Mines & Geology and
Legislative Affairs

MESSAGE

The Government of Telangana has initiated rehabilitation of Minor Irrigation Tanks, which have been the life line of Telangana people, since ages and are now becoming extinct slowly and slowly mainly due to neglect of their maintenance and partly due to rapid urbanisation. In the state, every village has a tank and tanks from ages are still functioning. Tanks, apart from irrigation, also serve recharging of ground water, meeting the requirement of domestic water needs and livestock and for rearing fish. Tanks are helpful in maintaining ecological balance apart from being centres for socio-economic and religious activities of the village communities.

Tanks play an important role in providing assured water supply and prevent to a greater extent the adverse effects on agriculture on account of vagaries of nature and ensure food security in drought prone areas.

The Minor Irrigation tanks in the state have lost their original capacity due to ageing and siltation. The Government of Telangana realising the importance of reclamation of tanks for growth in the state, decided to take up rehabilitation of these tanks under 'MISSION KAKATIYA' as a peoples' movement in a decentralised manner through community involvement in a sustainable manner. All the 46,531 tanks are proposed to be rehabilitated, at the rate of 9350 per year, in a span of 5 years starting from 2014 – 15 onwards.

This hand-out will go a long way in creating awareness in the engineering folk working in Minor Irrigation Sector of the state and will be a very useful guide for implementation of 'MISSION KAKATIYA' qualitatively.

T.HARISH RAO

Dr. S.K. JOSHI, I.A.S.,
Principal Secretary to Government
Irrigation & CAD Department
Telangana Secretariat.

MESSAGE

The key challenges faced by the newly created Telangana State are manifold. About 56% of the labour force, which is more than the national average of 47%, is engaged in agriculture in Telangana state. Since, agriculture is the backbone of rural livelihood, boosting agriculture production and thereby reducing rural poverty is the prime most agenda of the Government of Telangana state.

Telangana state is endowed with 2 major river systems: Godavari, Krishna and 19 other medium and minor river systems. The topography in respect of Godavari river does not permit surface irrigation as the cultivable land in the districts of Karimnagar, Warangal, Nalgonda and Medak is in the range of EL+350m to EL+500m. Also, the available water resources are unevenly distributed both in time and space. Even though, the state's average rainfall is reasonably good (927.58 mm), the state depends on tank irrigation which is an ideally suited water management technology to the state. In minor irrigation tanks, flow of water is ensured throughout the crop period as the tanks are located in hydrologically favourable sites and built in a series at different levels of water shed permitting cascading system or sequential chains.

In Telangana state, there are 46,531 minor irrigation tanks with an irrigation potential of 18.85 lakh acres (7.63 lakh ha) out of which only 37% is irrigated, leaving a gap of 63% irrigation potential created.

Government of Telangana, therefore, took up the massive programme for restoration of minor irrigation tanks under **"MISSION KAKATIYA"**, benefitting all the tank users for efficient use and improved opportunities through community participation for sustainable performance of irrigation tanks.

This manual, encompassing the detailed construction procedure and the quality standards to be adopted is a good effort and will be useful for one and all in the I&CAD Department for transparent execution of works as well as the agencies and other public, who will be aware of the construction procedure.

Dr. Shailendra Kumar Joshi

1.0 INTRODUCTION

The Government of Telangana have taken up a massive programme of Restoration of all Minor Irrigation Tanks numbering 46531, under MISSION KAKATIYA (ManaOoru – ManaCheruvu) in a decentralised manner through community involvement.

OBJECTIVE:

The objective of Mission Kakatiya is to enhance the development of Minor Irrigation infra-structure, strengthening community based irrigation management, adopting a comprehensive programme for restoration of tanks.

1.1 GUIDELINES FOR EXECUTING MINOR IRRIGATION WORKS UNDER MISSION KAKATIYA

After Award of Contract:

- The agreement and Technical Specifications shall be thoroughly familiarized and strategic issues noted for scrupulous following during execution.
- The date of agreement is the date of contract and completion period shall be reckoned from that date.
- Mile stone wise programme/ construction programme shall be examined for feasibility of execution. Revised mile stone programme, if necessary, may be drawn in consultation with the agency within one month of date of award of the work for execution within the time frame.
- Construction machinery, men, material shall be in place right from the date of agreement.
- Ensure that borrow areas are identified by the contractor and soils got tested for suitability in Departmental labs or authorized labs for the purpose.
- Ensure process of payment of mobilization advance as per agreement conditions.
- Complete set of drawings shall be ready for reference to facilitate execution.
- When works are sub-let during execution as per agreement, subject to a maximum

of 50%, eligibility criteria and qualification criteria of the sub-contractor shall be thoroughly checked.

- Mobilization advance at the borrowing interest rates from the Government from time to time shall be paid in 3 installments (1% - after signing of agreement, 4% - on commencement of work and 5% - on purchase of machinery and equipment) to be recoverable at 20% in each bill after payments reach 10% of contract value.

During Execution of Work:

- Pre-levels should be recorded in the presence of agency and got authenticated.
- Ensure the mark out of the area to be tackled, is properly given and recorded in the register duly checked by DEE.
- For embankment rising, the whole work may be taken at a time instead of piecemeal.
- Ensure that the thickness of compacted layer falls within 150 mm.
- Profile walls/ model section on the upstream of bank shall be constructed wherever there is proposed rising of embankment/ revetment.
- Chutes may be formed on the downstream of the bank to avoid scours and rain gulley formation.
- The values of OMC and MDD may be obtained for the soils before start of work.
- Degree of compaction – 98% of Proctor's Density for embankment by Power Roller
- Foundation level in respect of structures may be recorded and got checked by DEE and all concerned before laying concrete.
- For de-silting operations, net levels at 15 m intervals in the bed of the tank may be taken, compared with tank bed level, if available, or alternatively, trial pits may be taken at convenient intervals depending upon site condition and quantum of silt arrived at.
- Utmost care may be taken not to puncture the impermeable layers of the tank bed.

Quality Aspects:

- The list of tests to be conducted for QA/ QC shall be noted along with threshold limits for each test.

- For cement concrete works, design mix may be got approved. Similarly, all the necessary tests for concrete items shall be got tested and satisfied for quality maintenance. Ensure adequate supervision of mix to mix placement of concrete/ mortar.
- OK Cards shall be maintained.
- The concrete samples may be obtained during the laying of concrete and the same may be sent to the Laboratory and got them tested for their strength for 7 days and 28 days respectively. The results obtained may be recorded in a separate register.
- The defects noted during the execution as recorded in the OK cards/ placement registers, shall be pursued for rectification at contractor's own cost.
- No deviations shall be allowed, as a matter of fact, without prior inspection and approval of the competent authority.
- It should be borne in mind that the work shall be carried out strictly in accordance with technical specifications and relevant IS codes or as directed by the Engineer In-charge.

Documentation of works:

- All site registers shall be maintained.
- It should also be borne in mind, that passing of excess is limited to the technical sanction powers of estimates which includes even price escalation. No attempt shall be made to delete critical items in order to bring deviation/ excess within competency.
- Detailed documentation before, during progress and after the work shall be maintained as a record.

Progress of work:

- Progress of work shall be strictly in accordance to the mile stone programme. In event of back log, Liquidated Damages shall be levied as per agreement conditions.
- The progress of work may be watched and action for withdrawal of work as per clause 60 of APDSS and agreement conditions may be taken.

Completion of work:

- Completion report indicating the components of work attended to, the mode of construction, the critical problems that arose and solved during execution along with all the tests conducted to ensure QA/ QC aspects and the defects noticed and rectified shall be given within 7 days.

Determination of work:

- Determination of contract due to breach of contract shall be dealt as per agreement clauses and clause 61 of APDSS.

1.2 WORKS PROPOSED:

(i) Jungle clearance

(ii) Restoring the tank bund to design standards with revetment as per standards.

(iii) Repairs and replacement of tank sluices and gates.

(iv) Repairs and Re-construction of surplus weirs

(v) Restoring chain tanks

(vi) Re-sectioning of canal and feeder channels including de-silting.

