We must accept where there is development; we must support the promoters. One Greenfield copper Refinery Project is proposed in A.P.S.E.Z. by Adani Group, the above mentioned organization does many inspirational work of humanity and environmental preservation. When this organization is doing the project work as per rules it is most welcome and we will support the same.

Ref. No: Date: 29/04/2017

TO,

The chairman sir

Public Hearing Adani Copper Refinery

Tunda, Mundra Kuchchh

Subject: Our objection and reject adanis copper refinery project.

Respected sir

Mundra taluka was rich in its unique environment and biodiversity. fishermen, farmers and cattel herders would run their business and occupation here. But the adani company has ruined huge paches of mangroves forest that existed here. The mangroves forest was a kind of blessing for the people of the surrounding area as in times of famine. Cattle and camels would survive on mangroves during advers times. Fishermen and local community used mangroves wood to build their small houses, ships and other implements. Fish breeding would take place in mangrove trunks. Mangroves would save the surrounding area from being flooded, tsunami or earthquake, and acted as a natural protecting wall. Such useful mangroves forest has been destroyed in order to build Mudra Port and SEZ. The surrounding area has been severely affected.

1672

In case the M/s. Adani Enterprise Limited has the proposed Greenfild Copper Refinery Project if allowed, even the remaining patches of mangroves forest will be dangerously impacted. The company has deliberately not mentioned anything about the mangroves forest and the probable impact on it in its Environmental Impact Assessment Report (EIA Report) prepared for the Greenfild Copper Refinery Project. The EIA Notification 2006 has been violated. The marine and ecology of the area have not been studied.

Filling up of Creeks:

the creeks of mundra were filled by up by MPSEZ in order to reclaim land. Which has been cited in the report of the Sunita Narain Committee of Ministry of Environment forest and clement change (MOEF&CC) Government of India. It has brought harmful impact of the surrounding area. The Adani SEZ has filled uo Koyla vadi creek, Navinal Creek, Dhaja vadi creek, Bhradimata creek, Sonaper vadi creek, the creek near old port, kotadi creek-1 and kotadi creek-2. These were all natural creeks and the fishermen of the surrounding 15 villages used thses creeks as a path to enter into the sea. Va liable fish catches were available in these creeks. The area was full of mangroves. The EIA has not mentioned what would be the impact on these creeks due to Copper Refinery Project?

Demolition of Sand Dunes:

in the coastal area of Mundra there were sand dunes as high as 40 to 60 meters. High quality frss would grow on thes sand dunes. Cattel herders of the area used to graze their cattel in this grass land for six to eight months. The land on which the company wants to build the Copper Refinery contained high grass land and forestry land. These have been demolished by the Adani Company. Such sand dunes would help against natural calamities. The Copper Refinery project may lead to further destruction of sand dunes, accelerating the danger of natural calamity, severely damaging the environment as also human and animal population of the area. Nothing has been mentioned in the EAI report about this.

Impact on fishermen community:

the importance of mundra taluka for fishing community and their village is next only to the jakhau fisheries Port. The sea shore along the taluka was used by fishermen from Mandvi and Gandhidham for fishing. Fishermen would get huge quantity of fish here, but due to the activities of the Adani Port &SEZ and Adani Power, the fisheries business has been severely affected. The fisheries production has decreased considerably. Due to this, major challenges have risen in front of the fishing community regarding their livelihood and economy of the area. With the Adani Copper Refinery Project, the area will be further adversely affected. Fishery activity will come to an end due to chemicals and poisonous, materials released from the Copper Refinery. This will create crisis for human being.

Impact on Agriculture and Horticulture:

the land between Mundra and Mandviis rich in horticultural crops and green farms. The stretch is known as its greenbelt, including rich green farms. Water of this area is sweeter than any other part of kutch. The crop of dry dates is found only here in the entire India. This area has remained a green field due to dry date crop. But after 2005, due to the activities of Adani Port &SEZ and Adani Power, the dry date crop has been affected. The ash form the Adani Power Plant spreads over farms of dry dates which spoil fruits, and the raw fruits fall without becoming ripe. More, the dry dates are not as sweet as they used to be earlier. This has adversely affected the livelihood of those who lived on agriculture.

The saline water of the ocean now invades the land, contamination sweet water, adversely affecting ground water. Agriculture cannot be done in saline water. Thus, the area is already facing problems, and if the Copper Refinery is built here, the entire area will be further impacted. The rich farms and agriculture will be destroyed, and this will trouble the farmer's community.

Impact on Animal Husbandry:

in the whole of India, only kutch is the only district where animal population is more than human population. Mundra taluka has been a leader in animal husbandry and related business. Sweet water, vast gaucher land, forest,etc. which are requirement for animal husbandry, are found here. The business of milk and items made from milk flourished in this area. But as the Adani Group has acquired most of the gauchar land and government waste land, no land is left for cattle breeders and animal husbandry. Milk amd milk production has decreased. Cattle breeders have lost their economy.

Above and above this Adani Port &SEZ and Adani Power has acquired gauchar land of 10 village from the government of Gujarat. The details have been given in the table below:

Sr.No	Name of village	Total Gauchar land all figures in acres	Land allotted to sez
1	Tunda	388	211
2	Siracha	386.25	100.22
3	Navimal	276.05	231
4	Zarpara	2840	1000
5	Mundra	1405.04	1215.04
6	Baroi	140	75
7	Goyarsama	135.01	70
8	Luni	199	198

1674

Sources of Pollution in Copper Industry:

Copper industries is a mineral based industry. Copper bearing materials in the form of oxides or sulphides occur below the earth surface. The copper mineral is axtracted by various methods of mining. During mining large quantity of waste materials are generated. After the ore is taken out, it is crushed and milled. In crushing and grinding enormous amounts of dusts are generated. The ground ore is subjected to flotation for separation of copper rich mineral known as concentrate is then smelted in smelter to produce blister copper. The copper so produced is impure and is called anode copper. Copper production all of them contribute as sources of pollution in the copper industry. Thus the main sources of pollution in copper industries are (i)mining (2) comminution operation, (3) flotation, (4) roasting and smelting, (5) fire refining and electro refining stages, (6) sulphuric acid plant and (7) water treatment plants etc.

So we are request to you and MoEF&CC New Delhi government of india cancelation of Adanis TOR and not given environment clearance.

Thanking you

29/4/17

Naran Gadhavi.

Zarpara Kutch.

Gujarat Pollution Control Board
Gandhinagar

Sub: Environmental Public Hearing of M/s. Adani Enterprises Limited Village(s) :Siracha and Navinal, Taluka: Mundra, District: Kutch is scheduled on 27th April 2017

Sir,

We have studied the draft EIA report of the above-mentioned project. Following are our observation/comments/questions regarding project and draft EIA report.

1. What was the previous land use of the land for proposed project? Has Industry obtained NA permission for the land? Please provide the document.
2. How the required land for the project is acquired? Was it a government or private land?
3. When was environmental clearance for this project in Form I applied?
4. What is the status of NOC application to GPCB for this project?
5. What is the status of Forest & CRZ clearance for this project? Please provide a copy of both of these clearances.
6. How many mangrove trees will be uprooted due to this project? What is exact restoration plan for mangrove trees which would be displaced due to this project?
7. What type of precautionary measures are to be taken to avoid negative impact of construction activities on marine environment, water quality, inter tidal and sub tidal habitat and sediment quality ?
8. Please give exact dates of ambient air quality, surface water, ground water, noise monitoring and soil quality monitoring.
9. How will the project proponent plan to get coal – pet coke, met coke as a fuel in regular basis? Please provide any agreement made with the supplier.
10. What is the regular monitoring plan that shall be carried out for odor control by the projectproponent?
11. Please justify domestic water requirement.
12. Please provide complete details of each ETP Units.
13. Is there any cost-benefit analysis carried out for proposed project's benefits vs loss of ecosystem including flora, fauna and vegetation?
14. Please give name of registered recycler to whom nickel sludge, arsenic bearing sludge, used oil and oil sludge will be sent for disposal.
15. How many local people will getemployment through this project?
16. What will be action plan for socioeconomic development of an area by project proponent?

1676

PROJECT NAME:	M/s. Adani Enterprises Limited
VILLAGE:	Siracha and Navinal
TALUKA:	Mundra
DISTRICT:	Kutch
CONSULTANT:	Vimta Labs Limited
PROPOSED PRODUCT:	The proposed greenfield copper refinery project at Adani Port SEZ land
TOR DATE	21st June 2016
CATEGORY:	Category A – 3 (a)
STUDY PERIOD:	1st October to 31st December 2016
STUDY AREA:	10 km
LAND REQUIREMENT:	256.58 ha (634 acres) 154.18 ha (381 acres) – APSEZ area and 102.38ha (253 acres) – forest area for promoting industrial development
MANPOWER REQUIRED:	2000-3000 persons
POWER REQUIREMENT:	300 MW
TYPE OF FUEL:	HSD / FO / LPG / Coal – pet coke, met coke
WATER REQUIREMENT:	32,800 KLD
WATER SOURCE:	APSEZ Ltd through M/s. Mundra Utility Pvt.limited
EFFLUENT GENERATED:	6468 KLD – recycled water
GREENBELT:	84.59 ha

17. What activities industry will take up as a part of CSR and what will be the budget for it?
18. Please give detail list of people who will be responsible for implementation of EMP?
19. We request you to consider inspection report of the Committee headed by Ms. Sunita Narain that was constituted by MoEF for M/s Adani Port and SEZ Ltd, Mundra which submitted its report in April 2013 before granting environmental clearance.
20. We also request you to consider all the Supreme Court's pending and disposed cases that are filed against Adani Group of companies.

Yours truly,

Mahesh Pandya

CC: 1. Collector, Kutch
2. Regional officer, GPCB Kutch

District Collector,
Kutch.

Sub: About AEL copper refinery project and suggestion in environmental public hearing on 29th April 2017.

Respected sir,

As local journalist I welcome the project of the proposed copper refinery project would produce 10 LTPA of copper cathode; 5 LTPA of copper rod; 30 LTPA of sulphuric acid; 5 LTPA of phosphoric acid (as 100% P2O5); 30,000 TPA of aluminum fluoride, 288 TPA of selenium, 50 TPA of gold; 500 TPA of silver etc with the state of art environment friendly technology in Kutch district. The huge development will be based on sustainable development principal and not with devastation of ecology and environment. The precautionary principle applies to the project and on this principal I would like to prevent possible huge pollution. I humbly request MOEFCC and Project proponent Adani Enterprise Ltd to kindly consider the below discussed queries for the abatement of pollution. There is need to modify some of the points/subject matter shown in draft Environmental Impact Assessment report and respective changes should be there in the EMP to achieve the aims and objective of the sustainable development of the region along with business interest.

Suggestions :

1. The EIA report says .....

*1.2.4 ... **Location of the Project** : " The proposed project site is located in Siracha and Navinal villages at APSEZ Mundra taluka, Kutch district in the state of Gujarat. The total area earmarked for the proposed project is 256.58 ha (634 acres), in which 381 acres (154.18 ha) of land belongs to APSEZ area and 102.38 ha (253 acres) of land belongs to forest area for promoting industrial development.*

The question arises here is that when the proposed forest land which is yet not cleared by the MOEFCC stage I or Stage II and pending for consideration how proponent can ask EC over the land??? Is MOEFCC not obeying the own OM? We demand that, the forest land must not be converted as the SEZ has more land available for this project. Why the Adani Enterprise Ltd is asking the Reserve Forest??? We demand detail investigation of the balance land available in SEZ or private land availability in the vicinity. The RF should not be disturbed at all. We demand from proponent that they must have sustainable solution for land availability than the diversion of Reserve forest of 102.38 hector. The entire coastline is going to be industrialised in next few years and there will be no green cover in the semi arid zone. The present forest has the trees and shrubs so it must not be disturbed when the project is going to increase the Sox and other air pollutants in larger quantity. I suggest the project authorities to shift the project if possible at deep in northern side of coast line where the unfertilized land available in huge quantity.

The image on EIA Page C3-16 is showing the project site is in the Shiracha Reserve Forest and Danderi Reserve Forest. So the project site should be out of this two RF.
The Annexure -III land allotment letter is meaningless if the SEZ president is not clear about the land to be given to this project. The letter is not showing clear piece of land with area and its

possession with the SEZ authority it is talking about planning !!.....This issue should be addressed by the AEL authority before taking EC. If The land belong to the government and SEZ does not own it at present than how it can assure the land transfer to AEL.

2. The diversion of forest land wide file number is 8-04/2016-FC has taken valid consent from gram or not? Under Forest Right Act 2006 settlement of rights of local grazers and people are settled or not? I suggest not to divert the forest land but in any circumstances 5 times more land should be developed as forest in 25 kms of the project site with state forest department. MOEFCC should force the company to develop forest in this 25 kms radius only to balance the forest cover.

3. Provide the date of the issuance of the CRZ map by NIO to AEL.

4. Provide the factual details on the distance of various streams/rivers/coast/creek. The EIA report has shown the point 14 in Form 1 (which shown below). The distances of the natural river/creek/estuary/water body needs to be corrected. As per my knowledge the information is given by mistake and I request to verify the same and introduce the fact in Final EIA report also provide the copy to me.

Streams/Rivers Kotri creek (0.5 km, S)
Khari Nadi (1.9 km, W)
Gulf of Kachchh (3.9 km, S)
Nagavanti Nadi (4.7 km, E)
Phot Nadi (8.7 km, ENE)

5. Please provide the details of TSDF as described in the project for Hazardous waste disposal. There is no design shown in EIA report for TSDF site

1. No technical details regarding the TSDF site shown.
2. No Cell details and its capacity defined and no closer plan shown.
3. No details regarding the waste characterisation shown.
4. No details regarding heavy metal encapsulation shown which is to be disposed off in to TSDF.
5. The compliance of the Hazardous and Other Waste (Management and Trans boundary Movement) rules 2016 for the smelter base waste not shown.
6. This project component must be shown differently in the said area of 12.14 Hectors. SLF cell is shown just adjacent to the public road which is not suitable.
7. The criteria for site selection is not studied and followed as defined by MOEFCC/CPCB.
8. The ground water geology, hydrology and contour maps of the area are not studied.
9. The flow pattern of ground water is not studied.
10. The ground water table is not studied. (only 2-5 meter as shown on page C3-10) How TSDF is possible in such type of ground water area.

So this component is illegally inserted in the Draft EIA report as per my belief. The Form I do not have such details and the TOR also. The site specific TOR should be given for such kind of huge 12 hector secure land fill site for disposal of the highly toxic heavy metal baring waste which needs stabilization first. In absence of the waste characterisation the secured LF/TSDF for the hazardous heavy metal baring waste could not be the part of this copper smelter. This component should be taken EC separately along with the phosphogypsum and copper slag storage yard. This plant is very near to coastal area also. Keeping in mind the coastal hazard this site should be out of the coastal zone.

I demand the MOEFCC EAC to look in to the matter and ask the proponent to obtain fresh EC as separate project with proper EMP and EIA report or dispose the toxic metal baring waste of Cr, Cd, Ni, As, Pb, and some types of active radioactive metals in common TSDF available. The MOEFCC and CPCB always ask for common disposal of Hazardous waste in country. Gujarat

has more than 20 Captive TSDF sites and there are problems started in it. Such kind of captive landfill site will not be sustainable for future.

6. The copper slag and phosphogypsum reuse plan is not shown in the EIA report. There will be mountains of the two type of waste if not disposed or used properly. There are problems of this waste having some hazardous characteristics due to traces of heavy metals. The haphazard disposal of these two waste can be hazardous for the environment if disposed without assessing the toxic nature of metals. As all over India all the copper smelter are facing critical problems of disposal.

   I request the AEL to make a plan for Zero Dump of these two types of waste at site. There should be detailed utilization plan from day 1st and according to plan it should be immediately used. MOEFCC should not permit the proposed dumping in open to avoid the mountains of these two types of waste near the Kutch coast.

7. The premise of this project has the gypsum pond. Please provide the details on gypsum pond and its liner system to avoid leaching in to ground water and coastal sandy soil of the project site. The site is reclaimed with soil where the gypsum pond is proposed and it is located near the CRZ area. This pond can lead ground water pollution. Detailed engineering of the pond should be given to MOEFCC in final EIA report along with its handling mechanism. We demand to shift the gypsum pond to northern portion of the project where the soil is stable and having some more load baring capacity than the sandy part.

8. The project will have the water from Mundra Utility Pvt Ltd (MUPL). The water allocation letter is enclosed as Annexure-IV. What will be balance capacity of MUPL after allocating the 32.8MLD. What will be source of water of MUPL.

9. The ETP will have 1.2 MLD of water but where will be the treated water go? Please provide the justification of the water balance diagram shown on page C2-5.

10. Approximately 3 LTPA copper scrap and electronic scrap is also used as input to proposed copper smelting plant and copper scrap melting facility. Will all the 3 LPTA copper waste imported by AEL ? Is such e-waste import or scrap permitted to refine in India? Provide the details from where such huge copper waste will be procured for this proposed plant.

11. Is the technology selection process based on the environmental friendly technology with special consideration of semi arid atmosphere?

    The EIA has shown the Outotec Mercury Removal Process with selection of chloride scrubber Please provide the technological justification of the selection of technology with considering the temperature and humidity of the Kutch region. Will this project manufacture high purity metallic mercury at the site?

12. What will be level of radioactivity in the copper slag and other metal waste? EIA does not have touched up the issue. Please provide the details with proper justification.

13. What will be the pollution load of water/ electrolyte / hazardous waste from the Kaldo Furnace and PMR Plant? There are no word written on it and no details are given in EMP. Please provide the information. What will be done of the solvent used in it will it be recycled or disposed off.

14. Table 2.6 exhibit the emission of the all vents from the whole smelter and allied plants.
    The SO_2 will be from H_2SO_4 Plant will be 3 Lac NM^3/Hr which will be 1 Kg/Ton H_2SO_4 produced. Is it not the huge quantity of SO_2 ? Is the coastal region have that much capacity to take the load of SO_2 in 25-30 kms area in ambient environmental situation? Can the AEL reduce

the emission of SO_2 below 0.75 kg or more less /ton of H_2SO_4 ? I sincerely request the AEL management to reduce SO_2 emission from the H_2SO_4 plant. This is the critical gas which can deteriorate the health of people and animals and affect the environment seriously. I suggest MOEFCC to give the condition of 0.75 kg emission/ton of H_2SO_4 produced.

The SO_2 Level in ambient air is ranging between 20-35 micro-gram/M^3. After the proposed smelter it may cross the ambient air quality limit. So I am suggesting for decrease of SO_2 emission at the time of planning.

15. I suggest assessing the cumulative emission from all stakes shown in the EIA report for SO_2. The dispersion modelling should be carried out on the cumulative emission study. I believe that the cumulative study will show shocking result and the stake height can go above 150 -180 meters. The MOEFCC should increase the height of stake of Main Stack Secondary Gas Scrubber- I & II (Bi flue) Sr no 10. and of H_2SO_4 no 12.

The southern portion of the project site shows the presence of mangrove and it is inter tidal zone falling under CRZ 1A as per the CRZ map attached in EIA report. The southern portion is reclaimed land with sand. so I suggest that AEL should restore the mangrove in 1000 hector in Gujarat coastline to protect the coastal environment and balance the nature.

16. The air quality sampling point is carried out at 5 points between 0-5 kms of project site. There are only 3 location selected between 5 to 10 kms why? To complete the air quality monitoring as per procedure I suggest to carryout air quality analysis at new 5 points between 5 to 10 kms radius of study area and the data should be submitted in final EIA. Necessary changes in air modelling should also be done to minimise the impact of air pollution.

17. Please provide the air pollutants dispersion modelling based on sensitive receptors like habitat, village etc which is not done in draft EIA report and is asked under TOR 10 (i) point

18. I suggest online stake monitoring system for all major stakes emitting SO_2 with showing cumulative emission data online at main gate. There should be display board showing the parameters with permissible limits.

19. Figure 9.1 page C9-6 EIA report has shown the organisational structure of Environment Management Cell. Excluding 5 safety engineer there are only 8 person staff shown which i feel highly inadequate to handle the most important pollution control system and manage the environment. I suggest there should be more Environmental Scientist, Chemist and Engineer needed for the pollution control components of such kind of big smelter. The environmental cell should have employee strength of 25 or more.

20. Adani group is working in the region having ports, power plants and SEZ from 2008. The female literacy rate in the study area of 10 KMS is only 23.58% which is highly unacceptable. I suggest the company should share and increase its CSR budget towards female literacy in the area.

21. I also suggest the utilization of 3% of the project cost not the profit share for the benefits of the local people and their health from the date of the start of project. MOEFCC has in past given these conditions to various high pollution potential projects.

22. As per TOR point IV no plan regarding Arsenic baring sludge is submitted in draft EIA report. Please provide the report for arsenic and mercury baring sludge. I suggest to provide a detailed plan of haz waste disposal in proper way with detailed information.

1682

23. As per Model TOR the point no x is not complied with. There are no data shown for the flood and river discharge near by the Greenfield project. I request to provide the same from governmental department in final EIA report along with mitigation measures if any.

24. How the zero discharge status will be achieved by this plant is not shown in water table diagram and in draft EIA report. Please furnish details of all the components of ETP and stage wise pollution reduction to achieve the zero discharge status in final EIA.

25. I suggest during construction phase a 2 Nos of high capacity truck mounted dust collector should be used round o clock for controlling dusting in the construction area and introduction of coal tar temporary roads in the whole construction area.

26. As per the map submitted in draft EIA there is no 33% area left for the plantation. So from where the land will be taken for this 33 % plantation area? Please provide the breakup of the land.

27. On Model Tor point 9- CEP...Point No – ii- iii- iv no answer is given in EIA report. I suggest that any violation or any environmental issue the highest authorities should be informed and they should address the problem/grievance/violation with spirit. These grievance redressal mechanism and details must be shared with public also in any such issue and publish on web site.

28. If share holders and board of directors are not aware about the issues/problems of pollution then the management will not work effectively. I suggest that the environmental issues/problems should be addressed in the grievance redressal mechanism and it should be online in local language on web site of proponent.

29. I suggest online complaint redressal mechanism for greater transparency and accountability of pollution control facilities in such huge industry like this. I demand that company should initiate the online complaint redressal mechanism and display all the respective answers of company to avoid misunderstanding and confusion among the citizens/environmental groups/media. The ***MOEFCC should give the condition in Environmental Clearance for this demand.*** This move will lead smooth industrial development of the area avoiding litigations in court and public protest.

I hope the AEL management and MOEFCC will consider my above said suggestions for sustainable development of the Mundra region of Kutch.

Thanking you and hoping for action to protect the people ecology and enviornment.

Sincerely Yours

(Ibrahim Turk)

Comments, questions and suggestions for the Public Hearing on the 29th April 2017 for "the proposed greenfield copper refinery project at Adani port special economic zone land in villages Siracha and Navinal, taluka Mundra, district Kutch, Gujarat"

1. Please furnish full details of the existing land use of the site proposed for the project.

2. Please furnish the detailed land use of the proposed site as per the approved CZMP.

3. Please furnish a copy of the CZMP of this area approved by MoEF.

4. Has the project proponent carried out mapping of the CRZ area and the HTL – LTL line, buffer area, as well as mud flats, sand dunes, and corals on 1:4000 scale on the CZMP approved by MoEF? If yes, kindly furnish a colour copy.

5. Please furnish a satellite imagery of 1991 of the proposed project area.

6. Please give full land use details and categories of the proposed project area. Please mention how much area is under CRZ I - A, CRZ I, CRZ II, CRZ III and CRZ IV.

7. Does the proposed project area falls under ecologically sensitive and or geomorphologically important area, as per the CRZ Notification 2011?

8. Please specify what are the ecologically sensitive areas and or geomorphologically important areas observed at the proposed site and in the study area, along with the area details (in hectares).

9. Please furnish information on whether mangroves and mud flats are present at the site and the area (in hectares) covered by mangroves and mud flats.

10. Please furnish information at the distance which mangroves and mud flats are observed from the proposed project site.

11. Please furnish details of salt pans and aquaculture ponds within the study area, and their distances from the project site.

12. Please furnish details regarding the fishermen residing and/or fishing in the study area.

13. As per the study area map, the project area not only covers mudflats, it is also falls within the Mundra mangrove reserve forests. It is also in proximity of the Danderi reserve forests, Navinal reserve forest and the Mundra Dhoa reserve forest. Please explain why such an ecologically important area has been selected for this project.

14. As per the information submitted for "Site Alternatives" in the Form I, Site I has no forest area, whereas the proposed Site 2 has 253 acres of forest land that the project proponent has proposed for diversion. Please explain the rationale behind selecting the site which has forest area and explain why the site that does not have forests has not been selected.

15. It is also stated in Form I that mangroves are not present on the site. However, a bare perusal of the google earth images shows that the mangroves exist along the southern boundary of the proposed project. Also, the proposed conveyor belt from the port to the proposed site passes through the mangroves. This can also be observed from the "FIGURE 3.3.2 Landuse/Land Cover Map Based on Satellite Data" of the draft EIA report. Why has this been not mentioned in the Form I? Please explain.

16. The proposed area has been illegally reclaimed by the APSEZ. Entire land use and land cover has been changed due to this. Please give information on the land use and cover as was during 1991 and also before the SEZ clearances were granted. Please also furnish a copy of the permissions issued by the State and Central Government agencies permitting the reclamation and destruction of mangroves.

17. Is the project proponent going to destroy the remaining mangroves of this area as well?

18. Please explain on what basis is the alternative site 1 rejected.

19. The Table-3.3.2 – "Land use breakup details in 10 km radius" clearly mentions presence of mudflats, mangroves and the reclaimed area in the study area. As per this table only 5.27% of the land in the study area is built-up, whereas 11% of the study area is wetland. Why is the site being selected for this proposal?

20. Please explain why the land with scrub vegetation has been categorised as wasteland.

21. Item 21 of Form I under Basic Information states that the proposal involves approval/clearance under the Forest (Conservation) Act, 1980. However, under point 23 "Whether any Forest Land Involved? Area of Forest land Involved (hectares)" it is stated as "N/A". The Draft EIA report has mentioned at many instances the presence of 3 reserved forests and the Mundra mangrove forests. Please explain why such misleading information has been provided in Form 1.

22. In form 1, the query under point 24 is "Whether there is any litigation pending against the project and/or land in which the project is proposed to be set up?" The project proponent has replied has "No". It is important to point out here that at-least two court cases are going on the APSEZ land – SLP 28788 of 2016 in the Supreme Court and WP (PIL) 12 of 2011 in the High Court of Gujarat. Please explain why this was not disclosed in the Form 1.

23. What action has been taken by the APSEZ as per the recommendations of the Claude Alvares led "Committee on Mangroves" in the Civil Application 9124 of 2011 under the PIL 12 of 2011? Please furnish the details of the actions taken by the project proponent.

24. The Form 1, under "II Activity" states that no reclamation is envisaged. It is a well-known fact that the entire area has been reclaimed by the Adani group. This has been also stated in the Sunita Narain report. What measures have been taken to restore the area to its original state? How much mangrove plantation has been undertaken? Please furnish with the location details, along with coordinates and site photographs.

25. The Form 1 also mentions "construction of new approach road". However, the document on Alternative sites state that "Widening of existing Road" would be required for this site. Why is there such discrepancy in the information being provided?

26. Where would this proposed new approach road and / or the widening of the existing road come? Please furnish details along with the map showing the proposed new approach road and or widening of the road.

27. Please furnish details on the impacts and mitigation measures of proposed new approach road and/or widening of the road.

28. The Form 1 also mentions construction of new transmission lines. Please show location of the new transmission lines on colored map. Has the area required for this mentioned in the Draft EIA report? Please mention the impact of the transmission lines and the mitigation measures for same. How much forest land is involved? Are these transmission lines passing through CRZ areas? Why can't the existing transmission lines be upgraded?

29. For stream crossings, the Form 1 mentions that "Natural drainage passing through the site will be suitably trained and maintained. There will not be any diversion. Further, conveyer for Copper Concentrate and Rock Phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required." The Adani group has already reclaimed large swathes of mudflats, mangroves and creeks in this area. Now the APSEZ wants to further "suitably train and maintain" the natural drainage. Please furnish details on the impacts of this and mitigation measures of same. Please also explain how this can be permitted in view of the fact that the reclamation has been carried out illegally without valid Environmental, CRZ and Forest Clearances. Please furnish copies of these clearances, if any.

30. Further, there is already pollution in the area due to the coal dust and fly-ash and emissions of the power plant. There have been numerous complaints regarding this from the villagers of this area. Additional conveyor for Copper Concentrate and Rock Phosphate will further deteriorate the environment. Please give details on the impact of and mitigation measures of the conveyor for Copper Concentrate and Rock Phosphate, along with the impacts of the existing power plants.

31. It is mentioned in Form 1 that "Approximately 3000 persons will be employed during construction phase and about 2000 people will be employed during operation phase". Also, please mention if the employment will be given to the locals or to outsiders.

32. What kind of residential and cooking facilities will be provided for the construction workers?

33. What sanitation facilities will be provided for them during the construction phase?

34. How many locals have been employed so far by the APSEZ? Please furnish details. Please furnish how many are temporary and how many with permanent jobs.

35. Under the "Environment Sensitivity", the Form 1 states that "Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or other related value" are not present within 15 kms. However, mangroves are about 167 meters away from the boundary of the proposed project. Moreover, there are 3 reserved forest and the Mundra mangrove forest in the

proposed project area. Mangroves are protected as per the Indian legislation. Please explain why this was not mentioned in the Form 1.

36. Moreover, the 15 kms area covers the villages Tragadi. As per some of the reports Tragadi is turtle nesting sites. Why this has not been mentioned in the Form 1? Please explain. Have the impacts of the proposed project and related activities been studied for the turtle nesting? What are the mitigation measures for same? Please furnish full details of same.

37. Please give details on the pagadiya fishing along the APSEZ area. How many fishermen are engaged in this? How many have been impacted due to the APSEZ? Please furnish full details.

38. What compensation has been provided to fishermen who earlier used to fish by this technique, but had to stop due to the APSEZ? Please furnish full details.

39. How many fishing boats are present in the area? Please furnish full details.

40. From where would the sand be obtained for the proposed construction?

41. The proposed TOR document mentions under Land Use that - "The existing land use pattern in the study area of 10 km radius around the project will be established through the literature review of published Census records and latest available satellite imagery. Based on this review, the land use pattern is categorized into the following five categories:

1. Forest;
2. Irrigated and agricultural Land;
3. Un-irrigated agricultural land;
4. Culturable wasteland; and
5. Land not available for cultivation, which includes built-up areas."

Why are the mudflat areas and the mangroves not mentioned? Also, please demarcate the culturable wasteland and share a coloured map of the same.

42. The brief summary as well as the pre-feasibility report mentions that "There is no significant vegetation or habitation in the project site. The nearest significant features from the project site are 4620 MW Adani Power Plant and Tata Power (Western side of project area), and West Port of APSEZL (South – west direction from project)." Kindly explain why the mangrove vegetation or the three reserve forest areas and mangrove forest areas not significant.

43. The pre-feasibility report also mentions that "Land for different corridors (Power/ Road/ Raw Material Conveyor) would be additional." Please furnish full details of the land required and the existing land use for these corridors. Please furnish the existing land use, whether any eco-sensitive areas, forest lands, mangroves, beaches, etc. exist in these corridors. Please also furnish a coloured map of the proposed corridor area.

44. Why has information on the above-mentioned corridors not provided in the Draft EIA? Please explain.

45. The pre-feasibility report mentions that "From South West to North East majority of area is of APSEZL where west port is also located.. The land is having undulations and minor grading will be required." Kindly provide details on how the grading would be carried. What material would be used for this? From where would it be sourced? Please furnish full details.

46. How many creeks are present in the study area? Please furnish a coloured map and a satellite image showing the creeks.

47. The pre-feasibility report states that "Since the entire land is vacant, hence no displacement and rehabilitation of local population is envisaged". What about the fishermen? How many of fishermen are engaged in fishing in this area? Please furnish full details.

48. How many fisher-folk/local people will be given permanent jobs in the proposed project?

49. What kind of jobs will be given?

50. Will they be imparted appropriate training?

51. Would the job be permanent or temporary?

52. How many salt pans exist in the study area. Please furnish full details.

53. From where will be the coal sourced for "addition in the concentrate for effective smelting"? What will be the ash content, Sulphur content mercury content and radioactivity of the coal proposed to be used? How will it be transported? What is the quantity of the coal envisaged to be stored? What are the ash utilization plan? Please furnish a detailed report on same. What are the mitigation measures for the SOx, particulate matter, arsenic, heavy metals, mercury, radionuclides emissions?

54. Are there any studies conducted on the long-term radioactivity of the ash? Kindly furnish the same if any. What are the mitigation measures proposed for the same?

55. Please share details of the water circulation system proposed as mentioned in the Pre-feasibility report. Please show the layout on map of this proposed water circulation system. Please also share details of the land cover of this proposed area. Why has this not been mentioned in the Draft EIA?

56. The very first criterion for site selection is "Away from environmentally sensitive areas". However, this project falls under the reserve forest and mangrove areas. Please explain.

57. Under section 6.4.2 "Merits & demerits" of the pre-feasibility report why the presence of reserve forests and mangrove forest not mentioned under "Site-II (East of APL)"

58. How much green belt plantation has been undertaken by APSEZ so far? Please provide with the total area, the co-ordinates and the photographs of same.

59. What plant species have been planted in the green-belt in the APSEZ?

60. Are all the species proposed to be planted for the current proposal indigenous?

1688

61. Where is the sewage treatment plant proposed? Please show the location on the map.

62. Where would the sludge from the sewage treatment plant be disposed of?

63. Is there any facility proposed for the recycling and reuse of the sludge on site? Kindly provide the details along with the location on the map for the same if any.

64. The pre-feasibility report states that the "rejects from the secondary RO plant will be discharged into sea through the outfall channel of APSEZ's desalination plant." Please explain the impacts and mitigation measures of same.

65. What will be the composition of the rejects from the secondary RO plant? Kindly provide the detailed analysis report for the same with the concentration of each constituent.

66. What are the "latest environment technologies" that would be used to treat the gaseous emissions before they are discharged in to the atmosphere?

67. Please furnish a copy of the guidelines on "utilization of Copper Slag".

68. Please furnish a copy of the guidelines on "utilization of Phosphogypsum".

69. Please give full details of the location of the land fill sites for storage of Hazardous Cake and Scrubber Cake as well as a Map showing their locations.

70. Please furnish area details and location map of ETP cake land fill.

71. As per the draft EIA report almost 40% of the forest area is proposed to be converted to industrial use. Why is forest land required for this project?

72. As per the Draft EIA section 3.9.6 - "Endemic Flora Species and Threatened Flora of Navinal Area - Important threatened plant species reported from the region are Dipcadierythraeum, Helichrysumcutchicum, Heliotropiumrariflorum, Pavoniaceratocarpa, Convolvulus stocksii, Commiphorawightii.

Gujarat State Biodiversity Board proposes to declare the area as Biodiversity heritage site and as the site is close to Mundra SEZ, it deserves more protection." Despite this, please explain why this site is being selected for this project?

73. Isn't it ironical that the project proponent proposes to build the proposed copper refinery with environment friendly technology while destroying 102.38 hectares of forests only for this particular project? The project proponent may please explain the logic behind doing this.

74. The area identified for securing the hazardous cake and scrubber cake has not been specified. Neither has the area identified for intermediate/emergency storage of copper slag and phosphogypsum. As mentioned in the Draft EIA, area of 30 acres and 105 acres respectively has been mentioned for the said activities. Please give the location for these. Please also give the land use category of this areas. Have the clearances for this land been obtained? Please share the Forest, CRZ and environment clearances of same.

75. What will be the composition of the hazardous cake? Kindly provide the detailed analysis report for the same with the concentration of each constituent.

76. As per the table 2.9, ETP Cake contains heavy metals. What will be the impact of its disposal on the ground water table? What are the mitigation measures for the same?

77. Also, the project proponent is proposing to do away with 253 acres of forest area and then develop 209 acres of greenbelt/green cover. Kindly explain this.

78. The draft EIA report states that "The proposed copper refinery project of AEL is a one of the important projects. AEL believes that the copper refinery project would add significant value to Indian economy. The project will not only help ensuring by becoming self-sufficient in terms of copper, phosphoric acid and sulphuric acid for India but will also drive macroeconomic growth." This growth driven approach of Adani has been detrimental to the environment of Mundra. Moreover, the project would be detrimental as it will lead to air pollution and will impact the health of people residing in the vicinity.

79. The draft EIA report mentions that "The proposed project would have few adverse impacts on the environment. However, with proper and judicious implementation of the mitigation and environment management measures, the impacts can be minimized and can be maintained well within the permissible limits specified by the regulatory authorities." The approach of Adani group and the indifference towards protection and conservation of environment has been reported time and again. The proposed project will not only lead to further reclamation of mangroves and mudflats, it will also be detrimental to the mangroves and the reserve forests in this area.

80. The draft EIA report mentions that the "Mangroves are situated about 4.5 km near Kotri creek area/ SSW direction, distributed along the networks of creek system." The Google earth imagery dated 19.11.2015 clearly shows that mangroves exist at mere 167 metres from the proposed project. Why has this not been mentioned in the Draft EIA report? Please explain. Moreover, the project also falls under the Mundra mangrove forests. This too has been not mentioned here. Please explain.

81. Please furnish with the details of the APSEZ. How much area has been acquired under the APSEZ at Mundra and how much was permitted under the clearances?

82. Please furnish with all the CRZ, EC, Forest and wildlife clearances of the APSEZ, Mundra.

83. Has the APSEZ undertaken any mangrove plantation? Kindly furnish details of each location wherein the mangrove plantation has been undertaken, along with the area under plantation so far, locations' latitude-longitude, site photographs prior to plantation and post plantation, agency implementing the plantation and the compliance so far. Also furnish with the pre and post plantation satellite images of all the locations.

84. Please mention the area details for mangroves that have been destroyed so far for the APSEZ. Please furnish a 1991 and current satellite data.

85. Please furnish with the details of much of mudflats, sand dunes, creek, salt pans have been reclaimed so far.

1690

86. Please furnish with the complaints received for the existing projects, specifically regarding to the destruction of mangroves and violation of the CRZ Notification in the APSEZ area.

87. What action has been taken and what is the status and / or compliance of the show cause notices issued by the MoEF and the GPCB regarding the violation of the environmental clearances and the pollution in the APSEZ? Kindly furnish with the details and relevant documents.

88. Has Cumulative impact analysis been conducted for the proposal on local livelihood? What are the findings of this study? Which all companies/projects have been undertaken under this study?

89. What is the carrying capacity of this area to undertake the proposed project with respect to already existing projects? Has any carrying capacity study been conducted? Details thereof may please be furnished.

90. Have there been any complaints/grievances from the fishing community? Kindly furnish with same.

91. Please furnish full details of the environmental clearance and the CRZ clearance, Environmental clearances, Forest clearances and the Wildlife clearances received for the existing APSEZ, Mundra

92. Please furnish details of the CRZ clearance, Environmental clearances, Forest clearances and the Wildlife clearances received for all the facilities existing in the APSEZ.

93. How much land was reclaimed for the existing APSEZ after 20th February 1991?

94. How has the APSEZ impacted the livelihoods of local fisher folk communities?

95. What will be the impact of the additional transport of raw materials and the finished products on the road, rail and the SEZ infrastructure? Please furnish with details of same.

96. Please furnish details of the transportation – road, railway limes, as well sea borne, impacts and mitigations studies conducted for the proposal.

97. The proposed area falls under Seismic Zone V. What are the mitigations measures to handle the situation due to earthquake?

98. Please furnish full details of the field visits conducted to undertake the ecological study including copies of the field notes. Please mention full details of the team members, their qualifications, and the number of man days spent on the ecological data collection.

99. Has the project proponent carried out Social impact assessment report? If yes please furnish if any.

100. Please furnish the latitude-longitude coordinates of the corners/boundaries of the entire APSEZ, Mundra.

101. What are the existing facilities for the parking, washing, repairs and maintenance of trucks and other heavy equipment?

102. What facilities are provided for the drivers and cleaners?

103. What will be the impact of the water/sewage discharged into the creeks and gulf of Kachchh on the overall salinity of the water? Has any such report been conducted?

104. Please furnish No Objection Certificates, Consents, from the State Pollution Control Board for the projects involving discharge of effluents, solid wastes, and sewage waste under Environmental Protection Act 1986.

105. Has the project proponent carried out mangrove conservation plan? If yes then furnish full details with photographs and maps showing the mangrove conservation areas, along with details of the cost of mangrove conservation.

106. What is the original plot level? What is the proposed plot level? How this will affect the land terrain? Has the proponent conducted any analysis on its impact on the environment? Please furnish details.

107. Please furnish the status of NABET accreditation for all EIA consultants hired with their experience in details as of the period the Draft EIA studies were conducted and published.

108. Have all the ToRs been followed for the preparation of the documents?

109. Has authenticated English translation of all material in Regional languages been provided, as stated in the EAC minutes dated 3th – 4th May 2016?

110. It has been reported that the coastal areas of Mundra harbour mangroves and have mudflats, sand dunes, creek network etc. ecologically important areas. Despite this, projects are being allowed to set-up in this area. Why does Adani group always have to either reclaim the mangroves and mudflats or use a site which they have already reclaimed without proper clearances? Please explain.

Thanking you,
Yours faithfully,

Debi Goenka

QUESTIONS FOR COPPER REFINERY PUBLIC HEARING

1. What kind of forest area is 102.38 hectares?
2. The site is located in the Seismic zone – V, what is the vulnerability of the site due to its seismic sensitivity
3. Figure 1.2 is illegible. Please provide a better of the same map
4. Please provide list of all the raw materials that are required for the purpose of proposed project
5. Please provide name of the sources, along with distance from the plant, from which raw material would be brought to the project site?
6. What are all the different air pollutants which will be added to the Ambient Air Quality (AAQ) because of the transportation of raw material to the project site?
7. What is the incremental concentration (in ug/m3) of each of air pollutants which will be added to the AAQ because of the transportation of the raw material to the project site?
8. Give us a fully list of all the industries within APSEZ area, along with their production capacities.
9. Give us a full list of the all the industries within 15 kilometers radius of APSEZ area, along with their production capacities.
10. Give us a full list of all Air Pollutants which are discharged by each and every industry within APSEZ area, along with the quantum of discharge per hour.
11. Give us a full list of all Air Pollutants which are discharged by each and every industry within 15 kilometers of the APSEZ area, along with the quantum of discharge per hour.
12. What is the maximum baseline concentration of PM2.5 within 15 kilometers radius of the project site?
13. What is the incremental PM2.5 pollution which will be added by the project?

ભીમાભાઈ મોવીયા (ભીંડોરણા)

પ્રમુખ મંત્રી
વન અધિકાર સમિતિ
મું. સીરાચા તા. મુંદરા - ૪૨૭

Mob:- 9426902862

14. What is the impact of water withdrawal from the Sea on marine ecology?

15. The EIA Report is completely silent on feasibility of Zero Liquid Discharge (ZLD). The typical style of Vimta Labs, which is the consultant for the EIA Report, is that they provide Water balance diagram in the EIA Reports and say that it is there is no waste water discharge from the plant. Is water balance diagram sufficient to evaluate the feasibility of ZLD? Therefore, give us scientific explanation about the feasibility of ZLD for the proposed project.

16. Have you obtained prior Forest Clearance for the project?

17. What is the total amount of Forest which has been diverted/cleared so far for the purposes of different project within APSEZ area?

18. What has been the environmental damage which has happened as result of the Forest diversion so far?

19. How much money does the company owe to different banks?

20. How much money does the company owed to public sector banks?

21. What is the source of money for this project?

22. Why should we have a project promoted by a company which is deeply into debt?

23. Have you paid the 2000 crores money imposed as fine/penalty for damaging the Environment?

24. If not, when will the company pay penalty imposted?

25. The environmental damage which has already been caused by your company is punishable under Section 15 of the Environmental (Protection) Act, 1986 and you are liable to be imprisoned for the same. Why has the criminal action not been taken against you?

ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ,
ગાંધીનગર-ગુજરાત.

વિષયઃ મેસર્સ અદાણી એન્ટરપ્રાઇઝીઝ લિમિટેડ, અદાણી સ્પેશીયલ ઇકોનોમીક ઝોનની ગામઃ નવીનાળ અને શીરાચામાં આવી રહેલ ગ્રીનફીલ્ડ કોપર રીફાઇનરી પ્રોજેકટના વાંધા બાબતઃ

1) <u>ટર્મસ ઓફ રેફરન્સ નું નોન કમ્પલાયંસ અને તાઃ ૩૧-૦૩-૨૦૧૧ વાળા ભારત સરકાર નાં સર્કયુલર નું ભંગ.(બિડાણ-૧)</u>

a) આ પ્રોજેકટ માટે તા:૨૧ જુન ૨૦૧૬ ના રોજ ટી.ઓ.આર.(ટર્મસ ઓફ રેફરંસ) ઇસ્યુ કરવામા આવ્યો, જેમા સેકસન ૫(આઇ) માં સ્પષ્ટ જણાવવામાં આવ્યું છે કે જે ૧૦૨ હેકટર ફોરેસ્ટ ની જમીનનો ઉપયોગ થવાનો છે તેના કલીયરંસની નકલ રજુ કરવી.
   i) અદાણી એન્ટરપ્રાઇઝ દ્વારા એન્વાયર્મેન્ટ કલીયરંસ લેવા માટે જે ફાર્મ ૧(MoEFCC એ પોતાની વેબસાઇટ ઉપર અપલોડ કર્યું છે.) સબમીટ કરવામા આવ્યો છે તેમા ફોરેસ્ટ કલીયરંસ અન્ડર ધી પ્રોસેસ છે એવું જણાવવામા આવ્યું છે.
   ii) ડ્રાફટ ઈ.આઇ.એ. રીપોર્ટ ના પાના નં. AI 14 પર (ટી.ઓ.આર. નું કમ્પલાયંસ નથી કરવામા આવ્યું) પણ ફોરસ્ટ કલીયરંસ પેન્ડીગ છે એવું જણાવવામા આવ્યું છે.

   આમ, ઉપરોકત મુદ્દાઓને લઇને સ્પષ્ટ થાય છે કે અદાણી એન્ટરપ્રાઇઝ દ્વારા ટી.ઓ.આર. નું કમ્પલાયંસ કરવામા નથી આવ્યું માટે જયાં સુધી તી.ઓ.આર. નું કંપલાયંસ ન થાય ત્યાં સુધી પર્યાવરણીય લોક સુનાવણી માન્ય ગણાય નહી.

b) MoEFCC ના તા:૩૧-૦૩-૨૦૧૧ ના સરકયુલર (બિડાણ-૪) માં જણાવ્યા પ્રમાણે કોઇપણ નવો પ્રોજેકટ, જેમાં વન વિભાગની જમીનનો ઉપયોગ થવાનો હોય તો પહેલા ફોરેસ્ટ કલીયરંસ લેવું ત્યાર બાદ એન્વાયર્મેન્ટલ કલીયરંસ ની પ્રોસેસ કરવી. અદાણી એન્ટરપ્રાઇઝના આ પ્રોજેકટ માટે ૧૦૨ હેકટર જમીન ફોરેસ્ટ ની છે અને ફોરેસ્ટ કલીયરંસ પેન્ડીગ છે. જે બિડાણ-૨ અને બિડાણ-૩ માં સાબિત થાય છે. આમ, ફોરેસ્ટ કલીયરંસ પહેલા એન્વાયર્મેન્ટ કલીયરંસ ની કોઇપણ પ્રોસેસ કરવી ગેરકાદેસર છે, અને પબ્લીક હેયરીંગ પણ ગેરકાયદેસર ગણાવી.

c) ઇ.આઇ.એ. નોટીફીકેશન, ૨૦૦૬ ની સેકશન 8(vi) મા જણાવ્યા મુજબ કોઇપણ માહિતી જાણી જોઇને ગેરમાર્ગે દોરવા માટે છુપાવવામા આવી હોય તો અરજી રદ કરવી. આમ, અદાણી એન્ટરપ્રાઇઝ દ્વારા ગેરમાર્ગે દોરવા જાણી જોઇને ફોરેસ્ટ કલીયરંસ ને લગતી ઉપરોકત માહિતી છુપાવવામા આવી છે. આથી તેની પર્યવરણ કલીયરંસ માટેની અરજી રદ થવી જ જોઇએ.

d) ઉપરોકત મુદા નં. ૧. બાબતે મારા દ્વારા તાઃ ૧૧/૦૪/૨૦૧૭ ના રોજ, (૧) કે. સી. મિસ્ત્રી, મેમ્બર સેક્રેટરી, ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ, ગાંધીનગર. અને (૨). અરવીદ અગ્રવાલ, ચેરમેન, ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ, ગાંધીનગર. (૩). રીજનલ ઓફીસર, ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ, ગાંધીધામ. (૪). એમ.એ. ગાંધી, કલેકટર, કચ્છ. (૫). એમ.કે.સીંગ, જોઇટ સેક્રેટરી, એમ.ઓ.ઇ.એફ.સી.સી. નવી દીલ્લી. વાળાઓને ઇમેઇલ દ્વારા ફરીયાદ(બિડાણ-૫) કરેલ હોવા છતાં એકશન લેવામા કેમ નથી આવ્યા? એન્વાયર્મેન્ટ કલીયરંસ ને લગતી પ્રોસેસ કેમ રોકવામા નથી આવી? પબ્લીક હીયરીંગ કયા આધારે કરવામા આવી રહી છે?

2) ફોર્મ-૧ ની અંદર છુપાવવામા આવેલ માહિતીઃ

a) બેઝીક ઇન્ફર્મેશનના મુદા નં. ૧૬ અને ૨૬ માં સૂચિત પ્રોજેકટની જમીન પર નવીનાળ ગૌચર જમીનની પી.આઇ.એલ. નં ૧૭ ઓફ ૨૦૧૧ ના જજમેન્ટ પર રીવ્યુ પીટીશન કરવામા આવી, જે હાલમા ચાલુ છે. આ માહિતી છુપાવવામા આવી છે.

b) ફાર્મ-૧ ના એન્વાયર્મન્ટલ સેન્સીટીવીટી ના મુદ્દા નં-૨ અને ૧૦ માં અદાણી દ્વારા દાણેશ્વરી નદી ની માહિતી છુપાવવામા આવી છે, જયારે આ નદી સૂચિત પ્રોજેકટ વિસ્તારની અંદરથી પસાર થઇ રહી છે. આમ, આ માહિતી છુપાવવામા આવી છે.

આમ, ઇ.આઇ.એ. નોટીફીકેશન, ૨૦૦૬ ની સેકશન 8(vi) મા જણાવ્યા મુજબ કોઇપણ માહિતી જાણી જોઇને ગેરમાર્ગે દોરવા માટે છુપાવવામા આવી હોય તો અરજી રદ કરવી. અદાણી ગ્રીનફીલ્ડ કોપર રીફાઇનરી દ્વારા જાણી જોઇને ફાર્મ-૧ માં ઉપરોકત માહિતી છુપાવવામા આવી છે, જેથી તેની અરજી રદ થવી જોઇએ.

3) ઇ.આઇ.એ. રીપોર્ટ ની ક્ષતિઓ:

a) ઇ.આઇ.એ. રીપોર્ટના પેજ નં. ૮૧-૪ પર મુદા નં. ૧૦ માં અદાણી દ્વારા જણાવવામા આન્યું છે કે ૧૦ કી.મી.રેડીયસની અંદર આરકયોલોજીકલી ઇમ્પોર્ટન્ટ સ્થળો નથી. જયારે સૂચિત પ્રોજેકટ વિસ્તાર થી ૧ કી.મી. ના અંતરે નવીનાળ રીઝર્વ ફોરેસ્ટની અંદર આરકયોલોજીકલ સ્થળ આવેલો છે. જેને લઇને એમ.એસ. યુનિવર્સિટીના આરકયોલોજીકલ ડીપાર્ટમેન્ટ દ્વારા આ વિસ્તારનો સર્વે કરેલ છે જેનો પ્રાથમિક રીપોર્ટ આ સાથે જોડેલ છે. આમ, આ માહિતી છુપાવવામા આવી છે.

4) સુનિતા નારાયણ કમીટીના રીપોર્ટનું વાયોલેશન.

a) સુનીતા નારાયણ કમીટી રીપોર્ટના પાના નં. ૬૯ પર જણાવવામાં આવ્યું છે કે ભદ્રેશ્વર ખાતે ફીશીંગ બંદર બનાવવું જેથી કરીને આસપાસના ગામોના લોકો ત્યાં માછીમારી કરી શકે. પરંતુ અત્યાર સુધી આવું કંઇપણ કરવામા નથી આવ્યું.

b) સુનીતા નારાયણ કમીટી રીપોર્ટના પાના નં. ૬૯ પર જણાવવામાં આવ્યું છે ક માછીમારો કીનારા પર આવી જઇ શકે તે માટે આવવા જવાની વ્યવસ્થા ઊભી કરવી. જયારે અદાણી દ્વારા આવું કંઇપણ કરવામા આવ્યું નથી.

c) સુનીતા નારાયણ કમીટી રીપોર્ટના પાના નં. ૭૫ પર જણાવવામાં આવ્યું છે કે સામુદાયીક ગૌચર જમીનો સ્વેચ્છાએ પરત આપવી જોઇએ જેથી લોકો પોતાના પશુઓ ચરાવી શકે. પરંતુ આવું કંઇપણ કરવામા આવ્યું નથી.

d) પાના નં. ૭૫ પર જણાવવામા આવ્યું છે કે અત્યારના જેટલા પણ પ્રોજેકટો છે તેનું કયુમ્યુલીટીવ ઇમ્પેકટ અસેસમેંટ(સંકલીત અસરોનો અભ્યાસ) થવું જોઇએ અને તેની પરથી પર્યાવરણીય અસરોના નિરાકરણ માટેના પગલા ભરવા જોઇએ. આમ, અત્યાર સૂધી અભ્યાસ કરવામા આવ્યો નથી જેથી નવા પ્રોજેકટો ને મંજુરી મળવી જોઇએ નહી.

e) કમીટીએ રેકોમેન્ડેશન નં. ૭.૨.૨ માં જણાવ્યું છે કે નોર્થ પોર્ટ ની પર્યાવરણીય મંજુરી રદ થવી જોઇએ, કારણ કે તે વિસ્તારમાં બોચા આઇલેન્ડ આવેલો છે અને ત્યાં મોટા પ્રમાણમાં ચેરીયાઓને નુકશાન પહોંચાડાયો છે. તે છતાં મંજુરી રદ કરવામા આવી નથી.

f) સુનીતા નારાયણ કકમીટીની ભલામણ મુજબ HTL અને LTL નું મેપીંગ કરી પબ્લીક ડોમેન માં મૂકવું, જે આજ દીવસ સુધી મૂકવામા નથી આવ્યું.

5) વન વિભાગની જમીનનો પ્રશ્ન/

a) અદાણી દ્વારા તા: ૧૯ જૂલાઇ ૨૦૦૪ માં મુંદરા તાલુકાના આઠ ગામોની કુલ્લ ૧૫૭૬.૮૧ હેકટર રીઝર્વ ફોરેસ્ટ ની જમીનની માંગણી કરવામા આવેલ છે, જેનું ફોરેસ્ટ કલીયરંસ અન્ડર પ્રોસેસ છે. આ પ્રોજેકટ માટે જે જમીન નો ઉપયોગ થવાનો છે તે જમીન ૧૫૭૬.૮૧ વાળી માંગણી માની ૧૦૨.૩૮ હેકટર શીરાચા દાણદેરી રખાલ (રીઝર્વ ફોરેસ્ટ) ની છે.

b) વન અધિકાર અધિનિયમ ૨૦૦૬ પ્રમાણે કોઇપણ વન ની જમીન પર પહેલો અધિકાર તેનો ઉપયોગ કરતા ગ્રામજનોનો છે. અને ગ્રામસભાની મંજુરી વગર ઔધોગીક હેતુ કે અન્ય કોઇપણ હેતુ માટે ફાળવી શકાય નહી.

c) વન અધિકાર અધિનિયમ અંતર્ગત કોઇપણ કોમ્યુનિટી વન ની જમીનનો ત્રણ પેઢીથી ઉપયોગ કરતા હોય અથવા આજીવિકા મેળવતા હોય તો તેને હક મળી શકે છે.

d) આ ૧૫૭૬.૮૧ હેકટર ફોરેસ્ટની જમીન નો ઉપયોગ તેની આજુ-બાજુના ગામલોકો પોતાની આજીવિકા ચલાવવા કરે છે તો આ જમીન વન અધિકાર અધિનિયમ અંતર્ગત ઔદ્યોગિક હેતુ માટે ફાળવી શકાય નહી.

e) શીરાચા ગ્રામ પંચાયતે સૂચિત પ્રોજેકટ માટે ઉપયોગ થનાર જંગલની જમીન પર તા:૨૪/૦૪/૨૦૧૭ ના રોજ વન અધિકાર અધિનિયમ હેઠળ કોમ્યુનિટી રાઇટસ સેટલ કરવા પ્રાંત સ્તરીય વન અધિકાર સમિતી પાસે પોતાનો દાવો રજુ કર્યો છે.

f) ૧૫૭૬.૮૧ હેકટર જમીનની માંગણી માં નવીનાળ ગામની પણ ૮૯ હેકટર જમીન આવે છે અને તેના પર નવીનાળ ગ્રામસભા દ્વારા સામુહિક દાવો કરવામા આવ્યો છે.

g) વન અધિકાર અધિનિયમ પ્રમાણે આ જંગલ ની જમીન પર પ્રથમ અધિકાર ગ્રામજનો નો છે, જેથી તેનું ફોરેસ્ટ કલીયરંસ ન મળી શકે અને પ્રોજેકટ માટે ઉપયોગ ન થઇ શકે.

h) આ વિસ્તારમાં આ છેલ્લું રીઝર્વ ફોરેસ્ટ છે. જો તેને ઔધોગિક હેતુ માટે ફાળવી દેવામાં આવશે તો જંગલ વગરનો વિસ્તાર બની જશે અને ઔધોગિક વિસ્તારમાં જંગલો વધારે હોવા જરૂરી છે.

6) અદાણી પોર્ટ એન્ડ સ્પેશીયલ ઇકોનોમીક ઝોન ના એન્વાયર્મેંટ કલીયરંસ નું નોન કંપ્લાયંસ:

a) સ્પેશીફીક કંડીશન (૨) પ્રમાણે વિસ્તારમાં આવતી ક્રીકો, નદીઓ અને ચેરીયાના વિસ્તારનું સંરક્ષણ કરવું. જયારે, અદાણી દ્વારા આ વિસ્તારની ક્રીકો, નદીઓ અને ચેરીયાના વિસ્તારનું નિકંદન કાઢેલ છે. જે માં જોડેલ અલગ અલગ વર્ષનાં સેટેલાઇટ ફોટોગ્રાફસમાં જોઇ શકાય છે. આમ, આ કંડીશનનું વાયોલેશન કરવામા આવેલ છે.

b) સ્પેશીફીક કંડીશન (૪) માં જણાવ્યા પ્રમાણે દરેક ક્રીકની સ્થિતિ સેટેલાઇટ ઇમેજ-૨૦૦૫ ની સરખામણીએ લાવવી. પરંતુ અદાણી પોર્ટ એન્ડ એસ.ઇ.ઝેડ. દ્વારા આ કંડીશનનું પાલન કરવામાં આવેલ નથી.

c) સ્પેશીફીક કંડીશન નં. (૫) માં જણાવવામા આવ્યું છે કે વર્ષમાં એક વખત તાજેતરનો સેટેલાઇટ નકશો રજુ કરવો જેથી તેની સરખામણી વર્ષ-૨૦૦૫ ના સેટેલાઇટ નકશા સાથે થઇ અને ખાત્રી કરી શકાય કે ક્રીકો, નદીઓ, ચેરીયાઓ અને ક્રીકોના મુખમાં કોઇ ફેરફાર થયો છે કે નહી. એ.પી.એસ.ઇ.ઝેડ. દ્વારા અત્યાર સુધી આવો કોઇ નકશો રજુ કરવામા આવ્યો નથી. આમ, આ કંડીશનનું કંપલાયંસ કરવામા નથી આવ્યું.

d) સ્પેશીફીક કંડીશન (૬) માં જણાવ્યા મુજબ સુનિતા નારાયણ કમીટી દ્વારા રજુ કરવામા આવેલ રીપોર્ટને ધ્યાનમાં રાખીને પર્યાવરણ અને વન મંત્રાલય દ્વારા લાગુ કરવામા આવેલ આદેશનું એપી.એસ.ઇ.ઝેડ. એ પાલન કરવું. જયારે એ.પી.એસ.ઇ.ઝેડ. દ્વારા તેનું પાલન કરવામા નથી આવી રહ્યું.

e) સ્પેશીફીક કંડીશન (૧૨) અને (૧૩) માં જણાવ્યા પ્રમાણે NCSCM/NIOT એ પર્યાવરણ અને વન મંત્રાલય દ્વારા મંજુર કરાયેલ એકશન પ્લાનના અમલીકરણ માટેનું નિયંત્રણ અથવા ચકાસણી કરશે. છ માસિક મોનીટરીંગ રીપોર્ટ સાથે એકસન પ્લાનના પાલનનો રીપોર્ટ રજુ કરવાનો રહેશે. આ કંડીશનનું કંપલાયંસ અત્યાર સુધી કરવામા આવ્યું નથી.

f) સ્પેશીફીક કંડીશન (૧૫) માં જણાવ્યા પ્રમાણે નદીના માર્ગમાં કોઇપણ પ્રકારનો ફેરફાર કરવો નહી. જયારે, એ.પી.એસ.ઇ.ઝેડ દ્વારા.....

i) કાંડાગરા વાળી નદી જે અદાણી પાવર વચ્ચેથી નીકળે છે તેનો રૂટ બદલી નાખવામા આવેલ છે.

ii) નવીનાળ અને શીરાચા વચ્ચે આવેલ કમંડવાળા છેલાનો રૂટ બદલવામાં આવેલ છે.

iii) નાગમતી નદીનો એક મૂખ બંધ કરી નાખેલ છે.

iv) ધ્રબ વાળી નદી પર ઓ.સી.સી.એલ. કંપની ઊભી કરી દેવામા આવેલ છે.

v) કેવડી નદી ઉપર અદાણી હોસ્પીટલનનું બાંધકામ કરી નાાખવામા આવેલ છે. આમ, આ શરતનું ભંગ કરવામા આવેલ છે.

g) સ્પેશીફીક કંડીશન (૧૮) માં જણાવ્યા પ્રમાણે ચેરીયા વિસ્તારથી ૫૦ મીટર સુધી કોઇપણ ડેવલપમેન્ટ કરવું નહી. જયારે પ્રોજેકટ પ્રપોનન્ટ દ્વારા ઘણી જગ્યાએ બાંધકામ કરી દેવામા આવ્યું છે. જેમ કે, અદાણી હાઉસની બિલ્ડીગ ઊભી કરી દેવામા આવી છે. આમ, આ કન્ડીશનનું ભંગ કરવામાં આવ્યું છે.

7) ગુજરાત ઇકોલોજી કમીશન નો રીપોર્ટ:

a) કોલ હેન્ડલીગના કારણે ચેરીયા અને તેની ઇકોસીસ્ટમ પર થઇ રહેલ અસર ની ગુજરાત ઇકોલોજી કમીશન દ્વારા સ્ટડી કરી એક રીપોર્ટ બનાવવામાં આવ્યો છે. તેમાંથી મુંદરા પોર્ટ પણ આ સ્ટડી નો ભાગ હતો.

b) આ રીપોર્ટ મુજબ કોલસાની ડસ્ટના કારણે ચેરીયાની વૃધ્ધી પર અસર થઇ છે.

c) આ રીપોર્ટ એમ કહે છે કે ૨૦૧૦/૧૧ માં BOD(બાયોલોજીકલ ઓક્સિજન ડીમાંડ) ૯.૫૨ હતા જે ૨૦૧૨/૧૩ માં વધીને ૨૭ સુધી પહોંચ્યા છે, જે અભ્યાસ વિસ્તારના પાર્ટસ થી સૌથી વધારે અહીયા વધ્યા છે.

d) COD (કેમીકલ ઓકસીજન ડીમાન્ડ) પણ ૨૦૧૦/૧૧ માં ૩૮ હતો જે ૨૦૧૨/૧૩ માં વધીને ૯૨.૬૫પહોંચ્યું છે.

e) DO (ડીસોલ્વેડ ઓકસીજન) ૪.૮ થી વધીને ૪.૯૨ પહોંચ્યું છે, જે CPCB ની પરમીશેબલ લાઇન થી ઉંચું છે.

f) SO (સસ્પેન્ડેડ સોલીડ, પાણીમાં વધતું ધુંધળાપણું) ૫૬ થી વધીને ૧૬૨ પર પહોંચ્યું છે, જે CPCB ની પરમીશેબલ લાઇન થી ઉંચું ગયું છે.

g) નાઇટ્રેટ ૨૦૧૦/૧૧ માં ૦.૩૧૩ હતું જે ૨૦૧૨/૧૩ માં વધીને ૧.૧૫૪ પર પહોંચ્યું છે.

8) અદાણી એન્ટરપ્રાઇઝ લી.ના કોપર રીફાઇનરી પ્રોજેકટ માટે નવીનાળ ગામની ગૌચર જમીન હતી તેનો ઉપયોગ થવાનો છે. આ જમીનની મેટર કોર્ટમાં ચાલી રહી છે. તેનો હજી કોઇ પણ પાર્ટીની ફેવરમાં નિકાલ કરવામા નથી આવ્યો.

9) લોકલ લોકોની રોજગારી માટે આટલા બધા ઉદ્યોગો હોવા છતાં પણ કંઇ કરવામા નથી આવ્યું. જેમ કે અદાણી પાવર પ્લાન્ટ માટે આજુબાજુના વિસ્તારની ૪૦૦ હેકટર જેટલી જમીન આપવામા આવી અને માછીમારો, ખેડુતો અને પશુપાલકોને બેરોજગાર બનનાવી તેના બદલામા ૭૦૦૦ લેબર માંથી માત્ર ૫૦૦ લોકલ અને ૧૫૦૦ એમ્પ્લોયર માંથી માત્ર ૧૫ લોકલ છે. તો આ પ્રોજેકટ થી બેરોજગારી અને પ્રદુષણ સિવાય કંઇ નહી મળે.

10) આ વિસ્તાર દરીયાકીનારાનો છે. માટે સી.આર.ઝેડ. કલીયરંસ લેવું જરૂરી છે. કારણ કે વાવાઝોડું તેમજ ભુકંપ કે સુનામી વખતે બચાવ માટેનો એકશન પ્લાન બનાવી શકાય.

11) કંપની દ્વારા ૩૨૮૦૦ કે.એલ.ડી. પાણીનો ઉપયોગ કરવામાં આવશે. અને તેના માટે ડીસેલીનેશન પ્લાનનો ઉપયોગ કરવામા આવશે. તેના ડીસ્ચાર્જના કારણે દરીયાઇ જીવ સૃષ્ટી ઉપર ખરાબ અસર થશે. આ ડીસેલીનેશન પ્લાન કંપની સાથે સંકળાયેલ છે પરંતુ તેની અસરોનો અભ્યાસ કરવામા આવેલ નથી.

12) આ વિસ્તારમાં બે પાવર પ્રોજેકટ અને એશિયાનું મોટું કોલ હેન્ડલીગ પોર્ટ આવેલું છે પરંતુ ઇ.આઇ.એ. રીપોર્ટમાં બતાવવામાં નથી આવી.

13) અદાણીના બીજા પ્રોજેકટોના એન્વાર્યમેન્ટ કલીયરંસના કંપલાયંસ કરવામાં આવેલ નથી, તો નવા પ્રોજેકટ ને મંજુરી આપી અને આજુ-બાજુના વિસ્તારના લોકોને નુકશાન પહોચાડી ન શકાય.

14) સૂચિત પ્રોજેકટની ગૌચર જમીન પર અમારા ગામના પશુઓ ચરીયાણ કરતા હતા તે છીનવી આજીવિકા ખતમ કરી નાખવામા આવેલ છે. હવે વધેલી આ ફોરેસ્ટની જમીન પણ આપીને પ્રોજેકટ લગાવવામાં આવશે તો ચરીયાણ રહેશે જ નહી.

15) કોપર રીફાઇનરીના કારણે સલ્ફયુરીક એસીડ જેવા હઇઝારદીઅસ કેમીકલ નીકળવાના છે જેના કારણે આ વિસ્તારમાં પ્રદુષણ વધી જશે અને એસીડ વરસાદ થવાની સંભાવના વધી જશે. જેથી આ પ્રોજેકટ રદ થવો જોઇએ.

16) નદી બંધ કરવાના કારણે આસપાસના વિસ્તારની જમીનનું ધોવાણ થશે અને પૂર જેવી સ્થીતીમાં આજુબાજુના ગામડાઓ ને જોખમ સર્જાસે.

17) જુનારસ્તાઓ બંધ થશે જેમાનો એક નવીનાળ થી કોટડી ક્રીકનો માછીમારોનો રસ્તો બંધ થશે.

18) આ જંગલની અંદર વન્ય પ્રાણીઓ રહે છે તો તેઓના રહેઠાણ નાશ પામશે જેના રેસ્ટોરેશન ને લઇ શુ?

ગોપાલ ગોવિંદભાઈ મોરજરિયા

આપનો વિશ્વાસુ

C-Q-34

(TRANSLATED)

Chaunan Pravinsinh Bhurubha,

Village:Siraya,

Tal: Mundra Kutch

To,

The Member Secretary,

Gujarat Pollution Control Board,

Gandhinagar - Gujarat

Subject: Protest Objection for Greenfield Copper Refinery Project coming in M/s. Adani Enterprises Limited, Adani Special Economic Zone in village: Shiracha and Navinal.

1. **Non compliance of Terms of Reference and Breach of Circular dt. 31-03-2011 of the Government of India (Encl.: 1)**

   a) A T.O.R. (Terms of Reference) was issued for this project of dt. 21st June, 2016, in which it was clearly stated in Section 5(I) that clearance for forest land of 102 hectare should be submitted.

      i) It is declared in Form No.1 (MoEFCC uploaded by them on their website) to obtain Environment Clearance by Adani Enterprise that forest clearance is under the process.

      ii) It is declared on draft E.I.A. report on page no. AI 14 that (T.O.R. is not compliance by Adani) but forest clearance is pending.

      Thus, considering the abovementioned issued it is clear that T.O.R. is not compliance by Adani Enterprise. So, Environmental Public Hearing is not valid until the T.O.R. compliance is not made.

   b) According to Circular dt. 31-03-2011 of MoEFCC (Encl: 4) that forest clearance should be obtained first for any new project, in which the land of forest department is to be utilized and the environmental clearance process should be made thereafter. The land of 102 Hectare is of Forest in this project of Adani Enterprise and Forest Clearance is pending. It is proved by Encl: 2 and Encl:3. Thus, any environment clearance process made before forest clearance is illegal and Public Hearing may also be treated illegal.

   c) As per Section 8(iv) of E.I.A. Notification, 2006 if any information is concealed deliberately, the application should be cancelled. Thus, the abovementioned

information pertaining to forest clearance is concealed by Adani Enterprise deliberately to misguide. Hence, their application for environment clearance must be cancelled.

d) Why any action is not taken in spite of the complaint (encl.:5) regarding abovementioned point no. 1 is made by me by e-mail on 11/04/2017 to (1) K. C. Mistry, Member Secretary, Gujarat Pollution Control Board, Gandhinagar and (2) Arvind Agrawal, Chairman, Gujarat Pollution Control Board, Gandhinagar, (3) Regional Officer, Gujarat Pollution Control Board, Gandhidham, (4) M. A. Gandhi, Collector, Kutch, (5) M. K. Sing, Joint Secretary, MOEFCC., New Delhi?. Why the process pertaining to Environment Clearance is not stopped? On what basis Public Hearing is arranged?

2. **Information concealed in Form-1**

a) Review Petition is filed on judgment of P.I.L. No.17 of 2011 of the grazing land of Navinal on the land proposed in point no. 16 and 26 of basic information. It is concealed that it is under proceeding.

b) The information of Daneshwari River is concealed by Adani in point nos. 2 and 10. But, this river passes through the proposed project. Thus, the information is concealed.

Thus, as per Section 8(iv) of E.I.A. Notification, 2006 if any information is concealed deliberately, the application should be cancelled. The abovementioned information is deliberately concealed in Form No.1 by Adani Greenfield Copper refinery. Hence, their application deserves to be cancelled.

3. **Deficiencies in E.I.A. report**

a) It is declared by Adani in point no. 10 on page Nos. 1-4 of E.I.A. report that there is no archeologically important place within the radius of 10 km. But, an archeological place is situated in Navinal Reserve Forest, about 1 km. from the proposed project area. Accordingly, survey of this area is made by archeological department of M. S. University. The primary report is attached herewith. Thus, this information is concealed.

4. **Violation of Sunita Narayan Committee**

a) It is mentioned on page no. 69 of Sunita Narayan Committee Report that fishing port should be made at Bhadreshwar so that people of surrounding villages may make fishing activity there. But nothing such is made there.

b) It is mentioned on page no. 69 of Sunita Narayan Committee Report that arrangement of coming and going should be made so that fishermen may move on coast. But nothing such is made there by Adani .

c) It is mentioned on page no. 75 of Sunita Narayan Committee Report that collective grazing land should be given back voluntarily so that people may graze their animals. But nothing such is made there.

d) It is mentioned on page no. 75 of Sunita Narayan Committee Report that studied till now. So permission for new project should not be granted.

e) The committee has mentioned in recommendation no. 7.2.2 that environment permission for north port should be cancelled, because Bocha Island is situated there and mangrove is caused heavy damage there. In spite of that permission is not withdrawn.

f) As per the Sunita Narayan Committee report maping of HTL AND LTL should be made and kept in public domain, which is not placed till date.

5. **Issue of land of forest department**

a) A demand of land of reserve forest of 8 villages aggregating to 1576.81 hectare is made by Adani on dt. 19th July, 2004. Its forest clearance is under process. Out of 1576.81 hectare of demanded land to be used for project, 102.38 Hectare of land is of Shiracha Danderi Rakhal (reserve forest).

b) According to Forest Privilege Act, 2006 the villagers making use of the land have prior right on it and it cannot be allotted for industrial or other use without permission of the village meeting.

c) According to Forest Privilege Act, any community in use of the land for last three generations or earning livelihood from it may have right on it.

d) The villagers of surrounding are making use of this forest land of 1576.81 Hectare. So this land cannot be allotted for industrial purpose according to Forest Privilege Act

e) Shiracha Gram Panchayat has put it claim before Prant Stariya Van Adhikar Samiti to settle its community rights on the forest land to be used for proposed project.

f) Out of the 1576.81 hectare of land under demand, 89 hectare of land is of Navinal village and Navinal Village Committee has put collective claim on it.

g) According to Forest Privilege Act, the villagers have prior right on it. So, its forest clearance cannot be availed and it cannot be used for the project.

h) It is the last reserve forest in the area. If it is allotted for industrial purpose, the area will remain without forest and more forest are essential for industrial area.

6. **Noncompliance of Environment Clearance of Adani Port and Special Economic Zone**

a) As per condition (2) conservation of creeks, rivers mangroves coming within the area is to be made. It can be seen from the photographs of different years taken from satellite annexed herewith that the creeks, rivers mangroves coming within the area are exterminated by Adani. Thus, the condition is violated.

b) As per condition () condition of every creek should be kept in comparison with the satellite image, 2005.But, the condition is not followed by the Adani Port and S.E.Z.

c) It is directed in Specific Condition (5) that a recent satellite map should be submitted once a year so that it can be compared with the Satellite map of year 2005 and confirmed whether there is any change in creeks, rivers, mangrove and mouth of creek. No such map is submitted by A.P.S.E.Z. till date. Thus, condition compliance is not followed.

d) As per condition (6) A.P.S.E.Z. must observe order passed by the Ministry of Environment and Forest considering the report submitted by Sunita Narayan Committee. But, it is not followed by A.P.S.E.Z.

e) As directed in condition (12) and (13) NCSCM/NIOT will control and verify the implementation as per action plan approved by Ministry of Environment and Forest. Execution Report of Action Plan will be required to be submitted with six monthly monitoring reports. This condition is not complied till date.

f) As per condition (15) no change should be made in flow of river. But,

   a) The route of river of Kandagara passing through Adani Power is changed.

   b) The Kamandwala flow between Navinal and Shiracha is changed.

   c) The mouth of Nagmati River is closed.

   d) O.C.C.L. Company is established on river of Dhrab.

   e) Construction of Adani Hospital is made on Kevdi River. Thus, breach of this condition is made.

g) As per condition (18) no development should be made up to 50 meter from mangrove area. But, many constructions are erected by project proponent such as construction of Adani House building. Thus, breach of this condition is made.

7. Report of Gujarat Ecology Commission.

   a) A report is prepared by Gujarat Ecology Commission upon study of effect on mangrove and its ecology due to coal handling. Mundra Port is a part of it.
   b) According to the report growth of mangrove is affected by coal dust.
   c) As per the report BOD (Biological Oxygen Demand) was 9.52 in 2010/11 which has reached to 27 in 2012/13 which is the highest in the areas under survey.

d) COD (Chemical Oxygen Demand) was also 38 in 2010/11 which reached to 92.65 in 012-13.
e) DO (Dissolved Oxygen) has reached to 4.92 from 4.8. which is CPCB is higher than permissible line.
f) SO (Suspended Solid, blirness in water) has reached to 162 from 56 which is CPCB is higher than permissible line.
g) Nitrate 0.313 in 2010-11 has reached to 1.154 in 2012-13.

8. The grazing land of Navinal village will be used for Copper Refinery Project of Adani Enterprise Ltd. The matter of land is sub-juiced. No judgment is passed in favor of any party.
9. In spite of having so many industries, nothing is made for the employment to local people. I.e. 400 Hectare of land of surrounding villages is given to Adani Power and fishermen, farmers, cattle breeders are left unemployed. In reward thereof only 500 out of 7000 laborers and 15 out of 1500 employees are local. Consequently, nothing but unemployment and pollution will be available from this project.
10. This is a coastal area. So, C.R.Z. clearance is required so as to make action plan for salvage against earthquake or tsunami.
11. 32800 K.L.D. will be utilized by the company and desalination plant will be used for it, which will affect the sea-life adversely. This desalination is connected with the company. But no study of its effect is made.
12. There are two power projects and biggest coal handling port in Asia is situated here but it is not mentioned in E.I.A. report.
13. Environment Clearance Compliance of other projects of Adani is not made. So, people in surrounding should not be caused damage by giving permission to new project.
14. The livestock of our villages were grazing on the grazing land of the proposed project. The livelihood is ruined by snatching it. Now there will be no grazing land by giving remaining forest land to new project.
15. The hazardous chemical such as sulphuric acid will come out due to copper refinery. The possibility of pollution and acid rain will increase. So, this project should be cancelled.
16. The land in surrounding will be washed out due to closure of the river and danger of flood will increase in surrounding villages.
17. Old roads will be closed. One of which from Navinal to Kotdi creek will be closed.
18. Wild animals are living in this area, what about their restoration?

Yours faithfully,
Chaunan Pravinsinh Bhurubha.

પ્રતિ શ્રી
જિલ્લા કલેક્ટર સાહેબ,
કચ્છ.

૧૧.૨૯/૪/૧૯

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટથી સ્થાનિક લોકોને થનાર નુકશાન બાબતે લેખિત વાંધા/વિરોધ મૂકવા બાબત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે કચ્છ જિલ્લામાં નવીનાળ અને શિરાચા ગામમાં આવનાર અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના પ્રોજેકટને લીધે સ્થાનિક લોકો, વન પર નિર્ભર સમુદાય, માછીમારો અને દરિયાઈ પટ્ટીના પર્યાવરણ અને જીવસૃષ્ટિ સામે ગંભીર ખતરો છે. જે બાબતને ડ્રાફ્ટ ઇઆઇએ રિપોર્ટમાં ઘણી ખામીઓ અને ભૂલો તેમજ ખોટી માહિતીઓ છે. આ અભ્યાસ રિપોર્ટમાં દેખાય છે કે આ દરિયાકિનારે આવો મોટો ઉધોગ સ્થાપવાથી માનવ સ્વાસ્થ્ય, પશુ-પંખીઓ અને સમગ્ર જીવસૃષ્ટિને ગંભીર અને કાયમી નુકશાન થાય એમ છે. તેની ભરપાઈ થઈ શકે એમ નથી. સ્થાનિક ગામોમાં રહેતા લોકોની આવનારી પેઢી લુલી, લંગડી અને નપુંસક પેદા થાય એવો ભયજનક પ્રદૂષણ ફેલાવતો આ પ્રોજેકટ છે. તેથી આ સ્થળે અમે આ પ્રોજેકટનો વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજકેટનું સ્થળ યોગ્ય ન હોવાથી તેને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) દ્વારા પ્રોજેકટની જગ્યા માટે પસંદગી માટે આરક્ષિત વનની જગ્યા પસંદ કરવા સામે મારો વિરોધ છે. જમીન માટેના વિકલ્પોજ ખોટા પસંદ કરવામાં આવેલ છે. આ પ્રોજેકટ દરિયાકિનારાને મૂકી ને સ્થાપવો જોઇયે. કાચામાલને પરિવહન માટે ક્લોઝ પાઇપલાઇન કન્વેયર સિસ્ટમ હયાત હોય આ પ્રોજેકટને દરિયા કિનારાથી દૂર વધુ અંદર સ્થાપી શકાય એમ હોવા છતાં આ પ્રોજેકટને દરિયાનજીક નાખવાનું કંપનીના સંચાલકો એ નક્કી કરેલ છે જે અયોગ્ય છે. ઉધોગ માટે પાણી અને વીજળી પણ સરળતાથી ત્યાં આપી શકાય અને પાણીનો નિકાલ શૂન્ય હોય કોઈ પાણી બહાર ફેકવાની સમસ્યાનો પણ સવાલ નથી. દરિયાકાંઠે આવો ઉધ્યોગ સ્થાપવોજ જોખમી છે અને દરિયાઈ પર્યાવરણને નુકશાન કરી દરિયાઈ જમીનને રેતી પૂરી સમથળ કરી તેના પર આવો પ્રોજેકટ સ્થાપવો નુકશાનકારક છે. આથી અમે વન અધિકાર કાયદા 2006 હેઠળ ગામના સ્થાનિક લોકો કે જે વન પર નિર્ભર છે તેમની આજીવિકા જોખમમાં છે તેઓ આ પ્રોજકેટનો વિરોધ કરીએ છીએ. વનની જમીનો ઓછી થતી જાય છે તેથી અમારા ગામનું દંડેરી અને શિરાચાનું જંગલ કંપનીએ ને અન્ય ઓધોગિક હેતુઓ માટે મળવું જોઇયે નહી. ગામના

1704

ઢોર અને ગાયો આ જંગલમાં ચરે છે. તેથી અમો આ વનનો કંપનીના હેતૂ માટે ઉપયોગ સામે વિરોધ બતાવીએ છીએ.

2. <u>મેંગરૂવના ઝાડો કાપી નાખી, ખાડીઓ પૂરી તેમને કાયમી નુકશાન પહોંચાડવાનું કામ અદાણી કંપનીએ કરેલ છે. નવીનાળના દરિયા કિનારે જંગલમાં મોજૂદ રેતીના ઢુવાઓ તોડી નાખી તે રેતીનો ઉપયોગ પોર્ટ બનાવવા કરેલ છે જને લીધે સમગ્ર દરિયાઈ વિસ્તારની ભૌગોલિક પરિસ્થિતી બદલાઈ ગયેલ છે અને તે માટે અમારો કેસ માનનીય સુપ્રીમ કોર્ટમાં આજે ચાલે છે.</u> આ એપીએસઇઝેડ બનાવતી વખતે થયેલ આ વિસ્તારના પર્યાવરણ, દરિયાકિનારાને થયેલ ભારે નુકશાન, લોકોની આજીવિકાને અદાણી કંપનીએ પહોંચાડેલ હાનિ બદલ અમને આ કંપની અને તેના આવનાર પ્રોજેકટ સામે વિરોધ છે. આ કંપની પર્યાવરણને નુકશાન પહોંચાડીને અને જીવસૃષ્ટિને નુકશાન પહોંચાડી ઉધોગો સ્થાપે છે એ વાત કોર્ટ અને સરકારમાં પણ સાબિત છે. તેથી આ વિવાદિત કંપની અને તેના ખરડાયેલા ભૂતકાળને ધ્યાને રાખી આ પ્રોજેકટ નામંજૂર કરવામાં આવે.
3. આ પ્રોજેકટ કયા કયા સર્વે નંબરમાં કરવામાં આવનાર છે તમામ સર્વે નંબરની વિગતો રિપોર્ટ માં બતાવેલ નથી. કેમ? જેતે ગામ સહિતની વિસ્તાર દર્શાવતી તમામ વિગતો અમને આપશો.
4. પ્રોજેકટ માટે APSEZની કેટલી જમીન AEL ને આપવામાં આવેલ છે. તે તમામ પ્લોટના નંબર અને તેનું ક્ષેત્રફળ જણાવો અને તેનો પ્રત્યક્ષ કબ્જો કોની પાસે છે તે પ્લોટ દીઠ કાગળ પર લેખિતમાં બતાવશો.
5. હાલમાં APSEZ માં જેટલા પ્લોટ હોય તે તમામ પ્લોટનો વિસ્તાર બતાવતી માહિતી આપશો. કેટલા પ્લોટ વેચાઈ ગયા અને કેટલા પ્લોટ વેચાણ વગરના છે તેની પણ માહિતી આપશો.
6. આ પ્રોજેકટ જગ્યા કે જે APSEZની માલિકીની છે તેના પર પર આજની તારીખે SEZ નોટિફાઇ છે કે નહીં? તે નોટિફિકેશનની નકલ આપશો.
7. આ પ્રોજેકટ જગ્યા કે જે APSEZ AELને આપશે તે એસઇઝેડમાં ગણાશે કે નહીં ? જરૂરી માહિતી સરકારી રેકર્ડ અને સ્થિતિ પ્રમાણે આપશો.
8. આ જગ્યા કે જ્યાં પ્રોજેકટ કરવામાં આવશે તે જગ્યાની APSEZની માલિકી દર્શાવતા સરકારી દસ્તાવેજ આપશો.
9. MPSEZ દ્વારા જે તે સમયે શિરાયા, દંદેરી ફોરેસ્ટની ગેર કાયદેસર રીતે પચાવી પાડેલી જમીનની વિગતો આપશો. જે જમીન ભારત સરકારે ડીનોટિફાય કરેલ ન હોય પણ કંપનીએ કબ્જો કરેલ હોય તેવી જમીનની વિગતો આપશો.
10. APSEZ દ્વારા SEZ ડીનોટિફાય કરવામાટે (AEL ના પ્રોજેકટ વિસ્તાર માટે) ભારત સરકારની કોઇ મંજૂરી માંગવામાં આવેલ હોયતો દરખાસ્તની તારીખ આપશો.
11. AEL નો કોપર પ્લાન્ટ માટે શિરાયા, દંદેરી જંગલની જમીન લઈ તેના પર પ્રોજેકટ કરવાનું પ્રયોજન અને તર્ક આપશો.
12. MPSEZ ને જેતે સમયે ભારત સરકારે જંગલની જમીન તેમજ અન્ય જમીન પર રિક્લેમેશનની પરવાનગી આપી હોય તો તેની નકલ આપશો.

