources. He has also stated that there should be a complete

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

ban on location of highly polluting industries within 1 kilometre of certain water sources.

2. The Government have carefully examined the above suggestions. The Government impose a total ban on the setting up of the highly polluting industries mentioned in Annexure I to this order within one kilometre from the embankments of the water sources mentioned in Annexure II to this order.

3. The Government also direct that under any circumstances if any highly polluting industry is proposed to be set up within one kilometre from the embankments of the water sources other than those mentioned in Annexure II to this order, the Tamil Nadu Pollution Control Board should examine the case and obtain the approval of the Government for it."

Annexure I to the notification includes distilleries, tanneries, fertilizer, steel plants and foundries as the highly polluting industries. We have our doubts whether the above-quoted government order is being enforced by the Tamil Nadu Government. The order has been issued to control pollution and protect the environment. We are of the view that the order should be strictly enforced and no industry listed in Annexure I to the order should be permitted to be set up in the prohibited area.

23. The learned counsel for the tanneries raised an objection that the standard regarding total dissolved solids (TDS) fixed by the Board was not justified. This Court by the order dated 9-4-1996 directed the NEERI to examine this aspect and give its opinion. In its report dated 11-6-1996 NEERI has justified the standards stipulated by the Board. The reasoning of the NEERI given in its report dated 11-6-1996 is as under:

"The total dissolved solids in ambient water have physiological, industrial and economic significance. The consumer's acceptance of mineralized water decreases in direct proportion to increased mineralization as indicated by Bruvold (1). High total dissolved solids (TDS), including chlorides and sulphates, are objectionable due to possible physiological effects and mineral taste that they impart to water. High levels of total dissolved solids produce laxative/cathartic/purgative effect in consumers. The requirement of soap and other detergents in household and industry is directly related to water hardness as brought

out by De Boer and Larsen (2). High concentration of mineral salts, particularly sulphates and chlorides, are also associated with costly corrosion damage in wastewater treatment systems, as detailed by Patterson and Banker (3). Of particular importance is the tendency of scale deposits with high TDS thereby resulting in high fuel consumption in boilers.

The Ministry of Environment and Forests (MEF) has not categorically laid down standards for inland surface water discharge for total dissolved solids (TDS), sulphates and chlorides. The decision on these standards rests with the respective State Pollution Control Boards as per the requirements based on local site conditions. The standards stipulated by the TNPCB are justified on the afore-referred considerations.

The prescribed standards of the TNPCB for inland surface water discharge can be met for tannery wastewaters cost effectively through proper implant control measures in tanning operation, and rationally designed and effectively operated wastewater treatment plants (ETPs and CETPs). Tables 3 and 5 depict the quality of

groundwater in some areas around tanneries during peak summer period (3-6-1996 to 5-6-1996). Table 8 presents the data collected by TNPCB at individual ETPs indicating that TDS, sulphates and chloride concentrations are below the prescribed standards for inland surface water discharge. The quality of ambient waters needs to be maintained through the standards stipulated by TNPCB."

24. The Board has the power under the Environment Act and the Rules to lay down standards for emissions or discharge of environmental pollutants. Rule 3(2) of the Rules even permits the Board to specify more stringent standards from those provided under the Rules. The NEERI having justified the standards stipulated by the Board, we direct that these standards are to be maintained by the tanneries and other industries in the State of Tamil Nadu.

25. Keeping in view the scenario discussed by us in this judgment, we order and direct as under:

1. The Central Government shall constitute an authority under Section 3(3) of the Environment (Protection) Act, 1986 and shall confer on the said authority all the powers necessary to deal with the situation created by the tanneries and other polluting industries in the State of Tamil Nadu. The authority shall be headed by a retired Judge of the High Court and it may have other members — preferably with expertise in the field of pollution control and environment protection — to be appointed by the Central Government. The Central Government shall confer on the said authority the powers to issue directions under Section 5 of the Environment Act and for taking measures with respect to the matters referred to in clauses (*v*), (*vi*), (*vii*), (*viii*), (*ix*), (*x*) and (*xii*) of sub-section (2) of Section 3. The Central Government shall constitute the authority before September 30, 1996.