(vii) CM/ CD works on canal system

(viii) Construction of measuring devices

(ix) De-silting of tank and restoring to full capacity

2.0 CONSTRUCTION METHODOLOGY

2.1 STRENGTHENING/ REPAIRS TO EARTH DAM/ BUNDS

2.1.1 JUNGLE CLEARANCE:

i. All bushes, vegetation, roots, trees etc., are to be removed. This helps in ensuring proper bondage of the freshly laid soil with the old embankment.

FIG: 1 JUNGLE CLEARANCE IN PROGRESS

2.1.2 SURFACE PREPARATION:

ii. The base shall be stripped to a depth of 150mm below existing level.

iii. The requisite slopes of existing embankment shall be benched in steps of 0.3m x 0.6m on the front and the rear slope of the embankment such that there is a little slope towards the inside of the benching as shown in figure below:

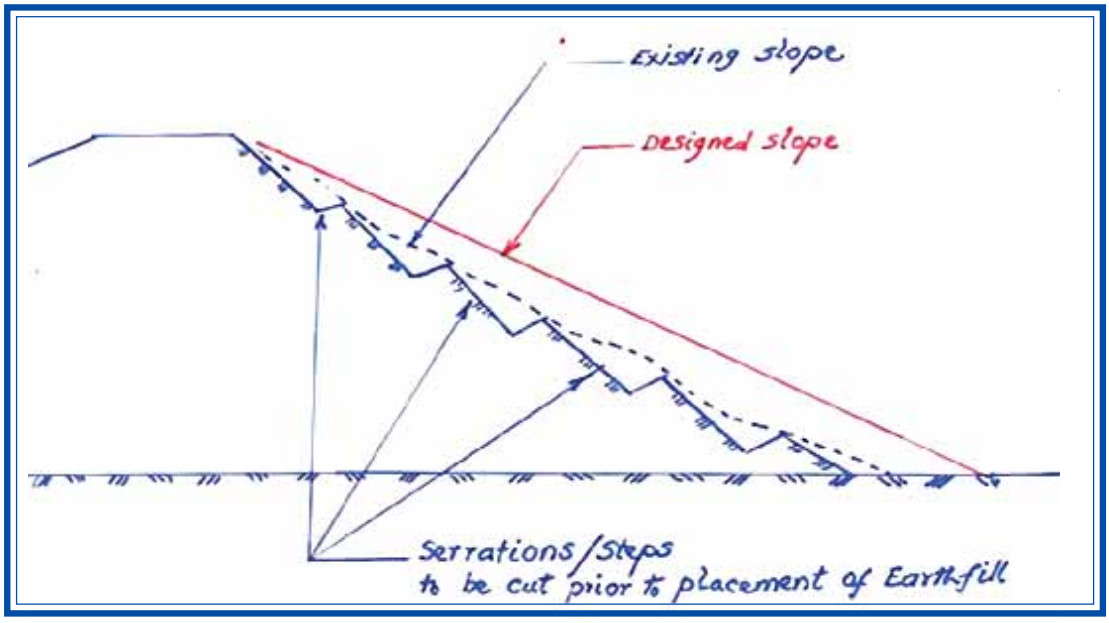

FIG:2 INDICATING SERRATIONS

2.1.3 MOISTURE CONTENT:

a. The initial moisture content of the material including that of borrow areas shall be determined at the source of supply.

b. The embankment shall have Optimum Moisture Content fairly uniform throughout the layer, prior to and during the compaction, as per clause 6 of IS 4701 – 1982.

c. Moistening shall be done by sprinkling either through a proper sprinkler tanker or using proper spray nozzles.

d. Flooding or sprinkling straight from the water hose shall not be allowed.

FIG: 3 UNDESIRABLE METHOD OF MOISTENING THE BUND ADVISABLE TO USE GARDNER CAN OR SPRINKLER HOSE ATTACHED

e. After adding the required quantity of water, the soil shall be processed by means of harrows, rotary mixers or as specified, till the layer is uniform with OMC.

This gives good grip to the embankment soil with the subgrade.

iv. Necessary watering shall be done for receiving the freshly laid soil.

2.1.4 COMPACTION:

v. Bank section shall be brought to design standard duly compacting to 98% Proctor's Density.

vi. The following machinery shall be utilised:

a. Soil Compaction Equipment

b. Vibratory Roller

c. Pneumatic Compaction Device

d. Slope Compaction Machine

e. Other Equipment as specified

vii. Each earth-fill shall be laid in suitable layers not exceeding 25cm before compaction and should be spread over full width of embankment.

viii. The layer shall be compacted by passing the roller in strips overlapping not less than 0.3m.

ix. Rolling shall commence at edges and progress towards centre longitudinally, in a direction parallel to the axis.

x. Each layer shall be prepared to have uniformly distributed moisture content.

xi. The thickness of horizontal layer after compaction shall not be more than 16.5cm.

xii. At least, one field density test shall be taken for each layer.

xiii. After rolling, density test shall be made (minimum 3 tests) to ensure 98% maximum Dry Density.

xiv. The no. of passes required for each layer to attain specified density shall be determined by actual field tests (not less than 8 passes).

FIG:4 COMPACTION WITH VIBRO MAX ROLLER

xv. Embankment shall not be widened by dumping earth from top.

xvi. The top of each layer shall be kept slightly depressed in the centre after rolling.

xvii. Extra width of 600mm thickness perpendicular to the slope shall be provided on either side, so that the lines of finished embankment slope shall have required specified density after compaction.

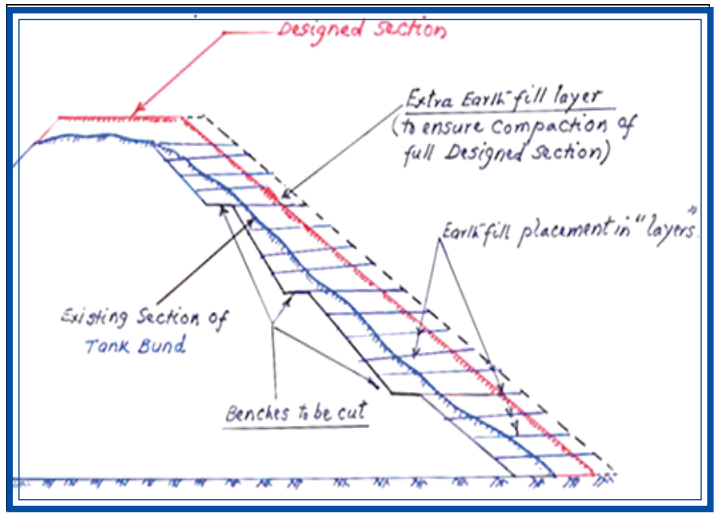

FIG: 5 EXTRA EARTH-FILL LAYER

xviii. The trimmed extra width shall be re-used for higher elevation.

xix. No fresh layer shall be laid until the previous layer is properly watered and compacted as per requirement.

xx. All large clods are to be broken and no clod bigger than 8cm rock are buried in the bank.

xxi. The soils used for the embankment shall be as determined by Engineer In-Charge and shall be obtained from required excavation or from approved borrow areas and shall conform to clause 6.4 of IS 4701.

xxii. Settlement Allowance:

Towards shrinkage, the embankment shall be constructed to a higher elevation than that shown in the drawing at the rate of

2.5cm/ every one meter height of the bank – if power driven equipment is used

2.0cm/ every one meter height of the bank - if other than power driven equipment is used.

xxiii. If the embankment covers the barrels of cross drainage or any structures, the first 45cm shall be compacted with pneumatic hand tampers in layers. This avoids damage of structures.

xxiv. Separate tests shall be conducted for each zone of embankment, for every 500cm compacted earth work.

xxv. Homogeneous Section: The available coarser and more pervious material shall be placed near the outer slopes to have increasing permeability from inner to outer side. This allows phreatic line to be followed for escape of seepage.

xxvi. Zonal Embankment: All zones shall be tackled simultaneously. The difference in level between zone to zone shall not be more than 150mm.

xxvii. Moisture Content:

a. If the earth delivered is too wet, it shall be dried by aeration, exposure to sun, ploughing, disc harrowing till OMC is attained.

b. If weather does not permit for drying of material, the work shall be suspended till OMC is attained.

c. Rolling shall be commenced only when the layer attains uniform moisture content.

d. Moisture Content for each layer shall be checked in accordance with IS 2720 (Part II) – 1973.

e. Unless otherwise mentioned, the moisture content shall be adjusted making due allowance for evaporation loss at any time of compaction:

f. upto -1% to +2% than the OMC for Casing Zone

g. upto -1% to +1% than the OMC for Hearting Zone

h. OMC shall be determined in accordance with IS 2720 (Part VII) – 1973.

i. The compaction shall be ensured that 98% of the maximum dry density at OMC is obtained.

j. Chute drains shall be provided at suitable intervals on downstream connected to toe drain all along the bund.

