MoEF & CC, Govt.of India
2nd Floor, 40-E, BSNL Building, TVK Industrial Estate,
CIPET Road, Guindy, Chennai - 600032

PRELIMINARY SUBMISSIONS:

3. That the above Original Application (herein after referred as OA) No. 532/2024 has been registered on Suo moto basis based on the news item appearing in 'The Hindu' dated 19.03.2024 titled, "Report on water bodies in Hyderabad presents grim picture: HC" in the Hon'ble Tribunal, Principal Bench, Delhi and the said OA was transferred to Chennai Bench vide order dated 15.05.2024. Further the case was renumbered as OA No. 204/2024 in the Southern Zone, Chennai.

4. That the Hon'ble Tribunal (PB) vide order dated 15.05.2024 directed as follows:

"Para 7 - Hence, we implead the following as respondents in the matter:

i. Telangana State Pollution Control Board, Paryavarana Bhavan, A-3, Industrial Estate, Sanathnagar, Hyderabad – 500018
ii. Central Pollution Control Board, Parivesh Bhawan, East Arjun Nagar, Delhi-110032
iii. District Collector/ District Magistrate, Hyderabad,

"Para 8 - Let notice be issued to the above respondents for filing their response before the Southern Zonal Bench of the Tribunal."

"Para 9 - The news item refers to some order passed by the Telangana High Court but it is not clear if the Writ Petition is still pending therefore before proceeding further the Southern Zonal Bench, will duly ascertain, if any, writ petition on the same issue is pending before the High Court.

The copy of the order dated 15.05.2024 is enclosed as **Annexure I.**

5. That the Hon'ble Tribunal (SZ), Chennai vide order dated 07.08.2024 directed as follows:

"Para 4 - It is stated that the writ petition is pending before the Hon'ble High Court of Telangana with regard to a similar issue. Let a copy of the affidavit filed in the above-said writ petition and the orders (if any) passed be furnished

H.D.VARALAXMI
Regional Director
CENTRAL POLLUTION CONTROL BOARD
Regional Directorate (Chennai)
MoEF & CC, Govt.of India
nd Floor, 40-E, BSNL Building, TVK Industrial Estate,
CIPET Road, Guindy, Chennai - 600032

Para 5 - Post the matter on 18.09.2024. Meanwhile, the respondents are also directed to file their respective replies/reports

The copy of the order dated 07.08.2024 is enclosed as **Annexure II.**

Further, Hon'ble Tribunal (SZ), Chennai vide order dated 18.09.2024, gave additional time for filing of reply and adjourned the case to 28.11.2024.

6. It is submitted that CPCB vide letter dated 20.06.2024 & 08.07.2024 requested Telangana Pollution Control Board (TGPCB) to issue appropriate directions to the concerned authorities to take action against the violators under Water (Prevention and Control of Pollution) Act, 1974 and also requested to submit the Action Taken Report at the earliest, which is yet to be received. The copy of the CPCB letters dated 20.06.2024 are enclosed as **Annexure III**.

7. It is submitted that TGPCB vide email dated 22.07.2024 has informed that, the WP No. 14728 of 2007 is under adjudication before Hon'ble High Court of Telangana and stated that TGPCB has requested the Standing Counsel of the Board, Chennai to inform about the pendency of the WP before the Hon'ble High Court of Telangana during the hearing and before the Hon'ble NGT. The copy of the email is enclosed as **Annexure IV**.

8. The CPCB has formulated Indicative Guidelines for Restoration of Water Bodies in compliance to the directions of Hon'ble NGT order dated 10.05.2019 in O.A. No. 325 of 2015 titled Lt. Col. Sarvadaman Singh Oberoi Vs. UoI & Ors. CPCB further requested all SPCBs/ PCCs including Telangana state to formulate its action plan for restoration of water bodies in their respective States/UTs vide letter dated 18.06.2019. Copy of the order dated 10.05.2019 in O.A No. 325 of 2015 and copy of Indicative Guidelines for Restoration of Water Bodies is annexed herewith as **Annexure- V** and **Annexure - VI** respectively.

H.D.VARALAXMI
Regional Director
CENTRAL POLLUTION CONTROL BOARD
Regional Directorate (Chennai)
MoEF & CC, Govt.of India
2nd Floor, 40-E, BSNL Building, TVK Industrial Estate,
CIPET Road, Guindy, Chennai - 600032

9. For ensuring compliance to the above-mentioned matter, the erstwhile Telangana State Pollution Control Board (TSPCB) submitted the Action plan for Restoration of Water Bodies in the State of Telangana vide letter dated 29.07.2020. The said action plan is in compliance of the directions issued by the Hon'ble NGT in O.A 325/2015 (PB). It was informed that the Govt. of Telangana has taken up the restoration of water bodies under the Mission Kakatiya Program.

   There are 185 lakes under GHMC jurisdiction which covers the twin cities of Hyderabad and Secunderabad. The Irrigation Department has demarcated FTL boundaries of all lakes and submitted to Lake Protection Committee for issuing preliminary notification. Out of which Final Notification was issued for 50 lakes and remaining lakes are under process. To protect the lakes from the encroachments chain link mesh fencing works with social bunding along the periphery of existing lake was taken up.

   The Solid Waste Management in the GHMC area is achieved through 100% door to door collection followed by processing at an integrated Scientific Land Fill facility with 6000TPD. A Construction and Demolition facility is in operation with a capacity of 750TPD and the Construction and Demolition waste is being processed. The Bio-medical waste is managed through the Common Bio-medical waste treatment facilities which are monitoring through the barcode system and online GPS port.

   Copy of report submitted by TSPCB vide letter dated 29.07.2020 is annexed herewith as **Annexure VII.**

10. That in light of the above submission, it is respectfully submitted that this Answering respondent i.e. CPCB, shall abide by any order(s) or direction(s) passed by this Hon'ble tribunal in the instant OA and render justice.

Item No.03 Court No. 1

BEFORE THE NATIONAL GREEN TRIBUNAL
PRINCIPAL BENCH, NEW DELHI

Original Application No.532/2024

News item titled "Report on water bodies in Hyderabad presents grim pictures: HC" appearing in The Hindu dated 19.03.2024

Date of hearing: 15.05.2024

CORAM: HON'BLE MR. JUSTICE PRAKASH SHRIVASTAVA, CHAIRPERSON
HON'BLE DR. AFROZ AHMAD, EXPERT MEMBER

ORDER

1. This Original Application is registered *suo-motu* on the basis of the news item titled "Report on water bodies in Hyderabad presents grim pictures: HC" appearing in The Hindu dated 19.03.2024.

2. The matter relates to the grim condition of water bodies in Hyderabad. As per the article, The Telangana High Court expressed serious concern over the pollution and degradation of 13 lakes in Hyderabad after reviewing a report by a committee of two advocates. The court highlighted the environmental harm caused by pollution in these water bodies, including the use of contaminated water for growing vegetables near Nalla Cheruvu of Uppal, that may pose serious concern to the environment and risk the health of people. The High Court expressed concern over the lack of action and called for immediate measures to revive and protect these vital resources.

3. The report also highlighted the decline in bird and fish populations due to pollution and the lack of protective measures like fences, surveillance cameras, and guards around the lakes. It also states that people operating function halls near the water bodies were dumping trash resulting in shrinkage of lakes.

4. The above news item indicates violation of the Water (Prevention and Control of Pollution) Act, 1974 and the Environment Protection Act, 1986.

5. The news item raises substantial issue relating to compliance of the environmental norms and implementation of the provisions of scheduled enactment.

6. Power of the Tribunal to take up the matter *suo-motu* has been recognized by the Hon'ble Supreme Court in the matter of *"Municipal Corporation of Greater Mumbai vs. Ankita Sinha & Ors." reported in 2021 SCC Online SC 897*.

7. Hence, we implead the following as respondents in this matter:

(i) Telangana State Pollution Control Board, through its Member Secretary, A-3, Paryavaran Bhavan, Sanath Nagar Industrial Estate, Hyderabad-500018.

(ii) Central Pollution Control Board, through its Member Secretary, Parivesh Bhawan, East Arjun Nagar, Delhi-110032

(iii) District Collector/District Magistrate, Hyderabad Opposite Sassoon Hospital, Station Road, Pune-411001.

8. Let notice be issued to the above Respondents for filing their response before the Southern Zonal Bench of the Tribunal.

9. The news item refers to some order passed by the Telengana High Court but it is not clear if the Writ Petition is still pending therefore before proceeding further the Southern Zonal Bench, will duly ascertain, if any, writ petition on the same issue is pending before the High.

10. Since the matter relates to the Southern Zonal Bench, Chennai, therefore, OA is transferred to the Southern Zonal Bench for appropriate

further action. Let the original record of this OA be transferred to the Southern Zonal Bench, Chennai.

11. List before Southern Zonal Bench at Chennai on 25.07.2024.

Prakash Shrivastava, CP

Madam,

This is with reference to the CPCB mail dated 09.07.2024 in the above subject matter.

Please find attached the Order of Hon'ble NGT, New Delhi in OA No.532 of 2024 (Transferred to NGT, South Zone & numbered as OA No. 204 of 2024) and Hon'ble High Court order dated 26.06.2024 in WP No.14728 of 2007 for kind information.

It is to submit that the WP No. 14728 of 2007 is under adjudication before Hon'ble High Court and posted for hearing in the week commencing from 22.07.2024.

The Hon'ble NGT New Delhi, vide order dated 15.05.2024 observed that the news item, which was taken as Suo Motu on the basis of New item," *refers to some order passed by the Telangana High Court but it is not clear if the Writ Petition is still pending therefore before proceeding further the Southern Zonal Bench, will duly ascertain, if any, writ petition on the same issue is pending before the High Court*".

The OA before NGT, Chennai is listed for hearing on 25.07.2024.

The TGPCB has requested the Standing Counsel of the Board, Chennai to inform about the pendency of the WP before the Hon'ble High Court of Telangana during the hearing and before the Hon'ble NGT on 25.07.2024.

This is for information and necessary action.

With Regards,
JCEE-II,
TGPCB-BO.

ORDER

1. The issue for consideration in the original application is identification, protection and restoration of water bodies in the State of Haryana. However, in the light of proceedings which have taken place, we are of the view that the scope of the application needs to be extended to the entire country in the interest of protection of environment.

2. This application was filed on 14.08.2015 before this Tribunal in the context of Gurgaon District and as per status report as on

09.03.2017 filed before this Tribunal on behalf of State of Haryana referred to in the order dated 20.07.2018, there are 1216 water bodies in the State of Haryana which are larger than 2.25 Ha and 123 water bodies which are in possession of the State in Gurgaon District while the total number of the water bodies are 641 (later corrected as 647) in Gurgaon District. The Tribunal directed that for 123 water bodies which are in possession of the State, steps be taken for their proper maintenance and restoration. An exercise be undertaken in the entire State of Haryana to identify water bodies. On such identification, water bodies be assigned Unique Identification (UID) number and steps be taken for restoration. Report was sought within six months.

3. Status report has been filed vide email dated 25.04.2019 by the Haryana Pond and Waste Water Management Authority (HPWWMA) stating that HPWWMA has been established under a State Act called the HPWWMA Act, 2018 notified on 23.10.2018 for development and protection of ponds and matters connected therewith. Pond has been defined as a tank or lake or any other inland water body having an area of 0.5 acre or more. The authority is to undertake survey and take steps for restoration of water bodies, PDMS (Pond Data management System) has been developed which can be accessed through "http://hpwwma.org": DPMOs (District Pond Management Officers) are appointed for each District. As per PDMS data, 16306 ponds fall under the Panchayats and 265 ponds fall under the Urban Local Bodies. The same have been given UID

numbers and work of development will be undertaken by DPD (Development and Panchayat Department). The work for connecting the ponds with the nearby canal network will be executed by the IWRD (Irrigation and water Resources Department). 200 most problematic and overflowing ponds will be addressed during 2019-20. 193 model ponds which are overlapping with the said 200 ponds will be developed in first phase for which a plan has been prepared.

4. The Gurgaon Metropolitan Development Authority (GMDA) has also given a report to the effect that water bodies in the District are owned by 20 different entities. Work of restoration of 123 water bodies was taken up which has been widened to improve 647 water bodies. In all 826 water bodies, as found as per record, the task involves identification and verification of data, review and categorization of water bodies, assigning UID numbers, preparation of maps and analysis of information in regard to size, restoration potential, etc. 20% of the water bodies are at risk due to discharge of untreated sewage, industrial effluents or waste water.

5. Learned counsel for the applicant submits that not even a single water body has so far been taken up for restoration inspite of the exercise undertaken for identification of the water bodies. The steps for preventing dumping of solid waste or discharging of effluents are urgently required. The State of Haryana may take necessary steps in terms of the status report referred to in para 3 & 4 above as well as in the light of general directions which we propose to issue to all the States/UTs.

6. There can be no dispute that the water bodies play significant role in recharge of ground water, preventing soil erosion, harnessing rain water and maintaining micro-climate in the area. Need for conservation and protection of water bodies is thus obvious. This requires involvement not only at the level of the State but also at the level of the community for which State needs to take initiative. The threat caused to the water bodies is by dumping of waste, discharge of effluents and encroachments. The steps required for restoration will include preparation and implementation of catchment area treatment plans, setting up of green belt and wherever viable setting up of bio-diversity parks around the water bodies, cleaning up of the garbage/debris and demarcation by the Revenue Department on identification survey and demarcation. Each water body is required to be given a geo-referenced-UID and an action plan is required for restoration and protection of each of the water bodies. In this view of the matter, need for conservation and protection of water bodies is not confined to the State of Haryana alone but extends to the whole country.

7. The Hon'ble Supreme Court in *Hinch Lal Tiwari v. Kamala Devi & Ors. (2001) 6 SCC 496* observed:

> *"It is important to notice that the material resources of the community like forests, tanks, ponds, hillock, mountain etc. are nature's bounty. They maintain delicate ecological balance. They need to be protected for a proper and healthy environment which enables*

people to enjoy a quality life which is the essence of the guaranteed right under Article 21 of the Constitution. The Government, including the Revenue Authorities i.e. Respondents 11 to 13, having noticed that a pond is falling in disuse, should have bestowed their attention to develop the same which would, on one hand, have prevented ecological disaster and on the other provided better environment for the benefit of the public at large. Such vigil is the best protection against knavish attempts to seek allotment in non-abadi sites."

8. The above observations advance the Public Trust Doctrine which is based on the principle that certain resources like air, water and forests have such great importance to the people as a whole that the same cannot be subject of private ownership. The same are gift of the nature and should be made freely available to the people. The Doctrine requires the State to protect such resources and not to permit them to be used for private or commercial purposes.[1] This concept is applicable to wetlands and all water bodies which is essential for protection of the environment. If the ponds and other such water bodies are not protected and conserved, this will in turn affect recharge of ground water, rain water harnessing and soil preservation.

9. Ground water conservation remains a challenge. This led the Hon'ble Supreme Court to direct constitution of the Central Ground Water Authority (CGWA) vide order reported in *M.C Mehta v. Union of*

[1] (1997) 1 SCC 388, M.C. Mehta vs Kamal Nath & Ors

India & Ors, (1997) 11 SCC 312. The data compiled by the said authority shows that there are over exploited, critical and semi critical areas (OCS). The ground water is on the decline in the said areas. In this regard, it may be noted that vide order dated 11.07.2018 in *W.P.C No. 4677/1985, M.C. Mehta v. Union of India and Ors.*, the Hon'ble Supreme Court noted the report of the Niti Ayog on "Composite Water Management Index", June 2018, in which it is stated, *inter alia*:

> *"In fact by 2020, 21 major cities, including Delhi, Bangalore and Hyderabad will are expected to reach zero groundwater levels, affecting access for 100 million people".*

10. The Tribunal has, vide order dated 07.05.2019 in *O.A No. 176/2015, Shailesh Singh Vs. Hotel Holiday Regency, Moradabad & Ors.,* directed the CGWA to prepare a policy for conservation of groundwater with a robust institutional mechanism for surveillance and monitoring with a view to enhance access to ground water for drinking purposes in OCS areas by way of appropriate replenishment practices which can be properly accounted and measured as well as to sustain the flood plains of rivers in terms of e-flows, augmentation of subterranean flows and preservation of other water bodies. The Tribunal also considered the matter in the context of Delhi, vide order dated 30.08.2018 in *Original Application No. 496 of 2016, Tribunal on its own Motion Vs. Govt. of NCT of Delhi & Ors.,* and appointed a Committee headed by the former Judge of Delhi High Court to oversee the steps for conservation of ground

water in Delhi. We also note the guidelines for National Lake Conservation Plan prepared by MoEF&CC in May 2008 as well as National Plan for Conservation of Aquatic Ecosystem (NPCA) prepared by MoEF&CC in November, 2016. Irrespective of the subject being covered by a particular State statute, the protection of water bodies is an essential need for protection of environment as held in *Hinch Lal Tiwari (Supra).* Such requirement is covered by the 'Precautionary' principle as well as the 'Sustainable Development' principle which are required to be enforced by this Tribunal under Section 20 of the NGT Act, 2010. The HPWWMA Act, 2018 covers only ponds having area of more than 0.5 acres. Thus ponds of lesser area have been left out of regulation under the said Act. This aspect needs to be addressed to the extent the same remains un-addressed not only in Haryana but throughout India to the extent the existing statutory framework or guidelines do not cover comprehensively the subject of restoration of all the water bodies. The definition of water body in the Haryana Act is as follows:

> *"the 'pond' means a tank or lake or any other inland water body having an area of 0.5 acre or more, whether it contains water or not, and mentioned in revenue records as talab, johar, tank or by any other name and includes green belt and the peripheral catchments areas, main feeder inlet and other inlets, bunds, weirs, sluices etc but does not include wet lands as notified by the Government from time to time."*

11. The above definition shows that only ponds of area of more than 0.5 acres are sought to be restored under the statutory provisions of the said Act. While in terms of the orders of the Hon'ble Supreme Court in *Hinch Lal Tiwari (Supra)* even ponds of lesser area will be covered for being protected and restored. This is also imperative in terms of the concern raised in the order of Hon'ble Supreme Court dated 11.07.2018 in *W.P.C Nos. 4677/1985, M.C. Mehta vs. Union of India &Ors*. for conservation of ground water. If all water bodies including ponds of lesser area than 0.5 acre are not covered, this will affect the environment including recharge of ground water, harnessing of rain water, prevention of soil erosion and maintaining the micro climate. We may, however, clarify that focus may be on ponds, etc. recorded in the revenue record.