13. ફોર્મ 1 માં બતાવેલ પ્રોજેકટની જગ્યામાં અનામત જંગલ બતાવેલ નથી જ્યારે નકશા અને ઇઆઇએ રિપોર્ટમાં બતાવેલ છે. આમ વિરોધાભાષી માહિતી કેમ આપવામાં આવેલ છે?
14. કંપનીએ ફરજિયાત 30% ગ્રીનબેલ્ટ બનાવવાનું છે. તો 526 હેક્ટરના 30% એટલે 157 હેક્ટર ગ્રીનબેલ્ટ બનાવવાનું થાય. કુલ 526 હેક્ટર પૈકી 102 હેક્ટર તૈયાર અનામત જંગલ લઈ કંપની ગ્રીન બેલ્ટ તરીકે બતાવવા માંગે છે?? જો હા તો બીજા 55 હેક્ટર અનામત જંગલ ક્યાથી લાવશે? આમ આ કંપની ખોટી રીતે ફોરેસ્ટ પચાવી પાડવા માંગે છે.
15. ઇઆઇએ રિપોર્ટના પાનાં સી-3 16માં બતાવ્યા મુજબ આ પ્રોજેકટનો મોટાભાગનો વિસ્તાર શિરાચા, દંદેરી જંગલની જમીન પર આવે છે. શું આ નક્શો ખોટો છે? તો સાચો નક્શો આપશો.
16. ઉપરોક્ત મુદ્દા માટે APSEZને મળેલ ફોરેસ્ટ કલિયરન્સની નકલ આપશો.
17. જંગલની જમીન બીજા ઔધોગિક ઉપયોગ માટે ડી નોટિફાય કરવા માટે મુકેલ છે તો તે બાબતે સ્થાનિક પંચાયતો એ આપેલ નો ઓબ્જેક્ષન સર્ટિફિકેટ ની નકલ આપશો.
18. <u>વન અધિકાર અધિનિયમ 2006 હેઠળ જરૂરી જિલ્લા કલેકટરે જંગલ સિવાય બીજી ખાનગી કે સરકારી જમીન આ વિસ્તારમાં ઉપલબ્ધ નથી તે બાબતે આપેલ પ્રમાણપત્રની નકલ આપશો.</u>
19. MPSEZ સામે SLP 28788 /2016 થી સુપ્રીમ કોર્ટ અને WP (PIL) 12/ 2011 થી ગુજરાત હાઇકોર્ટમાં ચાલતા કેસની વિગતો અને વિવાદ શેનો છે તેની માહિતી આપશો.
20. સુનિતા નારાયણ કમિટી દ્વારા વન અને પર્યાવરણ મંત્રાલયને થયેલ ભલામણ મુજબ કંપનીએ કેટલો દંડ સરકારમાં ભરેલ છે? આ દંડની હાલની સ્થિતિ દર્શાવશો અને આ બાબતે કાયદાકીય રીતે માહીતી આપશો.
21. પ્રોજેકટ સાઇટ માટે પસંદ કરવામાં આવેલ જમીન અને જંગલની જમીનમાં કેટલા કુદરતી નદી નાળા છે તેની વિગતો ઇઆઇએ રિપોર્ટ સિવાય વધારામાં જણાવશો જેથી કોઈ પણ નદી નાળા જાણ બહાર ફાઇનલ ઇઆઇએ રિપોર્ટમાં રહી ના જાય. વધુ ચોકસાઇથી પુનઃ અભ્યાસ કરવાની અમારી માંગ છે અને ગામ અને ગામ લોકો પર થનાર અસરો બાબતે ચકાસણી ફરી કરવામાં આવે એવી અમારી માંગ છે. નદી નાળા અને કોતરો વરસાદી પાણી ના નિકાલ ની વ્યવસ્થાઓ APSEZ માં બંધ કરવામાં આવેલ હતા પૂરી દેવાયેલ હતા. જે ફરીથી ખોલવા મારી અરજ છે. નવા કોઈ પણ વહેણ બંધ કરવાથી અમો કંપની સામે કાયદાકીય પગલાં ભરીશું.
22. AELના પ્રોજેકટની નજીક દરિયા વિસ્તારના GCZMA માન્ય CZMPની નકલ આપશો.
23. NIO દ્વારા બનાવાયેલ CRZ મેપની વિસ્તૃત વાંચી સમજી શકાય એવી કલર નકલ હાર્ડ કોપીમાં આપશો.
24. મેંગરુવના ઝાડો કે જે સીઆરઝેડ 1એ માં આવે છે તેનાથી આ પ્રોજકેટનું નજીકમાં નજીક અંતર બતાવશો. અને તે માટે જરૂરી રેકર્ડની નકલ આપશો.
25. આ દરિયાઈ વિસ્તારમાં વસતા માછીમારોની સંખ્યા અને તેમના હયાત ધંધા રોજગાર વિષે માહિતી આપશો.
26. MPSEZ ના પ્રોજકેટને લીધે આ વિસ્તારમાં બેકાર થયેલ માછીમારોની સંખ્યા બતાવશો.
27. પ્રોજેકટની નજીક આ વિસ્તારમાં કેટલા માછીમારો પગડિયા માછીમારી કરે છે તેની સંખ્યા જણાવશો.

28. આ પ્રોજેકટથી માછીમારી માટે આવવા જવાના કેટલા રસ્તા બંધ થાય છે? કે ભૂતકાળમાં બંધ કરવામાં આવેલ છે?
29. આ પ્રોજેકટથી જંગલ પર નભનારા પશુઓ અને જંગલનો સામુદાયિક ઉપયોગ કરતાં લોકો પર કેવી અસર થશે અને આવા કેટલા લોકો છે તેની માહિતી આપશો. FRA 2006 હેઠળ થયેલ કાર્યવાહીની નકલ આપશો.
30. કોપર સ્લેગ અને ફોસફોજીપ્સમનો વપરાશ પ્લાન બતાવશો.
31. ગુજરાત રાજ્ય જૈવ વિવિધતા બોર્ડ દ્વારા નવીનાળ જંગલને જૈવવિવિધતા વારસા જગ્યા જાહેર કરવામાં આવેલ છે કે કેમ કે તેની દરખાસ્ત ચાલે છે કે કેમ તેની વિગત આપશો.
32. નવીનાળ-શિરાચા દરિયાઈ વિસ્તારની કેરિંગ કેપેસિટી વિષે કોઈ અભ્યાસ હાથ ધરવામાં આવેલ છે કે નહીં? જો અભ્યાસ થયેલ હોય તો તેની માહિતી આપશો. AEL ના પ્રોજેકટ પછી કેટલી કેપીસીટી બચશે તેની માહિતી આપશો.
33. અદાણી અને ટાટાના પાવર પ્લાન્ટના કારણે હવા, પાણીના પ્રદૂષણ અને AEL ના કોપર પ્લાન્ટ પછી પેદા થતાં હવા પાણીના પ્રદૂષણની સંયુક્ત અસરો વિષે બંને પ્રોજેકટના ઇઆઇએ રિપોર્ટની તુલના કરવામાં આવેલ છે કે કેમ તેની માહિતી આપશો.
34. આ પ્રોજેકટ વિષે અંગ્રેજીમાંથી ગુજરાતી ભાષાંતર કરવામાં આવેલ પર્યાવરણને લગતા સાહિત્યની નકલો ક્યાં મૂકવામાં આવેલ હતી તેની માહિતી આપશો. ઇએસીની મિટિંગ મિનિટ્સમાં જણાવ્યા મુજબ.
35. અત્યાર સુધી અદાણિ ગ્રૂપ દ્વારા મેંગરુવ પુનઃ સ્થાપન કાર્યક્રમ હેઠળ ટોટલ કેટલા હેક્ટર મેંગરુવ રોપેલા છે અને ક્યાં ક્યાં રોપેલા છે ? તેની વિગતવાર માહિતી આપશો.
36. શું એપીએસઇઝેડમાં આવતી પાવર ટ્રાન્સમિશન લાઇનો AELના પ્રોજેકટને લીધે ખસેડવામાં આવશે? વધુ વિગતો આપશો.
37. અત્યંત પ્રદુષિત એવા કોપર રિફાઇનરીના પ્લાન્ટના પર્યાવરણ વ્યવસ્થાપન પ્લાન માટે જરૂરી સ્ટાફ (8 માણસો) ઇઆઇએ રિપોર્ટમાં બતાવ્યા મુજબ યોગ્ય છે? પ્રદૂષણની બાબતોને અદાણી સમૂહ કેટલી ગંભીરતાથી લે છે તેનો આ એક ઉત્તમ નમૂનો છે.
38. શું અદાણી પોર્ટનો સ્ટાફ પણ આ AEL પ્રોજેકટમાં પર્યાવરણ અને પ્રદૂષણની બાબતો જોશે? હાલમાં એવો કેટલો સ્ટાફ છે જે અદાણી સમૂહમાં નોકરી કરે છે અને સમૂહના તમામ પ્રોજેકટોમાં (પોર્ટ, એસઇઝેડ, પાવર પ્લાન્ટ વિગેરે) તેમની નોકરી અને પ્રદાન હોય છે? શું કાયદાકીય રીતે આ શક્ય છે ?
39. કેમિકલના 30 એકરના ઝેરી ઉકરડાના SLF પ્લાન વિષે TOR માં કે અન્ય કોઈ જગ્યા એ કેમ કોઈ માહિતી આપવામાં એવલ નથી ? વગર TOR આ પ્લાન શક્ય છે?
40. ૪૬થી વધુ ચીમનીઓમાંથી સલ્ફ્યુરિક એસિડ અને અન્ય ઝેરી ધુમાડા અને ટનોબંધી રોજનો સલ્ફર ડાયોક્સાઇડ વાયુ હવાની દિશામાં આજુબાજુના વિસ્તારમાં ફેલાઇ ગામોને બરબાદ કરી નાખશે તે માટે કોણ જવાબદાર રહેશે?

41. <u>લોકોના ફેફસા પર આ ઝેરીલા ગેસોની શું અસરો પડશે એ વિષે અભ્યાસ કરેલ હોય તો તેની નકલ આપશો અને ન કરેલ હોય તો તે અભ્યાસ કરાવી પછીજ તે આધારે આ પ્રોજેકટને મંજૂરી નકારી કાઢવાની અમારી માંગ છે.</u>
42. ઝેરી ધાતુઓના હવામાં માપવાના સાધનો GPCB પાસે છે ? જો GPCB આ ધાતુઓનું પ્રમાણ માપી જ શકવામાં અસમર્થ હોય તો આ પ્રદૂષણ કોણ માપશે ? એની વિગતો આપશો.
43. શું આ સ્મેલ્ટર પ્રોજેકટનું ગંદુ પાણી સીધી કે આડકતરી રીતે દરિયામાં નાખવામાં આવશે?
44. આખા પ્રોજેકટમાંથી નીકળતું ઔધોગિક ગંદુ પાણી શુધ્ધ થવાનું છે તે સીઇટીપીની ડિઝાઇન આ ઇઆઇએમાં બતાવેલ નથી. તો તે ડિઝાઇનની નકલ આપશો.
45. પાણીના રિસાઇક્લિંગ પ્લાન્ટની માહિતી કે ડિઝાઇન પણ આપવામાં આવેલ નથી. તેની માહિતી આપશો.
46. સ્થાનિક ગામ લોકોના હાલના આરોગ્યનો અભ્યાસ કંપનીએ કરેલ હોય તો તેની નકલ આપશો. સ્થાનિક ગામલોકોને આ પ્રોજેકટ વિષેની માહિતી સરળ ભાષામાં આપવામાં આવેલ છે કે સમજાવવામાં આવેલ છે કેમ તેની વિગતો જણાવશો?
47. સ્થાનિક લોકોને APSEZ માં આજદિન સુધી કેટલી નોકરીઓ મળી છે તેની સંખ્યા બતાવશો.
48. સ્થાનિક લોકોને APSEZ માં કેટલા કોન્ટ્રાક્ટ મળેલ છે તેની સંખ્યા અને ગામ લોકોનો જે વિકાસ થયેલો હોય તેવા ઉદાહરણો નામ અને ગામ સહિત આપશો.
49. સ્થાનિક લોકોને અને પર્યાવરણને થયેલ નુકશાન બાબત સ્થાનિક ગ્રામ પંચાયતોના વાંધા વિરોધ બાબતે ઇઆઇએ રિપોર્ટમાં કેમ કશુજ લખેલ નથી. તેની સંપૂર્ણ માહિતી આપશો.

ઉપરોક્ત પ્રોજેકટથી થતાં ફાયદા કરતાં સ્થાનિક લોકો, પશુપાલન, આરોગ્ય, પર્યાવરણ અને દેશને નુકશાન મોટું હોય કાયદાકીય ગૂંચવાળો આ પ્રોજેકટ પડતો મૂકવા મારી અરજ છે. અમો ભવિષ્યમાં થનાર પ્રદૂષણને લીધે ભોગ બનવા માંગતા ન હોય અમારે આ પ્રોજેકટ અને તેનો વિકાસ જોઈતો નથી.

આભાર સહ અને આ પર્યાવરણ લોક સુનાવણીમાં મારો વાંધો રજૂ કરી આગળની કાર્યવાહી કરવાની અપેક્ષા સહ.

આપનો વિશ્વાસુ

Mandvi –Kutch
Dt. 29-4-17

To,
District Collector
KUTCH.

Sub: Objections in writing towards the damage likely to occur to the local public due to proposed Copper Refinery Project of Adani Enterprise Limited (AEL)

Honourable Sir,
It is humbly submitted that, due to Copper Refinery Project of Adani Enterprise Limited (AEL) proposed to be established in the district of Kutch in the villages of Navinal and Siracha is a serious danger to the local public, local community depending on the forest, fishermen, and environment and coastal ecology. There are many discrepancies, mistakes and wrong information in the draft EIA report. It transpires from the study report that if such a big project is established on the sea shore human health, animal – birds, and coastal life as a whole will be jeopardized seriously and permanently that cannot be compensated. This is such a dangerous pollution emanating project that the future generations of locals residing in the surrounding villages may be crippled , lame and impotent. Therefore we are objecting establishment of the project at this location. We are submitting our written objection on the basis of the points mentioned below. And we demand to prevent establishment of this project at this location as it is not suitable here.

1. We object selection of land of reserved forest as project site by Adani Enterprise Limited (AEL). The options selected for the project site are wrong. This project shall be established away from the sea shore. As close pipeline conveyor system for transportation of raw material is already in existence it is possible to establish this project away from sea shore in spite

1709

of that the company management has decided to establish it near sea shore. It is not fair. Water and electricity also can be supplied there easily and water disposal being zero there is no problem of water discharge. It is dangerous to establish such an industry on the sea shore. Damaging the environment of the sea and creating land by reclamation using sand and establishing such project on it is harmful. So we object the project under Forest Rights Act 2006 as livelihood of people of village who are dependent on the forest is under risk. Forest lands are reducing so the land of Danderi and Shiracha forest should not be given to the company for other industrial purpose. Cattle of the village graze in this forest. So we are taking strong objection against the use of the forest for the company.

2. Adani company has done permanent damage by cutting the Mangrove trees and filling up the creeks. Sand dune available in the forest on the sea shore of Navinal has been used for development of port. So the whole geography of the coastal area has changed. And as on date our case is pending with Hon. Supreme Court in the matter. During development of APSEZ the damage has been done to the environment, the sea shore and livelihood of the people, so we object the company and the proposed project. The matter has been proved in the court and the government that the company is establishing industries by damaging environment and coastal life. Therefore considering the company being disputed and its spoiled past this project deserves to be rejected.
3. Why the details of all survey numbers of land in which the said project is proposed to come up is not mentioned in the report. Please provide the entire detail about the area including the respective villages.
4. Please mention plot numbers and its area in respect of APSEZ land given to AEL for the project and also provide plot wise details of land ownership in writing.
5. Furnish area wise details of all the plots which are with APSEZ at present. Also furnish details of plots sold out and unsold.

6. Is the land proposed for the project and owned by the APSEZ, a notified SEZ? Provide the copy of the notification.

1700

7. Is the area of the project that shall be given by APSEZ to AEL, to be considered under the SEZ? Provide the relevant details as per the Government record and status.

8. Provide the government documents showing the ownership of APSEZ for the land where the project is to be established.

9. Provide the details of the land that is illegally encroached by MPSEZ at Shiracha, Danderi forest. Provide the details of the land that is not denotified by the Government of India but has been taken into possession by the company.

10. Provide the date of the submission in case if the APSEZ would have sought approval of SEZ denotification (for AEL project area) from the Government of India.

11. Provide the planning and logic for undertaking project for AEL copper plant while obtaining the land at Shiracha, Daderi forest.

12. Provide the copy of the permission for reclamation provided by the Government of India, if any, to the MPSEZ for forest land and other land.

13. The reserved forest is not mentioned in Form 1 of the project but it is shown in map and EIA report. Why such contradictory information is provided?

14. The company has to make 30% green belt compulsorily. Therefore 157 hector comes as 30% of green belt of 526 hector. Out of the 526 hector does the company wish to obtain 102 hector of reserve forest and show it as green belt? If yes, from where will the company bring the rest of the 55 hector of reserve forest? Thus, this company wants to encroach the forest illegally.

15.. As shown under the EIA report page no. C-3 16, most part of the project falls in Shiracha, Dedari forest land. Is this map false? If so, provide a correct map.

16. Provide the forest clearance copy that was received by the APSEZ for the above mentioned point.

1711

17. If the forest land proposed to be denotified for other industrial use, then provide the copy of no objection certificates given by local Panchayats in this regard.

18. Please provide a copy of the certificate given by the district collector under the Forest Rights Act, 2006, stating that private or Government land is not available in this area other than the forest in this area.

19. Provide the information about what is the dispute under the SLP 28788/2016 being heard in the Supreme court and WP (PIL) 12/2011 being heard in the Gujarat High Court against MPSEZ.

20. What is the amount of penalty paid by the company to the Government on the basis of the recommendation provided by Sunita Narayan committee to the Forest and Environment ministry? Provide the current status of the penalty and provide the legal information about the same.

21. Apart from the EIA report, please provide the additional details about how many natural rivers, drains are located in the land selected for Project Site and forest land, so that no river, drains would be left to be mentioned in the final EIA report out of knowledge. Our demand is to re-study with more accuracy and the demand is made to make re investigation about possible effects that may incur to village and villagers. Our demand is to re open all closed canals, bays and creeks again. We will take legal actions against the company on any new closer of water flow.

22. Please provide copy of GCZMA approved CZMP for of the seaside area near the AEL project.

23. Please provide a readable and understandable hard color copy of the CRZ map prepared by NIO.

24. Mention the shortest distance of mangrove area which fall in CRZ 1A from the proposed project. And provide a copy of the records for it.

25. Provide information about the number of fishermen residing in the coastal area and about their existing business.

1712

26. Provide the number of fishermen who have become unemployed due to MPSEZ project

27. Provide the number of fishermen who do Pagadiya fishing near the project.

28. How many access roads used by fisherfolks for commuting will be closed due to this project? or have been closed in the past?

29. What type of impacts will be there on animals and people collectively relying on forests and how people and animals will be affected due to this project. And provide the copy of procedures followed under FRA 2006.

30. Provide the consumption plan of Copper Slag and Phospho gypsum.

31. Provide the detail as to whether the Navinal forest has been declared as biodiversity heritage place by the Gujarat State Biodiversity Board, or it is being under proposal.

32. Whether a study has been conducted to identify carrying capacity of the Navinal- Shiracha coastal area? Provide information if the study is undertaken. Provide information on how much capacity will be left after AEL's project.

33. Provide the information on whether the comparison is made on EIA reports of both projects for the combined impact of air- water pollution caused due to the power plant of Adani and Tata Power, air, water pollution and after AEL's Copper plant.

34. Provide the information about where the copies of the environmental literature of this project were kept which were translated from English to Gujarati according to the EAC meeting minutes.

35. So far, how many hectare of Mangrove afforestation is carried out by Adani Group and where is plantation done? Provide the detailed information.

36. Will the power transmissions line of APSEZ be moved due to AEL's project? Provide more details.

1713

37. The staff required (8 persons) for the Environmental Management Plan of highly polluted Copper Refinery Plant is proper as shown in the EIA report? This is a best example of how serious the Adani group is to the pollution issues

38. Will Adani Port staff also look into environmental and pollution issues in this AEL project? Currently, how many staff are there who serves in the Adani Group and also have contributions in all the projects of the group (port, SEZ, power plant etc.)? Is it appropriate to perform such jobs. Is it legally allowed?.

39. Why no information is given in TOR or any other place about the 30 acres of SLF? Is this plan possible Without TOR?.

40. Who will be responsible for destroying surrounding villages located in wind direction by spreading sulfuric acid and other toxic gases and other tons of sulfur dioxide gas from more than 46 chimneys? .

41. If you have studied about the impact of these Toxic Gases on people's lungs, then provide the copy of it and if not, then our demand is that the approval or rejection should be given on the basis of such study.

42. Does the GPCB have the instruments to measure toxic gases concentration in air? If GPCB is unable to measureconcentrations of metals then who will measure the pollution? Provide the detail about it.

43.. Will the effluent of the Smelter project be directly or indirectly discharged in the sea?

44. The CEPT design in which industrial waste water will be treated is not mentioned in EIA. So, provide the copy of that design.

45. The information or design of the water recycling plant is also not provided. Provide its information.

46. Provide the copy if the company has done the study of the existing health conditions of the local village people. Provide the details if the local village people have been explained the information in the simple language about this project.

1714

47. Provide number of total employment given to locals by APSEZ till date.

48. The number of contracts received by local people in APSEZ and the detail of development activities including examples with name and village.

49. Why nothing has been written in the EIA report about the objections of local village panchayat about the loss of local people and environmental damage? Provide the complete information about it.

As the local people, animal-husbandry, health, environment and country may be adversely affected rather than benefits from above mentioned project, hence it is my submission that the project be abandoned. As we do not want to suffer from the pollution in future, we do not want the project and the development from it.

Thanking you and with the expectation by representing my objection in this environmental public hearing and to take further actions,

Yours faithfully

પર્યાવરણીય લોક સુનાવણી માં તા 29-4-2017 ના રોજ રજૂઆત

પ્રતિ શ્રી
જિલ્લા કલેક્ટર સાહેબ અને અધ્યક્ષ જિલ્લા પર્યાવરણ લોક સુનાવણી સમિતિ.
કચ્છ.

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટ સામે દરિયાઈ પર્યાવરણ અને માછીમારોને નુકશાન બાબતે લેખિત વાંધા/વિરોધ દર્શાવવા બાબત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે નેશનલ ફીશરફોક ફોરમ દેશના દરિયાકિનારે વસેલા સમુદાયો, માછીમારી અને દરિયાઈ પર્યાવરણ સંરક્ષણનું કામ કરે છે. કચ્છ જિલ્લામાં નવીનાળ અને શિરાચા ગામમાં આવનાર અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના પ્રોજેકટને લીધે માછીમારી, દરિયાઈ પર્યાવરણ અને જીવસૃષ્ટિ સામે ગંભીર ખતરો છે. જે બાબતને લઈ અમોએ ડ્રાફ્ટ ઇઆઇએ રિપોર્ટનો અભ્યાસ કરેલ છે અને આ અભ્યાસ પછી માલૂમ પડે છે કે આ દરિયાકિનારે આવો મોટો ઉધોગ સ્થાપવાથી જીવસૃષ્ટિને ગંભીર અને કાયમી નુકશાન થાય એમ છે. તેથી આ સ્થળે અમે આ પ્રોજેકટનો વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજકેટનું સ્થળ યોગ્ય ન હોવાથી તેને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) દ્વારા પ્રોજેકટની જગ્યા માટે પસંદગી માટેના વિકલ્પોજ ખોટા પસંદ કરવામાં આવેલ છે. આ પ્રોજેકટ દરિયાકિનારે સ્થાપવાની જરૂરિયાત જ નથી. કાચામાલને પરિવહન માટે ક્લોઝ પાઇપલાઇન કન્વેયર સિસ્ટમ હયાત હોય આ પ્રોજેકટને દરિયા કિનારાથી ૧૦ કિમી કરતાં વધુ અંદર સ્થાપી શકાય એમ હોવા છતાં આ પ્રોજેકટને દરિયાનજીક નાખવાનું કોઈ કારણ કે તર્ક નથી. પાણી અને વીજળી પણ સરળતાથી ત્યાં આપી શકાય તેમ છે. પાણીનો નિકાલ શૂન્ય હોય કોઈ પાણી બહાર ફેકવાની સમસ્યાનો પણ સવાલ નથી. દરિયાકાંઠે આવો ઉધ્યોગ સ્થાપવોજ જોખમી છે અને દરિયાઈ પર્યાવરણને નુકશાન કરી દરિયાઈ જમીનને રેતી પૂરી સમથળ કરી તેના પર આવો પ્રોજેકટ સ્થાપવો નુકશાનકારક છે.
2. આ પ્રોજેકટ કયા કયા સર્વે નંબરમાં કરવામાં આવનાર છે તમામ સર્વે નંબરની જેતે ગામ સહિતની વિસ્તાર દર્શાવતી વિગતો આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
3. પ્રોજેકટ માટે APSEZ ની કેટલી જમીન AEL ને આપવામાં આવેલ છે. તે તમામ પ્લોટના નંબર અને તેનું ક્ષેત્રફળ જણાવો અને તેનો પ્રત્યક્ષ કબ્જો કોની પાસે છે તે પ્લોટ દીઠ બતાવશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
4. હાલમાં APSEZ માં જેટલા પ્લોટ હોય તે તમામ પ્લોટનો વિસ્તાર બતાવતી માહિતી આપશો. કેટલા પ્લોટ વેચાઈ ગયા અને કેટલા પ્લોટ વેચાણ વગરના છે તેની પણ માહિતી આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.

1746

5. આ પ્રોજેકટ જગ્યા કે જે APSEZની માલિકીની છે તેના પર પર SEZ નોટિફાઇ છે કે નહીં ? તે નોટિફિકેશનની નકલ આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
6. આ પ્રોજેકટ જગ્યા કે જે APSEZ AELને આપશે તે એસઇઝેડમાં ગણાશે કે નહીં ? જરૂરી માહિતી સરકારી રેકર્ડ અને સ્થિતિ પ્રમાણે આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
7. આ જગ્યા કે જ્યાં પ્રોજેકટ કરવામાં આવશે તે જગ્યાની APSEZની માલિકી દર્શાવતા દસ્તાવેજ આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
8. MPSEZ દ્વારા જે તે સમયે શિરાચા, દંદેરી ફોરેસ્ટની ગેર કાયદેસર રીતે પચાવી પાડેલી જમીનની વિગતો આપશો. જે જમીન ભારત સરકારે ડીનોટિફાય કરેલ ન હોય પણ કંપનીએ કબ્જો કરેલ હોય તેવી જમીનની માહિતી આપશો, અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
9. APSEZ દ્વારા SEZ ડીનોટિફાય કરવામાટે (AEL ના પ્રોજેકટ વિસ્તાર માટે) ભારત સરકારની કોઈ મંજૂરી માંગવામાં આવેલ હોયતો દરખાસ્તની તારીખ આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
10. AEL નો કોપર પ્લાન્ટ માટે શિરાચા, દંદેરી જંગલની જમીન લઈ તેના પર પ્રોજેકટ કરવાનું પ્રયોજન અને તર્ક આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
11. MPSEZ ને જેતે સમયે ભારત સરકારે જંગલની જમીન તેમજ અન્ય જમીન પર રિક્લેમેશનની પરવાનગી આપી હોય તો તેની નકલ આપશો.
12. ફોર્મ 1 માં બતાવેલ પ્રોજેકટની જગ્યામાં અનામત જંગલ બતાવેલ નથી જ્યારે નકશા અને ઇઆઇએ રિપોર્ટમાં બતાવેલ છે. આમ વિરોધાભાષી માહિતી કેમ આપવામાં આવેલ છે?
13. કંપનીએ ફરજિયાત 30% ગ્રીનબેલ્ટ બનાવવાનું છે. તો 526 હેક્ટરના 30% એટલે 157 હેક્ટર ગ્રીનબેલ્ટ બનાવવાનું થાય. કુલ 526 હેક્ટર પૈકી 102 હેક્ટર તૈયાર અનામત જંગલ લઈ કંપની ગ્રીન બેલ્ટ તરીકે બતાવવા માંગે છે?? જો હા તો બીજા 55 હેક્ટર અનામત જંગલ ક્યાથી લાવશે?
14. તૈયાર જંગલ કાપી નાખી નવું પ્લાંટેશન કરવું યોગ્ય છે ? આ બાબતે વધુ માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
15. ઇઆઇએ રિપોર્ટના પાનાં સી-3 16માં બતાવ્યા મુજબ આ પ્રોજેકટનો મોટાભાગનો વિસ્તાર શિરાચા, દંદેરી જંગલની જમીન પર આવે છે. શું આ નકશો ખોટો છે? તો સાચો નકશો આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
16. ઉપરોક્ત મુદ્દા માટે APSEZને મળેલ ફોરેસ્ટ કલિયરન્સની નકલ આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
17. APSEZ અને AEL ના પ્રોજેકટના તમામ હયાત ડાઇરેક્ટરો/ માલિકોના નામ આપશો અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
18. MPSEZ સામે SLP 28788 /2016 થી સુપ્રીમ કોર્ટ અને WP (PIL) 12/ 2011 થી ગુજરાત હાઇકોર્ટમાં ચાલતા કેસની વિગતો અને વિવાદ શેનો છે તેની માહિતી આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં વિસ્તૃત સ્વરૂપમાં મુકશો.
19. સુનિતા નારાયણ કમિટી દ્વારા વન અને પર્યાવરણ મંત્રાલયને થયેલ ભલામણ મુજબ કંપનીએ કેટલો દંડ સરકારમાં ભરેલ છે? આ દંડની હાલની સ્થિતિ દર્શાવશો અને આ બાબતે કાયદાકીય રીતે માહીતી આપશો. અને આ બાબત પર ટીકા ટિપ્પણી સાથે ફાઇનલ ઇઆઇએ રિપોર્ટમાં લેખિતમાં મુકશો.

20. પ્રોજેકટ સાઇટ માટે પસંદ કરવામાં આવેલ જમીન અને જંગલની જમીનમાં કેટલા કુદરતી નાળા છે તેની વિગતો ઇઆઇએ રિપોર્ટ સિવાય વધારામાં જણાવશો જેથી કોઈ પણ નદી નાળા જાણ બહાર ફાઇનલ ઇઆઇએ રિપોર્ટમાં રહી ના જાય. વધુ ચોકસાઇથી પુનઃ અભ્યાસ કરવાની અમારી માંગ છે. બંધ કરેલ તમામ કાંસ ખાડી અને નાળાઓ ફરીથી ખોલવાની અમારી માંગ છે. આ વિષે માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
21. AELના પ્રોજેકટની નજીક દરિયા વિસ્તારના GCZMA માન્ય CZMPની નકલ આપશો.
22. NIO દ્વારા બનાવાયેલ CRZ મેપ ની વિસ્તૃત વાંચી સમજી શકાય એવી કલર નકલ આપશો.
23. મેંગરુવના ઝાડો કે જે સીઆરઝેડ 1એ માં આવે છે તેનાથી આ પ્રોજકેટનું નજીકમાં નજીક અંતર બતાવશો. અને તે માટે જરૂરી રેકર્ડની નકલ આપશો.
24. આ દરિયાઇ વિસ્તારમાં વસતા માછીમારોની સંખ્યા અને તેમના હયાત ધંધા રોજગાર વિષે માહિતી આપશો.
25. MPSEZ ના પ્રોજકેટને લીધે બેકાર થયેલ માછીમારોની સંખ્યા બતાવશો.
26. પ્રોજેકટની નજીક કેટલા માછીમારો પગડિયા માછીમારી કરે છે તેની સંખ્યા જણાવશો.
27. આ પ્રોજેકટથી માછીમારી માટે આવવા જવાના કેટલા રસ્તા બંધ થાય છે? કે ભૂતકાળમાં બંધ કરવામાં આવેલ છે? અને આ માહિતીને ફાઇનલ ઇઆઇએ રિપોર્ટમાં સુધારી મુકશો.
28. આ પ્રોજેકટથી જંગલ પર નભનારા પશુઓ અને જંગલનો સામુદાયિક ઉપયોગ કરતાં લોકો પર કેવી અસર થશે અને આવા કેટલા લોકો છે તેની માહિતી આપશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
29. તાંબુ બનાવવા માટે કાચામાલમાં સલ્ફર, પારો અને વિકિરણ ઉત્સર્જિત કરતી સક્રિય ધાતુઓની માત્રા જણાવશો. અને તેમની સ્લેગમાં કેટલી માત્રા હશે તે પણ જણાવશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
30. સીઆરઇપી મુજબ કોપર સ્લેગ અને ફોસફોજીપ્સમના વ્યવસ્થાપન વિષે માહિતી આપશો.
31. સીઆરઇપી મુજબ સલ્ફ્યુરિક એસિડ પ્લાન્ટમાંથી નીકળતા ઉત્સર્જનનું પાલન કરવાના પગલાં બતાવશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
32. સીઆરઇપી મુજબ સલ્ફર ડાઈઓકસાઈડના ઉત્સર્જન ઘટાડવાની વ્યવસ્થા જણાવશો.
33. કોપર સ્લેગ અને ફોસફોજીપ્સમનો વપરાશ પ્લાન બતાવશો. અને તેને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
34. સ્મેલ્ટરને લાગુ પડતી તમામ સીપીસીબીની કેપ ગાઈડલાઇન્સ ના પાલન માટે ચોક્કસ પ્લાન આ ડ્રાફ્ટ ઇઆઇએ રિપોર્ટમાં ઉમેરવામાં આવે અને ફાઇનલ ઇઆઇએ રિપોર્ટમાં વન અને પર્યાવરણ મંત્રાલય સામે મંજૂરી વખતે મૂકવામાં એવી મારી માંગ છે. આની એક નકલ અમને પણ આપવામાં આવે. સંપૂર્ણ માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
35. ગુજરાત રાજ્ય જૈવ વિવિધતા બોર્ડ દ્વારા નવીનાળ જંગલને જૈવવિવિધતા વારસા જગ્યા જાહેર કરવામાં આવેલ છે કે કેમ કે તેની દરખાસ્ત ચાલે છે કે કેમ તેની વિગત આપશો. માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
36. નવીનાળ-શિરાચા દરિયાઈ વિસ્તારની કેરિંગ કેપેસિટી વિષે કોઈ અભ્યાસ હાથ ધરવામાં આવેલ છે કે નહીં? જો અભ્યાસ થયેલ હોય તો તેની માહિતી આપશો. AEL ના પ્રોજેકટ પછી કેટલી કેપીસીટી બચશે તેની માહિતી આપશો. માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.

1718

37. અદાણી અને ટાટાના પાવર પ્લાન્ટના કારણે હવા, પાણીના પ્રદૂષણ અને AEL ના કોપર પ્લાન્ટ પછી પેદા થતાં હવા પાણીના પ્રદૂષણની સંયુક્ત અસરો વિષે બંને પ્રોજેકટના ઇઆઇએ રિપોર્ટની તુલના કરવામાં આવેલ છે કે કેમ તેની માહિતી આપશો. આ માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
38. આ પ્રોજેકટ વિષે અંગ્રેજીમાંથી ગુજરાતી ભાષાંતર કરવામાં આવેલ પર્યાવરણને લગતા સાહિત્યની નકલો ક્યાં મૂકવામાં આવેલ હતી તેની માહિતી આપશો. ઇએસીની મિટિંગ મિનિટ્સમાં જણાવ્યા મુજબ.
39. અત્યાર સુધી અદાણિ ગ્રૂપ દ્વારા મેંગરુવ પુનઃ સ્થાપન કાર્યક્રમ હેઠળ ટોટલ કેટલા હેક્ટર મેંગરુવ રોપેલા છે અને ક્યાં ક્યાં રોપેલા છે ? તેની વિગતવાર માહિતી નકશા સાથે અને કરેલ કુલ ખર્ચ ની રકમ સાથે આપશો.
40. શું એપીએસઇઝેડમાં આવતી પાવર ટ્રાન્સમિશન લાઈનો AELના પ્રોજેકટને લીધે ખસેડવામાં આવશે? વધુ વિગતો આપશો.
41. અત્યંત પ્રદુષિત એવા કોપર રિફાઇનરીના પ્લાન્ટના પર્યાવરણ વ્યવસ્થાપન પ્લાન માટે જરૂરી સ્ટાફ (૪ માણસો) ઇઆઇએ રિપોર્ટમાં બતાવ્યા મુજબ યોગ્ય છે? પ્રદૂષણની બાબતોને અદાણી સમૂહ કેટલી ગંભીરતાથી લે છે તેનો આ એક ઉત્તમ નમૂનો છે.
42. શું અદાણી પોર્ટનો સ્ટાફ પણ આ AEL પ્રોજેકટમાં પર્યાવરણ અને પ્રદૂષણની બાબતો જોશે? હાલમાં એવો કેટલો સ્ટાફ છે જે અદાણી સમૂહમાં પણ નોકરી કરે છે અને સમૂહના તમામ પ્રોજેકટોમાં (પોર્ટ, એસઇઝેડ, પાવર પ્લાન્ટ વિગેરે) તેમની નોકરી અને પ્રદાન હોય છે? શું કાયદાકીય રીતે આ શક્ય છે ? APSEZ ના પર્યાવરણના ઉચ્ચ અધિકારી અને હેડનું નામ અને તેમની યોગ્યતા જણાવશો. માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
43. કેમિકલના 30 એકરના ઝેરી ઉકરડાના પ્લાન વિષે TOR માં કે અન્ય કોઈ જગ્યા એ કેમ કોઇ માહિતી આપવામાં એવલ નથી ? વગર TOR આ પ્લાન શક્ય છે? માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
44. 46 જેટલી ચીમનીઓમાંથી સલ્ફ્યુરિક એસિડ અને અન્ય ઝેરી ધુમાડા અને ટનોબંધી રોજનો સલ્ફર ડાયોક્સાઈડ વાયુ હવાની દિશામાં આજુબાજુના વિસ્તારમાં દરિયાઈ વિસ્તારમાં બેસી દરિયાના પાણીમાં ઓગળવાથી ગલ્ફ ઓફ કચ્છ અને જામનગર મરીન નેશનલ પાર્ક પર અને કોરલ પર શું અસરો પડશે? આ વિષે અભ્યાસ કરેલ હોય તો તેની નકલ આપશો માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો. અભ્યાસ ન કરેલ હોય તો તે અભ્યાસ કરાવી તેની નકલ અમને આપી પછીજ પ્રોજેકટને મંજૂરી આપવાની માંગ છે.
45. આ પ્લાન્ટને લીધે કોરલ બ્લીચિંગ અને દરિયાઈ એસીડીફિકેશનમાં કેટલો વધારો થશે તે જણાવશો. સલ્ફર ડાયોક્સાઈડ ભેજમાં ઓગળી સલ્ફ્યુરિક એસિડ બને છે જે દરિયામાં જવાથી દરિયાની PH કેટલી વધશે ?
46. ગ્લોબલ વોર્મિંગમાં પ્રોજેકટને લીધે શું વધારો થશે ??
47. કેટલા અબજ ટન ગ્રીન હાઉસ ગેસ આ પ્રોજેકટથી પૃથ્વીના વાતાવરણમાં જશે ? માહિતી ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
48. ગ્રીન હાઉસ ગેસ ઓછા કરવાનો પ્લાન ફાઇનલ EIA રિપોર્ટમાં બતાવશો.

49. જીપ્સમ પોંડ અને તેમનાથી ગળતર થઈ નીકળતા ગંદા પાણીથી દરિયાને થનાર નુકશાનની વિગતો ફાઇનલ ઇઆઇએ રિપોર્ટમાં આપશો.
50. RO રિજેક્ટને દરિયામાં નાખવામાં આવનાર હોય તો તેની વિગતો આપશો.
51. ઝેરી ધાતુઓના હવામાં માપવાના સાધનો GPCB પાસે છે ? જો GPCB આ ધાતુઓનું પ્રમાણ માપી જ શકવામાં અસમર્થ હોય તો આ પ્રદૂષણ કોણ માપશે? અન્ય એજન્સીની પ્રમાણિક્તા અને વિશ્વષનિયતા કેટલી ?
52. શું આ આ આખા સ્મેલ્ટર પ્રોજેકટનું ઓધોગિક ટ્રીટ કરેલ પાણી સીધી કે આડકતરી રીતે દરિયામાં નાખવામાં આવશે? સ્પષ્ટ જવાબ હા કે ના માં આપશો.
53. શું આ સ્મેલ્ટર ઝીરો ડિસ્ચાર્જના સિધ્ધાંત પર કામ કરશે તો ફાઇનલ ઇઆઇએ રિપોર્ટમાં આ બાબતે વધુ માહિતી EMP માં આપશો?
54. શું આ સ્મેલ્ટર સંપૂર્ણ પાણી રીસાઇકલ રિયુઝ કરી લેશે? આખો રિયુઝ પ્લાન અને તેના ઘટકો ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.
55. આખા પ્રોજેકટમાંથી નીકળતું ઓધોગિક ગંદુ પાણી શુધ્ધ થવાનું છે તે સીઇટીપીની ડિઝાઇન આ ઇઆઇએમાં બતાવેલ નથી. તો તે ડિઝાઇનની નકલ આપશો.
56. પાણીના રિસાઇક્લિંગ પ્લાન્ટની માહિતી કે ડિઝાઇન પણ આપવામાં આવેલ નથી. તેની માહિતી આપશો.
57. હાલમાં આવેલ માનનીય સુપ્રીમ કોર્ટના ઓધોગિક ગંદા પાણીના પ્રાથમિક ટ્રીટમેન્ટ કરવાના ચુકાદા સામે કંપનીએ કરેલ કાર્યાવહી ની નકલ આપશો. અને ફાઇનલ ઇઆઇએ રિપોર્ટમાં મુકશો.

ઉપરોક્ત બાબતે માહિતી છુપાવવામાં આવેલ છે અને આ પ્રોજેકટ દરિયાકિનારે સ્થાપવાથી સમગ્ર ગલ્ફ ઓફ કચ્છ અને મરીન નેશનલ પાર્ક ઉપરાંત માછીમારીને ગંભીર ખતરો પેદા થશે. આ પ્રોજેકટથી થતાં ફાયદા કરતાં લોકો, પશુપાલન, આરોગ્ય, પર્યાવરણ અને દેશને નુકશાન મોટું હોય કાયદાકીય ગૂંચવાળો આ પ્રોજેકટ પડતો મૂકવા મારી અરજ છે. કંપનીના કરોડોના ફાયદા માટે લોકો અને સરકારને અબજો રૂપિયાનું નુકશાન કરતાં આ પ્રોજેકટને પડતો મૂકવા અમારી અપીલ છે.

આભાર સહ
આપનો વિશ્વાસુ

Representation in Environmental Public hearing on dated 29-4-2017

To,
District Collector and Chairman, District Environmental Public hearing Committee, Kachchh.

Subject: Regarding written objection / protest for the loss of marine environment and fishermen against Adani Enterprise Ltd. (AEL) Copper Refinery Project

Respected sir,

With respectful regards we have to inform that, National Fisher folk Forum is engaged in welfare of communities residing on coastal areas, fishermen and conservation of marine environment. Fisheries, Marine environment and life shall have serious threat because of proposed copper refinery project of Adani Enterprise Ltd. in Navinal and Shiracha villages of Kutch District. In respect of the same, we have studied Draft EIA Report and on the basis of the same it is observed that such project on costal area, marine life shall have serious and irreparable loss. Hence we oppose the project at the site. We submit our written objections on issues mentioned hereunder and since the project site is not proper, we demand stoppage of the project at the site.

1. Options for selection of project site by Adani Enterprise Ltd. are improper. There is no need to establish such project in coastal area. Since close pipeline conveyer system is available for transportation of raw material, this project can be established at a distance of more than 10 kms away from the coastal line, there is no logic behind establishing the project on coastal line. Water and electricity also can be made available there. Since zero water discharge, there is no issue of water wastage to be disposal. It is dangerous to establish such project on coast line and establishing such project by harmful of marine life and environment by leveling the area with sand is harmful.

2. Please provide us details of survey numbers of land in which the said project is proposed to come up with details of villages under which the said land falls and please include the same in final EIA Report.

3. Please mention plot numbers and its area in respect of APSEZ land given to AEL for the project and also mention give plot wise details of persons in whose possession the same and please include the same in final EIA Report.

4. Furnish area wise details of all the plots which are with APSEZ at present. Also furnish details of plots sold out and unsold and please include the same in final EIA Report.

5. Is the site for the project owned by the APSEZ a notified SEZ? Provide the copy of the notification. Please include the same in the final EIA report.

1729

6. Is the area of the project that shall be given by APSEZ to AEL, to be considered under the SEZ? Provide the relevant details as per the government record and status. Please include the same in the final EIA report.

7. Provide the documents showing the ownership of APSEZ for the site at which the project is to be undertaken. Place the same in the final EIA report.

8. Provide the details of the land that is illegally siphoned off by MPSEZ at Shiracha, Danderi forest. Provide the details of the land that is not denotified by the government of India but has been taken into possession by the company. Place the same in the final EIA report.

9. Provide the date of the submission in case if the APSEZ would have sought approval of SEZ denotification (for AEL project area) from the government of India. Place the same in the final EIA report.

10. Provide the planning and logic for undertaking project for AEL copper plant while obtaining the land at Shiracha, Daderi forest. Place the same in the final EIA report.

11. Provide the copy of the permission for reclamation provided by the government of India, in any, to the MPSEZ for forest land and other land.

12. The reserved forest is not mentioned under project of Form 1 but map and EIA report is shown. Why is this contradictory information provided?

13. The company is to make 30% green belt mandatory. Therefore 157 hector comes as 30% of green belt of 526 Ha. Out of the 526 Ha does the company wish to obtain 102 Ha of reserve forest and show it as green belt? If yes, from where will the company bring the rest of the 55 Ha of reserve forest?

14. Is it proper to cut off the ready forest and initiate new plantation? Provide further information as for this in the report.

15. . As shown under the EIA report page no. C-3 16, most part of the project is situated on the Shiracha, Dedari forest land. Is this map false? Therefore, provide a correct map. And place the same in the final EIA report.

16. Provide the forest clearance copy that was received by the APSEZ for the above mentioned point. Moreover, place the same in the final EIA report.

17. Provide the names of all present directors/owners of APSEZ and AEL project and provide them in the final EIA report.

1727

18. Provide the information that what is the dispute under the SLP 28788/2016 held before the Supreme court and WP (PIL) 12/2011 held before the Gujarat High Court against MPSEZ. Place the same in an elaborate manner under final EIA report.

19. What is the amount of penalty paid by the company to the government on the basis of the recommendation provided by Sunita Narayan committee to the Forest and Environment ministry? Provide the current status of the penalty and provide the legal information as for the same. Provide the file with remarks as for this issue in writing within the final EIA report.

20. Apart from the EIA report, Please provide the additional details as to how many natural river, drains are located in the land selected for Project Site and forest land, so that no river, drains would be left to mentioned in the final EIA report out of knowledge. Our demand is to re-study with more accuracy. Our demand is to open all closed canals, bays and creeks again. Place information in the final EIA report.

21. Please provide GCZMA approved CZMP copy of the costal area near the AEL project.

22. Please provide a detailed color copy of the CRZ map prepared by NIO which readable and understandable.

23. Keep the difference of mangroves trees that come into the CRZ 1 in close vicinity of the project. And provide a copy of the records required for it.

24. Provide information about the number of fishermen residing in the costal area and about their existing business.

25. Show the number of fishermen who have become unemployed due to MPSEZ project

26. Provide the number of fishermen who do Pagadiya fishing near the project.
27. How many roads for commuting are closed for the fishers due to this project? or has been closed in the past? And update this information in the final EIA report.

28. Provide the information on how many animals rely on forests and how people will be affected who use the forests in community by this project. And put it in the final EIA report.

29. To make copper product, provide the information about Sulphur content, mercury and radiation and amount of active metals in raw material, . And also mention how much amount of them will be there in slag. And place in the final EIA report.

30. Provide the information on the management of Copper Slag and Phospho gypsum according to the CREP.

1728

31. According to the CREP, show the steps to follow emissions from the sulfuric acid plant and put it in the final EIA report.

32. Provide the information about the management of emissions reduction of sulfur dioxide as per CREP.

33. Make utilization plan for copper slag and Phosphogypsum. And put it in the final EIA report.

34. For the implementation of all CREP Guidelines of CPCB, applicable to the smelter, I demand that the specific plan is to be included in this draft EIA report and in the final EIA report, and to be placed before the Ministry of Environment and Forest at the time of approval. A copy of this is to be given to us too. Put the complete information in the final EIA report.

35. Provide the detail as to whether the Navinal forest has been declared as biodiversity heritage place by the Gujarat State Biodiversity Board, or it is being under proposal. Put information in the final EIA report.

36. Whether a study has been conducted about the Navinal- Shariya costal area carrying capacity? Provide information if the study is undertaken. Provide information on how much capacity will be left after AEL's project. Place information in the final EIA report.

37. Provide the information on whether the comparison is made on EIA reports of both projects for the combined impact of air- water pollution caused due to the power plant of Adani and Tata Power, air, water pollution and after AEL's Copper plan. Put this information in the final EIA report.

38. Provide the information about where the copies of the environmental literature of this project were kept which were translated from English to Gujarati according to the EAC meeting minutes.

39. So far, under the mangrove aforestation Program, in how many total numbers of hectares mangrove are planted by Adani Group and where are planted? Provide the detailed information along with the map and with the total amount of money spent.

40. Will the power transmissions line in APSEZ be moved due to AEL's project? Provide more details.

41. The staff required (8 persons) for the Environmental Management Plan of highly polluted Copper Refinery Plant is proper as shown in the EIA report? This pack is a best example of how serious the Adani group is to the pollution issues

1724

42. Will Adani Port staff also look into environmental and pollution issues in this AIL project? Currently, how many staff are there who serves in the Adani Group and also have contributions in all the projects of the group (port, SEZ, power plant etc.)? Is it Possible legally? Provide the name and his eligibility of the APSEZ's environmental officer and head. Put information in the final EIA report.

43. Why no information is given about TOR or any other place about the 30 acres of toxic waste in the chemical plant? Is this plan possible without TOR? Put information in the final EIA report.

44. What will be the effect on coral of Gulf of Kutch and Jamnagar Marine National Park by dissolving sulfuric acid and other toxic gas and other tons of sulfur dioxide gas in the sea water in the direction of air surrounding marine area from 46 Chimneys ? Provide a copy of it if the study is undertaken about this. Put the information in the final EIA report. If the study is not done, then it is a demand to allow the project after studying and giving us a copy of it.

45. Provide us information about how much this plant will increase coral bleaching and marine acidification. By dissolving in moisture, Sulfur dioxide gets converted into sulfuric acid, how much pH will increase by going that into the ocean?

46. Due to the project what will be the increase in global warming?

47. How many billion tons of green house gas will go to Earth's atmosphere by this project? Put information in the final EIA report.

48. Show the plan to reduce the greenhouse gas in final EIA report

49. . Provide in the final EIA report, the details of damage to the sea from the gypsum pond and the waste water that would be thrown out of it.

50. Provide the details of RO reject if it is to be discharge in the sea.

51. Does the GPCB have the instrument to measure toxic gases from air? If GPCB is unable to provide the measurement of pollution, who shall measure the pollution? What is the integrity and reliability of other agencies?

52. Will the industrial treated water for the entire Smelter project be directly or indirectly discharge in the sea? Provide specific reply in yes or no.

53. Will this smelter work on the principle of zero discharge? Therefore provide the further details as to this in the final EIA report at the time of EMP.

54. Will this smelter recycle reuse the entire water? Provide the entire reuse plan and the related final EIA report.

1725

55. The CETP design for treatment of industrial waste water coming out from the entire project is not shown in the EIA. Provide the copy of that particular design.

56. The information or design of the water recycling plant is also not provided. Provide its information.

57. Provide the copy of the details as to proceedings undertaken by company for the recent judgment passed by the Honorable Supreme Court for preliminary treatment of the waste water. Place it under the final EIA report.

The information as for these points has been kept hidden and a serious threat shall be generated for the Gulf of Kutch and Marine National Park along with fisheries. As the loss to people, animal-husbandry, health, environment and country is much more than benefit from the project, it is my submission that the project be abandoned while considering the legal tangles. It is our appeal to abandon this project that gives benefit of crores of rupees to the company against loss of multi crores to the people and government.

Thanking you
Yours faithfully

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેક્ટ સામે વાંધા/વિરોધ દર્શાવવા બાબત રજૂઆત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે અમો અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના ખતરનાક પ્રોજેક્ટ સામે વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજેક્ટને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. AEL કંપનીએ જે જગ્યાએ અદાણી એસઇઝેડની જગ્યા બતાવેલ છે ત્યાં શિરાયા ગામનું આરક્ષિત જંગલ આવેલ છે જેના પર અમારા ગામોનું પશુધન નભે છે અને લોકોની આજીવિકા નિર્ભર છે. આ જંગલ જમીનની માલીકી હજી સુધી ગુજરાત સરકારે કે ભારત સરકારે AEL કે MPSEZને આપેલ નથી. તદ ઉપરાંત શિરાયા ગામનું આરક્ષિત જંગલ અને દદેરી જંગલ પણ સરકારી રેકર્ડ પર ચાલે છે અને સરકારના કબજામાં છે. આમ આ પ્રોજેક્ટમાટે કોઈપણ જમીનની માલિકી AEL નથી. તેમ છતાં MPSEZ ઓથોરીટીએ ખોટી રીતે આ જમીન AELને કોપર રિફાઇનરીના પ્રોજેક્ટ માટે આપી છે તેવી સરકારમાં રજૂઆત કરવામાં આવેલ છે. આમ જમીન માલિકી વગર આ પ્રોજેક્ટ SEZ અને જંગલની જમીન પર આયોજિત છે તેની સામે અમારો વાંધો છે. જો આ જમીન ની માલિકી અદાણી કંપનીની હોય તો તે સરકારી રેકર્ડ ૭-૧૨ વિગેરે અમોને બતાવે. હજી કંપની પાસે જગ્યા નથી અને કંપની પ્લાન્ટ નાખવાની વાત કરે છે જે 'ભેંસ ભાગોળે અને છાસ છાગોળે' કહેવતને અનુરૂપ છે. રિપોર્ટમાં બતાવેલ પ્રોજેક્ટની જગ્યા તો ઘી અને માખણની વાતો કરે છે.
2. અમે આ પ્રોજેક્ટમાં તાંબાની બનાવટ દરમિયાન નિકળનાર ઝેરીલા અને ગંધાતા અનેક પ્રકારના ગેસોને લીધે અમને, અમારા બાળકો પરિવારના આરોગ્યને, અમારા પશુધનને, અમારા વિસ્તારની જીવસૃષ્ટિને અને દરિયાકિનારાને ગંભીર ખતરો હોય અમે આ પ્રોજેક્ટનો સખ્ત વિરોધ કરીએ છીએ. *૪૬ જેટલી 300 ફૂટ ઊંચી મોટી મોટી ચીમનીઓ ૨૪ કલાક ૩૬૫ દિવસ ઝેરીલા વાયુઓ અમારા વિસ્તારમાં ફગાવશે* જે અમારા ગામો પર પથરાઈને અમારા ફેફસા ખરાબ કરી નાખશે. સલ્ફર ડાયોકસાઈડ જેવા વાયુઓ લોખંડ કાટની ઓગાળી નાખે તેવા ઘાતક વાયુઓ છે જે લાખો ટનની માત્રામાં સતત નીકળશે અને ગામો પર ફેલાશે અને અમારા ફેફસા કોરી નાખશે. આવા ભયંકર પ્રોજેક્ટ અમને સોનાનો વિકાસ આપે તો પણ અમારી જાત અને આવનારી પેઢીને પ્યાને રાખી અમને મંજૂર નથી.
3. વિવિધ પ્રકારના અત્યંત ઝેરી અને નુકશાનકારક એસિડો અને સંખ્યાબંધ વાયુઓ નિકળવાથી અમારો સમગ્ર વિસ્તાર કાળો મેષ થઈ જશે. આ પ્રકારના ધાતુઓ બનાવતા પ્લાન્ટને લીધે દેશમાં અનેક જગ્યાએ પર્યાવરણ અને લોકોને પારાવાર નુકશાન થઈ રહ્યાના ઉદાહરણો હાજર હોવાથી અમો આ પ્લાન્ટનો વિરોધ કરીએ છે. આ કંપનીએ બનાવેલ રિપોર્ટમાં અમારા ગામો અને તેમાં રહેતા લોકોની હાજરી બરાબર બતાવેલ નથી. અને ઝેરી વાયુઓથી શું અસર થશે એ પણ લખેલ નથી. તેથી અમે આ વિષે વધુ કહી શકવાની સ્થિતિએ નથી. અમને મળેલ જાણકારી મુજબ આ પ્લાન્ટના ગેસોથી ફેફસા સુકકા પડી જાશે અને ખેતીમાં કૂલો ખરી જાશે. એટલે અમને અમારા આરોગ્ય અને આજીવિકાની ચિંતા છે. જેને ભારત સરકારે યોગ્ય રીતે સમજી વિચારી નિર્ણય લેવો જોઇયે અને લોકોના હિતમાં અમારા ગામો બચાવી લેવા જોઇયે.
4. AEL કંપનીમાંથી તાંબું બનાવવા માટે જે કાચો માલ લાવવામાં આવશે તેમાંથી અડધાથી વધુ કાચામાલનો કચરો નીકળશે દર વર્ષે લગભગ ૮ થી ૧૦ લાખ ટન કચરો (૧ લાખ ખટારા) નીકળશે અને આ કચરો આખા કચ્છ જિલ્લાના વિસ્તારમાં ફેલાશે. અમારા ગામોમાં અમારે ગામ લોકો ભાગવું પડે એવી પરિસ્થિતીનું નિર્માણ થવા જઇ રહ્યું હોય ત્યારે અમોને આ પ્રોજેક્ટ સામે વિરોધ છે.
5. ગામના લોકોને પીવા વાપરવાના પાણીના ફાંફા છે. ત્યારે આટલો મોટો પ્લાન્ટ પાણી ક્યાથી લાવશે અને અબજો લિટર પાણી ક્યાં કેટલે દૂર થી ગામના લોકો માટે રહસ્ય છે. અમોને કંપની જણાવે કે અબજો લિટર પાણી ક્યાથી લાવશે.
6. આ કંપનીમાં 30 એકરનો ઝેરી કચરાને દાટવાનો ઉકરડો પણ બનાવવાનો છે. અમારા ગામો તો આ લાખો ટન કેમિકલ કચરાના ઉકરડાની મરી પરવારશે જેની સરકારે ગંભીર નોંધ લેવી. આ ઉકરડો ક્યારે ખાલી થશે એની કોઇ મર્યાદાજ નથી.
7. અદાણિ અને ટાટાના પાવર પ્લાન્ટને લીધે એમજ અમારા ગામો અને લોકોને હયાત હવાના પ્રદૂષણને આરોગ્યની તકલીફ ત્યારે આ નવુ ભૂત અમારા બાળકો અને અમને ખતમ કરી નાખશે એ નક્કી છે તેથી અમો આ પ્રોજક્તનો વિરોધ કરીએ છીએ. પાવર પ્લાન્ટને લીધે ખારેક અને ખેતીના પાકોમાં ખૂબ મોટું નુકશાન છે હવે આ તાંબાનો નવો ઝેરીલો પ્લાન્ટ અમારા આરોગ્યને વધુ બગાડી શકે એમ હોય અમે વધુ પ્રદૂષણ ફેલાવતા આ પ્લાન્ટનો વિરોધ કરીએ છે.
8. અદાણિ તાંબાની કંપનીમાં સ્થાનિકોને રોજગારી આપવાની વાતો કરી છે. ટાટા અને અદાણીના પાવર પ્લાન્ટ બનાવતી વખતે પણ આવીજ વાતો કરેલ હતી જે આજ સુધી પૂરી નથી થઈ આમ સ્થાનિક લોકોને મરવા સિવાય છૂટકો જ નથી. તેથી અમને આ પ્લાન્ટ ખપે નહીં.
9. આ પ્લાન્ટથી મર્કયુરી એટલે કે ઝેરી ધાતુ પારો નીકળશે અને હવામાં આ ઝેર ફેલાશે નહીં દેખાતી આ ધાતુથી અમોને ધીમું ઝેર આપવાના આ પ્લાન્ટનો અમે અમારા ગામો સિવાય બીજે કયાક જ્યાં માનવ વસ્તી ન હોય ત્યાં નાખવા માટે સરકારને રજૂઆત કરીએ છે.
10. તાંબાની સાથે સોનું ચાંદી પ્લેટિનમ પણ અહિયાં નીકળશે. આ બધી કીમતી ધાતુઓમાંથી અમો ગામ લોકોને કંપની કેટલો હિસ્સો આપશે જેનાથી અમારી દવા દારૂનો ખર્ચ નીકળે. અમારા ભાગની રકમ ટકામાં જણાવવા વિનંતી છે. પેલા ૨૦૦ કરોડના દંડનું શું થયું એ જણાવશો.

આમ અમને આ પ્લાન્ટ અને ઔધોગિક વિકાસની જરૂર નથી. અમો અમારો વિકાસ જાતે કરી લઈશું પણ આવો ઝેરી અને સ્વાસ્થ્યને નુકશાનકારક પ્રોજેક્ટ અમને ખપતો નથી એ અમે સરકાર અને અદાણિ કંપની ને જણાવી છે.

આભાર

Date 29-4-2017

To,
District Collector
KUTCH.

SUB: PETITION TAKING OBJECTION AGAINST COPPER REFINARY PROJECT OF M/S. ADANI ENTERPRISE LIMITED (AEL)

Respected Sir,

We, the undersigned herewith oppose the coming up dangerous copper refinery project of M/s Adani Enterprise Limited. We submit herewith our objection taking petition to your good office with the points shown here under and request you to take suitable action as to with-held the project at the earliest possible:

1) The site shown by M/s. Adani Enterprise Limited (AEL) under the SEZ shown at Siracha village is a reserved forest and the only sustainability source of our cattle resulting in our only livelihood and income source. This land is still not allotted to the M/s. Adani Enterprise Limited (AEL) or MPSEZ and there still exist a forest land on the Government records which include the village Danderi forest land and is in government possession. Thus as on date no land is in the name of M/s. Adani Enterprise Limited (AEL) but the MPSEZ have proceeded for allotment of this land to the above company for its copper refinery project and have reported to the Government accordingly. So we are taking objection for this proposed project by M/s. Adani Enterprise Limited (AEL) without proper sanction. If the land in question is in the possession of M/s. Adani Enterprise Limited (AEL) they should have shown 7/12 extract to us. Thus the company has not acquired required land from Government and yet they are trying to set the project which is ridiculous.
2) We are totally against this project as the project will spread most dangerous toxic gas and stinking smell which is dangerous for the health of our children, cattle and other living elements as well as the sea **as its 300 ft high 46 chimneys will spread toxic gas all over the area 24 hours 365 days.**The Sulphur dioxide can even rust the iron, is a deadly gas which will come out from the plant process in lacs of tons and spread over nearby villages and will damage the lungs. Therefore, such project is not agreeable at any cost to us looking to the future of our generation, even if it contains golden features.
3) It is feared that the entire area will be affected by residue of the plant and will spread black power over the agricultural crops and affect it with acidic and many other gaseous pollution also. There are many examples in the country that such metal plant has damaged the atmosphere by creating pollution in many ways and hence we oppose the same. We have come to know that the plant organizers have not made demographic survey of connecting area and not shown the negative points involved in their proposed project and also not shown the

1728

reactions by toxic gas, We cannot say more due to lack of more scientific knowledge. But we come to know that by this plant's gaseous air pollution there will be effect on flowers of crops and it will not develop naturally to yield the anticipated production quality and quantity. This will affect our livelihood and health naturally which the Indian Government should consider sympathetically and save the villages in the interest of public at large.

4) The company will produce about 50% residue of raw material while making the end product from copper and this residue come to approximately 8-10 lac tons (i.e. 1 lac trucks) and this will affect the entire area of Kutch. In such circumstance there will be no alternate except to leave the village and hence we oppose this project.
5) There is problem of drinking water in our area and it is a question that how the company will manage for water requirement and if managed and what about effluent treatment?
6) We have come to know that they are planning to make an hazardous waste plant for this 30 acre plant which will affect the villages.
7) There are also some problems because of existing power plants in our area by Tata and Adani Group, even though we are going to face a new problem by this new project in the form of hazardous pollution which will affect our children and hence we oppose the project. Due to power plant some agricultural activities like date palm crop are affected but by this project it is sure that gas from copper refinery will affect our health also more make the atmosphere polluted, hence we oppose the project.
8) The company, M/s. Adani Enterprise Limited (AEL) is assuring about local employment butthe earlier companies like Tata group has not fulfilled such promises.
9) We have come to know that there will be residue of mercury and this is a toxic chemical element which will spread in the air, so we are representing our appeal to the Government to please set up such plant in any non-populated area.
10) We have come to know that there are other materials like gold, silver and platinum are also a by-product of the company yet it is useless activity looking the health problem etc.

In view of above we request you to kindly recommend the government to take necessary actions as to cancel this project as we do not need industrial development at the cost of public health.

Thanking you,

Yours faithfully,

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટ સામે વાંધા/વિરોધ દર્શાવવા બાબત રજૂઆત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે અમો અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના ખતરનાક પ્રોજેકટ સામે વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજેકટને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. AEL કંપનીએ જે જગ્યાએ અદાણી એસઇઝેડની જગ્યા બતાવેલ છે ત્યાં શિરાચા ગામનું આરક્ષિત જંગલ આવેલ છે જેના પર અમારા ગામોનું પશુધન નભે છે અને લોકોની આજીવિકા નિર્ભર છે. આ જંગલ જમીનની માલીકી હજી સુધી ગુજરાત સરકારે કે ભારત સરકારે AEL કે MPSEZને આપેલ નથી. તદ ઉપરાંત શિરાચા ગામનું આરક્ષિત જંગલ અને દંદેરી જંગલ પણ સરકારી રેકર્ડ પર ચાલે છે અને સરકારના કબજામાં છે. આમ આ પ્રોજેકટમાટે કોઇપણ જમીનની માલિકી AEL નથી. તેમ છતાં MPSEZ ઓથોરીટીએ ખોટી રીતે આ જમીન AELને કોપર રિફાઇનરીના પ્રોજેકટ માટે આપી છે તેવી સરકારમાં રજૂઆત કરવામાં આવેલ છે. આમ જમીન માલિકી વગર આ પ્રોજેકટ SEZ અને જંગલની જમીન પર આયોજિત છે તેની સામે અમારો વાંધો છે. જો આ જમીન ની માલિકી અદાણી કંપનીની હોય તો તે સરકારી રેકર્ડ ૭-૧૨ વિગેરે અમોને બતાવે. હજી કંપની પાસે જગ્યા નથી અને કંપની પ્લાન્ટ નાખવાની વાત કરે છે જે "ભેંસ ભાગોળે અને છાસ છાગોળે" કહેવતને અનુરૂપ છે. રિપોર્ટમાં બતાવેલ પ્રોજેકટની જગ્યા તો ધી અને માખણની વાતો કરે છે.
2. અમે આ પ્રોજેકટમાં તાંબાની બનાવટ દરમિયાન નિકળનાર ઝેરીલા અને ગંધાતા અનેક પ્રકારના ગેસોને લીધે અમને, અમારા બાળકો પરિવારના આરોગ્યને, અમારા પશુધનને, અમારા વિસ્તારની જીવસૃષ્ટિને અને દરિયાકિનારાને ગંભીર ખતરો હોય અમે આ પ્રોજેકટનો સદંતર વિરોધ કરીએ છીએ. ***૪૬ જેટલી 300 ફૂટ ઊંચી મોટી મોટી ચીમનીઓ ૨૪ કલાક ૩૬૫ દિવસ ઝેરીલા વાયુઓ અમારા વિસ્તારમાં ફગાવશે*** જે અમારા ગામો પર પથરાઈને અમારા ફેફસા ખરાબ કરી નાખશે. સલ્ફર ડાયોકસાઈડ જેવા વાયુઓ લોખંડ ક્ટાવી ઓગાળી નાખે તેવા ઘાતક વાયુઓ છે જે લાખો ટનની માત્રામાં સતત નીકળશે અને ગામો પર ફેલાશે અને અમારા ફેફસા કોરી નાખશે. આવ ભયંકર પ્રોજેકટ અમને સોનાનો વિકાસ આપે તો પણ અમારી જાત અને આવનારી પેઢીને ધ્યાને રાખી અમને મંજૂર નથી.
3. વિવિધ પ્રકારના અત્યંત ઝેરી અને નુકશાનકારક એસિડો અને સંખ્યાબંધ વાયુઓ નિકળવાથી અમારો સમગ્ર વિસ્તાર કાળો મેષ થઈ જશે. આ પ્રકારના ધાતુઓ બનાવતા પ્લાન્ટને લીધે દેશમાં અનેક જગ્યાએ પર્યાવરણ અને લોકોને પારાવાર નુકશાન થઈ રહ્યાના ઉદાહરણો હાજર હોવાથી અમો આ પ્લાન્ટનો વિરોધ કરીએ છે. આ કંપનીએ બનાવેલ રિપોર્ટમાં અમારા ગામો અને તેમાં રહેતા લોકોની હાજરી બરાબર બતાવેલ નથી અને ઝેરી વાયુઓથી શું અસર થશે એ પણ લખેલ નથી. તેથી અમે આ વિષે વધુ કહી શકવાની સ્થિતિએ નથી. અમને મળેલ જાણકારી મુજબ આ પ્લાન્ટના ગેસોથી ફેફસા સુકકા પડી જાશે અને ખેતીમાં ફૂલો ખરી જાશે. એટલે અમને અમારા આરોગ્ય અને આજીવિકાની ચિંતા છે જેને ભારત સરકારે યોગ્ય રીતે સમજી વિચારી નિર્ણય લેવો જોઇએ અને લોકોના હિતમાં અમારા ગામો બચાવી લેવા જોઇએ.
4. AEL કંપનીમાંથી તાંબું બનાવવા માટે જે કાચો માલ લાવવામાં આવશે તેમાંથી અડધાથી વધુ કાચામાલનો કચરો નીકળશે દર વર્ષે લગભગ થી ૧૦ લાખ ટન કચરો (૧ લાખ ખટારા) નીકળશે અને આ કચરો આખા કચ્છ જિલ્લાના વિસ્તારમાં ફેલાશે. અમારા ગામોમાં અમારે ગામ છોડ ભાગવું પડે એવી પરિસ્થિતીનું નિર્માણ થવા જઇ રહ્યું હોય ત્યારે અમોને આ પ્રોજેકટ સામે વિરોધ છે.
5. ગામના લોકોને પીવા વાપરવાના પાણીના ફાંફા છે. ત્યારે આટલો મોટો પ્લાન્ટ પાણી ક્યાથી લાવશે અને અબજો લિટર પાણી ક્યાં ફેકી દેશે ? ગામના લોકો માટે રહસ્ય છે. અમોને કંપની જણાવે કે અબજો લિટર પાણી ક્યાથી લાવશે.
6. આ કંપનીમાં 30 એકરનો ઝેરી કચરાને દાટવાનો ઉકરડો પણ બનાવવાનો છે. અમારા ગામો તો આ લાખો ટન કેમિકલ કચરાના ઉકરડાન મરી પરવારશે જેની સરકારે ગંભીર નોંધ લેવી. આ ઉકરડો ક્યારે ખાલી થશે એની કોઈ મર્યાદાજ નથી.
7. અદાણિ અને ટાટાના પાવર પ્લાન્ટને લીધે એમજ અમારા ગામો અને લોકોને હ્યાત હવાના પ્રદૂષણને આરોગ્યની તકલીફ ત્યારે આ નવું ભૂ અમારા બાળકો અને અમને ખતમ કરી નાખશે એ નક્કી છે તેથી અમો આ પ્રોજક્તનો વિરોધ કરીએ છીએ. પાવર પ્લાન્ટને લીધે ખારેક અ ખેતીના પાકોમાં ખૂબ મોટું નુકશાન છે હવે આ તાંબાનો નવો ઝેરીલો પ્લાન્ટ અમારા આરોગ્યને વધુ બગાડી શકે એમ હોય અમે વધુ પ્રદૂષ ફેલાવતા આ પ્લાન્ટનો વિરોધ કરીએ છે.
8. અદાણિ તાંબાની કંપનીમાં સ્થાનિકોને રોજગારી આપવાની વાતો કરી છે. ટાટા અને અદાણીના પાવર પ્લાન્ટ બનાવતી વખતે પણ આવી વાતો કરેલ હતી જે આજ સુધી પૂરી નથી થઈ આમ સ્થાનિક લોકોને મરવા સિવાય છૂટકો જ નથી. તેથી અમને આ પ્લાન્ટ ખપે નહીં.
9. આ પ્લાન્ટથી મર્કયુરી એટલે કે ઝેરી ધાતુ પારો નીકળશે અને હવામાં આ ઝેર ફેલાશે નહીં દેખાતી આ ધાતુથી અમોને ધીમું ઝેર આપવાના પ્લાન્ટનો અમે અમારા ગામો સિવાય બીજે ક્યાક જ્યાં માનવ વસ્તી ન હોય ત્યાં નાખવા માટે સરકારને રજૂઆત કરીએ છે.
10. તાંબાની સાથે સોનું ચાંદી પ્લેટિનમ પણ અહિયાં નીકળશે. આ બધી કીમતી ધાતુઓમાંથી અમો ગામ લોકોને કંપની કેટલો હિસ્સો આપશે જેનાથી અમારી દવા દારૂનો ખર્ચ નીકળે. અમારા ભાગની રકમ ટકામાં જણાવવા વિનંતી છે. પેલા ૨૦૦ કરોડના દંડનું શું થયું એ જણાવો?

આમ અમને આ પ્લાન્ટ અને ઔધોગિક વિકાસની જરૂર નથી. અમો અમારો વિકાસ જાતે કરી લઈશું પણ આવો ઝેરી અને સ્વાસ્થ્યને નુકશાનકા પ્રોજેકટ અમને ખપતો નથી એ અમે સરકાર અને અદાણિ કંપની ને જણાવી છે.

આભાર

SUB: PETITION TAKING OBJECTION AGAINST COPPER REFINARY PROJECT OF M/S. ADANI ENTERPRISE LIMITED (AEL)

Respected Sir,

We, the undersigned herewith oppose the coming up dangerous copper refinery project of M/s Adani Enterprise Limited. We submit herewith our objection taking petition to your good office with the points shown here under and request you to take suitable action as to with-held the project at the earliest possible:

1) The site shown by M/s. Adani Enterprise Limited (AEL) under the SEZ shown at Siracha village is a reserved forest and the only sustainability source of our cattle resulting in our only livelihood and income source. This land is still not allotted to the M/s. Adani Enterprise Limited (AEL) or MPSEZ and there still exist a forest land on the Government records which include the village Danderi forest land and is in government possession. Thus as on date no land is in the name of M/s. Adani Enterprise Limited (AEL) but the MPSEZ have proceeded for allotment of this land to the above company for its copper refinery project and have reported to the Government accordingly. So we are taking objection for this proposed project by M/s. Adani Enterprise Limited (AEL) without proper sanction. If the land in question is in the possession of M/s. Adani Enterprise Limited (AEL) they should have shown 7/12 extract to us. Thus the company has not acquired required land from Government and yet they are trying to set the project which is ridiculous.
2) We are totally against this project as the project will spread most dangerous toxic gas and stinking smell which is dangerous for the health of our children, cattle and other living elements as well as the sea **as its 300 ft high 46 chimneys will spread toxic gas all over the area 24 hours 365 days.**The Sulphur dioxide can even rust the iron, is a deadly gas which will come out from the plant process in lacs of tons and spread over nearby villages and will damage the lungs. Therefore, such project is not agreeable at any cost to us looking to the future of our generation, even if it contains golden features.
3) It is feared that the entire area will be affected by residue of the plant and will spread black power over the agricultural crops and affect it with acidic and many other gaseous pollution also. There are many examples in the country that such metal plant has damaged the atmosphere by creating pollution in many ways and hence we oppose the same. We have come to know that the plant organizers have not made demographic survey of connecting area and not shown the negative points involved in their proposed project and also not shown the

1731

reactions by toxic gas, We cannot say more due to lack of more scientific knowledge. But we come to know that by this plant's gaseous air pollution there will be effect on flowers of crops and it will not develop naturally to yield the anticipated production quality and quantity. This will affect our livelihood and health naturally which the Indian Government should consider sympathetically and save the villages in the interest of public at large.

4) The company will produce about 50% residue of raw material while making the end product from copper and this residue come to approximately 8-10 lac tons (i.e. 1 lac trucks) and this will affect the entire area of Kutch. In such circumstance there will be no alternate except to leave the village and hence we oppose this project.
5) There is problem of drinking water in our area and it is a question that how the company will manage for water requirement and if managed and what about effluent treatment?
6) We have come to know that they are planning to make an hazardous waste plant for this 30 acre plant which will affect the villages.
7) There are also some problems because of existing power plants in our area by Tata and Adani Group, even though we are going to face a new problem by this new project in the form of hazardous pollution which will affect our children and hence we oppose the project. Due to power plant some agricultural activities like date palm crop are affected but by this project it is sure that gas from copper refinery will affect our health also more make the atmosphere polluted, hence we oppose the project.
8) The company, M/s. Adani Enterprise Limited (AEL) is assuring about local employment butthe earlier companies like Tata group has not fulfilled such promises.
9) We have come to know that there will be residue of mercury and this is a toxic chemical element which will spread in the air, so we are representing our appeal to the Government to please set up such plant in any non-populated area.
10) We have come to know that there are other materials like gold, silver and platinum are also a by-product of the company yet it is useless activity looking the health problem etc.

In view of above we request you to kindly recommend the government to take necessary actions as to cancel this project as we do not need industrial development at the cost of public health.

Thanking you,

Yours faithfully,

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટ સામે વાંધા/વિરોધ દર્શાવવા બાબત રજૂઆત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે અમો અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના ખતરનાક પ્રોજેકટ સામે વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજેકટને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. AEL કંપનીએ જે જગ્યાએ અદાણી એસઇઝેડની જગ્યા બતાવેલ છે ત્યાં શિરાચા ગામનું આરક્ષિત જંગલ આવેલ છે જેના પર અમારા ગામોનું પશુધન નભે છે અને લોકોની આજીવિકા નિર્ભર છે. આ જંગલ જમીનની માલીકી હજી સુધી ગુજરાત સરકારે કે ભારત સરકારે AEL કે MPSEZને આપેલ નથી. તદ ઉપરાંત શિરાચા ગામનું આરક્ષિત જંગલ અને દંદેરી જંગલ પણ સરકારી રેકર્ડ પર ચાલે છે અને સરકારના કબજામાં છે. આમ આ પ્રોજેકટમાટે કોઇપણ જમીનની માલિકી AEL નથી. તેમ છતાં MPSEZ ઓથોરીટીએ ખોટી રીતે આ જમીન AELને કોપર રિફાઇનરીના પ્રોજેકટ માટે આપી છે તેવી સરકારમાં રજૂઆત કરવામાં આવેલ છે. આમ જમીન માલિકી વગર આ પ્રોજેકટ SEZ અને જંગલની જમીન પર આયોજિત છે તેની સામે અમારો વાંધો છે. જો આ જમીન ની માલિકી અદાણી કંપનીની હોય તો તે સરકારી રેકર્ડ ૭-૧૨ વિગેરે અમોને બતાવે. હજી કંપની પાસે જગ્યા નથી અને કંપની પ્લાન્ટ નાખવાની વાત કરે છે જે "લેસ ભાગોળે અને છાસ છાગોળે" કહેવતને અનુરૂપ છે. રિપોર્ટમાં બતાવેલ પ્રોજેકટની જગ્યા તો ઘી અને માખણની વાતો કરે છે.
2. અમે આ પ્રોજેકટમાં તાંબાની બનાવટ દરમિયાન નિકળનાર ઝેરીલા અને ગંધાતા અનેક પ્રકારના ગેસોને લીધે અમને, અમારા બાળકો પરિવારના આરોગ્યને, અમારા પશુધનને, અમારા વિસ્તારની જીવસૃષ્ટિને અને દરિયાકિનારાને ગંભીર ખતરો હોય અમે આ પ્રોજેકટનો સદંતર વિરોધ કરીએ છીએ. ***૪૬ જેટલી 300 ફૂટ ઊંચી મોટી મોટી ચીમનીઓ ૨૪ કલાક ૩૬૫ દિવસ ઝેરીલા વાયુઓ અમારા વિસ્તારમાં ફગાવશે*** જે અમારા ગામો પર પથરાઇને અમારા ફેફસા ખરાબ કરી નાખશે. સલ્ફર ડાયોકસાઇડ જેવા વાયુઓ લોખંડ ક્લાવી ઓગાળી નાખે તેવા ઘાતક વાયુઓ છે જે લાખો ટનની માત્રામાં સતત નીકળશે અને ગામો પર ફેલાશે અને અમારા ફેફસા કોરી નાખશે. આવ ભયંકર પ્રોજેકટ અમને સોનાનો વિકાસ આપે તો પણ અમારી જાત અને આવનારી પેઢીને ધ્યાને રાખી અમને મંજૂર નથી.
3. વિવિધ પ્રકારના અત્યંત ઝેરી અને નુકશાનકારક એસિડો અને સંખ્યાબંધ વાયુઓ નિકળવાથી અમારો સમગ્ર વિસ્તાર કાળો મેષ થઈ જશે. અ પ્રકારના ધાતુઓ બનાવતા પ્લાન્ટને લીધે દેશમાં અનેક જગ્યાએ પર્યાવરણ અને લોકોને પારાવાર નુકશાન થઈ રહ્યાના ઉદાહરણો હાજ હોવાથી અમો આ પ્લાન્ટનો વિરોધ કરીએ છે. આ કંપનીએ બનાવેલ રિપોર્ટમાં અમારા ગામો અને તેમા રહેતા લોકોની હાજરી બરાબર બતાવેલ નથી. અને ઝેરી વાયુઓથી શું અસર થશે એ પણ લખેલ નથી. તેથી અમે આ વિષે વધુ કહી શકવાની સ્થિતિએ નથી. અમને મળેલ જાણકા મુજબ આ પ્લાન્ટના ગેસોથી ફેફસા સુકકા પડી જાશે અને ખેતીમાં ફૂલો ખરી જશે. એટલે અમને અમારા આરોગ્ય અને આજીવિકાની ચિંતા દે જેને ભારત સરકારે યોગ્ય રીતે સમજી વિચારી નિર્ણય લેવો જોઇએ અને લોકોના હિતમાં અમારા ગામો બચાવી લેવા જોઇએ.
4. AEL કંપનીમાંથી તાંબું બનાવવા માટે જે કાચો માલ લાવવામાં આવશે તેમાંથી અડધાથી વધુ કાચામાલનો કચરો નીકળશે દર વર્ષે લગભગ થી ૧૦ લાખ ટન કચરો (૧ લાખ ખટારા) નીકળશે અને આ કચરો આખા કચ્છ જિલ્લાના વિસ્તારમાં ફેલાશે. અમારા ગામોમાં અમારે ગામ છો ભાગવું પડે એવી પરિસ્થિતીનું નિર્માણ થવા જઇ રહ્યું હોય ત્યારે અમોને આ પ્રોજેકટ સામે વિરોધ છે.
5. ગામના લોકોને પીવા વાપરવાના પાણીના ફાંફા છે. ત્યારે આટલો મોટો પ્લાન્ટ પાણી ક્યાથી લાવશે અને અબજો લિટર પાણી ક્યાં ફેકી દેશ ગામના લોકો માટે રહસ્ય છે. અમોને કંપની જણાવે કે અબજો લિટર પાણી ક્યાથી લાવશે.
6. આ કંપનીમાં 30 એકરનો ઝેરી કચરાને દાટવાનો ઉકરડો પણ બનાવવાનો છે. અમારા ગામો તો આ લાખો ટન કેમિકલ કચરાના ઉકરડા મરી પરવારશે જેની સરકારે ગંભીર નોંધ લેવી. આ ઉકરડો ક્યારે ખાલી થશે એની કોઈ મર્યાદાજ નથી.
7. અદાણિ અને ટાટાના પાવર પ્લાન્ટને લીધે એમજ અમારા ગામો અને લોકોને હયાત હવાના પ્રદૂષણને આરોગ્યની તકલીફ ત્યારે આ નવું પ્ર અમારા બાળકો અને અમને ખતમ કરી નાખશે એ નક્કી છે તેથી અમો આ પ્રોજક્તનો વિરોધ કરીએ છીએ. પાવર પ્લાન્ટને લીધે ખારેક અ ખેતીના પાકોમાં ખૂબ મોટું નુકશાન છે હવે આ તાંબાનો નવો ઝેરીલો પ્લાન્ટ અમારા આરોગ્યને વધુ બગાડી શકે એમ હોય અમે વધુ પ્રદૂષ ફેલાવતા આ પ્લાન્ટનો વિરોધ કરીએ છે.
8. અદાણિ તાંબાની કંપનીમાં સ્થાનિકોને રોજગારી આપવાની વાતો કરી છે. ટાટા અને અદાણીના પાવર પ્લાન્ટ બનાવતી વખતે પણ આવ વાતો કરેલ હતી જે આજ સુધી પૂરી નથી થઈ આમ સ્થાનિક લોકોને મરવા સિવાય છૂટકો જ નથી. તેથી અમને આ પ્લાન્ટ ખપે નહીં.
9. આ પ્લાન્ટથી મર્કયુરી એટલે કે ઝેરી ધાતુ પારો નીકળશે અને હવામાં આ ઝેર ફેલાશે નહીં દેખાતી આ ધાતુથી અમોને ધીમું ઝેર આપવાના પ્લાન્ટનો અમે અમારા ગામો સિવાય બીજે ક્યાક જ્યાં માનવ વસ્તી ન હોય ત્યાં નાખવા માટે સરકારને રજૂઆત કરીએ છે.
10. તાંબાની સાથે સોનું ચાંદી પ્લેટિનમ પણ અહિયાં નીકળશે. આ બધી કીમતી ધાતુઓમાંથી અમો ગામ લોકોને કંપની કેટલો હિસ્સો આપ જેનાથી અમારી દવા દારૂનો ખર્ચ નીકળે. અમારા ભાગની રકમ ટકામાં જણાવવા વિનંતી છે. પેલા ૨૦૦ કરોડના દંડનું શું થયું એ જણાવો?