FIG: 6 PROCTOR'S DENSITY TESTBEING CONDUCTED ON CONSOLIDATED BUND

Test	Frequency
Standard Proctor Test	One test per day for individual borrow area
Field Density & Moisture Content	One test for every 1500cum of earth work and at least one test in each layer laid on embankment

2.1.5 REVETMENT:

i. Remove the disturbed revetment.
ii. Take pre-measurements and record.
iii. Repairs to revetment/ new revetment shall be formed and well compacted to the profile duly re-using the old revetment stones.
iv. Revetment shall be done upto TBL.
v. Revetment should be properly anchored into the sub grade both at its commencement as well as its termination by providing “keys” 60 X 60 cms on the slope and embedding stones therein.
vi. Existing big gaps between the individual stone should be filled by hammer wedging angular stones pieces such that revetment becomes dense.2.1.6 ROCK TOE SETTING:

Arrangement of stones at the toe of outer slope of the tank bund to ensure free flow of seepage water without disturbing the embankment is called rock toe

The disturbed rock toe may be removed and reset as per drawing/ design standards duly re-using the old disturbed rock toe stones.

FIG: 7 TRIMMING OF D/S SLOPE - IN PROGRESS

2.1.6 ROCK TOE SETTING:

Arrangement of stones at the toe of outer slope of the tank bund to ensure free flow of seepage water without disturbing the embankment is called rock toe

The disturbed rock toe may be removed and reset as per drawing/ design standards duly re-using the old disturbed rock toe stones.

2.2 REPAIRS AND REPLACEMENT OF TANK SLUICES AND GATES

- Damaged part of the masonry in the sluice shall be reconstructed in accordance with clause 9.1, 9.2 of IS 1597 – Part 1.
- Repairs to the damaged irrigation sluices and their improvements shall be accorded the top priority.
- If necessary, replacement of existing plugs with screw-gear operated steel shutters shall be done.

FIG: 8 RE-CONSTRUCTED SLUICE GATE WITH SCREW ROD & GATE

- If necessary, approach R.C.C platforms or structures for operation of sluices shall be constructed.
- Designs of proposed gangways/ RCC platform or structures to facilitate easy approach for operation of sluices shall be prepared and got approved from CDO or the special design circle. Mechanical components shall be got reviewed and approved from the mechanical wing of CDO.
- In case the situation is such that repairs to the whole of sluice barrel is contemplated, it shall require 'open cut' of embankment/ earthen dam on either side of the barrel in order to expose the entire length of barrel (See fig below). Cutting shall be taken up for filling with approved soil. Layers of soil not more than 15cm thickness shall be laid, and compacted with either 'fuel-operated bed compactors' or 'pneumatic tampers' to the specified density of 95% at OMC. High-quality job is to be done in such situations.

2.2.1 CONSTRUCTION QUALITY AND QUALITY ASSURANCE:

Construction quality implies that the jobs be done to recognized standards through meticulous implementation of quality control and quality assurance parameters associated with the prescribed technical specifications and design.

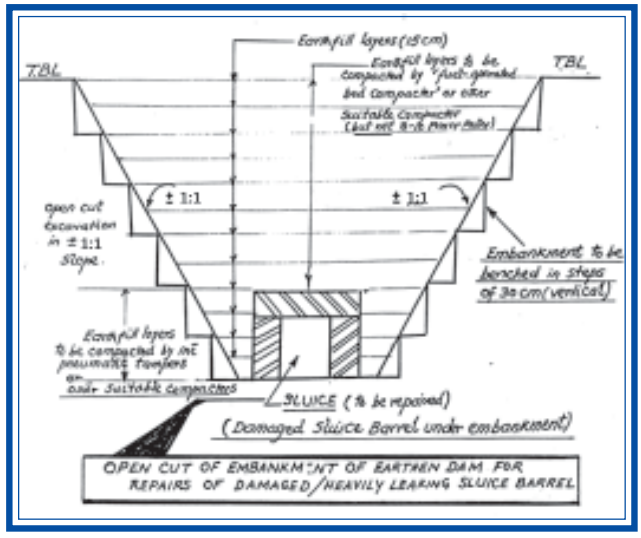

FIG: 9

2.3 RE-CONSTRUCTION OF SURPLUS WEIRS

The common damages may be one or many of the following:

i. Damage to pointing of joints in the body wall.

ii. Leakages through the bottom of weir and through the body wall of weirs.

FIG:10 POINTING TO JOINTS IN THE MASONRY WEIR

FIG: 11 RE-CONSTRUCTION OF APRONCOMPLETED AND REPAIRS TO BODY WALL TO BE TAKEN UP

FIG: 12 DAMAGED ABUTMENTTO BE REPAIRED SIMULTANEOUSLY WITH BODY WALL

FIG: 13 REPAIRS TO SURPLUS WEIRIN PROGRESS

iii. Pot holes in the solid apron.

iv. Damage to the talus portion.

i. Damage to pointing of joints in the body wall

- All loose mortar shall be removed from the affected joints.
- Raking of all such joints shall be done to a depth of 25mm.
- The joints shall be thoroughly cleaned with water (or air jet).
- Prepare the cement – sand – water mortar of specified grade on a smooth water tight platform making sure that no foreign material gets mixed, thoroughly by turning over to get a mixture of uniform colour. Water shall then be added gradually and mixing continued until mortar of required consistency of 90 to 100mm is obtained).
- Keep the cleaned up and raked up joints moist for about 2 to 3 hours before filling these with the wet mortar.
- Ensure that the wet mortar is used to fill up the joints within 30minutes of its mixing. Proper pointing of joints be done.
- Curing of the joints be done for 7 days.

ii. Leakages through the bottom of weir and leakages through the body wall of weirs

In case the weir suffers from appreciable leakages from the body wall, it may be appropriate to provide either external plastering or skin wall of concrete to the upstream body wall of weir.

a. External Plastering: After the hollow joints in masonry are duly filled up as per guidelines outlined in (i) above, these be kept moist (viz. Cured for 72 hours) and the following steps taken to apply external plastering.

- Roughening of surface of body wall shall be done to improve the bond of plaster.
- The surface shall be moistened sufficiently.
- Plaster of 20mm thickness and of specified grade shall then be applied to the surface from top and worked down. The mortar shall be stiff enough to cling to the surface and hold when laid.
- At the end of the day, the plaster shall be kept in a clean horizontal or vertical line.
- When commencing the work on next day, the edges of old plaster shall be scrapped clean and wetted and treated with cement slurry before the new plaster is laid adjacent to it.
- Water-curing of plastering shall be done uninterruptedly for 14 days.
- Any cracks which appear on the surface and all such portions which sound hollow when tapped or found soft or otherwise defective shall be cut in rectangular shape and re-done.