12. We may note that there are 351 polluted river stretches in India identified as such by the CPCB which need remediation. The matter is being considered by this Tribunal in *Original Application No.673/2018, News item published in "The Hindu"authored by Shri Jacob Koshy titled "More river stretches are now critically polluted : CPCB.* In *O.A. No. 148/2016, Mahesh Chandra Saxena Vs. South Delhi Municipal Corporation &Ors.,* vide order dated10.05.2019, it was observed that reuse of treated sewage water as well as restoration of water bodies are connected to ground water conservation, which in turn is connected to remedying the pollution of polluted river stretches.

13. Thus to give effect to 'Precautionary' principle and 'Sustainable Development' principle, we direct all the States and UTs to review the existing framework of restoration all the water bodies by preparing an appropriate action plan. Such action plans may be prepared within three months and a report furnished to the CPCB. The CPCB may examine all such plans and furnish its comments to this Tribunal within two months thereafter. The Chief Secretaries of all the States/UTs in the course of undertaking monitoring exercise in pursuance of the order of this Tribunal in *O.A No. 606/2018, Compliance of MSW Rules, 2016,* may also include restoration of water bodies as one of the items as the same is also incidental to waste management which are covered by orders in *O.A No. 606/2018, Compliance of MSW Rules, 2016.*

14. The CPCB may prepare and place on its website guidelines in the matter of restoration of water bodies in the light of above order within one month.

15. The matter may also be monitored by Central Monitoring Committee constituted in terms of order dated 08.04.2019 in *O.A No. 673/2018, News item published in "The Hindu" authored by Shri Jacob Koshy titled "More river stretches are now critically polluted : CPCB,* as this matter is connected to the steps required for remedying the polluted river stretches as already explained.

16. A copy of this order be sent to the Chief Secretaries of all the States and Union Territories and the CPCB by email.

List for further consideration on 09.12.2019.

Indicative Guidelines for Restoration of Water Bodies
(Polluted Lakes, Ponds and Rivers)

1 Introduction

Adequate availability of water of required quality is pre-requisite for survival and quality of human life. Surface water bodies like lakes, ponds, reservoirs, tanks and rivers were treated as community resource or asset over the centuries. In urban areas also such water bodies played an important role as a source of drinking water, absorption of flood water and a conduit for ground water recharge. They were being nurtured, protected, conserved and managed by the active participation of the local community without any code of conduct or rule. In turn, these water bodies have been catering the local human and livestock populations. The introduction of public water supply and ground water development through tube wells and hand pumps in the modern times, coupled with urbanization and industrialization induced pollution, a tectonic shift in the attitude of the people towards these water bodies has been witnessed. Both locals as well as the government have started neglecting this asset and have stopped caring, nurturing and conserving these community resources. Mushrooming urban, industrial and infrastructure development has further changed the status of these water bodies from community resources to a mere dumping ground or sink for solid wastes, construction debris, domestic sewage, industrial effluents, religious offering etc. resulting in severe degradation in the quality of such resources.

India has had abundant supply of water resources. However, from being a water abundant country India is gradually progressing towards water scarcity due to increasing population pressure, urbanization and uncontrolled growth. At present it is sustaining 18 per cent of world population with 4 per cent of global water

resources. Therefore, management of water resources has assumed great importance. Today availability of water resources is a major issue and is a big challenge facing our country.

In order to revive, restore and rehabilitate the traditional water bodies, the Government of India launched a Scheme for Repair, Renovation and Restoration (RRR) of water bodies which has multiple objectives like comprehensive improvement and restoration of water bodies thereby increasing tank storage capacity, ground water recharge, increased availability of drinking water, improvement in agriculture/horticulture productivity, improvement of catchment areas of tank commands, environmental benefits through improved water use efficiency by promotion of conjunctive use of surface and ground water, community participation and self-supporting system for sustainable management for each water body, capacity Building of communities in better water management and development of tourism, cultural activities, etc. by providing Central Grant to State Governments under a Pilot Scheme directly linked to agriculture during the remaining period of X^{th} Five Year Plan in January 2005. Keeping in view the benefits arising out of the implementation of the scheme, it was extended to XII Plan as well. Further, the Ministry of Environment, Forest and Climate Change is implementing a Centrally Sponsored Scheme of National Plan for Conservation of Aquatic Eco-systems (NPCA) since February, 2013 for conservation and management of identified lakes and wetlands in the 11 country in a holistic and integrated manner. Under the scheme financial assistance is provided to the concerned State Governments for undertaking various activities for conservation of wetlands and lakes, which also include a small component of lake front development and beautification, especially in urban lakes.

The National Water Policy (2012) formulated by MoWR,RD&GR advocates conservation, promotion and protection of water and highlights the need for augmenting the availability of water through rain water harvesting, direct use of

rainfall and other management measures. Further, the Standing Committee on Water Resources (2012-13) in their 16th Report on "Repair, Renovation and Restoration (RRR) of Water Bodies" also substantiated that *encroachment on water bodies is threatening the existence of a large number of water bodies and throwing consequent challenges of depleting ground water resources, occurrence of devastating floods in urban areas as well as water scarcity. Afore-said Committee suggested steps required to remove encroachment and to restore the water bodies.*

In recent years several metro cities such as Mumbai and Chennai have witnessed unprecedented flood. Encroachment of river bed is one of the reasons of flooding since it reduces the desired waterway of the river. Inadequacies of flood protection works, reduction in the water holding capacity of natural reservoirs in the basin due to progressive siltation, breaching of river banks, raising of river bed caused by deposition of silt are also the reasons. Encroachments happen due to number of local factors, thus issue is to be looked into by concerned State Government as per the prevailing rules and regulations of the respective State/UT.

As per MoWR, RD & GR, total number of water bodies have declined in the States which may be attributed to (i) increase in population and density of population per square kilometer; (ii) change in land use pattern; (iii) shift from paddy based agriculture to cash crop cultivation; (iv) depletion of ground water; (v) rapid Urbanization; (vi) unplanned urbanization and development activities; (vii) boom in construction activity; (viii) new water bodies have been developed to meet the additional requirement of water for drinking water and irrigation arising due to increase in population; (ix) some of the water bodies mainly, wells in southern group of islands were lost due to submergence of coastal area during tsunami in 2004.

NITI Aayog based on a study warning that India is facing its 'worst' water crisis in history and that demand for potable water will outstrip supply by 2030 if remedial steps are not taken. Nearly 600 million people faced high to extreme water stress. Also, made predictions that twenty-one cities, including Delhi, Bengaluru, Chennai and Hyderabad will run out of groundwater by 2020, affecting 100 million people. If matters are to continue, there will be a 6% loss in the country's Gross Domestic Product (GDP) by 2050. Moreover, critical groundwater resources, which accounted for 40% of India's water supply, are being depleted at "unsustainable" rates and up to 70% of India's water supply is "contaminated" 'Therefore*, water resource available to the country should be brought within the category of utilizable resources to the maximum possible extent.*

Therefore, existing scenario necessitates formulation of guidelines for restoration of water bodies keeping in view (i) to make pollution free water bodies and to meet the desired water quality criteria; (ii) to preserve excess water during monsoon, (iii) to restore and augment storage capacities of water bodies (iv) to serve and enhance ground water recharge; (v) increased availability of water for different intended purposes etc., These guidelines are only indicative guidelines and limited to restoration of ponds, lakes, polluted rivers or streams and divided into two parts i.e., stagnated surface water bodies such as ponds, lakes and rolling surface water bodies such as rivers or streams. However, concerned stakeholders are advised to conduct detailed gap analysis to enable to include related action plans for restoration of water bodies for ensuring compliance to Hon'ble NGT order dated 10.05.2019. For understanding aspects relating to restoration of water bodies, the documents already published or issued by Ministry of Water Resources, River Development and Ganga Rejuvenation (MoWR, RD & GR), Ministry of Housing and Urban Development also be referred as given at Sl. No. 7 References of these indicative guidelines.

This requires an understanding on the status of the water bodies, their suitable use, need for management and conservation so that they serve as a good

resource for future, potential strategies for long-term management especially in the urban areas, which are facing severe water shortage. It should include (i) Recognition Phase, (ii) Restoration Phase; (iii) Protection Phase; (iv) Improvement Phase and (v) Sustenance phase

2. Recognition Phase

Identification and recognition of the problem (inventory of existing and lost water bodies (due to encroachment, pollution, diversion etc.), analysis of cause of the problem and its effect and development of alternative solutions of problem as detailed below: -

2.1 Collection and maintenance of historical information relating to the water bodies

Based on the records available or remote sensing data or GIS maps, interaction with the public living in the vicinity of the water body, following information relating to the water bodies should be collected and records maintained by the concerned department in the State/UT: -

2.1.1 Stagnated water bodies such as ponds/lakes

A. ***Geographical details of the water body: -*** GPS Location and address of the water body, size or dimensions, area, elevation above mean sea level, ownership of the water body, boundaries with earmarking, map of water body (Digital map or remote sensing or satellite map over the years/National Wetland Atlas) with salient features

B. ***Hydrological description of the water body: -*** area, category of lake or pond (natural or man-made), average and maximum depth of stored water (during monsoon and non-monsoon period), total storage capacity, main source of water (rainfall/groundwater seepage/catchment

runoff/direct or indirect flow from any river or stream or creek), water permanence (permanent or intermittent), destination of excess water from pond or lake, purpose used to serve (like drinking water source, fisheries and agriculture or cultivation of aquatic food plants, recreational and aquatic sports, ground water recharge, act as a sink for sediments, habitat for noteworthy animal species, migratory birds or any other purpose), status of lakes or ponds in terms of % open water and aquatic vegetation.

C. Catchment Description

- Details on natural drains or flood channels and their flows contributing to water accumulation.
- Major Towns, total population living around the water body, any sewage contribution from the towns, total sewage generation, total no. of existing STPs and their treatment capacities, if any.
- Major industrial clusters or estates contributing to pollution in water body, total no. of industries (sector-wise), sector-wise total industrial effluent generation, existing industrial effluent treatment capacity [(both captive and Common Effluent Treatment Plants (CETPs)], if any.
- Total waste generation (waste like municipal solid waste, plastic waste, industrial hazardous waste, construction and demolition waste), existing provision for collection, transportation, treatment and disposal practices in the vicinity;
- Any other relevant information such as: - (i) Declared Wetland Ramsar sites, (ii) Bio-diversity details such as flora and fauna biodiversity (list of plant species, list of animal species, species of conservation significance (rare, endangered, threatened, endemic species), major plant invasive alien species and extent of invasion, major animal invasive alien species and extent of invasion.

2.1.2 River or streams

A. ***Digital map*** *of river under consideration with its tributaries showing salient features.*

B. ***Geographical and Hydrological description of polluted river***

Origin of the river and confluence with any other water body, length of travel of the river before confluence with any other water body, velocity of flow (in m/sec), average cross-sectional area (in m^2), average depth of flow (in m) during monsoon and non-mon-soon period, volume of flow or discharge (in m^3 /sec), tributaries of the river under consideration for restoration, GPS location details of all the tributaries and drains confluence with the river or stream; drains or channels contributing to river pollution;

C. ***Catchment description***

- Purpose used to serve by the river or streams
- Major towns along the banks of the river, town-wise total population (with projection for the next 20 years), total water consumption (both supply by local or urban bodies and the ground water consumption), total sewage generation pattern, no. of STPs and the treatment capacity.
- Major industrial estates or clusters along the banks of the river, Industry-sector –wise no. of industries, total water consumption, total industrial effluent generation and existing mechanism for treatment of industrial effluent.
- GPS location details of STPs, CETPs and their capacities, if any
- Ground water status, its utilization and the quality.

- Agricultural practices and the control measures with respect to agricultural runoff.
- Flora and fauna including biodiversity etc.

Also, water being state subject, the State Government or Union Territory Administration should assign the task of maintaining historical records pertaining to each water body to concerned Department in the State/UT and also to designate one responsible Department to enable to take necessary remedial actions as and when situation demands.

2.2 Digital Mapping of all the collected information

All the collected information to be located on the map and such details to be periodically updated and maintained by the concerned department in the State/UT.

3. Restoration Phase includes declaring the 'designated best use' in order to formulate strategies and to decide degree of treatment required for restoration of such water body, if required, selection of best solution to problems identified and application of the solution to the problems of the land which vary from case-to-case, to achieve the designated best use water goals as detailed below: -.

3.1 Designation of water body for its use by the State/UT

The landscape of India is dotted with large number of lakes, reservoirs and wetlands. Historically, the water bodies such as ponds or lakes have met water demands of the population for centuries and a community management system had sustained them for a long period of time.

In a water body or its part, water is subjected to several types of uses. Depending on the types of uses and activities, water quality criteria have been specified to determine its suitability for a particular purpose. Among the various

types of users there is one use that demands highest level of water quality or purity and that is termed as “Designated Best Use” in that stretch of water body. Based on this, water quality requirements have been specified for different uses in terms of primary water quality criteria. The Primary Water Quality Criteria for bathing water already prescribed under Environment (Protection) Rules, 1986**.**

Every pond, lake, river or stream falling under the jurisdiction of the concerned Department of the State Government or UT Administration is required to declare for its ‘designated best use’ in order to formulate strategies and to decide degree of treatment required for restoration of such water body, if required. In the absence of such information, it would be difficult for the regulatory authorities to formulate the strategies to be prepared in case restoration of such water bodies is required.

Water being the State subject, such list of water bodies with designated best use with all the relevant information collected by the concerned Department of the State/UT Administration is required to be submitted to the concerned State Pollution Control Board (SPCB)/Pollution Control Committee (PCC), Central Pollution Control Board (CPCB) as well as MoEF & CC, MoWR, RD & GR.

3.2 National Restoration Goals (Ponds, Lakes and Rivers)

‘Water quality criteria-designated best use’ water quality parameters as given at **Annexure-I** is required to be followed as ‘National Restoration Goals (for Ponds, Lakes or Rivers)’. However, this national restoration goals or criteria given at Annexure-I is only indicative and national restoration goals issued from time to time need to be followed for restoration of water bodies.

Monitored water quality of the water body (lakes and ponds) for relevant parameters (monitored at least 8 times in a year) (average mean value) is compared with the ‘National Restoration Goals’. In case of ponds or lakes, if the monitored water quality of the selected water body is complying at least i.e.,

6 out of 8 times to the designated best use water quality parameters, then such pond or lake is fit for the 'designated best use' and if not then requires remedial measures for its restoration**.** *This criterion is applicable only in case of ponds and lakes.*

In case of rivers or streams, the criteria issued from time to time by CPCB for categorization of monitoring location need to be followed and accordingly, the strategies to be formulated for its restoration to achieve at least bathing water quality criteria. Criteria for categorization of river monitoring location is ~~are~~ given in ***Annexure-II. This criterion is to screen the potential locations having pollution (w.r.t bathing water quality parameters i.e., BOD and Faecal Coliform only) and requires more comprehensive examination to identify all the possible sources of pollution.***

3.3 Steps to be followed for restoration of stagnated polluted ponds or lakes

Conservation and restoration requires a systematic and comprehensive plan to study selective and representative freshwater ecosystems. Details of the study should include the status of ponds or lakes or rivers, their suitable use, management and conservation so that they serve as a good resource for future use and formulation of strategies for long-term management especially in the urban areas.