2. The authority so constituted by the Central Government shall implement the "Precautionary Principle" and the "Polluter Pays Principle". The authority shall, with the help of expert opinion and after giving opportunity to the polluters concerned assess the loss to the ecology/environment in the affected areas and shall also identify the individuals/families who have suffered because of the pollution and shall assess the compensation to be paid to the said individuals/families. The authority shall further determine the compensation to be recovered from the polluters as cost of reversing the damaged environment. The authority shall lay down just and fair procedure for completing the exercise.

3. The authority shall compute the compensation under two heads namely, for reversing the ecology and for payment to individuals. A statement showing the total amount to be recovered, the names of the polluters from whom the amount is to be recovered, the amount to be recovered from each polluter, the persons to whom the compensation is to be paid and the amount payable to each of them shall be forwarded to the Collectors/District Magistrates of the area concerned. The Collector/District Magistrate shall recover the amount from the polluters, if necessary, as arrears of land revenue. He shall disburse the compensation awarded by the authority to the affected persons/families.

4. The authority shall direct the closure of the industry owned/managed by a polluter in case he evades or refuses to pay the compensation awarded against him. This shall be in addition to the recovery from him as arrears of land revenue.

5. An industry may have set up the necessary pollution control device at present

but it shall be liable to pay for the past pollution generated by the said industry which has resulted in the environmental degradation and suffering to the residents of the area.

6. We impose pollution fine of Rs 10,000 each on all the tanneries in the districts of North Arcot Ambedkar, Erode Periyar, Dindigul Anna, Trichi and Chengai M.G.R. The fine shall be paid before October 31, 1996 in the office of the Collector/District Magistrate concerned. We direct the Collectors/District Magistrates of these districts to recover the fines from the tanneries. The money shall be deposited, along with the compensation amount recovered from the polluters, under a separate head called "Environment Protection Fund" and shall be utilised for compensating the affected persons as identified by the authorities and also for restoring the damaged environment. The pollution fine is liable to be recovered as arrears of land revenue. The tanneries which fail to deposit the amount by October 31, 1996 shall be closed forthwith and shall also be liable under the Contempt of Courts Act, 1971.

7. The authority, in consultation with expert bodies like NEERI, Central Board, Board shall frame scheme/schemes for reversing the damage caused to the ecology and environment by pollution in the State of Tamil Nadu. The scheme/schemes so framed shall be executed by the State Government under the supervision of the Central Government. The

Page: 669

expenditure shall be met from the "Environment Protection Fund" and from other sources provided by the State Government and the Central Government.

8. We suspend the closure orders in respect of all the tanneries in the five districts of North Arcot Ambedkar, Erode Periyar, Dindigul Anna, Trichi and Chengai M.G.R. We direct all the tanneries in the above five districts to set up CETPs or Individual Pollution Control Devices on or before November 30, 1996. Those connected with CETPs shall have to install in addition the primary devices in the tanneries. All the tanneries in the above five districts shall obtain the consent of the Board to function and operate with effect from December 15, 1996. The tanneries who are refused consent or who fail to obtain the consent of the Board by December 15, 1996 shall be closed forthwith.

9. We direct the Superintendent of Police and the Collector/District Magistrate/Deputy Commissioner of the district concerned to close all those tanneries with immediate effect who fail to obtain the consent from the Board by the said date. Such tanneries shall not be reopened unless the authority permits them to do so. It would be open to the authority to close such tanneries permanently or to direct their relocation.

10. Government Order No. 213 dated March 30, 1989 shall be enforced forthwith. No new industry listed in Annexure I to the notification shall be permitted to be set up within the prohibited area. The authority shall review the cases of all the industries which are already operating in the prohibited area and it would be open to the authority to direct the relocation of any of such industries.

11. The standards stipulated by the Board regarding total dissolved solids (TDS) and approved by the NEERI shall be operative. All the tanneries and other industries in the State of Tamil Nadu shall comply with the said standards. The quality of ambient waters has to be maintained through the standards stipulated by the Board.

26. We have issued comprehensive directions for achieving the end result in this

case. It is not necessary for this Court to monitor these matters any further. We are of the view that the Madras High Court would be in a better position to monitor these matters hereinafter. We, therefore, request the Chief Justice of the Madras High Court to constitute a Special Bench "Green Bench" to deal with this case and other environmental matters. We make it clear that it would be open to the Bench to pass any appropriate order/orders keeping in view the directions issued by us. We may mention that "Green Benches" are already functioning in Calcutta, Madhya Pradesh and some other High Courts. We direct the Registry of this Court to send the records to the Registry of the Madras High Court within one week. The High Court shall treat this matter as a petition under Article 226 of the Constitution of India and deal with it in accordance with law and also in terms of the directions issued by us. We give liberty to the parties to approach the High Court as and when necessary.