FIG: 14 TALUS -WORK COMPLETED ON D/S OF WEIR

b. Concrete Skin Wall:

Provision of concrete skin wall shall provide a water-tight barrier and stop all leakages through the weir. Typical construction of this wall is illustrated as follows:

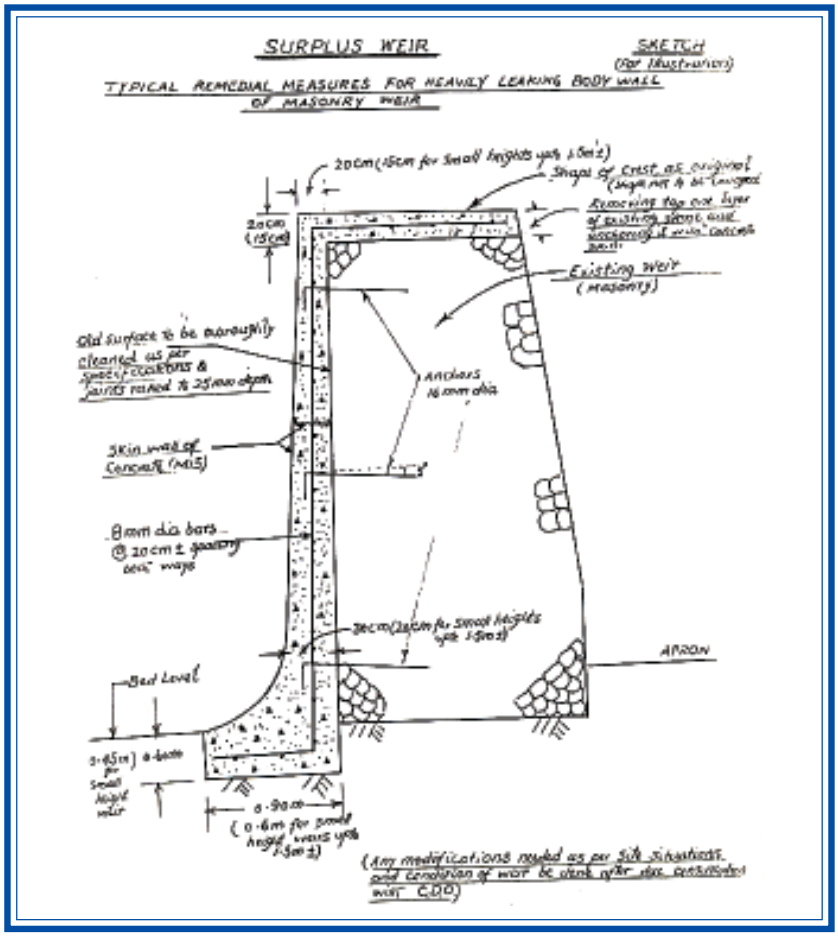

FIG: 15 SURPLUS WEIR

Skin wall concrete to arrest leakages

Its salient features are outlined below:

Grade of concrete	:	M15 (with 20mm maximum size of aggregate)
Thickness of concrete	:	200mm (150mm for smaller heights, say up to 1.5m) 300mm (200mm for smaller heights) at bottom
Reinforcement in skin wall	:	8mm dia at 200mm centres in both directions
Anchor bars	:	16mm dia (as shown in sketch)

The skin wall shall be anchored with top of weir by removing the top one layer of existing stone. The wall is to be taken below upstream ground level/ apron level to a depth of 450mm (or 600mm) and width of 600mm (or 900mm) throughout the length of weir, depending upon the height of weir. The shape of crest shall not be changed.

Specifications:

- Joints in the existing masonry be raked to a depth of 25mm.
- Roughen the surface through manual chipping or pneumatically operated tool.
- Keep the surface, after raking of joints and roughening of surface wet for 72 hours, prior to placement of skin concrete (M15).
- A coat of cement slurry with cement – mortar mix (1:2.5) with water-cement ratio of 0.7 be applied over the masonry surface, with joints thoroughly packed.
- 50mm dia holes be drilled in the masonry and clean the holes by air-water jet.
- Cement – sand mortar (1:2) with water cement ratio of about 0.33 shall be pushed into the drill holes while the holes are still wet after cleaning. Then 16mm dia steel anchors be pushed in. Drill holes for anchors shall have an inclination of 5 degrees with the horizontal downwards into the body wall.
- Concrete placement shall be done in convenient lifts and deploying good shuttering. Slump of concrete may be in the range of about 50mm and needle vibrators used for consolidation.
- Curing of concrete wall be done for 28 days.

In cases where leakages are through the bottom of weir, the provision of skin wall may not be taken to the full height of the weir, but be restricted to about 0.6m to 0.7m. Fine-tuning or any modifications, if considered necessary, be got done through CDO.

FIG: 16 CLADDING CONCRETE

iii. Pot holes in the solid apron:

In case the damage to the apron consists of only few pot holes and the rest of the apron is generally alright, it shall be appropriate to clean the pot holes, chip the sides wherever necessary and fill up these with plain cement concrete of M10 grade (equivalent to 1:3:6), duly consolidated.

2.4 IRRIGATION CHANNELS

2.4.1 EARTH SECTIONS:

- Channels shall be restored to the designed earthen sections in optimum possible reaches.
- Where banking is involved, the earth fill be appropriately compacted by 'fuel operated bed compactor' to impart stability and durability to the banks. Alternately, 'pneumatic tamper' be used for compaction.
- It shall be appropriate to construct Model Sections in RR stone masonry (±60m width) at suitable intervals, say, one at every curve and at 50 to 75m intervals in straight reaches. This shall be highly useful in maintaining the profile of the earthen channels.

2.4.2 LINED SECTIONS – SELECTIVE LINING:

Channels shall be lined only in such locations/ reaches where it becomes absolutely essential as dictated by the site conditions. Such selective lining shall be taken up onlywith the concurrence of the concerned Superintending Engineer who shall also approve the hydraulic design as well as the type and design of lining.

(i) Plain Cement Concrete Lining

- Thickness of Lining

It shall be provided as per following table:

Channel Discharge	Thickness of Lining
Less than 1.5cum/sec	65mm
1.5 cum/sec upto 15 cum/sec	75mm
15cum/sec and more	100mm

FIG: 17 MANUAL LINING - IN PROGRESS

- Cement Level – From durability consideration, cement level shall be 250kg/ cum of concrete, viz the mix design shall be higher than M10 concrete (between M10 and M15)
- Subgrade for lining – The sub-grade shall be duly compacted and moistened before placement of lining
- Side Slopes – In the locations where unlimited reaches are proposed to be converted into lined ones (for selective lining), the side slopes be preferably kept as 1.5:1 but not less than 1.25:1.
- Coping – Horizontal concrete coping or key shall invariably be provided at the top of lining.
- Concrete Placement – Conventional concrete placement (viz. Manual placement) shall be in alternate panels of up to 3m in length. Maximum size of graded coarse aggregate shall be restricted to 20mm. Detail of lining joint is outlined in the enclosed sketch.

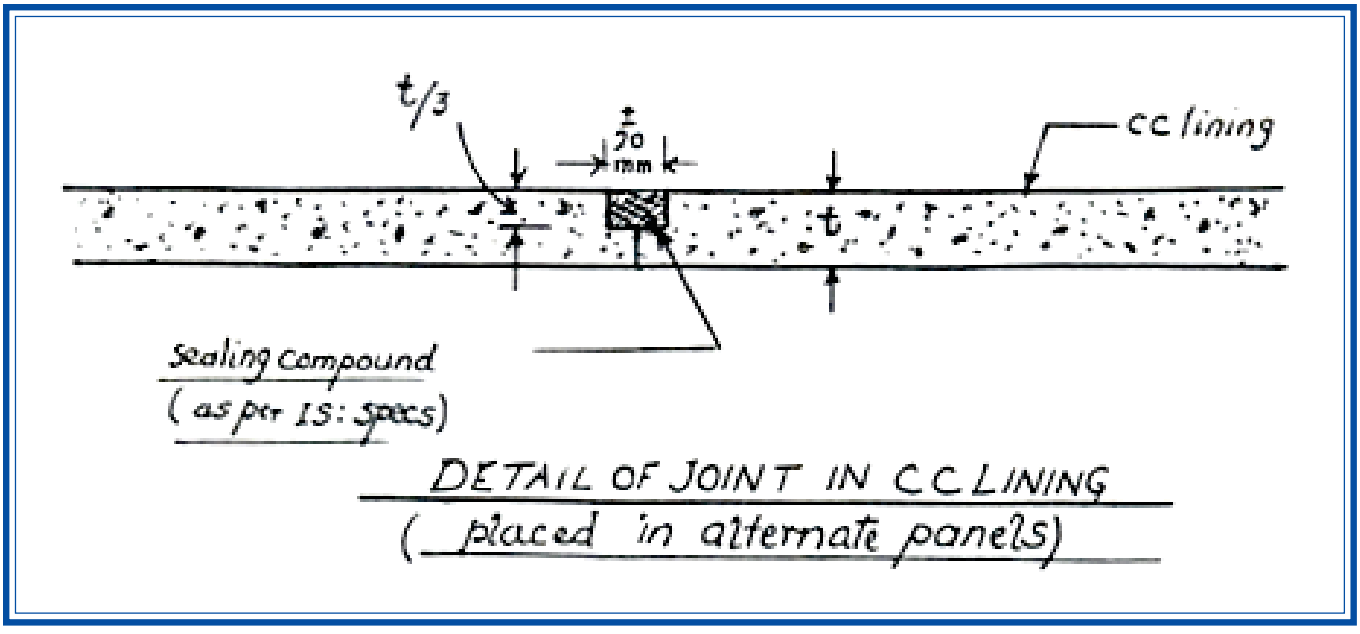

FIG: 18 JOINT IN CC LINING

- Sand – It shall be clean and free of silt, clay etc. It should not have injurious quantities of organic impurities. Fineness modulus shall not be less than about 2.2. Recognizing that sand is a very important constituent of concrete mix, as well as of cement mortar, field staff (Work Inspector/ Assistant Engineer/ Assistant Executive Engineer) shall do the following test to determine suitability of sand:

Quick 'Colour Test' to be conducted by field engineers at site to determine the suitability of sand in respect of any injurious (harmful) quantities of organic impurities:

Sand shall be tested with 3% solution of caustic soda, called Colour Test.

- A colourless liquid shall indicate clean and sand free from organic matter.
- A straw coloured liquid indicates presence of some organic matter but not enough to be objectionable.
- A dark colour means that the sand contains injurious quantities and accordingly, it is not to be used unless it is washed and a re-test shows that it is satisfactory.

- Curing of Lining – Utmost importance shall be given to water curing of lining. Bed lining be cured through ponding of water by providing small earth bunds. For curing of side lining, gunny bags be placed on slopes and kept wet. 28 days curing is desirable but the first 14 days of curing is very critical and must be ensured without any interruption whatsoever.

Note: Porous concrete plugs of 100mm dia may be provided in each panel of 3m width, as under drainage, wherever considered necessary.

2.4.3 TESTS AND FREQUENCY OF TESTING:

S. No.	Test	Frequency of Testing
1	Sand	
(i)	Sieve analysis for fineness modulus and gradation	One test for every 150cum (or less) sand to be used in concrete mix.
(ii)	Bulkage of Sand	Once in a shift or for every consignment
(iii)	Organic impurities in sand	Once in a shift or for every consignment.
2	Coarse Aggregate Screen analysis for gradation	One test for every 150cum (or less) aggregate to be used in concrete mix.
3	Water for suitability of use in concrete	One test from each source of water in a working season

In addition, slump tests of concrete be taken regularly.

Register to be maintained

A register shall be maintained to list the above tests and their results.

(ii) R.R. Masonry Lining (20cm/ 22.5cm) in cement mortar

Stones

- Stones to be used for lining shall have a reasonably uniform sizes with the designed dimensions and shall conform to specifications. Stones shall be brought from the quarries approved by the Engineer.
- Individual stones shall be sound, hard, and durable and capable of sustaining weathering and water action. Those shall be free from laminations, soft spots, seams and other defects. When immersed in water for 24hrs., the stones shall not absorb water more than about 5% of their dry weight.

Laying of Stone Lining

- Both bed and slopes of the channel shall be divided into panels for laying stone masonry. The panels shall have dimensions of, preferably, not more than 10m along and across the centre line of channels (minors/ distributaries). This may be increased to 15m for bigger capacity channels.
- While laying the stones, care shall be taken to lay binder stones of size 20cm X 20cm X 60cm or 22.5cm X 22.5cm X 60cm on either side expansion joint at 10m/ 15.0 centres.
- To guard the lining from building up of pore-pressure that may cause damage to the lining in gravelly soils, porous no-fine concrete slabs (of size 20cm X 20cm X 20cm) be provided in stone masonry. In small channels, such a slab be provided at half the full supply depth at 5m centres. No-fine concrete shall consist of 1 part of cement and 4 parts of coarse aggregate of maximum size not exceeding 20mm. No sand shall be used. To guard the lining from any pore pressure in cohesive soils, perforated pipes of 75mm dia be provided with a filter (of sand, gravel) backing. (CDO be consulted for specific provision of above under-drainage arrangement).
- Cement-Sand mortar shall be used within 30 minutes of the preparation of mortar.
- Hand mixing of mortar shall be done on a smooth water-tight platform, (if mechanical mixer cannot be deployed).
- Field colour test of sand shall be done for presence of any organic impurities. Maintain good line and grade, viz. Workmanship, while laying the masonry.
- Horizontal coping (or key) shall be laid at the top of lining.
- Water curing shall be done for at least 7 days.

(iii) Masonry Guide Walls

- Stone masonry guide walls in CM 1:5 over the lean concrete foundation shall be considered for construction only in specific locations where there seems to be no alternative due to peculiar site conditions.

To achieve the objective of minimum rehabilitation of Irrigation Channels conforming to acceptable engineering principles, careful decision shall need to be taken on the adoption of a particular type of lining or a combination of types of lining from amongst the three types of outlined above depending upon the site situations. The type and extent of such "Selective Lining", shall be decided by the respective Superintending Engineer of the region taking into account all the relevant factors. It shall be appropriate to restore the channels to the designed earthen sections to the optimum extent possible.

Note: In case of expansive soils associated with swelling pressures, full CNS soil treatment shall be done as per Indian Standard IS: 9451 – 1994.

FIG: 19 DAMAGED GUIDE WALLS - TO BE RE-CONSTRUCTED/ REPAIRED

FIG: 20 GUIDE WALL UNDER CONSTRUCTION WITH CEMENT CONCRETE

2.5 CM/ CD WORKS

2.5.1 FOUNDATION:

- Excavation for the foundation of structure shall be to the elevation shown in the drawing or as directed.
- As far as practicable, the material removed in excavation for structures shall be used for back fill embankments or wasted.

The bottom and side slopes of common excavation shall be finished to the prescribed dimensions and the surfaces so prepared shall be moistened and tamped with suitable tools to form firm foundation upon or against which to place the structure.

- The natural foundation material beneath the required excavation shall be moistened and compacted in base.
- Whenever unsuitable material is encountered in the foundation for a structure, additional excavation will be directed to remove the unsuitable material.
- The additional excavation shall be refilled as follows:
- In excavation in soils - by selected bedding material and compacted.
- In excavation in rock - by M10 grade cement concrete.

Excavation in expansive BC Soil:

- The excavation and removal of BC clayey soils shall be upto a depth of 1000mm for a discharge of 1.5 cumecs and above 600mm for a discharge of below 1.5 cumecs.
- Filling shall be with suitable soils and compact for balancing swell

Foundation		
S. No.	DO's	DO NOTs
1	Verify dimensions and foundation levels as per drawing	Do not forget to compare bearing capacity of actual soils met with design strength
2	Wet the foundation surface to a depth of 150mm or to impermeable material	Do not lay foundation concrete without wetting the surface
3	Ensure the rock surface free from oil, objectionable coating unsound fragments	Do not lay the concrete under water and over slush
4	Check-up concrete batching of ingredients	The minimum mixing time should not be less than 2 mins.
5	Check the batch of cements and its make	Do not forget to keep stand-by vibrator and needles

6	Check up water-cement ratioand slump test	Do not place concrete in raw insufficiently heavy to wash mortar from concrete
7	Ensure uniform mixing	Do not forget to cast the cubes
8	Ensure proper compaction with vibrators and keep stand-by vibrator and needle	Do not allow segregation of concrete
9	Operate immersion type vibrators nearly in vertical position to vertical drain	Do not use unsatisfactory mix
10	Cure with water for 28 days	Don't allow admixtures which will harm the strength of concrete
11	Compact with suitable bedding materials in case of over excavations and with M-5 grade concrete in case of rock	
12	Allow admixtures as per IS: 9103 - 1979	

Super Structure

S. No.	DO's	DO NOTs
1	Check the form work	Avoid abrupt surface irregularities
2	Apply cement slurry after cleaning the surface at vertical joints	Do not deviate from specified dimensions of cross section from -6mm to +12mm
3	Clean and cover with a layer of 10 to 15mm thick mortar of the same proportion of concrete mix for horizontal joints	Do not allow concreting until all form work installation of items to be embedded and preparation of surface involved are approved
4	Place the concrete at temperature between 15^0C to 30^0C	
5	The concrete shall be discharged within half an hour after introduction of the mix water and cement	

2.5.2 BACK FILLING:

- As far as practicable, backfill material shall be obtained from the excavation for structures or from adjacent canal excavation or from excavation of other ancillary works. Back filling shall be done with approved material after the concrete or masonry is fully set.
- Backfill material shall not contain stone larger than 7.5cm size.
- Backfill shall not be placed against retaining walls until the retaining wall is cured adequately and is strong enough to take lateral pressure of the back fill.