3.3.1 World Lake Vision

The World Lake Vision has been developed by International Lake Environment Committee (ILEC), Japan (https://www.ilec.or.jp/en/pubs/), in collaboration with UNEP , aiming at illuminating the growing crisis in management of lake ecosystem, articulating principles to guide the transition towards managing lakes for their sustainable use and to provide a practical blueprint for ensuring long-term health of lakes and integrity of their survival and economic development. The Seven Principles of Sustainable Lake Management are:

- A harmonious relationship between humans and nature is essential for the sustainable use of lakes.
- A lake drainage basin is the logical starting point for planning and management actions for sustainable lake use.
- A long-term, preventive approach directed to preventing the causes of lake degradation is essential.
- Policy development and decision making for lake management should be based on sound science and best available information.
- The management of lakes for their sustainable use requires the resolution of conflicts among competing users of lake resources taking into account the needs of present and future generations and of nature.
- Citizens and other stakeholders should be encouraged to participate meaningfully in identifying and resolving critical lake problems.
- Good governance, based on fairness, transparency and empowerment of all stakeholders, is essential for sustainable lake use.

The restoration of any water body should be considered only based on the needs and its utilities. *General steps to be followed for restoration of water bodies includes following: -*

3.3.2 Assessment of water quality of the selected water body

Water quality of all the designated best use water bodies are required to be monitored for relevant parameters and as per frequency prescribed under 'guidelines for water quality monitoring 2017' by Ministry of Environment, Forest and Climate Change (MoEF & CC)**.** *Wherever, frequency is not suggested, water bodies are required to be monitored following the standard protocols for collection of samples by the concerned department at least once in a month ~~or~~ but not less than 08 months in a year (covering pre and post-monsoon period)*

3.3.3 Need for restoration of water body

The monitored values of the water body is analyzed based on the criteria suggested under these guidelines or criteria issued from time to time by CPCB for identification of polluted lakes or ponds or rivers or streams and decision be taken for restoration of water body. The criteria suggested for river monitoring location is to use for initial screening and identification of potential hotspots on the river. A comprehensive examination of water quality is required for identifying sources.

3.3.4 Identification of sources of pollution, quantification and assessing detailed gap analysis

Following steps to be followed for idenfication of sources of pollution, its quantification and for carrying out detailed gap analysis

A. Desk Review and Reconnaissance Survey

Identification of various sources contributing to pollution in ponds or lakes–need to be carried out based on desk survey (available information or data/ google map/ historical records) and physical reconnaissance survey (based on physical visual observations, interactions with the local public etc.,) for identification and ascertaining the sources of pollution of ponds or lakes. All the possible sources of pollution should be identified which may be

- open channels or drainage channels contributing untreated sewage or untreated or partially treated effluent discharge from existing sewage treatment plant in the vicinity (or)
- any untreated industrial effluent discharges either from the individual industry or any common effluent treatment plant (CETP) located in the vicinity (or)

- improper disposal of solid waste (plastic waste/ municipal solid waste/industrial hazardous waste/sludges from septic tanks or sewage treatment plants (STPs) or hazardous waste disposal from common effluent treatment plants (CETPs) (or)
- Run off from nearby agricultural fields, if any.
- Social and cultural misuse of ponds or lakes by local communities especially for immersion of idols during festival seasons.
- Any open-defecation around the ponds or lakes by the people living in the vicinity due to lack of sanitary facilities in their dwellings or colonies and fencing all around such water body.
- Physical condition of weed growth and necessity for dredging- Aquatic plants growing in ponds and lakes are beneficial for fish and wildlife as they provide food, dissolved oxygen, and spawning and nesting habitat for fish and waterfowl. Aquatic plants can trap excessive nutrients and detoxify chemicals. However, dense growths (over 25% of the surface area) of algae and other water plants can cause (i) Fish kills; (ii) Fish flavor problems; (iii) Pond water odor problems; (iv) Drinking water taste problem and (v) Stunted fish growth.
- Silting or sediments in the ponds or lakes due to improper disposal of waste including construction and demolition waste or silt contribution from drainage channels which reduces storage capacity and accumulation of contaminated sludges.
- Status of aesthetic conditions around the water body
- Condition of the banks or bunds, spill over (provision to ensure smooth flow of excess floods on downstream especially during monsoon period) or flood channels including obstructions if any.

- Encroachment of waterbodies due to urbanization
- Condition of Eutrophication of lakes or ponds due to inadequate measures (due to indiscriminate discharge of Industrial effluents, run-off from agricultural fields, refuse and discharge of sewage, domestic wastes like food remnants, soaps, detergents cause depleted levels of dissolved oxygen in water lead to a situation where other aquatic life-forms cannot survive).
- Available In-situ available technological options for restoration of ponds or lakes (such as aeration, bio-remediation) in lakes or plants)

B. Detailed gap analysis

Detailed gap analysis to be made w.r.t municipal sewage, industrial effluent and waste management with a projection of at least 15 to 20 years, existing infrastructure for management of municipal sewage, industrial effluents and waste management in the catchment area of the water body under consideration for its restoration including volumetric flow details of all the channels or drains contributing to pollution in water body, as detailed below: -

- ***Sewage management:*** **-** Total population (with projected population at least for the next 20 years) living around the water body, total water consumption (taking into account both water supply by local/urban bodies as well as ground water consumption), total sewage generation (with projected generation quantities), total no. of existing STPs and their treatment capacities and the observed gap with regard to the sewage management (gap may be estimated in the catchment of waterbody).

- ***Industrial effluent management: -*** Industrial clusters or estates contributing to pollution in water bodies, total no. of industries, estimation of total water consumption by the industries, total industrial effluent generation, existing treatment capacity (both captive and common effluent treatment plants (CETPs), gap in industrial effluent management and the requirement for captive or common effluent treatment plants

- ***Waste Management: -*** waste-wise total waste generation, existing provisions for collection, transportation, treatment and disposal (in compliance to the concerned rules) with their capacities and waste-wise gap analysis and the requirements for their management

C. Identification of other associated issues which requires attention as a part of restoration of pond or lake

Apart from identification of all possible pollution sources, detailed gap analysis, additional measures required on case-to-case basis to be identified especially in case of ponds or lakes w.r.t the following aspects: -

- Buffer Zone development maintenance and the existing activities within the buffer zone.
- Feasibility for Bio-diversity park in case adequate land is available in the vicinity of ponds or lakes.
- Greenery development in the vicinity of the ponds or lakes.
- Introduction of recreation facilities such as paddle boats, building jetty.
- Machinery and the man power requirement for maintenance of

the restored water body.

- Existing provision for disposal of waste arising from the de-siltation and de-weeding activity of a pond or lake.
- Awareness and training requirements.
- Any other related measures required also be analyzed for inclusion of such actions while making action plans for restoration of water body (E.g., aesthetic point of view, bins for rubbish management which may be generated due to visitors).

4. **Protection Phase** that takes care of the general health of the water body and ensures normal functioning. A long-term, preventive approach directed to preventing the causes of waterbody degradation is essential.

4.1 Preparation of action plans

Action plans to be prepared based on the historical information collected, desk review, reconnaissance survey conducted, detailed gap analysis for ensuring additional measures required for restoration of water body (vary from case-to-case) covering both direct and indirect measures with specific time targets and the organization responsible for implementation of action plans with budget estimates. Action plans should include covering following aspects: -

A. **Sewage Management: -** for management of sewage inflow if any (which is causing eutrophication of lake or pond) by having adequate infrastructure for treatment of sewage through adequate capacity of sewage treatment plants (STPs) or combination of other low cost treatment technologies for ensuring discharge norms notified under Environment (Protection) Act, 1986 and same should be ensured by an individual generator of sewage as well as by the concerned local or urban body.

B. Industrial effluent management: - for management of industrial effluent inflow by having adequate infrastructure for treatment of industrial effluent in the form of captive industrial effluent treatment plants or through common effluent treatment plants by the respective industry contributing to the pollution of water bodies and same also should be ensured by the respective State Industrial Development Corporations or State Pollution Control Board (SPCB) or Pollution Control Committee (PCC). Adoption of state-of-the technologies for production processes and for ensuring treatment of generated industrial effluent (feasibility adoption of zero liquid discharge).

C. Management of waste

- Adequate infrastructure should be ensured for management of wastes (such as municipal solid waste, industrial hazardous waste, construction and demolition waste, plastic waste, e-waste) in accordance with the respective provisions notified under the Environment (Protection) Act,1986, by all the concerned.

- Periodic physical removal of improperly disposed wastes (such as municipal solid waste, construction and demolition waste, plastic waste, industrial hazardous waste, human and animal night soils) by the concerned local or urban body.

D. De-siltation

- Periodic removal of nutrient enriched accumulated sludges in ponds and lakes helps in ground water recharge potential, removal of contaminated sediments as well as increases storage capacity of lakes or ponds.

- Sediments removed from the ponds or lakes should be stored in a designated area (till moisture is completed drained out) at a suitable distance away from ponds or lakes and such dried sediments should be removed immediately so that sediments will not become a part of ponds or lakes once again especially in the event of any rain fall. Depending on the characteristics, such sediments after draining may be used as manure (complying to the manure quality prescribed under Solid Waste Management Rules, 2016 as amended from time to time or disposed of in accordance with the relevant provisions notified under Environment (Protection) Act, 1986.

E. De-weeding

- **Periodic dredging** (once in three months) of 80 % of dense and thickly covered aquatic plants viz., floating plants such as algae, duckweed, watermeal, water hyacinth; submerged plants such as milfoil, hydrilla, water lettuce, curly-leaf pondweed, clasping-leaf pondweed, coontail, sago pondweed, water lilly, water shield etc., bottom sediment, and associated nutrients should be carried out. De-weeding methods include: -

- **Preventive measures**

  - such as proper design and construction of ponds or lakes including levelling and smoothing of banks

- **Manual or physical control measures**

  - Manual or physical control measures such as non-chemical and non-motorized measures be taken for removal of weeds (manual harvesting) using hand pulling, rakes, cutters, benthic barriers, drawdown, aeration, shading and weed rollers as these measures are typically very low, however, such measures

are labor intensive and are therefore better suited to small, less established weed populations. Hand pulling and raking may result in turbid or murky water and may create plant fragments that can subsequently spread to new sites.

- **Mechanical control measures**
  - Using motor-driven under water weed cutters or floating weeds, rotovators essentially large-scale underwater rototillers for tilling up lake or pond sediments as well as to chop and loosen plant roots, or draglines (in case of underwater pond or lake dredging) (or) dry-land excavation machinery such as bulldozers (in case of drained ponds or lakes) shall be used (or)
  - Limiting the amount of sunlight available to aquatic plants by floating black plastic sheeting on the water surface (or) use of dark-colored and nontoxic water dyes (such as nigrosine, aniline and aqua-shade)

- **Biological controls** i.e., introducing aquatic animals and plants that eat or compete with waterweeds. Herbivorous animals (those that eat plants) include a wide variety of insects, snails, crayfish, tadpoles, turtles, fish (sterile, triploid grass carp), ducks, geese, and swans which can be stocked in ponds or lakes to consume aquatic plant.

- **Application of common aquatic herbicides** for **control of lake or pond weeds**

Use of herbicides is not recommended as it may kill fish in ponds or lakes. Herbicides should be used in a controlled and systematic way under the supervision of the expert and general herbicides that may be used for weed control are as given below-

- *For Algae (microscopic, filamentous, Chara) control- Herbicides such as copper sulfate, copper chelates, endothall,, simazine)*

- *Submerged Plants (coontail, watermilfoil, pondweeds such as sago, curlyleaf, leafy) control- Herbicides such as Endothall, Diquat, simazine, fluridone may be used*

- *Free-floating plants (duckweed, watermeal) control:- Herbicides such as Diquat, simazine may be used*

- *Rooted-floating plants such as (waterlilies, spanerdock) control- Herbicides such as Glyphosate and 2,4,-D may be used*

- *Emergent plants (cattails, perennial grasses, and broadleaves) control: - Herbicides such as Glyphosate may be used*

F. Prohibition of discharges or disposal of waste or washing activity and action against violators

- Ban on discharge of industrial effluent or sewage or waste (such as municipal solid waste or industrial hazardous waste or plastic waste or construction and demolition waste or sludges from septic tanks/ STPs/CETPs) into lakes or ponds or drainage channels connected with ponds or lakes or open defecation in the vicinity as well as washing of clothes or wading of cattle

- Stringent actions be taken against violating industry by the SPCB/PCC as per provisions under Water (Prevention and Control of Pollution) Act, 1974 as well as Environment (Protection) Act, 1986

- Levying of fine or Environmental Compensation on the violators for improper disposal of sewage or industrial effluent or wastes into lakes or ponds.

G. Stabilization of earthen bunds and the drainage channels as well as silt and soil erosion control measures

- Stabilization of earthen embankments, shore line protection with vegetative or rock riprap to avoid soil erosion and the inflow drainage channels with the stone revetment or pitching so as to avoid rapid seepage or leakages

- All the inflow drainage channels should be provided with suitable silt barriers or sediment traps or sediment detention basins at suitable intervals for control of silt especially during monsoon.

- Also, at all the outfalls of drainage channels, suitable strains or traps should be provided to control inflow of all the floating materials and periodic removal of floating materials should be ensured.

H. Protection drainage basin including preservation of drainage channels

A lake or pond drainage basin is the logical starting point for planning and management actions for sustainable lake or pond use. A long-term, preventive approach for preventing the causes of degradation is essential.

- Historically the drainage channels which used to carry natural runoff from the drainage basin and presently carrying either untreated municipal sewage or industrial effluent or both and contributing to pollution of water bodies eventually due to encroachment in view of urbanization. All such drainage channels need to be restored by interventions such as (i) stoppage of inflow of untreated municipal

sewage or industrial effluent. If required, interaction and diversion of untreated sewage or industrial effluent from such drainage channels by routing through properly designed dedicated sewerage network to ensure conveyance and for ensuring treatment and disposal through STPs/CETPs. Feasibility of in-situ treatment of treated sewage and industrial effluent within drainage channels and prior to the inflow into the water bodies also be explored by the concerned authorities.

- Major channels running from the larger watersheds should be identified based on the historical data and such drainage channels should be preserved and protected with suitable buffer land without any impervious cover. This aspect should be ensured by the State Local/ Urban Development/Town Planning authorities while planning or expansion of a locality.

I. Removal of encroachments and blockades

- The Stat Government or UT Administration should maintain records pertaining to the boundaries of each pond or lake in the respective State/UT and necessary steps should be taken and ensured removal of all encroachments in the water body spread area/water body boundary as and when required.

- Removal of encroachments in the drainage channels should be carried out periodically to facilitates enhancement in aeration naturally in the water body

- Refrain from granting any consent for establishment for large scale projects in the catchment areas.

- Pond or lake boundary should be provided with fence (permanent / temporary fencing) to avoid unauthorized entry.

J. Flood Control Measures

- Excess floods from drainage basin be controlled with a provision of properly designed ‘spill way’ with a provision of controlled gates for smooth flow of excess water or run off during monsoon.

- Remove all encroachments (lake bed, storm water drains) to prevent calamities related to floods and to facilitate inter connectivity of water bodies.

- Removal all blockades at inlet or outlets should be ensured to avoid stagnation or blockage of storm water.

5. Improvement phase that deals with overall improvement in the water body and its uses including resolution of conflicts among competing users of lake resources taking into account the needs of present and future generations and of nature.

5.1 Adoption of In-situ techniques for in-situ remediation of ponds or lakes

A. Physical treatment approaches

Aeration (using surface aerators or , submerged aerators or a combination of both may be used to increase the dissolved oxygen in the water body, which is used by microorganisms to degrade the pollutants. Aeration also aids in mixing the different thermal layers of the water body, resulting in de-stratification, exposing the lower-most layers to atmospheric air. The need and extent of aeration is calculated based on the water quality parameters, depth of water body, ambient temperatures, wind conditions

etc.). Apart from aeration, methods such as wastewater diversion, periodic de-weeding and sediment dredging, proper maintenance of drainage channels or feeder channels also helps in increase in dissolved oxygen)

B. **Chemical treatment approaches**

Flocculation using chemicals like alum and neutralizing chemicals especially during acidification (increase in pH level of the stagnated water body)

C. **In-situ techniques**

- *Using aquatic plants* (Macrophytes such as water hyacinth (Eichhornia crassipes) and water lettuce (Pistia stratiotes), Whorl-leaf watermilfoil (Myriophyllum verticillatum), pondweed (Potamogeton spp.), common reed (Phragmites communis), cattail (Typha latifolia), duckweed (Lemna gibba) and canna (Canna indica)

- *Using aquatic animals* such as clams, snails and other filter-feeding shellfish

- *Using biological techniques* may be used to decompose, transform and absorb water pollutants. However, concentration and frequency of dosing of the microbial cultures is decided based on the volume of the water body, water quality parameters, ambient temperatures and extent of algal growth [as per literature (i) an enzyme namely Phycoplus and the nutrients are mixed thoroughly and sprayed into the pond within 2-3 weeks' time significance difference may be seen; (ii) treatment method based on hydroponics technique that cleans the lake by absorbing nutrients dissolved in the water and thereby supporting living species inside the lake; (iii) floating

treatment wetlands (FTW) which are artificial islands made of chemically inert materials, gravel having floating characteristics with plants that stay afloat on the lake or ponds such as wetland plants, water hyacinth, mosquito repellents and ornamental plants like cattails, bulrush, citronella, canna, hibiscus, fountain grass, flowering herbs, tulsi and ashwagandha) which helps in cleaning the lake or pond through hydroponics system, (iv) Introduction of mixture of nutrients to grow algae formed by diatoms (the most basic, single-cell life form found in water bodies) which helps in release of oxygen into water and in turn aerobic bacteria present in water body helps to break down the organic matter and convert the pollutants to base constituents and also reduces odors from the lakes or ponds. The diatoms are eaten by zooplanktons that are, in turn, consumed by fish].