આમ અમને આ પ્લાન્ટ અને ઓધોગિક વિકાસની જરૂર નથી. અમો અમારો વિકાસ જાતે કરી લઈશું પણ આવો ઝેરી અને સ્વાસ્થ્યને નુકશાનકા પ્રોજેકટ અમને ખપતો નથી એ અમે સરકાર અને અદાણિ કંપની ને જણાવી છે.

આભાર

SUB: PETITION TAKING OBJECTION AGAINST COPPER REFINARY PROJECT OF M/S. ADANI ENTERPRISE LIMITED (AEL)

Respected Sir,

We, the undersigned herewith oppose the coming up dangerous copper refinery project of M/s Adani Enterprise Limited. We submit herewith our objection taking petition to your good office with the points shown here under and request you to take suitable action as to with-held the project at the earliest possible:

1) The site shown by M/s. Adani Enterprise Limited (AEL) under the SEZ shown at Siracha village is a reserved forest and the only sustainability source of our cattle resulting in our only livelihood and income source. This land is still not allotted to the M/s. Adani Enterprise Limited (AEL) or MPSEZ and there still exist a forest land on the Government records which include the village Danderi forest land and is in government possession. Thus as on date no land is in the name of M/s. Adani Enterprise Limited (AEL) but the MPSEZ have proceeded for allotment of this land to the above company for its copper refinery project and have reported to the Government accordingly. So we are taking objection for this proposed project by M/s. Adani Enterprise Limited (AEL) without proper sanction. If the land in question is in the possession of M/s. Adani Enterprise Limited (AEL) they should have shown 7/12 extract to us. Thus the company has not acquired required land from Government and yet they are trying to set the project which is ridiculous.
2) We are totally against this project as the project will spread most dangerous toxic gas and stinking smell which is dangerous for the health of our children, cattle and other living elements as well as the sea **as its 300 ft high 46 chimneys will spread toxic gas all over the area 24 hours 365 days.**The Sulphur dioxide can even rust the iron, is a deadly gas which will come out from the plant process in lacs of tons and spread over nearby villages and will damage the lungs. Therefore, such project is not agreeable at any cost to us looking to the future of our generation, even if it contains golden features.
3) It is feared that the entire area will be affected by residue of the plant and will spread black power over the agricultural crops and affect it with acidic and many other gaseous pollution also. There are many examples in the country that such metal plant has damaged the atmosphere by creating pollution in many ways and hence we oppose the same. We have come to know that the plant organizers have not made demographic survey of connecting area and not shown the negative points involved in their proposed project and also not shown the

1734

reactions by toxic gas, We cannot say more due to lack of more scientific knowledge. But we come to know that by this plant's gaseous air pollution there will be effect on flowers of crops and it will not develop naturally to yield the anticipated production quality and quantity. This will affect our livelihood and health naturally which the Indian Government should consider sympathetically and save the villages in the interest of public at large.

4) The company will produce about 50% residue of raw material while making the end product from copper and this residue come to approximately 8-10 lac tons (i.e. 1 lac trucks) and this will affect the entire area of Kutch. In such circumstance there will be no alternate except to leave the village and hence we oppose this project.
5) There is problem of drinking water in our area and it is a question that how the company will manage for water requirement and if managed and what about effluent treatment?
6) We have come to know that they are planning to make an hazardous waste plant for this 30 acre plant which will affect the villages.
7) There are also some problems because of existing power plants in our area by Tata and Adani Group, even though we are going to face a new problem by this new project in the form of hazardous pollution which will affect our children and hence we oppose the project. Due to power plant some agricultural activities like date palm crop are affected but by this project it is sure that gas from copper refinery will affect our health also more make the atmosphere polluted, hence we oppose the project.
8) The company, M/s. Adani Enterprise Limited (AEL) is assuring about local employment butthe earlier companies like Tata group has not fulfilled such promises.
9) We have come to know that there will be residue of mercury and this is a toxic chemical element which will spread in the air, so we are representing our appeal to the Government to please set up such plant in any non-populated area.
10) We have come to know that there are other materials like gold, silver and platinum are also a by-product of the company yet it is useless activity looking the health problem etc.

In view of above we request you to kindly recommend the government to take necessary actions as to cancel this project as we do not need industrial development at the cost of public health.

Thanking you,

Yours faithfully,

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટ સામે વાંધા/વિરોધ દર્શાવવા બાબત રજૂઆત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે અમો અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના ખતરનાક પ્રોજેકટ સામે વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજકેટને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. AEL કંપનીએ જે જગ્યાએ અદાણી એસઇઝેડની જગ્યા બતાવેલ છે ત્યાં શિરાચા ગામનું આરક્ષિત જંગલ આવેલ છે જેના પર અમારા ગામોનું પશુધન નભે છે અને લોકોની આજીવિકા નિર્ભર છે. આ જંગલ જમીનની માલીકી હજી સુધી ગુજરાત સરકારે કે ભારત સરકારે AEL કે MPSEZને આપેલ નથી. તદ ઉપરાંત શિરાચા ગામનું આરક્ષિત જંગલ અને દંદેરી જંગલ પણ સરકારી રેકર્ડ પર ચાલે છે અને સરકારના કબજામાં છે. આમ આ પ્રોજેકટમાટે કોઈપણ જમીનની માલિકી AEL નથી. તેમ છતાં MPSEZ ઓથોરીટીએ ખોટી રીતે આ જમીન AELને કોપર રિફાઇનરીના પ્રોજેકટ માટે આપી છે તેવી સરકારમાં રજૂઆત કરવામાં આવેલ છે. આમ જમીન માલિકી વગર આ પ્રોજેકટ SEZ અને જંગલની જમીન પર આયોજિત છે તેની સામે અમારો વાંધો છે. જો આ જમીન ની માલિકી અદાણી કંપનીની હોય તો તે સરકારી રેકર્ડ ૭-૧૨ વિગેરે અમોને બતાવે. હજી કંપની પાસે જગ્યા નથી અને કંપની પ્લાન્ટ નાખવાની વાત કરે છે જે "ભેંસ ભાગોળે અને છાસ છાગોળે" કહેવતને અનુરૂપ છે. રિપોર્ટમાં બતાવેલ પ્રોજેકટની જગ્યા તો ઘી અને માખણની વાતો કરે છે.
2. અમે આ પ્રોજેકટમાં તાંબાની બનાવટ દરમિયાન નિકળનાર ઝેરીલા અને ગંધાતા અનેક પ્રકારના ગેસોને લીધે અમને, અમારા બાળકો પરિવારના આરોગ્યને, અમારા પશુધનને, અમારા વિસ્તારની જીવસૃષ્ટિને અને દરિયાકિનારાને ગંભીર ખતરો હોય અમે આ પ્રોજેકટનો સદંતર વિરોધ કરીએ છીએ. ***૪૬ જેટલી 300 ફૂટ ઊંચી મોટી મોટી ચીમનીઓ ૨૪ કલાક ૩૬૫ દિવસ ઝેરીલા વાયુઓ અમારા વિસ્તારમાં ફગાવશે*** જે અમારા ગામો પર પથરાઇને અમારા ફેફસા ખરાબ કરી નાખશે. સલ્ફર ડાયોકસાઈડ જેવા વાયુઓ લોખંડ ક્ટાવી ઓગાળી નાખે તેવા ઘાતક વાયુઓ છે જે લાખો ટનની માત્રામાં સતત નીકળશે અને ગામો પર ફેલાશે અને અમારા ફેફસા કોરી નાખશે. આવ ભયંકર પ્રોજેકટ અમને સોનાનો વિકાસ આપે તો પણ અમારી જાત અને આવનારી પેઢીને ધ્યાને રાખી અમને મંજૂર નથી.
3. વિવિધ પ્રકારના અત્યંત ઝેરી અને નુકશાનકારક એસિડો અને સંખ્યાબંધ વાયુઓ નિકળવાથી અમારો સમગ્ર વિસ્તાર કાળો મેષ થઈ જશે. અ પ્રકારના ધાતુઓ બનાવતા પ્લાન્ટને લીધે દેશમાં અનેક જગ્યાએ પર્યાવરણ અને લોકોને પારાવાર નુકશાન થઈ રહ્યાના ઉદાહરણો હાજ હોવાથી અમો આ પ્લાન્ટનો વિરોધ કરીએ છે. આ કંપનીએ બનાવેલ રિપોર્ટમાં અમારા ગામો અને તેમાં રહેતા લોકોની હાજરી બરાબર બતાવેલ નથી. અને ઝેરી વાયુઓથી શું અસર થશે એ પણ લખેલ નથી. તેથી અમે આ વિષે વધુ કહી શકવાની સ્થિતિએ નથી. અમને મળેલ જાણકાર મુજબ આ પ્લાન્ટના ગેસોથી ફેફસા સુકકા પડી જાશે અને ખેતીમાં ફૂલો ખરી જાશે. એટલે અમને અમારા આરોગ્ય અને આજીવિકાની ચિંતા દે જેને ભારત સરકારે યોગ્ય રીતે સમજી વિચારી નિર્ણય લેવો જોઇયે અને લોકોના હિતમાં અમારા ગામો બચાવી લેવા જોઇયે.
4. AEL કંપનીમાંથી તાંબું બનાવવા માટે જે કાચો માલ લાવવામાં આવશે તેમાંથી અડધાથી વધુ કાચામાલનો કચરો નીકળશે દર વર્ષે લગભગ થી ૧૦ લાખ ટન કચરો (૧ લાખ ખટારા) નીકળશે અને આ કચરો આખા કચ્છ જિલ્લાના વિસ્તારમાં ફેલાશે. અમારા ગામોમાં અમારે ગામ છો ભાગવું પડે એવી પરિસ્થિતીનું નિર્માણ થવા જઇ રહ્યું હોય ત્યારે અમોને આ પ્રોજેકટ સામે વિરોધ છે.
5. ગામના લોકોને પીવા વાપરવાના પાણીના ફાંફા છે. ત્યારે આટલો મોટો પ્લાન્ટ પાણી ક્યાથી લાવશે અને અબજો લિટર પાણી ક્યાં ફેકી દેશે ગામના લોકો માટે રહસ્ય છે. અમોને કંપની જણાવે કે અબજો લિટર પાણી ક્યાથી લાવશે.
6. આ કંપનીમાં 30 એકરનો ઝેરી કચરાને દાટવાનો ઉકરડો પણ બનાવવાનો છે. અમારા ગામો તો આ લાખો ટન કેમિકલ કચરાના ઉકરડા મરી પરવારશે જેની સરકારે ગંભીર નોંધ લેવી. આ ઉકરડો ક્યારે ખાલી થશે એની કોઈ મર્યાદાજ નથી.
7. અદાણિ અને ટાટાના પાવર પ્લાન્ટને લીધે એમજ અમારા ગામો અને લોકોને હયાત હવાના પ્રદૂષણને આરોગ્યની તકલીફ ત્યારે આ નવું પ્ર અમારા બાળકો અને અમને ખતમ કરી નાખશે એ નક્કી છે તેથી અમો આ પ્રોજક્તનો વિરોધ કરીએ છીએ. પાવર પ્લાન્ટને લીધે ખારેક અ ખેતીના પાકોમાં ખૂબ મોટું નુકશાન છે હવે આ તાંબાનો નવો ઝેરીલો પ્લાન્ટ અમારા આરોગ્યને વધુ બગાડી શકે એમ હોય અમે વધુ પ્રદૂષ ફેલાવતા આ પ્લાન્ટનો વિરોધ કરીએ છે.
8. અદાણિ તાંબાની કંપનીમાં સ્થાનિકોને રોજગારી આપવાની વાતો કરી છે. ટાટા અને અદાણીના પાવર પ્લાન્ટ બનાવતી વખતે પણ આવ વાતો કરેલ હતી જે આજ સુધી પૂરી નથી થઈ આમ સ્થાનિક લોકોને મરવા સિવાય છૂટકો જ નથી. તેથી અમને આ પ્લાન્ટ ખપે નહીં.
9. આ પ્લાન્ટથી મર્કયુરી એટલે કે ઝેરી ધાતુ પારો નીકળશે અને હવામાં આ ઝેર ફેલાશે નહીં દેખાતી આ ધાતુથી અમોને ધીમું ઝેર આપવાના પ્લાન્ટનો અમે અમારા ગામો સિવાય બીજે ક્યાક જ્યાં માનવ વસ્તી ન હોય ત્યાં નાખવા માટે સરકારને રજૂઆત કરીએ છે.
10. તાંબાની સાથે સોનું ચાંદી પ્લેટિનમ પણ અહિયાં નીકળશે. આ બધી કીમતી ધાતુઓમાંથી અમો ગામ લોકોને કંપની કેટલો હિસ્સો આપ જેનાથી અમારી દવા દારૂનો ખર્ચ નીકળે. અમારા ભાગની રકમ ટકામાં જણાવવા વિનંતી છે. પેલા ૨૦૦ કરોડના દંડનું શું થયું એ જણાવો?

આમ અમને આ પ્લાન્ટ અને ઔધોગિક વિકાસની જરૂર નથી. અમો અમારો વિકાસ જાતે કરી લઈશું પણ આવો ઝેરી અને સ્વાસ્થ્યને નુકશાનકા પ્રોજેકટ અમને ખપતો નથી એ અમે સરકાર અને અદાણિ કંપની ને જણાવી છે.

આભાર

SUB: PETITION TAKING OBJECTION AGAINST COPPER REFINARY PROJECT OF M/S. ADANI ENTERPRISE LIMITED (AEL)

Respected Sir,

We, the undersigned herewith oppose the coming up dangerous copper refinery project of M/s Adani Enterprise Limited. We submit herewith our objection taking petition to your good office with the points shown here under and request you to take suitable action as to with-held the project at the earliest possible:

1) The site shown by M/s. Adani Enterprise Limited (AEL) under the SEZ shown at Siracha village is a reserved forest and the only sustainability source of our cattle resulting in our only livelihood and income source. This land is still not allotted to the M/s. Adani Enterprise Limited (AEL) or MPSEZ and there still exist a forest land on the Government records which include the village Danderi forest land and is in government possession. Thus as on date no land is in the name of M/s. Adani Enterprise Limited (AEL) but the MPSEZ have proceeded for allotment of this land to the above company for its copper refinery project and have reported to the Government accordingly. So we are taking objection for this proposed project by M/s. Adani Enterprise Limited (AEL) without proper sanction. If the land in question is in the possession of M/s. Adani Enterprise Limited (AEL) they should have shown 7/12 extract to us. Thus the company has not acquired required land from Government and yet they are trying to set the project which is ridiculous.
2) We are totally against this project as the project will spread most dangerous toxic gas and stinking smell which is dangerous for the health of our children, cattle and other living elements as well as the sea **as its 300 ft high 46 chimneys will spread toxic gas all over the area 24 hours 365 days.**The Sulphur dioxide can even rust the iron, is a deadly gas which will come out from the plant process in lacs of tons and spread over nearby villages and will damage the lungs. Therefore, such project is not agreeable at any cost to us looking to the future of our generation, even if it contains golden features.
3) It is feared that the entire area will be affected by residue of the plant and will spread black power over the agricultural crops and affect it with acidic and many other gaseous pollution also. There are many examples in the country that such metal plant has damaged the atmosphere by creating pollution in many ways and hence we oppose the same. We have come to know that the plant organizers have not made demographic survey of connecting area and not shown the negative points involved in their proposed project and also not shown the

1737

reactions by toxic gas, We cannot say more due to lack of more scientific knowledge. But we come to know that by this plant's gaseous air pollution there will be effect on flowers of crops and it will not develop naturally to yield the anticipated production quality and quantity. This will affect our livelihood and health naturally which the Indian Government should consider sympathetically and save the villages in the interest of public at large.

4) The company will produce about 50% residue of raw material while making the end product from copper and this residue come to approximately 8-10 lac tons (i.e. 1 lac trucks) and this will affect the entire area of Kutch. In such circumstance there will be no alternate except to leave the village and hence we oppose this project.
5) There is problem of drinking water in our area and it is a question that how the company will manage for water requirement and if managed and what about effluent treatment?
6) We have come to know that they are planning to make an hazardous waste plant for this 30 acre plant which will affect the villages.
7) There are also some problems because of existing power plants in our area by Tata and Adani Group, even though we are going to face a new problem by this new project in the form of hazardous pollution which will affect our children and hence we oppose the project. Due to power plant some agricultural activities like date palm crop are affected but by this project it is sure that gas from copper refinery will affect our health also more make the atmosphere polluted, hence we oppose the project.
8) The company, M/s. Adani Enterprise Limited (AEL) is assuring about local employment butthe earlier companies like Tata group has not fulfilled such promises.
9) We have come to know that there will be residue of mercury and this is a toxic chemical element which will spread in the air, so we are representing our appeal to the Government to please set up such plant in any non-populated area.
10) We have come to know that there are other materials like gold, silver and platinum are also a by-product of the company yet it is useless activity looking the health problem etc.

In view of above we request you to kindly recommend the government to take necessary actions as to cancel this project as we do not need industrial development at the cost of public health.

Thanking you,

Yours faithfully,

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટ સામે વાંધા/વિરોધ દર્શાવવા બાબત રજૂઆત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે અમો અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના ખતરનાક પ્રોજેકટ સામે વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજેકટને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. AEL કંપનીએ જે જગ્યાએ અદાણી એસઇઝેડની જગ્યા બતાવેલ છે ત્યાં શિરાચા ગામનું આરક્ષિત જંગલ આવેલ છે જેના પર અમારા ગામોનું પશુધન નભે છે અને લોકોની આજીવિકા નિર્ભર છે. આ જંગલ જમીનની માલીકી હજી સુધી ગુજરાત સરકારે કે ભારત સરકારે AEL કે MPSEZને આપેલ નથી. તદ ઉપરાંત શિરાચા ગામનું આરક્ષિત જંગલ અને દંદેરી જંગલ પણ સરકારી રેકર્ડ પર ચાલે છે અને સરકારના કબજામાં છે. આમ આ પ્રોજેકટમાટે કોઈપણ જમીનની માલિકી AEL નથી. તેમ છતાં MPSEZ ઓથોરીટીએ ખોટી રીતે આ જમીન AELને કોપર રિફાઇનરીના પ્રોજેકટ માટે આપી છે તેવી સરકારમાં રજૂઆત કરવામાં આવેલ છે. આમ જમીન માલિકી વગર આ પ્રોજેકટ SEZ અને જંગલની જમીન પર આયોજિત છે તેની સામે અમારો વાંધો છે. જો આ જમીન ની માલિકી અદાણી કંપનીની હોય તો તે સરકારી રેકર્ડ ૭-૧૨ વિગેરે અમોને બતાવે. હજી કંપની પાસે જગ્યા નથી અને કંપની પ્લાન્ટ નાખવાની વાત કરે છે જે "ભેસ ભાંગોળે અને છાસ છાગોળે" કહેવતને અનુરૂપ છે. રિપોર્ટમાં બતાવેલ પ્રોજેકટની જગ્યા તો ઘી અને માખણની વાતો કરે છે.
2. અમે આ પ્રોજેકટમાં તાંબાની બનાવટ દરમિયાન નિકળનાર ઝેરીલા અને ગંધાતા અનેક પ્રકારના ગેસોને લીધે અમને, અમારા બાળકો પરિવારના આરોગ્યને, અમારા પશુધનને, અમારા વિસ્તારની જીવસૃષ્ટિને અને દરિયાકિનારાને ગંભીર ખતરો હોય અમે આ પ્રોજેકટનો સદંતર વિરોધ કરીએ છીએ. ***૪૬ જેટલી ૩૦૦ ફૂટ ઊંચી મોટી મોટી ચીમનીઓ ૨૪ કલાક ૩૬૫ દિવસ ઝેરીલા વાયુઓ અમારા વિસ્તારમાં ફગાવશે*** જે અમારા ગામો પર પથરાઈને અમારા ફેફસા ખરાબ કરી નાખશે. સલ્ફર ડાયોકસાઈડ જેવા વાયુઓ લોખંડ ક્ટાવી ઓગાળી નાખે તેવા ઘાતક વાયુઓ છે જે લાખો ટનની માત્રામાં સતત નીકળશે અને ગામો પર ફેલાશે અને અમારા ફેફસા કોરી નાખશે. આવ ભયંકર પ્રોજેકટ અમને સોનાનો વિકાસ આપે તો પણ અમારી જાત અને આવનારી પેઢીને ધ્યાને રાખી અમને મંજૂર નથી.
3. વિવિધ પ્રકારના અત્યંત ઝેરી અને નુકશાનકારક એસિડો અને સંખ્યાબંધ વાયુઓ નિકળવાથી અમારો સમગ્ર વિસ્તાર કાળો મેષ થઈ જશે. આ પ્રકારના ધાતુઓ બનાવતા પ્લાન્ટને લીધે દેશમાં અનેક જગ્યાએ પર્યાવરણ અને લોકોને પારાવાર નુકશાન થઈ રહ્યાના ઉદાહરણો હાજર હોવાથી અમો આ પ્લાન્ટનો વિરોધ કરીએ છે. આ કંપનીએ બનાવેલ રિપોર્ટમાં અમારા ગામો અને તેમાં રહેતા લોકોની હાજરી બરાબર બતાવેલ નથી. અને ઝેરી વાયુઓથી શું અસર થશે એ પણ લખેલ નથી. તેથી અમે આ વિષે વધુ કહી શકવાની સ્થિતિએ નથી. અમને મળેલ જાણકારી મુજબ આ પ્લાન્ટના ગેસોથી ફેફસા સુકકા પડી જશે અને ખેતીમાં ફૂલો ખરી જશે. એટલે અમને અમારા આરોગ્ય અને આજીવિકાની ચિંતા છે જેને ભારત સરકારે યોગ્ય રીતે સમજી વિચારી નિર્ણય લેવો જોઇએ અને લોકોના હિતમાં અમારા ગામો બચાવી લેવા જોઇએ.
4. AEL કંપનીમાંથી તાંબુ બનાવવા માટે જે કાચો માલ લાવવામાં આવશે તેમાથી અડધાથી વધુ કાચામાલનો કચરો નીકળશે દર વર્ષે લગભગ થી ૧૦ લાખ ટન કચરો (૧ લાખ ખટારા) નીકળશે અને આ કચરો આખા કચ્છ જિલ્લાના વિસ્તારમાં ફેલાશે. અમારા ગામોમાં અમારે ગામ છોડ ભાગવું પડે એવી પરિસ્થિતીનું નિર્માણ થવા જઇ રહ્યું હોય ત્યારે અમોને આ પ્રોજેકટ સામે વિરોધ છે.
5. ગામના લોકોને પીવા વાપરવાના પાણીના ફાફા છે. ત્યારે આટલો મોટો પ્લાન્ટ પાણી ક્યાથી લાવશે અને અબજો લિટર પાણી ક્યાં ફેકી દેશ ગામના લોકો માટે રહસ્ય છે. અમોને કંપની જણાવે કે અબજો લિટર પાણી ક્યાથી લાવશે.
6. આ કંપનીમાં 30 એકરનો ઝેરી કચરાને દાટવાનો ઉકરડો પણ બનાવવાનો છે. અમારા ગામો તો આ લાખો ટન કેમિકલ કચરાના ઉકરડાઓ મરી પરવારશે જેની સરકારે ગંભીર નોંધ લેવી. આ ઉકરડો ક્યારે ખાલી થશે એની કોઈ મર્યાદાજ નથી.
7. અદાણિ અને ટાટાના પાવર પ્લાન્ટને લીધે એમજ અમારા ગામો અને લોકોને હયાત હવાના પ્રદૂષણને આરોગ્યની તકલીફ ત્યારે આ નવું ભ અમારા બાળકો અને અમને ખતમ કરી નાખશે એ નક્કી છે તેથી અમો આ પ્રોજક્તનો વિરોધ કરીએ છીએ. પાવર પ્લાન્ટને લીધે ખારેક અ ખેતીના પાકોમાં ખૂબ મોટું નુકશાન છે હવે આ તાંબાનો નવો ઝેરીલો પ્લાન્ટ અમારા આરોગ્યને વધુ બગાડી શકે એમ હોય અમે વધુ પ્રદૂષ ફેલાવતા આ પ્લાન્ટનો વિરોધ કરીએ છે.
8. અદાણિ તાંબાની કંપનીમાં સ્થાનિકોને રોજગારી આપવાની વાતો કરી છે. ટાટા અને અદાણીના પાવર પ્લાન્ટ બનાવતી વખતે પણ આવી વાતો કરેલ હતી જે આજ સુધી પૂરી નથી થઇ આમ સ્થાનિક લોકોને મરવા સિવાય છૂટકો જ નથી. તેથી અમને આ પ્લાન્ટ ખપે નહીં.
9. આ પ્લાન્ટથી મર્કયુરી એટલે કે ઝેરી ધાતુ પારો નીકળશે અને હવામાં આ ઝેર ફેલાશે નહીં દેખાતી આ ધાતુથી અમોને ધીમું ઝેર આપવાના પ્લાન્ટનો અમે અમારા ગામો સિવાય બીજે ક્યાક જ્યાં માનવ વસ્તી ન હોય ત્યાં નાખવા માટે સરકારને રજૂઆત કરીએ છે.
10. તાંબાની સાથે સોનું ચાંદી પ્લેટિનમ પણ અહિયાં નીકળશે. આ બધી કીમતી ધાતુઓમાંથી અમો ગામ લોકોને કંપની કેટલો હિસ્સો આપશે જેનાથી અમારી દવા દારૂનો ખર્ચ નીકળે. અમારા ભાગની રકમ ટકામાં જણાવવા વિનંતી છે. પેલા ૨૦૦ કરોડના દંડનું શું થયું એ જણાવો?

આમ અમને આ પ્લાન્ટ અને ઔધોગિક વિકાસની જરૂર નથી. અમો અમારો વિકાસ જાતે કરી લઈશું પણ આવો ઝેરી અને સ્વાસ્થ્યને નુકશાનકા પ્રોજેકટ અમને ખપતો નથી એ અમે સરકાર અને અદાણિ કંપની ને જણાવી છે.

આભાર

SUB: PETITION TAKING OBJECTION AGAINST COPPER REFINARY PROJECT OF M/S. ADANI ENTERPRISE LIMITED (AEL)

Respected Sir,

We, the undersigned herewith oppose the coming up dangerous copper refinery project of M/s Adani Enterprise Limited. We submit herewith our objection taking petition to your good office with the points shown here under and request you to take suitable action as to with-held the project at the earliest possible:

1) The site shown by M/s. Adani Enterprise Limited (AEL) under the SEZ shown at Siracha village is a reserved forest and the only sustainability source of our cattle resulting in our only livelihood and income source. This land is still not allotted to the M/s. Adani Enterprise Limited (AEL) or MPSEZ and there still exist a forest land on the Government records which include the village Danderi forest land and is in government possession. Thus as on date no land is in the name of M/s. Adani Enterprise Limited (AEL) but the MPSEZ have proceeded for allotment of this land to the above company for its copper refinery project and have reported to the Government accordingly. So we are taking objection for this proposed project by M/s. Adani Enterprise Limited (AEL) without proper sanction. If the land in question is in the possession of M/s. Adani Enterprise Limited (AEL) they should have shown 7/12 extract to us. Thus the company has not acquired required land from Government and yet they are trying to set the project which is ridiculous.
2) We are totally against this project as the project will spread most dangerous toxic gas and stinking smell which is dangerous for the health of our children, cattle and other living elements as well as the sea **as its 300 ft high 46 chimneys will spread toxic gas all over the area 24 hours 365 days.** The Sulphur dioxide can even rust the iron, is a deadly gas which will come out from the plant process in lacs of tons and spread over nearby villages and will damage the lungs. Therefore, such project is not agreeable at any cost to us looking to the future of our generation, even if it contains golden features.
3) It is feared that the entire area will be affected by residue of the plant and will spread black power over the agricultural crops and affect it with acidic and many other gaseous pollution also. There are many examples in the country that such metal plant has damaged the atmosphere by creating pollution in many ways and hence we oppose the same. We have come to know that the plant organizers have not made demographic survey of connecting area and not shown the negative points involved in their proposed project and also not shown the reactions by toxic gas, We cannot say more due to lack of more scientific knowledge. But we come to know that by this plant's gaseous air pollution there will be effect on flowers of crops and it will not develop naturally to yield the anticipated

1740

production quality and quantity. This will affect our livelihood and health naturally which the Indian Government should consider sympathetically and save the villages in the interest of public at large.

4) The company will produce about 50% residue of raw material while making the end product from copper and this residue come to approximately 8-10 lac tons (i.e. 1 lac trucks) and this will affect the entire area of Kutch. In such circumstance there will be no alternate except to leave the village and hence we oppose this project.
5) There is problem of drinking water in our area and it is a question that how the company will manage for water requirement and if managed and what about effluent treatment?
6) We have come to know that they are planning to make an hazardous waste plant for this 30 acre plant which will affect the villages.
7) There are also some problems because of existing power plants in our area by Tata and Adani Group, even though we are going to face a new problem by this new project in the form of hazardous pollution which will affect our children and hence we oppose the project. Due to power plant some agricultural activities like date palm crop are affected but by this project it is sure that gas from copper refinery will affect our health also more make the atmosphere polluted, hence we oppose the project.
8) The company, M/s. Adani Enterprise Limited (AEL) is assuring about local employment butthe earlier companies like Tata group has not fulfilled such promises.
9) We have come to know that there will be residue of mercury and this is a toxic chemical element which will spread in the air, so we are representing our appeal to the Government to please set up such plant in any non-populated area.
10) We have come to know that there are other materials like gold, silver and platinum are also a by-product of the company yet it is useless activity looking the health problem etc.

In view of above we request you to kindly recommend the government to take necessary actions as to cancel this project as we do not need industrial development at the cost of public health.

Thanking you,

Yours faithfully,

કચ્છ.

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટ સામે વાંધા/વિરોધ દર્શાવવા બાબત રજૂઆત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે અમો અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના ખતરનાક પ્રોજેકટ સામે વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજેકટને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. AEL કંપનીએ જે જગ્યાએ અદાણી એસઇઝેડની જગ્યા બતાવેલ છે ત્યાં શિરાચા ગામનું આરક્ષિત જંગલ આવેલ છે જેના પર અમારા ગામોનું પશુધન નભે છે અને લોકોની આજીવિકા નિર્ભર છે. આ જંગલ જમીનની માલીકી હજી સુધી ગુજરાત સરકારે કે ભારત સરકારે AEL કે MPSEZને આપેલ નથી. તદ ઉપરાંત શિરાચા ગામનું આરક્ષિત જંગલ અને દદેરી જંગલ પણ સરકારી રેકર્ડ પર ચાલે છે અને સરકારના કબજામાં છે. આમ આ પ્રોજેકટમાટે કોઇપણ જમીનની માલિકી AEL નથી. તેમ છતાં MPSEZ ઓથોરીટીએ ખોટી રીતે આ જમીન AELને કોપર રિફાઇનરીના પ્રોજેકટ માટે આપી છે તેવી સરકારમાં રજૂઆત કરવામાં આવેલ છે. આમ જમીન માલિકી વગર આ પ્રોજેકટ SEZ અને જંગલની જમીન પર આયોજિત છે તેની સામે અમારો વાંધો છે. જો આ જમીન ની માલિકી અદાણી કંપનીની હોય તો તે સરકારી રેકર્ડ ૭-૧૨ વિગેરે અમોને બતાવે. હજી કંપની પાસે જગ્યા નથી અને કંપની પ્લાન્ટ નાખવાની વાત કરે છે જે "લેંસ ભાગોળે અને છાસ છાગોળે" કહેવતને અનુરૂપ છે. રિપોર્ટમાં બતાવેલ પ્રોજેકટની જગ્યા તો ઘી અને માખણની વાતો કરે છે.
2. અમે આ પ્રોજેકટમાં તાંબાની બનાવટ દરમિયાન નિકળનાર ઝેરીલા અને ગંધાતા અનેક પ્રકારના ગેસોને લીધે અમને, અમારા બાળકો પરિવારના આરોગ્યને, અમારા પશુધનને, અમારા વિસ્તારની જીવસૃષ્ટિને અને દરિયાકિનારાને ગંભીર ખતરો હોય અમે આ પ્રોજેકટનો સદંતર વિરોધ કરીએ છીએ. ***૪૬ જેટલી 300 ફૂટ ઉંચી મોટી મોટી ચીમનીઓ ૨૪ કલાક ૩૬૫ દિવસ ઝેરીલા વાયુઓ અમારા વિસ્તારમાં ફગાવશે*** જે અમારા ગામો પર પથરાઈને અમારા ફેફસા ખરાબ કરી નાખશે. સલ્ફર ડાયોકસાઈડ જેવા વાયુઓ લોખંડ ક્ટાવી ઓગાળી નાખે તેવા ઘાતક વાયુઓ છે જે લાખો ટનની માત્રામાં સતત નીકળશે અને ગામો પર ફેલાશે અને અમારા ફેફસા કોરી નાખશે. આવ ભયંકર પ્રોજેકટ અમને સોનાનો વિકાસ આપે તો પણ અમારી જાત અને આવનારી પેઢીને ધ્યાને રાખી અમને મંજૂર નથી.
3. વિવિધ પ્રકારના અત્યંત ઝેરી અને નુકશાનકારક એસિડો અને સંખ્યાબંધ વાયુઓ નિકળવાથી અમારો સમગ્ર વિસ્તાર કાળો મેષ થઈ જશે. અ પ્રકારના ધાતુઓ બનાવતા પ્લાન્ટને લીધે દેશમાં અનેક જગ્યાએ પર્યાવરણ અને લોકોને પારાવાર નુકશાન થઈ રહ્યાના ઉદાહરણો હજ હોવાથી અમો આ પ્લાન્ટનો વિરોધ કરીએ છે. આ કંપનીએ બનાવેલ રિપોર્ટમાં અમારા ગામો અને તેમાં રહેતા લોકોની હાજરી બરાબર બતાવે નથી. અને ઝેરી વાયુઓથી શું અસર થશે એ પણ લખેલ નથી. તેથી અમે આ વિષે વધુ કહી શકવાની સ્થિતિએ નથી. અમને મળેલ જાણકા મુજબ આ પ્લાન્ટના ગેસોથી ફેફસા સુકકા પડી જાશે અને ખેતીમાં ફૂલો ખરી જાશે. એટલે અમને અમારા આરોગ્ય અને આજીવિકાની ચિંતા છે જેને ભારત સરકારે યોગ્ય રીતે સમજી વિચારી નિર્ણય લેવો જોઇયે અને લોકોના હિતમાં અમારા ગામો બચાવી લેવા જોઇયે.
4. AEL કંપનીમાંથી તાંબું બનાવવા માટે જે કાચો માલ લાવવામાં આવશે તેમાંથી અડધાથી વધુ કાચામાલનો કચરો નીકળશે દર વર્ષે લગભગ થી ૧૦ લાખ ટન કચરો (૧ લાખ ખટારા) નીકળશે અને આ કચરો આખા કચ્છ જિલ્લાના વિસ્તારમાં ફેલાશે. અમારા ગામોમાં અમારે ગામ છો ભાગવું પડે એવી પરિસ્થિતીનું નિર્માણ થવા જઇ રહ્યું હોય ત્યારે અમોને આ પ્રોજેકટ સામે વિરોધ છે.
5. ગામના લોકોને પીવા વાપરવાના પાણીના ફાફ છે. ત્યારે આટલો મોટો પ્લાન્ટ પાણી ક્યાથી લાવશે અને અબજો લિટર પાણી ક્યાં ફેકી દેશે ગામના લોકો માટે રહસ્ય છે. અમોને કંપની જણાવે કે અબજો લિટર પાણી ક્યાથી લાવશે.
6. આ કંપનીમાં 30 એકરનો ઝેરી કચરાને દાટવાનો ઉકરડો પણ બનાવવાનો છે. અમારા ગામો તો આ લાખો ટન કેમિકલ કચરાના ઉકરડા મરી પરવારશે જેની સરકારે ગંભીર નોંધ લેવી. આ ઉકરડો ક્યારે ખાલી થશે એની કોઇ મર્યાદાજ નથી.
7. અદાણિ અને ટાટાના પાવર પ્લાન્ટને લીધે એમજ અમારા ગામો અને લોકોને હયાત હવાના પ્રદૂષણને આરોગ્યની તકલીફ ત્યારે આ નવું પ્ર અમારા બાળકો અને અમને ખતમ કરી નાખશે એ નક્કી છે તેથી અમો આ પ્રોજક્તનો વિરોધ કરીએ છીએ. પાવર પ્લાન્ટને લીધે ખારેક અ ખેતીના પાકોમાં ખૂબ મોટું નુકશાન છે હવે આ તાંબાનો નવો ઝેરીલો પ્લાન્ટ અમારા આરોગ્યને વધુ બગાડી શકે એમ હોય અમે વધુ પ્રદૂષ ફેલાવતા આ પ્લાન્ટનો વિરોધ કરીએ છે.
8. અદાણિ તાંબાની કંપનીમાં સ્થાનિકોને રોજગારી આપવાની વાતો કરી છે. ટાટા અને અદાણીના પાવર પ્લાન્ટ બનાવતી વખતે પણ આવ વાતો કરેલ હતી જે આજ સુધી પૂરી નથી થઇ આમ સ્થાનિક લોકોને મરવા સિવાય છૂટકો જ નથી. તેથી અમને આ પ્લાન્ટ ખપે નહીં.
9. આ પ્લાન્ટથી મર્કયુરી એટલે કે ઝેરી ધાતુ પારો નીકળશે અને હવામાં આ ઝેર ફેલાશે નહીં દેખાતી આ ધાતુથી અમોને ધીમું ઝેર આપવાના પ્લાન્ટનો અમે અમારા ગામો સિવાય બીજે ક્યાક જ્યાં માનવ વસ્તી ન હોય ત્યાં નાખવા માટે સરકારને રજૂઆત કરીએ છે.
10. તાંબાની સાથે સોનું ચાંદી પ્લેટિનમ પણ અહિયાં નીકળશે. આ બધી કીમતી ધાતુઓમાંથી અમો ગામ લોકોને કંપની કેટલો હિસ્સો આપ જેનાથી અમારી દવા દારૂનો ખર્ચ નીકળે. અમારા ભાગની રકમ ટકામાં જણાવવા વિનંતી છે. પેલા ૨૦૦ કરોડના દંડનું શું થયું એ જણાવો?

આમ અમને આ પ્લાન્ટ અને ઓધોગિક વિકાસની જરૂર નથી. અમો અમારો વિકાસ જાતે કરી લઈશું પણ આવો ઝેરી અને સ્વાસ્થ્યને નુકશાનક પ્રોજેકટ અમને ખપતો નથી એ અમે સરકાર અને અદાણિ કંપની ને જણાવી છે.

SUB: PETITION TAKING OBJECTIOJN AGAINST COPPER REFINARY PROJECT OF M/S. ADANI ENTERPRISE LIMITED (AEL)

Respected Sir,

We, the undersigned herewith oppose the coming up dangerous copper refinery project of M/s Adani Enterprise Limited. We submit herewith our objection taking petition to your good office with the points shown here under and request you to take suitable action as to with-held the project at the earliest possible:

1) The site shown by M/s. Adani Enterprise Limited (AEL) under the SEZ shown at Siracha village is a reserved forest and the only sustainability source of our cattle resulting in our only livelihood and income source. This land is still not allotted to the M/s. Adani Enterprise Limited (AEL) or MPSEZ and there still exist a forest land on the Government records which include the village Danderi forest land and is in government possession. Thus as on date no land is in the name of M/s. Adani Enterprise Limited (AEL) but the MPSEZ have proceeded for allotment of this land to the above company for its copper refinery project and have reported to the Government accordingly. So we are taking objection for this proposed project by M/s. Adani Enterprise Limited (AEL) without proper sanction. If the land in question is in the possession of M/s. Adani Enterprise Limited (AEL) they should have shown 7/12 extract to us. Thus the company has not acquired required land from Government and yet they are trying to set the project which is ridiculous.
2) We are totally against this project as the project will spread most dangerous toxic gas and stinking smell which is dangerous for the health of our children, cattle and other living elements as well as the sea **as its 300 ft high 46 chimneys will spread toxic gas all over the area 24 hours 365 days.**The Sulphur dioxide can even rust the iron, is a deadly gas which will come out from the plant process in lacs of tons and spread over nearby villages and will damage the lungs. Therefore, such project is not agreeable at any cost to us looking to the future of our generation, even if it contains golden features.
3) It is feared that the entire area will be affected by residue of the plant and will spread black power over the agricultural crops and affect it with acidic and many other gaseous pollution also. There are many examples in the country that such metal plant has damaged the atmosphere by creating pollution in many ways and hence we oppose the same. We have come to know that the plant organizers have not made demographic survey of connecting area and not shown the negative points involved in their proposed project and also not shown the reactions by toxic gas, We cannot say more due to lack of more scientific knowledge. But we come to know that by this plant's gaseous air pollution there will be effect on flowers of crops and it will not develop naturally to yield the anticipated production quality and quantity. This will affect our livelihood and health naturally which the

1743

Indian Government should consider sympathetically and save the villages in the interest of public at large.

4) The company will produce about 50% residue of raw material while making the end product from copper and this residue come to approximately 8-10 lac tons (i.e. 1 lac trucks) and this will affect the entire area of Kutch. In such circumstance there will be no alternate except to leave the village and hence we oppose this project.
5) There is problem of drinking water in our area and it is a question that how the company will manage for water requirement and if managed and what about effluent treatment?
6) We have come to know that they are planning to make an hazardous waste plant for this 30 acre plant which will affect the villages.
7) There are also some problems because of existing power plants in our area by Tata and Adani Group, even though we are going to face a new problem by this new project in the form of hazardous pollution which will affect our children and hence we oppose the project. Due to power plant some agricultural activities like date palm crop are affected but by this project it is sure that gas from copper refinery will affect our health also more make the atmosphere polluted, hence we oppose the project.
8) The company, M/s. Adani Enterprise Limited (AEL) is assuring about local employment butthe earlier companies like Tata group has not fulfilled such promises.
9) We have come to know that there will be residue of mercury and this is a toxic chemical element which will spread in the air, so we are representing our appeal to the Government to please set up such plant in any non-populated area.
10) We have come to know that there are other materials like gold, silver and platinum are also a by-product of the company yet it is useless activity looking the health problem etc.

In view of above we request you to kindly recommend the government to take necessary actions as to cancel this project as we do not need industrial development at the cost of public health

Thanking you,

Yours faithfully,

સરપંચ, ગામ: નવીનાળ,
તા:મુંદરા-કચ્છ.

પ્રતિ શ્રી,
મેમ્બર સેક્રેટરી,
ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ,
ગાંધીનગર-ગુજરાત.

વિષય: મેસર્સ અદાણી એન્ટરપ્રાઇઝીઝ લિમિટેડ, અદાણી સ્પેશીયલ ઇકોનોમીક ઝોનની ગામ: નવીનાળ અને શીરાચામાં આવી રહેલ ગ્રીનફીલ્ડ કોપર રીફાઇનરી પ્રોજેક્ટના વાંધા બાબત:

1) <u>ટર્મસ ઓફ રેફરન્સ નું નોન કમ્પલાયંસ અને તા: ૩૧-૦૩-૨૦૧૧ વાળા ભારત સરકાર ના સર્કયુલર નું ભંગ.(બિડાણ-૧)</u>

a) આ પ્રોજેકટ માટે તા:૨૧ જુન ૨૦૧૬ ના રોજ ટી.ઓ.આર.(ટર્મસ ઓફ રેફરંસ) ઇસ્યુ કરવામા આવ્યો, જેમા સેકસન ૫(આઇ) માં સ્પષ્ટ જણાવવામાં આવ્યું છે કે જે ૧૦૨ હેકટર ફોરેસ્ટ ની જમીનનો ઉપયોગ થવાનો છે તેના ક્લીયરંસની નકલ રજુ કરવી.

i) અદાણી એન્ટરપ્રાઇઝ દ્વારા એન્વાયર્મેન્ટ ક્લીયરંસ લેવા માટે જે ફાર્મ ૧(MoEFCC એ પોતાની વેબસાઇટ ઉપર અપલોડ કર્યું છે.) સબમીટ કરવામા આવ્યો છે તેમા ફોરેસ્ટ ક્લીયરંસ અન્ડર ધી પ્રોસેસ છે એવું જણાવવામા આવ્યું છે.

ii) ડ્રાફટ ઈ.આઇ.એ. રીપોર્ટ ના પાના નં. AI 14 પર (ટી.ઓ.આર. નું કમ્પલાયંસ નથી કરવામા આવ્યું) પણ ફોરસ્ટ ક્લીયરંસ પેન્ડીંગ છે એવું જણાવવામા આવ્યું છે.

આમ, ઉપરોકત મુદ્દાઓને લઇને સ્પષ્ટ થાય છે કે અદાણી એન્ટરપ્રાઇઝ દ્વારા ટી.ઓ.આર. નું કમ્પલાયંસ કરવામા નથી આવ્યું માટે જયાં સુધી તી.ઓ.આર. નું કંપલાયંસ ન થાય ત્યાં સુધી પર્યાવરણીય લોક સુનાવણી માન્ય ગણાય નહી.

b) MoEFCC ના તા:૩૧-૦૩-૨૦૧૧ નો સરકયુલર (બિડાણ-૪) માં જણાવ્યા પ્રમાણે કોઇપણ નવો પ્રોજેકટ, જેમાં વન વિભાગની જમીનનો ઉપયોગ થવાનો હોય તો પહેલા ફોરેસ્ટ ક્લીયરંસ લેવું ત્યાર બાદ એન્વાયર્મેન્ટલ ક્લીયરંસ ની પ્રોસેસ કરવી. અદાણી એન્ટરપ્રાઇઝના આ પ્રોજેકટ માટે ૧૦૨ હેકટર જમીન ફોરેસ્ટ ની છે અને ફોરેસ્ટ ક્લીયરંસ પેન્ડીંગ છે. જે બિડાણ-૨ અને બિડાણ-૩ માં સાબિત થાય છે. આમ, ફોરેસ્ટ ક્લીયરંસ પહેલા એન્વાયર્મેન્ટ ક્લીયરંસ ની કોઇપણ પ્રોસેસ કરવી ગેરકાદેસર છે, અને પબ્લીક હેયરીંગ પણ ગેરકાયદેસર ગણવી.

c) ઇ.આઇ.એ. નોટીફીકેશન, ૨૦૦૬ ની સેકશન 8(vi) મા જણાવ્યા મુજબ કોઇપણ માહિતી જાણી જોઇને ગેરમાર્ગે દોરવા માટે છુપાવવામા આવી હોય તો અરજી રદ કરવી. આમ, અદાણી એન્ટરપ્રાઇઝ દ્વારા ગેરમાર્ગે દોરવા જાણી જોઇને ફોરેસ્ટ ક્લીયરંસ ને લગતી ઉપરોકત માહિતી છુપાવવામા આવી છે. આથી તેની પર્યાવરણ ક્લીયરંસ માટેની અરજી રદ થવી જ જોઇએ.

d) ઉપરોકત મુદ્દા નં. ૧. બાબતે મારા દ્વારા તા: ૧૬/૦૪/૨૦૧૭ ના રોજ, (૧) કે. સી. મિસ્ત્રી, મેમ્બર સેક્રેટરી, ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ, ગાંધીનગર. અને (૨). અરવીંદ અગ્રવાલ, ચેરમેન, ગુજરાત પ્રદુષણ નિયંત્રણ બોડ, ગાંધીનગર. (૩). રીજનલ ઓફીસર, ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ, ગાંધીધામ. (૪). એમ.એ. ગાંધી, કલેકટર, કચ્છ. (૫). એમ.કે.સીંગ, જોઇટ સેક્રેટરી, એમ.ઓ.ઇ.એફ.સી.સી. નવી દીલ્લી. વાળાઓને ઇમેઇલ દ્વારા ફરીયાદ(બિડાણ-૫) કરેલ હોવા છતાં એકશન લેવામા કેમ નથી આવ્યા? એન્વાયર્મેન્ટ ક્લીયરંસ ને લગતી પ્રોસેસ કેમ રોકવામા નથી આવી? પબ્લીક હીયરીંગ કયા આધારે કરવામા આવી રહી છે?

2) ફાર્મ-૧ ની અંદર છુપાવવામા આવેલ માહિતી:

a) બેઝીક ઇન્ફર્મેશનના મુદ્દા નં. ૧૬ અને ૨૬ માં સૂચિત પ્રોજેકટની જમીન પર નવીનાળ ગૌચર જમીનની પી.આઇ.એલ. નં ૧૭ ઓફ ૨૦૧૧ ના જજમેન્ટ પર રીવ્યુ પીટીશન કરવામા આવી, જે હાલમા ચાલુ છે. આ માહિતી છુપાવવામા આવી છે.

b) ફાર્મ-૧ ના એન્વાયર્મન્ટલ સેન્સીટીવીટી ના મુદ્દા ન-૨ અને ૧૦ માં અદાણી દ્વારા દાણેથરી નદી ની માહિતી છુપાવવામા આવી છે, જયારે આ નદી સૂચિત પ્રોજેકટ વિસ્તારની અંદરથી પસાર થઇ રહી છે. આમ, આ માહિતી છુપાવવામા આવી છે.

આમ, ઇ.આઇ.એ. નોટીફીકેશન, ૨૦૦૬ ની સેકશન 8(vi) મા જણાવ્યા મુજબ કોઇપણ માહિતી જાણી જોઇને ગેરમાર્ગે દોરવા માટે છુપાવવામા આવી હોય તો અરજી રદ કરવી. અદાણી ગ્રીનફીલ્ડ કોપર રીફાઇનરી દ્વારા જાણી જોઇને ફાર્મ-૧ માં ઉપરોકત માહિતી છુપાવવામા આવી છે, જેથી તેની અરજી રદ થવી જોઇએ.

3) ઇ.આઇ.એ. રીપોર્ટ ની ક્ષતિઓ:

a) ઇ.આઇ.એ. રીપોર્ટના પેજ નં. C૧-૪ પર મુદ્દા નં. ૧૦ માં અદાણી દ્વારા જણાવવામા આવ્યું છે કે ૧૦ કી.મી.રેડીયસની અંદર આરકયોલોજીકલી ઇમ્પોર્ટન્ટ સ્થળો નથી. જયારે સૂચિત પ્રોજેકટ વિસ્તાર થી ૧ કી.મી. ના અંતરે નવીનાળ રીઝર્વ ફોરેસ્ટની અંદર આરકયોલોજીકલ સ્થળ આવેલો છે. જેને લઇને એમ.એસ. યુનિવર્સિટીના આરકયોલોજીકલ ડીપાર્ટમેન્ટ દ્વારા આ વિસ્તારનો સર્વે કરેલ છે જેનો પ્રાથમિક રીપોર્ટ આ સાથે જોડેલ છે. આમ, આ માહિતી છુપાવવામા આવી છે.

4) સુનિતા નારાયણ કમીટીના રીપોર્ટનું વાયોલેશન.

a) સુનીતા નારાયણ કમીટી રીપોર્ટના પાના નં. ૬૯ પર જણાવવામાં આવ્યું છે કે ભદ્રેશ્વર ખાતે ફીશીંગ બંદર બનાવવું જેથી કરીને આસપાસના ગામોના લોકો ત્યાં માછીમારી કરી શકે. પરંતુ અત્યાર સુધી આવું કંઈપણ કરવામા નથી આવ્યું.

b) સુનીતા નારાયણ કમીટી રીપોર્ટના પાના નં. ૬૯ પર જણાવવામાં આવ્યું છે ક માછીમારો કીનારા પર આવી જઇ શકે તે માટે આવવા જવાની વ્યવસ્થા ઊભી કરવી. જયારે અદાણી દ્વારા આવું કંઈપણ કરવામા આવ્યું નથી.

c) સુનીતા નારાયણ કમીટી રીપોર્ટના પાના નં. ૭૫ પર જણાવવામાં આવ્યું છે કે સામુદાયીક ગૌચર જમીનો સ્વેચ્છાએ પરત આપવી જોઇએ જેથી લોકો પોતાના પશુઓ ચરાવી શકે. પરંતુ આવું કંઈપણ કરવામા આવ્યું નથી.

d) પાના નં. ૭૫ પર જણાવવામા આવ્યું છે કે અત્યારના જેટલા પણ પ્રોજેકટો છે તેનું કયુમ્યુલીટીવ ઇમ્પેકટ અસેસમેંટ(સંકલીત અસરોનો અભ્યાસ) થવું જોઇએ અને તેની પરથી પર્યાવરણીય અસરોના નિરાકરણ માટેના પગલા ભરવા જોઇએ. આમ, અત્યાર સુધી અભ્યાસ કરવામા આવ્યો નથી જેથી નવા પ્રોજેકટો ને મંજુરી મળવી જોઇએ નહી.

e) કમીટીએ રેકોમેન્ડેશન નં. ૭.૨.૨ માં જણાવ્યું છે કે નોર્થ પોર્ટ ની પર્યાવરણીય મંજુરી રદ થવી જોઇએ, કારણ કે તે વિસ્તારમાં બોંચા આઇલેન્ડ આવેલો છે અને ત્યાં મોટા પ્રમાણમાં ચેરીયાઓને નુકશાન પહોંચાડાયો છે. તે છતાં મંજુરી રદ કરવામા આવી નથી.

f) સુનીતા નારાયણ કકમીટીની ભલામણ મુજબ HTL અને LTL નુ મેપીંગ કરી પબ્લીક ડોમેન માં મૂકવું, જે આજ દીવસ સુધી મૂકવામા નથી આવ્યું.

5) *અદાણી એન્ટરપ્રાઇઝ લી. નો પ્રોજેકટ અદાણી પાવર પ્લાન્ટ દ્વારા થઇ રહેલ નુકશાન.*

a) અદાણી પાવરને તા: ૨૧/૧૦/૨૦૦૮ ના રોજ મળેલ પર્યાવરણીય મંજુરીના મુદા નં. ૨ તેમજ ૨૯/૦૫/૨૦૦૮ ના રોજ ઇન્ટેક અને ડીસ્પોસલ ફેસેલીટી ના સી.આર.ઝેડ. કલીયરંસના મુદ્દા નં ૨ માં જણાવવામા આવ્યું છે કે પાઇપલાઇન દ્વારા એફલુઅન્ટ ડીસ્ચાર્જ કરવાનુ છે, જયારે અદાણી પાવર દ્વારા ખુલ્લી કેનાલ બનાવીને એફલુઅન્ટ ડીસ્ચાર્જ કરવામા આવે છે. આમ, પર્યાવરણીય મંજુરીનું વાયોલેશન કરવામાં આવ્યું છે.

b) અદાણી પાવરની ઇન્ટેક ચેનલ બની તેના કારણે ગ્રાઉડ વોટરમાં ખારાશનું પ્રમાણ વધ્યું છે.

c) કોલ હેન્ડલીંગ ગાઇડલાઇનનો ભંગ થઇ રહ્યો છે.

d) CRZ કલીયરંસ ની શર્ત નં. ૭ માં જણાવવામાં આવ્યું છે કે ઇન્ટેક ચેનલ અને એફલુઅન્ટ ડીસ્ચાર્જ પાઇપલાઇનના કારણે લોકલ કોમ્યુનિટી કે માછીમારોને આવવા જવામા હેરાનગતી થવી ન જોઇએ. પરંતુ ઇન્ટેક ચેનલ અને એફલુઅન્ટ ડીસ્ચાર્જ ચેનલના કારણે માછીમારોના રસ્તા બંધ થઇ ગયા છે, વાંઢ ગામના માલધારીઓ ને ચરીયાણ વિસ્તારમા જવાના રસ્તા બંદ થઇ ગયેલ છ તેમજ દરીયા કીનારે આવેલ ધાર્મિક સ્થળ પર આવવા-જવાનો રસ્તો બંદ કરી નાખવામા આવ્યો છે.

e) CRZ કલીયરંસ ની શર્ત નં. ૯ માં જણાવવામાં આવ્યું છે કે પ્રોજેકટના કારણે લોકોનું, ઘરોનું કે માછીમારીનું ડીસ્પ્લેસમેંટ ન થવું જોઇએ. પાઇપલાઇનના કારણે માછીમારો અને તેની બોટો ને અવર-જવરમાં અવરોધ ઉભો ન થવો જોઇએ. જયારે ઇન્ટેક ચેનલ ના કારણે જુનો કોટડી બંદર જેના પર વર્ષોથી માછીમારો ત્યાં વસીને માછીમારી કરતા તે બધાનું સ્થળાંતર કરવામા આવેલ છે. એફલુઅન્ટ ડીસ્ચાર્જ માટે પાઇપલાઇનની જગ્યાએ ખુલ્લી ચેનલ બનાવી નાખવામા આવી છે , અને તે કોતરી ક્રીક ઉપરથી પસાર થતી હોઇ માછીમારોની બોટોની અવર-જવર અવરોધાઇ છે. આમ, આ કંડીશનનું વાયોલેશન કરવામા આવેલ છે.

f) પર્યાવરણીય મંજુરી ની શર્ત નં. ૨૧ માં જણાવવામાં આવ્યું છે કે છ માસિક કંપલાયંસ રીપોર્ટ સબમીટ કરવું. આ કંડીશન નું કંપલાયંસ નથી થઇ રહ્યું.

6) *વન વિભાગની જમીનનો પ્રશ્ન./*

a) અદાણી દ્વારા તા: ૧૯ જૂલાઇ ૨૦૦૪ માં મુંદરા તાલુકાના આઠ ગામોની કુલ્લ ૧૫૩૬.૮૧ હેકટર રીઝર્વ ફોરેસ્ટ ની જમીનની માંગણી કરવામા આવેલ છે, જેનું ફોરેસ્ટ કલીયરંસ અન્ડર પ્રોસેસ છે. આ પ્રોજેકટ માટે જે જમીન નો ઉપયોગ થવાનો છે તે જમીન ૧૫૩૬.૮૧ વાળી માંગણી માની ૧૦૨.૩૮ હેકટર શીરાચા દાણદેરી રખાલ (રીઝર્વ ફોરેસ્ટ) ની છે.

b) વન અધિકાર અધિનિયમ ૨૦૦૬ પ્રમાણે કોઇપણ વન ની જમીન પર પહેલો અધિકાર તેનો ઉપયોગ કરતા ગ્રામજનોનો છે. અને ગ્રામસભાની મંજુરી વગર ઔધોગીક હેતુ કે અન્ય કોઇપણ હેતુ માટે ફાળવી શકાય નહી.

c) વન અધિકાર અધિનિયમ અંતર્ગત કોઇપણ કોમ્યુનિટી વન ની જમીનનો ત્રણ પેઢીથી ઉપયોગ કરતા હોય અથવા આજીવિકા મેળવતા હોય તો તેને હક મળી શકે છે.

d) આ ૧૫૩૬.૮૧ હેકટર ફોરેસ્ટની જમીન નો ઉપયોગ તેની આજુ-બાજુના ગામલોકો પોતાની આજીવિકા ચલાવવા કરે છે તો આ જમીન વન અધિકાર અધિનિયમ અંતર્ગત ઔદ્યોગિક હેતુ માટે ફાળવી શકાય નહી.

e) શીરાચા ગ્રામ પંચાયતે સૂચિત પ્રોજેકટ માટે ઉપયોગ થનાર જંગલની જમીન પર તા:૨૪/૦૪/૨૦૧૭ ના રોજ વન અધિકાર અધિનિયમ હેઠળ કોમ્યુનિટી રાઇટસ સેટલ કરવા પ્રાંત સ્તરીય વન અધિકાર સમિતી પાસે પોતાનો દાવો રજુ કર્યો છે.

f) ૧૫૩૬.૮૧ હેકટર જમીનની માંગણી માં નવીનાળ ગામની પણ ૮૯ હેકટર જમીન આવે છે અને તેના પર નવીનાળ ગ્રામસભા દ્વારા સામુહિક દાવો કરવામા આવ્યો છે.

g) વન અધિકાર અધિનિયમ પ્રમાણે આ જંગલ ની જમીન પર પ્રથમ અધિકાર ગ્રામજનો નો છે, જેથી તેનું ફોરેસ્ટ કલીયરંસ ન મળી શકે અને પ્રોજેકટ માટે ઉપયોગ ન થઇ શકે.

h) આ વિસ્તારમાં આ છેલ્લું રીઝર્વ ફોરેસ્ટ છે. જો તેને ઔધૌગિક હેતુ માટે ફાળવી દેવામાં આવશે તો જંગલ વગરનો વિસ્તાર બની જશે અને ઔધૌગિક વિસ્તારમાં જંગલો વધારે હોવા જરૂરી છે.

7) અદાણી પોર્ટ એન્ડ સ્પેશીમલ ઇકોનોમીક ઝોન ના એન્વાયમેંટ કલીયરંસ નું નોન કંપ્લાયંસ:

a) સ્પેશીફીક કંડીશન (૨) પ્રમાણે વિસ્તારમાં આવતી ક્રીકો, નદીઓ અને ચેરીયાના વિસ્તારનું સરક્ષણ કરવું. જયારે, અદાણી દ્વારા આ વિસ્તારની ક્રીકો, નદીઓ અને ચેરીયાના વિસ્તારનું નિકંદન કાઢેલ છે. જે માં જોડેલ અલગ અલગ વર્ષનાં સેટેલાઇટ ફોટોગ્રાફ્સમાં જોઇ શકાય છે. આમ, આ કંડીશનનું વાયોલેશન કરવામા આવેલ છે.

b) એન્વાયર્મેંટ કલીયરંસ ની સ્પેશીફીક કંડીશન ને.(૩) માં જણાવવામાં આવ્યું છે કે તમામ ક્રીકોમાં પાણી અવર-જવર કરી શકે તે માટે તેના મોઢા ખુલ્લા રાખવા.

i) કોટડી ક્રીકનું મોઢું માટી નાખી છવાવી દેવામા આવ્યું છે.

ii) ભરાડી માતા ક્રીક નાગમતી નદીને જે જગ્યાએ મળે છે તે જગ્યા ઉપર બ્રીજ બનાવવાના કારણે દરીયાનું પાણી ઉપરના વિસ્તારમાં આવી શકતું નથી અને ત્યાં ઉપરના વિસ્તારમાં ચેરીયા હતા તે પણ સુકાઇ ગયા છે.

iii) આમ, આ કન્ડીશનનું વાયોલેશન કરવામા આવ્યું છે.

c) સ્પેશીફીક કંડીશન (૪) માં જણાવ્યા પ્રમાણે દરેક ક્રીકની સ્થિતિ સેટેલાઇટ ઇમેજ-૨૦૦૫ ની સરખામણીએ લાવવી. પરતુ અદાણી પોર્ટ એન્ડ એસ.ઇ.ઝેડ. દ્વારા આ કંડીશનનું પાલન કરવામાં આવેલ નથી.,

d) સ્પેશીફીક કંડીશન નં. (૫) માં જણાવવામા આવ્યું છે કે વર્ષમાં એક વખત તાજેતરનો સેટેલાઇટ નકશો રજુ કરવો જેથી તેની સરખામણી વર્ષ-૨૦૦૫ ના સેટેલાઇટ નકશા સાથે થઇ અને ખાત્રી કરી શકાય કે ક્રીકો, નદીઓ, ચેરીયાઓ અને ક્રીકોના મુખમાં કોઇ ફેરફાર થયો છે કે નહી. એ.પી.એસ.ઇ.ઝેડ. દ્વારા અત્યાર સુધી આવો કોઇ નકશો રજુ કરવામા આવ્યો નથી. આમ, આ કંડીશનનું કંપલાયંસ કરવામા નથી આવ્યું.

e) સ્પેશીફીક કંડીશન (૬) માં જણાવ્યા મુજબ સુનિતા નારાયણ કમીટી દ્વારા રજુ કરવામા આવેલ રીપોર્ટને ધ્યાનમાં રાખીને પર્યાવરણ અને વન મંત્રાલય દ્વારા લાગુ કરવામા આવેલ આદેશનું એપી.એસ.ઇ.ઝેડ. એ પાલન કરવું. જયારે એ.પી.એસ.ઇ.ઝેડ. દ્વારા તેનું પાલન કરવામા નથી આવી રહ્યું.

f) સ્પેશીફીક કંડીશન (૧૨) અને (૧૩) માં જણાવ્યા પ્રમાણે NCSCM/NIOT એ પર્યાવરણ અને વન મંત્રાલય દ્વારા મજુર કરાયેલ એકશન પ્લાનના અમલીકરણ માટેનું નિયંત્રણ અથવા ચકાસણી કરશે. છ માસિક મોનીટરીંગ રીપોર્ટ સાથે એકસન પ્લાનના પાલનનો રીપોર્ટ રજુ કરવાનો રહેશે. આ કંડીશનનું કંપલાયંસ અત્યાર સુધી કરવામા આવ્યું નથી.

g) સ્પેશીફીક કંડીશન (૧૫) માં જણાવ્યા પ્રમાણે નદીના માર્ગમાં કોઇપણ પ્રકારનો ફેરફાર કરવો નહી. જયારે, એ.પી.એસ.ઇ.ઝેડ દ્વારા.....

i) કાંડાગરા વાળી નદી જે અદાણી પાવર વચ્ચેથી નીકળે છે તેનો રૂટ બદલી નાખવામા આવેલ છે.

ii) નવીનાળ અને શીરાચા વચ્ચે આવેલ ડમડવાળા છેલાનો રૂટ બદલવામાં આવેલ છે.

iii) નાગમતી નદીનો એક મૂખ બંધ કરી નાખેલ છે.

iv) ધ્રબ વાળી નદી પર ઓ.સી.સી.એલ. કંપની ઊભી કરી દેવામા આવેલ છે.

v) કેવડી નદી ઉપર અદાણી હોસ્પીટલનનું બાંધકામ કરી નાખવામા આવેલ છે. આમ, આ શરતનું ભંગ કરવામા આવેલ છે.

h) સ્પેશીફીક કંડીશન (૧૮) માં જણાવ્યા પ્રમાણે ચેરીયા વિસ્તારથી ૫૦ મીટર સુધી કોઇપણ ડેવલપમેન્ટ કરવું નહી. જયારે પ્રોજેકટ પ્રપોનન્ટ દ્વારા ઘણી જગ્યાએ બાંધકામ કરી દેવામા આવ્યું છે. જેમ કે, અદાણી હાઉસની બિલ્ડીંગ ઊભી કરી દેવામા આવી છે. આમ, આ કન્ડીશનનું ભંગ કરવામાં આવ્યું છે.

i) સ્પેશીફીક કંડીશન (૧૯) માં જણાવ્યા પ્રમાણે એ.પી.એસ.ઇ.ઝેડ. ને બહારની બાજુ ત્રણ સ્તરના છત્રમાં ગ્રીન બેલ્ટ વિકસાવવાનો છે, જે આજ દિવસ સૂધી કંપલાયંસ કરવામા નથી આવ્યું.

8) ગુજરાત ઇકોલોજી કમીશન નો રીપોર્ટ:

a) કોલ હેન્ડલીંગના કારણે ચેરીયા અને તેની ઇકોસીસ્ટમ પર થઇ રહેલ અસર ની ગુજરાત ઇકોલોજી કમીશન દ્વારા સ્ટડી કરી એક રીપોર્ટ બનાવવામાં આવ્યો છે. તેમાંથી મુંદરા પોર્ટ પણ આ સ્ટડી નો ભાગ હતો.

b) આ રીપોર્ટ મુજબ કોલસાની ડસ્ટના કારણે ચેરીયાની વૃધ્ધી પર અસર થઇ છે.

c) આ રીપોર્ટ એમ કહે છે કે ૨૦૧૦/૧૧ માં BOD(બાયોલોજીકલ ઓક્સિજન ડીમાંડ) ૯.૫૨ હતા જે ૨૦૧૨/૧૩ માં વધીને ૨૭ સુધી પહોંચ્યા છે, જે અભ્યાસ વિસ્તારના પાર્ટસ થી સૌથી વધારે અહીંયા વધ્યા છે.

d) COD (કેમીકલ ઓકસીજન ડીમાન્ડ) પણ ૨૦૧૦/૧૧ માં ૩૮ હતી જે ૨૦૧૨/૧૩ માં વધીને ૯૨.૬૫પહોંચ્યું છે.

e) DO (ડીસોલ્વેડ ઓકસીજન) ૪.૮ થી વધીને ૪.૯૨ પહોંચ્યું છે, જે CPCB ની પરમીશેબલ લાઇન થી ઉચું છે.

f) SO (સસ્પેન્ડેડ સોલીડ, પાણીમાં વધતું ધુંધળાપણું) ૫૬ થી વધીને ૧૬૨ પર પહોચ્યુ છે, જે CPCB ની પરમીશેબલ લાઇન થી ઉચું ગયું છે.

g) નાઇટ્રેટ ૨૦૧૦/૧૧ માં ૦.૩૧૩ હતું જે ૨૦૧૨/૧૩ માં વધીને ૧.૧૫૪ પર પહોચ્યું છે.

9) અદાણી એન્ટરપ્રાઇઝ લી.ના કોપર રીફાઇનરી પ્રોજેકટ માટે નવીનાળ ગામની ગૌચર જમીન હતી તેનો ઉપયોગ થવાનો છે. આ જમીનની મેટર કોર્ટમાં ચાલી રહી છે. તેનો હજી કોઇ પણ પાર્ટીની ફેવરમાં નિકાલ કરવામા નથી આવ્યો.

10) લોકલ લોકોની રોજગારી માટે આટલા બધા ઉદ્યોગો હોવા છતાં પણ કંઇ કરવામા નથી આવ્યું. જેમ કે અદાણી પાવર પ્લાન્ટ માટે આજુબાજુના વિસ્તારની ૪૦૦ હેકટર જેટલી જમીન આપવામા આવી અને માછીમારો, ખેડુતો અને પશુપાલકોને બેરોજગાર બનનાવી તેના બદલામા ૭૦૦૦ લેબર માંથી માત્ર ૫૦૦ લોકલ અને ૧૫૦૦ એમ્પ્લોયર માંથી માત્ર ૧૫ લોકલ છે. તો આ પ્રોજેકટ થી બેરોજગારી અને પ્રદુષણ સિવાય કંઇ નહી મળે.

11) આ વિસ્તાર દરીયાકીનારાનો છે. માટે સી.આર.ઝેડ. કલીયરંસ લેવું જરૂરી છે. કારણ કે વાવાઝોડું તેમજ ભુકંપ કે સુનામી વખતે બચાવ માટેનો એકશન પ્લાન બનાવી શકાય.

12) કંપની દ્વારા ૩૨૮૦૦ કે.એલ.ડી. પાણીનો ઉપયોગ કરવામાં આવશે, અને તેના માટે ડીસેલીનેશન પ્લાનનો ઉપયોગ કરવામા આવશે. તેના ડીસ્ચાર્જના કારણે દરીયાઇ જીવ સૃષ્ટી ઉપર ખરાબ અસર થશે. આ ડીસેલીનેશન પ્લાન કંપની સાથે સંકળાયેલ છે પરંતુ તેની અસરોનો અભ્યાસ કરવામા આવેલ નથી.

13) આ વિસ્તારમાં બે પાવર પ્રોજેકટ અને એશિયાનું મોટું કોલ હેન્ડલીંગ પોર્ટ આવેલું છે પરંતુ ઇ.આઇ.એ. રીપોર્ટમાં બતાવવામાં નથી આવી.

14) અદાણીના બીજા પ્રોજેકટોના એન્વાર્યમેન્ટ કલીયરેસના કંપલાયંસ કરવામાં આવેલ નથી, તો નવા પ્રોજેકટ ને મંજુરી આપી અને આજુ-બાજુના વિસ્તારના લોકોને નુકશાન પહોંચાડી ન શકાય.

15) સૂચિત પ્રોજેકટની ગૌચર જમીન પર અમારા ગામના પશુઓ ચરીયાણ કરતા હતા તે છીનવી આજીવિકા ખતમ કરી નાખવામા આવેલ છે. હવે વધેલી આ ફોરેસ્ટની જમીન પણ આપીને પ્રોજેકટ લગાવવામાં આવશે તો ચરીયાણ રહેશે જ નહી.

16) કોપર રીફાઇનરીના કારણે સલ્ફયુરીક એસીડ જેવા હઇઝારડીઅસ કેમીકલ નીકળવાના છે જેના કારણે આ વિસ્તારમાં પ્રદુષણ વધી જશે અને એસીડ વરસાદ થવાની સંભાવના વધી જશે. જેથી આ પ્રોજેકટ રદ થવો જોઇએ.

17) નદી બંધ કરવાના કારણે આસપાસના વિસ્તારની જમીનનું ધોવાણ થશે અને પૂર જેવી સ્થીતીમાં આજુબાજુના ગામડાઓ ને જોખમ સર્જાસે.

18) જુનારસ્તાઓ બંધ થશે જેમાનો એક નવીનાળ થી કોટડી ક્રીકનો માછીમારોનો રસ્તો બંધ થશે.

19) આ જંગલની અંદર વન્ય પ્રાણીઓ રહે છે તો તેઓના રહેઠાણ નાશ પામશે જેના રેસ્ટોરેશન ને લઇ શુ?

આપનો વિશ્વાસુ

Ahmedabad, Gujarat-380015.

Subject: Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in Village(s) Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat - prescribing of ToRs regarding.

Sir,

This has reference to your online application No. IA/GJ/IND/53004/2016 dated 21st April, 2016 along with the application in prescribed format (Form-I), copy of pre-feasibility report and proposed TORs for undertaking detailed EIA study as per the EIA Notification, 2006 for the project mentioned above. The proposed project activity is listed at S.No. 3(a), under category 'A' of the Schedule of EIA Notification, 2006 and appraised at the Central level.

2.0 M/s. Adani Enterprises Limited proposes to install a new manufacturing unit for 10 LTPA copper project. It is proposed to set up the plant for Copper Cathode based on Pyrometallurgical process technology and Electro-refining process. The proposed unit will be located at Adani Port Special Economic Zone (APSEZ) land (Siracha and Navinal Villages), Mundra Taluka, Kutch District, Gujarat State. The proponent has provided 3 sites for the project and proposed to set up the plant at Site-II. The land required for the project is 256.58 ha, out of which 154.18 ha is for industrial use and 102.38 ha is forest land. It has been informed that state government has recommended the forest diversion proposal to the Central Government. The proponent has also informed that the merits for selecting Site-II for the project inter-alia include proximity to west port from where major raw material will be imported, major part of land is within the notified SEZ and also the forest land diversion proposal is forwarded by the State government to Central Government. The proposed site lies between 22°48'55.78" N Latitude and 69°34'32.02" E Longitude. There are no national parks/ wildlife sanctuary within 10 km radius. The project area falls under Seismic Zone V. The estimated project cost is Rs. 10,000 Crore and the estimated environment protection cost is Rs. 900 crores. Employment generation from proposed project will be about 2000 direct employment and about 5000 indirect employment. The proposed capacity for different products for new site area as below:

Name of Unit	No. of Units	Capacity of each Unit	Production Capacity
Copper Smelter plant	2	4.5 LTPA	9 LTPA
Copper Refinery plant	2	5.0 LTPA	10 LTPA

1750

Continuous cast copper rod plant	2/3	2.5/ 1.67 LTPA	5 LTPA
Copper scrap melting facility	2	0.5 LTPA	1 LTPA
Sulphuric acid plant	2	15 LTPA	30 LTPA
Phosphoric acid plant	2	2.5 LTPA (100% P_2O_5)	5 LTPA (100% P_2O_5)
Aluminium Fluoride plant	2	15,000 TPA	30,000 TPA
Selenium Recovery plant	2	144 TPA	288 TPA
Precious metal recovery plant (Gold)	2	25 TPA	50 TPA
Precious metal recovery plant (Silver)	2	250 TPA	500 TPA
Oxygen (Industrial) Plant (95% Purity)	2	45,000 TPM	90,000 TPM
Waste heat recovery boiler	2	25 MW	50 MW

3.0 The electricity load required is 300 MW, out of this, 40 MW will be generated from internal process steam by waste heat recovery; whereas the remaining 260 MW power will be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd. Company has also proposed to install 6 DG Set of 1200 - 2000 KVA Each, as a backup facility.

4.0 Proposed raw material requirement for project are Copper concentrate and Rock phosphate. Requirement would be fulfilled by importing as well as from domestic market. Fuel consumption will be mainly Furnace Oil, LPG/NG and Coal for process requirement. Water Consumption for the proposed project will be 32,800 KLD desalinated water and waste water generation will be nil outside the project boundary. Domestic waste water will be treated through Sewage treatment plant and industrial waste water generated will be treated in the Effluent Treatment Plant & through reverse Osmosis plant and reused in the process. ETP Sludge shall be disposed as per applicable hazardous waste management rules.

5.0 The above proposal was considered by the Expert Appraisal Committee (Industry) during its 6th meeting held on 3rd – 4th May, 2016 for prescribing TORs for undertaking detailed EIA/EMP study.

6.0 Based on the information furnished and presentation made by the project proponent, the Committee recommended prescribing following specific TORs for undertaking detailed EIA and EMP study in addition to the generic TOR enclosed at **Annexure I read with additional TORs at Annexure-2.**

i. The Public Hearing for the project should be conducted by Gujarat Pollution Control Board

ii. The issues raised during public hearing and commitment of the project proponent on the same along with time bound action plan to implement the commitment and financial allocation thereto should be clearly provided.

iii. The project proponent should carry out social impact assessment of the project as per the Office Memorandum No. J-11013/25/2014-IA.I dated 11.08.2014 issued by the Ministry regarding guidelines on Environment Sustainability and CSR related issues. The social impact assessment study so carried out should form part of EIA and EMP report.

iv. Plan for management of Arsenic bearing sludge should be submitted.

1751

v. Hazardous management plan for handling of all hazardous material including minerals, products and waste, like H_2SO_4 and Arsenic sludge should be prepared by the project proponent and submitted.

7.0 The undersigned is directed to inform that the Ministry of Environment, Forest and Climate Change (MoEFCC) after accepting the recommendation of the EAC (Industry), hereby decided to accord ToRs for the above project.

8.0 It is requested that the draft EIA Report may be prepared in accordance with the above mentioned specific TORs and enclosed generic TORs and additional TORs and thereafter further necessary action including conduct of public consultation may be taken (if required) for obtaining Environment Clearance in accordance with the procedure prescribed under the EIA Notification, 2006 as amended.

9.0 The TORs are valid for a period of three years from today i.e 21.06.2016 and will expire on 20.06.2019, However, this period could be further extended by a maximum period of one year provided an application is made by the project proponent at least three months before the expiry of the validity period, together with updated Form-I, based on proper justification.

21/06/2016

(Dr. Satish C. Garkoti)
Scientist 'F'

Copy to:-

1. The Secretary, Department of Environment, Government of Gujrat.
2. The Additional Principal Chief Conservator of Forests (C), Ministry of Environment, Forest and Climate Change, Regional Office (WZ), E-5, Kendriya Paryavaran Bhawan, E-5 Arera Colony, Link Road-3, Ravishankar Nagar, Bhopal – 462016.

(Dr. Satish C. Garkoti)
Scientist 'F'

1752

ANNEXURE –I

GENERIC TERMS OF REFERENCE (TOR) IN RESPECT OF INDUSTRY SECTOR

1. Executive Summary
2. Introduction
   - i. Details of the EIA Consultant including NABET accreditation
   - ii. Information about the project proponent
   - iii. Importance and benefits of the project

3. Project Description
   - i. Cost of project and time of completion.
   - ii. Products with capacities for the proposed project.
   - iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.
   - iv. List of raw materials required and their source along with mode of transportation.
   - v. Other chemicals and materials required with quantities and storage capacities
   - vi. Details of Emission, effluents, hazardous waste generation and their management.
   - vii. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)
   - viii. Process description along with major equipments and machineries, process flow sheet (quantative) from raw material to products to be provided
   - ix. Hazard identification and details of proposed safety systems.
   - x. Expansion/modernization proposals:
     - a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Regional Office of the Ministry of Environment and Forests as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental clearances including Amendments shall be provided. In addition, status of compliance of Consent to Operate for the ongoing /existing operation of the project from SPCB shall be attached with the EIA-EMP report.
     - b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.

4. Site Details
   - i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.
   - ii. A toposheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)
   - iii. Co-ordinates (lat-long) of all four corners of the site.
   - iv. Google map-Earth downloaded of the project site.

1752

v. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.

vi. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.

vii. Landuse break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc shall be included. (not required for industrial area)

viii. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area

ix. Geological features and Geo-hydrological status of the study area shall be included.

x. Details of Drainage of the project upto 5km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)

xi. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.

xii. R&R details in respect of land in line with state Government policy

5. **Forest and wildlife related issues (if applicable):**

i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable).

ii. Landuse map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (*in case of projects involving forest land more than 40 ha).*

iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.

iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden thereon.

v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area.

vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife

6. **Environmental Status**

i. Determination of atmospheric inversion level at the project site and site-specific micro-meteorological data using temperature, relative humidity, hourly wind speed and direction and rainfall.

ii. AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests.

iii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min.,

1754

max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.

iv. Surface water quality of nearby River (60m upstream and downstream) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.

v. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC.

vi. Ground water monitoring at minimum at 8 locations shall be included.

vii. Noise levels monitoring at 8 locations within the study area.

viii. Soil Characteristic as per CPCB guidelines.

ix. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.

x. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.

xi. Socio-economic status of the study area.

7. Impact Assessment and Environment Management Plan

i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be well assessed. Details of the model used and the input data used for modeling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.

ii. Water Quality modelling – in case, if the effluent is proposed to be discharged in to the local drain, then Water Quality Modelling study should be conducted for the drain water taking into consideration the upstream and downstream quality of water of the drain.

iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.

iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules.

v. Details of stack emission and action plan for control of emissions to meet standards.

vi. Measures for fugitive emission control

vii. Details of hazardous waste generation and their storage, utilization and disposal. Copies of MOU regarding utilization of solid and hazardous waste shall also be included. EMP shall include the concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.

viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.

1755

ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 1,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.

x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.

xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.

xii. Action plan for post-project environmental monitoring shall be submitted.

xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan.

8. Occupational health

i. Details of existing Occupational & Safety Hazards. What are the exposure levels of above mentioned hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved.

ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre placement and periodical examinations give the details of the same. Details regarding last month analyzed data of abovementioned parameters as per age, sex, duration of exposure and department wise.

iii. Annual report of heath status of workers with special reference to Occupational Health and Safety.

iv. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers.

9. Corporate Environment Policy

i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.

ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.

iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.

iv. Does the company have system of reporting of non compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report

1756

10. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.

11. Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.

12. 'A tabular chart with index for point wise compliance of above TORs.

13. The TORs prescribed shall be valid for a period of three years for submission of the EIA-EMP reports along with Public Hearing Proceedings (wherever stipulated).

The following general points shall be noted:

i. All documents shall be properly indexed, page numbered.
ii. Period/date of data collection shall be clearly indicated.
iii. Authenticated English translation of all material in Regional languages shall be provided.
iv. The letter/application for environmental clearance shall quote the MOEF file No. and also attach a copy of the letter.
v. The copy of the letter received from the Ministry shall be also attached as an annexure to the final EIA-EMP Report.
vi. The index of the final EIA-EMP report must indicate the specific chapter and page no. of the EIA-EMP Report
vii. While preparing the EIA report, the instructions for the proponents and instructions for the consultants issued by MOEF vide O.M. No. J-11013/41/2006-IA.II (I) dated 4th August, 2009, which are available on the website of this Ministry shall also be followed.
viii. The consultants involved in the preparation of EIA-EMP report after accreditation with Quality Council of India (QCI) /National Accreditation Board of Education and Training (NABET) would need to include a certificate in this regard in the EIA-EMP reports prepared by them and data provided by other organization/Laboratories including their status of approvals etc. Name of the Consultant and the Accreditation details shall be posted on the EIA-EMP Report as well as on the cover of the Hard Copy of the Presentation material for EC presentation.
ix. TORs' prescribed by the Expert Appraisal Committee (Industry) shall be considered for preparation of EIA-EMP report for the project in addition to all the relevant information as per the 'Generic Structure of EIA' given in Appendix III and IIIA in the EIA Notification, 2006. Where the documents provided are in a language other than English, an English translation shall be provided. The draft EIA-EMP report shall be submitted to the State Pollution Control Board of the concerned State for conduct of Public Hearing. The SPCB shall conduct the Public Hearing/public consultation, district-wise, as per the provisions of EIA notification, 2006. The Public Hearing shall be chaired by an Officer not below the rank of Additional District Magistrate. The issues raised in the Public Hearing and during the consultation process and the commitments made by the project proponent on the same shall be

x. included separately in EIA-EMP Report in a separate chapter and summarised in a tabular chart with financial budget (capital and revenue) along with time-schedule of implementation for complying with the commitments made. The final EIA report shall be submitted to the Ministry for obtaining environmental clearance.