2.5.3 CEMENT CONCRETE:

Nominal maximum Size of Aggregates:

- Nominal maximum size of aggregate for concrete in structures shall be as indicated in the relevant drawings

Mix Proportion:

- In proportioning concrete, the quantity of both cement and aggregate should be determined by mass as per clause 9.2 of I.S. 456 – 2000.
- Water shall be either measured by volume in calibrated tanks or weight.
- The acceptance or rejection of concrete shall be as per the acceptance criteria laid down in clause – 15 of I.S. 456 – 2000.
- The mix design and average concrete strength shall be adjusted according to the cube strength test results conforming to clauses 14.2, 14.3, 14.4, 14.5, of I.S. 456 – 2000.
- By weight
  - Called Design Mix
  - Specified as M10, M15, M20, M25 etc.
  - M20 – Its 28 days compressive strength is 20 N/mm2 or 200 kg/ cm^2
- Not more than 5% of standard test cubes, when tested for 28 days compressive strength, shall fall below 20 N/mm2
- All ingredients (Coarse and fine aggregates, cement, water and admixtures) to conform relevant Indian Standards
- Aggregates to be free from impurities viz., silt, clay and dirt as they affect their adhesion of cement paste
- Coarse aggregate to be tested for grading, soundness, abrasion and impact

- Fine aggregates to be tested for grading, fineness modulus, silt content and organic impurities
- Graded aggregates get closely packed in cement-sand matrix and make the concrete mix fully workable
- Cement to be tested for fineness, setting time, soundness and compressive strength
- Ensure proper storage for cement
- Storage godowns to have weather proof walls, roof and floor
- Cement to be used within 3 months of bagging
- 20 to 25% of cement strength is lost when stored upto 6 months

Durability of Concrete:

- Ability of concrete to resist harmful effects of environment exposure during operational/ service life without undue deterioration and with minimum maintenance
- Requirement of durability as per IS 456:2000
- Principal Factors influencing strength & durability
- Water-Cement Ratio (W/C)
- Air Entrainment
- Compaction and Curing
- Reinforcement

Mobile Concrete Mixer:

- Mobile Self Loading, Weigh-Batching & Mixing, Transporting Concrete Mixer
- It is a sort of moving Batching & Mixing Plant
- Indigenously available in concrete output
- Capacities – 4 m3; 2 m3; 1 m3
- It incorporates electronic batching of mix ingredients and water
- A versatile concrete production and transporting equipment for feeding concrete pavers
- Can supply concrete to any placement site(s) with a sustained progress of about 6 to 8 m3 per hour
- Aggregate and sand can be piled at convenient locations and this mixer feeds them into its drum through its bucket
- Has the mechanism to add calibrated quantity of water in the drum

- "On the fly" microprocessor based, high accuracy electronic weigh batching system with different aggregate weighing facility is available

FIG: 21 SELF-LOADING MOBILE CONCRETE MIXER

2.5.4 WATER – CEMENT RATIO:

Single most critical factor with maximum bearing on strength of concrete in general and on durability in particular

High W/C

↓

Reduces strength of concrete

Reduces durability of concrete

W/C should not exceed the range 0.50 – 0.60

High W/C

↓

Increases porosity in concrete

↓

Higher 'coefficient of permeability'

↓

Higher vulnerability to deterioration by environmental elements (CO_2, CO, moisture, sulphates, chlorides etc.)

Lower W/C

↓

Higher durability

↓

Higher impermeability of concrete

Significance of Water – Cement Ratio:

- Excessive W/C is undesirable for both the strength and durability of concrete. Capillary pores in concrete can be as large as 5 microns in dia
- No. and size of pores depend mostly on W/C used in making the concrete mix
- Relation between the age of concrete at which capillary pores get almost blocked (viz concrete becomes almost impermeable) and W/C is illustrated in table

W/C Ratio	Age at which capillary pores become alsmost 'blocked'
• 0.40	• 3 days
• 0.45	• 7 days
• 0.50	• 14 days
• 0.55	• 90 days
• 0.60	• 150 days
• 0.70	• over 365 days

- Thus, as W/C ratio increases, the concrete remains permeable for a longer period, thereby, permitting ingress of chemicals & moisture to penetrate it, leading to corrosion of reinforcement
- Concrete with W/C ratio of 0.70 remains vulnerable to chemical and moisture ingress for over 'ONE YEAR' whereas concrete with W/C ratio 0.40 becomes almost impermeable within 3 days of casting and shall be durable

There are 4 main aspects of 'Durability of Concrete':

- Impermeability
- Resistance to chemical attack
- Resistance to weathering
- Resistance to corrosion of embedded metal

FIG:22 COMPACTION OF CEMENT CONCRETE USING VIBRATORS

2.6 MEASURING DEVICES:

In order to strengthen effective functioning of MI Tanks through optimum usage of water, it is necessary that water measuring devices are provided at the off-take points. The commonly used measuring devices are Stage – Discharge curve method calibrated scale and/ or Fibre Reinforced Plastic (FRP) Cut Throat Flume as shown in figures below which will help in equitable distribution of water.

FIG:23 MEASURING DEVICE
Measuring discharge through a calibrated scale

FIG:24 CALIBRATED SCALEON CUT-THROAT FLUME

i. Line the channel in the reach where the flume is proposed.

ii. Choose straight reaches on the upstream and downstream of the flume.

iii. Avoid fall/ drop locations.

iv. Avoid curves.

v. Guidelines:

A.	For Straight Reach	
	Capacity of Flume in c/s	Minimum Straight Reach in U/S & D/S
a	1 to 4	2 to 3 metres
b	5 to 20	4 to 5 metres
B.	Criteria for distance from the Controlling Gate	
a	1 to 4	2 to 3 metres distance
b	5 to 20	5 to 10 metres distance

2.7 DE-SILTATION

De-silting is an important option for improving tank irrigation system. This process aims at removing accumulated silt in the tank bed, clearing foreshore encroachments and bringing the tanks to their original capacity. The process of de-silting is done by means of heavy earth moving machinery as shown in fig below:

The Dry bed of a small water harvesting structure being cleared.

FIG: 25 DE-SILTATION

The silt removed from the tank bed can be:

a. Transported by the needy farmers into their lands.

b. Deposited on the submergible lands on the foreshore of the tank which can thus be reclaimed and brought under cultivation. These newly cultivable areas become more productive.

c. Excess silt than that has been usefully transported may be deposited on the down-stream side of the toe of the tank bund.

To take up the de-siltation of tanks and decide upon the quantum of silt that can be removed, the following procedure has to be adopted:

1. Preliminary investigation including collection of statistics regarding tank bed level and other aspects need to be done.
2. Net levels at every 15m interval has to be taken in the tank bed area to decide the

quantum of silt that can be objectively taken.

3. Trial pits upto impermeable layer of the tank bed may be taken at suitable intervals so as to help the measurable quantity of de-siltation. This will be a check against meddling the impermeable layer leading to the tank becoming percolation tank.
4. The silt removed may be got tested for acidic impurities which may be harmful for agricultural growth.

Advantages of De-siltation:

1. Increased availability of fresh water, eliminates fluoride risks through improvement of ground water levels.
2. Usage of silt in the farms improves soil fertility thus reducing fertiliser usage, reduction in the subsidy on fertilisers by the government which can be effectively diverted for farm mechanisation.
3. There will be increase in food productivity due to silt usage as an effective manure.
4. The soil moisture content in the farm fields also increases.
5. This will rejuvenate the flood channels taking off from rivers and augment supplies to irrigation tanks.
6. In effect, there will be increase in storage.