5.2 Drainage basin management

- Drainage basin management includes control of non-point sources, structural and land treatment measures (regular monitoring of structures and systems and carrying out necessary rehabilitation and modernization programmes), interception and diversion of nutrients, sediments control (terracing, contour farming, grassed water ways, prior to reaching stagnated water body.

- Crop management, crop residue management and creation of shelter belts, good Irrigation practices, run off control provisions from agriculture runoff laden with excess fertilizers and pesticides

5.3 Green or Buffer Zone

- Buffer Zone around a lake or pond (at least 50 to 100 m periphery) should be maintained as green belt zone or no activity zone and no activity is allowed within the buffer zone by the concerned Departments in the State/UT. In case, any activity presently existing within the buffer zone (50 to 100 m), such as residential or commercial or industrial activity should take necessary measures to prevent discharge of any wastes into the water body.

- Within the buffer zone, no impervious cover is allowed and mainly plantation with a dense population of deeply rooted plants, trees, shrubs and grasses should be created so as to absorb nutrients (which promotes aquatic plant growth and a shift in the water quality) that comes directly from the anthropogenic activities.

5.4 Creation of biodiversity environment

In case the water body happens to be a site for the visit by migratory birds the number and type of trees by the side of the water body and water channels have also to be monitored to ensure adequate shelter as well as suitable environment for egg laying and propagation of bird species.

5.5 Monitoring of Implementation of action plans for restoration of ponds or lakes

The action plans are to be prepared and submitted to CPCB for seeking approval. The action-plan should include activity-wise action points, specific time lines, organization responsible for implementation, budget estimates as well as Program Evaluation and Review Technique (**PERT**) chart for implementation of action plans within the specified timelines, Upon approval of action plans for restoration

of ponds or lakes, thereafter, execution of action plans to begin and to be mentioned on monthly basis by the Monitoring Committee to be constituted under the Chairmanship of Principal Secretary (Environment) of the respective State Government or Union Territory Administration. The monitoring committee should review the progress on implementation of the action plans at least once in three months and apprise the Chief Secretary of the State/UT periodically.

A model lake restoration technique is given at **Figure 1** and a model flow chart for restoration of Ponds or Lakes is given in **Figure 2**.

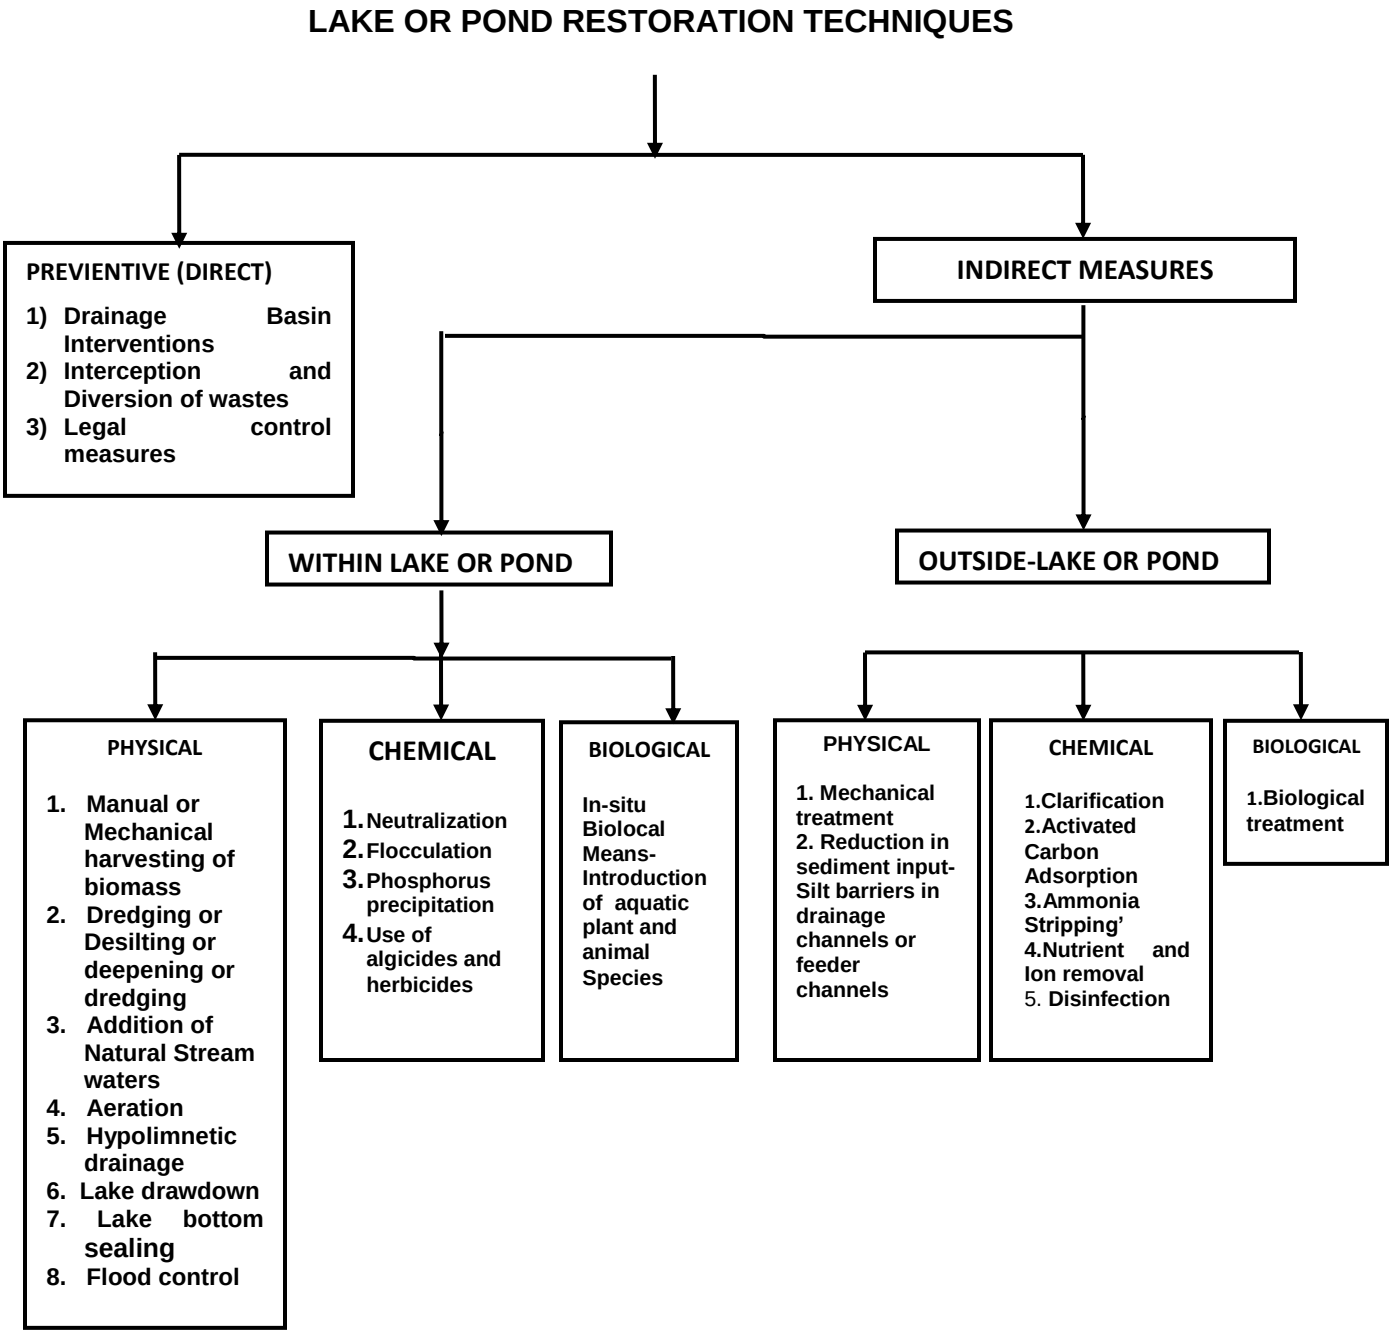

Figure 1. A Model Lake or Pond Restoration Technique

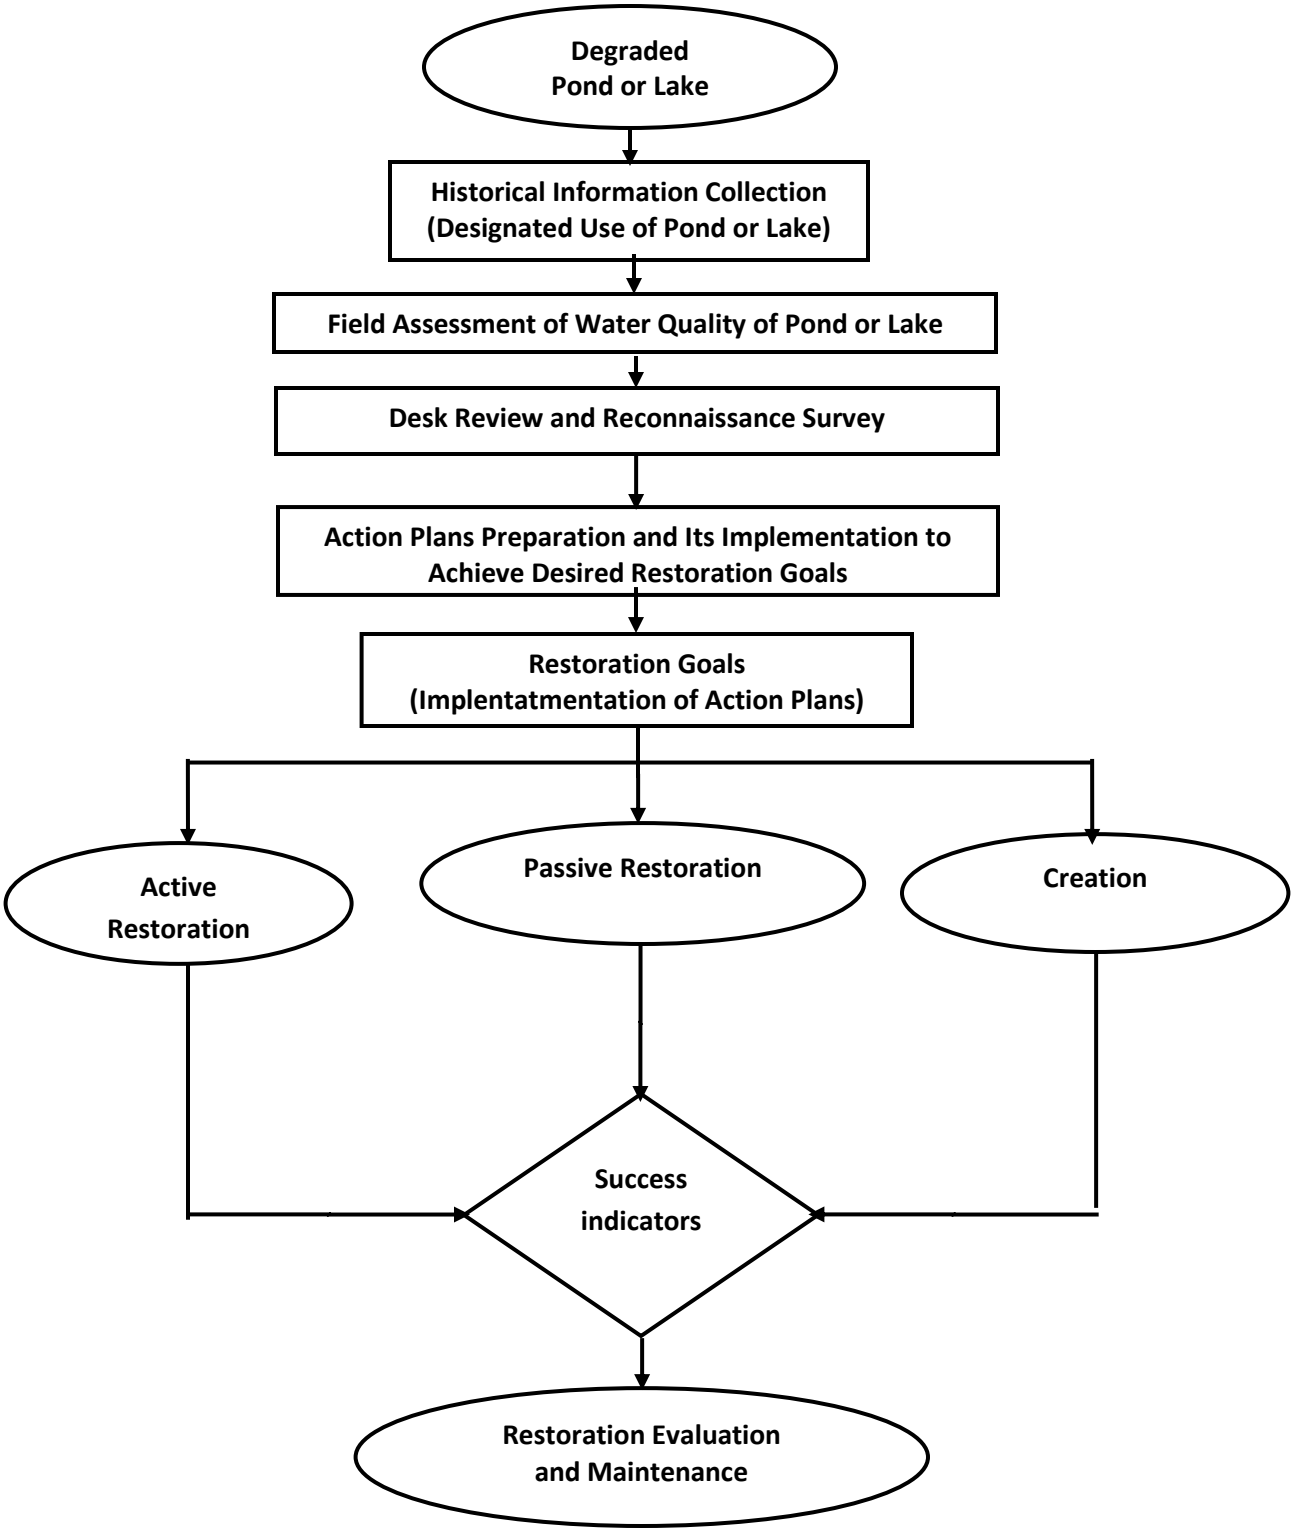

Figure 2. Model Flow Chart for Restoration of Pond or Lake

5.6 Steps involved in preparation of Action Plan for rejuvenation of polluted river stretches

A. Background Information (Refer to Sl. No. 2.1.2)

(i) Digital map of identified polluted river with its tributaries
(ii) Geographical and hydrological description of polluted river
(iii) Catchment description- uses of river, towns, cities and villages, industries (sector-wise no. of industries), ground water status and its utilisation, agricultural practices, flora and fauna etc.

B. Water Quality of River and Its Tributaries

(i) Water quality of river and its tributaries (at least for five years)
(ii) Quality assigned as per modified Water Quality Criteria **(Annexure-I)**

C. Identification of Causes of Pollution in Catchment Area of the River

- **Industrial Pollution**

(i) List of water polluting industries, industry sector-wise: water consumption, effluent generation and quantity of industrial effluent discharged into river
(ii) Status on granting of Consent under Water (Prevention and Control of Pollution) Act, 1974
(iii) Status on granting of authorization under the Hazardous & Other Waste (Management & Transboundary Movement) Rules, 2016 as amended (as applicable)
(iv) Compliance status and action taken (Placing in public domain)
(v) Final disposal mode of treated industrial effluents (i.e., disposal on land or drain or ZLD or drain connected to CETP etc.,)
(vi) Performance status of captive Effluent Treatment Plants (if applicable)
(vii) Existing Common Effluent Treatment Plants (CETPs) and their performance status.
(viii) Regulation of small scale industries/tiny units'/service units discharging effluents/sludge disposal into drains/landfill or any other mode of disposal

- **Ground water management**

(i) Status of ground water level-reserves in the catchment area of river under consideration
(ii) Blocks identified as over exploited, critical, semi-critical and safe (as per Central Ground Water Board (CGWB) if any)

(iii) Status of permissions granted by Central Ground Water Board (CGWB) to the industries and other Development projects in the catchment area of river.