1758

ANNEXURE-2

METALLURGICAL INDUSTRY (FERROUS AND NON-FERROUS)

1. Complete process flow diagram describing each unit, its processes and operations, along with material and energy inputs & outputs (material and energy balance).
2. Emission from sulphuric acid plant and sulphur muck management.
3. Details on installation of Continuous Emission Monitoring System with recording with proper calibration system
4. Details on toxic metals including fluoride emissions
5. Details on stack height
6. Details on ash disposal and management
7. Complete process flow diagram describing process of lead/zinc/copper/ aluminium, *etc.*
8. Details on smelting, thermal refining, melting, slag fuming, and Waelz kiln operation
9. Details on Holding and de-gassing of molten metal from primary and secondary aluminum, materials pre-treatment, and from melting and smelting of secondary aluminium
10. Details on toxic metal content in the waste material and its composition and end use (particularly of slag).
11. Trace metals in waste material especially slag.
12. Plan for trace metal recovery
13. Trace metals in water

****

1759

Format for Executive Summary

Executive summary of the report in about 8-10 pages incorporating the following:

i. Project name and location (Village, Dist, State, Industrial Estate (if applicable)
ii. Products and capacities. If expansion proposal then existing products with capacities and reference to earlier EC.
iii. Requirement of land, raw material, water, power, fuel, with source of supply (Quantitative)
iv. Process description in brief, specifically indicating the gaseous emission, liquid effluent and solid and hazardous wastes.
v. Measures for mitigating the impact on the environment and mode of discharge or disposal.
vi. Capital cost of the project, estimated time of completion
vii. Site selected for the project – Nature of land – Agricultural (single/double crop), barren, Govt/private land, status of is acquisition, nearby (in 2-3 km.) water body, population, with in 10km other industries, forest , eco-sensitive zones, accessibility, (note – in case of industrial estate this information may not be necessary)
viii. Baseline environmental data – air quality, surface and ground water quality, soil characteristic, flora and fauna, socio-economic condition of the nearby population
ix. Identification of hazards in handling, processing and storage of hazardous material and safety system provided to mitigate the risk.
x. Likely impact of the project on air, water, land, flora-fauna and nearby population
xi. Emergency preparedness plan in case of natural or in plant emergencies
xii. Issues raised during public hearing (if applicable) and response given
xiii. CSR plan with proposed expenditure.
xiv. Occupational Health Measures
xv. Post project monitoring plan

APPENDIX I

(See Paragraph-6)

FORM 1

Note : If space provided against any parameter is inadequate,Kindly upload supporting document under 'Additional Attachments if any' at the last part of the Form1. Please note that all such Annexures must be part of single pdf document.

(I) Basic Information

S.No.	Item	Details
	Whether it is a violation case and application is being submitted under Notification No. S.O.804(E) dated 14.03.2017 ?	No
1.	Name of the Project/s Brief summary of project Proposal Number Project Cost (in lacs)	Proposed 10 LTPA Copper Project Annexure-Brief summary of project IA/GJ/IND/53004/2016 1000000
2.	S. No. in the schedule Project Sector	3(a) Metallurgical industries (ferrous & non ferrous) Industrial Projects - 1
3.	Proposed capacity/area/length/tonnage to be handled/command area/lease area/number or wells to be drilled	Proposed Production Capacity: a. Copper Smelter Plant - 9 LTPA b. Copper Scrap Melting Facility - 1 LTPA c. Copper Refinery Plant - 10 LTPA d. Continuous Cast Copper Rod Plant - 5 LTPA e. Sulphuric Acid Plant - 30 LTPA f. Phosphoric Acid Plant - 5 LTPA g. Aluminum Fluoride Plant - 30,000 TPA h. Selenium Recovery Plant - 288 TPA i. Precious Metal Recovery Plant i. Gold – 50 TPA ii. Silver – 500 TPA j. Oxygen (Industrial) Plant – 90,000 TPM (95% Purity) k. Waste Heat recovery boiler b ha.
4.	New/Expansion/Modernization	New
5.	Existing Capacity/Area etc.	-1 ha.
6.	Category of project i.e. 'A' or 'B'	A
7.	Does it attract the general condition? If yes, please specify	No
8.	Does it attract the specific condition? If yes, please specify	No
9.	Location of the project Shape of the project land Uploaded GPS file Uploaded copy of survey of India Toposheet Plot/Survey/Khasra No. Town / Village State of the project	Mundra, Gujarat Block (Polygon) Annexure-GPS file Annexure-Survey of india toposheet APSEZ area in Siracha and Navinal villages. Siracha village 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/P, 142/P, 143, 144/1, 144/2, 147/P, 295/1 part, 295/2 (forest land), un-surveyed land, old ACL and diverted Mundra forest land part. Navinal Village 223/P, 224/P, 225/P and old ACL Siracha and Navinal Gujarat

Details of State of the project

S.no	State Name	District Name	Tehsil Name
(1.)	Gujarat	kutch	Mundra

10.	Nearest railway station along with distance in kms	Adipur/Gandhidham, 65 km
	Nearest airport along with distance in kms	Bhuj, 55 km
11.	Nearest Town/City/District Headquarters along with distance in kms	Mundra , 22 km
12.	Village Panchayats, Zila Parishad, Muncipal Corporation, Local body (Complete postal address with telephone nos. to be given)	
13.	Name of the Applicant	Santosh
14.	Registered Address	Adani House, Near Mithakali Circle, Navrangpura, Ahmedabad 380009, Gujarat
15.	**Address for correspondance:**	
	Name of the Company	ADANI ENTERPRISES LTD
	Name of the Applicant	Santosh
	Designation (Owner/ Partner/ CEO)	Head Env and Authorised Signatory for AEL
	Pin code	380015
	E-mail	prasad.suryarao@adani.com
	Telephone No.	079-26565555
	Fax No.	079-25555500
	Copy of documents in support of the competence/authority of the person making this application to make application on behalf of the User Agency .	NIL
16.	Details of Alternative Sites examined, if any. Location of these sites should be shown on a toposheet	Yes
	Uploaded details	Annexure-Uploaded details
17.	Whether part of Interlinked projects?	No
18.	Whether separate application of Interlinked project has been submitted?	N/A
19.	If Yes, MoEF file number	N/A
	Date of submission	N/A
20.	If No, Reason	N/A
21.	**Whether the proposal involves Approval/ Clearance under: if yes, details of the same and their status to be given**	
	(i) Whether the proposal involves approval/clearance under the Forest (Conservation) Act,1980?	Yes
	Status	Forest Clearance Under Process
	MoEF file number	8-04/2016-FC
	MoEF file number	1576.81ha.
	(ii) Whether the proposal involves approval/clearance under the wildlife (Protection) Act,1972?	No
	(iii) Whether the proposal involves approval/clearance under the C.R.Z notification, 2011?	No
22.	Whether there is any Government Order/Policy relevent/relating to the site?	No

1762

23.	Whether any Forest Land Involved? Area of Forest land Involved (hectares)	 N/A
24.	Whether there is any litigation pending against the project and/or land in which the project is proposed to be set up?	No
	(a) Name of the Court	N/A
	(b) Name of the Sub court	N/A
	(c) Case No.	N/A
	(d) Orders/directions of the court, if any and relevance with the proposed project	N/A

(II) Activity

1 Construction, operation or decommissioning of the Project involving actions, which will cause physical changes in the locality (topography, land use, changes in water bodies, etc.)

S.No	Information/Checklist confirmation	Yes/No	Details there of (with approximate quantities/rates, wherever possible) with source of information data
1.1	Permanent or temporary change in land use, land cover or topography including increase in intensity of land use (with respect to local land use plan)	Yes	381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Permanent change in land cover and topography will occur due to construction of the proposed industry. Further, forest land of 253 acres (102.38 ha) is also involved which will be converted for industrial use. Forest Clearance is under pursuance, file number is 8-04/2016-FC.
1.2	Clearance of existing land, vegetation and buildings?	Yes	Some shrubs / weeds (mainly prosopis juliflora) present at the site shall be cleared.
1.3	Creation of new land uses?	Yes	381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Permanent change in land cover and topography will occur due to construction of the proposed industry. Further, forest land of 253 acres (102.38 ha) is also involved which will be converted for industrial use. Forest Clearance is under pursuance, file number is 8-04/2016-FC.
1.4	Pre-construction investigations e.g. bore houses, soil testing?	Yes	Will be done prior to construction
1.5	Construction works?	Yes	Construction of manufacturing plants and related ancillary facilities will be carried out
1.6	Demolition works?	No	Not envisaged
1.7	Temporary sites used for construction works or housing of construction workers?	Yes	The temporary labour colony will be constructed for construction workers.
1.8	Above ground buildings, structures or earthworks including linear structures,cut and fill or excavations and fill or excavations	Yes	Construction of manufacturing plants and related ancillary facilities will be carried out.
1.9	Underground works including mining or tunneling?	No	Not envisaged
1.10	Reclamation works?	No	Not envisaged

1.11	Dredging?	No	Not envisaged
1.12	Offshore structures?	No	Not envisaged
1.13	Production and manufacturing processes?	Yes	Covered in Pre-feasibility report
1.14	Facilities for storage of goods or materials?	Yes	There will be storage of Copper Concentrate and Rock Phosphate in covered sheds, storage and handling area, other required raw materials & chemical, Furnace Oil, LPG/ NG for process requirement and HSD for DG set as power backup.
1.15	Facilities for treatment or disposal of solid waste or liquid effluents?	Yes	Solid waste management and effluent treatment will be provided and the details are given in the Pre-Feasibility Report.
1.16	Facilities for long term housing of operational workers?	No	About 2000 operation workers will be employed. No separate township has been planned for Copper complex. The house for O&M personnel would be provided at APSEZ existing township by augmenting the township, which is around 30 km away from the proposed Copper Complex.
1.17	New road, rail or sea traffic during construction or operation?	Yes	New approach road will be constructed.
1.18	New road, rail, air water borne or other transport infrastructure including new or altered routes and stations, ports, airports etc?	Yes	New approach road will be constructed. In addition, conveyor belt for transfer of Copper Concentrate and Rock Phosphate from existing Adani West Port to the site will be built.
1.19	Closure or diversion of existing transport routes or infrastructure leading to changes in traffic movements?	No	Not anticipated.
1.20	New or diverted transmission lines or pipelines?	Yes	New transmission line shall be constructed for construction and operational power tapping from APSEZ Ltd through M/s. Mundra Utility Pvt Ltd.
1.21	Impoundment, damming, culverting, realignment or other changes to the hydrology of watercourses or aquifers?	No	Not envisaged
1.22	Stream crossings?	Yes	Natural drainage passing through the site will be suitably trained and maintained. There will not be any diversion. Further, conveyer for Copper Concentrate and Rock Phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required.
1.23	Abstraction or transfers of water from ground or surface waters?	No	Desalinated water will be supplied by APSEZ Ltd.
1.24	Changes in water bodies or the land surface affecting drainage or run-off?	No	Not envisaged
1.25	Transport of personnel or materials for construction, operation or decommissioning?	Yes	Existing approach road to site shall be initially used for movement of personal and transport. For permanent and long term movement of personal and transport of material, new approach road construction or strengthening of existing approach road shall be done as submitted above in Sr. No. 1.17. During operational phase, Copper Concentrate and Rock Phosphate supply will be through conveyor belt and transportation of products through Trucks/ Trailers and tankers etc.
1.26	Long-term dismantling or decommissioning or restoration works?	No	Not envisaged
1.27	Ongoing activity during decommissioning which could have an impact on the	No	Not envisaged

	environment?		
1.28	Influx of people to an area in either temporarily or permanently?	Yes	Approximately 3000 persons will be employed during construction phase and about 2000 people will be employed during operation phase.
1.29	Introduction of alien species?	No	Not envisaged
1.30	Loss of native species or genetic diversity?	No	Not envisaged
1.31	Any other actions?	No	Not envisaged

2 Use of Natural resources for construction or operation of the Project (such as land, water, materials or energy, especially any resources which are non-renewable or in short supply):

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
2.1	Land especially undeveloped or agricultural land (ha)	Yes	The total land required for Copper project is 634 acres (256.57 ha). Identified land area is not an agricultural land but part of land already designated/recorded as Industrial Land under APSEZ and presently undeveloped. Remaining part of the above land is reserve forest land (253 acres (102.38 ha)), which has been applied for forest clearance.
2.2	Water (expected source & competing users) unit: KLD	Yes	Total 32,800 KLD desalinated water will be sourced from APSEZ Ltd.
2.3	Minerals (MT)	Yes	Total Copper Concentrate consumption for Copper plant is about 32 LTPA and will be imported from Chile/ Brazil/ Canada/ Australia, etc. and also from domestic market as available. Total Rock Phosphate consumption for Phosphoric Acid Plant is about 17.5 LTPA and will be imported from Morocco/ Jordan/ Egypt/ Australia, etc. and also from domestic market as available.
2.4	Construction material – stone, aggregates, sand / soil (expected source – MT)	Yes	Construction material such as sand, steel, aggregates, etc. will be used. However, the quantification of these materials will be done during detailed engineering stage. These materials will be sourced from local areas.
2.5	Forests and timber (source – MT)	No	Not envisaged
2.6	Energy including electricity and fuels (source, competing users) Unit: fuel (MT),energy (MW)	Yes	Construction phase: The construction power need of around 20 MW would be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd. Operational phase: The estimated power demand for the Copper Smelter plant is 300 MW. Out of this, 40 MW will be generated from internal process steam by heat recovery. Whereas, the remaining 260 MW power will be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd.
2.7	Any other natural resources (use appropriate standard units)	Yes	Silica Sand – 320,000 TPA Quartz – 144,000 TPA Limestone – 80,000 TPA

3 Use, storage, transport, handling or production of substances or materials, which could be harmful to human health or the environment or raise concerns about actual or perceived risks to human health

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate

			km, S) Nagavanti Nadi (4.7 km, E) Phot Nadi (8.7 km, ENE)
3	Areas used by protected, important or sensitive species of flora or fauna for breeding, nesting, foraging, resting, over wintering, migration	Yes	Mundra Mangrove RF (south of project area)
4	Inland, coastal, marine or underground waters	Yes	Gulf of Kachchh (3.9 km, S) Kotri creek (0.5 km, S)
5	State, National boundaries	No	Nil
6	Routes or facilities used by the public for access to recreation or other tourist, pilgrim areas	No	Nil
7	Defence installations	No	Nil
8	Densely populated or built-up area	Yes	Mundra (22 km)
9	Areas occupied by sensitive man-made land uses (hospitals, schools, places of worship, community facilities)	Yes	Hospitals, schools, places of worship and other general community facilities exist in the study area.
10	Areas containing important, high quality or scarce resources.(ground water resources,surface resources,forestry,agriculture,fisheries,tourism,minerals)	Yes	Kotri creek (0.5 km, S) Khari Nadi (1.9 km, W) Gulf of Kachchh (3.9 km, S) Nagavanti Nadi (4.7 km, E) Phot Nadi (8.7 km, ENE)
11	Areas already subjected to pollution or environmental damage.(those where existing legal environmental standards are exceeded)	No	Nil
12	Areas susceptible to natural hazard which could cause the project to present environmental problems (earthquakes, subsidence, landslides, erosion, flooding or extreme or adverse climatic conditions) similar effects	Yes	The project area falls under seismic zone-V as per IS: 1893 (Part-1): 2002.

(IV) Proposed Terms of Reference for EIA studies

1	**Uploaded Proposed TOR File**	Annexure-TOR file
2	**Uploaded scanned copy of covering letter**	Annexure-scanned copy of covering letter
3	**Uploaded Pre-Feasibility report(PFR)**	Annexure-PFR
4	**Uploaded additional attachments(only single pdf file)**	NIL

(V) Undertaking

I hereby give undertaking that the data and information given in the application and enclosures are true to be best of my knowledge and belief and I am aware that if any part of the data and information found to be false or misleading at any stage, the project will be rejected and clearance given, if any to the project will be revoked at our risk and cost.

V. (i)	**Name of Applicant**	Santosh
	Designation	Head Env and Authorised Signatory for AEL
	Name of Company (Applicant Name should not be given here)	ADANI ENTERPRISES LTD
	Address	Adani House, Near Mithakali Circle, Navrangpura, Ahmedabad 380009, Gujarat

1766

ANNEXURE-I
TOR LETTER AND ITS COMPLIANCE

Sr. No.	Terms of Reference(TOR)	Compliance
	green field projects)	
	xi. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.	381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company). Balance 253 acres is forest land for which State Govt. has recommended for Forest Clearance (FC) and is at Central Government file number is 8-04/2016-FC.
	xii. R&R details in respect of land in line with state Government policy	There is no Resettlement and Rehabilitation involved in the project.
5	**Forest and wildlife related issues (if applicable)**	
	i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (If applicable).	Forest land of 253 acres (102.38 ha) is also involved which will be converted for industrial use, State Govt. has recommended for Forest Clearance (FC) and is at Central Government, file number is 8-04/2016-FC.
	ii. Land use map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha).	Land use map based on 5 m resolution showing the forest land is shown in Figure-3.3.2 of Chapter-3.
	iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted	State Govt. has recommended for Forest Clearance (FC) and is at Central Government file number is 8-04/2016-FC.
	iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon.	There are no National Parks, Sanctuaries, Biosphere Reserves within 10 km radius study area. Toposheet showing the 10 km radius study area map on 1:50,000 scale is shown in Figure-1.2 of Chapter-1
	v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area.	As per the primary data collected and also from the secondary data sources, Peacock belongs to Sch-I as per Wildlife Protection Act, 1972. Conservation measures are provided in Section-4.2.7.3 of Chapter-4.
	vi. Copy of application submitted for clearance under the Wildlife (Protection) Act,1972, to the Standing Committee of the National Board for Wildlife	Not applicable
6.	**Environmental Status**	
	i. Determination of atmospheric	Report is enclosed as Annexure-VIII.

No. J-11015/200/2008-IA.II(M)
Government of India
Ministry of Environment & Forests

Paryavaran Bhavan,
C.G.O. Complex, Lodi Road,
New Delhi-110003.
Telefax: 24362434

Dated the 31st March, 2011

Office Memorandum

Sub: Consideration of projects for grant of environmental clearance under EIA Notification, 2006 which involve forestland – Procedure to be followed – Regarding.

Ref: Office Memorandum no. J-11013/41/2006-IA.II(I) dated 2nd December, 2009 regarding Procedure for consideration of proposals for grant of environmental clearance under EIA Noti9fication, 2006, which involve forestland and or wildlife habitat.

The issue regarding consideration of proposals especially mining project for grant of environmental clearance under EIA Notification, 2006, which also involve diversion of forestland has been under consideration for quite some time and circulars / guidelines have been issued in the past in this regard from time to time. In this regard, reference is also invited to para 8 (v) of the EIA Notification, 2006 reads as follows:

"Clearances from other regulatory bodies or authorities shall not be required prior to receipt of applications for prior environmental clearance of projects or activities, or screening, or scoping, or appraisal, or decision by the regulatory authority concerned, unless any of these is sequentially dependent on such clearance either due to a requirement of law, or for necessary technical reasons."

According to the above provision, the environmental clearance under EIA Notification, 2006 is independent of other clearances and submission of clearances under other relevant Acts and Rules as may be applicable to a project is not a pre-requisite for obtaining environmental clearance except in specific cases where it is sequentially dependent on such clearance either due to requirement of law or for necessary technical reason. This aspect was earlier discussed and deliberated and the office memorandum dated 2nd December, 2009 referred to above was an outcome of the same.

1768

However, in view of the complexity of the issues involved, the matter has been considered further in the Ministry and in supersession of the earlier instructions, it has now been decided to adopt the following procedure for consideration of such projects.

I. Projects in Pipeline:

(A) Projects received for TORs and yet to be considered by EAC:
In case of the proposals which have been received for prescribing TORs and involve forestland, in part or in full, and are yet to be considered by the EAC, during consideration of such proposals, clarifications will be obtained from the project proponent regarding feasibility of undertaking the project only in non forestland. In case, the project proponent confirms to undertake the project in non forest area only, the proponent may be advised to submit the revised proposal by deleting the forestland involved in the project. In case, it is not possible to undertake the project without involving diversion of forestland, the project proponent will be asked to first apply for stage-I forestry clearance for the forestland involved in the project and thereafter submit the proposal for obtaining terms of reference as per the procedure prescribed under EIA Notification, 2006.

(B) Projects for which TORs have already been prescribed but the proposal for environmental clearance is yet to be submitted:

In case of the proposals, which involve forestland, in part or in full, and for which TORS have already been prescribed, the project proponents are advised to ensure that the requisite stage-I forestry clearance has been granted and its copy is submitted along with their application / proposal for environment clearance. Alternatively, the proponent should delete from their land requirement, the forestland involved in the project and the proposal so amended without any forestland may be submitted for appraisal by the EAC.

In case of projects where forest diversion (Stage I Clearance) has been approved for part of the total forestland involved in the project, the proposal will be considered only for the land for which forest diversion has been approved and the non forestland, if any. For the purpose, the onus of demonstrating that the project activities will be limited to that much area only would lie with the project proponent and necessary supporting documents will be submitted in this regard.

(C) Projects submitted for environmental clearance based on the TORs prescribed by EAC:

The proposals already submitted for environmental clearance will be appraised by the EAC on their merit and in case of involvement of forestland, the proponent will be asked either to delete the forestland and submit the revised proposal or approach the EAC after the stage-I forestry clearance for

the forestland involved in the project has been granted, till which time the proposal will stand delisted.

In case of projects for which diversion of forestland has been granted for part of the forestland, the proposal will be appraised taking into account that much of land only (land for which FC granted + Non forestland) for the project activities and the proponent should demonstrate the viability of the project with requisite supporting documents.

(D) Projects already considered by EAC and recommended for grant of environmental clearance:

In accordance with the recommendations of EAC, such projects will be processed on file for obtaining approval of the MEF for grant of environment clearance. After MEF has approved, a communication will be sent to the project proponent informing that the Competent Authority has approved the project; however, the formal environmental clearance will be issued only after the stage-I forestry clearance for the forestland involved in the project has been obtained and submitted. For the purpose, a maximum time limit of one year will be provided to the proponent during which time the proposal will be kept in abeyance. In case, the formal forestry clearance is not submitted within this time frame, the proposal will stand rejected and the process for obtaining environmental clearance will have to be initiated, de-novo, as per the procedure prescribed under EIA Notification, 2006.

II. Expansion Projects:

(i) Mining Projects involving enhancement of production by increasing the depth and or number of shifts, without any increase in lease area and having already obtained the forestry clearance for the forestland involved in the mine lease, shall be considered on merit and decision taken.

(ii) The Expansion projects involving horizontal spread with additional land requirement will be dealt with as green field projects, if additional forestland is to be diverted.

III. Greenfield Projects:

(i) If any green field project does not envisage any diversion of forest land, it would be considered as per the provisions of EIA Notification, 2006.

(iii) In case of any green field project, which involves diversion of forest land, the project proponents are advised to re-examine the requirement of forestland and submit the proposal without forestland for consideration of the EAC. Otherwise, the proponent should submit the proposal for TORs under the EIA Notification, 2006 only after

1770

applying the stage-I forestry clearance for the forestland involved in the project.

(iii) All cases of grant / renewal of EC for any abandoned mine or sick project under revival etc. would be considered as a green field project for appraisal under EIA Notification, 2006 and the procedure mentioned above will be followed.

This issues with the approval of the Competent Authority.

Subject: Cancellation of public hearing scheduled for 29.4.2017 and rejection of EIA related to Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in MundraTaluka, Kutch, Gujarat

Dear Sir,

This is with reference to the public hearing for the above mentioned copper refinery project scheduled for 29.4.2017 in Mundrataluka, Kutch [Attached as Annexure 1]. We would like to present to you certain facts and request you to immediately cancel the public hearing and reject the EIA on clear legal grounds.

Non compliance of ToR and violation of MoEFCC circular dated 31.11.2011

- Section 5 (i) of the Terms of Reference (ToR) issued for the project on 21st June 2016, clearly indicates that the project proponent has to provide a copy of the*"Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department, (if applicable)."*[Attached as Annexure 2]
- Further as per the EDS by MoEFCC uploaded on the website athttp://environmentclearance.nic.in/auth/FORM_A_PDF.aspx?cat_id=IA/GJ/IND/53004/2016&pid=Newand accessed on 8.4.2017, it is clearly indicated that "Forest Clearance Under Process". The file is under process in file number 8-04/2016-FC. A copy of this web page is attached with this letter. [Attached as Annexure 3]
- In the EIA report on Page No. AI-14, it has also been stated that the forest clearance is pending at the level of the central government [Attached as Annexure 4]

This clearly indicates the project proponent is yet to obtain forest clearance and **has not complied with the Terms of Reference (ToR)**, making the EIA report liable for rejection.

In this regard we would also like to bring your attention to (attached) to an Office Memorandum of the **MoEFCC dated 31.11.2011** which clearly emphasizes the need for forest clearance prior to either appraising or granting environmental clearance. In the case of greenfield projects like the copper refinery**Section III (iii) of this circular**[Attached as Annexure 5] clearly states that:*"In case of any green field project, which involves diversion of forest land, the project proponents are advised to re-examine the requirement of forestland and submit the proposal without forestland for consideration of the EAC. Otherwise, the proponent should submit the proposal for TORs under the EIA Notification, 2006 only after applying the stage-1 forestry clearance for the forestland involved inthe project."*

1772

As you are aware **Section 8 (vi) of the EIA notification, 2006** clearly states: *"Deliberate concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application shall make the application liable for rejection, and cancellation of prior environmental clearance granted on that basis..."*

We therefore request you to take immediate action by:

1. Cancelling the public hearing scheduled for 29.4.2017 in Mundra
2. Reject the application attracting the Section 8 (vi) of the EIA notification.

We look forward to your immediate action and cooperation in this regard.

Sincerely,

Gajendrasinh Jadeja,
Sarpanch, Navinal Village,
MundraTaluka, Kutch District
Gujarat

Objectives

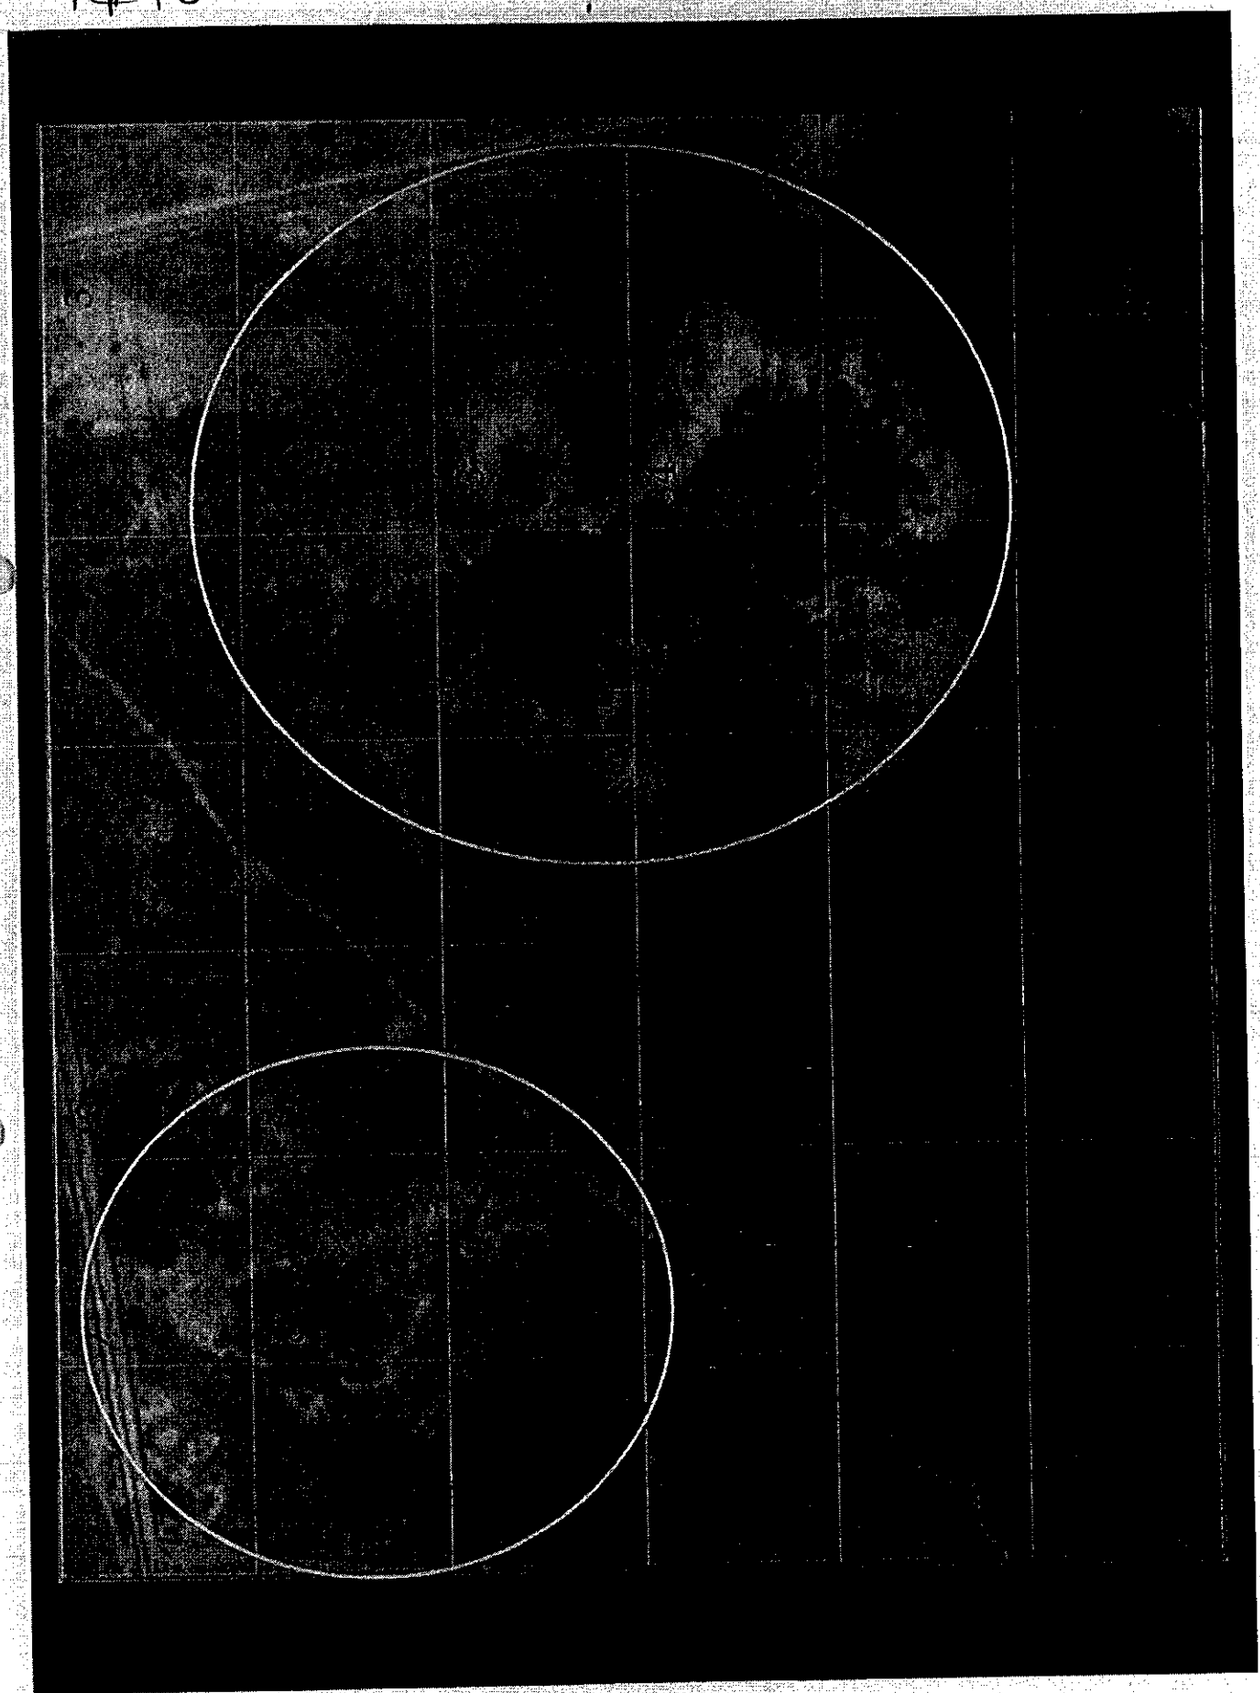
Coexistence of Classical Harappans and Regional Chalcolithic traditions

How the residents of Navinal were integrated into the interregional interaction networks of the Integration Era

How these patterns of social interaction changed during the subsequent Localization Era

Craft production existed at Navinal during Integration and Localization Eras

Variations within regional Chalcolithic traditions



Understand the chronology of the site

Preserve the cultural materials

Educate the general public and development officials regarding the importance of preserving the national heritage

Abstract

Recent explorations at the site of Navinal, Kachchh District, Gujarat has brought to light interesting evidence regarding the co-existence of regional Chalcolithic culture with Urban Harappans. This integration is reflected in various archaeological artefacts collected from the site. Lithic assemblages are an integral part of Chalcolithic cultures and are known to provide important evidence regarding trade and technology. The Lithic assemblage recovered from the site has given proof of long distance trade contacts and adaptation of a new technique of lithic blade production.

Introduction

The co-existence of Urban Harappans and Regional Chalcolithic cultures especially in the region of Gujarat has been the focus of many recent researches (Ajithprasad 2007; Mandelia et al. 2010; Ajithprasad 2011; Ajithprasad and Sharma 2011; Rajesh 2012). Various archaeological artefacts collected from the coastal site of Navinal has produced interesting facts regarding interrelationship between these two contrasting cultures. Results of a typological analysis of the lithic assemblage collected from the site have been presented in this paper. The study of lithics is of importance for understanding broader questions about society given that lithic assemblages are shaped by a myriad context and includes factors such as technology, economic organization, craft specialization, and other aspects of daily life (Rasmussen 2010). It was also noted that lithic assemblage provided important evidence regarding long distance contacts and continuous incorporation of two distinct lithic technologies.

Site

The archaeological site at Navinal (23° 49' 13.5" N, 69° 35' 49.9" E) in Mundra Taluka, Kachchh District, Gujarat (Fig. 1) was discovered by R.P. Pandya in 1956, but was first reported by S. R. Rao in 1963 (Rao 1963). Assigned by S. R. Rao as a Harappan Port Town, this site appeared as a roughly circular mound (approximately 1 km). Surface features of the site have been studied by archaeologists from M.S. University of Baroda, Kachchh University, University of Kerala and Albion College, USA in 2011, 2012 and 2013.

"Explorations were conducted at the site recently under a newly launched project - 'Archaeological Excavation in Navinal in Mundra Taluka, District Kachchh and Exploration in Kachchh District, Gujarat. This long-term multidisciplinary research project in the Harappan settlement of Navinal, Taluka Mundra, District Kachchh in Gujarat has been launched with twin objectives, to understand the level of integration which existed among the Regional Chalcolithic Cultures and Classical Harappans found at the site and, to understand the economic production and inter regional interaction network that existed during

To,

The Member Secretary,

Gujarat Pollution Control Board,

Gandhinagar - Gujarat

Subject: Objections for Greenfield Copper Refinery Project coming in M/s. Adani Enterprises Limited, Adani Special Economic Zone in village: Shiracha and Navinal.

1. **<u>Non compliance of Terms of Reference and Breach of Circular dt. 31-03-2011 of the Government of India (Encl.: 1)</u>**

   a) T.O.R. (Terms of Reference) was issued for this project of dt. 21st June, 2016, in which it was clearly stated in Section 5(I) that clearance for forest land of 102 hectare should be submitted.

      i) It is declared in Form No.1 (MoEFCC uploaded by them on their website) to obtain Environment Clearance by Adani Enterprise that forest clearance is under the process.

      ii) It is declared on draft E.I.A. report on page no. AI 14 that (The Compliance of TOR has not done) but forest clearance is pending.

      Thus, considering the above mentioned issued it is clear that T.O.R.by Adani Enterprise. So, Environmental Public Hearing is not valid until the T.O.R. compliance is not made.

   b) According to Circular dt. 31-03-2011 of MoEFCC (Encl: 4) that forest clearance should be obtained first for any new project, in which the land of forest department is to be utilized and the environmental clearance process should be made thereafter. The land of 102 Hectare is of Forest in this project of Adani Enterprise and Forest Clearance is pending. It is proved by Encl: 2 and Encl:3. Thus, any environment clearance process made before forest clearance is illegal and Public Hearing may also be treated illegal.

c) As per Section 8(iv) of E.I.A. Notification, 2006 if any information is concealed deliberately, the application should be cancelled. Thus, the above mentioned information pertaining to forest clearance is concealed by Adani Enterprise deliberately to misguide. Hence, their application for environment clearance must be cancelled.

d) Why any action is not taken in spite of the complaint (encl.:5) regarding above mentioned point no. 1 is made by me by e-mail on 11/04/2017 to (1) K. C. Mistry, Member Secretary, Gujarat Pollution Control Board, Gandhinagar and (2) Arvind Agrawal, Chairman, Gujarat Pollution Control Board, Gandhinagar, (3) Regional Officer, Gujarat Pollution Control Board, Gandhidham, (4) M. A. Gandhi, Collector, Kutch, (5) M. K. Sing, Joint Secretary, MoEFCC., New Delhi?. Why the process pertaining to Environment Clearance is not stopped? On what basis Public Hearing is arranged?

2. **Information concealed in Form-1**

a) Review Petition is filed on judgment of P.I.L. No.17 of 2011 of the grazing land of Navinal on the land proposed in point no. 16 and 26 of basic information. It is concealed that it is under proceeding.

b) The information of Daneshwari River is concealed by Adani in point nos. 2 and 10. But, this river passes through the proposed project. Thus, the information is concealed.

Thus, as per Section 8(iv) of E.I.A. Notification, 2006 if any information is concealed deliberately, the application should be cancelled. The above mentioned information is deliberately concealed in Form No.1 by Adani Greenfield Copper refinery. Hence, their application deserves to be cancelled.

3. **Deficiencies in E.I.A. report**

a) It is declared by Adani in point no. 10 on page Nos. 1-4 of E.I.A. report that there is no archeologically important place within the radius of 10 km. But, an archeological place is situated in Navinal Reserve Forest, about 1 km. from the proposed project area. Accordingly, survey of this area is made by archeological department of M. S. University. The primary report is attached herewith. Thus, this information is concealed.

4. **Violation of Sunita Narayan Committee**

a) It is mentioned on page no. 69 of Sunita Narayan Committee Report that fishing port should be made at Bhadreshwar so that people of surrounding villages may make fishing activity there. But nothing such is made there.

b) It is mentioned on page no. 69 of Sunita Narayan Committee Report that arrangement of coming and going should be made so that fishermen may move on coast. But nothing such is made there by Adani.

c) It is mentioned on page no. 75 of Sunita Narayan Committee Report that collective grazing land should be given back voluntarily so that people may graze their animals. But nothing such is made there.

d) It is mentioned on page no. 75 of Sunita Narayan Committee Report that Cumulative Impact assessment studied is to be required and compliance of the same. So permission for new project should not be granted.

e) The committee has mentioned in recommendation no. 7.2.2 that environment permission for north port should be cancelled, because Bocha Island is situated there and mangrove is caused heavy damage there. In spite of that permission is not withdrawn.

f) As per the Sunita Narayan Committee report mapping of HTL and LTL should be made and kept in public domain, which is not placed till date.

5. **Damage caused by Adani Power Plant Project of Adani Enterprise Ltd.**

a) It is mentioned in point no. 2 of permission granted to Adani Power on dt. 21/10/2008 and point no. 2 of C.R.Z. clearance of Intake and Disposal Facility dt. 29/05/2008 that effluent discharge should be made through pipeline. But effluent discharge is made by constructing open channel by Adani Power. Thus, environment permission is violated.

b) The ground water has become more salty due to intake channel construction by Adani Power.

c) Breach is found in guideline of coal handling.

d) It is mentioned in condition no. 7 of CRZ clearance that no trouble someness should be caused to the local community due to Intake Channel and Effluent Discharge pipeline. But the roads are closed by Intake Channel and Effluent Discharge pipeline. The road to approach grazing land is closed for cattle breeders are closed and road to approach religious place on sea shore is closed.

e) It is mentioned in condition no. 9 of CRZ clearance that no displacement of house of the people or fishermen should be caused due to project. Hindrance should not be caused due to pipeline in coming and going of fishermen and the officer boats. All those fishermen dwelling on old Kotdi Bandar since long are displaced due to intake channel. Open channel is built in place of pipeline for Effluent discharge and as it passes through Kotdi creek, the movement of boats of fishermen is interrupted. Thus, this condition is violated.

f) It is mentioned in condition 21 of the environment permission that half yearly compliance report should be submitted. The compliance thereof is not followed.

6. **Issue of land of forest department**

a) A demand of land of reserve forest of 8 villages aggregating to 1576.81 hectare is made by Adani on dt. 19th July, 2004. Its forest clearance is under process. Out of 1576.81 hectare of demanded land to be used for project, 102.38 Hectare of land is of Shiracha Danderi Rakhal (Reserve forest).

b) According to Forest Privilege Act, 2006 the villagers making use of the land have prior right on it and it cannot be allotted for industrial or other use without permission of the village meeting.

c) According to Forest Privilege Act, any community in use of the land for last three generations or earning livelihood from it may have right on it.

d) The villagers of surrounding are making use of this forest land of 1576.81 Hectare. So this land cannot be allotted for industrial purpose according to Forest Privilege Act

e) Siracha Gram Panchayat has put it claim before Prant Stariya Van Adhikar Samiti to settle its community rights on the forest land to be used for proposed project.

f) Out of the 1576.81 hectare of land under demand, 89 hectare of land is of Navinal village and Navinal Village Committee has put collective claim on it.

g) According to Forest Privilege Act, the villagers have prior right on it. So, its forest clearance cannot be availed and it cannot be used for the project.

h) It is the last reserve forest in the area. If it is allotted for industrial purpose, the area will remain without forest and more forest are essential for industrial area.

7. **Noncompliance of Environment Clearance of Adani Port and Special Economic Zone**

a) As per specific condition (2) conservation of creeks, rivers mangroves coming within the area is to be made. It can be seen from the photographs of different years taken from satellite annexed herewith that the creeks, rivers mangroves coming within the area are exterminated by Adani. Thus, the condition is violated.

b) It is directed in the specific condition (3) of Environment Clearance that mouth should be kept open so as the water may move in all creeks.

i) Mouth of Kotdi creek is closed by filling clay

ii) Due to bridge built on the point where Bharadi Mata creek meet Nagmati River sea water does not come to upper area and mangrove in that upper are withered.

iii) Thus, the condition is violated.

c) As per specific condition (4) condition of every creek should be kept in comparison with the satellite image 2005. But, the condition is not followed by the Adani Port and S.E.Z.

d) It is directed in Specific Condition (5) that a recent satellite map should be submitted once a year so that it can be compared with the Satellite map of year 2005 and confirmed whether there is any change in creeks, rivers, mangrove and mouth of creek. No such map is submitted by APSEZ till date. Thus, condition compliance is not followed.

e) As per condition (6) APSEZ must observe order passed by the Ministry of Environment and Forest considering the report submitted by Sunita Narayan Committee. But, it is not followed by APSEZ

f) As directed in condition (12) and (13) NCSCM/NIOT will control and verify the implementation as per action plan approved by Ministry of Environment and Forest. Execution Report of Action Plan will be required to be submitted with six monthly monitoring reports. This condition is not complied till date.

g) As per condition (15) no change should be made in flow of river. But,

   a) The route of river of Kandagara passing through Adani Power is changed.

   b) The Kamandwala flow between Navinal and Shiracha is changed.

   c) The mouth of Nagmati River is closed.

   d) O.C.C.L. Company is established on river of Dhrab.

   e) Construction of Adani Hospital is made on Kevdi River. Thus, breach of this condition is made.

h) As per condition (18) no development should be made up to 50 meter from mangrove area. But, many constructions are erected by project proponent such as construction of Adani House building. Thus, breach of this condition is made.

i) As per condition (19) three tire shelter greenbelt are required to be developed. But, no compliance is made till date.

8) Report of Gujarat Ecology Commission.

a) A report is prepared by Gujarat Ecology Commission upon study of effect on mangrove and its ecology due to coal handling. Mundra Port is a part of it.
b) According to the report, growth of mangrove is affected by coal dust.
c) As per the report BOD (Biological Oxygen Demand) was 9.52 in 2010/11 which has reached to 27 in 2012/13 which is the highest in the areas under survey.
d) COD (Chemical Oxygen Demand) was also 38 in 2010/11 which reached to 92.65 in 012-13.
e) DO (Dissolved Oxygen) has reached to 4.92 from 4.8. which is is higher than permissible limit of CPCB.
f) SS(Suspended Solid, turbidity in water) has reached to 162 from 56 which is higher than permissible limit of CPCB.

g) Nitrate 0.313 in 2010-11 has reached to 1.154 in 2012-13.

9) The grazing land of Navinal village will be used for Copper Refinery Project of Adani Enterprise Ltd. The matter of land is sub- judice. No judgment is passed in favor of any party.

10) In spite of having so many industries, nothing is made for the employment to local people. i.e. 400 Hectare of land of surrounding villages is given to Adani Power and fishermen, farmers, cattle breeders are left unemployed. In reward thereof only 500 out of 7000 laborers and 15 out of 1500 employees are local. Consequently, nothing but unemployment and pollution will be available from this project.

11) This is a coastal area. So, C.R.Z. clearance is required so as to make action plan for salvage against earthquake or tsunami.

12) 32800 K.L.D. will be utilized by the company and desalination plant will be used for it, which will affect the marine-life adversely. This desalination is connected with the company. But no study of its effect is made.

13) There are two power projects and biggest coal handling port in Asia is situated here but it is not mentioned in E.I.A. report.

14) Environment Clearance Compliance of other projects of Adani is not made. So, people in surrounding should not be caused damage by giving permission to new project.

15) The livestock of our villages were grazing on the grazing land of the proposed project. The livelihood is ruined by snatching it. Now there will be no grazing land by giving remaining forest land to new project.

16) The hazardous chemical such as sulphuric acid will come out due to copper refinery. The possibility of pollution and acid rain will increase. So, this project should be cancelled.

17) The land in surrounding will be washed out due to closure of the river and danger of flood will increase in surrounding villages.

18) Old roads will be closed. One of which from Navinal to Kotdi creek will be closed.

19) Wild animals are living in this area, what about their restoration?

Yours faithfully,
Sd/- illegible.

પ્રવિણસિંહ ભૂરૂભા ચૌહાણ
મુ પોસ્ટ શિરાચા તા મુંદ્રા જી કચ્છ
Ph 94269-02562
૨૯-૪-૨૦૧૭

પ્રતિ શ્રી
જિલ્લા કલેક્ટર સાહેબ,
કચ્છ.

વિષય : અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) કોપર રિફાઇનરીના પ્રોજેકટથી સ્થાનિક લોકોને થનાર નુકશાન બાબતે લેખિત વાંધા/વિરોધ મૂકવા બાબત

માનનીય સાહેબ,

સવિનય જણાવવાનું કે કચ્છ જિલ્લામાં નવીનાળ અને શિરાચા ગામમાં આવનાર અદાણી એન્ટરપ્રાઇઝ લિમિટેડના કોપર રિફાઇનરીના પ્રોજેકટને લીધે સ્થાનિક લોકો, વન પર નિર્ભર સમુદાય, માછીમારો અને દરિયાઈ પટ્ટીના પર્યાવરણ અને જીવસૃષ્ટિ સામે ગંભીર ખતરો છે. જે બાબતને ડ્રાફ્ટ ઇઆઇએ રિપોર્ટમાં ઘણી ખામીઓ અને ભૂલો તેમજ ખોટી માહિતીઓ છે. આ અભ્યાસ રિપોર્ટમાં દેખાય છે કે આ દરિયાકિનારે આવો મોટો ઉધોગ સ્થાપવાથી માનવ સ્વાસ્થ્ય, પશુ-પંખીઓ અને સમગ્ર જીવસૃષ્ટિને ગંભીર અને કાયમી નુકશાન થાય એમ છે. તેની ભરપાઈ થઈ શકે એમ નથી. સ્થાનિક ગામોમાં રહેતા લોકોની આવનારી પેઢી લુલી, લંગડી અને નપુંસક પેદા થાય એવો ભયજનક પ્રદૂષણ ફેલાવતો આ પ્રોજેકટ છે. તેથી આ સ્થળે અમે આ પ્રોજેકટનો વિરોધ કરીએ છે. અમે અમારો લેખિત વિરોધ નીચે મુજબના મુદ્દાઓ પર રજૂ કરીએ છીએ અને આ પ્રોજકેટનું સ્થળ યોગ્ય ન હોવાથી તેને અહી આવતો અટકાવવાની માંગ મૂકીએ છે.

1. અદાણી એન્ટરપ્રાઇઝ લિમિટેડના (AEL) દ્વારા પ્રોજેકટની જગ્યા માટે પસંદગી માટે આરક્ષિત વનની જગ્યા પસંદ કરવા સામે મારો વિરોધ છે. જમીન માટેના વિકલ્પોજ ખોટા પસંદ કરવામાં આવેલ છે. આ પ્રોજેકટ દરિયાકિનારાને મૂકી ને સ્થાપવો જોઇયે. કાચામાલને પરિવહન માટે ક્લોઝ પાઇપલાઇન કન્વેયર સિસ્ટમ હયાત હોય આ પ્રોજેકટને દરિયા કિનારાથી દૂર વધુ અંદર સ્થાપી શકાય એમ હોવા છતાં આ પ્રોજેકટને દરિયાનજીક નાખવાનું કંપનીના સંચાલકો એ નક્કી કરેલ છે જે અયોગ્ય છે. ઉધોગ માટે પાણી અને વીજળી પણ સરળતાથી ત્યાં આપી શકાય અને પાણીનો નિકાલ શૂન્ય હોય કોઈ પાણી બહાર ફેકવાની સમસ્યાનો પણ સવાલ નથી. દરિયાકાંઠે આવો ઉધ્યોગ સ્થાપવોજ જોખમી છે અને દરિયાઈ પર્યાવરણને નુકશાન કરી દરિયાઈ જમીનને રેતી પૂરી સમથળ કરી તેના પર આવો પ્રોજેકટ સ્થાપવો નુકશાનકારક છે. આથી અમે વન અધિકાર કાયદા 2006 હેઠળ ગામના સ્થાનિક લોકો કે જે વન પર નિર્ભર છે તેમની આજીવિકા જોખમમાં છે તેઓ આ પ્રોજકેટનો વિરોધ કરીએ છીએ. વનની જમીનો ઓછી થતી જાય છે તેથી અમારા ગામનું દંડેરી અને શિરાચાનું જંગલ કંપનીએ ને અન્ય ઔધોગિક હેતુઓ માટે મળવું જોઇયે નહી. ગામના

ઢોર અને ગાયો આ જંગલમાં ચરે છે. તેથી અમો આ વનનો કંપનીના હેતુ માટે ઉપયોગ સામે વિરોધ બતાવીએ છીએ.

2. <u>મેંગરૂવના ઝાડો કાપી નાખી, ખાડીઓ પૂરી તેમને કાયમી નુકશાન પહોંચાડવાનું કામ અદાણી કંપનીએ કરેલ છે. નવીનાળના દરિયા કિનારે જંગલમાં મોજૂદ રેતીના ઢુવાઓ તોડી નાખી તે રેતીનો ઉપયોગ પોર્ટ બનાવવા કરેલ છે જેને લીધે સમગ્ર દરિયાઈ વિસ્તારની ભૌગોલિક પરિસ્થિતી બદલાઈ ગયેલ છે અને તે માટે અમારો કેસ માનનીય સુપ્રીમ કોર્ટમાં આજે ચાલે છે.</u> આ એપીએસઇઝેડ બનાવતી વખતે થયેલ આ વિસ્તારના પર્યાવરણ, દરિયાકિનારાને થયેલ ભારે નુકશાન, લોકોની આજીવિકાને અદાણી કંપનીએ પહોંચાડેલ હાનિ બદલ અમને આ કંપની અને તેના આવનાર પ્રોજેકટ સામે વિરોધ છે. આ કંપની પર્યાવરણને નુકશાન પહોંચાડીને અને જીવસૃષ્ટિને નુકશાન પહોંચાડી ઉધોગો સ્થાપે છે એ વાત કોર્ટ અને સરકારમાં પણ સાબિત છે. તેથી આ વિવાદિત કંપની અને તેના ખરડાયેલા ભૂતકાળને ધ્યાને રાખી આ પ્રોજેકટ નામંજૂર કરવામાં આવે.
3. આ પ્રોજેકટ કયા કયા સર્વે નંબરમાં કરવામાં આવનાર છે તમામ સર્વે નંબરની વિગતો રિપોર્ટ માં બતાવેલ નથી. કેમ? જેતે ગામ સહિતની વિસ્તાર દર્શાવતી તમામ વિગતો અમને આપશો.
4. પ્રોજેકટ માટે APSEZની કેટલી જમીન AEL ને આપવામાં આવેલ છે. તે તમામ પ્લોટના નંબર અને તેનું ક્ષેત્રફળ જણાવો અને તેનો પ્રત્યક્ષ કબ્જો કોની પાસે છે તે પ્લોટ દીઠ કાગળ પર લેખિતમાં બતાવશો.
5. હાલમાં APSEZ માં જેટલા પ્લોટ હોય તે તમામ પ્લોટનો વિસ્તાર બતાવતી માહિતી આપશો. કેટલા પ્લોટ વેચાઇ ગયા અને કેટલા પ્લોટ વેચાણ વગરના છે તેની પણ માહિતી આપશો.
6. આ પ્રોજેકટ જગ્યા કે જે APSEZની માલિકીની છે તેના પર પર આજની તારીખે SEZ નોટિફાઇ છે કે નહીં? તે નોફિકેશનની નકલ આપશો.
7. આ પ્રોજેકટ જગ્યા કે જે APSEZ AELને આપશે તે એસઇઝેડમાં ગણાશે કે નહીં ? જરૂરી માહિતી સરકારી રેકર્ડ અને સ્થિતિ પ્રમાણે આપશો.
8. આ જગ્યા કે જ્યાં પ્રોજેકટ કરવામાં આવશે તે જગ્યાની APSEZની માલિકી દર્શાવતા સરકારી દસ્તાવેજ આપશો.
9. MPSEZ દ્વારા , જે તે સમયે શિરાચા, દંદેરી ફોરેસ્ટની ગેર કાયદેસર રીતે પચાવી પાડેલી જમીનની વિગતો આપશો. જે જમીન ભારત સરકારે ડીનોટિફાય કરેલ ન હોય પણ કંપનીએ કબ્જો કરેલ હોય તેવી જમીનની વિગતો આપશો.
10. APSEZ દ્વારા SEZ ડીનોટિફાય કરવામાટે (AEL ના પ્રોજેકટ વિસ્તાર માટે) ભારત સરકારની કોઈ મંજૂરી માંગવામાં આવેલ હોયતો દરખાસ્તની તારીખ આપશો.
11. AEL નો કોપર પ્લાન્ટ માટે શિરાચા, દંદેરી જંગલની જમીન લઈ તેના પર પ્રોજેકટ કરવાનું પ્રયોજન અને તર્ક આપશો.
12. MPSEZ ને જેતે સમયે ભારત સરકારે જંગલની જમીન તેમજ અન્ય જમીન પર રિક્લેમેશનની પરવાનગી આપી હોય તો તેની નકલ આપશો.

13. ફોર્મ 1 માં બતાવેલ પ્રોજેકટની જગ્યામાં અનામત જંગલ બતાવેલ નથી જ્યારે નકશા અને ઇઆઇએ રિપોર્ટમાં બતાવેલ છે. આમ વિરોધાભાષી માહિતી કેમ આપવામાં આવેલ છે?
14. કંપનીએ ફરજિયાત 30% ગ્રીનબેલ્ટ બનાવવાનું છે. તો 526 હેક્ટરના 30% એટલે 157 હેક્ટર ગ્રીનબેલ્ટ બનાવવાનું થાય. કુલ 526 હેક્ટર પૈકી 102 હેક્ટર તૈયાર અનામત જંગલ લઈ કંપની ગ્રીન બેલ્ટ તરીકે બતાવવા માંગે છે?? જો હા તો બીજા 55 હેક્ટર અનામત જંગલ ક્યાથી લાવશે? આમ આ કંપની ખોટી રીતે ફોરેસ્ટ પચાવી પાડવા માંગે છે.
15. ઇઆઇએ રિપોર્ટના પાનાં સી-3 16માં બતાવ્યા મુજબ આ પ્રોજેકટનો મોટાભાગનો વિસ્તાર શિરાચા, દંદેરી જંગલની જમીન પર આવે છે. શું આ નક્શો ખોટો છે? તો સાચો નક્શો આપશો.
16. ઉપરોક્ત મુદ્દા માટે APSEZને મળેલ ફોરેસ્ટ કલિયરન્સની નકલ આપશો.
17. જંગલની જમીન બીજા ઔધોગિક ઉપયોગ માટે ડી નોટિફાય કરવા માટે મુકેલ છે તો તે બાબતે સ્થાનિક પંચાયતો એ આપેલ નો ઓબ્જેક્શન સર્ટિફિકેટ ની નકલ આપશો.
18. <u>વન અધિકાર અધિનિયમ 2006 હેઠળ જરૂરી જિલ્લા કલેકટરે જંગલ સિવાય બીજી ખાનગી કે સરકારી જમીન આ વિસ્તારમાં ઉપલબ્ધ નથી તે બાબતે આપેલ પ્રમાણપત્રની નકલ આપશો.</u>
19. MPSEZ સામે SLP 28788 /2016 થી સુપ્રીમ કોર્ટ અને WP (PIL) 12/ 2011 થી ગુજરાત હાઇકોર્ટમાં ચાલતા કેસની વિગતો અને વિવાદ શેનો છે તેની માહિતી આપશો.
20. સુનિતા નારાયણ કમિટી દ્વારા વન અને પર્યાવરણ મંત્રાલયને થયેલ ભલામણ મુજબ કંપનીએ કેટલો દંડ સરકારમાં ભરેલ છે? આ દંડની હાલની સ્થિતિ દર્શાવશો અને આ બાબતે કાયદાકીય રીતે માહીતી આપશો.
21. પ્રોજેકટ સાઇટ માટે પસંદ કરવામાં આવેલ જમીન અને જંગલની જમીનમાં કેટલા કુદરતી નદી નાળા છે તેની વિગતો ઇઆઇએ રિપોર્ટ સિવાય વધારામાં જણાવશો જેથી કોઈ પણ નદી નાળા જાણ બહાર ફાઇનલ ઇઆઇએ રિપોર્ટમાં રહી ના જાય. વધુ ચોકસાઇથી પુનઃ અભ્યાસ કરવાની અમારી માંગ છે અને ગામ અને ગામ લોકો પર થનાર અસરો બાબતે ચકાસણી ફરી કરવામાં આવે એવી અમારી માંગ છે. નદી નાળા અને કોતરો વરસાદી પાણી ના નિકાલ ની વ્યવસ્થાઓ APSEZ માં બંધ કરવામાં આવેલ હતા પૂરી દેવાયેલ હતા. જે ફરીથી ખોલવા મારી અરજ છે. નવા કોઈ પણ વહેણ બંધ કરવાથી અમો કંપની સામે કાયદાકીય પગલાં ભરીશું.
22. AELના પ્રોજેકટની નજીક દરિયા વિસ્તારના GCZMA માન્ય CZMPની નકલ આપશો.
23. NIO દ્વારા બનાવાયેલ CRZ મેપની વિસ્તૃત વાંચી સમજી શકાય એવી કલર નકલ હાર્ડ કોપીમાં આપશો.
24. મેંગરૂવના ઝાડો કે જે સીઆરઝેડ ૧એ માં આવે છે તેનાથી આ પ્રોજેકટનું નજીકમાં નજીક અંતર બતાવશો. અને તે માટે જરૂરી રેકર્ડની નકલ આપશો.
25. આ દરિયાઈ વિસ્તારમાં વસતા માછીમારોની સંખ્યા અને તેમના હયાત ધંધા રોજગાર વિષે માહિતી આપશો.
26. MPSEZ ના પ્રોજકેટને લીધે આ વિસ્તારમાં બેકાર થયેલ માછીમારોની સંખ્યા બતાવશો.
27. પ્રોજેકટની નજીક આ વિસ્તારમાં કેટલા માછીમારો પગડિયા માછીમારી કરે છે તેની સંખ્યા જણાવશો.

28. આ પ્રોજેકટથી માછીમારી માટે આવવા જવાના કેટલા રસ્તા બંધ થાય છે? કે ભૂતકાળમાં બંધ કરવામાં આવેલ છે?
29. આ પ્રોજેકટથી જંગલ પર નભનારા પશુઓ અને જંગલનો સામુદાયિક ઉપયોગ કરતાં લોકો પર કેવી અસર થશે અને આવા કેટલા લોકો છે તેની માહિતી આપશો. FRA 2006 હેઠળ થયેલ કાર્યવાહીની નકલ આપશો.
30. કોપર સ્લેગ અને ફોસફોજીપ્સમનો વપરાશ પ્લાન બતાવશો.
31. ગુજરાત રાજ્ય જૈવ વિવિધતા બોર્ડ દ્વારા નવીનાળ જંગલને જૈવવિવિધતા વારસા જગ્યા જાહેર કરવામાં આવેલ છે કે કેમ કે તેની દરખાસ્ત ચાલે છે કે કેમ તેની વિગત આપશો.
32. નવીનાળ-શિરાચા દરિયાઈ વિસ્તારની કેરિંગ કેપેસિટી વિષે કોઈ અભ્યાસ હાથ ધરવામાં આવેલ છે કે નહીં? જો અભ્યાસ થયેલ હોય તો તેની માહિતી આપશો. AEL ના પ્રોજેકટ પછી કેટલી કેપીસીટી બચશે તેની માહિતી આપશો.
33. અદાણી અને ટાટાના પાવર પ્લાન્ટના કારણે હવા, પાણીના પ્રદૂષણ અને AEL ના કોપર પ્લાન્ટ પછી પેદા થતાં હવા પાણીના પ્રદૂષણની સંયુક્ત અસરો વિષે બંને પ્રોજેકટના ઇઆઇએ રિપોર્ટની તુલના કરવામાં આવેલ છે કે કેમ તેની માહિતી આપશો.
34. આ પ્રોજેકટ વિષે અંગ્રેજીમાંથી ગુજરાતી ભાષાંતર કરવામાં આવેલ પર્યાવરણને લગતા સાહિત્યની નકલો ક્યાં મૂકવામાં આવેલ હતી તેની માહિતી આપશો. ઇએસીની મિટિંગ મિનિટ્સમાં જણાવ્યા મુજબ.
35. અત્યાર સુધી અદાણિ ગ્રૂપ દ્વારા મેંગરુવ પુનઃ સ્થાપન કાર્યક્રમ હેઠળ ટોટલ કેટલા હેક્ટર મેંગરુવ રોપેલા છે અને ક્યાં ક્યાં રોપેલા છે ? તેની વિગતવાર માહિતી આપશો.
36. શું એપીએસઇઝેડમાં આવતી પાવર ટ્રાન્સમિશન લાઇનો AELના પ્રોજેકટને લીધે ખસેડવામાં આવશે? વધુ વિગતો આપશો.
37. અત્યંત પ્રદુષિત એવા કોપર રિફાઇનરીના પ્લાન્ટના પર્યાવરણ વ્યવસ્થાપન પ્લાન માટે જરૂરી સ્ટાફ (૪ માણસો) ઇઆઇએ રિપોર્ટમાં બતાવ્યા મુજબ યોગ્ય છે? પ્રદૂષણની બાબતોને અદાણી સમૂહ કેટલી ગંભીરતાથી લે છે તેનો આ એક ઉત્તમ નમૂનો છે.
38. શું અદાણી પોર્ટનો સ્ટાફ પણ આ AEL પ્રોજેકટમાં પર્યાવરણ અને પ્રદૂષણની બાબતો જોશે? હાલમાં એવો કેટલો સ્ટાફ છે જે અદાણી સમૂહમાં નોકરી કરે છે અને સમૂહના તમામ પ્રોજેકટોમાં (પોર્ટ, એસઇઝેડ, પાવર પ્લાન્ટ વિગેરે) તેમની નોકરી અને પ્રદાન હોય છે? શું કાયદાકીય રીતે આ શક્ય છે ?
39. કેમિકલના 30 એકરના ઝેરી ઉકરડાના SLF પ્લાન વિષે TOR માં કે અન્ય કોઈ જગ્યા એ કેમ કોઈ માહિતી આપવામાં એવલ નથી ? વગર TOR આ પ્લાન શક્ય છે?
40. ૪૬થી વધુ યીમનીઓમાંથી સલ્ફ્યુરિક એસિડ અને અન્ય ઝેરી ધુમાડા અને ટનોબંધી રોજનો સલ્ફર ડાયોક્સાઇડ વાયુ હવાની દિશામાં આજુબાજુના વિસ્તારમાં ફેલાઈ ગામોને બરબાદ કરી નાખશે તે માટે કોણ જવાબદાર રહેશે?

41. લોકોના ફેફસા પર આ ઝેરીલા ગેસોની શું અસરો પડશે એ વિષે અભ્યાસ કરેલ હોય તો તેની નકલ આપશો અને ન કરેલ હોય તો તે અભ્યાસ કરાવી પછીજ તે આધારે આ પ્રોજેકટને મંજૂરી નકારી કાઢવાની અમારી માંગ છે.
42. ઝેરી ધાતુઓના હવામાં માપવાના સાધનો GPCB પાસે છે ? જો GPCB આ ધાતુઓનું પ્રમાણ માપી જ શકવામાં અસમર્થ હોય તો આ પ્રદૂષણ કોણ માપશે ? એની વિગતો આપશો.
43. શું આ સ્મેલ્ટર પ્રોજેકટનું ગંદુ પાણી સીધી કે આડકતરી રીતે દરિયામાં નાખવામાં આવશે?
44. આખા પ્રોજેકટમાંથી નીકળતું ઔધોગિક ગંદુ પાણી શુધ્ધ થવાનું છે તે સીઇટીપીની ડિઝાઇન આ ઇઆઇએમાં બતાવેલ નથી. તો તે ડિઝાઇનની નકલ આપશો.
45. પાણીના રિસાઇક્લિંગ પ્લાન્ટની માહિતી કે ડિઝાઇન પણ આપવામાં આવેલ નથી. તેની માહિતી આપશો.
46. સ્થાનિક ગામ લોકોના હાલના આરોગ્યનો અભ્યાસ કંપનીએ કરેલ હોય તો તેની નકલ આપશો. સ્થાનિક ગામલોકોને આ પ્રોજેકટ વિષેની માહિતી સરળ ભાષામાં આપવામાં આવેલ છે કે સમજાવવામાં આવેલ છે કેમ તેની વિગતો જણાવશો?
47. સ્થાનિક લોકોને APSEZ માં આજદિન સુધી કેટલી નોકરીઓ મળી છે તેની સંખ્યા બતાવશો.
48. સ્થાનિક લોકોને APSEZ માં કેટલા કોન્ટ્રાક્ટ મળેલ છે તેની સંખ્યા અને ગામ લોકોનો જે વિકાસ થયેલો હોય તેવા ઉદાહરણો નામ અને ગામ સહિત આપશો.
49. સ્થાનિક લોકોને અને પર્યાવરણને થયેલ નુકશાન બાબત સ્થાનિક ગ્રામ પંચાયતોના વાંધા વિરોધ બાબતે ઇઆઇએ રિપોર્ટમાં કેમ કશુજ લખેલ નથી. તેની સંપૂર્ણ માહિતી આપશો.

ઉપરોક્ત પ્રોજેકટથી થતાં ફાયદા કરતાં સ્થાનિક લોકો, પશુપાલન, આરોગ્ય, પર્યાવરણ અને દેશને નુકશાન મોટું હોય ફાયદાકીય ગૂંચવાળો આ પ્રોજેકટ પડતો મૂકવા મારી અરજ છે. અમો ભવિષ્યમાં થનાર પ્રદૂષણને લીધે ભોગ બનવા માંગતા ન હોય અમારે આ પ્રોજેકટ અને તેનો વિકાસ જોઈતો નથી.

આભાર સહ અને આ પર્યાવરણ લોક સુનાવણીમાં મારો વાંધો રજૂ કરી આગળની કાર્યવાહી કરવાની અપેક્ષા સહ.

આપનો વિશ્વાસુ

પ્રવીણસિંહ ચૌહાણ.

To,
District Collector
KUTCH.

Sub: Objections in writing towards the damage likely to occur to the local public due to proposed Copper Refinery Project of Adani Enterprise Limited (AEL)

Honourable Sir,

It is humbly submitted that, due to Copper Refinery Project of Adani Enterprise Limited (AEL) proposed to be established in the district of Kutch in the villages of Navinal and Siracha is a serious danger to the local public, local community depending on the forest, fishermen, and environment and coastal ecology. There are many discrepancies, mistakes and wrong information in the draft EIA report. It transpires from the study report that if such a big project is established on the sea shore human health, animal – birds, and coastal life as a whole will be jeopardized seriously and permanently that cannot be compensated. This is such a dangerous pollution emanating project that the future generations of locals residing in the surrounding villages may be crippled , lame and impotent. Therefore we are objecting establishment of the project at this location. We are submitting our written objection on the basis of the points mentioned below. And we demand to prevent establishment of this project at this location as it is not suitable here.

1. We object selection of land of reserved forest as project site by Adani Enterprise Limited (AEL). The options selected for the project site are wrong. This project shall be established away from the sea shore. As close pipeline conveyor system for transportation of raw material is already in existence it is possible to establish this project away from sea shore in spite

1854

of that the company management has decided to establish it near sea shore. It is not fair. Water and electricity also can be supplied there easily and water disposal being zero there is no problem of water discharge. It is dangerous to establish such an industry on the sea shore. Damaging the environment of the sea and creating land by reclamation using sand and establishing such project on it is harmful. So we object the project under Forest Rights Act 2006 as livelihood of people of village who are dependent on the forest is under risk. Forest lands are reducing so the land of Danderi and Shiracha forest should not be given to the company for other industrial purpose. Cattle of the village graze in this forest. So we are taking strong objection against the use of the forest for the company.

2. Adani company has done permanent damage by cutting the Mangrove trees and filling up the creeks. Sand dune available in the forest on the sea shore of Navinal has been used for development of port. So the whole geography of the coastal area has changed. And as on date our case is pending with Hon. Supreme Court in the matter. During development of APSEZ the damage has been done to the environment, the sea shore and livelihood of the people, so we object the company and the proposed project. The matter has been proved in the court and the government that the company is establishing industries by damaging environment and coastal life. Therefore considering the company being disputed and its spoiled past this project deserves to be rejected.
3. Why the details of all survey numbers of land in which the said project is proposed to come up is not mentioned in the report. Please provide the entire detail about the area including the respective villages.
4. Please mention plot numbers and its area in respect of APSEZ land given to AEL for the project and also provide plot wise details of land ownership in writing.
5. Furnish area wise details of all the plots which are with APSEZ at present. Also furnish details of plots sold out and unsold.

6. Is the land proposed for the project and owned by the APSEZ, a notified SEZ? Provide the copy of the notification.

1855

7. Is the area of the project that shall be given by APSEZ to AEL, to be considered under the SEZ? Provide the relevant details as per the Government record and status.

8. Provide the government documents showing the ownership of APSEZ for the land where the project is to be established.

9. Provide the details of the land that is illegally encroached by MPSEZ at Shiracha, Danderi forest. Provide the details of the land that is not denotified by the Government of India but has been taken into possession by the company.

10. Provide the date of the submission in case if the APSEZ would have sought approval of SEZ denotification (for AEL project area) from the Government of India.

11. Provide the planning and logic for undertaking project for AEL copper plant while obtaining the land at Shiracha, Daderi forest.

12. Provide the copy of the permission for reclamation provided by the Government of India, if any, to the MPSEZ for forest land and other land.

13. The reserved forest is not mentioned in Form 1 of the project but it is shown in map and EIA report. Why such contradictory information is provided?

14. The company has to make 30% green belt compulsorily. Therefore 157 hector comes as 30% of green belt of 526 hector. Out of the 526 hector does the company wish to obtain 102 hector of reserve forest and show it as green belt? If yes, from where will the company bring the rest of the 55 hector of reserve forest? Thus, this company wants to encroach the forest illegally.

15.. As shown under the EIA report page no. C-3 16, most part of the project falls in Shiracha, Dedari forest land. Is this map false? If so, provide a correct map.

16. Provide the forest clearance copy that was received by the APSEZ for the above mentioned point.

1856

17. If the forest land proposed to be denotified for other industrial use, then provide the copy of no objection certificates given by local Panchayats in this regard.

18. Please provide a copy of the certificate given by the district collector under the Forest Rights Act, 2006, stating that private or Government land is not available in this area other than the forest in this area.

19. Provide the information about what is the dispute under the SLP 28788/2016 being heard in the Supreme court and WP (PIL) 12/2011 being heard in the Gujarat High Court against MPSEZ.

20. What is the amount of penalty paid by the company to the Government on the basis of the recommendation provided by Sunita Narayan committee to the Forest and Environment ministry? Provide the current status of the penalty and provide the legal information about the same.

21. Apart from the EIA report, please provide the additional details about how many natural rivers, drains are located in the land selected for Project Site and forest land, so that no river, drains would be left to be mentioned in the final EIA report out of knowledge. Our demand is to re-study with more accuracy and the demand is made to make re investigation about possible effects that may incur to village and villagers. Our demand is to re open all closed canals, bays and creeks again. We will take legal actions against the company on any new closer of water flow.

22. Please provide copy of GCZMA approved CZMP for of the seaside area near the AEL project.

23. Please provide a readable and understandable hard color copy of the CRZ map prepared by NIO.

24. Mention the shortest distance of mangrove area which fall in CRZ 1A from the proposed project. And provide a copy of the records for it.

25. Provide information about the number of fishermen residing in the coastal area and about their existing business.

1857

26. Provide the number of fishermen who have become unemployed due to MPSEZ project

27. Provide the number of fishermen who do Pagadiya fishing near the project.

28. How many access roads used by fisherfolks for commuting will be closed due to this project? or have been closed in the past?

29. What type of impacts will be there on animals and people collectively relying on forests and how people and animals will be affected due to this project. And provide the copy of procedures followed under FRA 2006.

30. Provide the consumption plan of Copper Slag and Phospho gypsum.

31. Provide the detail as to whether the Navinal forest has been declared as biodiversity heritage place by the Gujarat State Biodiversity Board, or it is being under proposal.

32. Whether a study has been conducted to identify carrying capacity of the Navinal- Shiracha coastal area? Provide information if the study is undertaken. Provide information on how much capacity will be left after AEL's project.

33. Provide the information on whether the comparison is made on EIA reports of both projects for the combined impact of air- water pollution caused due to the power plant of Adani and Tata Power, air, water pollution and after AEL's Copper plant.

34. Provide the information about where the copies of the environmental literature of this project were kept which were translated from English to Gujarati according to the EAC meeting minutes.

35. So far, how many hectare of Mangrove afforestation is carried out by Adani Group and where is plantation done? Provide the detailed information.

36. Will the power transmissions line of APSEZ be moved due to AEL's project? Provide more details.

1858

37. The staff required (8 persons) for the Environmental Management Plan of highly polluted Copper Refinery Plant is proper as shown in the EIA report? This is a best example of how serious the Adani group is to the pollution issues

38. Will Adani Port staff also look into environmental and pollution issues in this AEL project? Currently, how many staff are there who serves in the Adani Group and also have contributions in all the projects of the group (port, SEZ, power plant etc.)? Is it appropriate to perform such jobs. Is it legally allowed?.

39. Why no information is given in TOR or any other place about the 30 acres of SLF? Is this plan possible Without TOR?.

40. Who will be responsible for destroying surrounding villages located in wind direction by spreading sulfuric acid and other toxic gases and other tons of sulfur dioxide gas from more than 46 chimneys? .

41. If you have studied about the impact of these Toxic Gases on people's lungs, then provide the copy of it and if not, then our demand is that the approval or rejection should be given on the basis of such study.

42. Does the GPCB have the instruments to measure toxic gases concentration in air? If GPCB is unable to measureconcentrations of metals then who will measure the pollution? Provide the detail about it.

43.. Will the effluent of the Smelter project be directly or indirectly discharged in the sea?

44. The CEPT design in which industrial waste water will be treated is not mentioned in EIA. So, provide the copy of that design.

45. The information or design of the water recycling plant is also not provided. Provide its information.

46. Provide the copy if the company has done the study of the existing health conditions of the local village people. Provide the details if the local village people have been explained the information in the simple language about this project.

1859

47. Provide number of total employment given to locals by APSEZ till date.

48. The number of contracts received by local people in APSEZ and the detail of development activities including examples with name and village.

49. Why nothing has been written in the EIA report about the objections of local village panchayat about the loss of local people and environmental damage? Provide the complete information about it.

As the local people, animal-husbandry, health, environment and country may be adversely affected rather than benefits from above mentioned project, hence it is my submission that the project be abandoned. As we do not want to suffer from the pollution in future, we do not want the project and the development from it.

Thanking you and with the expectation by representing my objection in this environmental public hearing and to take further actions,

Yours faithfully

Ref: AEL/Copper/Mundra/EC/PH/ D-A-1

To,
Shri Ravilal K. Maheshwari
15, Ground Floor, Adarsh Tower,
Mundra-Kutch.

Subject: With regard to the reply to the submissions made by you for the environmental public hearing for Green Field Copper Refinery Plant-1 MTPA production project Category-A.

Reference: Your application dated 04.04.2017.

Sir,
It is hereby stated with reference to the above mentioned subject that the reply to the submissions made by you for the environmental public hearing for Green Field Copper Refinery Plant 1.0 MTPA production project Category-A are provided hereby.

1. We heartily congratulate the villages related to the project and the villages around it as they are important stakeholders of the project.
2. Desalinated water will be used in this project. Ground water will not be used. The waste that comes out of the project will be recycled. No liquid waste will be generated from this project. The chemicals and the hazardous that damage the environment will be disposed off in a manner that will not harm the environment.
3. In the proposed project SO2 and NOx will be released. Sulphuric Acid will be manufactured by using SO2. To reduce PM and NOx, scrubber will be used. The emissions generated during operation stage will be controlled as per NAAQ standards for maintaining ambient air quality by using APCM and therefore there will not be any long term effect.
4. All precautions as per statutory provisions will be taken at the time of transport of hazardous chemicals. Disaster management plan and risk analysis have been conducted. This has been included in Chapter-7 of the EIA report. The reported accident is not in relation to the proposed project activity.
5. The application for diversion of forest land is pending before the government of India. The company will comply with the decision taken by the government of India. The construction in the forest land for the proposed project will only be done after obtaining final approval.

6. This has no relevance to the proposed project and it is outside the scope of EIA report.
7. The proposed project area is partly notified SEZ and partly forest land for which clearance is under process by APSEZ. APSEZ has in principle agreed to provide the land for the project. All procedures related to land will be complied.
8. Reply is as per point no. 7 above.
9. The hazardous waste management will be done as per prescribed procedures and based on approvals granted. It is proposed to develop Secured Land Fill (SLF) within the project area for the management of specific hazardous waste. Details are given in the EIA report.
10. The company will pay all the taxes on time, as applicable from time to time, to Govt of India.
11. Direct and indirect employment opportunities will be generated due to proposed project. Local employment will be provided for proposed project based on eligibility and vacancies.
12. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.
13. Project will be implemented with all environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.
14. The proposed project is outside CRZ. The points raised by you do not relate to proposed project activity.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project

Thanking you,
For Adani Enterprises Ltd,

To,

Sh PC Gadhavi

Sub: Public Hearing of proposed Greenfield Copper Refinery Project

Ref: Letter from Sh P.C. Gadhavi, Leader of Ruling Party, EX President Taluka Panchayat Lakhapat

Dear Sir,

We thank you for raising the concerns and providing us valuable suggestions for the development of the project and the area. With reference to your letter, we would like to submit point wise response as desired by you.

1. Rs 1044 crores has been allocated as capital expenditure for environment management measures for the proposed project which is more than 10% of the total project cost. We assure that world class and efficient process equipment shall be installed along with pollution control devices in all facilities of the project.
2. Commitment letter has been obtained by Adani Enterprises Limited (AEL) from the APSEZ for allotment of land for the proposed project. Allotment of the land and ownership transfer shall be implemented only after compliance with all regulatory requirements including statutory payments and due fee for transfer.
3. Application for diversion of forest land has been already filed as also mentioned in TOR in MoEFCC. All compliance shall be ensured as per procedure, Forest Diversion is recommended by State Government and Approved by Central Government after ensuring all compliance by the user agency.
4. APSEZ has approval for desalination plant. APSEZ has in principally agreed for augmentation of needful infrastructure and provide desalinated water for this project as clearly mentioned in the water allotment letter in Annexure No 4 of EIA report.
5. We assure that wastewater will be treated in state of the art effluent treatment facilities to make suitable before being used for greenbelt.
6. Plant layout showing the green belt is provided in the EIA report in Fig 2.1. Forest department will be consulted for choice of species for plantation.

7. Risk Identification and Risk Assessment (HIRA) study has been conducted for this project, including Oxygen plant, through functional area expert and former faculty of Regional Labour Institute (RLI). All regulatory permissions, as applicable will be obtained. Risk assessment and disaster management plan has been incorporated Section 7.2 of the EIA.

8. Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure 1, page AI-14 of EIA report) that "Forest land of 102.38 ha is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central Government through File No. 8-04/2016-FC". The requirement of Office Memorandum of MoEFCC dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance...". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR. We submit that there is no deviation from EIA Notification 2006 and we understand that Public Hearing can be organised by State Pollution Control Board after TOR is obtained by the project proponent.

9. We would like to submit that compensatory afforestation is integral part of the forest diversion and we understand that Forest Clearance shall be granted by the Central Government only after compliance of all conditions by the user agency and compliance of all conditions of Stage-1 and Stage-2 forest clearance.

10. Commitment letter has been obtained from the APSEZ for allotment of land for the proposed project. Ownership of the land shall be transferred only after compliance with all regulatory requirements including statutory payments and due fee for transfer.

11. Project proponent, Adani Enterprises Limited (AEL), is not collecting any toll near MokhaChokdi. CSR budget of Rs 8 crore per annum has been proposed by M/s AEL for proposed copper refinery project, which is over and above the existing budget of Adani Foundation for CSR activities in the area. We also assures local community members that proposed CSR budget will be utilised in consultation with local community members in the areas of development of rural infrastructure, health care, education and livelihood as desired.

12. Presently, Adani Foundation runs Mobile Health Care Units, Rural Clinics, Special Innovative Projects i.e Health Card to Senior Citizens and Kidney Stone Project and Variety of Health Related Camps. To increase availability of quality health care services to the remote villages, foundation runs mobile health care unit. These mobile units cover 36 Villages and 4 Fisherman settlements. There are 8 rural clinics in Luni, Vadala, Bhadreshwar, TundaWandh, Tunda, Siracha, Navinal and Nana Kapaya.

    As Rs 8 crores per annum has been proposed for CSR budget for the proposed project in addition to the existing CSR budget of the Adani Foundation, existing healthcare activities shall be augmented in the area and new activities shall be launched as per the needs of the area and consultation with local communities.

13. People from local area will be given priority based on the skill sets available. Efforts also will be made to train the local youths. Priority will be given to local youths based on the skill sets and vacancy available.
14. Proposed project completion is of 30 months from the start of the construction activity at project site. Start date of the project will be decided after obtaining all the statutory clearances and tie up of the finance for the project.
15. The baseline data on environmental parameters was collected for all the ongoing activities during post monsoon season of 2016. An assessment has been done for the incremental load due to this project. It has been found that the environmental parameters will be within the statutory limits after operation of the project

સંદર્ભ:**AEL/Copper/Mundra/EC/PH/D-A-2**

રીખ:૨૯/૦૪/૨૦૧૭

પ્રતિ,
શ્રી પી. સી. ગઢવી
શાસક પક્ષના નેતા
માજી પ્રમુખ, તાલુકા પંચાયત,
લખપત – કચ્છ

વિષય :- પ્રસ્તાવિત ગ્રીન ફીલ્ડ કોપર રીફાઈનરી પ્રોજેકટની પર્યાવરણ લોક સુનવણી અંગે.
સંદર્ભ :- આપશ્રીની અરજી તા.૦૬/૦૪/૨૦૧૭

માનનીય સાહેબશ્રી,

અદાણીના પ્રોજેકટ વિશે તમે ઉઠાવેલ મુદ્દાઓ માટે અને પ્રોજેકટ તેમજ વિસ્તારના વિકાસ માટે તમે આપેલા સુચનો મુજબ અમો તમારો આભાર વ્યકતકરીએ છીએ. તમારા પત્ર સંદર્ભે તમારી અપેક્ષા મુજબનો મુદ્દાવાર પ્રતિભાવ નીચે આપેલ છે.

(૧) ૧૦૪૪ કરોડ રૂપિયા પર્યાવરણ સંરક્ષણના ખર્ચ માટે ફાળવવામાં આવેલ છે. પર્યાવરણ સંરક્ષણ ખર્ચ પ્રોજેકટના કુલ ખર્ચના ૧૦ % થી પણ વધારે છે. અમે ખાતરી આપીએ છીએ કે, કચરાને ઘટાડવા માટે અને ધુમાડાને પ્રમાણિત માત્રા કરતા પણ નીચે રાખવા માટે વૈશ્વિક સ્તરના સાધનો અને પ્રક્રિયાઓને લાગુ કરવામાં આવશે.

(૨) ભવિષ્યમાં જમીન ફાળવણી માટે અદાણી એન્ટરપ્રાઈઝ લી. ધ્વારા અદાણી પોર્ટ એન્ડ સ્પે. ઈ.ઝોન પાસેથી બાંહેધરી પત્ર મેળવી લેવામાં આવેલ છે. બધાં જ નિયમો અને શરતોનું પાલન કર્યા પછી જ તેમજ ભરવાપાત્ર બધા જ વેરાઓ ભરપાઈ કર્યા બાદ જમીનના માલિકી હકકનું તબદીલ કરવામાં આવશે.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. The previous land use of the proposed project has been converted to Industrial by APSEZ and APSEZ has consented to allot this land to AEL.

   Present land use of the land for proposed project is 154.18 ha (381 acres) of APSEZ land (Land allotment letter is enclosed as Annexure-III in EIA Report) and 102.38 ha (253 acres) of Forest land (Stage-I Forest clearance in process) which is State Govt. has recommended for Forest Clearance (FC) and is at Central Government [File number is 8-04/2016-FC].

2. Reply is as per point no. 1 above.

3. The online application for prior EC (application No: IA/GJ/IND/53004/2016: Form-1 and Pre-Feasibility Report) for the proposed project has been submitted to MoEF&CC on 21st April, 2016 and same was reviewed by the Expert Appraisal Committee (Industry I) held during 4th May 2016 in New Delhi to prescribe Terms of Reference (TORs) for the preparation of EIA/EMP report. The Environmental Clearance is under process.