Page: 670

27. Mr M.C. Mehta has been assisting this Court to our utmost satisfaction. We place on record our appreciation for Mr Mehta. We direct the State of Tamil Nadu to pay Rs 50,000 towards legal fees and other out of pocket expenses incurred by Mr Mehta.

Advocates who appeared in this case:
Raj Panjwani and Ms Purnima Bhat, Advocates, for the Petitioner;
A. Sharan, Additional Solicitor General (Vikas Sharma and Anil Katiyar, Advocates), for the Respondent.

Chronological list of cases cited ***on page(s)***

1. (2004) 12 SCC 118, *M.C. Mehta* v. *Union of India* 559*g-h*

ORDER

1. We have perused the affidavit filed by Mr G.V. Subrahmanyam, Director, Ministry of Environment and Forests, dated 7-12-2004, along with which list of projects in the industry sector which have been accorded ex post facto environmental clearance up to 14-5-2004 has been annexed. As per the said list, 95 projects in the industry sector have been accorded ex post facto environmental clearance. The notification dated 27-1-1994, inter alia, prohibits construction work, preliminary or otherwise, relating to setting up of the project till environmental clearance is obtained. The nature of the projects to which the said notification applies has been indicated in the notification itself. The last extension granted by the Ministry of Environment and Forests to seek environment impact clearance was in terms of the circular dated 14-5-2002 whereunder the application had to be filed by 31-3-2003. The said circular has been commented upon by this Court in *M.C. Mehta* v. *Union of India*[1].

Page: 560

2. Our attention has been drawn by Mr Panjwani, learned counsel, to the answer

© 2023 Eastern Book Company. The text of this version of this judgment is protected by the law declared by the Supreme Court in Eastern Book Company v. D.B. Modak, (2008) 1 SCC 1 paras 61, 62 & 63.

given in Parliament by the Minister of State in the Ministry of Environment and Forests relating to the units operating without prior environmental clearance. The answer states that the Government had received 465 proposals for ex post facto environmental clearance by 31-3-2003 of which 249 are in the industry sector and 216 in the mining sector. Even if 95 projects in the industry sector, referred to above, are reduced from the aforesaid figure of 249, it will still leave many projects in the industry sector going on without clearance besides 216 projects in the mining sector. A copy of the answer given by the Minister on the floor of the House has been handed over by Mr Panjwani to learned Additional Solicitor General. Let learned Additional Solicitor General take instructions and file an affidavit as to the units operating in violation of the notification dated 27-1-1994, steps taken regarding the remaining proposals and the other relevant facts in regard to the compliance with the environmental impact assessment notification in letter and spirit. This shall be done by filing an affidavit within a period of four weeks.

3. The matter is adjourned.

Court Masters

G. **General Clauses Act, 1897 — Generally — Object and applicability of**

Held :

The rule of promissory estoppel being an equitable doctrine has to be moulded to suit the particular situation. It is not a hard-and-fast rule but an elastic one, the objective of which is to do justice between the parties and to

Page: 195

extend an equitable treatment to them. This doctrine is a principle evolved by equity, to avoid injustice and though commonly named promissory estoppel, it is neither in the realm of contract nor in the realm of estoppel. For application of doctrine of promissory estoppel the promisee must establish that he suffered in detriment or altered his position by reliance on the promise.

(Para 32)

Normally, the doctrine of promissory estoppel is applied against the Government and defence based on executive necessity would not be accepted by the court. However, if it can be shown by the Government that having regard to the facts as they have subsequently transpired, it would be inequitable to hold the Government to the promise made by it, the court would not raise an equity in favour of the promisee and enforce the promise against the Government. Where public interest warrants, the principles of promissory estoppel cannot be invoked. The Government can change the policy in public interest. However, it is well settled that taking cue from this doctrine, the authority cannot be compelled to do something which is not allowed by law or prohibited by law. Doctrine of promissory estoppel cannot be invoked for enforcement of a promise made contrary to law, because none can be compelled to act against the statute [including delegated or subordinate legislation which is deemed to be a part of the parent statute]. Thus, the Government or public authority cannot be compelled to make a provision which is contrary to law.