(i) Compliance of conditions stipulated by CGWB and subsequently by SPCB.

(ii) Ground water sources (Hand –pumps, Wells, Tube Wells) identified in the catchment area of the river and the characteristics (at least for the period of two years);

(iii) Ground water sources (Hand –pumps, Wells, Tube Wells) identified as non-potable for human consumption in river stretch with Geo-genic/or polluted due to industries.

(iv) Compliance on ground water charging imposed by Rain Water Harvesting Mechanism.

(v) Existing mechanism for supply of potable water to the human population in the affected areas.

(vi) Health deformities /clinical reports in polluted river stretch areas in view of ground water contamination.

- **Sewage treatment and disposal: -**

(i) Cities, towns and villages located on the bank of river stretches discharging sewage effluents through drains into the river.

(ii) Quantification and pollution load of sewage generated by a city/town/village.

(iv) Status of septage management.

(v) Listing of drains carrying sewage and trade effluents joining river and determining flow and characteristics with details of catchment contributing sources (drainage maps from major /minor irrigation development of State/or local body).

(vi) Existing sewage treatment capacities and performance of Sewage Treatment Plants and their compliance Status

(vii) Final mode of disposal of treated sewage as well as sludge management

- **Waste management in the catchment area of river: -**

(i) Area-wise Hazardous waste generation, treatment and final mode of disposal and the existing infrastructure.

(ii) Area-wise Status on municipal solid waste generation, treatment and final mode of disposal and the existing infrastructure

(iii) Area-wise Status on bio-medical waste generation, treatment and final mode of disposal and the existing infrastructure

(iv) Any other waste generation, treatment and final mode of disposal and the existing infrastructure

- **River catchment information**

(i) Regulation of Flood Plain Zone
(ii) Encroachment in Flood Plain Zone
(iii) Plantation status
(iv) Flow data of river/tributary

- **Gap Analysis and Identification of the problems in the identified polluted river catchment: -**

(i) Sewage generation, existing infrastructure with treatment capacities and the observed gaps w.r.to infrastructure for sewage management
(ii) Industrial effluent generation, existing infrastructure with treatment capacities and the observed gaps w.r.to infrastructure for industrial effluent management
(iii) Waste generation, existing infrastructure with treatment capacities, designed life of the treatment and disposal facilities as applicable and the observed gaps w.r.to infrastructure for waste management
(iv) Any other relevant issues

(Note: - All the details such as river and its tributaries, area-wise population, sources and water consumption quantities, sewage generation, existing infrastructure for sewage management and the gaps observed, area-wise industries (industry sector-wise no. of industries), sources of water and water consumption quantities (industry-sector-wise), industrial effluent generation, existing infrastructure for treatment (like Captive ETPs, CETPs), final mode of disposal of industrial effluents, waste generation and its management with existing infrastructure, characteristics of river and its tributaries, identified contaminated ground water resource areas has to be detailed in the map preferably a digital map)

D. The River Rejuvenation Action Plan:-

After having complete based information as detailed under earlier paras A to D above, Action Plans on each Activity with time-lines can be framed. The key components of action plan may follow the suggested points as given the Table below:

S. No	Key Activity and Components		Agency to perform the task	Proposed Specific Time Frame for implement ation of action plan
1	**Industrial Pollution Control**			
	(a)	Inventorisation of water polluting industries	SPCB	
	(b)	Grant of consents	SPCB	
	(c)	Compliance verification	SPCB/ District Magistrate (DM)	
	(d)	Planning for CETP (as applicable)	SPCB+ State Industries Department or of Industries	
	(e)	Insisting on ZLD measures, recycling/reuse of treated industrial effluents	SPCB	
	(f)	Prohibition of disposal of effluents into drains except during rainy season subject to complying to effluent discharge norms for disposal in surface water.	SPCB + DM	
	(g)	Covering small and tiny units and not allowing discharge of effluents either individually or combined	SPCB+ Local Body/ Urban Body	
	(h)	Publishing list of defaulting industries in local newspapers and involving public in reporting deliberate discharges (without entering in the premises-backyard water and reporting running of industry against the closure orders.	SPCB + DM	
	(i)	Hazardous or Non Hazardous Waste Management Plan and no dumps anywhere except at identified locations	SPCB + DM	
	(j)	Reporting Non-Compliance of CGWB	SPCB +	

		conditions and closure of Non complying units.	CGWB	
	(k)	Levying compensation or fines for non-compliances as empowered to UPPCB under the Hon'ble NGT Order Dtd. 13/07/2017 in Ganga Matter in case of Tanneries.	SPCB	
	(l)	Other Action as relevant	SPCB + Concerned Agency of State	
2	**Ground Water Protection**			
	(a)	Declaration of Polluted Blocks	CGWB	
	(b)	Embargo on Water pollution /over-abstraction of industries as per block status	CGWB	
	(c)	Rain water harvesting	Local Body + DM	
	(d)	Identification of Geo-genic contamination (as applicable)	CGWB	
	(e)	Identification of industries discharging industrial effluent illegally and levying fine on such industries including closure of such industries	SPCB + CGWB	
	(f)	Remediation of contaminated ground water (due to discharge of industrial /sewage) with the recovered funds from the default industry	SPCB + CGWB	
	(g)	Capping of contaminated tube wells and Potable water supply through alternate measures in the affected areas of groundwater	Water Supply Department	
3	**Sewage Management**			
	(a)	Identification of cities, towns and villages discharging sewage into river/tributary	State Local and Urban Development and Executing Agencies	
	(b)	Identifying drains joining river and their quantification and characterizations of pollution load		
	(c)	Preparation of Detailed Project Report (DPR) for interception and diversion (I & D) of drains to sewage treatment plant (STP) for which suitable site to be identified and plan for utilization of treated sewage.		

	(d)	Execution of STP works and necessary infrastructure and ensuring household sewer connection for full utilization of STP		
	(e)	Regular cleaning of drains and prohibiting disposal of garbage/plastic and filthy material into drains including dairy waste		
	(f)	Restoration of natural drains for carrying only storm water (but not sewage)	Local and Urban Bodies + State Water Resources + State Irrigation Department + SPCB	
	(g)	Ensuring utilization of treated sewage for beneficial use such as agriculture, construction activity, washing/flushing/cleaning, industrial cooling etc.,	Local and Urban Bodies + State Irrigation Department + SPCB	
	(h)	Interception and Diversion of sewage from Drains and connectivity to STPs	Local and Urban Bodies	
4	**Flood Plain Zone (FPZ) Protection**			
	(a)	Demarcation of FPZ and not permitting encroachments	State Irrigation Department	
	(b)	Adopting good irrigation practices to conserve water	State Irrigation Department /DFO	
	(c)	Plantation and bio-diversity parks in FPZ	State Forest Department	
5	**E-Flow**			
	(a)	E-Flow determination/gauging	State Irrigation Department	
	(b)	Regulation of flow from barrages	State Irrigation Department	
6	**Health Impact Assessment Reports-Treatment Services**			

	(a)	Epidemiological survey in the catchment to find out water-born diseases/ health issues	State Health Department	
	(b)	Providing treatment services to the diseased persons in the catchment area		
7	**Education and Awareness**			
	(a)	Regular involvement of educational institutions for creating awareness and conservation programmes	State Education Department with concerned Departments	
8	**Funding for execution of Action Plans**			
	(a)	Pooling of financial resources of state and central assistance	State Finance Commission/ MoUD and MoWR, RD & GR	

E. Monitoring of Implementation of Action Plans for Rejuvenation of Polluted River Stretches:-

(i) In compliance with Hon'ble NGT Order dated 20/09/2018 (OA No. 673 of 2018), State/UT Level 'River Rejuvenation Committee (RRC)' constituted firstly has to ensure timely preparation of action plans (before 20/11/2018).

(ii) Prepared actions plans need to be submitted to CPCB for random scrutiny as well as for approvals.

(iii) Thereafter, execution of action plans to begin and to be mentioned on monthly basis by the 'RRC' under overall supervision of the Principal Secretary (Environment) of the respective State Government or Union Territory Administration.

A model flow chart for rejuvenation of polluted river is given in **Figure 3**

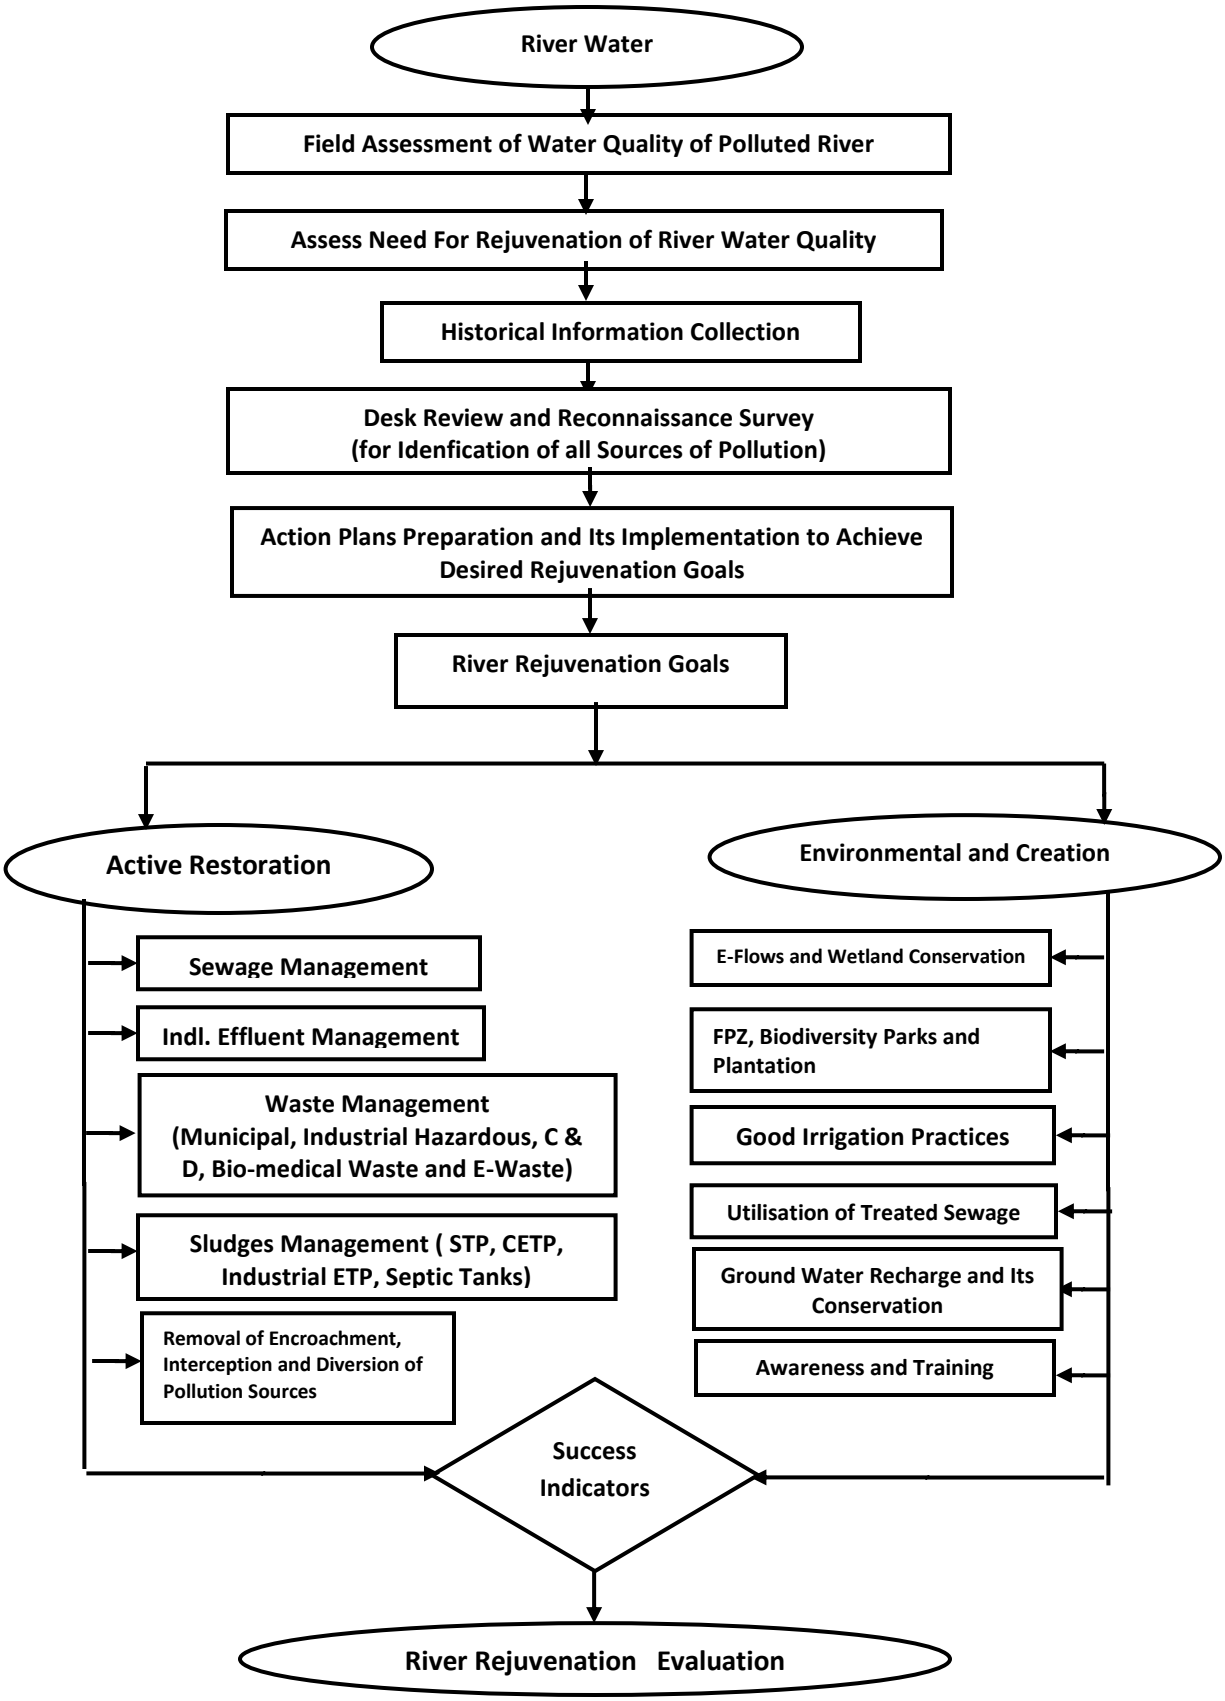

Figure 3. Model Flow Chart for Rejuvenation of Polluted Rivers

6. Sustenance Phase

Good governance, based on fairness, transparency and empowerment of all stakeholders, is essential to sustain the restoration efforts. Also, ownership of each waterbody should be decided, as most of them face indefinite sustenance due to multiplicity of administrative control and/or lack of specific action by singular authority. The in charge authority should treat the water body as ‘natural resources’, to act as the potential catalysts to better civic health, provide recreation, improve tourism, possibly meet water-needs of local people, etc. Such gains shall be attained only after the water bodies are treated on eco system based approach.

6.1 Awareness

Awareness for citizen’s groups, resident welfare associations, local organizations, activist groups, green organizations, political organizations, educational institutions and government agencies in protection of the water bodies should be organized periodically by the concerned authorities through campaigns, electronic media in vernacular languages also be ensured by the concerned authorities

6.2 Training

Organizing periodic trainings through identified and reputed institutions for all the concerned on aspects relating to maintenance during post- restoration phase of the water body.

6.3 Promoting Public Participation

Promoting active public participation (with the help of schools, colleges and universities, NGOs) for identifying and resolving critical lake or pond problems as

well as periodic maintenance and restoration of water body from aesthetic and restoration point of view should be organized.

6.4 Dissemination of Information

Water quality of the pond or lake should be displayed at the main entrance of the pond or lake boundary and such water quality data also connected to the servers of concerned custodian State Department (s) as well as State Environment Department, respective State Pollution Control Board (SPCB)/Pollution Control Committee (PCC). Display boards also should be provided at all the salient points on **'Do's and Don'ts'** for the public.