4. After receiving Environment Clearance from MOEF&CC. The necessary NOC (Consent to Establishment (CTE) or Consent to Operate (CTO) form GPCB shall be applied, as applicable.

5. The Forest Clearance is still under process. The details are available on the website of MoEF & CC (File No. 8-04/2016-FC).

Based on the survey which was carried out by Centre for Earth Science Studies (CESS, Thiruvanantpuram), which is an authorized agency by MoEF&CC, the proposed project site is outside CRZ and doesn't attract CRZ clearance.

6. Proposed project area is devoid of mangroves. There is no question of mangrove destruction.

7. The anticipated impacts and mitigation measures during construction and operation phase is given in Chapter-4 of EIA report.

8. The monitoring is conducted during 1st October, 2016 to 31st December 2016, is the study period for the Environmental Baseline data collection. The location and Ambient Air Quality and levels are given in Annexure-VI of EIA Report. All the environmental attributes such as sampling of air quality, water sampling (ground and surface), noise levels, and soil quality were carried out during the study period.

9. The coal will be sourced from the local market and transported through trucks. Around 3000 tonnes of coal will be stored. Further details of fuel consumption quantity and source are given in Table-2.5 of Chapter-2 (Project Description).

10. The question is not relevant and therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to the permissions granted.

11. Maximum domestic and service water requirement for the proposed project is 1000 KLD. The final requirement will be re-assessed during detail engineering.

12. The process details and schematic flow diagram of ETP is given in Figure-2.20 of Chapter-2.

13. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.

14. The solid waste generation (quantity and mode of disposal) and waste characteristic is presented in Chapter-2 of the EIA report. The Secured Land Fill (SLF) is proposed over 30 acres within the project premises for disposal of ETP waste sludge and spent catalyst. Other Hazardous waste will be disposed through the approved recyclers.

15. Details on potential employment are mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.

16. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation.

The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

17. Reply is as per point no. 16 above.

18. Environment management cell structure has been provided in Chapter-9 of the EIA Report who will be responsible for implementation of EMP.

19. In the matter of Sunita Narain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015.

20. This is outside the scope of the EIA report for the proposed project.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Subject: Public Hearing dated 29th April 2017 for Greenfield Copper Refinery Plant (1 MTPA) proposed by M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land

Ref: Your email Date: Tue, Apr 11, 2017 at 9:43 PM regarding the complaint from Sh Gajendrasinh Jadeja, Sarpanch, Navinal Village, Mundra Taluka.

Dear Sir,

With reference to the subject matter and your email, we submit that all requirements for obtaining the TOR from MoEFCC were fulfilled. After obtaining TOR, Environment Impact Assessment has been completed and all conditions of TOR has been complied with by project proponent for the purpose of public hearing.

- Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure 1, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest

1880

clearance and it is now at Central government through File No. 8-04/2016-FC". The file status is also available online at MoEFCC Forest Clearance.

- As the project is proposed by M/s Adani Enterprises Limited in APSEZ land, Forest Clearance has already been applied for this land by APSEZ (erstwhile Mundra SEZ Ltd.). The requirement of OM dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance...". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR.
- At no stage there is any concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application by the project proponent. There is no deviation from the Section 8 (vi) of EIA Notification 2006 also.

Hence, we submit that required process for TOR has been fulfilled by now and requirements shall also be fulfilled for EC application. This reply, duly signed by authorized signatory, is also being submitted to your office and scan copy is also attached herewith for ready reference.

Sincerely,

Authorized Signatory

For, Adani Enterprises Limited

Subject: Public hearing scheduled for 29.4.2017 and rejection of EIA related to Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in MundraTaluka, Kutch, Guj

Ref: Your email Dated Apr 11, 2017 addressed to MS, GPCB regarding the subject matter

Dear Sir,

With reference to the subject matter and your email, we submit that all requirements for obtaining the TOR from MoEFCC were fulfilled. After obtaining TOR, Environment Impact Assessment has been completed and all conditions of TOR has been complied with by project proponent for the purpose of public hearing.

- Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure 1, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC". The file status is also available online at MoEFCC Forest Clearance.
- As the project is proposed by M/s Adani Enterprises Limited in APSEZ land, Forest Clearance has already been applied for this land by APSEZ (erstwhile Mundra SEZ Ltd.). The requirement of OM dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance...". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR.
- At no stage there is any concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application by the project proponent. There is no deviation from the Section 8 (vi) of EIA Notification 2006 also.

Subject: **Regarding canceling of the public hearing on Adani Enterprise Limited, setting up of Greenfield Copper Refinery Plant.**

Dear Sir,

We are herewith responding para wise to the issues raised by you:

EIA studies have been carried based on TOR granted by MoEF&CC. Project will be implemented after obtaining required permissions and compliance will be done based on permissions granted.

The proposed project area is outside CRZ and therefore no presence of mangroves and mudflats. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in Chapter – 3 of the EIA report. Site selection is based on suitability criteria as studied and provided in the EIA report.

Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure 1, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC." The file status is also available online at MoEF&CC Forest Clearance.

The land allocation is being granted to AEL by APSEZ, the correspondence is given in EIA report as annexure-III.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Thanking you,

પ્રતિ,
શ્રી નારાણ બી. ગઢવી
પ્રમુખશ્રી,
ખેતી વિકાસ સેવા ટ્રસ્ટ
ગામ : ઝરપરા
મુંદરા – કચ્છ.

વિષય : કચ્છ જિલ્લાના મુંદરા તાલુકાના સિરાચા અને નવીનાળ ગામે અદાણી પોર્ટ સ્પેશિયલ ઇકોનોમિક ઝોનની જમીન ખાતે પ્રસ્તાવિક ગ્રીનફિલ્ડ કોપર રીફાઇનરી પ્રોજેકટની લોક સુનાવણી રદ કરવા બાબત.

સંદર્ભ : આપશ્રીની અરજી તા.૨૭/૦૪/૨૦૧૭

મહોદયશ્રી,

જયભારત સાથ ઉપરોકત વિષય અન્વયે જણાવવાનું કે,કચ્છ જિલ્લાના મુંદરા તાલુકાના સિરાચા અને નવીનાળ ગામે અદાણી પોર્ટ સ્પેશિયલ ઇકોનોમિક ઝોનની જમીન ખાતે પ્રસ્તાવિક ગ્રીનફિલ્ડ કોપર રીફાઇનરી પ્રોજેકટની લોક સુનાવણી રદ કરવા આપનાતરફથી રજુ કરવામાં આવેલ કરવામાં આવેલ વાંધાઓની પુર્તતા નીચે મુજબ છે.

ખેતી વિકાસ ટ્રસ્ટે જાહેર હિતની અરજી રિટ પિટિશન (પીઆઇએલ) નં.૧૨, ૨૦૧૧ નામદાર ગુજરાત હાઇકોર્ટમાં કરેલ હતી. આ અરજીમાં અરજદારે એપીએસઇઝેડ અને અદાણી પાવર વિરૂધ્ધ વિવિધ વાંધા ઉઠાવેલ છે. આ વાંધાઓ માંનો એક વાંધો પક્ષ્યિમ ભાગમાં ચેરીયાના જંગલના નાશનો છે.

પીઆઇએલ માં ચેરિયા જંગલનો નાશ,ક્રીકને પુરવી પર્યાવરણીય નિયમોનું ઉલ્લંઘન કરવું અને એપીએસઇઝેડની પ્રવૃતિ વિરૂધ્ધ સ્ટેટ ઓથોરીટીની નિષ્ક્રીયતાનો ઉલ્લેખ છે. આ અરજીમાં એમ પણ કહેવાયું

છે કે ખુલ્લી ઇન્ટેક ચેનલનાં કારણે ભુગર્ભ જળમાં ક્ષારનું પ્રમાણ વધશે અને ખેતી લાયક જમીનની ફળદ્રુપતાને નુકશાન થશે. આ અંગે એક સમિતિની રચના કરવાની ભલામણ કરાઇ છે.

વધુમાં, અરજદારે એપીએસઇઝેડ અને એપીએલ વિરૂધ્ધ અરજી નં. ૯૧૨૪, ૨૦૧૧ ભારતીય બંધારણના આર્ટીકલ ૨૦૧૫ અનુસાર કરી છે. જેમાં અરજદારે નામદાર ગુજરાત હાઇકોર્ટના તા.૧૨/૦૭/૨૦૧૧ ના હુકમનો અનાદર કરવાની વાત કરી છે. અરજદારે આ અરજીમાં જણાવ્યું છે કે એપીએસઇઝેડ અને એપીએલ એ કચ્છના મુંદરા તાલુકામા ચેરિયાના જંગલોનો નાશ કર્યો છે. ખેતી વિકાસ ટ્રસ્ટેઆ સિવાય કોઇ બીજો વાંધો ઉઠાવેલ નથી.

એપીએસઇઝેડ એ તેનો જવાબ ફાઇલ કર્યો છે. આ એપીએસઇઝેડની મુંદરામાં થતી પ્રવૃતિઓ અંગે છે. અને વિવિધમંજુરીઓ સંબંધીત અધિકારીઓ પાસેથી સમયસર મેળવાયેલ છે. એપીએસઇઝેડની પ્રવૃતિઓ મંજુરી મેળવાયા વગરની છે. તેવું અરજદાર સાબિત કરી શકેલ નથી.

આ પીટીશન પેન્ડીંગ રહેલ તે દરમ્યાન એમઓઇએફ એન્ડ સીસી એ સુનીતા નારાયણના નેતૃત્વ હેઠળ એક સમિતીની રચના કરી હતી. સમિતીએ સાઇટની મુલાકાત લીધી અને તેનો રિપોર્ટ એમઓઇએફ એન્ડ સીસી ને તા.૧૮/૦૪/૨૦૧૩ ના રજુ કર્યો. એમઓઇએફ એન્ડ સીસી એ ત્યાર બાદ શો કોઝ નોટીસ મોકલાવેલ હતી. જેનો ચુકાદો પેન્ડીંગ રહેલ હતો.

પીઆઇએલ ને તા.૧૭/૦૪/૨૦૧૭ના રોજ રદબાતલ કરવામાં આવેલ છે. ગુજરાત હાઇકોર્ટએ આ અરજી એમઓઇએફ એન્ડ સીસી દ્વારા એક સમિતી બનાવવાની શરતે રદ બાતલ કરી હતી. એમઓઇએફ એન્ડ સીસી યોગ્ય પગલા લીધેલ અને એક શો કોઝ નોટીસ ઇસ્યુ કરેલ હતી. એમઓઇએફ એન્ડ સીસીએ આ રિપોર્ટ ધ્યાને લઇ યોગ્ય પગલા લેવાના રહે છે. અને આરીતે આવી કોઇ પીટીશન હવે બાકી રહેતી નથી.

એમઓઇએફ એન્ડ સીસી એ આપેલ અંતિમ નિર્દેશ પ્રમાણે અને તા.૧૮/૦૯/૨૦૧૫ ના આદેશ અન્વયે એપીએસઇઝેડ ને અમુક શરતોનું પાલન કરવા આદેશ આપેલ છે. અને આમ આ શો કોઝ નોટિસ રદ બાતલ થાય છે. આ સાથે ચેરિયાના જંગલો નાશ કરવા સહિતના આક્ષેપોનો યોગ્યરીતેએમઓઇએફ એન્ડ સીસી દ્વારા યોગ્ય રીતે નિકાલ કરેલ છે. એમઓઇએફ એન્ડ સીસી એ આપેલા હુકમને પડકારવાની સમયસીમા પુર્ણ થઇ ગયેલ હોતા કાનુની રીતે લેવાયેલ નિર્ણય અંતિમ બની રહેલ છે.

અરજદારોએ નામદાર ગુજરાત હાઇકોર્ટની વિરૂધ્ધ કરેલ તા.૧૭/૦૪/૨૦૧૫ ની અરજી તા.૧૮/૦૩/૨૦૧૬ ના રોજ રદબાદલ કરેલ છે. આમ આ મેટરને નામદાર સુપ્રીમ કોર્ટ દ્વારા રદ બાતલ કરાતા ખેતી વિકાસ ટ્રસ્ટની અરજી પાયા વિહોણીથઇ જાય છે.

નામદાર ગુજરાત હાઇ કોર્ટે તા.૧૫/૧૦/૨૦૧૫ ના સીવીલ એપ્લીકેશન નં. ૯૧૨૪/૨૦૧૧ માં જણાવ્યું છે કે તેઓ શ્રી એપીએસઇઝેડ અને એપીએલ પર લાગાવેયલા કોર્ટ હુકમના અનાદરના આક્ષેપો વિરૂધ્ધ આક્ષેપ કરી શકાશે નહી.

નામદાર ગુજરાત હાઇકોર્ટે પોતાના તા.૦૫/૧૧/૨૦૧૫ ના અપાયેલ આદેશમાં એપીએસઇઝેડને કેટલાક પગલા લેવા સૂચિત કરેલ અને નિષ્ણાંતોની એક સમિતી પોર્ટ અને એસઇઝેડનો સર્વે. કરવા નિયુકત કરેલ. આ સમિતિનો મુળ ઉદેશ્ય. ચેરિયાના વૃક્ષોના મુદા પર ધ્યાને કેન્દ્રીત કરવાનો હતો. આ નિષ્ણાંત સમિતીએ પોતાનો રિપોર્ટ નામદાર કોર્ટને તા.૦૮/૦૬/૨૦૧૬ ના આપી દીધેલ છે. અને એપીએસઇઝેડ એ તેનો જવાબ તા.૧૮/૦૭/૨૦૧૬ ના દિવસે રજુ કરી દીધેલ છે. સમિતીનો રિપોર્ટ અને એપીએસઇઝેડનો જવાબનામદાર કોર્ટમાં પેન્ડીંગ રહેલ છે.

દુર્ભાગ્યવશ નિષ્ણાંતોની સમિતીએ નામદાર કોર્ટના તા.૦૫/૧૧/૨૦૧૫ ના આદેશમાં જણાવેલ એરીયાથી વધુ એરિયા તપાસ કરેલ છે. આ તથ્ય તા.૧૮/૦૭/૨૦૧૬ ની અમારી એફીડેવીટમાં જણાવાયેલ છે. જેથી એ સાબિત થાય છે કે સમિતીએ આપેલ રિપોર્ટ બદઇરાદા પુર્વકનો છે અને એપીએસઇઝેડ અને એપીએલની પ્રતિસ્ઠા ને હાનિ પહોંચાડવાનો છે. વધુમાં જણાવવાનું કે નિષ્ણાંતોની સમિતીના સભ્યો માંથી એક સભ્યા એપીએસઇઝેડને અપાયેલઅગાઉની મંજુરીની પ્રક્રીયામાં સામેલ હતાં. અને આમ તેઓએ પોતેજ આપેલી મંજુરી વિરૂધ્ધ કોઇ ભલામણ કરી શકે નહીં.

ઉપરોકત જણાવેલ વિગતો પરથી સાબિત થાય છે કે નામદાર કોર્ટમાંકરાયેલ સીવીલ એપ્લીકેશન નં. ૯૧૨૪/૨૦૧૧ નો માત્ર ચેરીયા ઉછેરનો મુદો જ એપીએસઇઝેડ દ્વારા કરવાનો બાકી રહેલ છે. નામદાર કોર્ટમાં પેન્ડીંગ રહેલ મેટરમાં ૧૬ હેકટર અથવા વધુ વિસ્તારમાં કોર્ટના આદેશ મુજબ ચેરીયા ઉછેરનીવાત છે આ ઉછેર સમિતીએ ભલામણ કરેલ જમીન પર કરવાનોછે. આ મેટરમાં અન્ય કોઇ જમીનના ચેરિયાનો ઉલ્લેખ નથી.

Ref: AEL/Copper/Mundra/EC/PH/D-A-6

To,
Kheti Vikas Seva Trust,
Vill: Zarpara, Tal: Mundra, Dist: Kutch

Kind Attn: Mr. NaranbhaiGadhvi

Subject: Your letter dated 27.04.2017 with respect to Public Hearing of Copper Smelter project

Dear Sir,
Withrespect to the above stated subject matter, please note that reply to the representationmadefor the proposed ship recycling project is as follows:

About High court cases:

Kheti Vikas Trust had filed alleged public interest litigation, being Writ Petition (PIL) No.12 of 2011, before Hon'ble Gujarat High Court. In the main petition, the Applicant had made various allegations against APSEZ and Adani Power Limited. One such allegation made in the main petition was in respect of the alleged "deforestation of mangrove forests which forms the main part of mangrove forest of western region".

PIL alleging destruction of mangrove, filling up of creeks and violation of Environmental Laws & inaction of the State Authorities against the activities of APSEZ. It also alleged that due to construction of open intake channel, the salinity of ground water has increased and is damaging the fertility of the agricultural land. A prayer was made to appoint a committee.

Subsequently, the Applicant filed the captioned Civil Application No.9124 of 2011 purportedly under the provisions of Article 215 of the Constitution of India, against APSEZ and APL, for alleged 'wilful and deliberate contempt' of the authority of Hon'ble Gujarat High Court. It is the case of the Applicant in the present civil application that APSEZ and APL had allegedly continued their operation of cutting/destruction of thick cover of Mangrove forest existing in MundraTaluka of Kutchch District in violation of the aforesaid order dated 12.7.2011 passed by this Hon'ble Gujarat High Court. KhetiVikas Trust has made no other allegations in present civil application, besides the allegation of destruction of mangroves of certain area in breach of the order dated 12.7.2011.

adani

APSEZ filed its reply and refuted the allegations. It was the case of APSEZ that the activities carried out by it at Mundra is permitted by various clearances granted by the concerned authorities from time to time. The petitioner failed to prove that any of the activities of APSEZ is not permissible.

During the pendency of the petition, MoEF&CC appointed a committee headed by Ms. SunitaNarain which visited the site and submitted its report to MoEF&CC on 18.4.2013. MoEF&CC thereafter issued a Show Cause Notice dated 30.9.2013 to APSEZ which was pending for adjudication.

Subject PIL was dismissed on 17.4.2015. The Gujarat High Court dismissed the petition on the premise that the prayer to appoint the committee is already granted by virtue of appointment of committee by MoEF&CC. MoEF&CC has already taken action and issued the show cause notice. It is for MoEF&CC to consider the report and take appropriate action and the petition does not survive any further.

MoEF&CC has given final directions to APSEZ to comply with certain conditions vide their order dated 18.09.2015 thereby disposed off the pending show cause. With this, all allegations including that of destruction of mangrove are appropriately dealt with by MoEF&CC. The statutory authority has taken a considered view which has become final as the time limit to challenge the said order of MoEF&CC had expired way back.

Appeal filed in Supreme Court by the petitioners against Gujarat High Court order dated 17.4.2015 which was dismissed on 18.3.2016. Upon dismissal of the matter by the Hon'ble Supreme Court, KhetiVikasSeva Trust cannot be heard to say that there is any merit in their case against APSEZ.

Thereafter, in its order dated 15.10.2015 in Civil Application No.9124 of 2011, the Gujarat High Court recorded that it would not be able to frame charges against APSEZ and APL for alleged contempt for breach of the order dated 12.7.2011.

Hon'ble Gujarat High Court by its order dated 5.11.2015 proposed certain measures to be undertaken by APSEZ and appointed a committee of experts to survey the area in and around the Port/SEZ developed by the APSEZ, with a special focus on the question of mangroves in the area. Said committee of experts has already filed its report before this Hon'ble Court on 8.6.2016 and APSEZ has also filed its response to the said report on 18.07.2016. The said report and the response of the APSEZ are pending before this Hon'ble Court.

Unfortunatelyhowever, the Committee has travelled much beyond the scope of the terms of reference delineated by this Hon'ble Court in its order dated 5.11.2015, which is demonstrated through our affidavit dated 18.07.2016 which clarifies that the contents of the report submitted by the Committee further reflects that the Committee has in fact proceeded with mala fides and with a view to pin down APSEZ and APL. In fact, one of the committee members was party to the earlier clearances

1894

adani

granted to APSEZ and is therefore, barred from raising any objection or giving any finding contrary to his own recommendations.

In view of the aforesaid it becomes evident that the only issue pending before this Hon'ble Court in Civil Application No.9124 of 2011 is as to the extent of the measures (the extent and the place where mangroves can be planted by way of compensatory plantation) to be undertaken by APSEZ. The matter pending before the Hon'ble Gujarat High Court is limited to plantation of 100 ha of mangroves or more as may be directed by the Hon'ble Court at the location identified by the Committee. No other area is subject matter of this matter.

About CRZ area:

The project will be developed using notified SEZ area and forest land. The proposed layout superimposed on authorized CRZ map is presented in the EIA report as Figure 2.1 on page C2-3. From the said figure, it is clear that the entire project area is outside CRZ.

About compliance:

APSEZ as well as APL have obtained requisite clearances from time to time from respective authorities and have been submitting their compliance reports twice in a year to all concerned government authorities.

MoEF&CC has dealt with the SunitaNarain Committee report and subsequent submissions of APSEZ as well as APL and has finally issued an order with certain directions. One of which is to carry out Cumulative Impact Assessment study for Mundra region. APSEZ has obtained ToR from GCZMA and started studies through NABET accredited consultant. Progress has been submitted to MoEF&CC from time to time. Study is in progress and on completion final report will be submitted to concerned authorities.

About CSR activities:

Adani Foundation is the CSR wing of Adani group. Adani Foundation works in four main areas for social upliftment of communities around all project locations of the Adani Group. They are Education, Community health, Social Livelihood and Rural Infrastructure development. With reference to the mentioned Office Memorandum of MoEF&CC and companies act with respect to the Corporate Social Responsibility, details about the activities carried out and planned by Adani Foundation in and around Mundra are mentioned in chapter 8 of the EIA report.

About Forest clearance:

As per procedures of EIA notification 2006, its subsequent amendments and other related notifications / circulars / office memorandums of MoEF&CC, it is clear that

Environmental Clearance procedure can be carried out once application has been made for forest land diversion and environment clearance can be granted to any project activities involving forest land by reviewing the status of forest clearance at respective time. Proper procedures are being followed for proposed project with respect to obtaining environment clearance as well as forest clearance.

In view of the above clarifications, it is clear that the required procedures are being followed for obtaining prior environmental clearance for the proposed project activity and Public Hearing is part of the process.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Out of total area proposed for the project 256.58 ha area is notified SEZ and 102.38 ha is forest land for which forest clearance application is in process.
2. The layout has been marked on the CRZ map given in Figure-1.5 of Chapter-1 in the EIA report. The proposed project area is outside CRZ.
3. GCZMA is the custodian of approved CZMP for the proposed project area. However project layout is superimposed on CRZ map prepared by authorized agency of MOEF&CC as per CRZ notification 2011 and same is provided in figure-1.5 of Chapter-1 of EIA report.
4. The proposed project layout has been marked on the authorized CRZ map given in Figure-1.5 of Chapter-1 in the EIA report. Same is in colour.
5. The latest satellite imagery of the 21 Jan 2016/14 Feb 2016 is given in Figure-3.3.1 of Chapter 3 of EIA report
6. The land use details of the study area are given in Figure-3.3.2 of Chapter-3 of EIA report
7. The proposed project area is outside CRZ.
8. There are no ecologically sensitive areas in the proposed project area. However mangroves are present outside the project area but within the study area. The land use break-up details as per satellite image classification for the study area is given in chapter-3 of EIA report.

9. The proposed project area is outside CRZ area therefore no presence of mangroves and mudflats.

10. Mangroves are present at 100 m away in the southern side of the project area.

11. Salt pans are located at a distance of around 5KM in WSW direction from the project area.

12. The fish species in the study area have been listed in Chapter-3 of the EIA report. Details on existing fisherman will be included in the Final EIA report.

13. Proposed Project area is outside CRZ and there are no mudflats and mangroves in the project area. Alternative site analysis is done for the project and site is selected based on its suitability. Project area includes forest land for which APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance.

14. The alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors.

15. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1.

16. The proposed project is planned over notified SEZ and Forest land that applied for diversion. No reclamation is proposed as part of proposed project activity. Details on present land use are provided in Chapter - 3 of the EIA report.

17. Proposed project area is devoid of mangroves. There is no question of mangrove destruction.

18. The alternate site analysis was carried out. The site selection criteria and the study of alternate sites is detailed in chapter-5 of the EIA report.

19. The proposed project area is outside CRZ and therefore no presence of mangroves and mudflats. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in Chapter – 3 of the EIA report. Site selection is based on suitability criteria as studied and provided in the EIA report.

20. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in chapter – 3 of the EIA report.

21. The forest related information as asked in point no. 22 is replied properly.

22. There is no case pending against the proposed project.
23. The question is not related to proposed project.
24. The question is not related to proposed project. No reclamation is proposed in the project under discussion.
25. As a part of the requirement for the proposed project the existing roads will be strengthened by widening or upgrading and extended to approach the proposed site.
26. The raw material transportation is proposed to be received from the approach road within notified SEZ which will be strengthened. The overall layout of the proposed plant is given in Figure-2.1 of EIA report.
27. The widening of existing road is within the notified SEZ and it is considered as part of the overall impact assessment of the proposed project. However, impact will be insignificant.
28. Power will be sourced from existing transmission lines by extending it to the proposed project site by using existing area of APSEZ. Same will be outside CRZ.
29. Natural drainage will not be disturbed due to the proposed project. The natural topography will be maintained. The proposed project location is notified SEZ and forest land for which necessary clearance is under progress.
30. The copper concentrate and rock phosphate will be transported through state of art pipe conveying method. The required EMP measures will be implemented as mentioned in Chapter-6. Project will be implemented after obtaining required clearances from concerned statutory authorities and complied with.
31. The locals will be given preference as per the eligibility. The skill development program will be implemented as a part of CSR program to improve employability.
32. During construction phase, workers will be sourced through contractors and it will be ensured that workers get required facilities.
33. All the facilities including sanitation and others will be provided.
34. This is outside the scope of the EIA report for the proposed project. However, local employment will be provided for the proposed project based on eligibility.
35. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1.
36. There is no notified/ declared turtle nesting site present within 15KM of the proposed project area.
37. The details of pagadiya fishermen will be included in the final EIA report. No fishermen will be impacted due to the proposed project.

38. This is outside the scope of the EIA report for the proposed project.

39. The proposed project area is outside CRZ. We do not have any information on fishing boats in the surrounding area. However, proposed project activity will have no impact on fisheries.

40. The sand for the proposed construction will be sourced from local available markets.

41. The land use pattern of the study area covering 10 km radius is given in Figure-3.3.2, Chapter -3 of the EIA report. Same is in color. Mudflats and mangroves are mentioned in Table 3.3.2, Chapter-3 of EIA report.

42. Project area is notified SEZ and forest land for which diversion is under process. Mangroves and other RF are mentioned as part of Form-1 and EIA report. Mangroves are not present within the proposed project area.

43. All the utility corridors will be part of notified SEZ. However, they will be finalized as part of detail engineering and only after obtaining required clearance for the proposed project.

44. Reply is as per point no. 43.

45. Leveling of the land profile will be done as part of detailed engineering for the proposed project.

46. Map showing the creek in the satellite imagery and land use map are provided in Chapter-3 of the EIA report.

47. Proposed project area is devoid of any human habitation. The fishermen in the surrounding areas will not be disturbed due the proposed project.

48. Details on potential employment are mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.

49. Based on the eligibility and available vacancies, jobs will be provided.

50. Training will be integral part of all the employees. The skill development program will be implemented as a part of CSR program to improve employability.

51. Based on the eligibility and available vacancies, jobs will be provided.

52. Salt pans are present in the south west direction of the project area at a distance of around 5KM.

53. The coal will be sourced from the local market and transported through trucks. Around 3000 tonnes of coal will be stored. Coal is taking part in the smelting process

adani

and hence there is no ash generation. The details about mitigation measures have been covered as a part of EMP in the EIA report.

54. There is no generation of ash in the process.

55. The requested details are part of detail engineering. Preliminary water balance diagram is given in figure-2.2 of the EIA report.

56. Environmental sensitivity analysis is done for 15KM area from the project boundary and same is provided in Form-1. The alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors.

57. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors.

58. This is outside the scope of the EIA report for the proposed project.

59. This is outside the scope of the EIA report for the proposed project.

60. Yes, the present proposal will include the indigenous species.

61. STP will be part of ETP and same is shown in the layout map provided in the EIA report.

62. The sewage sludge will be utilized as manure for the greenbelt.

63. The sewage sludge will be used within the plant itself and the particulars will be available post detail engineering.

64. The plant will be designed for Zero Liquid Discharge. The rejects from the RO plant will be sent to multi-effect evaporator. There is no discharge of any treated water into sea. Preliminary water balance diagram is given in figure-2.2 of the EIA report.

65. Reject from secondary stage RO containing higher TDS will be sent to multi-effect evaporator where water will be separated and re-used and salts (mainly calcium) will be stored in the SLF within the project area.

66. Tail gas scrubbers will be installed to scrub residual gases from Sulphuric Acid Plant to produce Gypsum used in cement industries and high efficiency gas scrubbers will be installed in Phosphoric Acid Plant to produce Hydro Fluro Silicic acid which is used in manufacturing of Aluminum Fluoride.

67. Copper slag can be used as a building material (added in concrete as well as in ready mix), road construction and shot blasting. The same is covered in EIA report. As per MoEF&CC notification dated 4th April, 2016, copper slag does not fall under

hazardous waste category and separate guidelines on the management of copper slag will be issued by CPCB separately and same is awaited.

68. Phosphogypsum is used for cement manufacturing, gypsum board manufacturing and fertilizer. The same is covered in EIA report. The "Guidelines for Management, Handling, Utilisation and Disposal of Phosphogypsum Generated from Phosphoric Acid Plants" published by CPCB is available online at: http://cpcb.nic.in/wast/hazardouswast/GuidelineforM,H,Utili&%20DisposalofPhosphogypsumfromPAPlants.pdf

69. An area of 30 acres has been demarcated for the SLF and shown in the plant layout in Chapter-2 of the EIA report, which takes care of the generated ETP cake and scrubber cake.

70. Reply is as per point no. 69 above.

71. Total area required for the plant is 256.58 ha. Three alternative sites were proposed. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. The site selection criteria and the study of alternate sites are detailed in chapter-5 of EIA report.

72. Project area includes forest land for which APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. The proposed project site is away from biodiversity heritage site as proposed by Gujarat State Biodiversity Board. However, project will be implemented by taking all environmental safeguards.

73. Total area required for the plant is 256.58 ha. Three alternative sites were proposed. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. The site selection criteria and the study of alternate sites are detailed in chapter-5 of EIA report.

74. ETP cake and scrubber cake will be stored in the secured land fill (SLF). An area of 30 acres has been demarcated for the SLF and shown in the plant layout in Chapter-2 of the EIA report. Storage of copper slag, phosphogypsum and SLF is proposed within the project boundary. The proposed project site is outside CRZ. Forest clearance for the forest land in the proposed project has been applied. Environment clearance is under progress.

75. The preliminary composition of the waste generated such as scrubber cake and ETP cake is provided in Chapter-2 of EIA report.

76. ETP cake will be stored in SLF. Secured land fill is proposed to be developed over an area of 30 acres within the proposed project area. SLF will be constructed and

operated as per the CPCB guidelines for treatment, storage and disposal facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and landscaping will be done. Monitoring of environmental parameters will also be carried out. Therefore, there are no possibilities of contamination of ground water.

77. Total area required for the plant is 256.58 ha. Forest land requirement is part of the total land estimated for the project. Greenbelt requirement on 33% of the area is proposed and shall be complied as per EC conditions. For the compensatory afforestation for the forest land shall also done as per established procedure.

78. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Based on studies under EIA, ambient air quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.

79. Proposed project is outside CRZ area, therefore there is no question of reclamation of mudflats and mangroves. Project will be implemented with all environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.

80. Map showing the study area with satellite imagery and land use map are shown in in the Chapter-3 of the EIA report. Authorized CRZ map is also provided in figure-1.5 of Chapter-1 of EIA report. Mangroves are present at 100 m away in the southern side of the project area.

81. This is outside the scope of the EIA report for the proposed project.

82. The proposed project site is outside CRZ. Forest clearance for the forest land in the proposed project has been applied. Environment clearance is under progress. Wild life clearance is not applicable for the proposed project.

83. This is outside the scope of the EIA report for the proposed project.

84. This is outside the scope of the EIA report for the proposed project.

impacts has been carried out with respect to proposed project activity. The details have been provided in Chapter-4 of the EIA report.

89. EIA studies have been carried based on TOR granted by MoEF&CC. Project will be implemented after obtaining required permissions and compliance will be done based on permissions granted.

90. Representations received from fishing community were addressed during public hearing as well as in written responses. There are no complaints or grievances from the fishing community for the proposed project activity.

91. Project is located in notified SEZ area. APSEZ has obtained EC and CRZ clearances from MoEF&CC vide their letter dated 15th July, 2014 for multi-product SEZ at Mundra. Proejct area also includes forest land for which APSEZ is in the process of obtaining forest clearance. Wild life clearance is not applicable.

92. Reply is as per point no. 91 above.

93. This is outside the scope of the EIA report for the proposed project.

94. This is outside the scope of the EIA report for the proposed project.

95. The impacts due the additional traffic of the proposed project have been considered while calculating the cumulative impact and the details are available in Chapter 4 of the EIA report. There will not be any significant impact due to increase of traffic due to proposed project.

96. The impacts due the additional traffic of the proposed project have been considered while calculating the cumulative impact and the details are available in Chapter 4 of the EIA report. Existing railway lines will be used based on requirement. Existing port facility available at west port and south port of APSEZ will be utilized for transportation of materials.

97. The plant design will be done considering seismic zone-V as per IS 1893 (part-1)-latest edition. Disaster management plan has been prepared and available in Chapter-7 of the EIA report.

98. Ecological study has been carried out during the study period by an EIA agency approved by QCI-NABET. The NABET certificate and personnel involved in the ecological study is available in Chapter-11 of the EIA report.

99. EIA studies have been carried based on TOR granted by MoEF&CC. Socio economic study has been carried out as part of EIA and same is available in Chapter-3 of the EIA report.

100. This is outside the scope of the EIA report for the proposed project. However, coordinates of the proposed project boundary are provided in Chapter-1 of the EIA report.

101. All the infrastructural facilities like parking, washing, repairs and maintenance etc will be part of detail engineering and same will be carried out after obtaining required clearances.

102. Separate truck parking and rest rooms will be provided to the drivers and cleaners involved in the transportation of the raw material and end products.

103. The proposed plant will operate on Zero discharge concept. There is no discharge of any treated water into creeks or Gulf of Kachchh.

104. This is outside the scope of the EIA report for the proposed project.

105. The proposed project is outside CRZ area and no mangroves are present at the proposed project site.

106. The proposed project will be implemented in notified SEZ and forest land. The land terrain is gently sloping and no major cutting and filling for leveling of land will be involved. Impact on land environment is carried out and details are in chapter-4 of the EIA report.

107. The NABET certificate of the EIA consultant (NABET/EIA/1619/RA0043 Valid upto 19 May 2019) is provided in Chapter-11 of EIA report.

108. TOR granted by MoEF&CC vide their letter dated 21st June, 2016 has been followed for preparation of draft EIA report.

109. All documents have been provided in English. The representations received in local language will be translated into English and same will be authenticated.

110. This is outside the scope of the EIA report for the proposed project.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

સંદર્ભ: AEL/Copper/Mundra/EC/PH/ D-A-8

શ્રી ધર્મેશ મિસ્ત્રી
બ્લોક 14, હાઉસ નં 1340, નર્મદા એપાર્ટમેન્ટ
ભરૂચ, ગુજરાત.

વિષય :અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેક્ટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ

માનનીય સાહેબ,,

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. અમે પ્રદૂષણ નિયંત્રણ અને પર્યાવરણીય રક્ષણ માટે નવીનતમ ટેકનોલોજી પણ અપનાવીશું. આ પ્રોજેક્ટને ઝીરો લિક્વિડ ડિસ્ચાર્જ સાથે અમલમાં મૂકવામાં આવશે. પર્યાવરણીય અસર આકારણી હાથ ધરવામાં આવી છે અને તમામ પર્યાવરણીય પરિમાણો કાનૂની મર્યાદાની અંદર હશે. અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ:

1. સંકળાયેલા પર્યાવરણીય સલાહકારો QCI NABET માન્ય છે અને EIA સલાહકાર (NABET / EIA / 1619 / RA0043 19 મે 2019 સુધી માન્ય) નું પ્રમાણપત્ર ઇઆઇએ અહેવાલના પ્રકરણ -11 માં પૂરું પાડવામાં આવ્યું છે. વિમતા લેબ્સ દ્વારા રોકાયેલા નિષ્ણાત કામગીરી ક્ષેત્રની ટીમના નામો અને લાયકાતો અંતિમ ઇઆઇએ અહેવાલમાં દ્વારા પૂરા પાડવામાં આવશે
2. વિગતો ઉપરના મુદ્દા નં. 1 મુજબ છે.
3. આ સૂચિત પ્રોજેક્ટ માટે ઈઆઈએ રિપોર્ટના કાર્યક્ષેત્રની બહાર છે.
4. આ સૂચિત પ્રોજેક્ટ માટે ઈઆઈએ રિપોર્ટના કાર્યક્ષેત્રની બહાર છે.
5. આ સૂચિત પ્રોજેક્ટ માટે ઈઆઈએ રિપોર્ટના કાર્યક્ષેત્રની બહાર છે.
6. એનએબીઈટી અધિકૃત સલાહકાર દ્વારા ડ્રાફ્ટ ઇઆઇએ અહેવાલ તૈયાર કરવામાં આવ્યો છે અને તે જાહેર સુનાવણી માટે રજૂ કરવામાં આવ્યો છે. જાહેર સુનાવણી ઇઆઇએ (EIA) જાહેરનામા 2006 અને તેનાં અનુગામી સુધારા પર આધારિત છે. સાર્વજનિક સુનાવણી દરમિયાન જનતાની ચિંતાઓને ધ્યાન

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Madam,

We acknowledge the receipt of your representation and have noted your concerns.

We assure you that all the environmental safeguards will be put into place before operation of the project. There are many such projects operating in the world, including the developed countries. We will also be adopting the latest technology for pollution control. We are confident of operating this plant with all the safeguards to mitigate the pollution.

Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

We assure you that all the environmental standards will be complied during plant implementation and operation.

વિષય :અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ

માનનીય સાહેબ,,
અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે.

અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી પહેલાં બધી પર્યાવરણીય સલામતીઓનો અમલમાં મૂકવામાં આવી છે. વિકસિત દેશો સહિત, વિશ્વમાં કાર્યરત આવા ઘણાં બધાં પ્રોજેક્ટ્સ છે. અમે પ્રદૂષણ નિયંત્રણ માટે નવીનતમ ટેકનોલોજી પણ અપનાવીશું. અમે પ્રદૂષણને ઘટાડવા માટે તમામ સલામતિઓ સાથે આ પ્લાન્ટને સંચાલિત કરવા માટે વિશ્વાસ રાખીએ છીએ.

લાયકાતના આધારે આ પ્રોજેક્ટમાં રોજગાર માટે સ્થાનિક લોકોને પ્રાધાન્ય આપવામાં આવશે. સ્થાનિક યુવાનોની રોજગારીમાં સુધારો કરવા માટે એક કૌશલ્ય વિકાસ કેન્દ્રની સ્થાપના કરવાની એક યોજના છે. સ્થાનિક સમુદાયના વિકાસ માટે કોર્પોરેટ સોશિયલ રિસ્પોન્સિબિલિટી હેઠળ વાર્ષિક રૂ.8.0 કરોડની જોગવાઇ કરવામાં આવી છે. હસ્તક્ષેપના વિસ્તારોમાં શિક્ષણ, આરોગ્ય અને સ્વચ્છતા, ટકાઉ આજીવિકા અને ગ્રામીણ આંતરમાળખાકીય સુવિધાઓ હશે.

અમે ખાત્રી આપીએ છીએ કે પ્લાન્ટના અમલીકરણ અને કામગીરી દરમિયાન તમામ પર્યાવરણીય ધોરણોનું પાલન કરવામાં આવશે.

આપનો આભાર,

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your appreciation to the efforts of Adani Group for development of the area.

We assure you that we will continue to comply with environmental standards set by state pollution control board/ central pollution control board for proposed copper refinery project.

As part of improving employability within local youth, there is a plan to set up a Skill Development Centre through Adani Foundation. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

The project will also provide various business opportunities as mentioned by you. We will be happy to support the same.

We thank you for your support and would like to continue our engagement with the community for development of the area.

Thanking you,

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your appreciation to the efforts of Adani Group for development of the area.

We assure you that we will continue to comply with environmental standards set by state pollution control board/ central pollution control board for proposed copper refinery project.

As part of improving employability within local youth, there is a plan to set up a Skill Development Centre through Adani Foundation. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

The project will also provide various business opportunities as mentioned by you. We will be happy to support the same.

We thank you for your support and would like to continue our engagement with the community for development of the area.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your appreciation to the efforts of Adani Group for development of the area.

We assure you that we will continue to comply with environmental standards set by state pollution control board/ central pollution control board for proposed copper refinery project.

As part of improving employability within local youth, there is a plan to set up a Skill Development Centre through Adani Foundation. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

The project will also provide various business opportunities as mentioned by you. We will be happy to support the same.

We thank you for your support and would like to continue our engagement with the community for development of the area.

માનનીય સાહેબ,,

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. વિકસિત દેશો સહિત વિશ્વમાં ઘણા આવા ઘણા પ્રોજેક્ટ્સ છે. તમારા દ્વારા ઉલ્લેખ કરાયેલાં ભય કોઈ પણ છોડમાં ક્યારેય બન્યાં નથી. અમે પ્રદૂષણને ઘટાડવા માટે તમામ સલામતીઓ સાથે આ પ્લાન્ટને સંચાલિત કરવાનો વિશ્વાસ રાખીએ છીએ. અમે પ્રદૂષણ નિયંત્રણ માટે નવીનતમ ટેકનોલોજી પણ અપનાવીશું.:
આપના દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓના પેરાવાઇઝ જવાબ અમો અત્રે આપી રહ્યા છીએ.

1. હવા અને જળ પ્રદૂષણ ઘટાડવા માટેનાં તમામ પગલાંઓ અપનાવવામાં આવશે. અસર મૂલ્યાંકન હાથ ધરવામાં આવ્યું છે અને પ્રોજેક્ટ કાર્યરત થયા બાદ જમીનના સ્તરના કેન્દ્રીકરણનું મૂલ્યાંકન કરવા માટે બેઝલાઈન ડેટા પર વૃદ્ધિની અસરોને મૂકવામાં આવી છે. પ્રોજેક્ટની કામગીરી પછીની પૂર્વાનુમાનિત જમીનના સ્તરનું કેન્દ્રીકરણ પણ નેશનલ એમ્બિયન્ટ એર ક્વોલિટી સ્ટાન્ડર્ડની અંદર હશે અને તેથી તેની આસપાસની ઇકોસિસ્ટમ પર કોઈપણ લાંબા ગાળાની અસરો થવાની અપેક્ષા નથી.

2. પ્રક્રિયા દરમ્યાન ઉત્પન્ન થયેલો SO2 ગેસ, સલ્ફ્યુરિક એસિડના પ્લાન્ટ માટે ઈન્પુટ કાચો માલ છે અને પ્રોજેકટ એરિયાની અંદરજ સંબંધિત પ્લાંટમાં સલ્ફ્યુરિક એસિડમાં રૂપાંતરિત કરવામાં આવશે. સલ્ફ્યુરિક એસિડ પ્લાન્ટના શેષ વાયુઓ ટેલ ગેસ સ્ક્બ્બિંગ પછી, ચીમનીમાથી છોડવામાં આવશે. સ્ટેક દ્વારા બાકી રહેલા વાયુઓને છોડતાં પહેલાં, હાઈડ્રો ફ્લુરો સિલિકિક એસિડનું ઉત્પાદન કરવા હાઈડ્રોજન ફ્લુરાઇડને સ્કબ કરવા માટે ફોસ્ફોરિક એસિડ પ્લાન્ટમાં ઉચ્ચ કાર્યક્ષમતાવાળા ગેસ સ્કબર્સ ઈન્સ્ટોલ કરવામાં

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. There are many such projects in the world, including the developed countries. The apprehensions mentioned by you have never happened at any of the plants. We are confident of operating this plant with all the safeguards to mitigate the pollution. We will also be adopting the latest technology for pollution control.

We are herewith responding para wise to the issues raised by you:

1. All measures for mitigating the air & water pollution will be adopted. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem.
2. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing. High efficiency gas scrubbers will be installed in Phosphoric Acid plant to scrub Hydrogen Fluoride to produce Hydro Fluro Silicic Acid before releasing the residual gases through the stack. The emissions leaving the various stacks/ vents proposed as part of this project will be meeting the prescribed norms of Central Pollution Control Board (CPCB). Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.
3. The project will be implemented with Zero Liquid Discharge. Waste produced from the proposed plant will be stored in Secured Land Fill (SLF) which will be developed over the area of 30 Acres within the proposed project area. SLF will be constructed and

operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and landscaping will be done. Monitoring of environmental parameters will also be carried out. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits.

4. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We are submitting para wise response to the issues raised by you:

1. Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. No streams will be closed or blocked by the project.

2. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.

3. All measures for mitigating the air & water pollution will be adopted. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem.

4. The project is estimated to emit 0.53 Million Tons of CO2 equivalent of GHG per year from proposed project which is insignificant in the context of Local or Global Warming. Heat available from the plant process will be converted to produce power with the waste heat recovery boiler as well as hot water for plant process requirements.

5. All measures for mitigating the air & water pollution will be adopted. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1. Proposed project area is devoid of mangroves. There is no question of mangrove destruction.

2. Impact Assessment has been carried out covering 10 km area surrounding the project site and it includes water bodies (if any), local residents and villages. There is no proposal of closing any creeks.

3. There are no sand dunes in the proposed project site. Hence, there is no question of demolition of sand dunes.

4. No fishermen will be impacted due to proposed project and will have no impact on fisheries.

   Project will be implemented with all the environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.

5. Project will be implemented with all the environmental safeguards. There is no proposal of using groundwater for the proposed project. Water requirement for the proposed project will be supplied through desalination plant of APSEZ.

   The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for Air and Water and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

6. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

7. Proposed project will directly source the copper concentrate from outside which will be transported through state of art pipe conveying method. Thus, the process in this plant will directly start from smelting and will not involve mining, commination operation, floatation, etc. Project will be implemented with all environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems. The proposed project is based on Zero liquid discharge system and hence there will be no discharge of any effluent outside the proposed project boundary.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. The previous land use of the proposed project has been converted to Industrial by APSEZ and APSEZ has consented to allot this land to AEL.

   Present land use of the land for proposed project is 154.18 ha (381 acres) of APSEZ land (Land allotment letter is enclosed as Annexure-III in EIA Report) and 102.38 ha (253 acres) of Forest land (Stage-I Forest clearance in process) which is State Govt. has recommended for Forest Clearance (FC) and is at Central Government [File number is 8-04/2016-FC].

2. Reply is as per point no. 1 above.

3. The online application for prior EC (application No: IA/GJ/IND/53004/2016: Form-1 and Pre-Feasibility Report) for the proposed project has been submitted to MoEF&CC on 21st April, 2016 and same was reviewed by the Expert Appraisal Committee (Industry I) held during 4th May 2016 in New Delhi to prescribe Terms of Reference (TORs) for the preparation of EIA/EMP report. The Environmental Clearance is under process.

4. After receiving Environment Clearance from MOEF&CC. The necessary NOC (Consent to Establishment (CTE) or Consent to Operate (CTO) form GPCB shall be applied, as applicable.

5. The Forest Clearance is still under process. The details are available on the website of MoEF & CC (File No. 8-04/2016-FC).

Based on the survey which was carried out by Centre for Earth Science Studies (CESS, Thiruvanantpuram), which is an authorized agency by MoEF&CC, the proposed project site is outside CRZ and doesn't attract CRZ clearance.

6. Proposed project area is devoid of mangroves. There is no question of mangrove destruction.

7. The anticipated impacts and mitigation measures during construction and operation phase is given in Chapter-4 of EIA report.

8. The monitoring is conducted during 1st October, 2016 to 31st December 2016, is the study period for the Environmental Baseline data collection. The location and Ambient Air Quality and levels are given in Annexure-VI of EIA Report. All the environmental attributes such as sampling of air quality, water sampling (ground and surface), noise levels, and soil quality were carried out during the study period.

9. The coal will be sourced from the local market and transported through trucks. Around 3000 tonnes of coal will be stored. Further details of fuel consumption quantity and source are given in Table-2.5 of Chapter-2 (Project Description).

10. The question is not relevant and therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to the permissions granted.

11. Maximum domestic and service water requirement for the proposed project is 1000 KLD. The final requirement will be re-assessed during detail engineering.

12. The process details and schematic flow diagram of ETP is given in Figure-2.20 of Chapter-2.

13. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.

14. The solid waste generation (quantity and mode of disposal) and waste characteristic is presented in Chapter-2 of the EIA report. The Secured Land Fill (SLF) is proposed over 30 acres within the project premises for disposal of ETP waste sludge and spent catalyst. Other Hazardous waste will be disposed through the approved recyclers.

15. Details on potential employment are mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.

16. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation.

The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

17. Reply is as per point no. 16 above.

18. Environment management cell structure has been provided in Chapter-9 of the EIA Report who will be responsible for implementation of EMP.

19. In the matter of Sunita Narain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015.

20. This is outside the scope of the EIA report for the proposed project.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Thanking you,

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. The alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors.

   Project area includes forest land also for which APSEZ has applied for Forest clearance and same is under process. As a process, State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance.

   As per OM of MoEF&CC, after making an application for forest land project proponent can apply for obtaining ToR for the proposed project and proceed with the precedures as per EIA notification 2006 and subsequent amendements. Same is complied fully.

2. As a process, State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. Compliance will be done as per forest clearance and Compensatory afforestation for the forest land will be done as per established procedure.

3. Proposed project layout is superimposed on CRZ map of the area prepared by authorized agency of MOEF&CC as per CRZ notification 2011 and same is provided in Chapter-1 of the EIA report. CRZ map is prepared by NCESS in June 2011. .

4. The details provided with respect to distance of various streams/rivers/coasts/creeks in Form-1 and EIA report are factual in nature. We will again verify the details and same will be reported in the final EIA report.

5. SLF will be constructed and operated as per the CPCB guidelines for treatment, storage and disposal facility (TSDF). All required approvals will be taken from concerned authorities. The SLF, once filled to its capacity will be capped on top and soil cover will be spread and landscaping will be done. This was disclosed in Form-1; Aspects related to ground water has been studied and relevant information has been provided. Regular monitoring will be carried out as per Environment monitoring programme. Further detailing is part of detail engineering. The proposed project is outside CRZ area.

6. Details on production quantity of copper slag and phosphogypsum are provided in the EIA report. The uses of copper slag and phosphogypsum are also mentioned in the EIA report. Both the materials will be handled with all precautions as they are valuable raw materials for several applications.

7. Gypsum storage area will be constructed as per the "Guidelines for Management, Handling, Utilisation and Disposal of Phosphogypsum Generated from Phosphoric Acid Plants" published by CPCB and which is available online at: http://cpcb.nic.in/wast/hazardouswast/GuidelineforM,H,Utili&%20DisposalofPhosphogypsumfromPAPlants.pdf. Compliance will be done as per permissions granted from statutory authorities. There will not be any impact on soil and ground water due to operation of gypsum storage area.

8. MUPL will be supplying water for the proposed project from its approved desalination plant capacity. Approved capacity is 300 MLD.

9. The proposed project is based on Zero Liquid Discharge (ZLD) system. Preliminary water balance diagram is given in figure-2.2 of the EIA report. The treated water from ETP will be further treated into the RO plant. The purified water from the RO plant will be reused in the proposed project and rejects will be sent to multi-effect evaporator to achieve zero discharge. There is no discharge of any treated water into the sea.

10. Copper scrap and E-scrap will be sourced domestically as well as from import market based on availability. All the applicable rules and regulations will be complied with.

11. Environment friendly technology will be selected and pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.

    The list of products manufactured from the proposed project facility is mentioned in Chapter-1 of the EIA report.

12. EIA has been conducted as per the TOR granted by MoEF&CC and all conditions of the same have been complied with. Project will be implemented in line with the permissions granted and all the conditions will be complied as per permissions.

13. Effluent from PMR plant will be treated in the state of art ETP as shown in Chapter-2 of the EIA report. The waste generated from Kaldo furnace will be recycled in the proposed plant.

14. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.

15. The impact analysis has been carried out for the proposed project as per TOR granted by MoEF&CC in which baseline conditions are monitored and prediction of impacts has been carried out with respect to proposed project activity. The details have been provided in Chapter-4 of the EIA report. Proposed project is outside CRZ area and there will not be any impact on marine ecology.

16. Air quality monitoring is done based on ToR granted and is as per CPCB and MoEF&CC guidelines. Details are provided in the EIA report.

17. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.

18. Standards laid down by CPCB and SPCB will be complied.

19. Proposed Environment management cell is as per requirements. Apart from the employees in environment management cell, line managers in Operations & Maintenance will also be well trained for environment protection.

20. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.

21. Reply is as per point no. 20 above.

22. Arsenic bearing sludge will be stabilized and stored in the secured land fill (SLF). Mercury will be recovered as Calomel as well as mercury metal and will be sold in the market. SLF will be constructed and operated as per the CPCB guidelines for

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Out of total area proposed for the project 256.58 ha area is notified SEZ and 102.38 ha is forest land for which forest clearance application is in process.
2. The layout has been marked on the CRZ map given in Figure-1.5 of Chapter-1 in the EIA report. The proposed project area is outside CRZ.
3. GCZMA is the custodian of approved CZMP for the proposed project area. However project layout is superimposed on CRZ map prepared by authorized agency of MOEF&CC as per CRZ notification 2011 and same is provided in figure-1.5 of Chapter-1 of EIA report.
4. The proposed project layout has been marked on the authorized CRZ map given in Figure-1.5 of Chapter-1 in the EIA report. Same is in colour.
5. The latest satellite imagery of the 21 Jan 2016/14 Feb 2016 is given in Figure-3.3.1 of Chapter 3 of EIA report
6. The land use details of the study area are given in Figure-3.3.2 of Chapter-3 of EIA report
7. The proposed project area is outside CRZ.
8. There are no ecologically sensitive areas in the proposed project area. However mangroves are present outside the project area but within the study area. The land use break-up details as per satellite image classification for the study area is given in chapter-3 of EIA report.

9. The proposed project area is outside CRZ area therefore no presence of mangroves and mudflats.

10. Mangroves are present at 100 m away in the southern side of the project area.

11. Salt pans are located at a distance of around 5KM in WSW direction from the project area.

12. The fish species in the study area have been listed in Chapter-3 of the EIA report. Details on existing fisherman will be included in the Final EIA report.

13. Proposed Project area is outside CRZ and there are no mudflats and mangroves in the project area. Alternative site analysis is done for the project and site is selected based on its suitability. Project area includes forest land for which APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance.

14. The alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors.

15. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1.

16. The proposed project is planned over notified SEZ and Forest land that applied for diversion. No reclamation is proposed as part of proposed project activity. Details on present land use are provided in Chapter - 3 of the EIA report.

17. Proposed project area is devoid of mangroves. There is no question of mangrove destruction.

18. The alternate site analysis was carried out. The site selection criteria and the study of alternate sites is detailed in chapter-5 of the EIA report.

19. The proposed project area is outside CRZ and therefore no presence of mangroves and mudflats. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in Chapter – 3 of the EIA report. Site selection is based on suitability criteria as studied and provided in the EIA report.

20. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in chapter – 3 of the EIA report.

21. The forest related information as asked in point no. 22 is replied properly.

22. There is no case pending against the proposed project.

23. The question is not related to proposed project.

24. The question is not related to proposed project. No reclamation is proposed in the project under discussion.

25. As a part of the requirement for the proposed project the existing roads will be strengthened by widening or upgrading and extended to approach the proposed site.

26. The raw material transportation is proposed to be received from the approach road within notified SEZ which will be strengthened. The overall layout of the proposed plant is given in Figure-2.1 of EIA report.

27. The widening of existing road is within the notified SEZ and it is considered as part of the overall impact assessment of the proposed project. However, impact will be insignificant.

28. Power will be sourced from existing transmission lines by extending it to the proposed project site by using existing area of APSEZ. Same will be outside CRZ.

29. Natural drainage will not be disturbed due to the proposed project. The natural topography will be maintained. The proposed project location is notified SEZ and forest land for which necessary clearance is under progress.

30. The copper concentrate and rock phosphate will be transported through state of art pipe conveying method. The required EMP measures will be implemented as mentioned in Chapter-6. Project will be implemented after obtaining required clearances from concerned statutory authorities and complied with.

31. The locals will be given preference as per the eligibility. The skill development program will be implemented as a part of CSR program to improve employability.

32. During construction phase, workers will be sourced through contractors and it will be ensured that workers get required facilities.

33. All the facilities including sanitation and others will be provided.

34. This is outside the scope of the EIA report for the proposed project. However, local employment will be provided for the proposed project based on eligibility.

35. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1.

36. There is no notified/ declared turtle nesting site present within 15KM of the proposed project area.

37. The details of pagadiya fishermen will be included in the final EIA report. No fishermen will be impacted due to the proposed project.

38. This is outside the scope of the EIA report for the proposed project.

39. The proposed project area is outside CRZ. We do not have any information on fishing boats in the surrounding area. However, proposed project activity will have no impact on fisheries.

40. The sand for the proposed construction will be sourced from local available markets.

41. The land use pattern of the study area covering 10 km radius is given in Figure-3.3.2, Chapter -3 of the EIA report. Same is in color. Mudflats and mangroves are mentioned in Table 3.3.2, Chapter-3 of EIA report.

42. Project area is notified SEZ and forest land for which diversion is under process. Mangroves and other RF are mentioned as part of Form-1 and EIA report. Mangroves are not present within the proposed project area.

43. All the utility corridors will be part of notified SEZ. However, they will be finalized as part of detail engineering and only after obtaining required clearance for the proposed project.

44. Reply is as per point no. 43.

45. Leveling of the land profile will be done as part of detailed engineering for the proposed project.

46. Map showing the creek in the satellite imagery and land use map are provided in Chapter-3 of the EIA report.

47. Proposed project area is devoid of any human habitation. The fishermen in the surrounding areas will not be disturbed due the proposed project.

48. Details on potential employment are mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.

49. Based on the eligibility and available vacancies, jobs will be provided.

50. Training will be integral part of all the employees. The skill development program will be implemented as a part of CSR program to improve employability.

51. Based on the eligibility and available vacancies, jobs will be provided.

52. Salt pans are present in the south west direction of the project area at a distance of around 5KM.

53. The coal will be sourced from the local market and transported through trucks. Around 3000 tonnes of coal will be stored. Coal is taking part in the smelting process

and hence there is no ash generation. The details about mitigation measures have been covered as a part of EMP in the EIA report.

54. There is no generation of ash in the process.

55. The requested details are part of detail engineering. Preliminary water balance diagram is given in figure-2.2 of the EIA report.

56. Environmental sensitivity analysis is done for 15KM area from the project boundary and same is provided in Form-1. The alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors.

57. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors.

58. This is outside the scope of the EIA report for the proposed project.

59. This is outside the scope of the EIA report for the proposed project.

60. Yes, the present proposal will include the indigenous species.

61. STP will be part of ETP and same is shown in the layout map provided in the EIA report.

62. The sewage sludge will be utilized as manure for the greenbelt.

63. The sewage sludge will be used within the plant itself and the particulars will be available post detail engineering.

64. The plant will be designed for Zero Liquid Discharge. The rejects from the RO plant will be sent to multi-effect evaporator. There is no discharge of any treated water into sea. Preliminary water balance diagram is given in figure-2.2 of the EIA report.

65. Reject from secondary stage RO containing higher TDS will be sent to multi-effect evaporator where water will be separated and re-used and salts (mainly calcium) will be stored in the SLF within the project area.

66. Tail gas scrubbers will be installed to scrub residual gases from Sulphuric Acid Plant to produce Gypsum used in cement industries and high efficiency gas scrubbers will be installed in Phosphoric Acid Plant to produce Hydro Fluro Silicic acid which is used in manufacturing of Aluminum Fluoride.

67. Copper slag can be used as a building material (added in concrete as well as in ready mix), road construction and shot blasting. The same is covered in EIA report. As per MoEF&CC notification dated 4th April, 2016, copper slag does not fall under

adani

hazardous waste category and separate guidelines on the management of copper slag will be issued by CPCB separately and same is awaited.

68. Phosphogypsum is used for cement manufacturing, gypsum board manufacturing and fertilizer. The same is covered in EIA report. The "Guidelines for Management, Handling, Utilisation and Disposal of Phosphogypsum Generated from Phosphoric Acid Plants" published by CPCB is available online at: http://cpcb.nic.in/wast/hazardouswast/GuidelineforM,H,Utili&%20DisposalofPhosphogypsumfromPAPlants.pdf

69. An area of 30 acres has been demarcated for the SLF and shown in the plant layout in Chapter-2 of the EIA report, which takes care of the generated ETP cake and scrubber cake.

70. Reply is as per point no. 69 above.

71. Total area required for the plant is 256.58 ha. Three alternative sites were proposed. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. The site selection criteria and the study of alternate sites are detailed in chapter-5 of EIA report.

72. Project area includes forest land for which APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. The proposed project site is away from biodiversity heritage site as proposed by Gujarat State Biodiversity Board. However, project will be implemented by taking all environmental safeguards.

73. Total area required for the plant is 256.58 ha. Three alternative sites were proposed. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. The site selection criteria and the study of alternate sites are detailed in chapter-5 of EIA report.

74. ETP cake and scrubber cake will be stored in the secured land fill (SLF). An area of 30 acres has been demarcated for the SLF and shown in the plant layout in Chapter-2 of the EIA report. Storage of copper slag, phosphogypsum and SLF is proposed within the project boundary. The proposed project site is outside CRZ. Forest clearance for the forest land in the proposed project has been applied. Environment clearance is under progress.

75. The preliminary composition of the waste generated such as scrubber cake and ETP cake is provided in Chapter-2 of EIA report.

76. ETP cake will be stored in SLF. Secured land fill is proposed to be developed over an area of 30 acres within the proposed project area. SLF will be constructed and

operated as per the CPCB guidelines for treatment, storage and disposal facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and landscaping will be done. Monitoring of environmental parameters will also be carried out. Therefore, there are no possibilities of contamination of ground water.

77. Total area required for the plant is 256.58 ha. Forest land requirement is part of the total land estimated for the project. Greenbelt requirement on 33% of the area is proposed and shall be complied as per EC conditions. For the compensatory afforestation for the forest land shall also done as per established procedure.

78. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Based on studies under EIA, ambient air quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.

79. Proposed project is outside CRZ area, therefore there is no question of reclamation of mudflats and mangroves. Project will be implemented with all environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.

80. Map showing the study area with satellite imagery and land use map are shown in in the Chapter-3 of the EIA report. Authorized CRZ map is also provided in figure-1.5 of Chapter-1 of EIA report. Mangroves are present at 100 m away in the southern side of the project area.

81. This is outside the scope of the EIA report for the proposed project.

82. The proposed project site is outside CRZ. Forest clearance for the forest land in the proposed project has been applied. Environment clearance is under progress. Wild life clearance is not applicable for the proposed project.

83. This is outside the scope of the EIA report for the proposed project.

84. This is outside the scope of the EIA report for the proposed project.

85. Proposed project is outside CRZ. Project is developed on notified SEZ area and forest land for which clearance is under progress. No reclamation is proposed in the proposed project activity.

86. This is outside the scope of the EIA report for the proposed project.

87. This is outside the scope of the EIA report for the proposed project.

88. The impact analysis has been carried out for the proposed project as per TOR granted by MoEF&CC in which baseline conditions are monitored and prediction of

impacts has been carried out with respect to proposed project activity. The details have been provided in Chapter-4 of the EIA report.

89. EIA studies have been carried based on TOR granted by MoEF&CC. Project will be implemented after obtaining required permissions and compliance will be done based on permissions granted.

90. Representations received from fishing community were addressed during public hearing as well as in written responses. There are no complaints or grievances from the fishing community for the proposed project activity.

91. Project is located in notified SEZ area. APSEZ has obtained EC and CRZ clearances from MoEF&CC vide their letter dated 15th July, 2014 for multi-product SEZ at Mundra. Proejct area also includes forest land for which APSEZ is in the process of obtaining forest clearance. Wild life clearance is not applicable.

92. Reply is as per point no. 91 above.

93. This is outside the scope of the EIA report for the proposed project.

94. This is outside the scope of the EIA report for the proposed project.

95. The impacts due the additional traffic of the proposed project have been considered while calculating the cumulative impact and the details are available in Chapter 4 of the EIA report. There will not be any significant impact due to increase of traffic due to proposed project.

96. The impacts due the additional traffic of the proposed project have been considered while calculating the cumulative impact and the details are available in Chapter 4 of the EIA report. Existing railway lines will be used based on requirement. Existing port facility available at west port and south port of APSEZ will be utilized for transportation of materials.

97. The plant design will be done considering seismic zone-V as per IS 1893 (part-I)-latest edition. Disaster management plan has been prepared and available in Chapter-7 of the EIA report.

98. Ecological study has been carried out during the study period by an EIA agency approved by QCI-NABET. The NABET certificate and personnel involved in the ecological study is available in Chapter-11 of the EIA report.

99. EIA studies have been carried based on TOR granted by MoEF&CC. Socio economic study has been carried out as part of EIA and same is available in Chapter-3 of the EIA report.

100. This is outside the scope of the EIA report for the proposed project. However, coordinates of the proposed project boundary are provided in Chapter-1 of the EIA report.

101. All the infrastructural facilities like parking, washing, repairs and maintenance etc will be part of detail engineering and same will be carried out after obtaining required clearances.

102. Separate truck parking and rest rooms will be provided to the drivers and cleaners involved in the transportation of the raw material and end products.

103. The proposed plant will operate on Zero discharge concept. There is no discharge of any treated water into creeks or Gulf of Kachchh.

104. This is outside the scope of the EIA report for the proposed project.

105. The proposed project is outside CRZ area and no mangroves are present at the proposed project site.

106. The proposed project will be implemented in notified SEZ and forest land. The land terrain is gently sloping and no major cutting and filling for leveling of land will be involved. Impact on land environment is carried out and details are in chapter-4 of the EIA report.

107. The NABET certificate of the EIA consultant (NABET/EIA/1619/RA0043 Valid upto 19 May 2019) is provided in Chapter-11 of EIA report.

108. TOR granted by MoEF&CC vide their letter dated 21st June, 2016 has been followed for preparation of draft EIA report.

109. All documents have been provided in English. The representations received in local language will be translated into English and same will be authenticated.

110. This is outside the scope of the EIA report for the proposed project.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Forest land involved in the project is a terrestrial forest as mentioned in Chapter-4 of the EIA report. As mentioned in Chapter-2 of EIA report, State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC".
2. The plant design will be done considering seismic zone-V as per IS 1893 (part-I)-latest edition. Disaster management plan has been prepared and available in Chapter-7 of the EIA report.
3. Study area map on a larger size paper will be provided in final EIA report.
4. Raw materials requirement and sources has been provided in Chapter-2 of the EIA report.
5. Reply is as per point no. 4 above.
6. The copper concentrate and rock phosphate will be transported through state of art pipe conveying method. The required EMP measures will be implemented as mentioned in Chapter-6. Project will be implemented after obtaining required clearances from concerned statutory authorities and complied with.
7. Reply is as per point no. 6 above.
8. As per TOR, the study area is 10 km around the proposed site and major industries and ports within 10KM radius study area of the proposed project have been given in chapter-1 of the EIA report. Full list of industries in study area, as desired, will be given in final EIA report

9. As per TOR, details of 10KM radius study area are covered.

10. The impact analysis has been carried out for the proposed project as per TOR granted by MoEF&CC in which baseline conditions, which reflect emissions from existing industries, are monitored and prediction of impacts has been carried out with respect to proposed project activity. The details have been provided in Chapter-4 of the EIA report.

11. As per TOR, details of 10KM radius study area are covered. Environmental sensitivity is identified for 15KM radius area as per TOR.

12. The maximum baseline concentration of PM2.5 in ambient air, in the study area, is given in Chapter-3 of the EIA report.

13. Incremental concentrations for PM10, SO2, and NO2 have been given in Chapter-4 of the EIA report.

14. There is no separate desalination plant proposed for the project. APSEZ will be supplying water for the proposed project from its approved desalination plant capacity. Therefore there will not be additional impact due to proposed project.

15. Besides the water balance diagram, technical scheme to achieve Zero Liquid Discharge (ZLD) is also given in Chapter-2 of the EIA report. The rejects from the RO plant will be sent to multi-effect evaporator to achieve zero discharge and salts (mainly calcium) will be stored in the SLF within the project area. There is no discharge of any treated water into the sea.

16. Project area includes forest land for which APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. As per procedure, EC shall be obtained from MoEF&CC after compliance of applicable requirements.

17. As per TOR, forest land involved for the proposed project has been mentioned in Chapter-1 and in Land Use for the proposed project is given in Chapter-2 of the EIA report.

18. As per TOR, baseline environment of the study area and environmental impacts of the proposed project have already been studied and provided in EIA report.

સંદર્ભ:**AEL/Copper/Mundra/EC/PH/D-A-34**

શ્રી પ્રવિણસિંહ ભૂરૂભા ચૌહાણ
ગામ:- સિરાચા
તાલુકો:- મુંદ્રા
જિલ્લો:- કચ્છ,ગુજરાત.

વિષય:-અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ.

માનનીય સાહેબ,,

આપના દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓના પેરાવાઇઝ જવાબ અમો અત્રે આપી રહ્યા છીએ.

1. અમારી રજૂઆત છે કે MoEFCCપાસેથી TOR મેળવવાની તમામ જરૂરિયાત સંતોષવામાં આવી હતી.TOR મેળવ્યા પછી, એન્વાયરમેન્ટ ઇમ્પેક્ટ એસેસ્સમેંટ (પર્યાવરણ અસર મૂલ્યાંકન) પૂર્ણ કરવામાં આવેલ છે અને TOR ની તમામ શરતોનો પ્રોજેક્ટના પ્રયોજકો દ્વારા લોકસુનાવણીના ઉદ્દેશ માટે અમલ કરવામાં આવેલ છે.

   ફોરેસ્ટ જમીનના દરજ્જા અંગે, આ TOR માટેના ફોર્મ-1 માં અને ઉપરાંત TOR કોમ્પલાયન્સ (EIA રિપોર્ટના એનેક્ષર 1, પેજ A1-14) માં સ્પષ્ટપણે જાહેર કરવામાં આવેલ છે કે "ફોરેસ્ટ જમીન 253 એકર પણ સામેલ છે જે ઔદ્યોગિક હેતુ માટે તબદીલ કરવામાં આવશે.રાજ્ય સરકારે ફોરેસ્ટકલીયરન્સ માટે ભલામણ કરેલી છે અને તે હવે કેન્દ્ર સરકાર સમક્ષ ફાઇલ નંબર-04/2016-FCથી છે" ફાઇલનું સ્ટેટસ પણ ઓનલાઇનMoEFCCપરવન્યમંજૂરી અર્થેઉપલબ્ધ છે. APSEZ ના પત્ર તારીખ 15 એપ્રિલ 2016 થી APSEZ એ સૈદ્ધાંતિક રીતે AEL ના પ્રોજેકટ માટે જમીન ફાળવવાનું કબુલ કરેલ છે, જે EIA રિપોર્ટમાં સામેલ છે.
   મેસર્સ અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ દ્વારા પ્રોજેકટ APSEZની જમીનમાં દરખાસ્ત કરવામાં આવેલ હોવાથી આ જમીન ફોરેસ્ટકલીયરન્સ માટે APSEZ(ભુતપૂર્વ મુંદ્રા એસઇઝેડ લિમિટેડ) દ્વારા જ અરજી કરી દેવામાં આવેલ હતી.તારીખ 31.03.2011 ની જરૂરિયાત "પ્રયોજકોએ TOR ની દરખાસ્ત,ફોરેસ્ટકલીયરન્સ સ્ટેજ-1 ની અરજી કર્યા પછી જ મૂકવી જોઈએ." આથી, આ દરખાસ્તનું પણ પાલન કરવામાં આવ્યું છે.TOR માટે અરજી કરવાના પહેલા ફોરેસ્ટકલીયરન્સ માટે અરજી કરવામાં આવેલ હતી.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We are herewith responding para wise to the issues raised by you:

1. We submit that all requirements for obtaining the TOR from MoEFCC were fulfilled. After obtaining TOR, Environment Impact Assessment has been completed and all conditions of TOR has been complied with by project proponent for the purpose of public hearing.
   Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure 1, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC". The file status is also available online at MoEFCC Forest Clearance. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report.

   As the project is proposed by M/s Adani Enterprises Limited in APSEZ land, Forest Clearance has already been applied for this land by APSEZ (erstwhile Mundra SEZ Ltd.). The requirement of OM dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance...". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR.

   At no stage there is any concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application by the project proponent. There is no deviation from the Section 8 (vi) of EIA Notification 2006 also.

   We do not offer any comment related to point 1(d) of your letter.
2. The PIL 17 of 2011 has been disposed by the High Court. The judgment is under review.

Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. Google Map is provided in EIA Report (Schedule –C 1-6).

3. A complete list of archeological monuments in the state of Gujarat is available at http://asi.nic.in/asi_monu_alphalist_gujarat.asp. Further, a complete list of excavations is available at http://asi.nic.in/asi_excavations.asp. As on date, there is no Notified Archeological Site located within 10 km from the proposed project site.

4. The Committee and its report pertain to APSEZ. The points mentioned are not related to the proposed project activity therefore we do not offer any comment.

5. APSEZ has applied for diversion of forest land for industrial purpose. The forest diversion is under process. All the rules will be complied for forest diversion, as applicable. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.

6. The issues raised are for APSEZ and are not related to the proposed project activity therefore we do not offer any comment.

7. The Report on Coal Handling and its impacts are not relevant to the proposed project activity therefore we do not offer any comment.

8. The PIL 17 of 2011 has been disposed by the High Court. The judgment is under review.

9. Details on potential employment is mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.

10. The proposed site is outside CRZ and hence there is no requirement of Clearance under the CRZ Notification. The same is shown in Fig. 1.5 of EIA Report. Risk Analysis and Disaster Management Plan has been prepared to identify and address the natural disasters, which is covered in EIA Report.

11. There is no separate desalination plant proposed for the project. APSEZ will be supplying water for the proposed project from its approved desalination plant capacity. Therefore there will not be additional impact due to proposed project.

12. References of Adani and Tata Power Plants as well as west & south ports of APSEZ are mentioned in Table 1.1 of Chapter 1 of the EIA Report.

13. Comment being general in nature, we do not offer comment.

14. Asestablished procedure, forest clearance is recommended by State Government and approved by MoEF&CC only after completion of all requirements and compliance by user agency. Adani foundation is working for Sustainable Livelihood in the surrounding villages through CSR projects.

15. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. Sulphuric Acid is a saleable product from this project. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Therefore no significant adverse impacts are envisaged.

16. No closure of river is envisaged in the proposed project.

17. Proposed project will not affect the access from Navinal to Kotdi Creek.

18. Flora and Fauna study has been conducted as part of the EIA and details are provided in the Chapter 3 and management plan is also provided in Chapter 4.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Thanking you,

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,
We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control and environmental protection. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. The Copper Project is based on the import of Copper Concentrate, which is not available in our country in required quantity. Also, most of the finished products will be dispatched through sea route. These factors were considered as site selection criteria. The site is advantageous in terms of proximity to the port. With all the pollution control measures proposed, the environmental risks and impacts will be mitigated. The project is also based on zero liquid discharge. There are many such plants on coastal locations and have been operating without any significant impact on the coastal ecology. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. The entire process and conditions of forest clearance will be complied, once obtained.

2. The para has alleged Adani Group of violations that have not been substantiated. There have been such allegations and legal suits in the past which have been dismissed by the Hon'ble Courts. The points raised do not pertain to proposed project and therefore we do not offer any comments. However, project will be implemented in line with the permissions granted and by implementing environmental safeguards.

3. The proposed project is located partly in notified SEZ and partly in forest land applied for diversion. The Survey Numbers for notified SEZ have been incorporated in the Form-1 application and its details are: *APSEZ area in Siracha and Navinal villages. Siracha village 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/P, 142/P, 143, 144/1, 144/2, 147/P, 295/1 part, 295/2 (forest land), unsurveyed land, old ACL and diverted Mundra forest land part. Navinal Village 223/P, 224/P, 225/P and old ACL.* Same will also be included in the final EIA Report.

4. APSEZ has given in principle approval to transfer/ allot the land in favour of AEL after obtaining due permissions. A copy of letter is provided in the Annexure-III of the EIA report.

5. The land details related to proposed project are provided in the Point No. 3 above.

6. Part of the proposed project land, 154.18 ha is within the Notified SEZ. A copy of notification is enclosed as Annexure- and same will be included in the final EIA Report.

7. Part of the proposed project land, 154.18 ha is within the Notified SEZ.

8. Proposed project includes notified SEZ area and the forest land. A copy of notified SEZ area is as per point no. 6 above. APSEZ has applied for forest land diversion and same is under progress. Details of land are provided in the chapter-2 of EIA the report.

9. We do not agree with your observation. AEL has not started any activity at the site and there is no encroachment on any land.

10. At the moment, there is no requirement of SEZ denotification for the proposed project area.

11. Alternative site analysis was carried out. The site selection criteria and the study of alternative sites is detailed in Chapter-5 of the EIA Report.

12. There is no proposal of reclamation in Forest Land. The proposal for diversion of forest land is under process. Other land under the proposed project is notified SEZ area.

13. The details of Forest Land are also shown in Form-I (Basic Information, Sl. Nos. 9, 12, 21 and 23).

14. Company has proposed 33% area for Green Belt. The 102.38 ha forest land, once diverted and allotted, will be part of the project area. The Green Belt will be developed in 33% of the total project area of 256.58 ha. There is no illegal encroachment of forest area.

15. As per the map on Page C3-16, the project site also includes part of the Siracha Reserve Forest. Correct map is provided in the EIA report.

16. The Forest Clearance is still under process. The details are available on the website of MoEF & CC (File No. 8-04/2016-FC).

17. The Forest Land diversion is under process and all the conditions of the forest clearance will be complied once granted.

18. The Forest Land diversion is under process and the requirements of Forest Rights Act, as applicable, will be complied with.

19. SLP28788/2016 in the Supreme Court and WP (PIL) 12/2011 at Gujarat High Court are dismissed vide respective orders dated - and -. Therefore, there is no dispute.

20. In the matter of Sunita Narain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015.

21. Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. Impact Assessment has been carried out covering 10 km area surrounding the project site and it includes water bodies (if any), local residents and villages. There is no proposal of closing any creeks.

22. Gujarat Coastal Zone Management Authority is the custodian of approved Coastal Zone Management Plan. However, authorized CRZ map superimposing project area prepared by authorized agency of MoEF&CC is provided in the Chapter-3 of the EIA report.

23. The CRZ Map enclosed is prepared by National Centre for Earth Science Studies and enclosed on Page C3-17 of EIA Report. More clear copy will be included in the final EIA report.

24. The proposed site is outside CRZ and the minimum distance from existing Mangrove in southern direction is more than 100 m.

25. The occupational structure of the people in the area is detailed on Page C3-65 of the EIA Report. The main workers account for 90.57% of the total workers. The Work Participation Rate is 56.36%. Fishing is one of the activities. Details on number of fishermen in the study area will be included in the final EIA report.

26. No fishermen will be impacted due to proposed project.

27. The details on pagadiya fisherfolk will be included in the final EIA Report.

28. Project will be developed over notified SEZ area and forest land applied for diversion. APSEZ has created dedicated approach road for fishermen of Navinal and Siracha. Fishermen access roads will not be closed due to proposed project.

29. There is no resettlement involved in the diversion of 102.38 ha of forest land. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.

30. Details on production quantity of copper slag and phosphogypsum is provided in the EIA report. Copper Slag can be used as a building material (Added in Concrete as well as in ready mix), Road Construction & shot blasting and Phosphogypsum is used for

Cement manufacturing, gypsum board Manufacturing and fertilizer. Both the materials will be sold in domestic and overseas market.

31. There is no notification on Navinal Forest being notified as Biodiversity Area.

32. Carrying Capacity Studies are undertaken by Statutory Authorities. We are not aware of any Carrying Capacity Studies carried out for this area. EIA studies have been conducted for the study area as per TOR granted by MoEF&CC.

33. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for Air and Water and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

34. The Gujarati Summary was placed at all the Gram Panchayats within 10 km of the proposed site in addition to the 7 places- The District Collector, Bhuj, District Kutch, District Development Office, Bhuj, District Kutch, District Industry Centre, Bhuj, District Kutch, Taluka Development Office, Mundra, District Kutch, Taluka Development Office, Mandvi, District Kutch, The Chief Conservator of Forest, Ministry of Environment, Forests and Climate Change Government of India, Regional Office (West Zone), Kendriya Paryavaran Bhavan, E-5, Arera Colony, Link Road -3, Ravishankar Nagar, Bhopal 462016 and Regional Office, Kutch (East), Gujarat Pollution Control Board, Room No. 215-216, Second Floor, Kandla Port Trust, Admn Building, Sector 08, Gandhidham, Kutch.

35. This is outside the scope of the EIA Report for the proposed project.

36. Power Transmission Lines will be retained with some deviation.

37. 8 persons are proposed as a part of Environment Cell alone. The Environment Management is not only limited to these 8 persons, but it includes the operations carried out by various departments for the management of environment.

38. Adani Enterprises Limited will have its own Environment Management Team headed by an environmentalist, capable of handling all the environmental and pollution issues of the Copper Project. Other issues are outside the scope of the EIA Report for the proposed project.

39. The area under SLF is provided in the Pre-feasibility Report, which is a part of the TOR Application.

40. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are

proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.

41. Our reply is same as point no. 40.

42. The question does not pertain to us, therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to the permissions granted.

43. Proposed project will have zero liquid discharge facility and no treated water will be sent to the sea.

44. There is no proposal of tie up with any CETP. AEL will have its own ETP for treatment of wastewater. Details are provided in the EIA report.

45. The Flow Diagram and the Capacities are provided in the EIA Report. Further planning will be carried out during detailed engineering.

46. EIA report includes details on demographic information about the study area. The Executive Summary of the EIA Report was prepared in local language and made available to all the panchayats within 10 km radius of the proposed site. The Executive Summary in local language was also made available at 5 Government Offices along with EIA Report. Adani foundation is working in the area of community health covering all the villages in the surrounding.

47. This is outside the scope of the EIA Report for the proposed project. However, local employment will be provided for proposed project based on eligibility and details are provided in the EIA report.

48. This is outside the scope of the EIA Report for the proposed project.

49. The EIA Report has been prepared as per the Terms of Reference issued by the Ministry of Environment, Forests and Climate Change.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

12. વન જમીનમાં સુધારણાની કોઈ દરખાસ્ત નથી. જંગલની જમીનની માર્ગાંતરની દરખાસ્ત પ્રક્રિયા હેઠળ છે. સૂચિત પ્રોજેક્ટ હેઠળની અન્ય જમીન નોટિફાઈડ SEZ વિસ્તાર છે.

13. વનની જમીનની વિગત ફોર્મ -1 (મૂળભૂત માહિતી, ક્રમ નં 9, 12, 21 અને 23) માં પણ દર્શાવવામાં આવી છે.

14. કંપનીએ ગ્રીન બેલ્ટ માટે 33% વિસ્તારનો પ્રસ્તાવ મૂક્યો છે. 102.38 હેકટર જંગલની જમીન, એકવાર માર્ગાંતર અને ફાળવણી થયા પછી, તે પ્રોજેક્ટ વિસ્તારનો ભાગ હશે. 256.58 હેક્ટરના કુલ પ્રોજેક્ટ વિસ્તારના 33% માં ગ્રીન બેલ્ટ વિકસાવવામાં આવશે. જંગલ વિસ્તારમાં કોઈ ગેરકાયદેસર અતિક્રમણ કરવામાં આવ્યું નથી.

15. પૃષ્ઠ C3-16 ના નકશા મુજબ, પ્રોજેક્ટ સાઇટમાં સિરાચા રિઝર્વ ફોરેસ્ટનો ભાગ પણ શામેલ છે. યોગ્ય નકશો ઇઆઇએ અહેવાલમાં આપવામાં આવ્યો છે.

16. વન મંજૂરી હજી પણ કાર્યવાહી હેઠળ છે. આ વિગતો MoEF & CC (ફાઈલ નં. 8-04 / 2016-એફસી) ની વેબસાઇટ પર ઉપલબ્ધ છે.

17. જંગલ જમીન માર્ગાંતર કાર્યવાહી હેઠળ છે અને એકવાર મંજૂર થયા પછી, વન મંજૂરની તમામ શરતોનું પાલન કરવામાં આવશે.

18. જંગલ જમીન માર્ગાંતર કાર્યવાહી હેઠળ છે અને લાગુ થતી હોય તે પ્રમાણે જંગલ અધિકાર અધિનિયમની આવશ્યકતાઓનું પાલન કરવામાં આવશે.

19. તારીખ -અને -તારીખ સુપ્રીમ કોર્ટમાં SLP28788/2016 અને ગુજરાત હાઇકોર્ટમાં ડબલ્યુપી (પીઆઈએલ) 12/2011ને સંબંધિત ઓર્ડરોની થી રદ કરવામાં આવે છે. તેથી, કોઈ વિવાદ નથી.

20. સુનિતા નારાયણ કમિટીના અહેવાલના સંદર્ભમાં, APSEZ, 18 મી સપ્ટેમ્બર, 2015 ના તેમના અંતિમ હુકમ MoEF&CC.ના નિર્દેશો અનુસાર, પાલન કરે છે.