(Para 33)

The purpose of the General Clauses Act is to place in one single statute different provisions as regards interpretations of words and legal principles which would

otherwise have to be specified separately in many different Acts and Regulations. Whatever the General Clauses Act says whether as regards the meaning of words or as regards legal principles, has to be read into every statute to which it applies.

(Para 40)

The Electricity (Supply) Act, 1948 being a Central Act, the provisions of Sections 14 and 21 of the General Clauses Act, 1897 would be applicable thereto.

(Para 36)

Section 14, GCA, 1897 deals with the exercise of a power successively and has no relevance to the question whether the power claimed can at all be conferred. By Section 14 any power conferred by any Central enactment may be exercised from time to time as occasion arises, unless a different intention appears in the Act. There is no different intention in the Electricity (Supply) Act, 1948. Therefore, the power to issue a notification under Section 49 of the 1948 Act, can be exercised from time to time if circumstances so require.

(Para 37)

Section 21, GCA, 1897 is based on the principle that power to create includes the power to destroy and also the power to alter what is created. Section 21, amongst other things, specifically deals with power to add to, amend, vary or rescind the notifications. The power to rescind a notification is inherent in the power to issue the notification without any limitations or conditions. Section 21 embodies a rule of construction. The nature and extent of its application must be governed by the relevant statute which confers the power to issue the notification, etc. However, there is no manner of doubt that the exercise of power to make subordinate legislation includes the power to rescind the same. This is made clear by Section 21. On that analogy an administrative decision is revocable while a judicial decision is not revocable except in special circumstances. Exercise of power of a subordinate legislation will be prospective and cannot be retrospective unless the statute authorises such an exercise expressly or by necessary implication.

(Paras 38 and 40)

Page: 196

When by a Central Act power is given to the State Government to give some relief by way of concession and/or rebate to newly-established industrial units by a notification, the same can be curtailed and/or withdrawn by issuing another notification under the same provision and such exercise of power cannot be faulted on the ground of promissory estoppel. It would be too narrow a view to accept that chargeability once fixed cannot be altered. Since the charging provision in the Electricity (Supply) Act, 1948 is subject to the State Government's power to issue notification under Section 49 of the Act granting rebate, the State Government, in view of Section 21 of the General Clauses Act, can always withdraw, rescind, add

to or modify an exemption notification. Further, power to curtail and/or withdraw the notification issued under Section 49 of the Electricity (Supply) Act, 1948 giving rebate is implied under Section 49 itself on proper interpretation of Section 21 of the General Clauses Act. Therefore, the power to curtail and/or withdraw the notification issued under Section 49 of the Electricity (Supply) Act, 1948, granting certain benefits, was available to the respondents.

(Paras 39 to 41)

The two-Judge Bench in *Sant Steels case*, (2008) 2 SCC 777 was of the view that notification issued under Section 49 of the 1948 Act can be revoked/modified only if express provision was made for the revocation/modification of the said notification under Section 49 itself and the Court found that as there was no such provision contained in Section 49, it was not open to revoke the same. Further, it added that the provisions of the General Clauses Act would be applicable in case of delegated legislation if withdrawal/curtailment of benefit was in larger public interest or if the legislation was enacted by the legislature authorising the Government to withdraw/curtail the benefit granted by a notification. Under the circumstances the two notifications curtailing the benefit to 17% were treated as contrary to Section 49 of the 1948 Act. The above statement of law is not accurate.

(Para 35)

The concept of the larger public interest introduced, before invocation of Section 21 of the General Clauses Act in *Sant Steels case*, in fact, amounts to amendment of the said provision, as Notifications dated 18-6-1998 and 25-1-1999, issued under Section 49 of the 1948 Act, as well as Notification dated 7-8-2000, issued under Section 24 of the U.P. Electricity Reforms Act, 1999, are in the nature of legislations and, therefore, the principle of promissory estoppel would not apply to them.

(Paras 35 and 43)

What is found is that several decisions some of which are rendered by a larger Bench were not considered in *Sant Steels case*. Hence, the same is overruled on this point. Thus, the petitioners in the present writ petition are not entitled to claim promissory estoppel against the Government and would not be entitled to any benefit on the basis of *Sant Steels case*.