6.5 Recreational Centre

Creation of pond or lakes can be converted into recreational centers with boating activities, walkways and benches for visitors on charge basis so as to generate revenue for operation and maintenance of the lake or pond areas

-- OO --

Annexure-I

Water Quality Criteria-Designated Best Use

Designated-Best-Use	Class of Water	Criteria
Drinking Water Source without conventional treatment but after disinfection	A	Total Coliforms Organism in MPN/100ml shall be 50 or less pH between 6.5 and 8.5 Dissolved Oxygen 6mg/l or more Biochemical Oxygen Demand 5 days 20C 2mg/l or less
Outdoor bathing (Organised)	B*	Faecal Coliform in MPN/100ml: 500 (desirable) and 2500 (Maximum Permissible) Faecal streptococci in MPN/100 ml: 100 (desirable) and 500 (maximum Permissible) pH between 6.5 to 8.5 Dissolved Oxygen: 5mg/l or more Biochemical Oxygen Demand 3 Day BOD, 27 ^{O} C: 3mg/l or less
Drinking water source after conventional treatment and disinfection	C	Total Coliforms Organism MPN/100ml shall be 5000 or less pH between 6 to 9 Dissolved Oxygen 4mg/l or more Biochemical Oxygen Demand 5 days 20C 3mg/l or less
Propagation of Wild life and Fisheries	D	pH between 6.5 to 8.5 Dissolved Oxygen 4mg/l or more Free Ammonia (as N) 1.2 mg/l or less
Irrigation, Industrial Cooling	E	pH between 6.0 to 8.5 Electrical Conductivity at 25 ^{O}C micro mhos/cm Max.2250 Sodium Absorption Ratio Max. 26 Boron Max. 2mg/l

***** ***Class B as per Primary Water Quality Criteria for Bathing Water (Water Used for Organised Outdoor Bathing) as per Environment (Protection) Rules, 1986***

Annexure-II

CRITERIA FOR CATEGORISATION OF RIVER MONITORING LOCATION

1. Introduction

Water Quality monitoring is an essential component to maintain and restore the wholesomeness of resources by way of prevention and control of pollution as prescribed under the Water (Prevention and Control of Pollution) Act, 1974. However, the Water (Prevention and Control of Pollution), Act, 976 does not define the level of wholesomeness to be maintained or restored in different water bodies of the country. In view of the said reason, the Central Pollution Control Board (CPCB) has tried to define the wholesomeness of water in terms of safe human uses, and thus, taken human uses of water as base for identification of water quality objectives for different water bodies in the Country. It is considered ambitious to maintain or restore all natural water body at pristine level which is possible only by taking proper control measures. The level and degree of treatment required can be decided depending on the categorization of the polluted river locations/stretch, as per the criteria detailed below:-

2. Categorization of River Monitoring Location

The water quality data is required to be analyzed and primarily mean or average values of Biochemical Oxygen Demand (BOD) and Faecal Coliform (FC) need to be estimated. Then, based on the total score estimated for the parameters BOD (weightage- 70 %) and FC (Weightage- 30 %), based on the criteria, the monitoring location is categorized as 'polluted' location. The polluted monitoring locations in a continuous sequence are defined as 'polluted river stretch'. However, actual self-purification distance need to be estimated based on the requisite input parameters which depend on the case-to-case and the local conditions.

The monitoring locations may be categorized in five classes from Category I to Category –VI. i.e., critically polluted to Good or Fit for Bathing i.e., Category –I indicates 'critically polluted'; Category-II indicates 'severely polluted'; Category-III indicates 'moderately polluted', Category –IV indicates 'less polluted', Category –V indicates 'Good' or Fit for Bathing'

Above suggested criteria is intended only for categorization of the river monitoring locations. However, if any State/UT desires to identify any other water body such as lakes, tanks may also apply these criteria depending on the need and the requisite achievable goals for rejuvenation of such water bodies.

Table 1 to Table 3 gives the mean or average BOD/Faecal Coliform values or range and the corresponding scores as well as categorization of the monitoring location

Table 1. Observed Mean or Average BOD Value in mg/l and corresponding BOD Score

S. No	*Mean or Average* **BOD (Weightage-70 %)**	
	Mean or Average BOD (in mg/l)	**BOD Score (X)**
1	> 48	100
2	24-48	80
3	12-24	60
4	6-12	40
5	≤ 6	20

Table 2. Observed Mean or Average Faecal Coliform (in MPN/100 ml) and corresponding FC Score

S. No	**Mean or Average Faecal Coliform (Weightage -30 %)**	
	Mean or Average Faecal Coliform (in MPN/100 ml)	**FC Score (Y)**
(1)	> 5,00,000	100
(2)	5000 to 5,00,000	80
(3)	5000 to 50,000	60
(4)	500 to 5000	40
(5)	≤500	20

Table 3. Total Score and corresponding Category of River Monitoring Location

S. No	**Total Score* (Z')**	**Category ~~Priority~~ Class of the Monitoring location**	**Category of Monitoring location**
(1)	81-100	Category -I	Critically Polluted
(2)	61-80	Category--II	Severely Polluted
(3)	41-60	Category -III	Moderately Polluted
(4)	21-40	Category -IV	Less Polluted
(5)	≤ 20	Category -V	Good or Fit For Bathing

Note:

(i) Above criteria must be considered only for the river locations having monitored at least for 2 years and 8 observations in each year covering at least pre-monsoon and post-monsoon period;

(ii) *Above criteria is a preliminary screening criteria for categorizing monitoring locations. However, comprehensive assessment needs to be done by States/UTs to arrive at the extent of contamination;*

(iii) *Please refer to the procedure for estimation of Total Score given in S.No 3.;*

2.1 **Criteria for Category- I – Critically Polluted: -** If the Total score is 81-100, then the monitoring location is categorized as **'Critically Polluted'.**

2.2 **Criteria for Category- II – Severely Polluted: -** If the Total score is 61-80, then the monitoring location is categorized as **'Severely Polluted'**

2.3 **Criteria for Category- III-Moderately Polluted: -** If the Total score is 41-60, then the monitoring location is categorized as **'Moderately Polluted'**

2.4 **Criteria for Category-IV –Less Polluted: -** If the Total score is 21-40, then the monitoring location is categorized as **'Less Polluted'**.

2.5 **Criteria for Category -V-Good or Fit for Bathing:-**If the Total score is ≤ 20, then the monitoring location is categorized as **'Good or Fit for Bathing'.**

*For easy understanding, flow chart given in **Figure 4** and steps for calculating the total score may also be referred in the subsequent paras:-*

3. Steps for calculating total score and categorizing of monitoring location : -

(i) *Depending on the average BOD measured value, assign the BOD score (X) as given in **Table 1.***

(ii) *Similarly depending on the average FC measured value, assign the FC Score (Y) as given in **Table 2.***

(iii) *Total score **(Z)** is estimated as: BOD Score **(X) X** (Weightage of BOD i.e., 70 %) + FC Score **(Y) X** (Weightage for FC i.e., 30 %). and*

(iv) *Now compare calculated Total Score (Z) with the **Z'** Value given in the Table 3 and the monitoring location is categorized suitably.*

For easy understanding following examples may be referred in the subsequent paras.

E.g. (1): *At a particular monitoring location, the average values of BOD and the FC values are observed as 6 mg/l and 9000 MPN/100 ml respectively. Then, the total score is calculated as*

- *X is the BOD Score corresponding to the mean BOD value of 6 mg/l as per* ***Table 1*** *= 20*
- *Y is the FC Score corresponding to the average FC value of 9000 MPN/100 ml as per* ***Table 2*** *= 60*
- *Calculated Total Score* ***(Z)*** *=* ***X*** *X* ***Weightage of BOD*** *+* ***Y*** *X* ***Weightage of FC*** *i.e.,20 X 0.7 + 60 X 0.3 = 14 + 18= 32.*
- *Compare 39 value with the* ***Z'*** *values given in* ***Table 3*** *to decide on the ~~Priority~~ Category of the Monitoring Location. In this case, monitoring location is Category-IV i.e., 'Less Polluted',*

E.g.(2): *At a particular monitoring location, the average value of BOD and the FC values are observed as 2 mg/l and 45 MPN/100 ml respectively. Then, the total score is calculated as*

- *X is the BOD Score corresponding to the average BOD value of 2 mg/l as per* ***Table 1*** *= 20*
- *Y is the FC Score corresponding to the average FC value of 45 MPN/100 ml as per* ***Table 2*** *=20*
- *Calculated Total Score* ***(Z)*** *is calculated as =* ***X*** *X* ***Weightage of BOD*** *+* ***Y*** *X* ***Weightage of FC*** *i.e., 20 X 0.7 + 20 X 0.3 =20*
- *Compare 20 value with the* ***Z'*** *values given in* ***Table 3*** *to decide on the Category of the Monitoring Location. In this case, monitoring location is Category-V i.e., 'Good' or Fit for Bathing*

E.g. (3): *At a particular monitoring location, the average value of BOD and the FC values are observed as 2 mg/l and 550000 MPN/100 ml respectively. Then, the total score is calculated as*

- *X is the BOD Score corresponding to the average BOD value of 2 mg/l as per* ***Table 1*** *= 20*

- *Y is the FC Score corresponding to the average FC value of 550000 MPN/100 ml as per **Table 2** = 100*

- *Calculated Total Score **(Z)** = **X** X **Weightage of BOD** + **Y** X **Weightage of FC** i.e., 20 X 0.7 + 100 X 0.3 = 44.*

- *Compare 100 value with the **Z'** values given in **Table 3** to decide on the Category of the Monitoring Location. In this case, monitoring location is Category-III i.e., Moderately Polluted'*

E.g.(4): *At a particular monitoring location, the average value of BOD and the FC values are observed as 45 mg/l and 400 MPN/100 ml respectively. Then, the total score is calculated as*

- *X is the BOD Score corresponding to the average BOD value of 45 mg/l as per **Table 1** = 80*

- *Y is the FC Score corresponding to the average FC value of 400 MPN/100 ml as per **Table 2** = 20*

- *Calculated Total Score **(Z)** = **X** **X** **Weightage of BOD + Y X Weightage of FC** i.e., 80 X0.7 + 20 X 0.3 = 62.*

- *Compare 100 value with the **Z'** values given in **Table 3** to decide on the Category of the Monitoring Location. In this case, monitoring location is 'Category-II i.e., Severely Polluted'*

E.g (5): *At a particular monitoring location, the average values of BOD and the FC values are observed as 24 mg/l and 200000 MPN/100 ml respectively. Then, the total score is calculated as*

- *X is the BOD Score corresponding to the mean BOD value of 24 mg/l as per **Table 1** = 60*

- *Y is the FC Score corresponding to the average FC value of 200000 MPN/100 ml as per **Table 2** = 80*

- *Calculated Total Score **(Z)** = **X** X Weightage **of BOD** (70 %) + Y X **Weightage of FC** (30 %) i.e.,60 X 0.7 + 80 X 0.3 = 42 + 24= 66.*

- *Compare 90 value with the **Z'** values given in **Table 3** to decide on the Category of the Monitoring Location. In this case, monitoring location is Category-II i.e., 'Severely Polluted',*

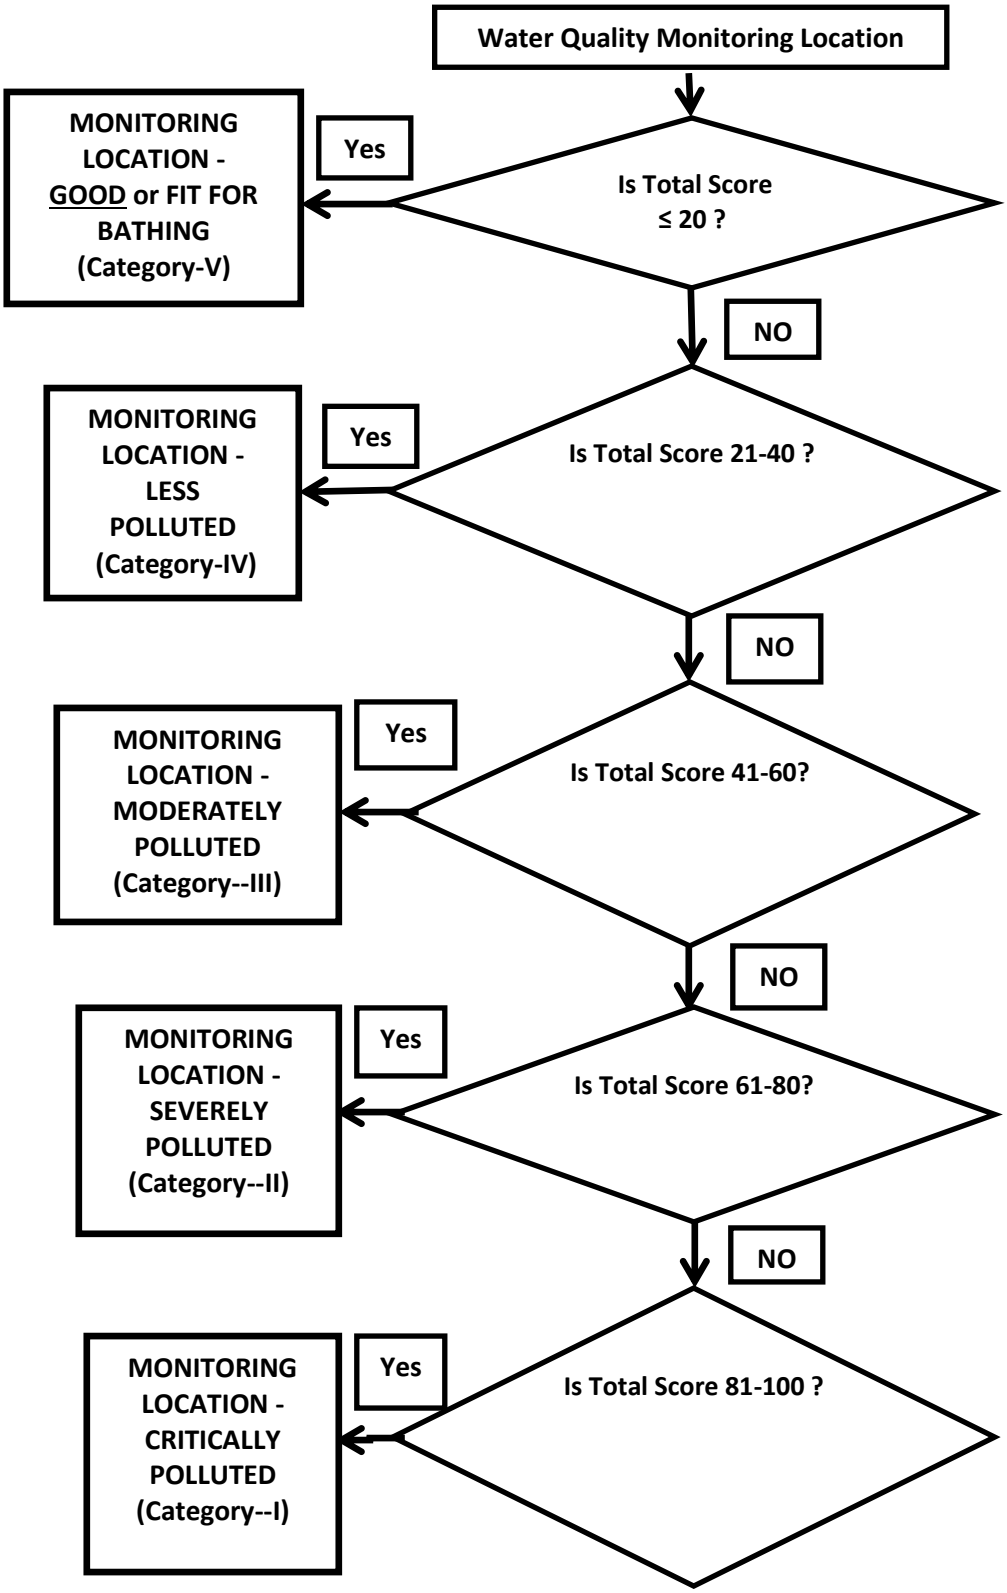

Figure 4. Flow Chart Showing Criteria for Categorization of River Monitoring Location

Annexure R-1/VII

TELANGANA STATE POLLUTION CONTROL BOARD

Paryavarana Bhavan, A-3, Industrial Estate, Sanathnagar, Hyderabad – 500 018

Ph: 040-23887500

Lr.No.692/TSPCB/NGT/Legal/2020 **Dated:29.07.2020**

To

The Member Secretary,

Central Pollution Control Board,

Parivesh Bhavan, East Arjun Nagar,

Delhi – 110 032

Sir,

Sub: TSPCB – Submission of the action plan for restoration of the water bodies in the state of Telangana-Reg.

Ref: 1. Hon'ble NGT orders in OA.No.325 of 2015
2. TSPCB Lr.No.692/TSPCB/NGT/Legal/2020 dated:25-05-2020

****

Kind attention is invited to the subject and reference cited above. The action plan for restoration of the water bodies in the state of Telangana in compliance to the directions issued by the Hon'ble NGT orders in OA.No.325 of 2015 is herewith enclosed.

The details of the lakes are provided as per the format given by the CPCB along with relevant enclosures (Individual lake details). Government of Telangana has taken up the restoration of the water bodies under the Mission Kakatiya Program and a separate manual for the works that are to be taken up for restoration is also made available since 2015. So far 23,735 lakes restoration works are completed and the government has incurred an expenditure of Rs.5,926.64 Crores. All the details are provided in the report enclosed.

The action plan along with relevant documents are enclosed for kind perusal and favour of information and updating the same to Hon'ble NGT.

Yours faithfully,

Sd/-

MEMBER SECRETARY

Encl: As above.