21. સૂચિત સાઇટના પશ્ચિમ ભાગમાં ધનેશ્વરી, મોસમી નદી વહે છે. ઇઆઇએ અહેવાલના પૃષ્ઠ C2-3 પરના પ્લાન્ટ લેઆઉટમાં દર્શાવ્યા મુજબ નદીના પ્રવાહને જાળવવામાં આવશે. પ્રોજેક્ટ સાઇટની આસપાસના

10 કીમી વિસ્તારમાં અસર આકારણી આવરી લેવામાં આવી છે અને તે જળાશયો (જો કોઈ હોય તો), સ્થાનિક રહેવાસીઓ અને ગામોનો સમાવેશ કરે છે. કોઈપણ ખાડીઓ બંધ કરવાની કોઈ દરખાસ્ત નથી

22. ગુજરાત કોસ્ટલ ઝોન મેનેજમેન્ટ ઓથોરિટી માન્ય કોસ્ટલ ઝોન મેનેજમેન્ટ પ્લાનનો રખેવાળ છે. જોકે, MoEF&CC ની અધિકૃત એજન્સી દ્વારા તૈયાર કરાયેલ અધિકૃત સીઆરઝેડ નકશો સુપરિમબોઝિંગ પ્રોજેક્ટ વિસ્તારને ઇઆઇએ અહેવાલના પ્રકરણ -3 જણાવવામાં આવ્યો છે.

23. જોડેલ સીઆરઝેડ નકશો નેશનલ સેન્ટર ફોર અર્થ સાયન્સ સ્ટડીઝ દ્વારા તૈયાર કરવામાં આવેલ છે અને ઇઆઇએ રિપોર્ટના પૃષ્ઠ C3-17 પર જોડેલ છે. અંતિમ ઇઆઇએ અહેવાલમાં વધુ સ્પષ્ટ નકલ શામેલ કરવામાં આવશે.

24. સૂચિત સાઇટ સીઆરઝેડની બહાર છે અને દક્ષિણ દિશામાં પ્રવર્તમાન મેંગ્રોવથી લઘુત્તમ અંતર 100 મીટરથી વધુ છે.

25. આ વિસ્તારના લોકોનું વ્યવસાયિક માળખું ઇઆઇએ અહેવાલના પૃષ્ઠ C3-65 પર દર્શાવવામાં આવ્યું છે. મુખ્ય કામદારો કુલ કામદારોના 90.57 ટકા છે. કાર્ય ભાગીદારીનો દર 56.36 ટકા છે. માછીમારી પ્રવૃત્તિઓ પૈકીની એક છે. અભ્યાસ ક્ષેત્રમાં માછીમારોની સંખ્યા અંગેની વિગતોને અંતિમ ઇઆઇએ અહેવાલમાં સામેલ કરવામાં આવશે.

26. સૂચિત પ્રોજેક્ટને લીધે કોઈ માછીમારોને અસર થશે નહીં..

27. પેગડીયા માછીમારોની વિગતોનો અંતિમ ઈઆઇએ અહેવાલમાં સમાવેશ કરવામાં આવશે.

28. નોટિફાઈડ SEZ વિસ્તાર અને માર્ગાંતર માટે લાગુ કરવામા આવેલી જંગલની જમીન પર પ્રોજેક્ટ વિકસાવવામાં આવશે. APSEZ એ નવીનાળ અને સિરાચાના માછીમારો માટે સમર્પિત આવવા જવાનો માર્ગ બનાવ્યો છે. સૂચિત પ્રોજેક્ટને કારણે માછીમારોના એક્સેસ માર્ગો બંધ કરવામાં આવશે નહીં.

29. 102.38 હેક્ટર જંગલ જમીનના માર્ગાંતરણમાં કોઈ પુનર્વસન સંકળાયેલ નથી. વનસ્પતિ અને પ્રાણીઓના અભ્યાસ EIA ના ભાગરૂપે કરવામાં આવેલા છે અને EIA રિપોર્ટમાં મેનેજમેંટ પ્લાન આપવામાં આવેલો છે. એક વખત જંગલ મુક્તિ મળતાં, જંગલ મુક્તિની તમામ શરતોનું, જંગલ જમીનના માર્ગાંતરણની અસરોનું શમન કરવા માટે પાલન કરવામાં આવશે. તમામ કાર્યવાહી પૂરી થયા પછી અને MoEF&CCની મંજૂરી મળ્યા પછી જંગલ માર્ગાંતરણ માટે રાજ્ય સરકાર દ્વારા ભલામણ કરી શકાશે.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,
We acknowledge the receipt of your representation and have noted your concerns. We are herewith responding para wise to the issues raised by you:

1. The Copper Project is based on the import of Copper Concentrate, which is not available in our country in required quantity. Also, most of the finished products will be dispatched through sea route. These factors were considered as site selection criteria. The site is advantageous in terms of proximity to the port. With all the pollution control measures proposed, the environmental risks and impacts will be mitigated. The project is also based on zero liquid discharge. There are many such plants on coastal locations and have been operating without any significant impact on the coastal ecology. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. The entire process and conditions of forest clearance will be complied, once obtained.

2. The proposed project is located partly in notified SEZ and partly in forest land applied for diversion. The Survey Numbers for notified SEZ have been incorporated in the Form-1 application and its details are: *APSEZ area in Siracha and Navinal villages. Siracha village 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/P, 142/P, 143, 144/1, 144/2, 147/P, 295/1 part, 295/2 (forest land), unsurveyed land, old ACL and diverted Mundra forest land part. Navinal Village 223/P, 224/P, 225/P and old ACL.* Same will also be included in the final EIA Report.

3. APSEZ has given in principle approval to transfer/ allot the land in favour of AEL after obtaining due permissions. A copy of letter is provided in the Annexure-III of the EIA report.

4. The land details related to proposed project are provided in the Point No. 2 above.

5. Part of the proposed project land, 154.18 ha is within the Notified SEZ. A copy of notification is enclosed as Annexure- ? and same will be included in the final EIA Report.

6. Part of the proposed project land, 154.18 ha is within the Notified SEZ.

Adani Enterprises Ltd

Tel +91 79 2656 5555
Fax +91 79 2555 5500
info@adani.com
www.adani.com

7. Proposed project includes notified SEZ area and the forest land. A copy of notified SEZ area is as per point no. 6 above. APSEZ has applied for forest land diversion and same is under progress. Details of land are provided in the chapter-2 of EIA the report.

8. We do not agree with your observation. AEL has not started any activity at the site and there is no encroachment on any land.

9. At the moment, there is no requirement of SEZ denotification for the proposed project area.

10. Alternative site analysis was carried out. The site selection criteria and the study of alternative sites is detailed in Chapter-5 of the EIA Report.

11. There is no proposal of reclamation in Forest Land. The proposal for diversion of forest land is under process. Other land under the proposed project is notified SEZ area.

12. The details of Forest Land are also shown in Form-I (Basic Information, Sl. Nos. 9, 12, 21 and 23).

13. Company has proposed 33% area for Green Belt. The 102.38 ha forest land, once diverted and allotted, will be part of the project area. The Green Belt will be developed in 33% of the total project area of 256.58 ha. There is no illegal encroachment of forest area.

14. Forest land is part of proposed project area for which all necessary procedure and compliance will be made. Green Belt will be developed around the facilities as per desired norms.

15. As per the map on Page C3-16, the project site also includes part of the Siracha Reserve Forest. Correct map is provided in the EIA report.

16. The Forest Clearance is still under process. The details are available on the website of MoEF & CC (File No. 8-04/2016-FC).

17. Present list of directors of AEL is enclosed as Annexure- . Same will be included in the final EIA report.

18. SLP28788/2016 in the Supreme Court and WP (PIL) 12/2011 at Gujarat High Court are dismissed vide respective orders dated - and -. Therefore, there is no dispute.

19. In the matter of Sunita Narain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015.

20. Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. Impact Assessment has been carried out covering 10 km area surrounding

1998

the project site and it includes water bodies (if any), local residents and villages. There is no proposal of closing any creeks.

21. Gujarat Coastal Zone Management Authority is the custodian of approved Coastal Zone Management Plan. However, authorized CRZ map superimposing project area prepared by authorized agency of MoEF&CC is provided in the Chapter-3 of the EIA report.

22. The CRZ Map enclosed is prepared by National Centre for Earth Science Studies and enclosed on Page C3-17 of EIA Report. More clear copy will be included in the final EIA report.

23. The proposed site is outside CRZ and the minimum distance from existing Mangrove in southern direction is more than 100 m.

24. The occupational structure of the people in the area is detailed on Page C3-65 of the EIA Report. The main workers account for 90.57% of the total workers. The Work Participation Rate is 56.36%. Fishing is one of the activities. Details on number of fishermen in the study area will be included in the final EIA report.

25. No fishermen will be impacted due to proposed project.

26. The details on pagadiya fisherfolk will be included in the final EIA Report.

27. Project will be developed over notified SEZ area and forest land applied for diversion. APSEZ has created dedicated approach road for fishermen of Navinal and Siracha. Fishermen access roads will not be closed due to proposed project.

28. There is no resettlement involved in the diversion of 102.38 ha of forest land. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.

29. Copper Concentrate will be the principal raw material, which has sulphur and mercury content of 34% and 50 ppm respectively. There is no known Uranium or Thorium content and its radiation in the raw material. Copper slag will contain Sulphur (0.5-1.5%) and mercury (BDL).

30. There are no CREP Guidelines for Copper Smelter & Refinery.

31. There are no CREP Guidelines for Copper Smelter & Refinery.

32. There are no CREP Guidelines for Copper Smelter & Refinery.

33. Details on production quantity of copper slag and phosphogypsum is provided in the EIA report. Copper Slag can be used as a building material (Added in Concrete as well

Adani Enterprises Ltd

as in ready mix), Road Construction & shot blasting and Phosphogypsum is used for Cement manufacturing, gypsum board Manufacturing and fertilizer. Both the materials will be sold in domestic and overseas market.

34. There are no CREP Guidelines for Copper Smelter & Refinery.

35. There is no notification on Navinal Forest being notified as Biodiversity Area.

36. Carrying Capacity Studies are undertaken by Statutory Authorities. We are not aware of any Carrying Capacity Studies carried out for this area. EIA studies have been conducted for the study area as per TOR granted by MoEF&CC.

37. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for Air and Water and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

38. The Gujarati Summary was placed at all the Gram Panchayats within 10 km of the proposed site in addition to the 7 places- The District Collector, Bhuj, District Kutch, District Development Office, Bhuj, District Kutch, District Industry Centre, Bhuj, District Kutch, Taluka Development Office, Mundra, District Kutch, Taluka Development Office, Mandvi, District Kutch, The Chief Conservator of Forest, Ministry of Environment, Forests and Climate Change Government of India, Regional Office (West Zone), Kendriya Paryavaran Bhavan, E-5, Arera Colony, Link Road -3, Ravishankar Nagar, Bhopal 462016 and Regional Office, Kutch (East), Gujarat Pollution Control Board, Room No. 215-216, Second Floor, Kandla Port Trust, Admn Building, Sector 08, Gandhidham, Kutch.

39. This is outside the scope of the EIA Report for the proposed project.

40. Power Transmission Lines will be retained with some deviation.

41. 8 persons are proposed as a part of Environment Cell alone. The Environment Management is not only limited to these 8 persons, but it includes the operations carried out by various departments for the management of environment.

42. Adani Enterprises Limited will have its own Environment Management Team headed by an environmentalist, capable of handling all the environmental and pollution issues of the Copper Project. Other issues are outside the scope of the EIA Report for the proposed project. The question does not pertain to proposed project and therefore we do not offer any comment.

43. The area under SLF is provided in the Pre-feasibility Report, which is a part of the TOR Application.

44. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the

adani

2000

project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height, Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report. There will not be any impact on coral of Gulf of Kutch and Jamnagar due to proposed project activity.

45. The project is being designed with zero liquid discharge, there is no likelihood of ocean warming or acidification due to proposed project. There will not be any coral bleaching and marine acidification due to proposed project.
46. The project is estimated to emit 0.53 Million Tons of CO2 equivalent of GHG emission per year, which is insignificant in the context of Global Warming.
47. The total GHG emission is estimated at 0.53 Million Tons of CO2 equivalent per year. This information will be added as apart of final EIA Report.
48. We will be adopting advanced technologies which are having lesser footprint as compared to other existing conventional technologies in the market. However, alternative source of fuel will be explored to minimize the GHG emissions due to project activity.
49. The Gypsum produced will have around 20% moisture and same will be stored in the Gypsum storage area proposed over 28.34 ha through dry conveying method. Gypsum storage area will be constructed with HDPE liner to prevent any leaching. Gypsum will be sun-dried and sold to the potential customers. There will not be any discharge of water outside the project premises.
50. RO Rejects will be taken to Multi-Effect Evaporator. There will not be any discharge into the sea.
51. The question does not pertain to us, therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to the permissions granted.
52. Proposed project will have zero liquid discharge facility and no treated water will be sent to the sea.
53. The entire project will work on the principle of Zero Liquid Discharge. Details are provided in the EIA report.
54. The project will generate 6468 KLD of wastewater. Entire wastewater will be treated and reused within the plant. The details are provided in the EIA Report.
55. There is no proposal of tie up with any CETP. AEL will have its own ETP for treatment of wastewater. Details are provided in the EIA report.
56. The Flow Diagram and the Capacities are provided in the EIA Report. Further planning will be carried out during detailed engineering.

વિષય :અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ

માનનીય સાહેબ,,
અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ::

1. પ્રોજેકટ કોપર કોન્સનટ્રેટની આયાત પર આધાર રાખે છે, જે આપણા દેશમાં જરૂરી જથ્થામાં ઉપલબ્ધ નથી.વળી, તૈયાર થયેલ ઘણા ઉત્પાદનો દરિયાઈ માર્ગે મોકલવામાં આવશે. આ પરિબળો સાઇટની પસંદગી માટે ધ્યાનમાં લેવામાં આવેલા.બંદરની નજીક હોવાથી આ સાઇટ ફાયદાકારક છે. તમામ સૂચવાયેલા પ્રદૂષણ નિયંત્રણ પગલાં લઈ, પર્યાવરણના જોખમ અને અસરોનું શમન કરવામાં આવશે. પ્રોજેકટ ઝીરો લિક્વિડ ડિસ્ચાર્જ(પ્રવાહી બહાર આવશે નહીં) પર આધારિત છે.દરિયા કિનારાના લોકેશનો પર આવા ઘણા પ્લાન્ટ આવેલા છે અને તેમના સંચાલનથી દરિયા કાંઠાની પરિસ્થિતી ઉપર કોઈ નોંધપાત્ર અસર થયેલ નથી.પ્રોજેકટ સાઇટનો એક ભાગ જંગલ જમીન છે, જેનો ઉપયોગ ત્યારેજ કરવામાં આવશે જ્યારે જંગલના માર્ગાંતરણની આખરી મંજૂરી મળી જશે. જંગલ મુક્તિ મંજૂર થતાં તેની તમામ પ્રક્રિયા અને શરતોનું પાલન કરવામાં આવશે.

2. સૂચિત પ્રોજેક્ટ આંશિક નોટિફાઇડ SEZ માં અને આંશિક માર્ગાન્તર માટે લાગુ જંગલ જમીનમાં સ્થિત છે. નોટિફાઇડ SEZ માટે સર્વે નંબર્સ ફોર્મ-1 એપ્લિકેશનમાં સામેલ કરવામાં આવ્યા છે અને તેની વિગતો છે: *APSEZ* વિસ્તાર સીરાચા અને નેવાણી ગામોમાં: સિરાચા ગામ. 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141 / પી, 142 / પી, 143, 144/1, 144/2, 147 /પી, 295/1 ભાગ , 295/2 (જંગલ જમીન), બિનસર્વે જમીન, જૂની એસીએલ અને માર્ગાંતરિત મુંદ્રા જંગલ જમીનનો ભાગ. નેવીલ ગામ 223/પી, 224 /પી, 225/ પી અને જૂની એસીએલ જેનો અંતિમ ઇઆઇએ અહેવાલમાં પણ સામેલ કરવામાં આવશે.

3. APSEZ એ યોગ્ય પરવાનગીઓ પ્રાપ્ત કર્યા પછી એઇએલની તરફેણમાં જમીન તબદીલ કરવા/ ફાળવવા સૈધ્ધાંતિક મંજૂરી આપી છે. પત્રની એક નકલ ઇઆઇએ અહેવાલની અનુસૂચિ - 3 માં આપવામાં આવી છે.

4. સૂચિત પ્રોજેક્ટ સંબંધિત જમીનની વિગતો ઉપરના ક્રમાંક 3 માં આપવામાં આવેલી છે.

5. સૂચિત પ્રોજેક્ટની જમીનનો ભાગ, 154.18 હેકટર નોટિફાઇડ SEZ માં છે. જાહેરનામાંની એક નકલ અનુસૂચિ -? અને તેને અંતિમ ઇઆઇએ રિપોર્ટમાં શામેલ કરવામાં આવશે.

6. સૂચિત પ્રોજેક્ટની જમીનનો ભાગ, 154.18 હેકટર નોટિફાઇડ SEZ માં છે.

7. સૂચિત પ્રોજેક્ટમાં નોટિફાઇડ SEZ વિસ્તાર અને જંગલની જમીનનો સમાવેશ થાય છે. નોટિફાઇડ SEZ ની એક નકલ ઉપરના મુદ્દા નં. 6 મુજબ છે. APSEZ એ વન જમીનના માર્ગાન્તર માટે લાગુ પડે છે અને તે પ્રગતિ હેઠળ છે. ઇઆઇએ રિપોર્ટના પ્રકરણ -2 માં જમીનની વિગતો આપવામાં આવી છે.

8. અમે તમારા નિરીક્ષણ સાથે સંમત નથી. એઈએલે સાઇટ પર કોઈ પ્રવૃત્તિ શરૂ કરી નથી અને કોઈપણ જમીન પર કોઈ અતિક્રમણ કર્યું નથી.

9. હાલમાં, સૂચિત પ્રોજેક્ટ વિસ્તાર માટે SEZ ડીનોટીફીકેશનની કોઈ જરુરિયાત નથી.

10. વૈકલ્પિક સ્થળ વિશ્લેષણ હાથ ધરવામાં આવ્યું હતું. સ્થળ પસંદગીના માપદંડ અને વૈકલ્પિક સ્થળનો અભ્યાસ EIA રિપોર્ટના પ્રકરણ -5 માં વિગતવાર આપેલ છે

11. વન જમીનમાં સુધારણાની કોઈ દરખાસ્ત નથી. જંગલની જમીનની માર્ગાંતરની દરખાસ્ત પ્રક્રિયા હેઠળ છે. સૂચિત પ્રોજેક્ટ હેઠળની અન્ય જમીન નોટિફાઇડ SEZ વિસ્તાર છે.

12. વનની જમીનની વિગત ફોર્મ -1 (મૂળભૂત માહિતી, ક્રમ નં 9, 12, 21 અને 23) માં પણ દર્શાવવામાં આવી છે.

13. કંપનીએ ગ્રીન બેલ્ટ માટે 33% વિસ્તારનો પ્રસ્તાવ મૂક્યો છે. 102.38 હેકટર જંગલની જમીન, એકવાર માર્ગાંતર અને ફાળવણી થયા પછી, તે પ્રોજેક્ટ વિસ્તારનો ભાગ હશે. 256.58 હેક્ટરના કુલ પ્રોજેક્ટ વિસ્તારના 33% માં ગ્રીન બેલ્ટ વિકસાવવામાં આવશે. જંગલ વિસ્તારમાં કોઈ ગેરકાયદેસર અતિક્રમણ કરવામાં આવ્યું નથી.

2004

14. વન જમીન સૂચિત પ્રોજેક્ટ વિસ્તારનો એક ભાગ છે જેના માટે તમામ જરૂરી પ્રક્રિયા અને પાલન કરવામાં આવશે. ઇચ્છિત નિયમો મુજબ સુવિધાઓની આસપાસ ગ્રીન બેલ્ટ વિકસાવવામાં આવશે.

15. પૃષ્ઠ C3-16 ના નકશા મુજબ, પ્રોજેક્ટ સાઇટમાં સિરાયા રિઝર્વ ફોરેસ્ટનો ભાગ પણ શામેલ છે. યોગ્ય નકશો ઇઆઇએ અહેવાલમાં આપવામાં આવ્યો છે.

16. વન મંજૂરી હજી પણ કાર્યવાહી હેઠળ છે. આ વિગતો MoEF & CC (ફાઈલ નં. 8-04 / 2016-એફસી) ની વેબસાઇટ પર ઉપલબ્ધ છે.

17. AEL ના ડિરેક્ટરોની વર્તમાન યાદી અનૂસૂચિ- xxx તરીકે જોડાયેલી છે. જેને અંતિમ ઇઆઇએ અહેવાલમાં શામેલ કરવામાં આવશે.

18. તારીખ -અને -તારીખ સુપ્રીમ કોર્ટમાં SLP28788/2016 અને ગુજરાત હાઇકોર્ટમાં ડબલ્યુપી (પીઆઈએલ) 12/2011ને સંબંધિત ઓર્ડરોની થી રદ કરવામાં આવે છે. તેથી, કોઈ વિવાદ નથી.

19. સુનિતા નારાયણ કમિટીના અહેવાલના સંદર્ભમાં, APSEZ, 18 મી સપ્ટેમ્બર, 2015 ના તેમના અંતિમ હુકમ MoEF&CC.ના નિર્દેશો અનુસાર, પાલન કરે છે.

20. સૂચિત સાઇટના પશ્ચિમ ભાગમાં ધનેશ્વરી, મોસમી નદી વહે છે. ઇઆઇએ અહેવાલના પૃષ્ઠ C2-3 પરના પ્લાન્ટ લેઆઉટમાં દર્શાવ્યા મુજબ નદીના પ્રવાહને જાળવવામાં આવશે. પ્રોજેક્ટ સાઇટની આસપાસના 10 કીમી વિસ્તારમાં અસર આકારણી આવરી લેવામાં આવી છે અને તે જળાશયો (જો કોઈ હોય તો), સ્થાનિક રહેવાસીઓ અને ગામોનો સમાવેશ કરે છે. કોઈપણ ખાડીઓ બંધ કરવાની કોઈ દરખાસ્ત નથી

21. ગુજરાત કોસ્ટલ ઝોન મેનેજમેન્ટ ઓથોરિટી માન્ય કોસ્ટલ ઝોન મેનેજમેન્ટ પ્લાનનો રખેવાળ છે. જોકે, MoEF&CC ની અધિકૃત એજન્સી દ્વારા તૈયાર કરાયેલ અધિકૃત સીઆરઝેડ નકશો સુપરિમબોઝિંગ પ્રોજેક્ટ વિસ્તારને ઇઆઇએ અહેવાલના પ્રકરણ -3 જણાવવામાં આવ્યો છે.

22. જોડેલ સીઆરઝેડ નકશો નેશનલ સેન્ટર ફોર અર્થ સાયન્સ સ્ટડીઝ દ્વારા તૈયાર કરવામાં આવેલ છે અને ઇઆઇએ રિપોર્ટના પૃષ્ઠ C3-17 પર જોડેલ છે. અંતિમ ઇઆઇએ અહેવાલમાં વધુ સ્પષ્ટ નકલ શામેલ કરવામાં આવશે.

23. સૂચિત સાઇટ સીઆરઝેડની બહાર છે અને દક્ષિણ દિશામાં પ્રવર્તમાન મેંગ્રોવથી લઘુત્તમ અંતર 100 મીટરથી વધુ છે.

24. આ વિસ્તારના લોકોનું વ્યવસાયિક માળખું ઇઆઇએ અહેવાલના પૃષ્ઠ C3-65 પર દર્શાવવામાં આવ્યું છે. મુખ્ય કામદારો કુલ કામદારોના 90.57 ટકા છે. કાર્ય ભાગીદારીનો દર 56.36 ટકા છે. માછીમારી પ્રવૃત્તિઓ પૈકીની એક છે. અભ્યાસ ક્ષેત્રમાં માછીમારોની સંખ્યા અંગેની વિગતોને અંતિમ ઇઆઇએ અહેવાલમાં સામેલ કરવામાં આવશે.

25. સૂચિત પ્રોજેક્ટને લીધે કોઈ માછીમારોને અસર થશે નહીં..

26. પેગડીયા માછીમારોની વિગતોનો અંતિમ ઈઆઇએ અહેવાલમાં સમાવેશ કરવામાં આવશે.

27. નોટિફાઈડ SEZ વિસ્તાર અને માર્ગાંતર માટે લાગુ કરવામા આવેલી જંગલની જમીન પર પ્રોજેક્ટ વિકસાવવામાં આવશે. APSEZ એ નવીનાળ અને સિરાચાના માછીમારો માટે સમર્પિત આવવા જવાનો માર્ગ બનાવ્યો છે. સૂચિત પ્રોજેક્ટને કારણે માછીમારોના એક્સેસ માર્ગો બંધ કરવામાં આવશે નહીં.

28. 102.38 હેક્ટર જંગલ જમીનના માર્ગાંતરણમાં કોઈ પુનર્વસન સંકળાયેલ નથી. વનસ્પતિ અને પ્રાણીઓના અભ્યાસ EIA ના ભાગરૂપે કરવામાં આવેલા છે અને EIA રિપોર્ટમાં મેનેજમેંટ પ્લાન આપવામાં આવેલો છે. એક વખત જંગલ મુક્તિ મળતાં, જંગલ મુક્તિની તમામ શરતોનું, જંગલ જમીનના માર્ગાંતરણની અસરોનું શમન કરવા માટે પાલન કરવામાં આવશે. તમામ કાર્યવાહી પૂરી થયા પછી અને MoEF&CCની મંજૂરી મળ્યા પછી જંગલ માર્ગાંતરણ માટે રાજ્ય સરકાર દ્વારા ભલામણ કરી શકાશે.

29. કોપર કોન્સેન્ટરેટ મુખ્ય કાચો માલ હશે, જે અનુક્રમે 34% અને 50 પીપીએમની સલ્ફર અને મર્ક્યુરી સામગ્રી ધરાવે છે. કાચા માલમાં કોઈ જાણીતી યુરેનિયમ અથવા થોરીયમ સામગ્રી અને તેનું રેડીયેશન નથી. કોપર સ્લેગમાં તે જ સલ્ફર (0.5-1.5%) અને મર્ક્યુરી (બીડીએલ) હશે..

30. કોપર સ્મેલ્ટર અને રિફાઇનરી માટે કોઈ સીઆરપીપી માર્ગદર્શિકા નથી.

31. કોપર સ્મેલ્ટર અને રિફાઇનરી માટે કોઈ સીઆરપીપી માર્ગદર્શિકા નથી.

32. કોપર સ્મેલ્ટર અને રિફાઇનરી માટે કોઈ સીઆરપીપી માર્ગદર્શિકા નથી.

33. કોપર સ્લેગ અને ફોસ્ફોજીપ્સમના ઉત્પાદનના જથ્થાની વિગતો EIA રિપોર્ટમાં આપવામાં આવેલી છે. કોપર સ્લેગ બિલ્ડીંગ મટિરિયલ તરીકે(કોંક્રીટમાં અને તૈયાર મિક્સમાં સાથે નાખવા), રોડ બાંધકામ અને અને શૉટ બ્લાસ્ટિંગમાં વપરાય છે અને ફોસ્ફોજીપ્સમ સિમેન્ટ ઉત્પાદન, જીપ્સમ બોર્ડ ઉત્પાદન અને ખાતરમાં વપરાય છે.બંને મટિરિયલ સ્થાનિક અને વિદેશી બજારોમાં વેચવામાં આવશે.

34. કોપર સ્મેલ્ટર અને રિફાઇનરી માટે કોઈ સીઆરપીપી માર્ગદર્શિકા નથી.

35. જૈવવિવિધતા ક્ષેત્ર તરીકે નવીનાળ ફોરેસ્ટ પર કોઈ જાહેરનામું સૂચિત કરવામાં આવ્યું નથી.

36. વૈધાનિક સત્તાવાળાઓ દ્વારા વહન ક્ષમતા અભ્યાસો હાથ ધરવામાં આવ્યા છે. આ વિસ્તાર માટે કોઈ પણ વહન ક્ષમતા અભ્યાસો હાથ ધરવામાં આવ્યા હોય તેની અમને જાણ નથી. MoEF&CC દ્વારા મંજૂર કરાયેલા TOR મુજબ અભ્યાસના વિસ્તાર માટે EIA અભ્યાસો હાથ ધરવામાં આવ્યા છે.

37. સંચિત અસર દર્શાવવા માટે સૂચિત કોપર પ્રોજેક્ટના કારણે અસરો બેઝલાઇન ડેટા પર લાદવામાં આવી છે. પ્રોજેક્ટના સંચાલન પછીની પૂર્વાનુમાનિત અસરો હવા અને પાણી માટે નિર્ધારિત ધોરણોમાં જણાય છે અને તેથી તે સ્વાસ્થ્ય, કૃષિ અને પશુપાલન પર કોઈ નોંધપાત્ર અસર થવાની સંભાવના નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ 4 માં વિગતો ઉપલબ્ધ છે.

38. 7 સ્થળો - જિલ્લા કલેકટર, ભુજ, જિલ્લો કચ્છ, જીલ્લા વિકાસ કચેરી, ભુજ, જિલ્લો કચ્છ, જિલ્લા ઉદ્યોગ કેન્દ્ર, ભુજ, જિલ્લો કચ્છ, તાલુકા વિકાસ કચેરી, મુંદ્રા, જિલ્લો કચ્છ, તાલુકા વિકાસ કચેરી, માંડવી, જિલ્લો કચ્છ, મુખ્ય વન સંરક્ષક, પર્યાવરણ, વન અને હવામાન પરિવર્તન મંત્રાલય, ભારત સરકાર, પ્રાદેશિક કચેરી (પશ્ચિમ ઝોન), કેન્દ્રીય પર્યાવરણ ભવન, ઇ -5, એરેરા કોલોની, લિંક રોડ -3, રવિશંકર નગર, ભોપાલ 462016 અને પ્રાદેશિક કચેરી, કચ્છ (પૂર્વ), ગુજરાત પ્રદૂષણ નિયંત્રણ બોર્ડ, રૂમ નં. 215-216, બીજો માળ, કંડલા પોર્ટ ટ્રસ્ટ, એડમીન બિલ્ડિંગ, સેકટર 08 , ગાંધીધામ, કચ્છ- ઉપરાંત સૂચિત સાઇટના 10 કિ.મી.ની અંદર તમામ ગ્રામ પંચાયતો ગુજરાતીમાં સારાંશ મૂકવામાં આવેલ છે.

39. આ સૂચિત પ્રોજેક્ટ માટે ઇઆઇએ અહેવાલના કાર્યક્ષેત્રની બહાર છે.

40. પાવર ટ્રાન્સમિશન લાઇન્સ કેટલાક વિચલન સાથે જાળવી રાખવામાં આવશે.

41. માત્ર પર્યાવરણ સેલના એક ભાગ તરીકે 8 વ્યક્તિઓનો પ્રસ્તાવ છે. પર્યાવરણ વ્યવસ્થાપન આ 8 વ્યક્તિઓ સુધી મર્યાદિત નથી, પરંતુ પર્યાવરણ વ્યવસ્થાપન માટે વિવિધ વિભાગો દ્વારા હાથ ધરવામાં આવેલી કામગીરીનો તેમાં સમાવેશ થાય છે.

42. અદાણી એન્ટરપ્રાઈઝીસ લિમિટેડ પાસે એન્જીનિયરિસ્ટની આગેવાની હેઠળની તેની પોતાની પર્યાવરણ વ્યવસ્થાપન ટીમ હશે, જે કોપર પ્રોજેક્ટના તમામ પર્યાવરણીય અને પ્રદૂષણના મુદ્દાઓનું સંચાલન કરવાની ક્ષમતા ધરાવે છે. અન્ય મુદ્દાઓ સૂચિત પ્રોજેક્ટ માટે ઇઆઇઆઇ અહેવાલના કાર્યક્ષેત્રની બહાર છે.. .પ્રશ્ન સૂચિત પ્રોજેક્ટને સંબંધિત નથી, તેથી અમે કોઈ ટિપ્પણી આપતા નથી..

43. એસએલએફ હેઠળનો વિસ્તાર પ્રિ-ફીઝીબીલીટી અહેવાલમાં પૂરો પાડવામાં આવેલ છે, જે TOR એપ્લિકેશનનો એક ભાગ છે.

44. પ્રક્રિયા દરમ્યાન ઉત્પન્ન થયેલો SO2 ગેસ, સલ્ફ્યુરિક એસિડના પ્લાન્ટ માટે ઈન્પુટ કાચો માલ છે અને પ્રોજેકટ એરિયાની અંદરજ સંબંધિત પ્લાંટમાં સલ્ફ્યુરિક એસિડમાં રૂપાંતરિત કરવામાં આવશે. સલ્ફ્યુરિક એસિડ પ્લાન્ટના શેષ વાયુઓ ટેલ ગેસ સ્ક્રબ્બિંગ પછી, કેન્દ્રિય પ્રદૂષણ નિયંત્રણ બોર્ડ (CPCB) ના નિયત ધોરણોને અનુસરી ચીમનીમાથી છોડવામાં આવશે. 46 ચિમની /પ્રોસેસ વેન્ટમાંથી, 4 ચીમનીને 100 મીટર (300 ફુટ) ઊંચાઈ સાથે પ્રસ્તાવિત કરવામાં આવી છે. અસર મૂલ્યાંકન હાથ ધરવામાં આવ્યું છે અને પ્રોજેક્ટ કાર્યરત થયા બાદ જમીનના સ્તરના કેન્દ્રીકરણનું મૂલ્યાંકન કરવા માટે બેઝલાઈન ડેટા પર વૃદ્ધિની અસરોને મૂકવામાં આવી છે. પ્રોજેક્ટની કામગીરી પછીની પૂર્વાનુમાનિત જમીનના સ્તરનું કેન્દ્રીકરણ પણ નેશનલ એમ્બિયન્ટ એર ક્વોલિટી સ્ટાન્ડર્ડની અંદર હશે અને તેથી તેની આસપાસની ઇકોસિસ્ટમ પર કોઈપણ લાંબા ગાળાની અસરો થવાની અપેક્ષા નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ 4 માં વિગતો આપવામાં આવી છે.

45. આ પ્રોજેક્ટને ઝીરો લીક્વીડ ડિસ્ચાર્જ સાથે તૈયાર કરવામાં આવી રહ્યું છે, સૂચિત પ્રોજેક્ટને કારણે ઓસન વોર્મિંગ અથવા એસિડીકરણની કોઈ શક્યતા નથી. પ્રસ્તાવિત પ્રોજેક્ટને કારણે કોઈ કોરલ બ્લીચીંગ અને દરિયાઈ એસિડિફિકેશન રહેશે નહીં.

46. પ્રોજેક્ટ દર વર્ષે જીએચજી (GHG) ની 0.53 મિલિયન ટન CO2 સમકક્ષ ઉત્સર્જન હોવાનો અંદાજ છે, જે ગ્લોબલ વોર્મિંગના સંદર્ભમાં નજીવું છે.

47. કુલ જીએચજી દર વર્ષે 0.53 મિલિયન ટન CO2 સમકક્ષ ઉત્સર્જન હોવાનો અંદાજ છે. આ માહિતીને અંતિમ ઇઆઇએ અહેવાલના ભાગ રૂપે ઉમેરવામાં આવશે.

48. અમે બજારમાં હાલની પરંપરાગત તકનીકીઓની તુલનાએ ઓછા ફૂટપ્રિંટ ધરાવતી હોય તેવી અદ્યતન તકનીકીઓ અપનાવીશું. જો કે, પ્રોજેક્ટ પ્રવૃત્તિને કારણે જીએચજી ઉત્સર્જનને ઘટાડવા માટે બળતણનો વૈકલ્પિક સ્રોત શોધી કાઢવામાં આવશે.

49. જીપ્સમના ઉત્પાદનમાં લગભગ 20% ભેજ હોય છે અને તે સૂચિત 28.34 હેકટર જીપ્સમ સ્ટોરેજ એરિયામાં શુષ્ક વાહક પદ્ધતિ દ્વારા સંગ્રહિત કરવામાં આવશે. કોઈપણ લીશિંગ અટકાવવા માટે જીપ્સમ સ્ટોરેજ એરિયાનું HDPE લાઇનર વડે નિર્માણ કરવામાં આવશે. જીપ્સમ સૂર્યના તાપ વડે સૂકવી અને સંભવિત ગ્રાહકોને વેચવામાં આવશે. પ્રોજેક્ટની જગ્યા બહાર પાણીના કોઈપણ સ્રાવ થશે નહીં.

50. આર.ઓ. રીજેક્ટ્સને મલ્ટિ-ઈફેક્ટ ઈવેપોરેટરમાં લઈ જવામાં આવશે. દરિયામાં કોઈ નિકાલ થશે નહીં.

51. પ્રશ્ન અમને સંબંધિત નથી, તેથી અમે કોઈ ટિપ્પણી આપતા નથી..પર્યાવરણીય મોનીટરીંગ ઇઆઇએ અહેવાલના પ્રકરણ -6 માં જણાવ્યા મુજબ અને મંજૂર કરેલ પરવાનગીઓ સાથે સુસંગત રહીને કરવામાં આવશે
52. સૂચિત પ્રોજેક્ટમાં ઝીરો લીક્વીડ ડિસ્ચાર્જ સુવિધા હશે અને કોઈ સારવાર કરેલ પાણી સમુદ્રમાં મોકલવામાં આવશે નહીં
53. સમગ્ર પ્રોજેક્ટ ઝીરો લિક્વિડ ડિસ્ચાર્જના સિદ્ધાંત પર કામ કરશે. ઇઆઇએ અહેવાલમાં વિગતો આપવામાં આવી છે.
54. આ પ્રોજેક્ટમાંથી 6468 KLD ગંદુ પાણી ઉત્પન્ન થશે. સંપૂર્ણ ગંદાપાણીનો પ્લાન્ટની અંદર પ્રક્રીયા કરી ફરીથી ઉપયોગ કરવામાં આવશે. વિગતો ઇઆઇએ અહેવાલમાં પૂરી પાડવામાં આવેલી છે
55. કોઈપણ સીઇટીપી સાથે જોડાણ કરવાની કોઈ દરખાસ્ત નથી. ગંદાપાણીના ઉપચાર માટે એઇએલની પોતાની ETP હશે. ઇઆઇએ અહેવાલમાં વિગતો આપવામાં આવી છે.
56. ઇવાય અહેવાલમાં ફ્લો ડાયાગ્રામ અને ક્ષમતાઓ આપવામાં આવેલી છે. વિગતવાર એન્જિનિયરિંગ દરમિયાન વધુ આયોજન કરવામાં આવશે.
57. માનનીય સુપ્રીમ કોર્ટ દ્વારા પસાર કરવામાં આવેલી ચુકાદો હાલના ઉદ્યોગ સાથે સંકળાયેલો છે અને તેથી તે લાગુ પડતો નથી, જો કે, સૂચિત પ્રોજેક્ટ માટે ઇ.ટી.પીની વિગતો ઇઆઇએ અહેવાલમાં આપવામાં આવી છે.

અમે ખાત્રી આપીએ છીએ કે પ્રોજેક્ટના સ્થાપન અને સંચાલનમાં તમામ પર્યાવરણીય સુરક્ષા પ્રદાન કરવામાં આવશે.

આપનો આભાર,

સંદર્ભ: **AEL/Copper/Mundra/EC/PH/D-A-37**

વિજય ગઢવી
શ્રી હરીનગર-૧,
માંડવી નલીયા રોડ, માંડવી
જિલ્લોઃ- કચ્છ,ગુજરાત.

વિષયઃ-અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ

માનનીય સાહેબ,,

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. અમે પ્રદૂષણ નિયંત્રણ માટે આધુનિક ટેકનોલોજી પણ અપનાવીશું. આ પ્રોજેક્ટને ઝીરો લિક્વિડ ડિસ્ચાર્જ સાથે અમલમાં મૂકવામાં આવશે. પર્યાવરણીય અસર આકારણી હાથ ધરવામાં આવી છે અને તમામ પર્યાવરણીય પરિમાણો કાનૂની મર્યાદાની અંદર હશે. અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ:

1. 256.57 હેકટરના કુલ પ્રોજેક્ટ વિસ્તાર પૈકી, 154.18 હેક્ટર જમીન સૂચિત SEZ છે અને 102.38 હે ફોરેસ્ટની જમીન હેઠળ આવે છે. ઇઆઇએ અહેવાલમાં જોડેલ 15 એપ્રિલ 2016 ના APSEZ પત્ર મુજબ, APSEZએઇએલને પ્રોજેક્ટ માટે જમીન ફાળવવા માટે સૈધ્ધાંતિક રીતે સંમત છે. APSEZ (અગાઉની એમપીએસઇઝેડ લિમિટેડ) દ્વારા આ જમીન માટે અગાઉથી ફોરેસ્ટ ક્લીયરન્સ લાગુ કરવામાં આવ્યું છે. સ્ટેજ -1 વનની મંજૂરીને લાગુ કર્યા પછી, TOR માટે પ્રોજેક્ટ્સ પ્રયોજક દરખાસ્ત રજૂ કરી શકતા હોવાથી, આ જરૂરિયાતનું પણ પાલન કરવામાં આવ્યું છે. પ્રોજેક્ટ સાઇટનો એક ભાગ ફોરેસ્ટની જમીન છે, જેનો ઉપયોગ ફોરેસ્ટની જમીનના ડાયવર્ઝન માટે અંતિમ મંજૂરી મેળવ્યા પછી જ થશે. સ્થાપિત પ્રક્રિયાની પૂર્ણતા બાદ રાજ્ય સરકાર દ્વારા વનની મંજૂરીની ભલામણ કરવામાં આવે છે અને છેલ્લે MoEFCCદ્વારા મંજૂર કરવામાં આવે છે.
2. પ્રક્રિયા દરમ્યાન ઉત્પન્ન થયેલો SO2 ગેસ, સલ્ફ્યુરિક એસિડના પ્લાન્ટ માટે ઈન્પુટ કાચો માલ છે અને પ્રોજેકટ એરિયાની અંદરજ સંબંધિત પ્લાન્ટમાં સલ્ફ્યુરિક એસિડમાં રૂપાંતરિત કરવામાં આવશે.

સલ્ફ્યુરિક એસિડ પ્લાન્ટના શેષ વાયુઓ ટેલ ગેસ સ્ક્રબ્બિંગ પછી, કેન્દ્રિય પ્રદૂષણ નિયંત્રણ બોર્ડ (CPCB) ના નિયત ધોરણોને અનુસરી ચીમનીમાથી છોડવામાં આવશે. 46 ચિમની/પ્રોસેસ વેન્ટમાંથી, 4 ચીમનીને 100 મીટર (300 ફુટ) ઊંચાઈ સાથે પ્રસ્તાવિત કરવામાં આવી છે. અસર મૂલ્યાંકન હાથ ધરવામાં આવ્યું છે અને પ્રોજેક્ટ કાર્યરત થયા બાદ જમીનના સ્તરના કેન્દ્રીકરણનું મૂલ્યાંકન કરવા માટે બેઝલાઈન ડેટા પર વૃદ્ધિની અસરોને પણ મૂકવામાં આવી છે. પ્રોજેક્ટની કામગીરી પછીની પૂર્વાનુમાનિત જમીનના સ્તરનું કેન્દ્રીકરણ પણ નેશનલ એમ્બિયન્ટ એર ક્વોલિટી સ્ટાન્ડર્ડની અંદર હશે અને તેથી તેની આસપાસની ઇકોસિસ્ટમ પર કોઈપણ લાંબા ગાળાની અસરો થવાની અપેક્ષા નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ 4 માં વિગતો આપવામાં આવી છે

3. ઇઆઇએરીપોર્ટનાપ્રકરણ 9 માંપર્યાવરણવ્યવસ્થાપનયોજના (ઇએમપી) માંજણાવ્યાપ્રમાણેપ્રોજેક્ટનેપર્યાવરણની સલામતી સાથેવિકસાવવામાંઆવશે. વિશ્વમાંઆવાઘણાપ્રોજેક્ટ્સ છે, જેમાં યુરોપ, અમેરિકા, એશિયાવગેરે વિકસિત દેશોનો સમાવેશ થાય છે. તમારા દ્વારા જે ભયનો ઉલ્લેખ થયો છે તે અમારી જાણમાં નથી. આ પ્લાન્ટ ચલાવવા માટે અમને વિશ્વાસ છે કે અમે પ્રદૂષણ ઘટાડવા અને પર્યાવરણનું રક્ષણ કરવા માટે તમામ સાવચેતીઓ રાખીશું. વસ્તીવિષયક વિગતો EIA અહેવાલના પ્રકરણ 3 માં આપવામાં આવી છે. સૂચિત પ્રોજેક્ટમાં ઝીરો લિક્વિડ ડિસ્ચાર્જ મેળવવાની સુવિધા હશે. CPCB દ્વારા નિર્ધારિત ધોરણો મુજબ ઉત્સર્જન પ્રાપ્ત કરવા માટે પ્રદૂષણ નિયંત્રણના પગલાં અમલમાં મુકવામાં આવશે. પ્રોજેક્ટના વિકાસ પછી એમ્બિયન્ટ એર ક્વોલિટીને નિર્ધારિત ધોરણોની અંદર જોવા મળશે. લોકોની તંદુરસ્તી પર કોઈ નોંધપાત્ર પ્રતિકૂળ અસર નહીં થાય. EMP ઇઆઇએ અહેવાલના પ્રકરણ-9 માં આપવામાં આવ્યું છે.

4. દરવર્ષેકોપર પ્લાન્ટમાંથી આડ પેદાશ તરીકે અંદાજે 8 થી 10 લાખ ટન કોપર સ્લેગનું ઉત્પાદન થશે. બાંધકામ ઉદ્યોગ, રોડ નિર્માણ,શોટ-બ્લાસ્ટિંગ વગેરેમાં કોપર સ્લેગનો વ્યાપક ઉપયોગ થાય છે. કોપર સ્લેગને ફેરો-સેન્ડ અને આયર્ન-સિલિકેટતરીકે પણ ઓળખવામાં આવે છે, જે સિમેન્ટ કંપનીઓ દ્વારા ગ્રીન-સિમેન્ટનું ઉત્પાદન કરવા માટે કાચા માલ તરીકે ઉપયોગમાં લેવાય છે. સ્થાનિક તેમજ નિકાસ બજારોમાં સૂચિત પ્રોજેક્ટમાંથી પેદા થયેલા સ્લેગના વેચાણને વધારવા માટે પ્રયત્નો કરવામાં આવશે.

5. સૂચિત પ્રોજેક્ટ ASPEZના ક્ષાર રહિત સમુદ્રના પાણીના સ્ત્રોત પર આધારિત છે. સૂચિત પ્રોજેક્ટમાં ઝીરો લિક્વિડ ડિસ્ચાર્જ કરવા માટેની સુવિધા હશે. ઇઆઇએ રિપોર્ટના પ્રકરણ-2 માં વિગતો આપવામાં આવી છે.

6. સિક્યુર્ડ લેન્ડ ફીલ(એસએલએફ) સૂચિત પ્રોજેક્ટ વિસ્તારની અંદર 30 એકર વિસ્તાર પર વિકસિત કરવાની દરખાસ્ત છે. ટ્રીટમેન્ટ, સંગ્રહ અને નિકાલની સુવિધા (ટીએસડીએફ) માટે CPCB માર્ગદર્શિકા

મુજબ એસએલએફ નિર્માણ અને સંચાલન કરવામાં આવશે. એસએલએફ, તેની ક્ષમતા સુધી ભરાઈ ગયા પછી, ઉપરનો ભાગ ઢાંકી દેવામાં આવશે અને સોઈલ કવર ફેલાવવામાં આવશે અને પછી પ્લાન્ટેશન કરવામાં આવશે. પર્યાવરણીય પેરામીટરની દેખરેખ પણ હાથ ધરવામાં આવશે.

7. સૂચિત કોપર પ્રોજેક્ટના કારણે સૂચિત અસર દર્શાવવા માટે બેઝલાઇન ડેટા પરઉમેરવામાં આવી છે. પ્રોજેક્ટના સંચાલન પછીની પૂર્વાનુમાનિત અસરો AAQ ના નિર્ધારિત ધોરણોની અંદર જણાય છે અને તેથી તેની સ્વાસ્થ્ય, કૃષિ અને પશુપાલન પર કોઈ નોંધપાત્ર અસર થવાની સંભાવના નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ-4 માં વિગતો ઉપલબ્ધ છે.
8. સ્થાનિક લોકોને યોગ્યતા મુજબ રોજગારીમાં પ્રાધાન્ય આપવામાં આવશે. સ્થાનિક લોકોની રોજગારીમાં સુધારો કરવા માટે કૌશલ્ય વિકાસ કાર્યક્રમ અમલમાં મૂકવામાં આવશે.
9. મર્ક્યુરી રીકવરી સુવિધા સૂચિત પ્રોજેક્ટનો એક ભાગ છે. મર્ક્યુરી પર્યાવરણમાં છોડવામાં આવશે નહીં. ઇઆઇએ રિપોર્ટના પ્રકરણ 2 માં વિગતો આપવામાં આવી છે.
10. પ્રક્રિયાના ભાગરૂપે સોનું અને ચાંદી જેવી કિંમતી ધાતુઓ પુનઃપ્રાપ્ત કરવામાં આવશે. સ્થાનિક સમુદાયના વિકાસ માટે કોર્પોરેટ સોશિયલ રિસ્પોન્સિબીલિટી હેઠળ વાર્ષિકરૂ 8.0 કરોડની જોગવાઇ કરવામાં આવી છે. શિક્ષણ, આરોગ્ય અને સ્વચ્છતા, સ્થાયી આજીવિકા અને ગ્રામીણ આંતરમાળખાકીય સુવિધાઓ સંબંધિત ક્ષેત્રોમાં કરવામાં આવશે. તમારા દ્વારા ઉલ્લેખિત APSEZ સાથે સંકળાયેલો અને અમને જણાવ્યા મુજબનોદંડ પાછો ખેંચી લેવામાં આવ્યો છે.

અમે ખાત્રી આપીએ છીએ કે પ્રોજેક્ટના સ્થાપન અને સંચાલનમાં તમામ પર્યાવરણીય સુરક્ષા પ્રદાન કરવામાં આવશે.

આપનો આભાર,

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,
We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Out of 256.57 Ha of total project area, 154.18 Ha land is notified SEZ and 102.38 Ha fall under forest land. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report. Forest Clearance has already been applied for this land by APSEZ (erstwhile MPSEZ Ltd). As the project proponent can submit the proposal for TOR, after applying the Stage-I forestry clearance, this requirement has also been complied with. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.

2. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.

3. The project will be developed with all the environmental safeguards as detailed in Environment Management Plan (EMP) in Chapter 9 of EIA Report. There are many

such projects in the world, including the developed countries in Europe, America, Asia, etc. The apprehension mentioned by you is not in our knowledge. We are confident of operating this plant with all the safeguards to mitigate the pollution and protect environment. Demographic details are provided in Chapter 3 of the EIA Report. Proposed project will have facility to achieve Zero Liquid Discharge. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Ambient Air Quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter 9 of the EIA report.

4. Copper slag, estimated 8 to 10 Lac Tonnes per year, will be produced from the copper plant as a by-product. Copper Slag is widely used in construction industry, road making, shot-blasting etc. Copper Slag is also known as Ferro-Sand and Iron-Silicate which is used by Cement companies as raw material to produce the green-cement. Efforts will be made to maximize the sale of the Slag generated from the proposed project in domestic as well as in export market.

5. The proposed project is based on desalinated sea water sourced from APSEZ. Proposed project will have facility to achieve Zero Liquid Discharge. Details are given in Chapter 2 of EIA Report.

6. Secured Land Fill (SLF) is proposed to be developed over the area of 30 Acres within the proposed project area. SLF will be constructed and operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and then plantation will be done. Monitoring of environmental parameters will also be carried out.

7. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for AAQ and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

8. Local people will be given preference in employment as per eligibility. Skill development programme will be implemented to improve the employability of local people.

9. Mercury recovery facility is part of the proposed project. Mercury will not be released in the environment. Details are given in Chapter 2 of EIA Report.

10. Precious metals like gold and silver will be recovered as part of the process. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure. The

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,
We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Out of 256.57 Haof total project area, 154.18 Ha land is notified SEZ and 102.38 Ha fall under forest land. વિષયઃ-અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ

માનનીય સાહેબ,,

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. અમે પ્રદૂષણ નિયંત્રણ માટે આધુનિક ટેકનોલોજી પણ અપનાવીશું. આ પ્રોજેક્ટને ઝીરો લિક્વિડ ડિસ્ચાર્જ સાથે અમલમાં મૂકવામાં આવશે. પર્યાવરણીય અસર આકારણી હાથ ધરવામાં આવી છે અને તમામ પર્યાવરણીય પરિમાણો કાનૂની મર્યાદાની અંદર હશે. અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ:

1. 256.57 હેકટરના કુલ પ્રોજેક્ટ વિસ્તાર પૈકી, 154.18 હેક્ટર જમીન સૂચિત SEZ છે અને 102.38 હે ફોરેસ્ટની જમીન હેઠળ આવે છે. ઇઆઇએ અહેવાલમાં જોડેલ 15 એપ્રિલ 2016 ના APSEZ પત્ર મુજબ, APSEZએઇએલને પ્રોજેક્ટ માટે જમીન ફાળવવા માટે સૈધ્ધાંતિક રીતે સંમત છે. APSEZ (અગાઉની એમપીએસઇઝેડ લિમિટેડ) દ્વારા આ જમીન માટે અગાઉથી ફોરેસ્ટ ક્લીયરન્સ લાગુ કરવામાં આવ્યું છે. સ્ટેજ -1 વનની મંજૂરીને લાગુ કર્યા પછી, TOR માટે પ્રોજેક્ટ્સ પ્રયોજક દરખાસ્ત રજૂ કરી શકતા હોવાથી, આ જરૂરિયાતનું પણ પાલન કરવામાં આવ્યું છે. પ્રોજેક્ટ સાઇટનો એક ભાગ ફોરેસ્ટની જમીન છે, જેનો ઉપયોગ ફોરેસ્ટની જમીનના ડાયવર્ઝન માટે અંતિમ મંજૂરી મેળવ્યા પછી જ થશે. સ્થાપિત પ્રક્રિયાની પૂર્ણતા બાદ રાજ્ય સરકાર દ્વારા વનની મંજૂરીની ભલામણ કરવામાં આવે છે અને છેલ્લે MoEFCCદ્વારા મંજૂર કરવામાં આવે છે.
2. પ્રક્રિયા દરમ્યાન ઉત્પન્ન થયેલો SO2 ગેસ, સલ્ફ્યુરિક એસિડના પ્લાન્ટ માટે ઈન્પુટ કાચો માલ છે અને પ્રોજેકટ એરિયાની અંદરજ સંબંધિત પ્લાન્ટમાં સલ્ફ્યુરિક એસિડમાં રૂપાંતરિત કરવામાં આવશે.

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. અમે પ્રદૂષણ નિયંત્રણ માટે આધુનિક ટેકનોલોજી પણ અપનાવીશું. આ પ્રોજેક્ટને ઝીરો લિક્વિડ ડિસ્ચાર્જ સાથે અમલમાં મૂકવામાં આવશે. પર્યાવરણીય અસર આકારણી હાથ ધરવામાં આવી છે અને તમામ પર્યાવરણીય પરિમાણો કાનૂની મર્યાદાની અંદર હશે. અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ:

1. 256.57 હેકટરના કુલ પ્રોજેક્ટ વિસ્તાર પૈકી, 154.18 હેક્ટર જમીન સૂચિત SEZ છે અને 102.38 હે ફોરેસ્ટની જમીન હેઠળ આવે છે. ઇઆઇએ અહેવાલમાં જોડેલ 15 એપ્રિલ 2016 ના APSEZ પત્ર મુજબ, APSEZએઇએલને પ્રોજેક્ટ માટે જમીન ફાળવવા માટે સૈધ્ધાંતિક રીતે સંમત છે. APSEZ (અગાઉની એમપીએસઇઝેડ લિમિટેડ) દ્વારા આ જમીન માટે અગાઉથી ફોરેસ્ટ ક્લીયરન્સ લાગુ કરવામાં આવ્યું છે. સ્ટેજ -1 વનની મંજૂરીને લાગુ કર્યા પછી, TOR માટે પ્રોજેક્ટ્સ પ્રયોજક દરખાસ્ત રજૂ કરી શકતા હોવાથી, આ જરૂરિયાતનું પણ પાલન કરવામાં આવ્યું છે. પ્રોજેક્ટ સાઇટનો એક ભાગ ફોરેસ્ટની જમીન છે, જેનો ઉપયોગ ફોરેસ્ટની જમીનના ડાયવર્ઝન માટે અંતિમ મંજૂરી મેળવ્યા પછી જ થશે. સ્થાપિત પ્રક્રિયાની પૂર્ણતા બાદ રાજ્ય સરકાર દ્વારા વનની મંજૂરીની ભલામણ કરવામાં આવે છે અને છેલ્લે MoEFCCદ્વારા મંજૂર કરવામાં આવે છે.
2. પ્રક્રિયા દરમ્યાન ઉત્પન્ન થયેલો SO2 ગેસ, સલ્ફ્યુરિક એસિડના પ્લાન્ટ માટે ઈન્પુટ કાચો માલ છે અને પ્રોજેકટ એરિયાની અંદરજ સંબંધિત પ્લાન્ટમાં સલ્ફ્યુરિક એસિડમાં રૂપાંતરિત કરવામાં આવશે.

મુજબ એસએલએફ નિર્માણ અને સંચાલન કરવામાં આવશે. એસએલએફ, તેની ક્ષમતા સુધી ભરાઈ ગયા પછી, ઉપરનો ભાગ ઢાંકી દેવામાં આવશે અને સોઈલ કવર ફેલાવવામાં આવશે અને પછી પ્લાન્ટેશન કરવામાં આવશે. પર્યાવરણીય પેરામીટરની દેખરેખ પણ હાથ ધરવામાં આવશે.

7. સૂચિત કોપર પ્રોજેક્ટના કારણે સૂચિત અસર દર્શાવવા માટે બેઝલાઇન ડેટા પર ઉમેરવામાં આવી છે. પ્રોજેક્ટના સંચાલન પછીની પૂર્વાનુમાનિત અસરો AAQ ના નિર્ધારિત ધોરણોની અંદર જણાય છે અને તેથી તેની સ્વાસ્થ્ય, કૃષિ અને પશુપાલન પર કોઈ નોંધપાત્ર અસર થવાની સંભાવના નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ-4 માં વિગતો ઉપલબ્ધ છે.
8. સ્થાનિક લોકોને યોગ્યતા મુજબ રોજગારીમાં પ્રાધાન્ય આપવામાં આવશે. સ્થાનિક લોકોની રોજગારીમાં સુધારો કરવા માટે કૌશલ્ય વિકાસ કાર્યક્રમ અમલમાં મૂકવામાં આવશે.
9. મર્ક્યુરી રીકવરી સુવિધા સૂચિત પ્રોજેક્ટનો એક ભાગ છે. મર્ક્યુરી પર્યાવરણમાં છોડવામાં આવશે નહીં. ઇઆઇએ રિપોર્ટના પ્રકરણ 2 માં વિગતો આપવામાં આવી છે.
10. પ્રક્રિયાના ભાગરૂપે સોનું અને ચાંદી જેવી કિંમતી ધાતુઓ પુનઃપ્રાપ્ત કરવામાં આવશે. સ્થાનિક સમુદાયના વિકાસ માટે કોર્પોરેટ સોશિયલ રિસ્પોન્સિબીલિટી હેઠળ વાર્ષિક રૂ 8.0 કરોડની જોગવાઇ કરવામાં આવી છે. શિક્ષણ, આરોગ્ય અને સ્વચ્છતા, સ્થાયી આજીવિકા અને ગ્રામીણ આંતરમાળખાકીય સુવિધાઓ સંબંધિત ક્ષેત્રોમાં કરવામાં આવશે. તમારા દ્વારા ઉલ્લેખિત APSEZ સાથે સંકળાયેલો અને અમને જણાવ્યા મુજબનો દંડ પાછો ખેંચી લેવામાં આવ્યો છે.

અમે ખાત્રી આપીએ છીએ કે પ્રોજેક્ટના સ્થાપન અને સંચાલનમાં તમામ પર્યાવરણીય સુરક્ષા પ્રદાન કરવામાં આવશે.

આપનો આભાર,

અદાણી એન્ટરપ્રાઇઝિસ લિમિટેડ વતી,

(પ્રસાદ સૂર્યારાવ)

અધિકૃત સહીકર્તા .

Ref: AEL/Copper/Mundra/EC/PH/D-A-39

Shri JadejaJaipalsinh L
Dist- Kutchh, Gujarat.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,
We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Out of 256.57 Ha of total project area, 154.18 Ha land is notified SEZ and 102.38 Ha fall under forest land. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report. Forest Clearance has already been applied for this land by APSEZ (erstwhile MPSEZ Ltd). As the project proponent can submit the proposal for TOR, after applying the Stage-I forestry clearance, this requirement has also been complied with. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.

2. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.

3. The project will be developed with all the environmental safeguards as detailed in Environment Management Plan (EMP) in Chapter 9 of EIA Report. There are many such projects in the world, including the developed countries in Europe, America, Asia, etc. The apprehension mentioned by you is not in our knowledge. We are

info@adani.com
www.adani.com

confident of operating this plant with all the safeguards to mitigate the pollution and protect environment. Demographic details are provided in Chapter 3 of the EIA Report. Proposed project will have facility to achieve Zero Liquid Discharge. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Ambient Air Quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter 9 of the EIA report.

4. Copper slag, estimated 8 to 10 Lac Tonnes per year, will be produced from the copper plant as a by-product. Copper Slag is widely used in construction industry, road making, shot-blasting etc. Copper Slag is also known as Ferro-Sand and Iron-Silicate which is used by Cement companies as raw material to produce the green-cement. Efforts will be made to maximize the sale of the Slag generated from the proposed project in domestic as well as in export market.

5. The proposed project is based on desalinated sea water sourced from APSEZ. Proposed project will have facility to achieve Zero Liquid Discharge. Details are given in Chapter 2 of EIA Report.

6. Secured Land Fill (SLF) is proposed to be developed over the area of 30 Acres within the proposed project area. SLF will be constructed and operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and then plantation will be done. Monitoring of environmental parameters will also be carried out.

7. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for AAQ and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

8. Local people will be given preference in employment as per eligibility. Skill development programme will be implemented to improve the employability of local people.

9. Mercury recovery facility is part of the proposed project. Mercury will not be released in the environment. Details are given in Chapter 2 of EIA Report.

10. Precious metals like gold and silver will be recovered as part of the process. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure. The penalty mentioned by you pertains to APSEZ and as informed to us same has been withdrawn.

ગ્રીન-સિમેન્ટનું ઉત્પાદન કરવા માટે કાચા માલ તરીકે ઉપયોગમાં લેવાય છે. સ્થાનિક તેમજ નિકાસ બજારોમાં સૂચિત પ્રોજેક્ટમાંથી પેદા થયેલા સ્લેગના વેચાણને વધારવા માટે પ્રયત્નો કરવામાં આવશે.

5. સૂચિત પ્રોજેક્ટ ASPEZના ક્ષાર રહિત સમુદ્રના પાણીના સ્ત્રોત પર આધારિત છે. સૂચિત પ્રોજેક્ટમાં ઝીરો લિક્વિડ ડિસ્ચાર્જ કરવા માટેની સુવિધા હશે. ઇઆઇએ રિપોર્ટના પ્રકરણ-2 માં વિગતો આપવામાં આવી છે.
6. સિક્યુર્ડ લેન્ડ ફીલ(એસએલએફ) સૂચિત પ્રોજેક્ટ વિસ્તારની અંદર 30 એકર વિસ્તાર પર વિકસિત કરવાની દરખાસ્ત છે. ટ્રીટમેન્ટ, સંગ્રહ અને નિકાલની સુવિધા (ટીએસડીએફ) માટે CPCB માર્ગદર્શિકા મુજબ એસએલએફ નિર્માણ અને સંચાલન કરવામાં આવશે. એસએલએફ, તેની ક્ષમતા સુધી ભરાઈ ગયા પછી, ઉપરનો ભાગ ઢાંકી દેવામાં આવશે અને સોઈલ કવર ફેલાવવામાં આવશે અને પછી પ્લાન્ટેશન કરવામાં આવશે. પર્યાવરણીય પેરામીટરની દેખરેખ પણ હાથ ધરવામાં આવશે.
7. સૂચિત કોપર પ્રોજેક્ટના કારણે સૂચિત અસર દર્શાવવા માટે બેઝલાઇન ડેટા પરઉમેરવામાં આવી છે. પ્રોજેક્ટના સંચાલન પછીની પૂર્વાનુમાનિત અસરો AAQ ના નિર્ધારિત ધોરણોની અંદર જણાય છે અને તેથી તેની સ્વાસ્થ્ય, કૃષિ અને પશુપાલન પર કોઈ નોંધપાત્ર અસર થવાની સંભાવના નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ-4 માં વિગતો ઉપલબ્ધ છે.
8. સ્થાનિક લોકોને યોગ્યતા મુજબ રોજગારીમાં પ્રાધાન્ય આપવામાં આવશે. સ્થાનિક લોકોની રોજગારીમાં સુધારો કરવા માટે કૌશલ્ય વિકાસ કાર્યક્રમ અમલમાં મૂકવામાં આવશે.
9. મર્ક્યુરી રીકવરી સુવિધા સૂચિત પ્રોજેક્ટનો એક ભાગ છે. મર્ક્યુરી પર્યાવરણમાં છોડવામાં આવશે નહીં. ઇઆઇએ રિપોર્ટના પ્રકરણ 2 માં વિગતો આપવામાં આવી છે.
10. પ્રક્રિયાના ભાગરૂપે સોનું અને ચાંદી જેવી કિંમતી ધાતુઓ પુનઃપ્રાપ્ત કરવામાં આવશે. સ્થાનિક સમુદાયના વિકાસ માટે કોર્પોરેટ સોશિયલ રિસ્પોન્સિબીલિટી હેઠળ વાર્ષિકરૂ 8.0 કરોડની જોગવાઇ કરવામાં આવી છે. શિક્ષણ, આરોગ્ય અને સ્વચ્છતા, સ્થાયી આજીવિકા અને ગ્રામીણ આંતરમાળખાકીય સુવિધાઓ સંબંધિત ક્ષેત્રોમાં કરવામાં આવશે. તમારા દ્વારા ઉલ્લેખિત APSEZ સાથે સંકળાયેલો અને અમને જણાવ્યા મુજબનોદંડ પાછો ખેંચી લેવામાં આવ્યો છે.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Out of 256.57 Haof total project area, 154.18 Ha land is notified SEZ and 102.38 Ha fall under forest land. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report. Forest Clearance has already been applied for this land by APSEZ (erstwhile MPSEZ Ltd). As the project proponent can submit the proposal for TOR, after applying the Stage-I forestry clearance, this requirement has also been complied with. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.
2. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.
3. The project will be developed with all the environmental safeguards as detailed in Environment Management Plan (EMP) in Chapter 9 of EIA Report. There are many such projects in the world, including the developed countries in Europe, America, Asia, etc. The apprehension mentioned by you is not in our knowledge. We are confident of operating this plant with all the safeguards to mitigate the pollution and protect environment. Demographic details are provided in Chapter 3 of the EIA

Report. Proposed project will have facility to achieve Zero Liquid Discharge. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Ambient Air Quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter 9 of the EIA report.

4. Copper slag, estimated 8 to 10 Lac Tonnes per year, will be produced from the copper plant as a by-product. Copper Slag is widely used in construction industry, road making, shot-blasting etc. Copper Slag is also known as Ferro-Sand and Iron-Silicate which is used by Cement companies as raw material to produce the green-cement. Efforts will be made to maximize the sale of the Slag generated from the proposed project in domestic as well as in export market.
5. The proposed project is based on desalinated sea water sourced from APSEZ. Proposed project will have facility to achieve Zero Liquid Discharge. Details are given in Chapter 2 of EIA Report.
6. Secured Land Fill (SLF) is proposed to be developed over the area of 30 Acres within the proposed project area. SLF will be constructed and operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and then plantation will be done. Monitoring of environmental parameters will also be carried out.
7. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for AAQ and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.
8. Local people will be given preference in employment as per eligibility. Skill development programme will be implemented to improve the employability of local people.
9. Mercury recovery facility is part of the proposed project. Mercury will not be released in the environment. Details are given in Chapter 2 of EIA Report.
10. Precious metals like gold and silver will be recovered as part of the process. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure. The penalty mentioned by you pertains to APSEZ and as informed to us same has been withdrawn.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Thanking you,

સંદર્ભ: AEL/Copper/Mundra/EC/PH/D-A-41

તુર્ક મોહમ્મદ અબ્દુલ કાદર જમાદાર.
ગામઃ-ધ્રબ
તાલુકોઃ-
જિલ્લોઃ- કચ્છ,ગુજરાત.

વિષયઃ- અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ

માનનીય સાહેબ,,

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. અમે પ્રદૂષણ નિયંત્રણ માટે આધુનિક ટેકનોલોજી પણ અપનાવીશું. આ પ્રોજેક્ટને ઝીરો લિક્વિડ ડિસ્ચાર્જ સાથે અમલમાં મૂકવામાં આવશે. પર્યાવરણીય અસર આકારણી હાથ ધરવામાં આવી છે અને તમામ પર્યાવરણીય પરિમાણો કાનૂની મર્યાદાની અંદર હશે. અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ:

1. 256.57 હેકટરના કુલ પ્રોજેક્ટ વિસ્તાર પૈકી, 154.18 હેક્ટર જમીન સૂચિત SEZ છે અને 102.38 હે ફોરેસ્ટની જમીન હેઠળ આવે છે. ઇઆઇએ અહેવાલમાં જોડેલ 15 એપ્રિલ 2016 ના APSEZ પત્ર મુજબ, APSEZએઇએલને પ્રોજેક્ટ માટે જમીન ફાળવવા માટે સૈધ્ધાંતિક રીતે સંમત છે. APSEZ (અગાઉની એમપીએસઇઝેડ લિમિટેડ) દ્વારા આ જમીન માટે અગાઉથી ફોરેસ્ટ ક્લીયરન્સ લાગુ કરવામાં આવ્યું છે. સ્ટેજ -1 વનની મંજૂરીને લાગુ કર્યા પછી, TOR માટે પ્રોજેક્ટ્સ પ્રયોજક દરખાસ્ત રજૂ કરી શકતા હોવાથી, આ જરૂરિયાતનું પણ પાલન કરવામાં આવ્યું છે. પ્રોજેક્ટ સાઇટનો એક ભાગ ફોરેસ્ટની જમીન છે, જેનો ઉપયોગ ફોરેસ્ટની જમીનના ડાયવર્ઝન માટે અંતિમ મંજૂરી મેળવ્યા પછી જ થશે. સ્થાપિત પ્રક્રિયાની પૂર્ણતા બાદ રાજ્ય સરકાર દ્વારા વનની મંજૂરીની ભલામણ કરવામાં આવે છે અને છેલ્લે MoEFCCદ્વારા મંજૂર કરવામાં આવે છે.
2. પ્રક્રિયા દરમ્યાન ઉત્પન્ન થયેલો SO2 ગેસ, સલ્ફ્યુરિક એસિડના પ્લાન્ટ માટે ઈન્પુટ કાચો માલ છે અને પ્રોજેકટ એરિયાની અંદરજ સંબંધિત પ્લાન્ટમાં સલ્ફ્યુરિક એસિડમાં રૂપાંતરિત કરવામાં આવશે.

EMP is provided in Chapter 9 of the EIA report.

4. Copper slag, estimated 8 to 10 Lac Tonnes per year, will be produced from the copper plant as a by-product. Copper Slag is widely used in construction industry, road making, shot-blasting etc. Copper Slag is also known as Ferro-Sand and Iron-Silicate which is used by Cement companies as raw material to produce the green-cement. Efforts will be made to maximize the sale of the Slag generated from the proposed project in domestic as well as in export market.

5. The proposed project is based on desalinated sea water sourced from APSEZ. Proposed project will have facility to achieve Zero Liquid Discharge. Details are given in Chapter 2 of EIA Report.

6. Secured Land Fill (SLF) is proposed to be developed over the area of 30 Acres within the proposed project area. SLF will be constructed and operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and then plantation will be done. Monitoring of environmental parameters will also be carried out.

7. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for AAQ and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

8. Local people will be given preference in employment as per eligibility. Skill development programme will be implemented to improve the employability of local people.

9. Mercury recovery facility is part of the proposed project. Mercury will not be released in the environment. Details are given in Chapter 2 of EIA Report.

વિષયઃ- અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ

માનનીય સાહેબ,,

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. અમે પ્રદૂષણ નિયંત્રણ માટે આધુનિક ટેકનોલોજી પણ અપનાવીશું. આ પ્રોજેક્ટને ઝીરો લિક્વિડ ડિસ્ચાર્જ સાથે અમલમાં મૂકવામાં આવશે. પર્યાવરણીય અસર આકારણી હાથ ધરવામાં આવી છે અને તમામ પર્યાવરણીય પરિમાણો કાનૂની મર્યાદાની અંદર હશે. અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ:

1. 256.57 હેકટરના કુલ પ્રોજેક્ટ વિસ્તાર પૈકી, 154.18 હેક્ટર જમીન સૂચિત SEZ છે અને 102.38 હે ફોરેસ્ટની જમીન હેઠળ આવે છે. ઇઆઇએ અહેવાલમાં જોડેલ 15 એપ્રિલ 2016 ના APSEZ પત્ર મુજબ, APSEZએઇએલને પ્રોજેક્ટ માટે જમીન ફાળવવા માટે સૈધ્ધાંતિક રીતે સંમત છે. APSEZ (અગાઉની એમપીએસઇઝેડ લિમિટેડ) દ્વારા આ જમીન માટે અગાઉથી ફોરેસ્ટ ક્લીયરન્સ લાગુ કરવામાં આવ્યું છે. સ્ટેજ -1 વનની મંજૂરીને લાગુ કર્યા પછી, TOR માટે પ્રોજેક્ટ્સ પ્રયોજક દરખાસ્ત રજૂ કરી શકતા હોવાથી, આ જરૂરિયાતનું પણ પાલન કરવામાં આવ્યું છે. પ્રોજેક્ટ સાઇટનો એક ભાગ ફોરેસ્ટની જમીન છે, જેનો ઉપયોગ ફોરેસ્ટની જમીનના ડાયવર્ઝન માટે અંતિમ મંજૂરી મેળવ્યા પછી જ થશે. સ્થાપિત પ્રક્રિયાની પૂર્ણતા બાદ રાજ્ય સરકાર દ્વારા વનની મંજૂરીની ભલામણ કરવામાં આવે છે અને છેલ્લે MoEFCCદ્વારા મંજૂર કરવામાં આવે છે.
2. પ્રક્રિયા દરમ્યાન ઉત્પન્ન થયેલો SO2 ગેસ, સલ્ફ્યુરિક એસિડના પ્લાન્ટ માટે ઈન્પુટ કાચો માલ છે અને પ્રોજેકટ એરિયાની અંદરજ સંબંધિત પ્લાન્ટમાં સલ્ફ્યુરિક એસિડમાં રૂપાંતરિત કરવામાં આવશે.

મુજબ એસએલએફ નિર્માણ અને સંચાલન કરવામાં આવશે. એસએલએફ, તેની ક્ષમતા સુધી ભરાઈ ગયા પછી, ઉપરનો ભાગ ઢાંકી દેવામાં આવશે અને સોઈલ કવર ફેલાવવામાં આવશે અને પછી પ્લાન્ટેશન કરવામાં આવશે. પર્યાવરણીય પેરામીટરની દેખરેખ પણ હાથ ધરવામાં આવશે.

7. સૂચિત કોપર પ્રોજેક્ટના કારણે સૂચિત અસર દર્શાવવા માટે બેઝલાઇન ડેટા પર ઉમેરવામાં આવી છે. પ્રોજેક્ટના સંચાલન પછીની પૂર્વાનુમાનિત અસરો AAQ ના નિર્ધારિત ધોરણોની અંદર જણાય છે અને તેથી તેની સ્વાસ્થ્ય, કૃષિ અને પશુપાલન પર કોઈ નોંધપાત્ર અસર થવાની સંભાવના નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ-4 માં વિગતો ઉપલબ્ધ છે.
8. સ્થાનિક લોકોને યોગ્યતા મુજબ રોજગારીમાં પ્રાધાન્ય આપવામાં આવશે. સ્થાનિક લોકોની રોજગારીમાં સુધારો કરવા માટે કૌશલ્ય વિકાસ કાર્યક્રમ અમલમાં મૂકવામાં આવશે.
9. મર્ક્યુરી રીકવરી સુવિધા સૂચિત પ્રોજેક્ટનો એક ભાગ છે. મર્ક્યુરી પર્યાવરણમાં છોડવામાં આવશે નહીં. ઇઆઇએ રિપોર્ટના પ્રકરણ 2 માં વિગતો આપવામાં આવી છે.
10. પ્રક્રિયાના ભાગરૂપે સોનું અને ચાંદી જેવી કિંમતી ધાતુઓ પુનઃપ્રાપ્ત કરવામાં આવશે. સ્થાનિક સમુદાયના વિકાસ માટે કોર્પોરેટ સોશિયલ રિસ્પોન્સિબીલિટી હેઠળ વાર્ષિક રૂ 8.0 કરોડની જોગવાઇ કરવામાં આવી છે. શિક્ષણ, આરોગ્ય અને સ્વચ્છતા, સ્થાયી આજીવિકા અને ગ્રામીણ આંતરમાળખાકીય સુવિધાઓ સંબંધિત ક્ષેત્રોમાં કરવામાં આવશે. તમારા દ્વારા ઉલ્લેખિત APSEZ સાથે સંકળાયેલો અને અમને જણાવ્યા મુજબનો દંડ પાછો ખેંચી લેવામાં આવ્યો છે.

અમે ખાત્રી આપીએ છીએ કે પ્રોજેક્ટના સ્થાપન અને સંચાલનમાં તમામ પર્યાવરણીય સુરક્ષા પ્રદાન કરવામાં આવશે.

આપનો આભાર,
અદાણી એન્ટરપ્રાઇઝિસ લિમિટેડ વતી,

(પ્રસાદ સૂર્યારાવ)

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. Out of 256.57 Haof total project area, 154.18 Ha land is notified SEZ and 102.38 Ha fall under forest land. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report. Forest Clearance has already been applied for this land by APSEZ (erstwhile MPSEZ Ltd). As the project proponent can submit the proposal for TOR, after applying the Stage-I forestry clearance, this requirement has also been complied with. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.

2. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report

3. The project will be developed with all the environmental safeguards as detailed in Environment Management Plan (EMP) in Chapter 9 of EIA Report. There are many such projects in the world, including the developed countries in Europe, America,

adani

Asia, etc. The apprehension mentioned by you is not in our knowledge. We are confident of operating this plant with all the safeguards to mitigate the pollution and protect environment. Demographic details are provided in Chapter 3 of the EIA Report. Proposed project will have facility to achieve Zero Liquid Discharge. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Ambient Air Quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter 9 of the EIA report.

4. Copper slag, estimated 8 to 10 Lac Tonnes per year, will be produced from the copper plant as a by-product. Copper Slag is widely used in construction industry, road making, shot-blasting etc. Copper Slag is also known as Ferro-Sand and Iron-Silicate which is used by Cement companies as raw material to produce the green-cement. Efforts will be made to maximize the sale of the Slag generated from the proposed project in domestic as well as in export market.

5. The proposed project is based on desalinated sea water sourced from APSEZ. Proposed project will have facility to achieve Zero Liquid Discharge. Details are given in Chapter 2 of EIA Report.

6. Secured Land Fill (SLF) is proposed to be developed over the area of 30 Acres within the proposed project area. SLF will be constructed and operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and then plantation will be done. Monitoring of environmental parameters will also be carried out.

7. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for AAQ and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

8. Local people will be given preference in employment as per eligibility. Skill development programme will be implemented to improve the employability of local people.

9. Mercury recovery facility is part of the proposed project. Mercury will not be released in the environment. Details are given in Chapter 2 of EIA Report.

10. Precious metals like gold and silver will be recovered as part of the process. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure. The penalty mentioned by you pertains to APSEZ and as informed to us same has been withdrawn.

સંદર્ભ: **AEL/Copper/Mundra/EC/PH/D-A-43**

શ્રી જાડેજા ગજેન્દ્રસિંહ ભીમાજી,
સરપંચ,નવીનાલ
ગામ:-નવીનાલ,
તાલુકો:- મુંદ્રા
જિલ્લો:- કચ્છ,ગુજરાત.

વિષય:-અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ.

માનનીય સાહેબ,,

આપના દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓના પેરાવાઇઝ જવાબ અમો અત્રે આપી રહ્યા છીએ.

1. અમારી રજૂઆત છે કે MoEFCCપાસેથી TOR મેળવવાની તમામ જરૂરિયાત સંતોષવામાં આવી હતી.TOR મેળવ્યા પછી, એન્વાયરમેન્ટ ઇમ્પેક્ટ એસેસ્સમેંટ (પર્યાવરણ અસર મૂલ્યાંકન) પૂર્ણ કરવામાં આવેલ છે અને TOR ની તમામ શરતોનો પ્રોજેક્ટના પ્રયોજકો દ્વારા લોકસુનાવણીના ઉદ્દેશ માટે અમલ કરવામાં આવેલ છે.
   ફોરેસ્ટ જમીનના દરજ્જા અંગે, આ TOR માટેના ફોર્મ-1 માં અને ઉપરાંત TOR કોમ્પલાયન્સ (EIA રિપોર્ટના એનેક્ષર 1, પેજ A1-14) માંસ્પષ્ટપણે જાહેર કરવામાં આવેલ છે કે "ફોરેસ્ટ જમીન 253 એકર પણ સામેલ છે જે ઔદ્યોગિક હેતુ માટે તબદીલ કરવામાં આવશે.રાજ્ય સરકારે ફોરેસ્ટકલીયરન્સ માટે ભલામણ કરેલી છે અને તે હવે કેન્દ્ર સરકાર સમક્ષ ફાઇલ નંબર-04/2016-FCથી છે" ફાઇલનું સ્ટેટસ પણ ઓનલાઇનMoEFCCપરવન્યમંજૂરી અર્થેઉપલબ્ધ છે. APSEZ ના પત્ર તારીખ 15 એપ્રિલ 2016 થી APSEZ એ સૈદ્ધાંતિક રીતે AEL ના પ્રોજેકટ માટે જમીન ફાળવવાનું કબુલ કરેલ છે, જે EIA રિપોર્ટમાં સામેલ છે.
   મેસર્સ અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ દ્વારા પ્રોજેકટ APSEZની જમીનમાં દરખાસ્ત કરવામાં આવેલ હોવાથી આ જમીન ફોરેસ્ટકલીયરન્સ માટે APSEZ(ભુતપૂર્વ મુંદ્રા એસઇઝેડ લિમિટેડ) દ્વારા જ અરજી કરી દેવામાં આવેલ હતી.તારીખ 31.03.2011 ની જરૂરિયાત "પ્રયોજકોએ TOR ની દરખાસ્ત,ફોરેસ્ટકલીયરન્સ સ્ટેજ-1 ની અરજી કર્યા પછી જમૂકવી જોઈએ." આથી, આ દરખાસ્તનું પણ

Village- Navinal, Taluka- Mundra
Dist- Kutchh, Gujarat.

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,

We are herewith responding para wise to the issues raised by you:

1. We submit that all requirements for obtaining the TOR from MoEFCC were fulfilled. After obtaining TOR, Environment Impact Assessment has been completed and all conditions of TOR has been complied with by project proponent for the purpose of public hearing.
   Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure 1, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC". The file status is also available online at MoEFCC Forest Clearance. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report.

   As the project is proposed by M/s Adani Enterprises Limited in APSEZ land, Forest Clearance has already been applied for this land by APSEZ (erstwhile Mundra SEZ Ltd.). The requirement of OM dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance...". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR.

   At no stage there is any concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application by the project proponent. There is no deviation from the Section 8 (vi) of EIA Notification 2006 also.

   We do not offer any comment related to point 1(d) of your letter.

2. The PIL 17 of 2011 has been disposed by the High Court. The judgment is under review.

   Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. Google Map is provided in EIA Report (Schedule –C 1-6).

3. A complete list of archeological monuments in the state of Gujarat is available at http://asi.nic.in/asi_monu_alphalist_gujarat.asp. Further, a complete list of excavations is available at http://asi.nic.in/asi_excavations.asp. As on date, there is no Notified Archeological Site located within 10 km from the proposed project site.
4. The Committee and its report pertain to APSEZ. The points mentioned are not related to the proposed project activity therefore we do not offer any comment.
5. The issues raised are for APL and are not related to the proposed project activity therefore we do not offer any comment.
6. APSEZ has applied for diversion of forest land for industrial purpose. The forest diversion is under process. All the rules will be complied for forest diversion, as applicable. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.
7. The issues raised are for APSEZ and are not related to the proposed project activity therefore we do not offer any comment.
8. The Report on Coal Handling and its impacts are not relevant to the proposed project activity therefore we do not offer any comment.
9. The PIL 17 of 2011 has been disposed by the High Court. The judgment is under review.
10. Details on potential employment is mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.
11. The proposed site is outside CRZ and hence there is no requirement of Clearance under the CRZ Notification. The same is shown in Fig. 1.5 of EIA Report. Risk Analysis and Disaster Management Plan has been prepared to identify and address the natural disasters, which is covered in EIA Report.
12. There is no separate desalination plant proposed for the project. APSEZ will be supplying water for the proposed project from its approved desalination plant capacity. Therefore there will not be additional impact due to proposed project.
13. References of Adani and Tata Power Plants as well as west & south ports of APSEZ are mentioned in Table 1.1 of Chapter 1 of the EIA Report.
14. Comment being general in nature, we do not offer comment.
15. As a procedure, forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC. Adani foundation is working for Sustainable Livelihood in the surrounding villages through CSR projects.
16. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. Sulphuric Acid is a saleable product from this project. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Therefore no significant adverse impacts are envisaged.
17. No closure of river is envisaged in the proposed project.

સંદર્ભ: **AEL/Copper/Mundra/EC/PH/D-A-44**

શ્રી પ્રવિણસિંહ ભૂરૂભા ચૌહાણ
ગામઃ- સિરાચા
તાલુકોઃ- મુંદ્રા
જિલ્લોઃ- કચ્છ,ગુજરાત.

વિષયઃ- અદાણી એન્ટરપ્રાઈસિસ લિમિટેડ(AEL)ના કોપર રિફાઇનરી પ્રોજેકટ અંગેની લોકસુનાવણીમાંની આપની રજુઆતનો જવાબ.