2.8 OK CARD SYSTEM

An OK Card is a condensed form of specifications and essential requirements for achieving requisite workmanship and quality level of output.

- Shall be maintained in duplicate in two colours.
- The green coloured card shall form a part of the record of Q.C/Q.A.Wing and the red coloured card remains in the custody of construction Wing.
- Entries in the OK Card shall be in English as well as in the local language (Telugu).
- First column in the OK Card against the various activities shall be filled by Work Inspector (WI). The second column shall be initiated by Assistant Engineer/ Assistant Executive Engineer with dated signature against all the items. In case of absence of WI, the first column shall be left blank, but AE/ AEE shall fill the second column.
- Authorization of commencement of any activity and/ or OK of any activity shall be governed by the OK recorded by AE/ AEE in the OK card.
- Deputy Executive Engineer shall record his observations/ comments in OK Card during his visits to the work.
- Executive Engineers/ Superintending Engineers during their inspection of works shall check these cards and record their comments, if any, on them.
- **OK Card for each component shall be in duplicate.**

After the particular part of the work is completed, the OK Card related thereof, shall be filed in the Office of Executive Engineer, as a permanent record.

FORMATION OF EMBANKMENT

S. No.	DO's	DO NOTs
1	Get the top soil, vegetation and sand patches removed to complete depth	Do not raise the bank in piecemeal
2	Scarify the ground and wet properly	Do not allow new layer without scarificat on and wet ng of old layer
3	Obtain PD OMC for the useful soils and borrow soils	Do not allow new layer unless required degree of compaction is achieved
4	Provide CoTs according to height of bank	Don't leave any loose layer un-rolled at the end of day in rainy season
5	Raise embankment to full width with uniform horizontal layer of 25cm thickness	Don't allow compacted layer to be more than 150mm
6	Break clods, remove roots, big boulders, other materials larger than 80mm from the soils used in the embankment	No new layer to be laid unless the over-moistened layer is either completely removed or allowed to dry
7	Supplement deficit moisture whenever required	Don't dump soils in heap
8	Provide extra offset on both sides of bank	Don't dump soils in water and slush
9	Compaction with 8 to 10 tonnes power roller	No. of roller passes should not be less than 10
10	Conduct field compact on tests and determine compaction co-efficiency	Do not forget to provide settlement allowance of 2cm/ meter height of bank
11	Check embankment profiles periodically	Don't use expansive soils ion banking
12	Ensure 8 minimum number of passes	
13	Provide 10% allowance in setting pro i le of the embankment	

EXCAVATION OF CHANNELS

S. No.	DO's	DO NOTs
1	Fix up the center line and set the curves correctly	Do not avoid approval of the deviation statement
2	Take working levels, real variation in ground levels and classificat on of soils as per Govt. Memo No. 1970-12/ 72-11 dtd 4-7-1994	Avoid over break and loosening of canal
3	Get top soil vegetation etc. removed	Do not mix up useful soils with other soils of cutting
4	Provide treatment with CNS soils in BC reaches (Expansive soils)	
5	Form soil bank as per drawing and away from side drain with suitable gaps for drainage into the valley	
6	Form Dowel Bank as per drawing	
7	Form Inspection path to a uniform longitudinal gradient and with gentle transverse slope towards drains	
8	Compact over excavation/ breakage portion with suitable soils, gravel, spalls	

FREQUENCY OF TESTING

S. No.	TEST	FREQUENCY OF TEST	PURPOSE	TEST DESIGNATION
1	Grain Size Analysis for classificat on	One test per day for every 3000 cum	To know the classificat on of soil actually put in the embankment	IS: 2720 - IV - 1975
2	Atterberg Limit Test	One test per day		IS: 2720 - V - 1970
3	Specific Gravity	One test per day		IS: 2720 - III- 1964
4	Field Density and Moisture Content & Consolidation Test	One test for every 500 cum of earth work and at-least one test in each layer laid on embankment	To determine the placement density and moisture content	IS: 2720 - XXVIII - 1974 IS: 2720 - XXIX - 1966 IS: 2720 - XXXIII - 1971
5	Consolidation Test	1 set of 3 samples in every 6m height of embankment or for 30,000 cum or once in 10 days	To know settlement Rate and its magnitude	IS: 2720 - XV - 1965
6	Standard Proctor Test	One test per day for individual borrow area	To determine MDD and OMC of the soil and compare the results with laboratory value	IS: 2720 - VII - 1970
7	Moisture Content	One test in each sample	To know the moisture content of the sample	IS: 2720 - II - 1975
8	Shrinking Factor	One test in one week or 5m of embankment height	To determine Shrinkage Limit	IS: 2720 - VI - 1972

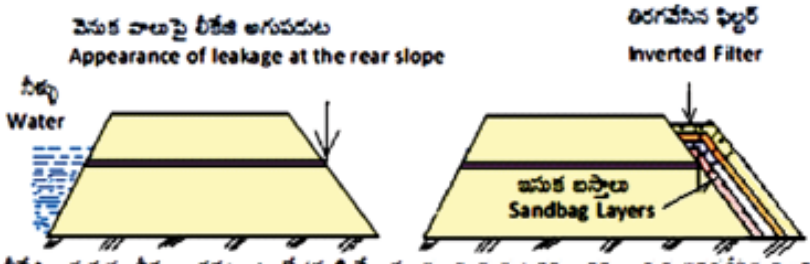
Tackling Emergency Situations

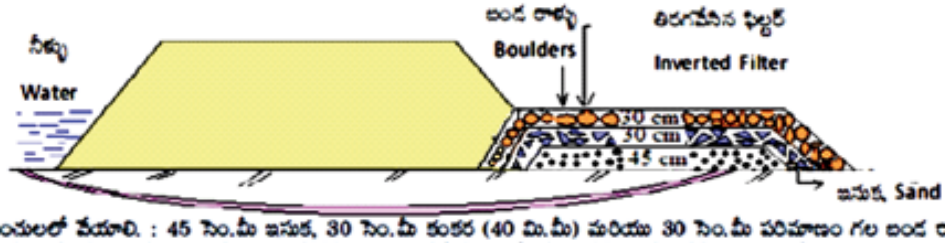


వెంటనే చేయాలి : Place Promptly

1. క్రింది భాగములో ఇసుక బస్తాలను 2 పొరలుగా వేయవలెను
1. 2 layers of sand bags at the bottom
2. దాని పైన ఒక వరుసలో 40 మి.మీ పరిమాణం గల కంకర బస్తాలను వేయాలి.
2. then one layer of 40 mm metal bag.
3. గుళక రాళ్ళను (12 సెం.మీ - 22 సెం.మీ పరిణామం) మరొక పై పొరగా వేయాలి.
3. then one layer of pebbles (Size of pebbles 12 to 22cm) at the top.

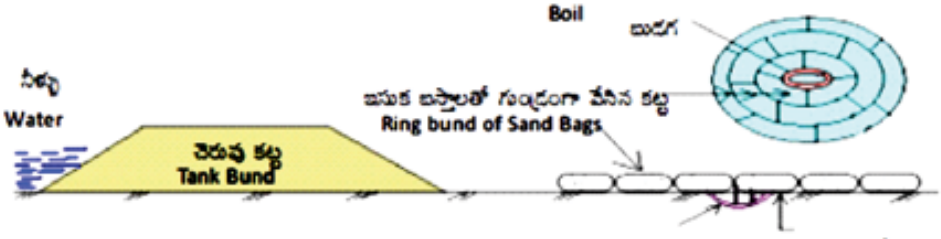
లీకేజి అవుతున్న నీరు బురదగా ఉంటే (మట్టి రేణువులను మాస్తున్న) తక్షణ చర్య అవ్వాలి తిరగవేసిన ఫిల్టరి వేయాలి. (పైపింగ్ మరియు తెగిపోవడం అరికట్టవచ్చు)
If leakage water is turbed (carrying soil particles), immediate action should be taken to place inverter to filter. (to avoid piping & breach)

పునాదుల ద్వారా లీకేజి
Leakages through foundations



గోనెసంచులలో వేయాలి. : 45 సెం.మీ ఇసుక, 30 సెం.మీ కంకర (40 మి.మీ) మరియు 30 సెం.మీ పరిమాణం గల బండ రాళ్ళను పైన వేయాలి
Dump or place in Gunny bags : 45cm sand, 30 cm metal (40mm & place 30 cm boulders on top)

బుడగలాగా కనిపించడం (డి అను వ్యాసంతో)
Appearance of "BOILS" (of diameter say d)



(10Xడి అను వ్యాసము) ఇసుక బస్తాలతో గుండ్రంగా వేసిన కట్ట
Place Ring bund of Sand Bags of 10Xd diameter

GUIDE FOR O&M WORKS Contd...