//T.C.F.B.O.//

JOINT CHIEF ENVIRONMENTAL SCIENTIST (FAC)

ACTION PLAN FOR

RESTORATION OF WATER BODIES

(Prepared as per the direction of NGT in M.P.26/2019 of O.A 325/2015 dated 10.05.2019)

Prepared by

Irrigation & Command Area Development Dept

Government of Telangana

July, 2020

3	Action Plan for restoration of the water bodies Timeframe / Action Plan	5
4	Format of the CPCB	15
5	Action Plan for the lakes in the GHMC area	17
6	Status of the Action Plan for the restoration of the Industrially polluted lakes as per OA No.69-72	20
7	Conclusion	

1. Background:

Hon'ble NGT issued orders in OA NO. 325/2015 pertains to identification, protection and restoration of the water bodies. So far three orders were issued on 10-05-2019, 25-02-2020 and 01-06-2020.

The essence of the three orders is identification, protection and restoration of water bodies in all the states. The succinct of the orders are as follows:

> *There can be no dispute that the water bodies play significant role in recharge of ground water, preventing soil erosion, harnessing rain water and maintaining micro-climate in the area. Need for conservation and protection of water bodies is thus obvious. This requires involvement not only at the level of the State but also at the level of the community for which State needs to take initiative. The threat caused to the water bodies is by dumping of waste, discharge of effluents and encroachments. The steps required for restoration will include preparation and implementation of catchment area treatment plans, setting up of green belt and wherever viable setting up of bio-diversity parks around the water bodies, cleaning up of the garbage/debris and demarcation by the Revenue Department on identification survey and demarcation. Each water body is required to be given a geo-referenced - UID and an action plan is required for restoration and protection of each of the water bodies. In this view of the matter, need for conservation and protection of water bodies is not confined to the State of Haryana alone but extends to the whole country.*
>
> Further, direction on enhancing the capacity of the existing ponds/water bodies, creation of water harvesting structures in the sub-watersheds to the extent possible, apart from setting up of additional water bodies/water harvesting structures wherever viable, utilizing available funds including under MGNREGA and involving the community at large at every level. Gram Panchayats can certainly play a significant role in the matter. Once adequate capacity enhancement of water bodies takes place, excess flood/rain water can be channelized by using appropriate water harvesting techniques.

In light of the above orders, the action plan being implemented by the Government of Telangana since its formation as a new state towards the protection of the water bodies and optimizing the utilization of water resources is very much in line with the Hon'ble NGT orders. The two flag ship programs of the Government for protection of the water bodies are Kalesweram project where 20 new reservoirs with a capacity of 147.71 TMC storage capacity is in the process of completion and the second project is Mission Kakatiya wherein Government of Telangana have taken up a massive programme for Restoration of all Minor Irrigation Tanks numbering 46531 in a decentralised manner through community involvement.

2. Introduction:

Tanks have been the life line of Telangana owing to the state's geographical positioning. The people of the state are highly dependent on the tanks which are spread across all the 10 districts. The topography and rainfall pattern in Telangana have made tank irrigation an ideal type of irrigation by storing and regulating water flow for agricultural use.

Construction of tanks in Telangana has been an age old activity since pre Satavahana era. During the Kakatiya era, the construction of tanks was carried out with utmost technical expertise. Tanks such as Ramappa, Pakhala, Laknavaram, Ghanapuram, Bayyaram which were built by Kakatiyas resemble seas and they greatly helped agriculture and overall development and prosperity of the Kakatiya kingdom.

This vision and legacy of Kakatiyas were carried forward by Qutubshahis and Asafjahis who ruled this region for centuries. Hundreds of big and small tanks were built in Telangana region during their rule. Government desires to uphold the vision of Kakatiyas which envisages revival and restoration of Minor Irrigation Sources in Telangana State.

Tank irrigation has huge bearing on generation of rural employment, poverty reduction and agricultural growth. The sheer size of command area under tank irrigation makes it a large center of agricultural production and provides a critical opportunity for commercial agriculture through market linkages.

Realizing the importance of reclamation of tanks for growth in the state, the Government of Telangana State has taken up the programme of restoring the minor irrigation sources under the title Mission Kakatiya (Mana Ooru Mana Cheruvu). The mission aims at retrieving the lost glory of minor irrigation in the state with community participation for ensuring sustainable water security.

In July 2014 Irrigation Department, Govt of Telangana has carried out for the first time, the census of Minor Irrigation sources in Telangana, which include M.I tanks constructed and maintained by Irrigation Dept., M.I Tanks constructed by Panchayat Raj Dept. and later transferred to Irrigation Dept., Percolation Tanks, Forest Tanks, Private Kuntas, Anicuts and Check dams. As per the enumeration, the total number of tanks is found to be around 46,531. The irrigation department has planned to restore all the 46,531 minor irrigation sources in the state in next five years, taking up 20% of the tanks each year.

2.1 THE OBJECTIVE OF MISSION KAKATIYA:

The objective of Mission Kakatiya is to enhance the development of agriculture based income for small and marginal farmers, by accelerating the development of minor irrigation infrastructure, strengthening community based irrigation management and adopting a comprehensive programme for restoration of tanks.

The Government has prioritized to take the restoration of minor irrigation tanks to restore them to store their original capacity and to effectively utilize 255 TMC of water allocated for Minor irrigation sector under Godavari & Krishna River basins.

- The minimum ayacut that can be irrigated with the above allocated water is about 20 lakh acres.
- But as per the statistics the ayacut now being irrigated is only about 9 to 10 lakh acres under Minor Irrigation tanks. Thus, there is a gap ayacut of about 10 lakh acres.

The reasons for this gap ayacut under Minor Irrigation tanks are due to.

1) Loss of water storage capacity of tanks due to accumulation of silt in tank beds over a long period.
2) Due to dilapidated sluices, weirs and weak bunds
3) Due to defunct of feeder channels.
4) Due to dilapidated condition of Irrigation canals.

A reconciliation survey was conducted to identify the exact number of all types of Minor irrigation sources in Telangana State. As per survey 46,531 No of M.I, Small tanks, Percolation tanks, Private Kuntas and Small tanks (constructed by Forest Department) were identified and the lakes that require restoration were identified.

The massive programme for Restoration of tanks is named as "Chinna Neeti Vanarula Punaruddarana" and it is renamed as "Mission Kakatiya".

The Government is planned to restore 9,306 Tanks every year (20% of total tanks) with an eventual target of restoring all 46,531 tanks in 5 years, in a phased manner

The present programme of "MISSION KAKATIYA" is to bring this gap ayauct of 10 lakh acres in to command which requires no further allocation of water and also land acquisition. This gap ayacut of 10 lakh acres under Minor Irrigation tanks can be brought to Irrigation.

1. By de-silting the tank beds to restore original water storage capacity of tanks.
2. By repairing dilapidated sluices, weirs etc.,
3. By strengthening the tank bunds to its original standards.
4. By repairing the feeder channels to standards for getting water freely into tanks.(Part of chain of tanks)
5. By taking up necessary works to supplement/filling Minor Irrigation tanks through canal networks of Major, medium and lift irrigation projects taken up on both Krishna and Godavari Rivers.
6. By re-sectioning of irrigation channelsto standards & Repairs to CM & CD works for smooth distribution of water to fields according to their requirement.

2.2 IDENTIFICATION OF TANKS

1. The District Minister/ local MLA/MLC/Public representatives will be approached to identify priority order for restoration of local tanks.
2. Mandal Assistant Executive Engineer will submit the list of tanks under his Jurisdiction (along with their ayacut) to concerned officials / public representatives.

3. Identify tanks for which repair works have already been taken up under programme like CBTMP, RRR & Normal State Plan, along with type of the repairs taken up.
4. Preference will be given to tanks which have greater ayacut and good source of water.
5. Tanks which have not been covered under any programme will be given priority.
6. The chain of tanks in Mandal will be identified in the 1stphase. Repairs/ Re-sectioning of Feeder channel and Silt removal in the tanks will be taken up as priority basis.
7. One urban tank at constituency Head Quarters will be taken up and developed as Mini Tank Bund.

2.3 Advantages of Silt removal& Silt Application

a) The water retention capacity of the soil will increase thereby decreasing the number of wettings.
b) De-silting will improve ground water recharging capacity and increase the capacity of the tank there by increasing the availability of water even during the summer for irrigation & drinking water purposes.
c) As per studies conducted, it is observed that due to de-silting the fluoride content in the ground water will be reduced considerably.
d) Silt can be used as nutrient / fertilizer to the plant which generally reduces the usage of fertilizer.
e) The yield of the crops like cotton and chillies is increased by 20 to 30%.

2.4 MAKING IT AS A PEOPLE'S PROGRAMME

It is programmed to publicize the importance of Chinna Neeti Vanarula Punaruddharana in the public through wide publicity to make them aware and participate in the massive programme designed by the Government. There is a necessity to motivate and encourage the end users for their participation explaining the Benefits of the tank to the public by various type of media. The respective departments are addressed accordingly to publicize the benefits of the programme and importance of people's participation.

2.5 ORGANIZATION SETUP

To handle the massive programme Mission Kakatiya the M.I. Sector is reorganized and Strengthened with following Administrative structure.

1) Two Chief Engineers, one for Minor Irrigation (Godavari Basin) and Minor Irrigation(Krishna Basin)
2) Nodal Officers of Chief Engineer Rank to supervise the progress works are appointed for each district.
3) One Superintending Engineer is allotted at District Level.
4) One Executive Engineer is allotted for each revenue division.
5) One Deputy Executive Engineer for Each Constituency.
6) One Assistant Executive Engineer for Each Mandal.

2.6 The schedule of tender process:

The Government understanding the priority has shortened the tender process in order to expedite the works:

Sl.No.	Process	Earlier	Present
1	Calling of Tenders	14 Days	7 Days
2	Acceptance of Tenders	90 Days	7 Days
3	Concluding Agreements	14Days	5 Days
4	Additional security Deposit	< 25 %	< 10 %

2.7 Mission Kakatiya Programme:

The Government has prioritized to take the restoration of tanks to their original capacity under Mission Kakatiya Programme to effectively utilize the 255 TMC of water allocated to Minor Irrigation. The Mission Kakatiya Programme has taken up in phased manner from the year 2015 to 2020 as detailed below:

PROGRESS OF MISSION KAKATIYA

SL.No.	DETAILS	MISSION KAKATIYA				TOTAL
		PHASE -I	PHASE -II	PHASE -III	PHASE -IV	
1	No of tanks sanctioned	8003	8946	6047	4629	**27625**
2	Total Ayacut in Lakh Acres	6.92	6.83	3.81	3.22	**20.78**
3	Cost of Administrative Sanction Rs. in Crores	2540.62	3170.77	1957.64	1486.94	**9155.97**
4	Works Completed	7934	7842	3918	1742	**21436**
5	Expenditure incurred in Crores	1903.37	2341.74	1087.39	594.14	**5926.64**
6	Silt excavated in Lakh Cubic Meters	1004.97	1003.73	271.35	104.30	**2384.35**
7	Storage capacity restored in TMC for the works completed	3.55	3.54	0.96	0.37	**8.42**

2.8 INTERDEPARTMENTAL CO-ORDINATION

In order to ensure inter departmental coordination at the District level, the Government have constituted the District Level Implementation, Monitoring and Evaluation Committee for Mission Kakatiya. The composition of the Committee is as follows:

District Collector	:	Chairman
Joint Collector	:	Member
Conservator of Forest/Divisional Forest Officer (Social Forestry)	:	Member
Superintending Engineer (MI)	:	Member-convener
Chief Executive Officer, ZillaParishad	:	Member
Joint Director of Agriculture	:	Member
Sub-Collectors/Revenue Divisional Officers in the district	:	Member
Project Director, DWAMA	:	Member
Executive Officer, BC Co-operative Society	:	Member
Assistant Director, Fisheries	:	Member
District Panchayat Officer	:	Member
District Public Relations Officer	:	Member
Deputy Director, Ground water	:	Member
Chief Planning Officer	:	Member

District level committee shall meet once in a week during the working season and once in a month during the rest of the year. The tank wise progress of implementation of the works should be reviewed, any problems encountered with, if any, in implementation of the programme be discussed and resolved. Minutes of the meeting will be communicated to the officers concerned.

2.9 Irrigation & CAD department

The Irrigation & CAD department is the chief implementing department. The works will be executed through the Superintending Engineer and the Executive Engineer of the concerned areas, supported by the field engineers i.e., Dy. Executive Engineers and the Assistant Executive Engineers, under overall supervision of the Chief Engineer, Minor Irrigation. The engineers at all the levels will have to be in constant touch with the officials of the line departments to have better coordination.

2.10 Agriculture Department

The tasks that are to be carried out by the Agriculture department are : In all tanks, samples of the silt should be collected to test its suitability for application in agriculture fields and wide publicity should be given to utilize tank bed silt by farmers. b) The farmers should be motivated by the department on the following;

1) Efficient use of available water through change in irrigation system and improved water management techniques.
2) Increase in productivity of farms through suitable cropping pattern and increased cropping intensity.
3) Balanced use of chemical fertilizers and judicious use of plant protection chemicals.
4) Reduction of cultivation cost through introduction of improved implements and equipment.
5) Introduction of high-tech agriculture to increase the farm returns.

2.11 Rural Development Department

The department should converge various other programmes being implemented, with the Mission Kakatiya and coordinate with other line departments whenever and wherever necessary.

2.12 Forest Department

The tasks that are to be carried out by the Forest department are

- Effective utilization of tank foreshore areas in selected locations through afforestation.
- Nursery raising and plantation wherever necessary.
- Training for maintenance and cultural operations.
- Planting Silver Oak and Toddy (Eetha) trees around the tank boundaries. These activities, apart from reducing silt inflow into the tank, are also expected to create an additional, sustainable income source for the tank community.

2.13 Fisheries Department

The department should take up the following activities which will result in increase in aquaculture.

i. Upgrading production practices through improved stocking.
ii. use of Improved feeding, management and harvesting techniques.
iii. Intensive fish and prawn cultivation.

2.14 Revenue Department

The Revenue Department officials will have to coordinate with the field Engineers in

- Identifying the Shikam lands.
- Determining/demarking the FTL of tank.

- Identifying the government waste lands for dumping the unproductive soil.
- Cooperating between Revenue and Irrigation depts for removing illegal constructions in tank bed .

2.15 Ground Water Department

The ground water department should regularly

- Monitor the groundwater levels and quality of groundwater.
- Supply list of over exploited villages to the district Superintending Engineers/Executive Engineers.

2.16 Information and Public Relations Department

i. Create awareness on the benefits of restoration of the tanks by using different types of media and organizing IEC activities like street plays, kalajathas, wall writings, pamphlets and involving rural folklore like Chindu, Voggukathalu etc.,
ii. Motivate the farmers to utilize the useful silt excavated out of the tanks in their agriculture fields at their cost, by explaining the benefits that come out of it.
iii. Organize essay and elocution competitions for the students on the topic "tanks and their restoration", in coordination with the education department, at school, mandal and district levels and award prizes to the winners to encourage them in motivating their parents.
iv. Involve NCC, NSS, Guides and Scouts and Nehru YuvakKendras etc., in propagating the benefits of the programme.
v. Involve Public Representatives and SHGs in the programme.

2.17 MONITORING TOOL

A website is developed to tackle the massive programme Mission kakatiya to track the progress of works online and proposed to effect the payments duly linking the Bill Monitoring System with this website.

The restoration and maintenance works of Minor Irrigation tanks were being taken up for Bund, Weir, Sluice, Irrigation Channels and De-siltation of tanks are taken up to bring them to the original capacity of tanks. The silt so removed is proposed to use as manure for the fields with the participation of farmers by transporting and spreading in the fields with their cost.

On account of de-siltation of the tanks the following are the advantages which may benefit the farmers.

1. The water retention capacity of the soil will increase there by decreasing the number of wettings.
2. De-silting can improve ground water recharge and drinking water facility to cattle in the summer.
3. Due to de-silting, it is observed that the fluoride content in the ground water is reduced considerably as per studies conducted.
4. Silt can be used as nutrient / fertilizer to the plant which generally reduces the usage of fertilizer.
5. The yield of the crop is increased by 20 to 30 % for cotton and chillies.
6. There is a scope for getting carbon credits in the international market.

A detailed manual on construction procedures and quality aspects are prepared from award of work to the completion and post maintenance.

3. Action Plan for restoration of the water bodies

The activities that are taken up for restoration of the water bodies are detailed in the manual placed at Annex-I.

The activities taken up and proposed to be taken up are provided as per the indicative guidelines given by the CPCB.