માનનીય સાહેબ,,

અમે તમારી રજૂઆતની પ્રાપ્તિને સ્વીકારીએ છીએ અને તમારી ચિંતાઓની નોંધ લીધી છે. અમે તમને ખાતરી આપીએ છીએ કે પ્રોજેક્ટની કામગીરી શરૂ થતાં પહેલાં બધા પર્યાવરણીય સાવચેતીઓની વ્યવસ્થા કરવામાં આવશે. અમે પ્રદૂષણ નિયંત્રણ માટે આધુનિક ટેકનોલોજી પણ અપનાવીશું. આ પ્રોજેક્ટને ઝીરો લિક્વિડ ડિસ્ચાર્જ સાથે અમલમાં મૂકવામાં આવશે. પર્યાવરણીય અસર આકારણી હાથ ધરવામાં આવી છે અને તમામ પર્યાવરણીય પરિમાણો કાનૂની મર્યાદાની અંદર હશે. અમે તમારા દ્વારા ઉઠાવવામાં આવેલા મુદ્દાઓનો આ મુજબ જવાબ આપીએ છીએ:

1. કોપર પ્રોજેકટ તે આયાત કરેલ કોપર કોન્સનટ્રેટ પર આધાર રાખે છે, જે આપણા દેશમાં જરૂરી જથ્થામાં ઉપલબ્ધ નથી.વળી, તૈયાર થયેલ ઘણા ઉત્પાદનો દરિયાઈ માર્ગે મોકલવામાં આવશે. આ પરિબળો સાઇટની પસંદગી માટે ધ્યાનમાં લેવામાં આવેલા.બંદરની નજીક હોવાથી આ સાઇટ ફાયદાકારક છે. તમામ સૂચવાયેલા પ્રદૂષણ નિયંત્રણ પગલાં લઈ, પર્યાવરણના જોખમ અને અસરોનું શમન કરવામાં આવશે. પ્રોજેકટ ઝીરો લિક્વિડ ડિસ્ચાર્જપર આધારિત છે.દરિયા કિનારાના લોકેશનો પર આવા ઘણા પ્લાન્ટ આવેલા છે અને તેમના સંચાલનથી દરિયા કાંઠાની પરિસ્થિતી ઉપર કોઈ નોંધપાત્ર અસર થયેલ નથી.પ્રોજેકટ સાઇટનો એક ભાગ ફોરેસ્ટ જમીન છે, જેનો ઉપયોગ ત્યારેજ કરવામાં આવશે જ્યારે ફોરેસ્ટના ડાયવર્ઝનની આખરી મંજૂરી મળી જશે. ફોરેસ્ટકલીયરન્સ મંજૂર થતાં તેની તમામ પ્રક્રિયા અને શરતોનું પાલન કરવામાં આવશે.
2. આ પેરામાં અદાણી ગ્રુપે ઉલ્લંઘનો કરેલા છે તેવા આક્ષેપો કરવામાં આવેલા છે પણ તેનો કોઈ આધાર આપેલ નથી. ભૂતકાળમાં આવા આક્ષેપો અને કાનૂની દાવાઓ થયા હતા જે માનનીય કોર્ટો એ રદ કરેલા છે. ઉપસ્થિત કરેલા મુદ્દા સૂચિત પ્રોજેક્ટને સંબંધિત નથી અને આથી અમે કોઈ ટિપ્પણી આપતા

નથી. જરૂરી પરમીશનમળ્યા બાદ પર્યાવરણીય સંરક્ષણ માટેના પગલા લઈને જ પ્રોજેકટ કાર્યરત કરવામાં આવશે.

3. સૂચિત પ્રોજેક્ટ આંશિકનોટિફાઈડSEZમાં અને આંશિક ફોરેસ્ટ જમીનમાં ડાયવર્ઝન માટે એપ્લાઈડ કરેલ છે. નોટિફાઈડ SEZમાટે સર્વે નંબર્સ ફોર્મ-1 એપ્લિકેશનમાં સામેલ કરવામાં આવ્યા છે અને તેની વિગતો:APSEZ વિસ્તાર સીરાચા અને નવીનાળ ગામોમાં: સિરાચા ગામ. 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/પી, 142/પી, 143, 144/1, 144/2, 147/પી, 295/1 ભાગ , 295/2 (ફોરેસ્ટ જમીન), બિનસર્વે જમીન, જૂની એસીએલ અને માર્ગાંતરિત મુંદ્રા ફોરેસ્ટ જમીનનો ભાગ. નવીનાળ ગામ 223/પી, 224 /પી, 225/પી અને જૂની એસીએલ જેનો અંતિમ ઇઆઇએ અહેવાલમાં પણ સામેલ કરવામાં આવશે.
4. APSEZ એ યોગ્ય પરવાનગીઓ પ્રાપ્ત કર્યા પછી એઇએલની તરફેણમાં જમીન તબદીલ કરવા/ ફાળવવા સૈધ્ધાંતિક મંજૂરી આપી છે. પત્રની એક નકલ ઇઆઇએ અહેવાલની અનુસૂચિ - 3 માં આપવામાં આવી છે.
5. સૂચિત પ્રોજેક્ટ સંબંધિત જમીનની વિગતો ઉપરના ક્રમાંક 3 માં આપવામાં આવેલી છે.
6. સૂચિત પ્રોજેક્ટની જમીનનો ભાગ, 154.18 હેકટર નોટિફાઈડ SEZમાં છે. જાહેરનામાંની એક નકલ અંતિમ ઇઆઇએ રિપોર્ટમાં સામેલ કરવામાં આવશે.
7. સૂચિત પ્રોજેક્ટની જમીનનો ભાગ, 154.18 હેકટર નોટિફાઈડ SEZમાં છે.
8. સૂચિત પ્રોજેક્ટમાં નોટિફાઈડ SEZ વિસ્તાર અને ફોરેસ્ટની જમીનનો સમાવેશ થાય છે. નોટિફાઈડ SEZની એક નકલ ઉપરના મુદ્દા નં. 6 મુજબ છે. APSEZ એફોરેસ્ટ જમીનના ડાયવર્ઝન માટે અરજી કરેલ છે અને તે પ્રોસેસમાં છે. ઇઆઇએ રિપોર્ટના પ્રકરણ -2 માં જમીનની વિગતો આપવામાં આવી છે.
9. અમે તમારા ઓબ્ઝર્વેશન સાથે સંમત નથી. એઈએલે સાઇટ પર કોઈ પ્રવૃત્તિ શરૂ કરી નથી અને કોઈપણ જમીન પર કોઈ અતિક્રમણ કર્યું નથી.
10. હાલમાં, સૂચિત પ્રોજેક્ટ વિસ્તાર માટે SEZ ડીનોટીફીકેશનની કોઈ જરુરિયાત નથી.
11. વૈકલ્પિક સ્થળ વિશ્લેષણ હાથ ધરવામાં આવ્યું હતું. સ્થળ પસંદગીના માપદંડ અને વૈકલ્પિક સ્થળનો અભ્યાસ EIA રિપોર્ટના પ્રકરણ-5 માં વિગતવાર આપેલ છે
12. ફોરેસ્ટ જમીનમાં સુધારણાની કોઈ દરખાસ્ત નથી. ફોરેસ્ટની જમીનની ડાયવર્ઝનની દરખાસ્ત પ્રોસેસમાં છે. સૂચિત પ્રોજેક્ટ હેઠળની અન્ય જમીન નોટિફાઈડ SEZ વિસ્તાર છે.
13. ફોરેસ્ટની જમીનની વિગત ફોર્મ -1 (મૂળભૂત માહિતી, ક્રમ નં 9, 12, 21 અને 23) માં પણ દર્શાવવામાં આવી છે.
14. કંપનીએ ગ્રીન બેલ્ટ માટે 33% વિસ્તારનો પ્રસ્તાવ મૂક્યો છે. 102.38 હેકટર ફોરેસ્ટની જમીન, એકવાર ડાયવર્ઝન અને ફાળવણી થયા પછી, તે પ્રોજેક્ટ વિસ્તારનો ભાગ હશે. 256.58 હેક્ટરના કુલ પ્રોજેક્ટ

વિસ્તારના 33% માં ગ્રીન બેલ્ટ વિકસાવવામાં આવશે. ફોરેસ્ટ વિસ્તારમાં કોઈ ગેરકાયદેસર અતિક્રમણ કરવામાં આવ્યું નથી.

15. પૃષ્ઠ C3-16 ના નકશા મુજબ, પ્રોજેક્ટ સાઇટમાં સિરાચા રિઝર્વ ફોરેસ્ટનો ભાગ પણ સામેલ છે. યોગ્ય નકશો ઇઆઇએ અહેવાલમાં આપવામાં આવ્યો છે.
16. વન મંજૂરી હજી પણ કાર્યવાહી હેઠળ છે. આ વિગતો MoEF& CC (ફાઈલ નં. 8-04 / 2016-એફસી) ની વેબસાઇટ પર ઉપલબ્ધ છે.
17. ફોરેસ્ટ જમીન ડાયવર્ઝન કાર્યવાહી હેઠળ છે અને એકવાર મંજૂર થયા પછી, વન મંજૂરની તમામ શરતોનું પાલન કરવામાં આવશે.
18. ફોરેસ્ટ જમીન ડાયવર્ઝન કાર્યવાહી હેઠળ છે અને લાગુ થતી હોય તે પ્રમાણે ફોરેસ્ટ અધિકાર અધિનિયમની આવશ્યકતાઓનું પાલન કરવામાં આવશે.
19. તારીખ –અને - સુપ્રીમ કોર્ટમાં SLP28788/2016 અને ગુજરાત હાઇકોર્ટમાં ડબલ્યુપી (પીઆઈએલ) 12/2011ને સંબંધિત ઓર્ડરોથી રદ કરવામાં આવે છે. તેથી, કોઈ વિવાદ નથી.
20. સુનિતા નારાયણ કમિટીના અહેવાલના સંદર્ભમાં, APSEZ, 18 મી સપ્ટેમ્બર, 2015 ના તેમના અંતિમ હુકમ MoEF&CCના નિર્દેશો અનુસાર, પાલન કરે છે.
21. સૂચિત સાઇટના પશ્ચિમ ભાગમાં ધનેશ્વરી, મોસમી નદી વહે છે. ઇઆઇએ અહેવાલના પૃષ્ઠ C2-3 પરના પ્લાન્ટ લેઆઉટમાં દર્શાવ્યા મુજબ નદીના પ્રવાહને જાળવવામાં આવશે. પ્રોજેક્ટ સાઇટની આસપાસના 10 કીમી વિસ્તારમાં ઈમ્પેક્ટ એસેસમેન્ટ આવરી લેવામાં આવી છે અને તે જળાશયો (જો કોઈ હોય તો), સ્થાનિક રહેવાસીઓ અને ગામોનો સમાવેશ કરે છે. કોઈપણ ખાડીઓ બંધ કરવાની કોઈ દરખાસ્ત નથી.
22. ગુજરાત કોસ્ટલ ઝોન મેનેજમેન્ટ ઓથોરિટી માન્ય કોસ્ટલ ઝોન મેનેજમેન્ટ પ્લાનનો કસ્ટોડીયન છે. જોકે,MoEF&CC ની અધિકૃત એજન્સી દ્વારા તૈયાર કરાયેલ અધિકૃત સીઆરઝેડ નકશો સુપરઈમ્પોઝીંગ પ્રોજેક્ટ વિસ્તારને ઇઆઇએ અહેવાલના પ્રકરણ -3 જણાવવામાં આવ્યો છે.
23. જોડેલ સીઆરઝેડ નકશો નેશનલ સેન્ટર ફોર અર્થ સાયન્સ સ્ટડીઝ દ્વારા તૈયાર કરવામાં આવેલ છે અને ઇઆઇએ રિપોર્ટના પૃષ્ઠ C3-17 પર જોડેલ છે. અંતિમ ઇઆઇએ અહેવાલમાં વધુ સ્પષ્ટ નકલ સામેલ કરવામાં આવશે.
24. સૂચિત સાઇટ સીઆરઝેડની બહાર છે અને દક્ષિણ દિશામાં પ્રવર્તમાન મેંગ્રોવથી લઘુત્તમ અંતર 100 મીટરથી વધુ છે.
25. આ વિસ્તારના લોકોનું વ્યવસાયિક માળખું ઇઆઇએ અહેવાલના પૃષ્ઠ C3-65 પર દર્શાવવામાં આવ્યું છે. મુખ્ય કામદારો કુલ કામદારોના 90.57 ટકા છે. કાર્ય ભાગીદારીનો દર 56.36 ટકા છે. માછીમારી

પ્રવૃત્તિઓ પૈકીની એક છે. અભ્યાસ ક્ષેત્રમાં માછીમારોની સંખ્યા અંગેની વિગતોને અંતિમ ઇઆઇએ અહેવાલમાં સામેલ કરવામાં આવશે.

26. સૂચિત પ્રોજેક્ટને લીધે કોઈ માછીમારોને અસર થશે નહીં..
27. પગાડીયા માછીમારોની વિગતોનો અંતિમ ઈઆઇએ અહેવાલમાં સમાવેશ કરવામાં આવશે.
28. નોટિફાઈડ SEZ વિસ્તાર અને ડાયવર્ઝન માટે લાગુ કરવામાં આવેલી ફોરેસ્ટની જમીન પર પ્રોજેક્ટ વિકસાવવામાં આવશે. APSEZ એ નવીનાડ અને સિરાચાના માછીમારો માટે સમર્પિત આવવા જવાનો માર્ગ બનાવ્યો છે. સૂચિત પ્રોજેક્ટને કારણે માછીમારોના જવાના માર્ગો બંધ કરવામાં આવશે નહીં.
29. 102.38 હેક્ટર ફોરેસ્ટ જમીનના ડાયવર્ઝનમાં કોઈ પુનર્વસન સંકળાયેલ નથી. વનસ્પતિ અને પ્રાણીઓના અભ્યાસ EIA ના ભાગરૂપે કરવામાં આવેલા છે અને EIA રિપોર્ટમાં મેનેજમેન્ટ પ્લાન આપવામાં આવેલો છે. એક વખત ફોરેસ્ટકલીયરન્સ મળતાં,ફોરેસ્ટકલીયરન્સની તમામ શરતોનું,ફોરેસ્ટ જમીનના ડાયવર્ઝનની અસરોનું શમન કરવા માટે પાલન કરવામાં આવશે. તમામ કાર્યવાહી પૂરી થયા પછી અને MoEF&CCની મંજૂરી મળ્યા પછી ફોરેસ્ટડાયવર્ઝન માટે રાજ્ય સરકાર દ્વારા ભલામણ કરી શકાશે.
30. કોપર સ્લેગ અને ફોસ્ફોજીપ્સમના ઉત્પાદનના જથ્થાની વિગતો EIA રિપોર્ટમાં આપવામાં આવેલી છે. કોપર સ્લેગ બિલ્ડીંગ મટિરિયલ તરીકે(કોંક્રીટમાં અને તૈયાર મિક્સમાં સાથે નાખવા), રોડ બાંધકામ અને અને શૉટ બ્લાસ્ટિંગમાં વપરાય છે અને ફોસ્ફોજીપ્સમ સિમેન્ટ ઉત્પાદન, જીપ્સમ બોર્ડ ઉત્પાદન અને ખાતરમાં વપરાય છે.બંને મટિરિયલ સ્થાનિક અને વિદેશી બજારોમાં વેચવામાં આવશે.
31. જૈવવિવિધતા ક્ષેત્ર તરીકે નવીનાળ ફોરેસ્ટ પર કોઈ નોટીફીકેશન સૂચિત કરવામાં આવ્યું નથી.
32. કાયદાકીય સત્તાવાળાઓ દ્વારા વહન ક્ષમતા અભ્યાસો હાથ ધરવામાં આવ્યા છે. આ વિસ્તાર માટે કોઈ પણ વહન ક્ષમતા અભ્યાસો હાથ ધરવામાં આવ્યા હોય તેની અમને જાણ નથી. MoEF&CC દ્વારા મંજૂર કરાયેલા TOR મુજબ અભ્યાસના વિસ્તાર માટે EIA અભ્યાસો હાથ ધરવામાં આવ્યા છે.
33. સૂચિત કોપર પ્રોજેક્ટના કારણે સૂચિત અસર દર્શાવવા માટે બેઝલાઇન ડેટા પર ઉમેરવામાં આવી છે. પ્રોજેક્ટના સંચાલન પછીની પૂર્વાનુમાનિત અસરો હવા અને પાણી માટે નિર્ધારિત ધોરણોમાં જણાય છે અને તેથી તે સ્વાસ્થ્ય, કૃષિ અને પશુપાલન પર કોઈ નોંધપાત્ર અસર થવાની સંભાવના નથી. ઇઆઇએ રિપોર્ટના પ્રકરણ 4 માં વિગતો ઉપલબ્ધ છે.
34. સૂચિત સાઇટના 10 કિ.મી.ની વિસ્તારના તમામ ગ્રામ પંચાયતો ગુજરાતીમાં સારાંશ મૂકવામાં આવેલ છે. ઉપરાંત 7 સ્થળો - જિલ્લા કલેકટર,ભુજ,જિલ્લો કચ્છ, જીલ્લા વિકાસ કચેરી, ભુજ,જિલ્લો કચ્છ, જિલ્લા ઉદ્યોગ કેન્દ્ર, ભુજ,જિલ્લો કચ્છ, તાલુકા વિકાસ કચેરી, મુંદ્રા, જિલ્લો કચ્છ, તાલુકા વિકાસ કચેરી, માંડવી, જિલ્લો કચ્છ, મુખ્ય વન સંરક્ષક, પર્યાવરણ, વન અને હવામાન પરિવર્તન મંત્રાલય, ભારત સરકાર, પ્રાદેશિક કચેરી (પશ્ચિમ ઝોન), કેન્દ્રીય પર્યાવરણ ભવન, ઇ -5, એરેરા કોલોની, લિંક રોડ -3,

Subject: **Response to your representation in Public Hearing for Copper Refinery Project of Adani Enterprises Limited (AEL).**

Dear Sir,
We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:

1. The Copper Project is based on the import of Copper Concentrate, which is not available in our country in required quantity. Also, most of the finished products will be dispatched through sea route. These factors were considered as site selection criteria. The site is advantageous in terms of proximity to the port. With all the pollution control measures proposed, the environmental risks and impacts will be mitigated. The project is also based on zero liquid discharge. There are many such plants on coastal locations and have been operating without any significant impact on the coastal ecology. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. The entire process and conditions of forest clearance will be complied, once obtained.

2. The para has alleged Adani Group of violations that have not been substantiated. There have been such allegations and legal suits in the past which have been dismissed by the Hon'ble Courts. The points raised do not pertain to proposed project and therefore we do not offer any comments. However, project will be implemented in line with the permissions granted and by implementing environmental safeguards.

3. The proposed project is located partly in notified SEZ and partly in forest land applied for diversion. The Survey Numbers for notified SEZ have been incorporated in the Form-1 application and its details are: *APSEZ area in Siracha and Navinal villages. Siracha village 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/P, 142/P, 143, 144/1, 144/2, 147/P, 295/1 part, 295/2 (forest land), unsurveyed land, old ACL and diverted Mundra forest land part. Navinal Village 223/P, 224/P, 225/P and old ACL.* Same will also be included in the final EIA Report.

4. APSEZ has given in principle approval to transfer/ allot the land in favour of AEL after obtaining due permissions. A copy of letter is provided in the Annexure-III of the EIA report.

5. The land details related to proposed project are provided in the Point No. 3 above.

6. Part of the proposed project land, 154.18 ha is within the Notified SEZ. A copy of notification will be included in the final EIA Report.

7. Part of the proposed project land, 154.18 ha is within the Notified SEZ.

8. Proposed project includes notified SEZ area and the forest land. A copy of notified SEZ area is as per point no. 6 above. APSEZ has applied for forest land diversion and same is under progress. Details of land are provided in the chapter-2 of EIA the report.

9. We do not agree with your observation. AEL has not started any activity at the site and there is no encroachment on any land.

10. At the moment, there is no requirement of SEZ denotification for the proposed project area.

11. Alternative site analysis was carried out. The site selection criteria and the study of alternative sites is detailed in Chapter-5 of the EIA Report.

12. There is no proposal of reclamation in Forest Land. The proposal for diversion of forest land is under process. Other land under the proposed project is notified SEZ area.

13. The details of Forest Land are also shown in Form-I (Basic Information, Sl. Nos. 9, 12, 21 and 23).

14. Company has proposed 33% area for Green Belt. The 102.38 ha forest land, once diverted and allotted, will be part of the project area. The Green Belt will be developed in 33% of the total project area of 256.58 ha. There is no illegal encroachment of forest area.

15. As per the map on Page C3-16, the project site also includes part of the Siracha Reserve Forest. Correct map is provided in the EIA report.

16. The Forest Clearance is still under process. The details are available on the website of MoEF& CC (File No. 8-04/2016-FC).

17. The Forest Land diversion is under process and all the conditions of the forest clearance will be complied once granted.

18. The Forest Land diversion is under process and the requirements of Forest Rights Act, as applicable, will be complied with.

19. SLP28788/2016 in the Supreme Court and WP (PIL) 12/2011 at Gujarat High Court are dismissed vide respective orders dated - and -. Therefore, there is no dispute.

20. In the matter of SunitaNarain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015.

21. Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. Impact Assessment has been carried out covering 10 km area surrounding the project site and it includes water bodies (if any), local residents and villages. There is no proposal of closing any creeks.

22. Gujarat Coastal Zone Management Authority is the custodian of approved Coastal Zone Management Plan. However, authorized CRZ map superimposing project area prepared by authorized agency of MoEF&CC is provided in the Chapter-3 of the EIA report.

23. The CRZ Map enclosed is prepared by National Centre for Earth Science Studies and enclosed on Page C3-17 of EIA Report. More clear copy will be included in the final EIA report.

24. The proposed site is outside CRZ and the minimum distance from existing Mangrove in southern direction is more than 100 m.

25. The occupational structure of the people in the area is detailed on Page C3-65 of the EIA Report. The main workers account for 90.57% of the total workers. The Work Participation Rate is 56.36%. Fishing is one of the activities.Details on number of fishermen in the study area will be included in the final EIA report.

26. No fishermen will be impacted due to proposed project.

27. The details on pagadiya fisher folk will be included in the final EIA Report.

28. Project will be developed over notified SEZ area and forest land applied for diversion. APSEZ has created dedicated approach road for fishermen of Navinal and Siracha. Fishermen access roads will not be closed due to proposed project.

29. There is no resettlement involved in the diversion of 102.38 ha of forest land. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.

30. Details on production quantity of copper slag and phosphogypsum is provided in the EIA report. Copper Slag can be used as a building material (Added in Concrete as well as in ready mix), Road Construction & shot blasting and Phosphogypsum is used for

Cement manufacturing, gypsum board Manufacturing andfertilizer. Both the materials will be sold in domestic and overseas market.

31. There is no notification on Navinal Forest being notified as Biodiversity Area.

32. Carrying Capacity Studies are undertaken by Statutory Authorities. We are not aware of any Carrying Capacity Studies carried out for this area. EIA studies have been conducted for the study area as per TOR granted by MoEF&CC.

33. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for Air and Water and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.

34. The Gujarati Summary was placed at all the Gram Panchayats within 10 km of the proposed site in addition to the 7 places- The District Collector, Bhuj, District Kutch, District Development Office, Bhuj, District Kutch, District Industry Centre, Bhuj, District Kutch, Taluka Development Office, Mundra, District Kutch, Taluka Development Office, Mandvi, District Kutch, The Chief Conservator of Forest, Ministry of Environment, Forests and Climate Change Government of India, Regional Office (West Zone), KendriyaParyavaranBhavan, E-5, Arera Colony, Link Road -3, Ravishankar Nagar, Bhopal 462016 and Regional Office, Kutch (East), Gujarat Pollution Control Board, Room No. 215-216, Second Floor, Kandla Port Trust, Admn Building, Sector 08, Gandhidham, Kutch.

35. This is outside the scope of the EIA Report for the proposed project.

36. Power Transmission Lines will be retained with some deviation.

37. 8 persons are proposed as a part of Environment Cell alone. The Environment Management is not only limited to these 8 persons, but it includes the operations carried out by various departments for the management of environment.

38. Adani Enterprises Limited will have its own Environment Management Team headed by an environmentalist, capable of handling all the environmental and pollution issues of the Copper Project. Other issues are outside the scope of the EIA Report for the proposed project.

39. The area under SLF is provided in the Pre-feasibility Report, which is a part of the TOR Application.

40. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are

proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.

41. Our reply is same as point no. 40.

42. The question does not pertain to us, therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to the permissions granted.

43. Proposed project will have zero liquid discharge facility and no treated water will be sent to the sea.

44. There is no proposal of tie up with any CETP. AEL will have its own ETP for treatment of wastewater. Details are provided in the EIA report.

45. The Flow Diagram and the Capacities are provided in the EIA Report.Further planning will be carried out during detailed engineering.

46. EIA report includes details on demographic information about the study area. The Executive Summary of the EIA Report was prepared in local language and made available to all the panchayats within 10 km radius of the proposed site. The Executive Summary in local language was also made available at 5 Government Offices along with EIA Report. Adani foundation is working in the area of community health covering all the villages in the surrounding.

47. This is outside the scope of the EIA Report for the proposed project. However, local employment will be provided for proposed project based on eligibility and details will be provided in the final EIA report.

48. This is outside the scope of the EIA Report for the proposed project.

49. The EIA Report has been prepared as per the Terms of Reference issued by the Ministry of Environment, Forests and Climate Change.

We assure you that all the environmental safeguards will be provided during implementation and operation of the project.

Thanking you,

Linking over 1br
Aadhaar may cos

TIMES NEWS NETWORK

New Delhi: Over one billion mobile phone numbers will have to be linked their owners' Aadhaar account in the next one year, which telecom companies say may cost as much as Rs 2,500 crore.

"We have been asked by the telecom ministry to start the process of linking mobile numbers/subscribers with their aadhar account. Mobile companies will start the process soon," Rajan Mathews, director-general of Cellular Operators Association of India (COAI), told

Ahead of GST launc
rejigs indirect tax

TIMES NEWS NETWORK

New Delhi: As it prepares to launch the Goods and Services Tax (GST) by July 1, the finance ministry on Saturday approved the re-organisation of the indirect tax wing renaming the Central Board of Excise and Customs (CBEC) as the Central Board of Indirect Taxes and Customs (CBIC).

The decision will be sent for legislative approval.

The existing formations of central excise and service tax under the CBEC have been re-organised to implement and enforce the provisions of the proposed GST.

The changes were approved by finance minister

The Central Board of Excise and Customs (CBEC) was renamed as the Central Board of Indirect Taxes and Customs (CBIC). FM Arun Jaitley approved the changes

Bajaj ends alliance with Kawasaki

Satyanarayan.Iyer
@timesgroup.com

Pune: Bajaj Auto on Saturday said it will end its 8-year-old 'sales and services' partnership with Japanese automaker Kawasaki in India from April 1, 2017.

The company did not specify the reason for terminating the partnership, but said "the two have mutually and amicably decided to separate in India." It appears though, from the sales figures, that Kawasaki was not able to sell enough units in the country.

Kawasaki motorcycles in India were sold through the KTM dealerships (earlier Probiking network). Bajaj entered into a partnership with KTM to sell the latter's motorcycles in the country.

KTM has over 300 dealerships in the country. However, it is not clear through how many of these dealerships, Kawasaki sells it's units. Bajaj Auto said that it intends to focus more on the KTM brand, which, it said, has seen a compounded growth rate of 48% since 2012. Kawasaki paid a share of its profit to Bajaj Auto to use its dealerships. "Profit numbers are confidential," Amit Nandi, president, Probiking said.

"The Probiking network has sold about 6,500 Kawasaki motorcycles in India since 2009, whereas it sold over 1,00,000 KTM motorcycles since 2012," said Nandi.

TABLE OF CONTENTS

Sr. No.	Committee Observations	Page Nos.
1	According to the EIA report, the land requirement for the project is 256.58 Ha. Out of 256.58 Ha, 154.19 Ha is APSEZ area and 102.39 Ha is a Forest land. The land use conversion plan of 154.19 Ha for industrial purpose has not been obtained from the Competent Authority concerned. Further, PP has obtained stage I forest land diversion approval for 1576.81 ha in the name of M/s. Adani Ports and SEZ Limited. The factual agreement between M/s. Adani Enterprises Limited and M/s. Adani Ports and SEZ Limited for the utilization of 102.39 Ha is a Forest land is not clear.	1
2	CRZ map inter-alia including demarcation of HTL/LTL/CRZ land classification along with super imposition of plant site through competent agencies has not been submitted.	45
3	Source of copper ore concentrate, characteristics, mode of transportation from source to plant site, confirmed ore linkage document has not been submitted.	46
4	Water consumption of 10 LTPA Copper smelter is 32790 KLD whereas the water requirement for existing 4.5 LTPA copper smelter unit is only 10,000 KLD. Hence, water requirement for the proposed plant has to be reworked out.	65
5	According to the EIA records, Dhaneshwari river is passing through the project site and the mangrove reserve forest is existing within the project site. Quantification of these mangroves and conservation measures for mangroves and the river stream has not been submitted.	69
6	Storage arrangements made for the raw materials are found to be not adequate. Open storage of raw materials such as coal, limestone etc., shall be avoided.	158
7	Sulfur balance of the copper smelter unit has not been submitted.	161
8	Copper slag disposal site co-ordinates, concrete mode of utilization, maximum time frame envisaged for the storage at the disposal yard i.e., one month (or) 15 days has not been submitted.	162
9	Phospo-gypsum disposal site co-ordinates, concrete mode of utilization, maximum time frame envisaged for the storage at the disposal yard i.e., one month (or) 15 days has not been submitted.	184
10	Lining details for Phospo-gypsum disposal yard, leachate collection system envisaged and details of piezo-well installation has not been made available.	190
11	Secured land fill site co-ordinates, lining details, leachate collection system envisaged and details of piezo-well installation has not been made available.	205
12	Baseline health status of the people living in the study area of the project site has not been collected.	223
13	Details regarding disposal of arsenic bearing sludge has not been submitted.	268
14	Mercury in ambient air has not been monitored.	271
15	Conservation plan prepared for the Schedule-I species is not meeting the requirement of the conservation of the species that are identified. Therefore, the plan shall be revised considering the requirements of the conservation of the species identified and shall be approved by the competent authority concerned.	276
16	Collection of runoff water from the raw material storage area, slag and gypsum storage yard and its treatment has not been submitted.	277
17	Study on installation of rain water harvesting structure based on annual rain fall pattern and details regarding amount of water to be conserved has not made available.	279
18	Impact on hydro geology regime of the project site has not submitted.	280

19	Occupational health assessment envisaged for the employees and workers has not been submitted.	340
20	As per the Public hearing proceedings, it is noted that there are strong oppositions from the stake holders against the installation of copper smelter unit. Consolidated list of point- wise issues raised and response provided along with action plan for implementation has not been submitted.	398
21	The Chapter-5 consists of only listing of alternative technologies. The committee opined that the PP shall select out of alternative technologies available, based on the selection of the technology, the impact prediction shall be made and mitigation measures shall be proposed.	440
22	Quantitative representation of mitigation measures was not presented.	448
23	Revised water balance shall be submitted.	451
24	HIRA shall be prepared for worst case scenario	453
25	Management of white shall be spelled out	463
26	Material balance shall be revised.	465
27	The involvement of geological expert shall be provided.	471
28	The compliance of specific conditions of the environmental clearance of the SEZ shall be provided.	472
29	The reply to TOR point No. (4) is not proper.	918
30	The data retrieved from the LULC studies shall be utilized for the prediction of impacts and mitigation measures.	922
31	The Air Quality modeling studies shall be re-worked out including the mercury and keeping the mixing height in view.	924
32	The Environmental Policy of the Organization is not meeting the requirements given in ToR Point No. 9(i), 9(ii), 9(iii), 9(iv).	939
33	The CER shall be calculated on the slab rates as per the Office memorandum issued on 1st May, 2018.	944

2077

Summary of Responses to ADS by MoEF&CC

The pointwise responses/ replies for all Additional Details Sought (ADS) in the EAC (Industry-1) meeting held at Ministry of Environment, Forest & Climate Change dated 10-11th January 2019 is provided hereunder along with the applicable supporting documents and annexures.

After additional studies in-line with the ADS, total cost of Environmental Management Plan (EMP) has been revised from Rs. 1,044.40 Crore to Rs. 1,048.43 Crore.

Sr. No.	Description of Item	Capital Cost (Rs. in Crores)	Revised Capital Cost (Rs. in Crores)	Recurring Cost (Rs. in Crores)
1	Air pollution control system	639	639	2.5
2	Water pollution control system	360	360	1.5
3	Environmental management system: • Solid waste management system • Greenbelt development and others • Post project monitoring • Gas collection hood and energy conservation	45	45	1
4	Wildlife conservation and Mangrove Conservation Plan	0.40	4.43	0.53
Total		**1,044.40**	**1,048.43**	**5.53**

The CER budget has also been revised from Rs. 40 Crore to Rs.58 Crore. The budget allocations under CER has been derived from the issues raised during the PH, findings of Social Impact Assessment and Office Memorandum (OM) dated 1st May 2018.

EAC OBSERVATION NO.-1

2078

EAC OBSERVATION:

According to the EIA report, the land requirement for the project is 256.58 ha. Out of 256.58 ha, 154.19 ha is APSEZ area and 102.39 ha is a Forest land. The land use conversion plan of 154.19 ha for industrial purpose has not been obtained from the Competent Authority concerned. Further, PP has obtained stage I forest land diversion approval for 1576.81 ha in the name of M/s. Adani Ports and SEZ Limited. The factual agreement between M/s. Adani Enterprises Limited and M/s. Adani Ports and SEZ Limited (APSEZ) for the utilization of 102.39 Ha in a Forest land is not clear.

REPLY:

Total project area for the proposed Copper Refinery is 256.58 ha. APSEZ is in possession of 154.19 ha land and is already notified as SEZ via Gazette Notification of Ministry of Commerce and Industry dated 21st September 2016 and the same is attached as **Annexure-1(a)**.

The balance land of 102.39 ha for proposed Copper Refinery Project is part of Forest Clearance (FC) proposal no- F.No.: 8-04/2016-FC for diversion of 1576.81 ha of forest land applied by M/s APSEZ. This FC proposal has been accorded stage-1 "In-principle" approval vide letter dated 16th November 2018, under Section-2 of the Forest (Conservation) Act, 1980 in favour of APSEZL for the development of Special Economic Zone (SEZ) and Industrial Park. Forest Clearance (FC) Stage-I, letter dated: 16th November 2019 is attached as **Annexure-1(b).**

The FAC committee recommended Forest land diversion for the proposed land use of 1576.81 ha which includes 125 ha land for the proposed Copper project during the meeting dated 25th January 2018. Minutes of the Meeting is attached as an **Annexure-1(c).**

There is factual agreement through a MoU **(Annexure-1(d))** dated 14th March 2019 between APSEZ and AEL which reads as " APSEZ will make available to AEL 256.58 ha of land on long term lease basis. Out of the total requirement of 256.58 ha land, currently APSEZ is in possession of 154.19 ha of land which can be readily made available for the project. The balance land of 102.39 ha is under forest diversion process and will be handed over to the project once APSEZ receives the possession of the land." The complete details of land parcels is available as part of the MoU.

आलोक वर्धन चतुर्वेदी, अपर सचिव

MINISTRY OF COMMERCE AND INDUSTRY

(Department of Commerce)

NOTIFICATION

New Delhi, the 21st September, 2016

S.O. 3029(E).—WHEREAS, the Central Government had notified/de-notified the Special Economic Zone named M/s. Mundra Port and Special Economic Zone Limited at Mundra in the State of Gujarat under the following notifications of the Government of India in the Ministry of Commerce and Industry (Ministry of Commerce), namely:-

(1) S.O. number 1365 (E) dated 27th May, 2009;

(2) S.O. number 583 (E) dated 26th March, 2012;

(3) S.O. number 1443 (E) dated 31st May, 2013;

(4) S.O. number 3379 (E) dated 11th December, 2015;

AND, WHEREAS, the name of the SEZ was changed from M/s. Mundra Port and Special Economic Zone Limited (MPSEZL) to M/s. Adani Ports and Special Economic Zone Limited vide approval letter No. F.1/15/2011-SEZ dated 27th March, 2012;

AND, WHEREAS, the Central Government has decided to consolidate all the Special Economic Zones notified vide S.O. number 1365 (E) dated 27th May, 2009; S.O. number 583 (E) dated 26th March, 2012; S.O. number 1443 (E) dated 31st May, 2013; S.O. number 3379 (E) dated 11th December, 2015 referred in preceding paragraph for administrative convenience and without affecting rights obligations and fiscal benefits of the Developer(s);

NOW, THEREFORE, the Central Government, in exercise of the powers conferred by second proviso to sub-section (1) of section 4 of the Special Economic Zones Act, 2005 (28 of 2005) (hereinafter referred to as the said Act, read with rule 8 of the Special Economic Zones Rules, 2006, and in supersession of the notification number S.O. number 1365 (E) dated 27th May, 2009; S.O. number 583 (E) dated 26th March, 2012; S.O. number 1443 (E) dated 31st May, 2013; S.O. number 3379 (E) dated 11th December, 2015, referred to the first paragraph, except as respects things done or omitted to be done for such supersession, the Central Government on being satisfied that the requirements under sub-section (8) of section 3 of the said Act and other related requirements are fulfilled, hereby consolidates the Special Economic Zones mentioned in the notifications referred to the first paragraph, and re-notifies following areas comprising following survey numbers given in the table below as a Special Economic Zone, namely:

TABLE

A (Multi Product)

Dated: 16th November, 2018

To,

The Principal Secretary (Forests),
Department of Forests & Environment,
Government of Gujarat,
Gandhi Nagar.

Sub: Diversion of 1576.81 ha Reserved Forest Land in favour of Adani Ports and Special Economic Zone Ltd. (APSEZL) for the development of Special Economic Zone (SEZ) and Industrial Park at Village – Siracha, Navinal, Dhrub, Mundra, Baroi, Gorasama, Luni, Bhadreshwar, Tehsil Mundra, under Forest Division and District Kutch, Gujarat (Online Proposal No. FP/GJ/IND/17613/2004):- Reg.

Sir,

I am directed to refer to the APCCF (Land Management) and Nodal Officer, (FCA), Govt. of Gujarat letter No. FCA-1014/10-11/14/S.F-66/F dated 21.01.2016 for seeking prior approval of Central Government under Section-2 of the Forest (Conservation) Act, 1980. The proposal has been examined by the Forest Advisory Committee (FAC) constituted by the Central Government under Section-3 of the aforesaid Act.

2. After careful consideration of the proposal of the State Government of Gujarat and on the basis of the recommendations of the Forest Advisory Committee (FAC), the Central Government hereby agrees to accord *"In-principle"* approval under Section-2 of the Forest (Conservation) Act, 1980 for diversion of 1576.81 ha Reserved Forest Land in favour of Adani Ports and Special Economic Zone Ltd. (APSEZL) for the development of Special Economic Zone (SEZ) and Industrial Park at Village – Siracha, Navinal, Dhrub, Mundra, Baroi, Gorasama, Luni, Bhadreshwar, Tehsil Mundra, under Forest Division and District Kutch, Gujarat, subject to the following conditions:-

(i) Legal status of the diverted forest land shall remain unchanged;

(ii) *The entire forest area being diverted, should not be cleared off the vegetation in one go after diversion. The UA may clear vegetation for the purpose of basic/essential infrastructure to be developed in the SEZ. Thereafter, as and when a specific project / industry is to come up in the SEZ, the corresponding area shall be marked on the ground and cleared off vegetation. Till then the remaining areas shall be maintained as green cover. It shall be ensured that the lease agreement is made within six months of such clearing. A detailed land use for the marked area, on which clearing of vegetation is proposed shall be submitted to the Regional Office of MoEF&CC before start of work on the area, for information. The Regional Office of MoEF&CC shall ensure that the user agency carries out the work which is in conformity with the broad land use submitted by it. It shall be ensured that minimum number of trees are cleared. The user agency shall explore the possibility of trees of 10 cm dia at breast height and above, proposed for felling/clearing are translocated to suitable location within or outside the SEZ in consultation with State Forest department;*

2096

(iii) Felling of tress on the forest land being diverted shall be reduced to the bare minimum and the trees should be felled under strict supervision of the State Forest Department;

(iv) *The diverted forest land shall not be proposed to be utilized for Golf Course, Beach Resort, Park or Residential purposes, or any other activity prohibited by FCA 1980, FC Rules and/or guidelines made there under*

(v) *The diverted forest land shall not be used for the construction/expansion of any private Aerodrome. The forest land may be considered, in future on merits, in case of commercial Airport is developed with the approval of DGCA.*

(vi) *The detailed existing land use with maps of all forest land 2008.41 ha (1840ha + 168.41 ha) for which the approval was granted vide letter dated 30.09.2009 and details of complete land use including forest land for the existing private Aerodrome and power plants within the SEZ may be provided for information;*

(vii) *Forest areas proposed within of Mundra survey no. 141/P, Baroi survey no. 207/P, Goversama survey no. 52/P, Luni survey no. 468/P and Bhadreswar survey no. 733/P are having sea front. 100mt shelter belt/green belt in above villages be included in the Master plan of the SEZ, excluding stretches where use of water front is inevitable;*

(viii) *All the conditions as recommended by the Chief Wildlife Warden shall be complied with the User Agency;*

(ix) *The State Government shall clarify whether any non-forest land situated in and around the SEZ but not forming part of the SEZ at present, can be acquired by/allotted to the APSEZ before Stage-II approval;*

(x) *If 683 ha land of GMB or any other non-forest land is allotted for this SEZ, then the equivalent forest land shall be reduced from the forest land diverted/being diverted for the SEZ;*

(xi) *The State Government and the UA shall make effort to include 122 ha of non-forest land in village Jarapara in the SEZ. Accordingly, it is recommended that 122 ha of forest land in Bhadreswar Block shall be maintained as green belt at the cost of UA;*

(xii) *State government will provide details of lease period, terms and conditions on which the forest land is proposed to be diverted in favour of the Use Agency;*

(xiii) *All other conditions imposed in the approval granted for diversion of 2008.41 ha (1840ha + 168.41 ha) forest land on 30.09.2009 shall be complied;*

(xiv) *Only site-specific activities, permissible under the Rules and guidelines framed under the FC Act, shall be taken up in the forest land to be diverted;*

(xv) *The recommendation of the FAC is subject to the condition that in case of conflicts, the provisions of FC Act, 1980, shall prevail over those of SEZ Act 2005;*

(xvi) *All other conditions/recommendations made by FAC on this proposal in its meeting on 25.01.2018, not in conflict with the recommendation of FAC on 20.09.2018 shall remain unchanged.*

(xvii) *The User agency shall identify suitable land for Compensatory Afforestation over double the forest area being diverted. The land shall be mutated in the name of State Forest Department before the Stage-II approval;*

(xviii) *The User Agency shall deposit in the designated account the estimated amount towards compensatory afforestation to be carrying out by the State Forest Department;*

(xix) The Compensatory Afforestation shall be done over double non-forest land (NFL) i.e *3154 ha* to the forest area proposed to be diverted, as per the recommendation of Government of Gujarat, vide its GR No. FCA-1013/11-10/SF-24/F, dt 12.06.2015. The Compensatory Afforestation shall be done within a period of three years with effect from the date of issue of Stage-II clearance and maintained thereafter in accordance with the approved plan in consultation with the State Forest Department at the cost of the User Agency. CA at rate of 1000 saplings per hectares shall be planted over *3154.00* ha.

(31,54,000 plants). If this is not possible to plant these many seedlings in the identified NFL, the balance seedlings will be planted in degraded forest land as per the prescriptions of the Working Plan at the cost of the User agency. In such case CA cost will be revised and duly approved by competent authority and will be deposited online in the Adhoc-CAMPA account of the state concerned;

(xx) The User agency shall identify and mutate in the name of State Forest Department of Government of Gujarat, 3154 ha of suitable non-forest land for CA adjacent to notified Forest for raising Compensatory Afforestation (CA) shall be notified as reserved Forest under Section-4 or Protected Forest under Section-29 of the Indian Forest Act, 1927 or under the relevant Section(s) of the local Forest Act. The Nodal officer must report compliance within a period of 6 month from the date of grant of final approval and send a copy of the notification declaring the non-forest land under Section 4 or Section 29 of the Indian Forest Act, 1927, or under the relevant section of the local Forest Act as the case may be, to this Ministry for information and record;

(xxi) The State Government shall submit a certificate, that site for CA is suitable and free from all encroachments and other encumbrances, under the signature not below the rank of Nodal Officer (FCA) in the State Government;

(xxii) The land identified for the purpose of CA shall be clearly depicted on a Survey of India toposheet of 1:50,000 scale;

(xxiii) *The Compensatory Afforestation land shall be surveyed at the cost of User Agency and the User Agency shall erect pillars and barbed wire fencing or trench under the consultation of CCF, Kutch Circle;*

(xxiv) The User Agency shall deposit the cost of raising and maintaining the compensatory afforestation at the current wage rate in the account of Adhoc-CAMPA of the state concerned through online e-portal only. The scheme may include appropriate provision for anticipated cost increase for works scheduled for subsequent years;

(xxv) The User Agency shall provide additionally 25% of the CA cost towards Soil and Moisture Conservation measures in the proposed CA area as per site requirement and the said amount shall be deposit in the account of Adhoc-CAMPA of the state concerned through online e-portal only;

(xxvi) The User Agency shall deposit, the Net Present Value (NPV) of the forest land being diverted under this proposal, as per the orders of the Hon'ble Supreme Court of India dated 28.03.2008, 24.04.2008 and 09.05.2008 in Writ Petition (Civil) No. 202/1995 and the guidelines issued by this Ministry vide its letter No. 5-3/2007-FC dated 05.02.2009. The requisite funds shall be deposited in the account of Adhoc-CAMPA of the state concerned through online e-portal only;

(xxvii) At the time of payment on the Net Present Value (NPV) at the then prevailing rate, the User Agency shall furnish an undertaking to pay the additional amount of NPV, if so determined, as per the final decision of the Hon'ble Supreme Court of India;

(xxviii) The user agency should ensure that the compensatory levies (CA cost, NPV etc.) are deposited through challan generated online on web portal and deposited in appropriate bank online only. Amount deposited through other modes will not be accepted as compliance of Stage-I clearance;

2098

(xxix) The forest clearance will be for a period co-terminus with the lease period specified in the lease agreement. The State Government will submit the lease agreement documents specified in the lease agreement;

(xxx) The User agency shall obtain the Environment Clearance as per the provisions of the Environment (Protection) Act, 1986, if required;

(xxxi) *Complete compliance of CRZ regulations shall be ensured;*

(xxxii) Layout plan of the proposal shall not be changed without the prior approval of the Central Government;

(xxxiii) The User Agency will abide by the applicable recommendations of the State Government including State Forest/Wildlife Departments;

(xxxiv) State Government shall complete settlement of rights, in terms of the Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006, if any, on the forest land to be diverted and submit the documentary evidence as prescribed by this Ministry in its letter No. 11-9/1998-FC (pt.) dated 03.08.2009 read with 05.07.2013 in support thereof;

(xxxv) The user agency shall provide alternate fuels (LPG) to the labourers and the staff working at the site so as to avoid any damage and pressure on the nearby forest areas;

(xxxvi) Boundary of the forest land proposed to be diverted shall be demarcated on ground at the project cost, by erecting four feet high reinforced cement concrete pillars, each inscribed with its serial number, forward and back bearing, distance from pillar to pillar and GPS co-ordinates;

(xxxvii) Any other condition that the concerned Regional Office of this Ministry may stipulate, from time to time, in the interest of conservation, protection and development of forests & wildlife;

(xxxviii) The user agency shall submit the annual self-compliance report in respect of the above conditions to the State Government, concerned Regional Office and this Ministry by the end of March of every year regularly; and

(xxxix) The user agency and the State Government shall ensure compliance to provisions of the all Acts, Rules, Regulations, Guidelines, relevant Hon'ble Court Order (s) and National Green Tribunal (NGT) Order(s), if any, pertaining to this project for the time being in force, as applicable to the project.

3. After receipt of the report on compliance to the conditions stipulated in the paragraph-2 above, from the State Government of Gujarat, Final/Stage-II approval for diversion of the proposed forest land under Section-2 of the Forest (Conservation) Act, 1980 will be issued by this Ministry. Diversion of the proposed forest land to the user agency shall not be effected by the State Government of Gujarat, till Final/Stage-II approval is issued by this Ministry.

Yours faithfully,

16/11/2098

(Shrawan Kumar Verma)
Dy. Inspector General of Forests (FC)

ANNEXURE-1(c)

2100

d) 25% of CA cost will be deposited extra by the user agency for soil and moisture conservation (SMC) activities on the CA land.
e) Complete compliance of FRA will be done and certificate on prescribed form will be submitted along with the compliance report.

Agenda No. 3

F. No. 8-04/2016-FC

Sub: Diversion of 1576.81 ha of Reserved forest land for the development of Special Economic Zone and Industrial Park at Village - Siracha, Navinal, Dhrub, Mundra, Baroi, Gorasama, Luni, Bhadreshwar, Ta. Mundra, Dist. Kutch in favour of Adnai Group, Mundra Port and Special Economic Zone Ltd., Ahmedabad.

The above stated agenda item was considered by FAC on 25.1.18 and details available on file were also considered and the FAC observed as follows

1. The present proposal is for diversion of **1576.81 ha** of reserved forest for non-forestry purpose for the development of port based multipurpose SEZ by Adani Ports and Special Economic Zone Limited (APSEZL) in Mundra coast in Kutch district of Gujarat.

2. Adani Ports and Special Economic Zone Limited (APSEZ) is a private multi-port operator. The company was earlier known as Mundra Port & Special Economic Zone Ltd (MPSEZ) and it changed its name to "Adani Ports and Special Economic Zone Limited (APSEZL)" on January 6, 2012.

3. **Adani Ports and Special Economic Zone Limited (APSEZL):** In 1994, the Gujarat Maritime Board (GMB) approved setting up a captive jetty at the Port of Mundra. The Adani group initiated its activities in Mundra in 1994-95. In 1998, a joint sector company, the Gujarat Adani Port Ltd. (GAPL), was incorporated. In 2001, the Port of Mundra signed a concession agreement with GMB for development, operation, and maintenance of the port at Mundra.
4. According to the State Government, the Ministry of Commerce and Industry, Government of India granted in principle permission for total 10000 ha of Mudra Special Economic Zone (MSEZ) in 2001 under State Government's Exim Policy 2000. Under SEZ Act 2005 a Special Economic Zone (SEZ) at Mundra was notified in 2006. The Mundra Special Economic Zone was merged with GAPL of Adani Group. The combined company was renamed 'Mundra Port and Special Economic Zone Limited (MPSEZL)' under Adani Group.

5. **Forest Clearances granted to MPSEZL:**

   a. On 26th June 1998 the proposal for 2400 ha of Forest land for M/s Adani Chemicals was submitted by the State Government which was rejected by Forest Advisory

210 |

Committee (FAC) on the ground that the area contains 19.42 lakh mangrove trees. On 17th July 2002, FAC asked for a fresh proposal to be submitted due to high impacts of the project and its location in an ecologically fragile region. On 26th September 2002 FAC recommends 1840 ha of forest land out of the revised proposal for 1850 ha. 10 ha of interspersed mangrove forests was kept out. However, the proposal was granted in principle approval on 13th May 2004 by MoEF to M/s Adani Chemicals for diversion of **168.41 ha** of forest land in only one consolidated patch in survey area number 169/36 for salt washery and desalination plant for diversion of **1840 ha** of forestland for high purity salt works. The EC was also granted to Adani Chemicals Limited for the establishment of high purity salt works, involving an area of **2946.22 ha**, of this **1850 ha** is forestland, for which the in-principle forest clearance was granted in May 2004. The Forest Clearance (FC) and EC letters specify that 10 ha of interspersed mangrove forest, which was deleted from the proposed area shall be transferred back to the state government and maintained at the project cost.

b. On 23rd June 2004 MoEF granted approval for change of user agency from M/s Adani Chemicals Ltd to M/s Mundra SEZ Ltd. However on 5th September 2007, the MPSEZ Ltd requested the MoEF to amend the 'In principle approval' to include phasing out of payments for the diversions of the forest land and changing the name to Mundra Port and SEZ Ltd (MPSEZL); and also for change of land use in Master Plan also in favour of MPSEZ Ltd.

c. However on 27th March 2008 FAC rejected the change of land use to carry out activities related to the Master Plan of the MPSEZL which was against purposes (high purity salt works and salt washery) for which the forest land was earlier diverted. The FAC noted, *"the proposed land use completely changes the scope and purpose of the original diversion accorded....the state government may be advised to submit the proposal afresh."*

d. The application for fresh forest clearance for 1840 ha came up before the Forest Advisory Committee (FAC) of the MoEF in March 2008. Thereafter on 17th April 2008, the FAC considers and recommended the proposal following a representation by MPSEZL dated 3rd April 2008. This came under the scanner of CEC. On 16th July 2008 Central Empowered Committee reported on the FAC reconsideration decision to divert 1840 ha + 168.41 ha of forest land. The report concludes, *"the CEC is of the view that the recommendations of the FAC in the present case may not be accepted and the present request by the user agency for the diversion of forest land in a phased manner as part of the expansion of the Mundra Port and SEZ Limited may be rejected."* On 3rd October 2008 Supreme Court's order in the TN Godavarman case, *"as Regards the proposed land use, the State Government may furnish a fresh proposal to the FAC within a reasonable time."*

e. A fresh application was made by MPSEZL and was granted in-principle approval for forest land of 2008.41 ha (1840 ha + 168.41 ha) on 27.2.2009. The final approval was granted by MoEF on 30.09.2009 with specific and standard conditions.

f. The proposed land use for **diversion of 1840 ha** of forest land as recommended by the State Government was as under:

S. No.	Description of Items	Area (Ha)
1.	Port incl. Jetties, Basine, harbour, barge Berths, Tug Berths and their Immediate back-up Areas for Cargo handling area, Crane movement area, circulation areas etc.	386.40
2.	Container Freight Stations (CFS) including closed areas, Open Container Storage areas,	257.60
3.	Godowns & Closed Storage Areas for Bulk & Liquid Cargos including Rail sidings etc.	349.60
4.	Open Stock Yards & Open Hard Stands incl. rail sidings etc. for coal, Iron Ore, Steel, Cement, FIM, Pipes etc.	423.20
5.	Transport & Utiliti Corridor including Railway Lines, Roads, Drains, water Pipelines, Oil & Gas Pipelines, Sewage Pipelines, Sea-Water Intake Channel, Outlet Channel/Pipelines, Transmission Lines, Conveyors, Telecom / Data Transmission Lines, Buildings etc.	368.00
6.	Green Belt, etc.	55.20
	Total	**1840.00**

And the proposed land use for **diversion of 168.41 ha** of forest land as recommended by the State Government was as under:

S. No.	Description of Items	Area (Ha)
1.	Container Freight Stations (CFS) including Closed areas, Open Storage areas, Circulation areas etc.	21.89
2.	Light / Medium Industries	106.10
3.	CBD / Offices, Roads, Drains, Water Pipelines, Oil & Gas Pipelines, Sewage Pipelines, electricity Lines, Telecom / Data Transmission Lines, other Buildings etc.	25.56

12

2103

4.	Green Belt Development	14.85
	Total	**168.41**

6. The final approval was granted by MoEF on 30.09.2009 with specific and standard conditions..

7. **Details of notified Adani Port Special Economic Zone**: According to the project authority, the project involves development of SEZ of the 10000 ha of SEZ, the plot area, **8481.2784 ha** is notified in different point of time. On May 27, 2009, the Ministry of Commerce and Industry re-notified and consolidated the SEZ area of **6472.8684 ha**. After forest clearance, the Ministry of Commerce and Industry de-notified **1840 ha** of Mundra SEZ on 25th November 2009. The details of SEZ notification is as under:

Notification of SEZ	Area Notified as SEZ (ha)
March 4, 2006, GPCB issued a site clearance certificate to Mundra SEZ Limited for airstrip development at survey No. 52/53 of Village Goersana in Mundra.	
June 23, 2006, Ministry of Commerce and Industry notified multi product SEZ under GAPL of 2406.7592 ha in Mundra and Anjar*talukas*.	2406.759
September 6, 2006, Ministry of Commerce and Industry transferred the notified multi product SEZ under GAPL of 2406.7592 ha in Mundra and Anjar*talukas* to M/s Mundra Port and Special Economic Zone Limited.	
May 10, 2007, Ministry of Commerce and Industry notified power SEZ under Adani Power Private Limited of 293.881 ha in Tunda and Siracha villages.	293.881
July 3, 2007, Ministry of Commerce and Industry notified an additional area of 251.4308 ha was notified as part of the SEZ.	251.4308
June 23, 2006, Ministry of Commerce and Industry notified an additional area of 74.6145 ha as part of the multi product SEZ under MPSEZL.	74.6145
May 2, 2008, Ministry of Commerce and Industry notified an additional area of 1074.1755 ha under the multi product SEZ in favor of MPSEZL.	1074.1755
August 11, 2008, Ministry of Commerce and Industry notified an additional area of 2113.7962 ha under the multi product SEZ in favor of MPSEZL.	2113.7962
Total	6214.657

2104

May 27, 2009, Ministry of Commerce and Industry re-notified and consolidated the SEZ area of 6472.8684 ha.	**6472.8684**

8. The APSEZL again proposed in 2010 to develop another 3510.06 ha including 1840 ha already diverted and another 1670 ha of government land including 864.1299 ha of forest land. APSEZL however approached the Forest Department vide ref no APSEZL/APCCF (land)/F-01/2013-14 dated 10th June 2013 for the entire 1576.81 ha Reserved forest.

9. The State Government of Gujarat vide their letter No. FCA-1014/10-11/14/S.F-66/F dated 21.01.2016 had submitted the proposal for additional **1576.81 ha** of all remaining forest land to consolidate all land holding in the proposed APSEZ which was submitted for diversion in 2005. The proposal was considered earlier in the FAC meeting dated 20.07.2017 also. The details of forest land is as under:

Village	**Survey No.**	**Hect.**
Siracha	295/paiki	125.00
Siracha	295/paiki-2	269.10
Navinal	223/paiki	89.52
Dhurb Mundra	169/paiki 141/paiki-2	81.59 46.66
Baroi	207/paiki	136.43
Goarsama	52/paiki	112.06
Luni	468/paiki-2	516.45
Bhadreshwar	733/paiki	200.00
		1576.81

10. The application was submitted by Mundra Special Economic Zone Limited (MSEZL) in old application form in March 2005 for Mundra Special Economic Zone (MSEZ) for following purposes:

"MSEZ is proposed to be set up with self-contained facilities like Ind. Park Complex, Distribution Center, Commercial Complexes, Housing Complexes, Utilities like Water Supply, Drainage, Roads, Lighting, Social Infrastructure like schools, colleges, hospitals, townships, open air theatre, amusement park, etc. and provision for Air-field, helipad, railway station, roads (SH& NH), etc. over a total area of about 10,000 hectares.

14

2105

This 10,000 hectares land is required to be in contiguous blocks as far as possible in the area identified which includes Govt. Waste Land, Forest Land, Private Land, etc.

The development will be as per the detailed project report. The class SEZs set up at JEBEL ALI-FTZ Dubai and SHENZEN PORT – HONGKONG."

11. Justification for the diversion of forest land was given as under:

"As per the policy of the Government India, SEZs are intended to be developed as self-contained township for industrial and commercial with required infrastructure for industrial/commercial activities like water supply, sewerage, adequate power supply, effluent treatment facilities, rail, road, port and airport connectivity for easy movement of cargo and service personnel and world class township having composite social infrastructure like schools, colleges, banks, hospitals, post offices, super markets, amusement parks and gardens, recreation centers and cinema halls and hotels and restaurants and world class commercial complexes for housing the offices of international trading and industrial organizations for setting up their activities in the Special Economic Zone.

In the case of Mundra SEZ, after eliminating the existing populated areas, contiguous land available are Government was land and forest land without useful vegetation and private uncultivable land. Moreover, the land in question is located in the vicinity of Mundra Port and railway line. The forest land proposed for diversion is within the overall boundary of the Mundra SEZ project. There is significant vegetation on the proposed forest land and the particular lands cannot be avoided for making contiguous land blocks. Moreover, the sea facing forest lands offer ideal scope for development of various SEZ activities without really sacrificing any forest.

For all the above said development contiguous blocks of lands are required to facilitate proper area planning.

Moreover, SEZ project is supposed to be in vicinity of sea port for providing easy movement of bulk cargoes. For the industries located in SEZ, re-export facilities will be excellent and will have benefits of some special privileges. The SEZ industries will generate huge employment for the country and benefits of value addition accrue to the nation while the benefits of duty exemption are availed by entrepreneurs locating their industrial units in SEZ."

12. The proposal was recommended by the DFO on 24.03.2005and the Chief Conservator of Forests Kuchchh Circle recommended the proposal on 15.05.2010 to the Nodal officer FCA Gujarat with the following observation:

    1. The user agency has already diverted the reserved forest of 2008.41 ha for the same cause, so this proposed area can be developed as forests only within SEZ. Therefore, there is no need for any diversion of forest land for the same cause.

29/06

2. If this proposal is considered for the diversion than the forest of Siracha of an area of 394.10 may be excluded because of the unique prominent *Acacia nilotica* forest in the district.
3. The area is coastal area so at least 100 mt belt toward sea may be developed as green shelter belt only.
4. For proposed compensatory afforestation land, the Murachvan area is adjoining to forest area and favourable to wildlife. But the remaining two areas Junachay and Amara are not adjoining to any forest areas. Also, they are only grazing areas for local peoples. So, as CF, undersigned does not recommend to accept these areas as compensatory lands.
5. Therefore, these proposed Junachay and Amara areas may kindly be replaced with either at Nanamodungar having dominant indigenous trees cover, Keerodungar having Caracal site and breeding site for migratory birds or land in Abdasa taluka, having GIB habitat.

13. The Nodal Officer FCA recommended the proposal on 16.08.2010 to the with following recommendations:

The user agency has submitted proposal for diversion of 1576.81 ha of forest land for the purpose of developing SEZ. However, it is recommended for 1552.81 ha area, subject to following conditions:

1. There exist rights of local people as per forest settlement reports in the area. These rights may either be continued as such or the user agency should provide alternative at their cost.
2. As Siracha RF supports good patches of Deshi Babool (*Acacia nilotica*) and small wildlife, these patches, totaling to 269.25 ha area will be conserved *in situ* as Green Belt by the user agency.
3. User agency shall provide right of way of not less than 8 mts width within Dhrub RF area for the proposed diversion of 24 ha which has been excluded from the proposal of the user agency.
4. The non-forest land to Compensatory Afforestation shall be transferred to the Department duly demarcated and surveyed by DILR and after barbed wire fencing or trench mound fencing shall be provided by the user agency as decided by CCF, Kachchh.
5. User agency will develop green shelter belt of not less than 100 mts. width all along the adjoining coastal land of the proposed area under diversion.
6. Permission of the competent authority shall be obtained by the user agency for developing the area as SEZ.
7. It user agency fails to develop the area with 5 years from the date of the formal approval, the remaining area shall be reverted back to the Forest Department without payment of any refund or compensation of any kind.

16

2107

14. The State Government has recommended the proposal on 21.01.2016 subject to the following conditions:

"Diversion of **1576.81** ha of forest land of Reserved forest land for development of Special Economic Zone and Industrial Park at village-Siracha, Navinal, Dhurab, Mundra, Borai, Gorasama, Luni, Bhadreshwar, Taluka. Mundra, Distt., Kutch in favour of Adani Group Mundra Port and Special Economic Zone Ltd, Ahmedabad" this proposal is recommended subject to the following conditions:

1	The user agency shall make necessary arrangements for right of the way for the local people from the diverted land. Plan of such arrangement with the consent of local people shall be submitted before the formal approval to this proposal.
2	All the conditions as recommended by the Chief Wildlife Warden shall be complied with the User Agency. (A copy is enclosed in this proposal)
3	The User Agency shall develop and maintain a green belt at Siracha Village for *in situ* conservation of Indian Birds and Wolfs, hence 100 ha. area of Siracha village may be excluded from the diversion. Exact location of 100 ha. from the total demanded land of Siracha village can be decided at the time of formal approval.
4	If 122 ha. of Village – Zarpapa- 683 ha., of GMB or any other revenue land is allotted for this SEZ then equivalent land from land shall be reduced from the demanded forest land for this SEZ.
5	The Compensatory Afforestation land shall be surveyed at the cost of User Agency and erect pillars and barbed wire fencing or trench under the consultation of CCF, Kutch Circle.
6	The user agency shall develop the 100 mts shelter belt at adjoining sea side.
7	Approval of Developing SEZ shall be obtained by the User Agency from concerned authority.
8	The diverted shall be utilized for the purpose of the SEZ within 5(five) years from the date of the formal approval. If the user agency fails to do so, the unutilized forest land shall be recovered by the Forest Department.
9	The User Agency shall obtain Environment Clearance, CRZ Clearance before the commencement of the work.
10	The Compensatory Afforestation land shall be handed over to the State Forest Department without any liability and encroachment before the formal approval to this proposal.

2108

11	All the conditions of the formal approval of 2008.41 ha forest land shall be diverted shall be complied with before the formal approval of this proposal
	(a) 3770 ha non-forest land of Kutch district shall be transferred to the state Forest Department before the formal approval to this proposal for the Ghorad Sanctuary.
	(b) Compensatory Afforestation for the approval of 2008.41 ha of forest land shall be transferred to the State Forest Department before the formal approval to this proposal.
	(c) The User agency shall pay the cost of fencing in Compensatory Afforestation land to the State Forest Department before the formal approval to this proposal.
	(d) The user agency shall pay the difference amount of 5.35 Crores for the firewood estimation from 2008.41 ha forest land before the formal approval to this proposal.
	(e) Any other conditions of the formal approval of the 2008.41 ha diverted forest land before the formal approval of this proposal.
12	Diverted forest land shall not be utilized for Golf Course, Bench Resort, Park or Residential purposes or any other activity prohibited by FCA 1980 and/or guidelines there under.
13	The user agency shall comply the additional conditions of processing fee, Registration fee, Additional Compensatory Afforestation Land, Amount for Additional Compensatory Afforestation Land and additional Compensatory Afforestation Land and additional amount as per Government of Gujarat's GR No. FCA-1013/11-10/SF-24/F Dated 12.06.2015
14	The user agency shall comply the provisions of Forest Right Act, 2006 before the formal approval of this proposal.
15	Recommendations of the Nodal Officer is submitted by its letter no. JMN/29B/A/806/2015-16 dated 28.12.2015 (A copy is enclosed in this proposal)

15. The said proposal was considered earlier also by the FAC in its meeting held on 20.07.2017 and based on the facts made available on the date of FAC meeting, the following information were sought from the State Government:

(i) Detailed land use plan has not been submitted and therefore the State government shall provide detailed land use of the whole area including forest and non-forest land.

(ii) State government will analyse and examine the land use plan and submit a proposal for diversion of forest land for non- forestry purpose for only those land use which are permissible under the guideline of FCA 1980.

18

	those land uses which are permissible under the guideline of FCA, 1980.	
	The details of proposed land use are as follows:	
	Proposed land use	Area in ha.
	Power Plant 1000 MW X 3	59.9
		209.2
	Copper Smelter Plant – 1 MT capacity	125
	Coal to Polygeneration – 10 MT capacity	89.52
	CFS & warehousing	81.59
	Engineering Cluster	5.21
	Mix Industrial cluster viz engineering ware house etc and social Infrastructure as per FCA 1980 guidelines viz schools, hospitals/ dispensary, community halls, cooperatives, etc.	41.45
	CFS & warehousing	51.46
	Commercial Airport with MRO, Storage yards, fuel tankers, terminals etc.	84.98
		112.06
	Engineering Cluster with Water front for manufacturing and assembly of Crane, Boilers, project cargo, port operation equipment, etc and Liquid storage tanks farm.	516.44
		200
	Total	1576.81
iii.	In this regard, the State Govt. reported that compliance of all conditions put forward in final Approval given by the Govt. of India.	
	In principal approval has been granted by Govt. of India vide letter No. 8-2/1999-FC (PT) dated 27.02.2009 for land admeasuring 1840 ha and 168.41 ha to Adani Ports and SEZ Ltd for development of port based Special Economic Zone. Compliance of conditions laid down in In-principle approval granted by the Govt. of India.	
	For the condition No. 8 of in principle approval no. 8-2/1999-FC (PT) dated 27.02.2009, 3752.30 ha land is transferred in the name of Forests & Environment Department out of 3700.00 ha land of which was possessed by GEDA.	
	For the Conditions No. 17, 18 & 19 of Memorandum No. FCA-1009(10-14) SF-18-K dated 17.11.2009, the user agency has given the Bank Guarantee of **Rs.77300000.00.** User agency has provided detailed compliance of all conditions put forward in Final Approval given by the Govt. of India	
iv.	In this regard, the State Govt. reported that at one point of time in 2009, **the then Conservator of Forest, Kutch has directed to exclude an area of 394 ha in Village Siracha, stating that 100 ha patch possess good vegetation and presence of wild animals.** The State Govt. accordingly recommended final proposal with deduction of 100 ha land out of this 394 h	

(iii)MOEF&CC had accorded prior approval under section 2(ii) of FC Act, in favour of M/s Mundra Port, for diversion of reserved forest area of 57.75 ha, for laying of Railway line vide letter No. 8-163/97FC, MoEF, New Delhi, dated 24.07.2004, and 1840.00 ha. & 168.41 ha. for development of port based SEZ vide No. 8-2/1999-FC(Pt), dated 27.02.2009. It has been fulfilled/complied by the user agency. The State Government shall submit complete compliance of all stipulations of past approvals under section 2(ii) of FCA, 1980.

(iv) Site inspection was carried out by the regional office for **1476.81 ha** whereas state government has now recommended the proposal for total **1576.81 ha**, which include 100 ha of *Acacia nilotica* patch , with condition that the same may be diverted by allowing user agency to pay five times of NPV of forest area. This patch is a part of 394 ha of forest of Sircha village which CF Kutch had recommended to be excluded. **Regional office may inspect the area again and give specific comments on exclusion/inclusion of 100 ha or 394 ha into the proposal.**

(v) State Government may kindly give justification for notifying the forest area as part of SEZ (special economic Zone) without seeking prior permission under the provision of Forest conservation act 1980.

(vi) It is reported that the part of non- forest area is being utilized as SEZ and now the proposal is for the balance patches of forest area which are required to be included in SEZ to make the total area as 10000 ha. From the review of the map and justification of the state it is learnt that it is statutory requirement of custom department that for processing zone of SEZ it should be located on contiguous pieces of land and that there should be over all contiguity in the various components of SEZ. State Government had further justified that there is no option than to opt for the diversion of forest land to be included in the SEZ. The State Government may be asked why this matter was not brought to the notice of FAC earlier.

(vii)State Government shall give very specific recommendation regarding suitability of Compensatory afforestation land.

(viii) State Government shall submit complete compliance of FRA.

16. Accordingly, the State Govt. and Regional office, Bhopal was requested vide the Ministry's letter dated 24.08.2017 to furnish the information as sought by FAC in its meeting held on 20.07.2017 The State Government vide their letter no. FCA-1014/10-11/14/S.F-66/F dated 01.12.2017 has submitted their compliance report as under:

S. No.	Reply of State Govt.
i. & ii	In this regard, the State Govt. reported that the user agency has submitted details pocket wise land use plan as per the FCA, 1980 guideline and is attached in their reply as Annexure-A (pg. 803/c), as submitted to CCF, Kutch & Nodal Officer. Detailed land use plan is in accordance with their project needs and project components. User agency has provided detailed land use plan and has given confirmation that diverted forest area for only

	Zone (SEZ) to User Agency in 2001 under State Govt.'s Exim Policy 2000.
	That the forest land, is required to complete the SEZ land requirement for establishing SEZ has been mentioned in the original proposal and has been provided in various comments, offered by user agency and this office.
	Thus, as of now total 8464 ha of area, acquired in piece meal through Private land, Direct Govt. allotted land and Govt. land allotment through Gujarat Maritime Board has been declared as SEZ area.
	As informed by user agency, they will approach Ministry of Commerce and Industry, Govt. of India to declare this area as SEZ area only after the area is diverted to User Agency.
vi.	**In this regard, the State Govt. reported that the** proposal of User Agency for area under consideration is adjoining to already declare as SEZ of 8464 ha land. There is no other land except Forest Land. Hence, User agency has proposed for diversion of Forest Land.
	Ministry of Commerce and Industries, Govt. of India has granted In-principle permission for establishing SEZ in total 10000 ha of Special Economic Zone (SEZ) to User Agency in 2001 under State Government's Exim Policy, 2000.
	That the land is required to complete the SEZ land requirement for establishing SEZ has been mentioned in the original proposal and has been provided in various comments, offered by user agency and his office.
	It is statutory requirement of customs department that for processing zone of SEZ, it should be located on contiguous pieces of land and that there should be over all contiguity in the various components of SEZ. This aspect has been submitted by the State Government earlier, in its project justification and other clarifications provided.
vii.	The State Govt. stated that the detailed scheme for Compensatory Afforestation and land suitability was already prepared in Sept-2008 while processing the proposal. But, as per the opinion of then Conservator of Forests, Kutch that Non-forest Land of Junachy and Amara area offered as CA land by User Agency is not adjacent to existing forest land and therefore not suitable for afforestation.
	However, as per the latest resolution of State Government dated 15.05.2017 whenever the Non-forest land being offered as Compensatory Afforestation land is not possible to be contiguous to existing forest land and if the area of diversion is 100 ha or more area the CA land should not be less than a patch of 25 ha. Considering this guideline the CA offered land at Junachy and Amara was found suitable.
	State Government vide its GR dated 15.05.2017 has provided guidelines for suitability of private land for compensatory land. Considering this

2110

	in Jan. 2016.
	However, User agency requested State Govt. for the re-survey of the Siracha land stating that the Wild life report is quite old i.e. of 2009 and at present no wildlife and exotic vegetation is available in that area. The survey was carried out by CCF, Kutch office and founded that there was negligible movement of wildlife as per report and Acacia Nilotica is present only in one corner of the land parcel. Further, the area of 100 ha of Siracha is in close proximity to existing power plant and as represented by user agency this Forest land of Siracha is necessary for their expansion of Power Plant, due to integration with existing power plant. **User agency has also represented and agreed to pay 5 times NPV in line with FCA provision of addressing the situation of diversion of Wild life protected area.** User agency feels that there is no other alternative for 100 ha land and for that DCF Kutch East has recommended not to exclude 100 ha land.
	But, as per reference of Minutes of Meeting of Forest Advisory Committee held on 20.07.2017, APCCF, Regional Office, Bhopal has conducted the site inspection once again on 26.09.2017 to decide for 100 ha Siracha forest land. Previously, it was done on 06.05.2016. So now this aspect pertains to Regional Office Bhopal and its further report on latest site inspection report.
v.	**In this regard, the State Govt. reported that Ministry of Commerce and Industry, Govt of India has granted in principle permission for total 10000 ha of Special Economic Zone (SEZ) to User Agency in 2001 under State Govt's Exim Policy 2000.** In the meantime, user agency has acquired 6456 ha land in piece meal through private land, direct allotted Govt land and Govt land allotment through Gujarat Maritime Board. **As and when user agency got the possession of land, it was further notified as SEZ Area after getting approval from Ministry of Commerce and Industry, GoI.** Further, the area of 1840 ha and 168 ha forest land has been diverted to APSEZL by Forest Department in Nov-2009 has also been notified for SEZ area in April-2015 and March-2012 respectively.
	Thus, as of now total 8464 ha of area has been declared as SEZ Area.
	The area declared as SEZ area earlier is adjacent to various pockets of this 1576 ha forest land, which is proposed for diversion by User Agency. The area of 1576 ha as proposed for allotment by User Agency has not been declared as SEZ Area as it is not in their possession. As informed by user agency, they will approach Ministry of Commerce and Industry, Government of India to declare this area as SEZ area only after the area is diverted to User Agency.
	Ministry of Commerce and Industry, Govt. of India has granted in principle permission for establishing SEZ in total 10,000 ha of Special Economic

21

~~211~~ 211

	guideline, the CA offered land at Junachy and Amara was found suitable.
	Suitability Certificates along with scheme of Compensatory Afforestation and land suitability for land area of 503.01 ha of Village Murachban, Taluka. Lakhpat, 283.80 ha of Village Junachy, Taluka.Lakhpat and 790 ha of Village Amara, Taluka.Nakhatrana have been provided by DCF accordingly.
	However, User Agency has given undertaking if forest department is not ready to accept proposed CA land as mentioned above, it will be changed and new CA areas will be provided before the issuance of final approval.
viii.	The State Govt. stated that an Undertaking has been given by the User Agency that all formalities as per the Guidelines of Forest Rights Rules-2006 of Government of India will be completed before final approval. So, undertaking of User Agency may be provided.

17. After the FAC meeting on 20.07.2017, theMinistry vide it's letter dated 24-08-2017 requested the Regional Office, Bhopal to **inspect the area again** and give specific recommendations on the exclusion / inclusion of 100 hectares or 394 hectares of forest area in the proposal.The Regional office inspected the project area on 26.09.2017 with the specific and the only objective of evaluating the recommendation of the State Government of Gujarat to include 100 ha of 394.10 ha of Siracha village into the project. SIR was done along with Shri U.D. Singh, APCCF (Land), GOG, Shri P.S. Randhava, CCF, Kutch and the senior officers from the User Agency. Based on the field observations during inspection, the discussions held at the time of inspection with User Agency officers as well as officers of State Forest Department, Regional office recommended the proposal for consideration of diversion of 394.10 hectares of forest area of Siracha village for the following reasons:

a) The forest land of Siracha village is adjoining the existing power plant of the User Agency. During field inspection the User Agency representatives informed that the forest land of Siracha village is required for the expansion of the existing power plant which was initially developed keeping in view the future expansion. Therefore, for the expansion of existing power plant, the User Agency has no option for alternative site and its requirement are integral for implementation, operation and expansion of future component.

b) The Siracha forest land is an isolated patch of forest measuring 394.10 (Map prepared by BISAG). *Though, it is good forest, however, since it is surrounded from all sides by habitation and various kinds of infrastructure it does not, therefore, possess high conservation value. During inspection, regional office found no major signs of wild life.* The last Inspection Report of Regional Office, Bhopal dated 06.05.2016 also under paragraph 19 mentions that during site visit, no significant wild life was seen. With the

2112

full development of SEZ, its conservation value would be further undermined. It the CA area is developed contiguous to an existing large forest area with good potential for conservation the loss on account of 394.10 ha of forest area would be adequately compensated.

c) Generation of power is one of the key requirements for the development of the country. The 3000 MW proposed to be generated, as informed by the User Agency, through the said expansion of adjoining power plant near Siracha, in regional office's well-considered opinion, would be far less detrimental to the overall environment as compared to another standalone thermal power plant established elsewhere to produce same amount of power. The main reason for this is that such a standalone power plant in the hinterland would be supplied huge quantity of required coal transported through railway or road whereas the proposed expanded thermal power plant would be fed coal by a conveyor system (as informed by User Agency during inspection) from Mundraport to the power plant. Secondly the expansion would use the existing sea water facility for cooling and consumptive purpose thus avoiding use of huge quantity of fresh water if the new plant were to come up elsewhere. Thirdly, the expansion would use the existing infrastructure facilities for evacuation of power.

d) The State Government has recommended payment of five times the NPV for the 100 hectares of forest area coming under diversion for non-forest use for the project.
In other words the APCCF (C), Regional Office has recommended the diversion of 394.10 ha of good forest, citing reason that it will have no future conservation value, for future expansion of TTP by APSEZL albeit at 5 times the NPV.

18. Form the documents examined by the FAC in meeting dated 25.01.2018 it is learnt that the Mundra special economic zone is proposed to set up with self-contained facilities like Industrial park complex, distribution centre, commercial complexes, Housing complexes , utilities like water supply, drainage, roads ,lighting, social infrastructure like school, colleges, hospitals , townships, open air theatre, recreation centre, cinema hall, amusement park etc and provision for air field, helipad ,railway station, roads(SH &N.H) etc over total area. The User Agency has now agreed to change the land use of forest land as informed by State Govt. vide its letter dated 01-12-2017 and the proposed changed land use of forest land is now indicated under para 16 above.
FAC deliberated on the fact that establishment of port based SEZ is necessary for the development of the country. On analysis through DSS it is observed that most of the forest area and revenue areas are under non forestry use and some patches of forest areas are available inside SEZ. In view of the clarification submitted by the State Government vide letter dated 01-12-2017 FAC recommends the grant of In Principle Approval for the diversion of **1552.81 ha** (1576.81-24 ha) of forest land subject to general standard and following specific conditions.

i The Nodal officer, FCA had recommended in 2010 that though the user agency has submitted proposal for diversion of 1576.81 ha of forest land for the purpose of developing SEZ only 1552.81 ha area may be diverted excluding 24 ha in Dhrub RF, subject to specific conditions.. It was recommended that the user agency shall provide

2418

right of way of not less than 8 mts width for 24 ha which has been excluded from the proposal of the user agency. The details of settlement of rights shall be provided.

ii The diverted forest land measuring 1552.81ha shall be maintained as green area within the APSEZ and the diversion for non-forestry purpose will be considered only on case to case basis by the ministry for the purpose required for SEZ.

iii Diverted forest land shall not be proposed to be utilized for Golf Course, Beach Resort. Park or Residential purposes, or any other activity prohibited by FCA 1980 and/or guidelines there under

iv From the DSS analysis it is observed that Aerodrome already exists in the zone. The diverted forest land will not be proposed for the construction of private Aerodrome as demanded by the use agency. The forest land may be considered, in future on merits, in case of commercial Airport is developed with the approval of DGCA.

v The detailed existing land use with maps of all forest land 2008.41 ha (1840ha + 168.41 ha) for which the approval was granted vide 30.09.2009 and details of complete land use including forest land for the existing private Aerodrome and power plants within the SEZ may be provided.

vi 100 meter wide green shelter belt along the sea coast except in the waterfront area shall be included in the Master Plan of APSEZ.

vii Complete compliance of CRZ regulations shall be ensured.

viii All the conditions as recommended by the Chief Wildlife Warden shall be complied with the User Agency.

ix The Compensatory Afforestation land shall be surveyed at the cost of User Agency and erect pillars and barbed wire fencing or trench under the consultation of CCF, Kutch Circle.

x Compensatory afforestation shall be raised over identified non forest land equivalent to the diverted forest land diverted and at least 1000 plants per hectare (1552.81 hectares x 1000 = 1552810 plants) shall be planted with provision for ten years on subsequent maintenance.

xi 25% of revised CA cost will be deposited extra by the user agency for soil and moisture conservation (SMC) activities on the CA land.

xii Complete compliance of Forest Right Act 2006 to be done for the 1576.81 ha of forest land by the State Government.

xiii To provide protection to the existing wildlife a patch of natural forest in Luni to Harmiramora village shall be kept as green belt without carrying out any activities in that area as recommended by the CCF Kutch Circle vide letter dated 15.5.2014 to PCCF Wildlife Gujarat. The recommendation of the Chief wildlife warden Gujarat sent vide No WLP/663/32/B/1778-79/2014 dated 30.5.2014 must be complied.

xiv The State Government will inform about the status of the land measuring 122 ha in village Jarapara and 683 ha of land belonging to GMB has been transferred to APSEZL. This area need to be deducted from the proposed forest land diversion as recommended by the State Government.

2914

xv State government will provide the terms and conditions on which the forest is proposed to be transferred on lease to the use agency The detail of lease period, terms, conditions and consideration, if any, may be provided.

xvi All other conditions imposed in the approval granted for diversion of 2008.41 ha (1840ha + 168.41 ha) forest land on 30.09.2009 shall be complied.

Agenda No. 4

F. No. 8-115/2000-FC

Sub: Diversion of 19.52 ha of forest land for raising the height of Barvi Dam for submergence and rehabilitation in District Thane of Maharashtra.

The above stated agenda Item was considered by FAC on 25.1.18 and observed as follows:

1. The State Govt. of Maharashtra vide their letter no. FLD-1215/CR-292-F-10 dated 15.09.2015 has submitted a proposal for diversion of 19.52 ha of forest land for raising the height of Barvi Dam for submergence and rehabilitation in District Thane of Maharashtra to Regional Office, Nagpur.
2. This is a dam being constructed since 1968 to meet the demand of water for industrial and drinking purposes. MoEF&CC vide its letter no. 8-115/2000-FC dated 19.12.2005 had accorded approval for diversion of 513.66 ha of forest land. The proposed height of the dam at the time of approval was 62.05 meter. It is reported that this projects was envisaged to be constructed in three stages. In second stage the height was raised up to 65.05 m and in third stage the height is proposed to be raised up to 72.06 m.
3. The proposal for additional area of 19.52 ha was submitted to REC Nagpur.
4. The stated proposal was considered by the REC in its meeting held on 25.01.2015. The Addl. PCCF & Nodal Officer (FCA), Government of Maharashtra and representative of the user agency were also present in the said Regional Empowered Committee (REC) meeting. After detailed examination of the proposal and interaction with the Nodal officer (FCA) and representatives of the User Agency, the REC observed as under:
   i. The Committee noted that project envisages raising the height of Barvi Dam in Thane District in the State of Maharashtra to meet the increased demand of water for industrial and drinking purposes. Project was already completed and in the 3rd stages out of which two stages area already completed and in the **3rd Stage of the project, height of dam is proposed to be increased by 7.01 meters i.e. from RL 65.05 meters to 72.06 meters to augment the storage capacity of the reservoir to meet the increased demand of water in the region.**
   ii. The Committee also noted that Government of India vide its letter no. 8-115/2000-FC dated 19.12.2005 had accorded approval for diversion of 513.66 ha of forest land. However, while submitting the initial proposal for diversion of 513.66 ha of

MEMORANDUM OF UNDERSTANDING (MOU)

THIS MOU is entered on this 14th day of March, 2019 Year between **Adani Enterprises Limited,** a company registered under the Companies Act, 2013, and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"AEL"**, which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **FIRST PART,**

and Adani Port & SEZ Ltd, a Company registered under the Company's Act 2013 and having its registered office at 1st Floor, Infrastructure House, Nr. Adani House, Navrangpura, Ahmedabad (hereinafter referred to as **"APSEZ"** which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **SECOND PART.**

Both AEL & APSEZ may hereinafter also be referred to jointly as the **'Parties'** and severally as a **'Party'**

ADANI PORTS AND SPECIAL ECONOMIC ZONE LTD.

