No.: 156860/DMA/SWM/SBM/73/2024

Circular

Subject: Regarding the steps to be taken to dispose of inert waste generated from solid waste management as per the rules.

- Ref :**
1. Honourable National Green Tribunal O.A No 606/2018. Case dated 13.08.2024.
 2. Central Pollution Control Board Guidelines.
 3. Solid Waste Management Rules 2016
 4. Inert Waste Test Report submitted by Urban Local Bodies.

National Green Tribunal O.A No 606/2018. Case dated 13.08.2024 has directed to test the inert waste generated from solid waste processing in Urban Local Bodies. When the test reports of solid waste submitted by the urban local bodies as per reference (4) were examined, it was found that they were not as per the standards set in the Physical & Chemical Characterisation in the TCLP (Toxic Characteristic Leaching Procedure) report. The reason for this is that the waste was not segregated properly and the said test report showed a mixture of wet and dry waste.

In this regard, as per the Solid Waste Management Rules -2016 all Urban local bodies should lay more emphasis on waste segregation at source and take steps to ensure 100% segregation (Dry Waste, Wet Waste, and Sanitary Waste & Hazardous Waste). Only solid waste coming from wet and dry waste processing should be disposed in the SLF (Sanitary Landfill). Steps should be taken not to fill hazardous waste, heavy metals and other harmful waste in the SLF.

In addition to the provisions of **Schedule I** of the Solid Waste Management Rules - 2016, the following points should be ensured in the design of SLF:

- HDPE Liners to be provided at the Base and Sides
- There should be Leachate Collection System in Place
- Sufficient Gradient to be provided for Leachate collection
- Surface Water Drainage System must be in place
- Gas collection and control facility to be provided

Furthermore, as mentioned in Rule 15 (Zi), the Urban Local Bodies are directed to make all possible efforts to recycle waste and non-recyclable materials to prevent any waste from going to the landfill.