Sl. No.	Key Activities and Components	Implementing Agencies	Proposed Time Frame for Implementation and Completion of activities (End Date)
A.	**Recognition Phase-**		
1	Inventory of all the 46,697 lakes with geo tagging, digitization, sources of pollution, usage and flora & fauna, inlets and outlets etc	I&CAD	44672 lakes are geo-tagged, 1240 lakes geo-tagged and are at approval stage, 619 lakes yet to be geo-tagged. The geotagging of the remaining 619 lakes will be completed by October, 2020.
B. Restoration Phase			
a.	Identification of designated use of water bodies through assessment of water quality criteria (As per National Restoration Goals)	I&CAD	Completed (best designated use as fit for irrigation & fishing)
b.	Details on management and conservation plans for ponds and formulation of strategies for long term management	I&CAD Strengthening/ Repairs to Earth Dams/ Bunds, Jungle Clearance, Surface preparation, Moisture Content, Compaction, Revetment, Rock-Toe Setting, Repairs & Resettlement of Tank Sluices and Gates, Re-Construction of Surplus Weirs,	21,436 lakes are restored so far and remaining 6195 lakes restoration under progress and are likely to be completed within two years

Sl. No.	Key Activities and Components	Implementing Agencies	Proposed Time Frame for Implementation and Completion of activities (End Date)
		Irrigation Channels, Earth Sections, Lined Sections – Selective Lining, Foundations, Back Filling, De-Siltation. Protection for sustenance of the restored tank	
c.	Identification of the sources of pollution quantification and detailed gap analysis (Sewage Management, Industrial Effluent Management & Waste Management)	I&CAD , TSPCB, Urban Local Bodies, HMWS&SB	Completed
d.	Construction of the Sewage Treatment Plants(STPs) to protect the lakes	Urban Local Bodies and HMWS&SB	HMWS&SB has constructed 20 STPs to protect the lakes and plans for another 20 STPs to prevent entering of Sewage water into the lakes. Three years as it includes networking.
C. Protection Phase			
a.	Preparation of action plans for Sewage Management, Industrial Effluent Management & Waste Management	MA&UD, TSPCB	Actions plan for sewage management submitted in OA No.673 with timelines upto May, 2022 and the sewage management will cover the water bodies in urban areas. No Gap in Industrial Effluent management. A separate action plan is under implementation in the 6 lakes with legacy industrial pollution. The details of which are submitted in

Sl. No.	Key Activities and Components	Implementing Agencies	Proposed Time Frame for Implementation and Completion of activities (End Date)
			subsequent section. Action plan for Solid waste management- 100% Door to door collection is being practiced and the setting up of the processing facilities is under progress as per the actions indicated in OA No.606/2018.
b.	De-Siltation, De-Weeding, Mechanical and biological control measures, Stabilization of earthen bunds and the drainage channels as well as silt and soil erosion control measures, Protection drainage basin including preservation of drainage channels	I&CAD	Completed for 21,436 lakes and remaining 6195 lakes restoration under progress and will be completed in two years The other regulatory activities are to be carried out on continual basis
c.	Prohibition of discharges or disposal of waste or washing activity and action against violators	ULB, I&CAD and TSPCB	
d.	Preparation of catchment conservation plant for the protection of drainage basin	Irrigation Department	
e.	Necessary actions for removal of encroachments and blockades in water bodies spread area/ boundary/drainage channels and necessary flood control measures	Irrigation and Revenue,	
D. Improvement Phase			
1.	Adoption of In-situ techniques for in-situ remediation of ponds or lakes (Physical & chemical treatment)	MA&UD	Kokapet lake drain is taken up on pilot basis and the works are in progress and DPRs for four other drains are under progress. A pilot project rain guard / wetland construction on Kukatpally nala which joins Hussain Sagar Lake is taken

Sl. No.	Key Activities and Components	Implementing Agencies	Proposed Time Frame for Implementation and Completion of activities (End Date)
			up for a length of 300 RMT to reduce the BOD load of the water passing through it. The same is under construction. It will be completed by October, 2020.
2.	Drainage basin management involving rehabilitation and modernization monitoring programmes, Sediment control, structural and land treatment measures and Crop Management.	Local Bodies and I&CAD	To continue as regular activity after the restoration
3.	Creation & Monitoring of biodiversity environment by the side of river body to ensure adequate shelter for migrating birds and type of trees	Telangana State Biodiversity Board	To continue as regular activity
4.	Monitoring of Implementation of action plans for restoration of ponds or lakes including activity - wise action points, specific timelines, organization responsiblefor implementation, budget estimates as well as Program Evaluation and Review.	Telangana State Pollution Control Board in coordination with stake holder departments	To continue as regular activity till completion

4.0 FORMAT FOR SUBMISSION OF INFORMATION ON PROPOSED ACTION PLANS FOR "RESTORATION OF POLLUTED WATER BODIES (LAKES AND PONDS)" IN COMPLIANCE TO HON'BLE NGT ORDERS DATED 10.5.2019& 25.02.2020 IN O.A. NO. 325/2015

17	Additional Measures (Pl. indicate action-wise implementing agency, estimated cost and the timelines for completion)							

5.Action Plan for protection of lakes from pollution within GHMC Limits in compliance to Hon'ble NGT orders dt. 10.05.2019 & 25.02.2020 in O.A.No. 325 of 2015

There are 185 lakes under GHMC jurisdiction which covers the twin cities of Hyderabad and Secunderabad. The Irrigation Department has demarcated FTL boundaries of all lakes and submitted to Lake Protection Committee for issuing preliminary notification. Out of which Final Notification was issued for 50 lakes and remaining lakes are under process. To protect the lakes from the encroachments chain link mesh fencing works with social bunding along the periphery of existing lake was taken up.

The Solid Waste Management in the GHMC area is achieved through 100% door to door collection followed by processing at an integrated Scientific Land Fill facility with 6000TPD. A Construction and Demolition facility is in operation with a capacity of 750TPD and the Construction and Demolition waste is being processed. The Bio-medical waste is managed through the Common Bio-medical waste treatment facilities which are monitoring through the barcode system and online GPS portal.

The only issue that has to be managed is the regulation of the entry of the sewage into the water bodies in the urban areas. The proposed actions and the status of the lakes are detailed below:

S. NO	Description	No of the lakes
1.	lakes are located in the premises of Government /Private Organizations like ICRISAT, HCU, NIRD, EMMAR Properties, IIL, TCS, ISB, Tourism and Forest premises are being well maintained free from sewage and pollution	35
2.	HMWS&SB have constructed about 20Nos of STPs at 20 lakes are being maintained the lake free from sewage.	20
3.	Irrigation & CAD Department have taken up diversion of sewage entry in to 19 urban lakes which are more probable for pollution along with de-silting of lake bed and other development works under Restoration and Comprehensive Development under Mission Kakatiya Phase-IV. The works are in progress	19
4.	lakes taken up under Corporate Social Responsibility (CSR) scheme in co-ordination with private corporate companies and being maintained free from pollution and lake edge development.	5

5.	lakes only receives the water during monsoon season and the remaining period the lake is free from sewage entry. Hence, no treatment proposed.	6
6.	number of lakes fully protected from sewage by diverting all sewage entries in to lakes.	2
7.	The HMWS&SB have proposed 20 new STPs for treatment of sewage water entering into 19 urban lakes and protect the lake from pollution.	19
8.	protection of lakes to be taken up in phased manner	78

6.Industrial Effluent Management: There is no gap in the Industrial Effluent management. The details of which are as follows:

- Total no. of industries/ industrial estates: Water Polluting Industries-2095 Nos.
- Total Industrial discharge: 603 MLD
- Total no. of industries having ETPs:1319 (including 84 ZLD)
- Total existing CETPs:7 (674 Industries) with 6.241MLD capacity
- 101 industries issued closure orders for non-compliance
- Total no. of GPIs/ SPIs: 3 (Patancheru-Bollarum, Kukatpally & Kattedan)
- No. of industries having OCEMS:292

State	Existing ETP Capacity	Whether Complying or not	CETP Proposed, if any	Status (DPR/ tendering/ under construction/ ETC etc.)
Telangana	593 MLD captive and 6.3MLD CETP	Yes	01 No at IDA Pashamylaram	Under Construction

The lakes that are polluted historically were dealt under the OA **Nos. 69 TO 72 OF 2013 & BATCH CASES [PATANCHERU POLLUTION BATCH CASES]:**

The compliance of the directions are as follows:

Para No. 226:Providing Online Effluent Monitoring Systems:

"We also direct that in respect of the existing units, the Board must ensure that all the units are connected with online effluent and emission monitoring system enabling the Board to monitor the primary treatment level inside the unit's premises and ultimately even when the treatment takes place at CETP. The mechanism for online monitoring would enable the Board to continuously monitor the standards of effluents at every point of discharge. When once the online monitoring is effected, the same has to be monitored by the Board regularly and take appropriate action wherever defects are found out".

Compliance:

It is respectfully submitted that as per the directions of Central Pollution Control Board (CPCB), all the 17 categories of highly polluting industries were directed to install Online Pollution Monitoring Systems (CC camera, online flow meter & systems to measure the effluent parameters) for their ETPs and the data to be connected to TSPCB & CPCB servers. All the 17

category of industries were enforced to install Online Pollution Monitoring System (OPMS) and the data is connected to TSPCB & CPCB servers. The Board has installed separate server for collecting the monitoring data, with SMS alert facility, whenever the parameters are exceeding the standards.

All the effluent carrying tankers were enforced to have GPS tracking devices and are connected to Board's GPS tracking system to avoid illegal dumping. The Board implemented online manifest system for the CETPs.

The Board constituted night patrolling teams to monitor the illegal movement of tankers during the odd hours. The Board also constituted day patrolling teams during the monsoon season to check illegal discharges into natural drains and nallahs.

Rolling Task Force teams are constituted on specific complaints with senior technical & scientific staff to have transparency in verification.

There are 117 numbers of 17 category industries located in the Manjeera Basin as per the operative guidelines issued by the Board. Out of the total industries, 108 industries have installed online monitoring system and balance 9 other units have become sick.

Direction No.3:

A. Restoration of water bodies:

"Even after the passage of decades there is no significant improvement in the groundwater quality particularly in the Manjira River Basin with specific reference to Kazipally Lake, Isnapur Lake, Kistareddypet Lake and Gandigudem Lake which ultimately lead to Nakkavagu and therefore it is incumbent on the part of the State Government to completely restore all these water bodies to their original position and recover the entire cost from the industrial units proportionately".

Compliance:

I.

A meeting was held by the Chief Secretary, Govt of Telangana on 20.04.2019 with the concerned Departments on the orders of the Hon'ble NGT. During the meeting, it was decided for construction of STPs at up-stream of Nakkavagu, Asanikunta, Kazipally, Gandigudem, Kistareddypet and Isnapur Tanks by the HMWS&SB Department before taking up restoration. Further, a decision was also taken that the restoration of the above five tanks shall be taken up by the Irrigation Department after completion of the STP works / diversion of domestic sewage.

The Irrigation & CAD (MI) Dept., vide letter dated 25.10.2019 informed that the proposal of restoration of Lakes viz., Khazipally, Isnapur, Kistareddypet, Gandigudem and Asanikunta for an amount of Rs.14.4430 Crores is being sent to Finance (EBS-IX) Dept., Govt of Telangana for their concurrence and its return is awaited.

Constitution of the Committee for effectively implementing the directions of the Hon'ble NGT, Chennai regarding restoration of Lakes:

Further, the Hon'ble NGT vide para no 176 directed the State Government to constitute a Team consisting of Experts from the field of Hydrology, Environmental Engineering, pollution Control Board and Central Ground Water Authority for effectively implementing the directions regarding restoration of Lakes.

In compliance to the Hon'ble NGT orders, the I&CAD Dept., Govt. of Telangana issued GO vide GO Rt No. 575 dated 07.04.2018 constituted the Committee with Experts for effective implementation of the directions of the Hon'ble NGT, Chennai regarding restoration of Lakes duly specifying ToRs for the Committee.

B. Restriction of extraction of ground water by industrial units & framing of appropriate guidelines by the Government:

"Until complete restoration of the said tanks / lakes is done, the drawal of water by the industries shall be restricted by the Government by framing appropriate guidelines in consultation with the Central Groundwater Authority and Expert from Osmania University, particularly Department of Hydrology. Framing of such guidelines regarding extraction of groundwater by the industrial units of Patancheru and Bollaram shall be completed within a period of three months and till then no unit shall be permitted to extract groundwater and

the periodical report shall be filed by the State of Telangana to the Registry of NGT (SZ) once in six months, the first of such report shall be filed on or before 26th April, 2018 and the Registry shall place the said report before the Tribunal for passing appropriate direction".

Compliance:

i. In pursuance of the order of Hon'ble National Green Tribunal, Southern Zone, Chennai, the Irrigation & CAD (MI) Department, Govt. of Telangana vide Memo dated 03.03.2018 has framed the guidelines for extraction of ground water and communicated the following guidelines for extraction of ground water by industrial units: -

1. The industries should fully treat, recycle and reuse the waste water generated. The solid waste generated should be sent to solid waste disposal plant at Dindigal.

2. The industry shall minimize the usage of groundwater by adopting proper treatment and reuse practices.

3. In IDAs, the withdrawal of groundwater may be permitted subject to the condition of undertaking of appropriate groundwater recharge measures in their premises or in IDA. Quantum of groundwater extraction may be restricted as per the recommendations of Ground Water Department and WALTA Act. All industries utilizing ground water shall be required to submit Annual water audit (annual budgeting giving the details of utilization of ground water, surface water, waste water generated reused etc.,) to the Ground Water Department.

4. Each industry shall-take all measures to adopt artificial recharge in areas, from where water tankers are operated to ensure further ground water decline does not take place.

5. Each industry may have one piezometer well and water levels and water quality shall be monitored regularly under the supervision of Ground Water Department, Government of Telangana and State Pollution Control Board.

ii. The Board communicated the guidelines to 222 industries included in the ban categories as per GO Ms No. 95 and respondent industries on 18.08.2018 for implementation of the guidelines issued by the Government during extraction of ground water.

C. <u>Ensuring Primary Treatment by Member Industries of PETL, Compliance of inlet and outlet standards by PETL, Compliance of standards by STP, Amberpet & Monitoring of River Musi:</u>

"It is the duty of the Board not only to ensure primary treatment by every unit but also must satisfy that the standard of effluent discharged by each industrial unit, after primary treatment to PETL, is within the permissible limit and the PETL maintains its inlet and outlet standards and only after the Board is satisfied that the outlet standard of PETL is within the limits prescribed by the Board and also eligible to be transported for further dilution in the STP at Amberpet and only then transporting shall be permitted. During transport it should be ensured that no breakage or leakage takes place en-route and at the place of discharge in the STP at Amberpet the outlet standards must be checked by the Board and satisfy that it is allowed to enter into the STP for further dilution. After dilution from STP at the point of discharge into Musi river proper check must be made by the Board to ensure the standard".

<u>Compliance:</u>

i. <u>Establishment of Primary ETPs / ETPs:</u>

It is respectfully submitted that the member units of CETP, Patancheru are increased to 186 (Member units - 167, with temporary membership sending first runoff rain water - 19) as on 30.09.2019 and member industrial units of CETP are having primary treatment system for complying with the inlet standards of PETL. Whenever the effluent of a member industry does not meet the inlet standard of PETL, the effluent tanker is returned back to that unit

for further treatment to the inlet standards of PETL. The Board is ensuring that the primary treatment is done by the member units of PETL by regularly monitoring the outlet of primary ETP in the industrial premises and also at inlet of PETL. Further, PETL is monitoring the effluent tankers of all the member units and rejecting the tankers whose effluent quality does not meet the inlet standards of PETL.

ii. Monitoring of inlet & outlet of PETL, Patancheru:

The Board is monitoring inlet & outlet parameters on daily basis to verify the compliance of the inlet and outlet standards.

Inlet of PETL: The half yearly average analysis results of inlet of M/s. PETL, pertaining to the parameters of effluents viz., pH, TDIS, COD, Ammonical Nitrogen, Oil & Grease and Boran are meeting the standards prescribed by the Board.

Outlet of PETL: The half yearly average analysis results of outlet of M/s. PETL, pertaining to the parameters of effluents viz., pH, TSS, TDIS, COD, BOD, Ammonical Nitrogen, Oil & Grease and Boron are meeting the standards prescribed by the Board.

iii. **Monitoring of STP, Amberpet:**

As per the monthly analysis reports, the parameters of treated effluents are meeting the inland surface water standards.

iv. Monitoring of water quality in Nakkavagu Basin:

The Board is regularly monitoring surface water in Nakkavagu Basin at various locations till the confluence of Nakkavagu with River Manjeera.

7.Conclusion:

The Government of Telangana has already initiated actions for restoration of the water bodies. The activities commenced from the year 2015. The details of the restoration are placed in the websitehttps://missionkakatiya.cgg.gov.in/missionkakatiya. So far 23, 735 lakes are restored by incurring an expenditure of Rs.5926.64 Crores and with about 6556 lakes restoration works are going on. The desiltation to a tune of 2384.5 Lakhs cubic meters was excavated during the restoration works leading to an increased storage capacity of 8.42 TMC. This in turn has stabilised 15.05 lakh acres of ayacut. The ground water table across the state have increased in the surrounding areas.

The remaining works are also being taken up and will be completed.