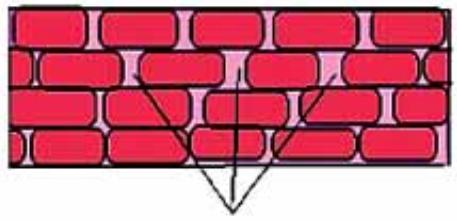
Rectification of Depressions/ Undulations:

బుడగలాగ కనిపించడం (డి అను వ్యాసంతో)

Appearance of "BOILS" (of diameter say d)

రాళ్ళ పేర్పులోని రాళ్ళ మధ్యన పెద్ద ఖాళీలు

Big gap between stones of revetment

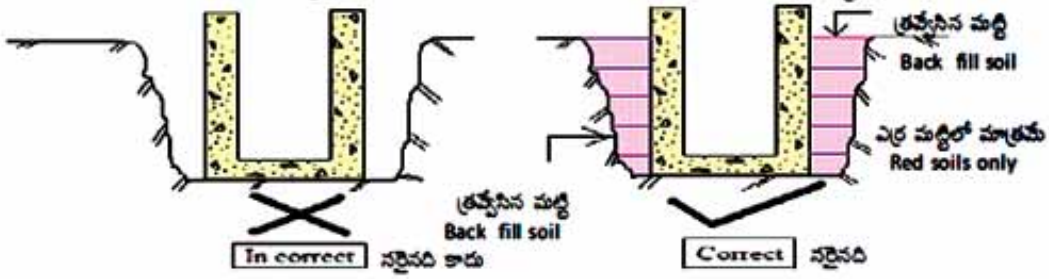


రాళ్ళ పేర్పు యొక్క రాళ్ళ మధ్యన పెద్ద ఖాళీలను కోణీయ చిన్న రాళ్ళతో నింపి వాటిని ఖాళీల లోనికి సుత్తితో కొట్టాలి

Big gaps between stones of the revetment should be filled with angular small stones & hammer wedged into the gaps

నీటి కాలువ యొక్క లైనింగ్ విభాగము

Lined sections of Irrigation Channel

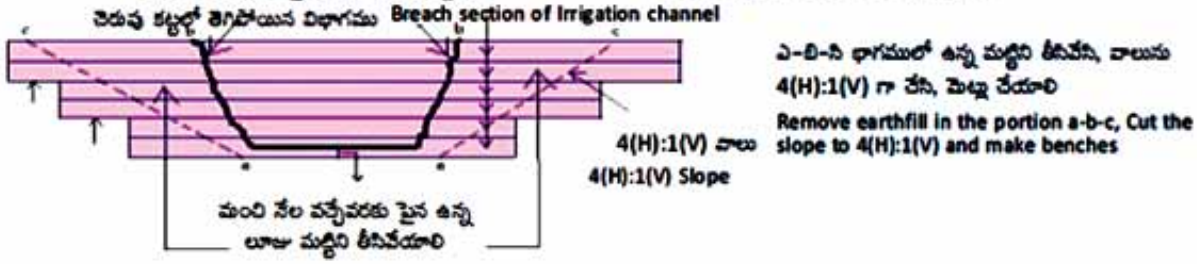


ఎందుకంటే త్రవ్వేసిన మట్టిని తిరిగి నింపలేదు
Because back fill soil is not placed

త్రవ్వేసిన మట్టిని తిరిగిపొరలుగా వేసి చేతి పరికరాల ద్వారా దట్టించాలి
Because back fill soil is placed in layers and tamped manually

తెగిపోయిన కట్ట భాగము పూడ్చడం

Closing a Breach in a Bund



ఎ-బి-సి భాగములో ఉన్న మట్టిని తీసివేసి, వాలును 4(H):1(V) గా చేసి, మెట్లు చేయాలి

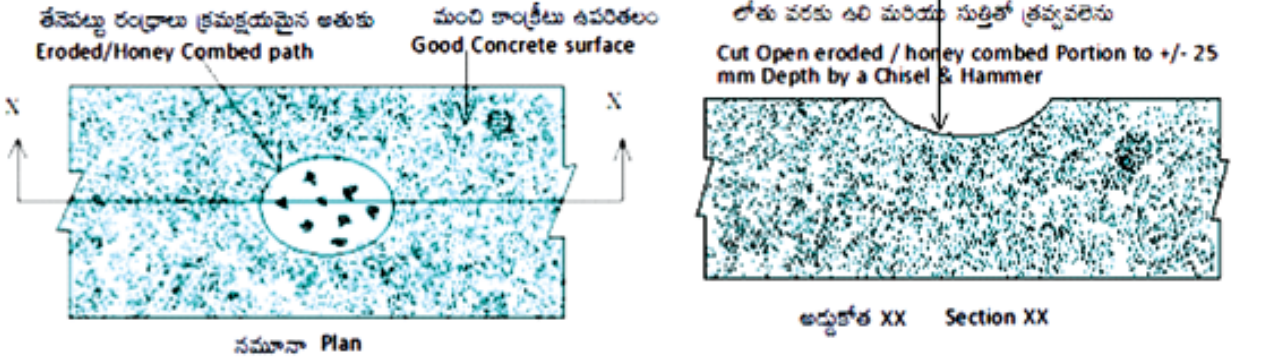
Remove earthfill in the portion a-b-c, Cut the slope to 4(H):1(V) and make benches

GUIDE FOR O&M WORKS Contd...

Rectification of Depressions/ Undulations:

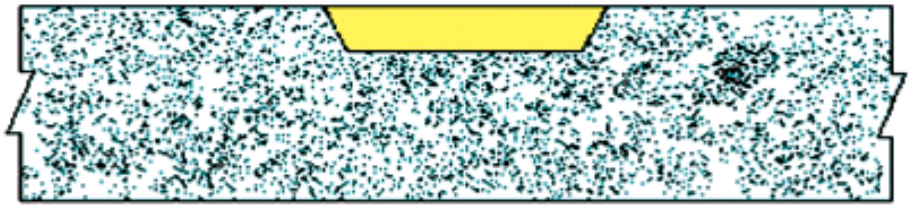
కాంక్రీటులో తేనె పట్టు రంధ్రాలను కాంక్రీటు కొట్టుకు పాయి ఉన్న అతుకులను సరిచేయుట

Rectification of "Honey-combed Eroded concrete patches"



త్రవ్విన భాగాన్ని పొడి ప్యాక్ మొర్టార్‌తో నింపి చక్కగా సమం చేయాలి

Fill the cut portion with Dry pack mortar and level it nicely



పొడి ప్యాక్ మొర్టార్ ఒక భాగము సిమెంట్ మరియు 2 భాగములు ఇసుక సరిపడినంత నీటితో కలిపి చేతితో కొద్దిగా వత్తుతూ ఒక బంతి లాగా తయారు చేయాలి

Dry pack mortar : One part of cement & two parts of sand mixed with just enough water to mould the cement - sand mixture into ball with slight pressure of hand

BEFORE THE NATIONAL GREEN TRIBUNAL (SOUTHERN ZONE) CHENNAI

Original Application No 204 of 2024 (SZ)

IN THE MATTER OF:

Suo Motu based on the news item appearing in 'The Hindu' dated 19.03.2024titled, "**Report on water bodies in Hyderabad presents grim picture: HC**".

.... Applicant (s)

Versus

Central Pollution Control Board
Through its Member Secretary New Delhi and Ors.