ADANI ENTERPRISES LTD. AHMEDABAD

WHEREAS

AEL is setting up an integrated copper smelting & refinery complex at Mundra, Gujarat (hereinafter referred to as "**Plant**") with an annual production capacity of 10, 00,000 TPA.

Since, APSEZ is already having the land, power & water availability in the proposed area, AEL would like to utilize these resources for its Plant.

NOW, THEREFORE, IN CONSIDERATION OF THE ABOVE PREMISES AND OF THE UNDERTAKINGS HEREIN FURNISHED, IT IS HEREBY AGREED BY AND BETWEEN THE PARTIES AS FOLLOWS:

APSEZ will make available to AEL 256.58 hectares of land on long term lease basis. Out of the total requirement of 256.58 hectares of land, currently APSEZ is in possession of 154.19 hectares of land which can be readily made available for the project. The balance 102.39 hectares of land is under forest diversion process and will be handed over to the project once APSEZ receives the possession of the land. The complete details of the land is placed at Annexure-I of this MOU.

APSEZ will make available to AEL 300 MW of power & 32,800 m3/day of desalinated water for the Plant operations.

The payment terms & the other commercial terms & conditions will be mutually decided by both the parties at a later convenient date.

EFFECTIVE DATE, COMMENCEMENT DATE & VALIDITY OF THE MOU

1. The effective date shall be the date of this MOU.
2. This MOU shall remain valid till the time a definitive detailed agreement incorporating all the commercials, scope, penalty and legal related matters is executed between the parties.

SETTLEMENT OF DISPUTES

1. In case of any disputes, differences, claims between the parties hereto arising out of this MoU, the same shall be referred to respective senior management of each Party, who in turn will work out an amicable settlement.

OTHER CONDITIONS:

1. Any amendment to this MoU in order to be valid shall be in writing.
2. This MoU shall be executed in duplicate and both the counterparts shall be treated as original.

ADANI PORTS AND SPECIAL ECONOMIC ZONE LIMITED * ADANI PORTS

ADANI ENTERPRISES LTD. AHMEDABAD

2117

Validity:

This MoU shall remain valid until execution of the Definitive Agreements to this effect.

IN WITNESS WHEREOF THE PARTIES HERETO HAVE HEREUNTO SET THEIR RESPECTIVE HANDS AND SEALS THE DAY, MONTH AND YEAR FIRST ABOVE WRITTEN.

EAC OBSERVATION NO.-2

2.11.19

EAC OBSERVATION:

CRZ map inter-alia including demarcation of HTL/LTL/CRZ land classification along with super imposition of plant site through competent agencies has not been submitted.

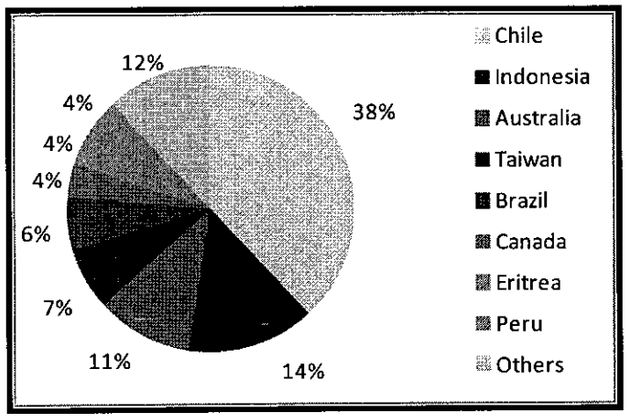
REPLY:

The map of proposed project is superimposed on CRZ map of the area prepared in 2011 by Centre of Earth Science Studies (CESS), Thiruvantapuram, an institute recognized by Ministry of Environment and Forest & Climate Change, Government of India. The proposed project site is outside the CRZ. This map is in Figure-1.5 of EIA and also attached herewith.

Further, National Centre for Sustainable Coastal Management (NCSCM), Chennai which is a nodal agency for CRZ mapping and preparation of CZMP for Gujarat has been engaged for the superimposition of the proposed Copper Refinery plant layout on authenticated CRZ map of district Kutch.

NCSCM has communicated that superimposition of the proposed project Copper Refinery plant layout on CRZ Map would be done after approval of CZMP map of Kutch District as the CZMP of district Kutch is under approval process by Govt of Gujarat.

EAC OBSERVATION:



Source of copper ore concentrate, characteristics, mode of transportation from source to plant site, confirmed ore linkage document has not been submitted.

REPLY:

Copper Concentrate for the proposed project will be sourced from the following countries:

- Latin American Countries such as Chile, Peru, Brazil
- ASEAN Countries such as Indonesia, Philippines
- Australia
- Africa
- Canada
- USA

Copper Concentrate is basic raw material for the Copper Smelter. Latin American countries are the major supplier of the raw material. Copper Concentrate for the proposed project will be sourced through various mines across the globe. There is adequate reserves for the Copper are available and hence sourcing of the Copper Concentrate will not be constraint. Please find below the chart showing the receipt of the Copper Concentrate from different countries for copper smelters available in India.

World copper mine production is growing around 3% per annum and is 20 Million Tons in 2017. 42% of production is coming through Latin American countries and 17% from Asia. Europe and North America contributes 13% each. Chilli, Peru, Australia, Indonesia are some of the major countries exporting copper concentrate. China, Japan, Korea, Germany and India are the major importers of copper concentrate. A detailed Copper Concentrate Market Report prepared from International Copper Study Group (ICSG) is being presented in **annexure- 3(a).**

For long term ore (Copper Concentrate) linkage various supplier have been approached and comfort letters from various suppliers have been attached in **annexure- 3(b).**

EAC OBSERVATION NO.-3

The typical copper concentrate analysis is shown below; 2121

Species	Unit	Sourcing Range	Smelting Input Range
Cu	Wt%	18 - 54	24 - 28

Copper Concentrate will be unloaded from the vessel and transported to intermediate facility at port storage by closed conveyor system. The storage facility at the port and plant will be a closed and paved with concrete. All the transfer points will be fitted with dust extraction/ suppression system to handle dust.

Copper Concentrate will be transported from port to plant by closed conveyor system or by closed trucks. Dust extraction/ suppression system to handle dust will be provided at the truck unloading point.

Copper concentrate storage facility will be provided and paved with concrete. Detail drawing of the storage facility is attached in **Annexure-6.**

Copper Concentrate Market Outlook

Copper Concentrate is basic raw material for the Copper Smelter. Latin American countries are the major supplier of the raw material. Copper Concentrate for the proposed project will be sourced through various mines across the globe. There is adequate reserves for the Copper are available and hence sourcing of the Copper Concentrate will not be constraint. Please find below the chart showing the receipt of the Copper Concentrate from different countries in India.

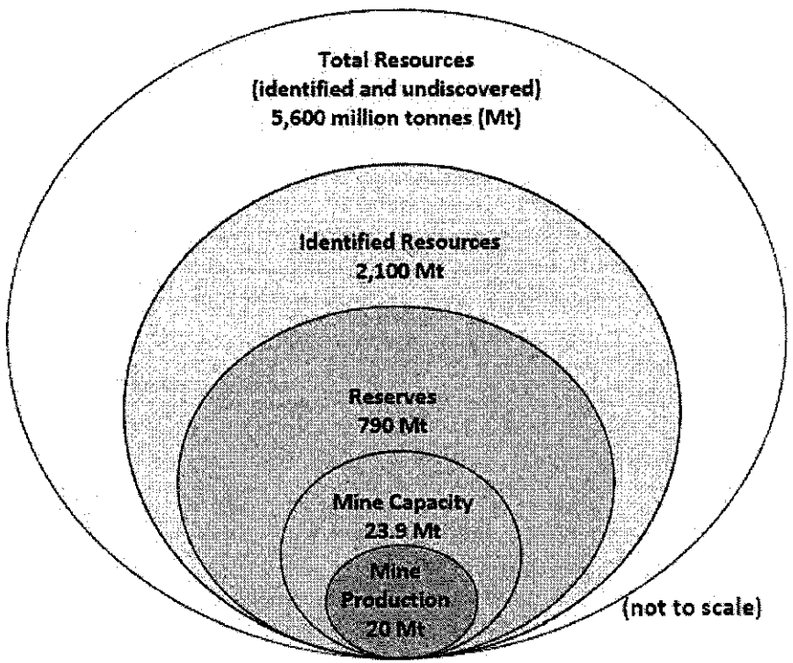
Below are the some of the extract information from International Copper Study Group – World Copper Fact book 2018.

1. Long term Availability of Copper
2. World Mine Production
3. Mine Production By Region
4. Top Copper Concentrate Producing Countries
5. Top 20 Mines by Capacity
6. International Trade Flow for Copper Concentrate.

The World Copper Factbook 2018

Copper Resources and Long-Term Availability of Copper

Copper Reserves and Resources



Typically, the future availability of minerals is based on the concept of reserves and resources. Reserves are deposits that have been discovered, evaluated and assessed to be economically profitable to mine. Resources are far bigger and include reserves, discovered deposits that are potentially profitable, and undiscovered deposits that are predicted based on preliminary geological surveys (see definitions below).

According to the United States Geological Survey (USGS), copper reserves currently amount to around 790 million tonnes (Mt) and identified and undiscovered copper resources are estimated to be around 2,100 Mt and 3,500 Mt, respectively. The latter does not take into account the vast amounts of copper found in deep sea nodules and land-based and submarine massive sulphides. Current and future exploration opportunities will lead to increases in both reserves and known resources.

Definitions (http://minerals.usgs.gov/minerals/pubs/mcs/2014/mcsapp2014.pdf)
Resource: A concentration of naturally occurring solid, liquid, or gaseous material in or on the Earth's crust in such form and amount that economic extraction of a commodity from the concentration is currently or potentially feasible.
Identified Resources: Resources whose location, grade, quality, and quantity are known or estimated from specific geologic evidence. Identified resources include economic, marginally economic, and sub-economic components.
Undiscovered Resources: Resources, the existence of which are only postulated, comprising deposits that are separate from identified resources. Undiscovered resources may be postulated in deposits of such grade and physical location as to render them economic, marginally economic, or sub-economic.
Reserves: That part of the reserve base (part of an identified resource that meets specified minimum physical and chemical criteria related to current mining and production practices, including those for grade, quality, thickness, and depth) which could be economically extracted or produced at the time of determination. The term reserves need not signify that extraction facilities are in place and operative.

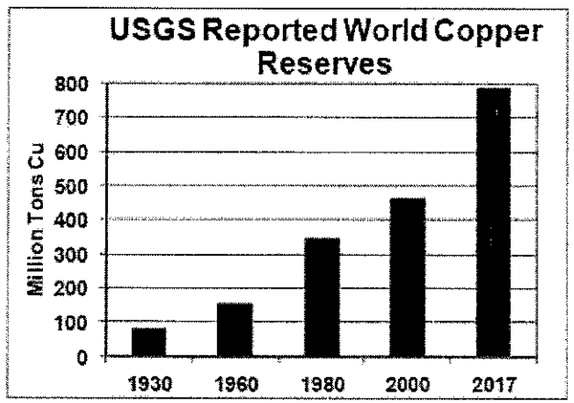
The World Copper Factbook 2018

Global Distribution of Identified and Undiscovered Copper Resources in Porphyry and Sediment-hosted Stratabound Copper Deposits [1/]

In 2013 the U.S. Geological Survey (USGS) completed a geology-based, cooperative international assessment of copper resources of the world [2/]. The USGS assessed undiscovered copper in two deposit types that account for about 80% of the world's copper supply. Porphyry copper deposits account for about 60% of the world's copper. In porphyry copper deposits, copper ore minerals are disseminated in igneous intrusions. Sediment-hosted stratabound copper deposits, in which copper is concentrated in layers in sedimentary rocks, account for about 20% of the world's identified copper. The mean undiscovered totals for porphyry and sediment-hosted deposits are 3,100 and 400 Mt respectively, resulting in a global total of 3,500 Mt of copper. With identified copper resources currently estimated at 2,100 Mt, total copper resources (undiscovered + identified) are estimated at 5,600 Mt.



1/ Undiscovered Copper Resources - A Global Assessment, April 2014, Presentation at ICSG meeting, Lisbon, by Mrs *Jane M. Hammarstrom (USGS Global Mineral Resource Assessment Team)*
2/ Supporting studies, including documentation of the assessment methodology and descriptions of individual tracts, are available on the USGS Mineral Resources Program Web site, at *http://minerals.usgs.gov/global/.*

International Copper Study Group

Are We Going to Run Out of Copper[1]?

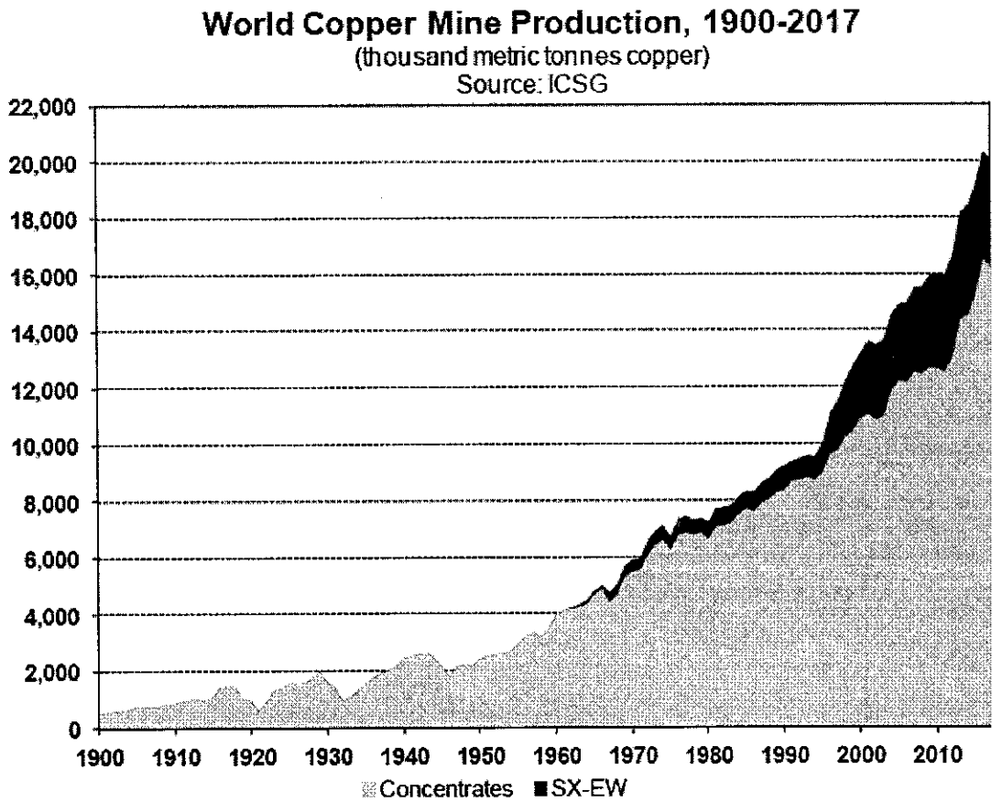
It is highly improbable. Since 1950, based on the then current rate of demand, there has always been, on average, 40 years of reserves, and significantly greater amounts of known resources (USGS data). In addition, recycling, innovation and mining exploration continue to contribute to the long-term availability of copper.

Despite increased demand for copper produced from ore in recent years, increases in reserves have grown, and there is more identified copper available to the world than at any other time in history.

In the period 2007-2017, 192 million tonnes of copper have been mined. In that same period however, reserves have grown by 300 million tonnes. This reflects additional exploration, technological advances and the evolving economics of mining.

Technology has a key role to play in addressing many of the challenges faced by new copper production. Known and as yet unknown innovations will ensure new mine production continues to provide vital copper supplies.

In addition copper recycling plays an important role in copper availability since today's primary copper is tomorrow's recycled material. Unlike other commodities such as energy or food, copper is not "consumed". Copper is one of the few raw materials which can be recycled repeatedly without any loss of performance, and key stakeholders such as policy-makers, scrap collectors, copper producers and recyclers must all focus on ensuring that yesterday's metal is recycled and re-used.



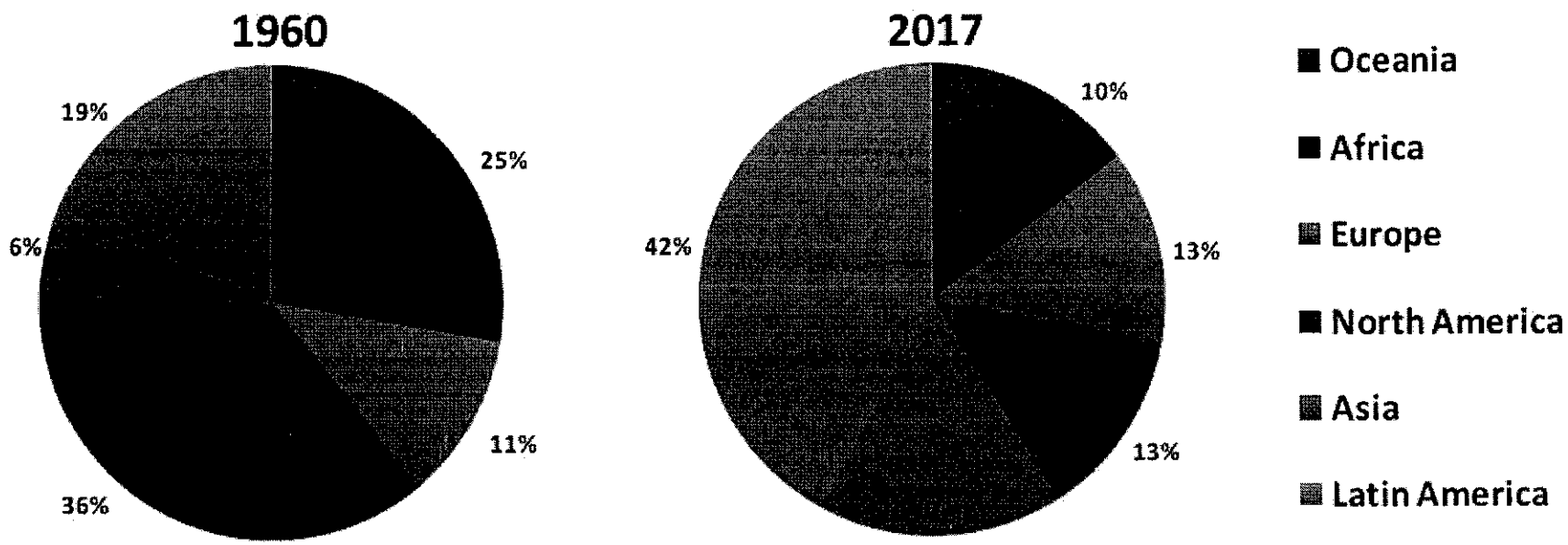
While this will ensure a progressive move towards a more sustainable economy, the loop cannot be completely closed for two reasons. Firstly, demand will continue to increase due to population growth, product innovation and economic development. Secondly in most applications, copper stays in use for decades.

Consequently, meeting future metals demand will continue to require a combination of primary raw materials, coming from mines, as well as recycled materials, while innovative policies and technology should continue to contribute to improvements in recycling performance and resource efficiency.

Based on the latest knowledge on geological availability and continuous industry innovation there are good reasons to believe that copper will continue to be a vital and positive contributor to society well into the future.

1/ Based on the International Copper Association briefing note on copper's long-term availability. See http://copperalliance.org/about-copper/long-term-availability/

Copper Mine Production

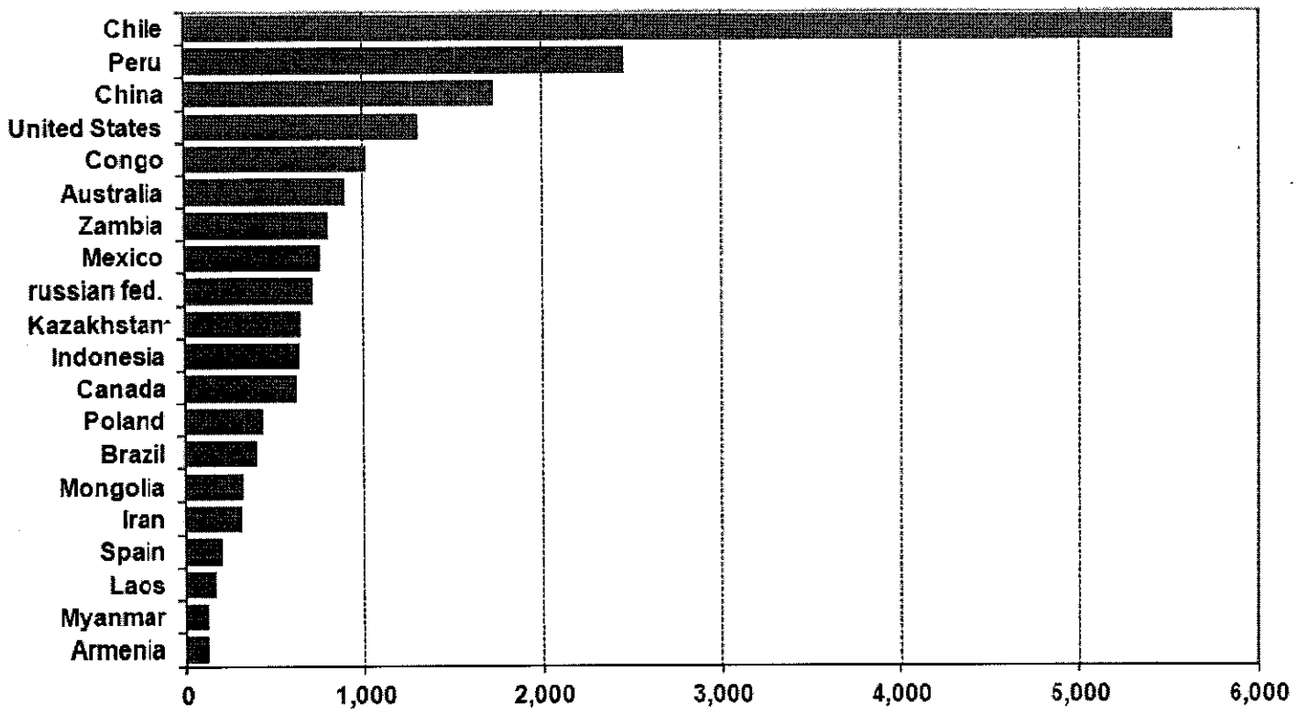


Since 1900, when world production was less than 500 thousand tonnes copper, world copper mine production has grown by 3.2% per annum to 20 million tonnes in 2017. SX-EW production, virtually non-existent before the 1960s, stood at 3.7 million tonnes in 2017.

Copper Mine Production by Region, 1960 versus 2017

Thousand metric tonnes copper

Source: ICSG

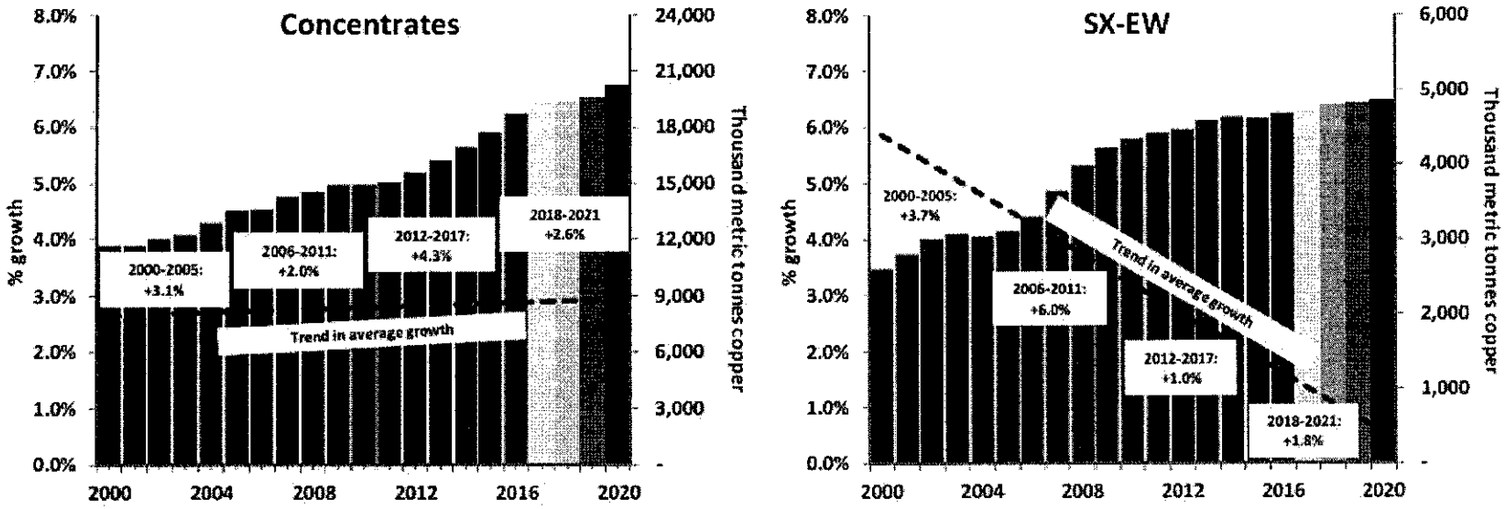


From less than 750,000 tonnes copper in 1960, copper mine production in Latin America has increased to 8.4 million tonnes in 2017, representing 42% of the global total. Asia has also exhibited significant growth. The region's share of global production has increased from just 6% to 17% over the respective period. Conversely, North America's share declined from 36% to 13%.

ANNEXURE-3(a)

Copper Mine Production by Country: Top 20 Countries in 2017

(Thousand metric tonnes)
Source: ICSG



Chile accounted for over a quarter of world copper mine production in 2017 with mine output of 5.5 million tonnes copper. Peru, which has seen a sharp increase in output since 2015, accounted for 12% of world mine production.

The World Copper Factbook 2018

Trends in Copper Mining Capacity, 2000-2021

Thousand metric tonnes (Bars) and Annual percentage change (Line)
Source: ICSG Directory of Copper Mines and Plants – H1 2018 Edition

Copper mining capacity is estimated to reach 25.9 million tonnes copper in 2021, with 20% being SX-EW production. This will be 8% higher than global capacity of 23.9 million tonnes copper recorded in 2017. Growth in copper mine capacity is expected to average 2.4% per year going forward as new capacity is added at existing and some new operations. The ratio between production and capacity is called the capacity utilization rate. The world mine capacity utilization rate was around 84% in 2017.

Note: Capacity data reflects production capabilities not necessarily production forecasts

Dear Mr. Rao / Mr. Prasanna.

Expression of Interest for Supply of Copper Concentrate

This refers to various discussions we have had over last one year.

We are happy to note that the project is now well into the final phase of getting approvals.

As you are aware. we are a part of Mitsubishi Group which has investments in copper mines like Escondida. Los Pelambres. Antamina. Quelleveco etc in Latin America. The Group also owns Triland Metals Ltd – a prominent member of London Metals Exchange.

We are currently trading approximately 600K dmt copper concentrate worldwide and with Quelleveco offtake commencing from early 2022 onwards. the book size will increase to well over 1 million dmt. We have access to some of the cleanest copper concentrate qualities available.

As assured during our meetings. Mitsubishi Corporation RtM International Pte Ltd (RtMI) shall be more than pleased to supply mutually agreed quantity of copper concentrate to the proposed Adani Copper smelter.

Looking forward to discuss in greater detail once all the approvals are in the place.

Kindly keep us posted on the progress. Thanks

Best regards.

Y.K. Sharma
Mitsubishi Corporation

TRANSAMINE
TRADING SA

Date : Feb 01 , 2019

M/s Adani Enterprises
Ahmedabad

Kind Attention : Mr Prasad Surya Rao

Dear Sir

This is with reference to our various discussions on the subject of Copper concentrates supplies to your proposed Copper Smelter project at Mundra.As you are aware Transamine Trading SA, trades 1.2 to 1.5 million MT of copper concentrates annually, sourcing the same across the globe from as far and wide as Chile, Peru, Mexico, US, Canada, DRC, Indonesia, Papua New Guinea, Australia etc. It has got well established relationship with all the major mines like Escondida, Grasberg, Los Pelambras, Chiquicamata, Andina, Collahuasi, Sierra Gorda, Jabel Sayid etc. It expects to maintain the volume for the coming years at the present level, which makes it one amongst the top four Copper concentrates trader in the world today.

Kindly note Transamine Trading S.A, Geneva has advised that they will be extremely keen into entering into an agreement for long term supply of Copper concentrates under frame mechanism covering multiple years, as we have discussed so far . The said agreement can be sealed and signed off, once the proposed project gets necessary Environment Clearance to establish from the relevant regulatory authorities. Therefore , please do advise us once you have received the mentioned approval – so that we can progress on the agreement.

We look forward to hearing from you soon

Thanks and Regards
Somnath Ghosh
On behalf o Transamine Trading S.A.

Adani Enterprises Ltd.- Copper Business
Adani Corporate House, Shantigram,
Nr. Vaishnodevi Circle, SG Highway,
Ahmedabad – 380058, Gujarat, India

Sub: Supply of Copper Concentrate for Adani Copper Project

Kind Attention: Mr. Prasad A. Suryarao

This is with reference to the update on the progress of your Copper project at Mundra, Gujarat.

As you are aware, Trafigura is one of the largest copper concentrate suppliers in the world and have association with multiple miners and Smelters all across the world. We are delighted to reconfirm building a long term relationship with Adani for this project. We confirm our interest to be a Concentrate supplier to your Project – depending on the time frame for the project commissioning, commercial and other related terms. The said supply would be made on a regular basis from our pool of resources available. We also assure you that the quality parameters will be shared with you on a periodical basis & based on the mutual agreement, the requisite quantity shall be supplied to your project.

At last we want to reassure you that we would be definitely be interested to enter into the MoU/Definitive agreement for this project concentrate requirement offtake subject and as confirmed by you after necessary statutory approvals and other formalities which we understand are still going on including but not limiting to EC. The detailed terms & conditions will also be incorporated in the agreement based on our mutual discussion at that point of time.

Wishing you the best for your approval process, we look forward for your feedback on the progress.

Yours faithfully,

For Trafigura India Pvt. Ltd.

Date. 17th, May 2019
In reply please Address to
Base Metals div.

To: Adani Enterprise Ltd – Copper Business, Ahmedabad.
Dear Mr. Prasad Suryarao,

We are delighted to receive an update on the progress of your copper project at Mundra.
It is our honor that we may have a chance to establish a long-term relationship with Adani who will be a biggest copper producer in India after the completion of the smelter construction work.

As you might be aware, we are one of the major copper concentrate supplier in the world who handle approximately 1 million DMT per year of the copper concentrates.

Our major sources of supply are; Collahuasi copper mine, Los Bronces copper mine and Caserones copper mine of which we have shares, and also, we have long-term supply contracts with the global major suppliers including Codelco and BHP, as well as off-take contracts with the middle sized copper mines in Asia Pacific region.

On top of the copper concentrates, we are capable to supply the secondary copper raw materials including copper anodes and copper blisters which may be consumed at your smelter facility.

Please be advised that we are ready to discuss our business opportunity including Memorandum of Understanding arrangement for our future raw material business once necessary licenses including the environment approval have been granted by the authorities.

We do hope your operating permission to be obtained soon, looking forward to discussing our business possibility near future and waiting any further good news from yours with this regard.
Hope this is line with our earlier discussion also.

Yours faithfully,

Tatsuhiro Torikai
General Manager
Raw Material Marketing Dept.
Base Metals Div.

EAC OBSERVATION:

Water consumption of 10 LTPA Copper smelter is 32790 KLD whereas the water requirement for existing 4.5 LTPA copper smelter unit is only 10,000 KLD. Hence, water requirement for the proposed plant has to be reworked out.

REPLY:

The water consumption for the proposed copper plant has been prepared based on the information submitted by various technology licensers.

Water consumption is largely due to evaporation losses in the cooling tower of Copper Smelter and Sulphuric Acid Plant, evaporation losses during the copper slag granulation. To identify the area to rework for the water consumption reduction, a benchmarking exercise was carried out.

Water Consumption is largely depends on:

1. Type of Cooling System (Air Cooling/ Water Cooling/ Sea water or River based once through system) adopted.
2. Operating conditions (Temperature of the Incoming water and Circulation Rate) prevailing.
3. Type of Copper Slag Handling System (Granulation or Ladle Cooling)
4. Air Cooling and Ladle Cooling needs large area.

Proposed project will have water consumption ~ 8.7 m3/T of Copper in case of water cooling system (6.5 m3/ T of Copper in case of air cooling system) compared to Vedanta's water consumption of ~ 6.9 m3/T of Copper (average of last 5 years)*.

Specific Water Consumption (m3/T of Product)

Name of the plant	Unit	Proposed	Vedanta, India**
Copper Smelter	m^3/T of Copper	2.42	2.40
Copper Refinery	m^3/T of Copper	0.52	0.66
Sulphuric Acid	m^3/T of Copper	5.44	2.98
CCR	m^3/T of Copper	0.32	0.24
Total Copper		**8.70**	**6.28**
Phosphoric Acid	m^3/T of Phosphoric Acid	4.25	4.33

Source: Sustainability Report

****Source: National Award for Excellence in water management – 2008***

Difference between Proposed and Vedanta:

1. Sulphuric Acid Cooling Tower system: Water Cooled CT Vs Water Cooled CT+ Radiator Type air Cooler.
2. Sulphuric Acid to Copper ratio (This ratio depends on sulphur to copper ratio in copper concentrate): **3.00** vs **2.70**

EAC OBSERVATION NO.-4

2139

Type of Cooling Towers

Due to non-availability of adequate water, referred plant uses mix of Water Cooled Cooling Tower and Radiator Type air Cooler system for Sulphuric Acid cooling which saves approximately 0.7 m3 per ton of sulphuric acid. This has reduced water consumption by ~0.7 m3/ T of Sulphuric Acid (~2.2 m3/T of Copper). Proposed project will be using water cooling system due to availability of the water from desalination plant and it also helps Proposed project to reduce **carbon footprint by 45%.** Detailed note is attached (**Annexure-4**) for the ready reference.

MUNDRA COPPER SMELTER – 1.0 MTPA

COMPARISON OF WET COOLING TOWER AND RADIATOR TYPE AIR COOLER

- **Preamble**

Sulphuric acid plant requires circulating water for meeting cooling requirement of various auxiliaries. Heat from various auxiliaries is gained by circulating water which is rejected to the atmosphere through cooling tower.

The heat can be rejected from the circulating cooling water either through wet cooling tower or dry cooling tower (i.e., radiator type air cooler, which is water to air cooler).

Wet cooling towers (or open circuit cooling towers) operate on the principle of evaporative cooling. The cooling water from the plant is pumped to a height of about 10 m and distributed over the cooling tower fill, cascading down the fill to the well at the bottom. In this type of cooling tower, some water is lost due to evaporation and drift which is about 2% of circulation rate. Also, in order to keep the dissolved solids in water under control, blowdown is taken from the water. To make-up for this loss (~2.5%), water needs to be continuously added into the system.

Radiator type Air Coolers (or Dry cooling towers) work on the principle of convection and conduction to dissipate heat from process fluid to the air stream created by the fans mounted on it. Dry coolers are closed loop systems which eliminate any kind of water loss and thus eliminating the continuous requirement of make-up water.

A comparative study is done with respect to the wet and dry cooling towers for the sulphuric acid plant for Mundra Copper Complex and same is presented below in this note.

1 Technical Comparison

Technical comparison of different parameters between Wet Cooling Tower and Radiator type Air Coolers are presented in the table below considering the circulating water requirement for a 1500 KTPA (100% H_2SO_4) of sulphuric acid plant for each phase.

S.No.	Description	Unit	Wet Cooling Tower	Radiator type Cooler
1	Heat Load	kW	172138	172138
2	Hot Water Inlet Temp	deg. C	42	80
3	Cold Water Outlet Temp	deg. C	32	65
4	Water Quality	-	Desalinated Water	Passivated DM
5	Total Circulating Water	m^3/hr	14804	9869
6	Temperature Range	deg. C	10	15
7	Cycles of Concentration, C		4	0
8	CT evaporation loss, E	m^3/hr	227	0
9	Total CT evaporation loss per day	m^3/day	5436	0
10	CT drift loss @ 0.01% (D) of total CW flow	m^3/hr	1	0
11	Total CT drift loss per day	m^3/day	36	0
12	CT blow down (B) B = (E / C-1) -D, where C = Cycles of Concentration,	m^3/hr	74	0
13	Total CT blow down per day	m^3/day	1776	0

ANNEXURE-4

2140

MUNDRA COPPER SMELTER – 1.0 MTPA

COMPARISON OF WET COOLING TOWER AND RADIATOR TYPE AIR COOLER

S.No.	Description	Unit	Wet Cooling Tower	Radiator type Cooler
14	CT make-up total (M) M = E* (C /(C-1))	m^3/hr	302	0
15	Total CT make up water required per day for each phase (1500 KTPA SAP)	m^3/day	7248	0
16	**Total CT make up water required per day for both phase (3000 KTPA SAP)**	**m^3/day**	**14496**	**0**
17	Power Consumption to produce desal water	kW	1359	0
18	Power Consumption Fans	kW	539	4370
19	Power Consumption for CW Pumps	kW	2069	1379
20	Total Power Consumption for each phase (1500 KTPA SAP)	kW	3966	5749
21	Total Power Consumption for both phase (3000 KTPA SAP)	**kW**	**7933**	**11498**
22	Footprint each phase (1500 KTPA SAP)	m2	935	4186
23	**Footprint each phase (1500 KTPA SAP)**	**acre**	**0.231**	**1.034**
24	**Footprint both phase (3000 KTPA SAP)**	**acre**	**0.462**	**2.069**
25	**CO2 Emission each phase (1500 KTPA SAP)**	**kg**	**1123**	**1627**
26	**CO2 Emission both phase (3000 KTPA SAP)**	**kg**	**2245**	**3255**

1.1 Circulating Water Quality

For Wet cooling tower, desalinated water will be used as circulating water in the circuit.

For radiator type cooler, the circulation system is a closed one, therefore passivated DM water shall be used with provision for intermittent make-up.

1.2 Water Consumption

As per above table, make-up water requirement for wet cooling towers of both phases is approx. 14496 m3/hr to account for blowdown, evaporation and drift losses.

In radiator type air coolers, the water circulates in closed loop, hence make-up water requirement is not there (negligible, as only leakages have to be topped-up).

1.3 Power Consumption

In both the systems, fans and pumps consume power. However, in case of wet cooling tower, additional power will be consumed for generating make-up water.
As indicated in table above, total power consumed by radiator type coolers is 45% higher than wet cooling tower.

MUNDRA COPPER SMELTER – 1.0 MTPA
COMPARISON OF WET COOLING TOWER AND RADIATOR TYPE AIR COOLER

1.4 Footprint Area

Footprint area required for radiator type cooler will be approx. five (5) times that of wet cooling towers for same flow of circulating water.

1.5 Carbon Emissions

As per above table, there is significant difference in carbon emission (45% higher) for radiator type cooler compared to wet cooling tower.
(Note: Based on Greenhouse gas reporting: conversion factors from Department for Business, Energy and Industrial Strategy, Govt of UK. The conversion factor is 0.28307 kg CO2 for each kWh produced.)

1.6 Material of Construction

FRP can be used for cooling tower casing and PP/ PVC materials can be used in wet cooling tower for fills & drift eliminators.

Radiator type cooler casing/ structure shall be carbon steel with epoxy painting and finned tubes shall be of Stainless steel.

2 Conclusion

Wet cooling tower is recommended due to the following as detailed above:
1) Lower power consumption 45%
2) Lower carbon footprint by 45%
3) Lower land requirement by 77%
4) No need of DM water
5) Reliable performance as no issues of fouling being an open system

***

EAC OBSERVATION NO.-5

2143

EAC OBSERVATION:

According to the EIA records, Dhaneshwari River is passing through the project site and the mangrove reserve forest is existing within the project site. Quantification of these mangroves and conservation measures for mangroves and the river stream has not been submitted.

REPLY:

As mentioned in EIA report, Dhaneshwari River is passing through the project site however, no mangrove reserve forest is existing within the project site. The mangroves are present at Kotdi creek which is ~200 m from the project site in the southern side. There will be bridges across the two land parcels for accessing. Flow of the water from the river will not be disturbed. No activity will be carried out in Dhaneshwari river bed. A 50 m wide greenbelt has been proposed along the side of Dhaneshwari River within the project site.

Wildlife Conservation Plan & Mangrove Conservation Plan study for Proposed Greenfield Copper Refinery Project has been conducted by Dr. Bharat Jethva, NABET Accredited FAE Cat-I, Ecology & Biodiversity of M/s. Bhagwati Enviro Care Pvt. Ltd.

A study carried out by National Centre for Sustainable Coastal Management (NCSCM), Chennai in year 2018, the total mangrove cover in Kotdi-I and Kotdi-II creeks was about 410 ha, out of which dense mangroves occurred to the extent of only 50 ha (12%), followed by sparse mangroves, distributed in 189 ha. The scattered mangrove covered an area of 171 ha. A study by Thivakaran and Sawale (2016) reported 47 species of macrofauna in the Mundra mangrove eco-system. Total 12 species of gastropods, 14 species of crustaceans, 9 species of bivalves, 8 species of polychaetes and 4 species belonged to the category "others". Increasing spread of mangrove area and high species richness of macrofauna suggests healthy and dynamic condition of mangrove ecosystem in this area.

Study suggests that mangrove plantation shall be carried out by Kutch East Forest Division as the area is under their jurisdiction and the staff has vast experience in mangrove plantation and management. A financial outlay of Rs. 250 Lakhs has been proposed by AEL for mangrove plantation and monitoring. The mangrove conservation report is enclosed as **Annexure-5**.

adani

Dated 25 March 2019

To,

Divisional Forest Officer (Kutch – East)
Kutch, Gujarat

Sub- Submission of Wildlife and Mangrove Conservation Plan for approval please.

Dear Sir,

M/s. Adani Enterprises Limited (AEL) has proposed to set up a Greenfield copper refinery project of 1.0 MTPA (10 LTPA) capacity in Siracha and Navinal village within Adani Port Special Economic Zone (APSEZ), taluka Mundra, district Kutch, Gujarat.

As per Environmental Impact Assessment (EIA) Notification dated 14th September 2006, proposed project falls under category-A of project activity 3(a) for prior Environmental Clearance (EC) from Ministry of Environment, Forest & Climate Change (MoEF&CC). Hence, Terms of Reference (TORs) for the preparation of EIA has been obtained from the MoEFCC vide letter reference F.No.J-11011/113/2016-IA.II(I) dated 21st June 2016 (attached).

Total area earmarked for the project is 256.58 ha (634 acres), out of which 154.19 ha (381 acres) of land is already industrial land in APSEZ and 102.39 ha (253 acres) land is part of the total 1576.81 Ha forest land for which Stage-1 Forest Clearance has been granted by the MoEF&CC vide letter F.No 8-04/2016-FC dated 16th Nov 2018 (attached) in favor of APSEZ.

Condition number No. 5(v) of the TOR reads that "Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area is to be prepared".

Study has been carried out through NABET accredited Field Area Expert, Cat-I (Ecology and Biodiversity). Wildlife Conservation Plan has been prepared based on primary data and fresh field surveys. Besides, the Mangrove Conservation Plan has also been incorporated in the present study.

Attached, please find the 3 copies of Conservation Plan for your comments and forwarding to Chief Wild Life Warden (CWLW) the state for approval please.

Thanking you,
Sincerely,

P.A.Suryarao

1. INTRODUCTION

1.1. Background

M/s. Adani Enterprises Limited (AEL) intends to set up a Greenfield copper refinery project of 1.0 MTPA (10 LTPA) capacity in 256.58 ha (634 acres) of area, which includes facilities like copper smelter, sulphuric acid plant, copper refinery, continuous cast copper wire rod plant, precious metal recovery plant, phosphoric acid plant, aluminium fluoride plant, effluent treatment plant, utilities storage of water and fuel, etc. with the state of the art environment friendly technology, which will be located at Adani Port Special Economic Zone (APSEZ) land in villages Siracha and Navinal, Taluka Mundra, district Kutch, Gujarat.

As per Environmental Impact Assessment (EIA) Notification dated 14th September 2006, proposed project falls under category-'A' of project activity 3(a) and requires prior Environmental Clearance (EC) to be obtained from Ministry of Environment, Forest & Climate Change (MoEF&CC) before the commencement of ground activity. The application No: IA/GJ/IND/53004/2016 for prior EC (Form-1 and Pre Feasibility Report) for the proposed project has been submitted to MoEF&CC on 21st April 2016 and same was reviewed by the Expert Appraisal Committee (Industry-I) the meeting held on 4th May 2016 in New Delhi to prescribe Terms of Reference (TORs) for the preparation of EIA/EMP report. TOR has been issued by MoEF&CC vide letter reference F.No.J-11011/113/2016-IA.II(I) dated 21st June 2016. EIA for the project has been conducted by the NABET accredited consultant and submitted to MoEF&CC for Environmental Clearance in 2018.

As a part of approved ToR No. 5(v) 'Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area is to be prepared'. Present study is carried out towards preparation of above mentioned plan based on primary data and fresh field surveys. Besides, as on voluntary basis, the Mangrove Conservation Plan has also been

incorporated in this report. Therefore, the present study is carried out to fulfil requirement of the ToR issued to AEL. The present study is a detailed account of flora, fauna, mangrove and wildlife habitats present in 10 km radius of the proposed project area based on literature survey and primary data collection. Additionally 10-15 km radius area was also studied to check if there is any environmental sensitivity present based on the secondary information and published literature.

1.2. Legal Framework

M/s. Adani Enterprises Limited (AEL) intends to set up a Greenfield copper refinery project of 1.0 MTPA (10 LTPA) capacity in 256.58 ha (634 acres) of area, which includes facilities like copper smelter, sulphuric acid plant, copper refinery, continuous cast copper wire rod plant, precious metal recovery plant, phosphoric acid plant, aluminium fluoride plant, effluent treatment plant, utilities storage of water and fuel, etc. with the state of the art environment friendly technology, which will be located at Adani Port Special Economic Zone (APSEZ) land in villages Siracha and Navinal, Taluka Mundra, district Kutch, Gujarat.

The proposed project falls under category-'A' of project activity 3(a) and requires prior Environmental Clearance (EC) to be obtained from Ministry of Environment, Forest & Climate Change (MoEF&CC) before the commencement of ground activity. The application No: IA/GJ/IND/53004/2016 for prior EC (Form-1 and Pre Feasibility Report) for the proposed project has been submitted to MoEF&CC on 21st April 2016 and same was reviewed by the Expert Appraisal Committee (Industry-I) the meeting held on 4th May 2016 in New Delhi to prescribe Terms of Reference (TORs) for the preparation of EIA/EMP report. TOR has been issued by MoEF&CC vide letter reference F.No.J-11011/113/2016-IA.II(I) dated 21st June 2016. The present study is to fulfil the requirements of studies mentioned under ToR No. 5(v) issued to AEL.

1.3. Scope of Work

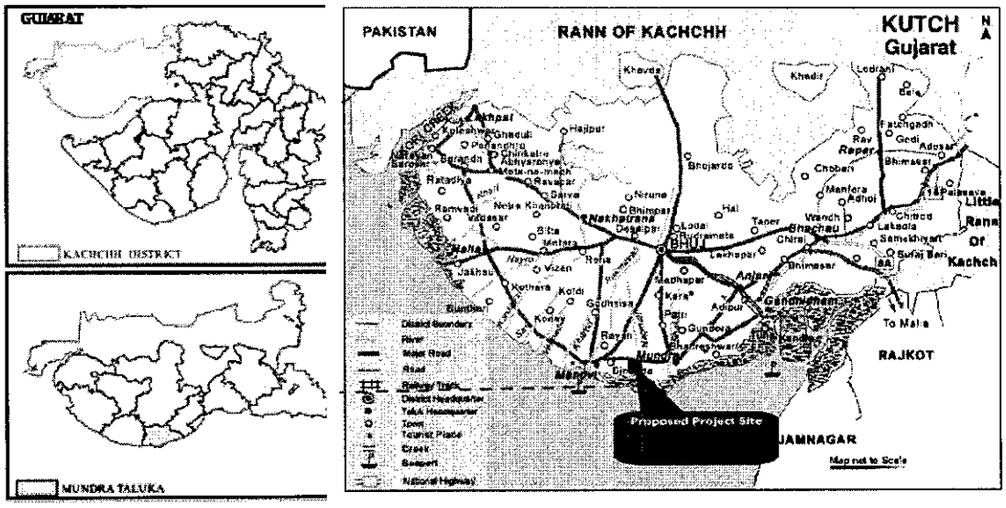
Scope of work for this study is in line with the ToR No. 5(v) issued to AEL which include preparation of Wildlife Conservation Plan. AEL also intends to submit Mangrove conservation plan as part of this report. The preparation of the wildlife and mangrove consecration plan required the study of habitat types and quality, species, diversity, rarity, fragmentation, ecological linkage, age, abundance, etc. in case of schedule fauna, conservation measures should be proposed, And a detailed study to assess the wildlife habitats, their migration route, etc. and measures to mitigate impacts of the proposed activities.

The present study has carried out identification of ecologically sensitive receptors (species, habitats& eco-systems) based on field investigations and literature survey along with their mitigation with conservation action plan. The study was carried out in core area (project site) and in buffer area i.e. 10.0km periphery from the project site. The study was carried out systematically and scientifically using primary and secondary data in order to bring out factual information on the ecological conditions of the project site and its surroundings.

The study involved assessment of general habitat type, vegetation pattern, preparation of inventory flora and fauna of terrestrial ecosystem in 10 km radius from the boundary of proposed project site. Biological assessment of the site was done to identify whether there are any Rare, Endemic or Threatened (RET) species of flora or fauna in the core area as well its buffer zone and to identify whether there are any ecologically sensitive area within buffer zone that is likely to be impacted. The study also designed to suggest suitable mitigation measures if necessary for conservation of important species and their habitats etc.

1.4. Objectives of the Study

The major aim of the present study is to avoid any impact of proposed project activity on important natural habitats or species in the study area. Therefore, the study is carried out with following objectives.



- To evaluate the ecological status of the study area with respect to important flora, fauna and ecologically sensitive habitats etc.
- Assessment of any impacts of the project activities on ecologically sensitive habitats and species.
- Recommend mitigation measures in the form of wildlife conservation plan with an in-built monitoring mechanism and schedule of implementation along with financial budget.

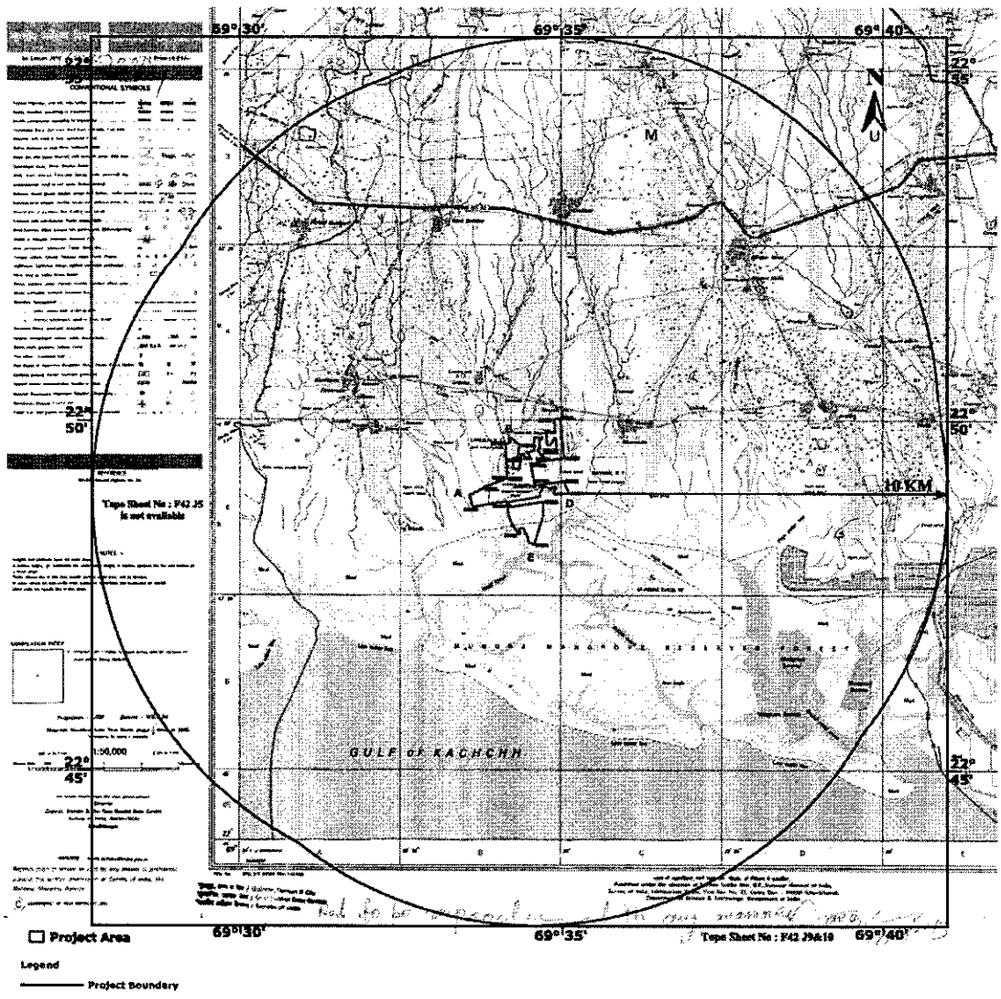
2. STUDY AREA

2.1. Project Location

The proposed project site is located in villages Siracha and Navinal at APSEZ Taluka Mundra, district Kutch in the state of Gujarat (Map-2.1).

Map- 2.1: Proposed project location in Siracha village of Kutch district in Gujarat.

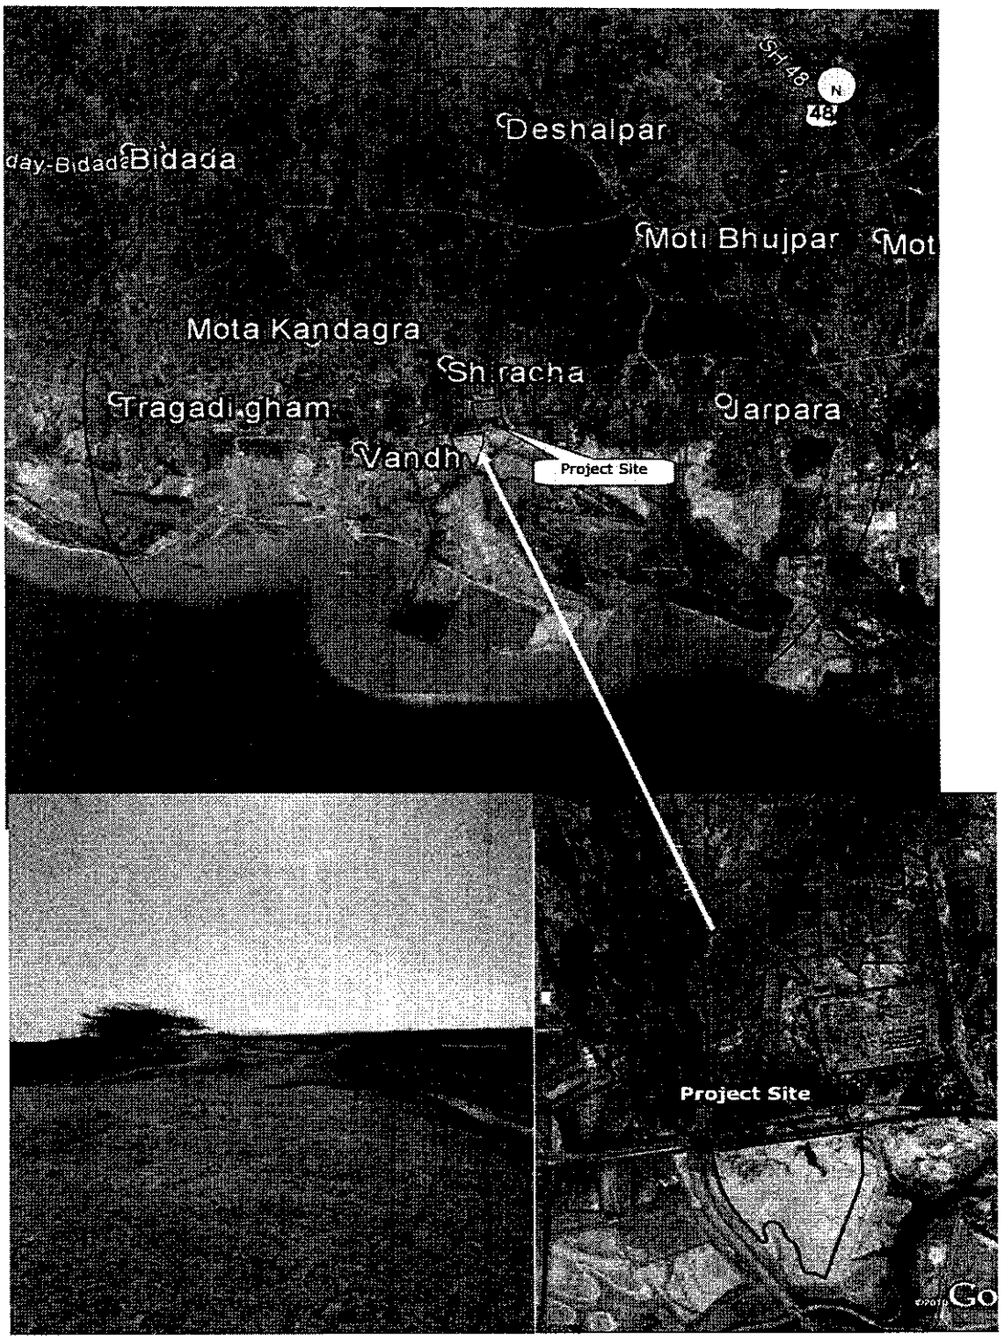
2.2. Study Area:



For the convenience of the study and the user agencies, the study area was divided in two major parts i.e. 1) Core area/project area and 2) Buffer area i.e. 10.0 km periphery of the project boundary (Map-2.2, Map-2.3).

2.2.1. Core Area:

Core area is proposed project area of Greenfield Copper Refinery plant at Mundra (Map-2.2) The total area earmarked for the proposed project is 256.58 ha (634 acres), in which 154.19 ha (381 acres) of land belongs to APSEZ area and 102.39 ha (253 acres) of land belongs to forest area for promoting industrial development. The Gulf of Kutch sea coast is located at 3.9 km south from the proposed project site. The area is located 5.0 km south of National Highway NH- 8A and 0.3 km from State Highway SH-6. No



major vegetation or any human settlements present in the core area, therefore, there is no need for rehabilitation of any human settlements from the project site. Most importantly the project site does not fall in 10.0 km periphery of any National Park or Sanctuary or their eco-sensitive zones. Site is located at a substantial distance from the Coastal Regulatory Zone areas of Gulf of Kutch sea coast therefore, does not attract CRZ clearance.

Map-2.2: Proposed project location on Toposheet.

Corner Point	Latitude	Longitude
A	22°48'55.40"N	69°33'34.74"E
B	22°49'44.92"N	69°34'13.74"E
C	22°50'01.88"N	69°34'59.78"E
D	22°48'57.23"N	69°35'08.42"E
E	22°48'13.26"N	69°34'35.43"E

Map-2.3: Project location (core area) with 10.0 Km buffer (study area) in Gujarat

2.2.2. Buffer Area

The Buffer Area mainly consists of revenue areas 18 villages that fall in 10.0 km periphery of the project site (Map-2.2). The list of villages is given in Table-2.1.

Table-2.1: List of villages falling in 10 km buffer area.

No	Village	No	Village	No	Village
1	Tunda	7	Mota Bhadiya	13	Khakhar Moti
2	Shiracha	8	Kandagara Mota	14	Deshalpar
3	Navinal	9	Bhujpar Nani	15	Sukhapar
4	Jarpara	10	Bhujpar Moti	16	Nani Khakhar
5	Bidada	11	Depa	17	Gelda
6	Tragadi	12	Nana Bhadiya	18	Dhrab

Majority of the land of the buffer area is occupied by the agriculture fields, forest area, industries (Saltpans, Ports, and Power plants), open scrub vegetation, mangrove, mudflats, pond/ reservoir, roads & railway network & built up areas etc. Most importantly there are no Wildlife Sanctuaries or National Parks located in the 10.0 Km periphery of the proposed project area. The proposed project land is located at substantial distance from Coastal Regulatory Zone of Gulf of Kutch coast.

3. METHODOLOGY

3.1. Basic frame work of data collection

The prediction of impacts industries on flora and fauna depends on understanding of the proposed activities, its magnitude/extent, scale and ecological conditions in the surrounding area. Collection of comprehensive baseline information on flora and fauna is therefore a prerequisite for assessment of impacts of development activities. It would also help in advance planning and mitigate the impacts and ultimately managing the natural habitats and resources. The approach to achieve the stated objectives within defined scope of work, include field surveys, interviews, and reviews of literature. Following was the basic fame work of the data collection and analysis for the present study.

3.2. Field Surveys

Several field visits were carried out between month of February-March 2019 to understand and assess the impacts of proposed project activities on flora and fauna and natural habitats. We evaluated the distribution and abundance of flora and fauna and mangroves in project area and in buffer area separately.

3.3. Identification of Important Ecological Habitats

The important ecological habitats and features were identified based on our field visits and also mapping of landuse types in the study area. We identified ecologically important habitats through primary survey, literature survey and consulting local naturalists etc. These important ecological habitats and features were then identified on landuse map that is prepared for the study area. Land use map of 10 km radius of the proposed project site is prepared by EIA agency is used for the present study. Prominent landuse features such as, roads, rivers/waterbody/drainages, agriculture, sea, sandy beach, mangrove, mudflats, industrial and built up areas, forest area, scrubland etc. were digitized using open source software such as QGIS and their areas were calculated. There may be acceptable margin of

errors in the final map however, locations and important features are identified and shown on map.

3.4. Study of Flora

In order to study the flora we laid 10X10 m^2 size 30 quadrates in buffer and 10 quadrates in core area (Map-3.1 & 3.2). Quadrates were laid separately for detailed analysis of vegetation in the core area (project site area) and buffer areas (10 km periphery). In order to study herbs and grass species, we laid a 1X1m^2 quadrate within the abovementioned quadrates. Details of Geographic Coordinates of each of the quadrates laid are given in Map-3.1 and Annexure-1. Information on geographic coordinate, occurrence of plants, their species names, numbers and floral phenotypes, life forms etc. were collected from each quadrate we laid. Direct visual enumeration of plant species was carried out to generate data on flora. The collected data was then systematically and scientifically analyzed to produce information on following biodiversity parameters of flora. The encountered vegetation of the study area was analyzed to calculate density, frequency & abundance (Curtis and McIntosh, 1950). Total abundance, density and frequency in respect to individual species were calculated in order to understand the vegetation structure and relative importance of the sampled areas. We used Shannon Weaver Index (Shannon & Weiner, 1949) for Species diversity and Simpson dominance index (Simpson, 1949) for species dominance. Species enumeration (inventory), richness, total abundance, density, and evenness provide systematic baseline information of the vegetation community.

3.5. Study of Fauna

We mainly studied the fauna of higher trophic levels which acts as indicator of the type and health of the eco-systems.

Reptiles: Majority of the reptile species are fossorial in habit therefore the assessment of reptiles and their diversity etc. holds special significance for any development projects. It is difficult to conduct quantitative study on reptiles within a short period of time. Therefore, we relied on qualitative observations only. We carried out study based on interview survey,

secondary literature as well as direct observation on road killed reptiles. We randomly looked for various reptiles and their presence i.e. lizards, snakes etc. in the study areas. Therefore, only a check list of reptiles observed during the study period was prepared.

Birds: Birds, occupying higher trophic levels in the ecosystems, respond quickly to the changes in the habitats and therefore serve as one of the best indicators for evaluating the status of the area. Therefore, we created baseline data on birds by systematically and collected data on their occurrence i.e. presence absence in the buffer and core areas in the study area.

Map-3.1: Sampling locations for flora and fauna study in the core area.

Map-3.2: Sampling locations for flora and fauna study in the buffer area.

For creating baseline data on birds we randomly walked in the study area during early morning i.e. 6:00 AM to 9AM and 5:00PM to 7:00 PM. These time periods of the day are when maximum bird movements are expected. We walked randomly in the study area carried out sightings of birds ad libitum and recorded species based on their identification. Special reference books for bird species identification were used. Apart from walking randomly, we also relied on specific habitat search for different species i.e. dense bushes, wetland, ponds, big trees, agriculture areas etc. In order to accomplish the inventorization of the bird species found in the study area. All the bird species are classified based on their conservation status, their schedule under Wildlife Protection Act 1972, their migratory status, habitats and their feeding guilds. This was further used for finding out important bird species in the study area i.e. rare, endangered or species of high conservation significance.

Mammals: Like birds, mammals are also occupying higher trophic levels in many ecosystems and respond quickly to the changes in their habitats therefore, serves as best indicators of the ecosystem health. We therefore, chose to create qualitative baseline information on presence and absence of mammals in the study area. Since the presence of mammalian species is low affecting probability of their sightings, in the study area, it was difficult to estimate their population using line transect method. More importantly, it was difficult to accommodate the sightings of nocturnal and diurnal animals in the study. Therefore, we prepared a qualitative check list of mammals based on their presences and absence using indirect evidences and signs such as footprints, dens, droppings, diggings, scrap marks, etc. in the project area.

Apart from these, search efforts were also made for various signs of important wildlife species in the study area which includes looking for wildlife signs such as dens, diggings, scrap marks, droppings etc. The sites where likelihood of animals is higher such as shady trees, waterholes, dense and undisturbed bushes etc. were surveyed intensively during the survey in the study area. This survey has helped us in identifying various species of mammals in the study area. For mammal inventory, both direct sightings and indirect evidences (like dung, scats, pellets, foot prints, nests, dens etc.) were accounted.

3.6. Important Wildlife Habitats and Protected Areas

We assessed the presence and distances of important wildlife habitats and hotspots such as protected areas, mangroves, breeding and nesting habitats, coastal habitats, important wetlands, and grassland area from core area. These important areas such as Protected areas (National Park, Wildlife Sanctuaries, Conservation Reserves etc.), Wetlands of national importance, Ramsar sites, Important Bird Areas (IBAs), classified by the Bombay Natural History Society etc.

3.7. Rare, Threatened & Endemic Wildlife Species and Their Corridors

We also assessed the presence of rare, endangered, endemic wildlife species in the project area/core area and buffer area. Special search efforts were made during the field visits to identify any such sensitive species or their corridors etc. in the project area and buffer area. Apart from field visits we relied on interview surveys of local people, consultation with local biologists and naturalists etc.

3.8. Literature Review

Considering the time limitation to undertake statistically rigorous data gathering system, study also relied on existing knowledge about the ecology and biodiversity of the region. Importantly, there are quite a few studies undertaken in the past dealing with the impacts of Copper refinery Plants on flora and fauna and other concerns of biodiversity conservation. Literature on Copper refinery projects and associated environmental issues were downloaded and collated through internet. Various relevant literatures were surveyed during the study for collection of baseline information. Maps, reports and documents collected from the project proponent were also reviewed and used in the present study. Books on flora, fauna and wildlife were also studied in order to understand the biology of several species. Other wildlife and mangrove conservation plans submitted for the surrounding area are also referred.

3.9. Consultations

During the study, series of consultations were made with both technical and non technical stakeholders to get precise information on the project area/core area and buffer zone habitats. In order to know more about the seasonal presence of several faunal species and their movement, study team informally consulted and discussed with local naturalists and local people, from the villages, herders and farmers who inhabit close to the proposed project area.

3.10. Supplementary Information

Other than the above, for the purpose of this study, relevant information was also collected from following sources:

Research papers on flora and fauna and mangroves

Google imageries/Google Maps

Project related Maps provided by Adani Enterprise Limited

Communications with subject experts

3.11. Analysis to Evaluate the Potential Impacts

The information collected on status of flora and fauna and, their spatio-temporal distributions, hotspots, and potential impacts of proposed project development were logically analyzed and conclusions were extracted for preparation of conservation plan for the project proponent to implement.

3.12. Preparation of Wildlife Conservation Action Plan:

After identification of key impacts of the project, on flora, fauna or any key habitats of any important species or their corridors, a comprehensive wildlife conservation action plan was prepared for 5 years with monitoring mechanism and financial projections.

3.13. Limitations of the Study

The study undertaken is structured around the project information as provided by the project proponent, any change in the proposed activities may result in variation of outcome. The study is based on field visits, literature survey, consultation with local people etc. Professional judgment and subjective interpretation of facts has been applied for this study. All information's and inferences presented herein are based on the specifics currently available within the limits of the scope of work, information provided by the client or its representative, existing secondary data and schedule.

4. Ecological Assessment

The observations and assessment of overall ecological scenario presented in this chapter include details of flora, fauna, natural habitats, protected areas, wildlife species and their migration corridors etc. Such baseline information provides better understanding of the situation and overall ecological importance of the area. This baseline information viewed against proposed project activities help in predicting their impacts on the wildlife and their habitats in the region. Data collected and information gathered from secondary literature on flora, fauna, protected area, natural habitats, wildlife species etc., were analyzed and results are presented as follow.

4.1. Biogeographic Zone

The region falls in Indo-Malay Realam (IM 1303) and Deserts and Xeric Shrublands Biome as defined by WWF. The North-western Thorn Scrub Forests [IM1303] ecoregion represents a large expanse of degraded dry forest surrounding the Thar Desert. Neither exceptionally species-rich nor high in endemism, the ecoregion nevertheless harbours viable populations of antelopes.

As per classification of Indian Biogeographic zones by Rodgers et al. (2000), Kutch district falls under Biogeographic Zone 3 - the Indian Desert and the Biogeographic Province Kutch Desert- 3B.

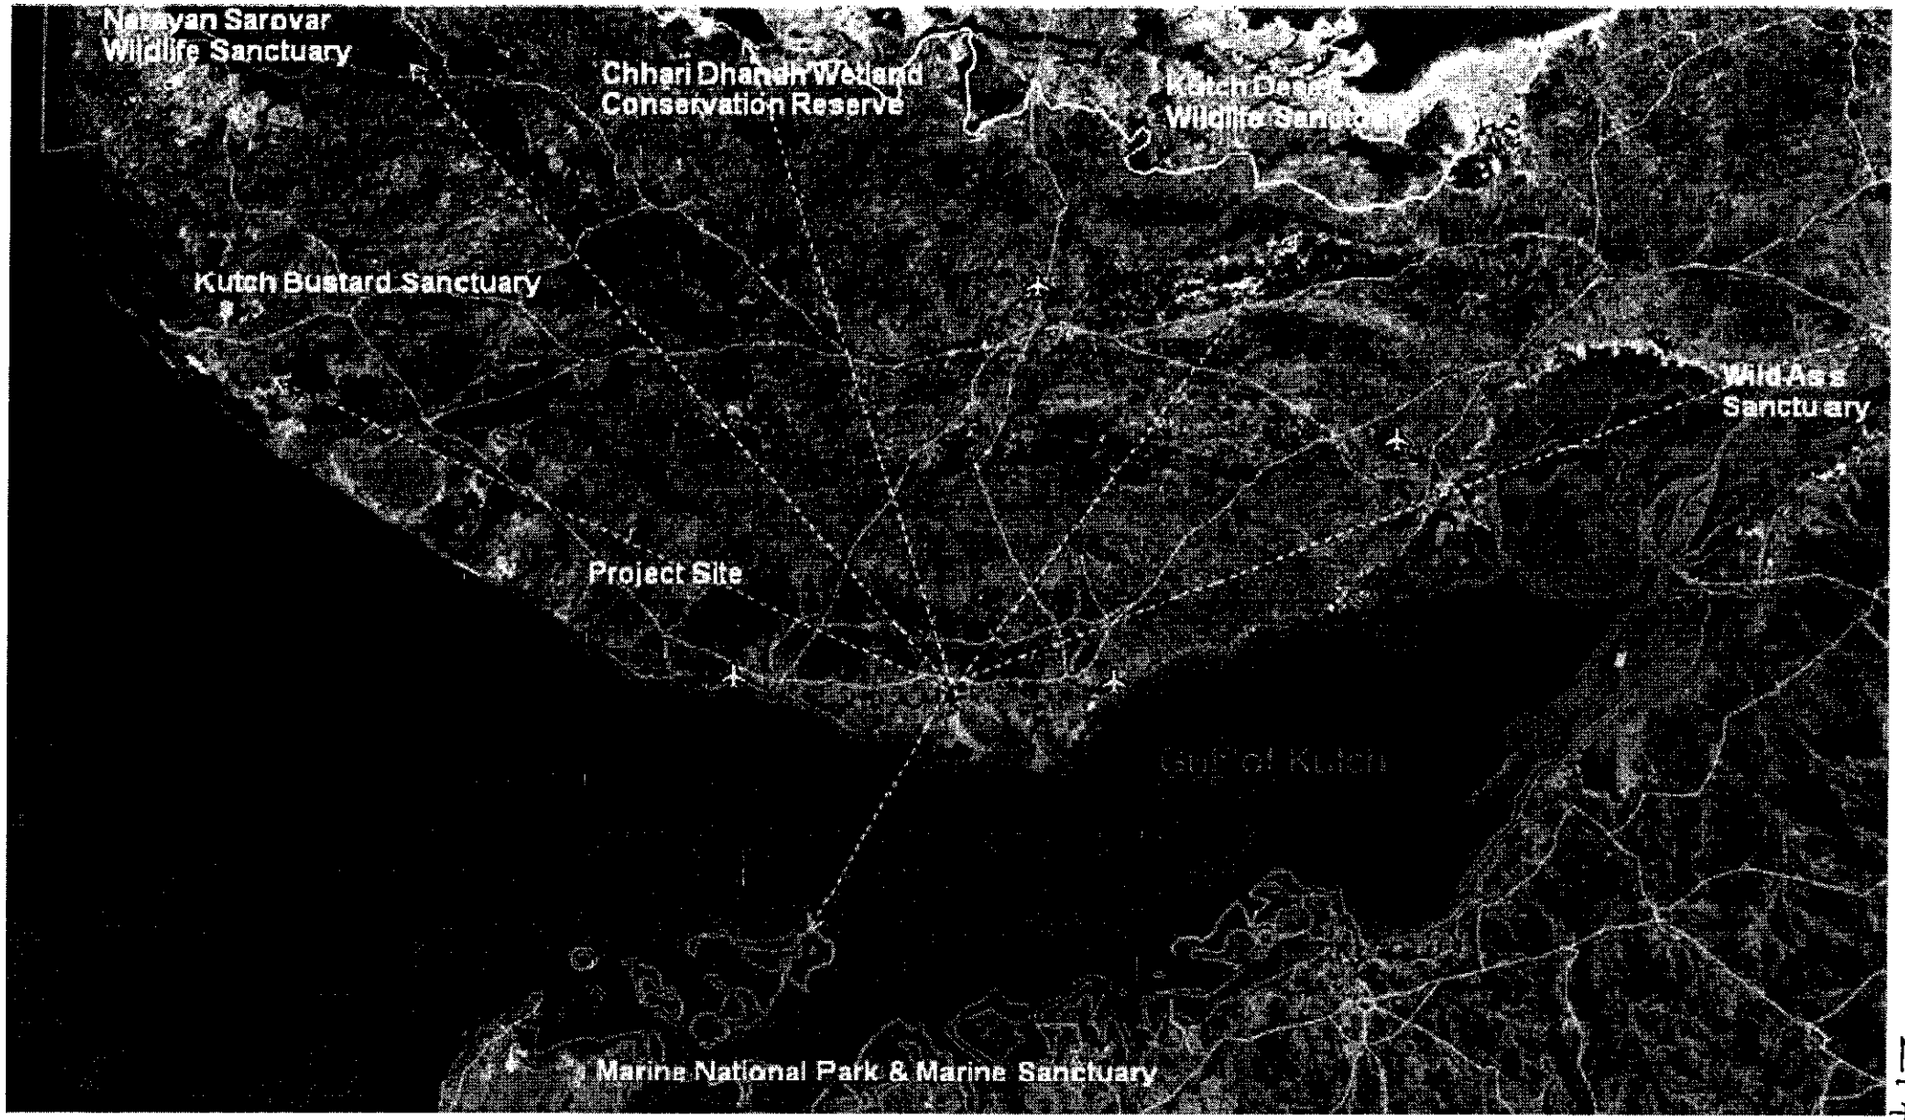
4.2. Protected Areas

As per our information and survey there is no Sanctuary, National Park, or notified wildlife corridors within the core area and buffer area (10 km) of the project site. Marine National Park is located at 33.0 Km distance in south-west direction, Marine Sanctuary is located in same direction at 35.0 Km distance, where as Narayan Sarovar Sanctuary is located at 103.0 km in North-West direction, Kutch Desert Wildlife Sanctuary is situated in the Great Rann of Kutch at 70.0km North East direction. The Wild Ass Sanctuary is located in the Little Rann of Kutch at 120 km distance, Kutch Bustard

Sanctuary at 92.0 km in North direction and Chari-Dhand Wetland Conservation Reserve is located at 82.0 Km north. Majority of the protected areas and their eco-sensitive zones are located beyond 30 km distance from the project site (Table-4.1, Map-4.1).

Table-4.1: Protected area and their distances from proposed project site.

No	Protected Areas	Distance	Direction
1	Marine National Park	33 Km	South-West
2	Marine Sanctuary	35 Km	South-West
3	Narayan Sarovar Sanctuary	103 Km	North-West
4	Kutch Bustard Sanctuary	92 Km	North-West
5	Wild Ass Sanctuary	120 Km	East
6	Kutch Desert Sanctuary	70 Km	North-East
7	Chhari Dhandh Conservation Reserve	82 Km	North
8	Banni Grassland Important Bird Area	69 Km	North



4.3. Landuse Types in the Study Area

We mapped various landuse types of the study area using field surveys and various references available online. The major landuse features are agriculture, sea, mudflats, open scrubland, sparse wasteland, mangroves etc (Table-4.2 & Figure-4.1, Plate-4.1).

Table-4.2: Area & percentages of various landuse types in the study area.

No	Landuse Type	Area (ha.)	% of Area
1	Built up Area	2103.27	5.08
2	Forests	837.62	2.02
3	Agriculture	15484.69	37.41
4	Wasteland	5620.36	13.58
5	Waterbody	9366.3	22.63
6	Wetlands	4469.36	10.80
7	Others	3512.17	8.48

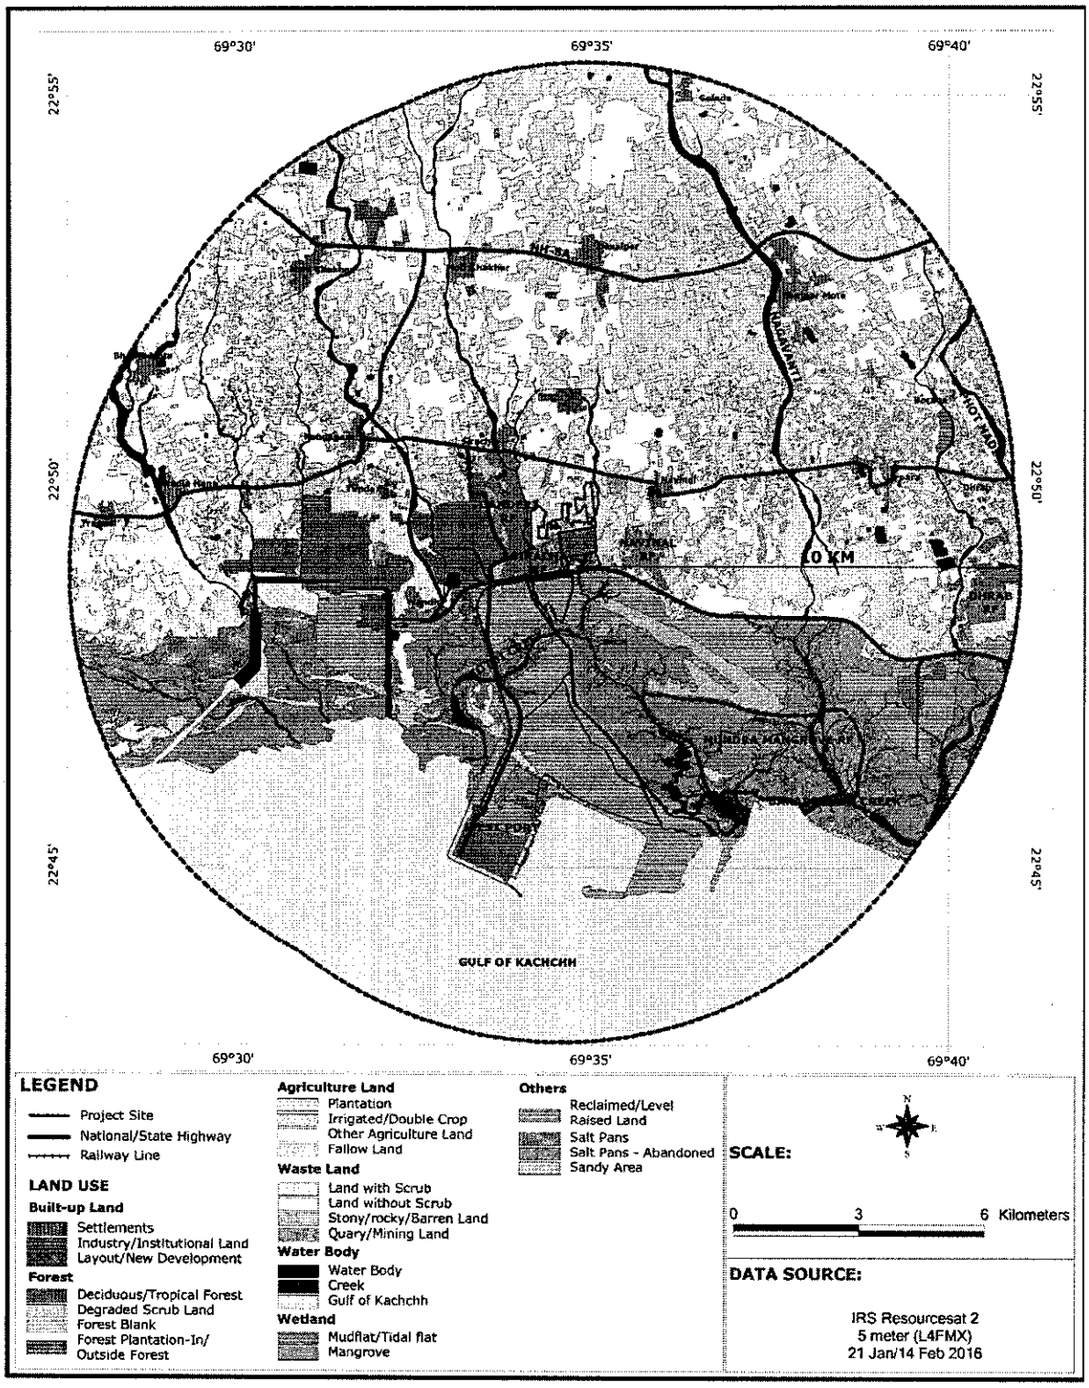
1964

Map-4.2: Landuse pattern in the study area.



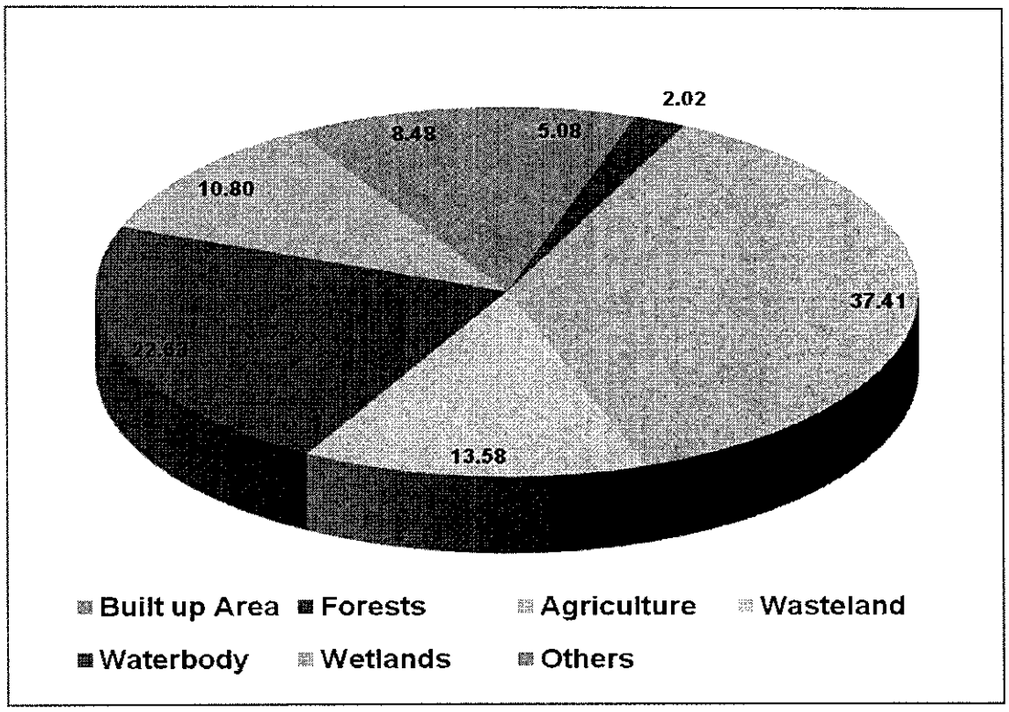


Figure-4.1: Percentage of various landuse classless in the study area.

4.4. Important Ecological Habitats

Based on our field visits and literature survey we identified two important and ecologically sensitive habitats that are located within 10km buffer zone. These habitats are listed below

i. *Forest Area*
ii. *Mangrove ecosystem*
iii. *Waterbodies*
iv. *Important birdwatching site*

4.4.1. Forest Area & Forest Type

As per information received from project proponent, the total area earmarked for the proposed project is 256.58 ha (634 acres), in which 154.19 ha (381 acres) of land belongs to APSEZ area and 102.39 ha (253 acres) of land belongs to forest area for promoting industrial development. Therefore, core project area does include forest area. Forest Clearance for this land is under process and stage-I clearance is already received for the same. MoEF&CC

Table-4.3: Details of Forest area and forest types in study area.

No	Village	Survey No	Area	Type
1	Deepa	220/p	17.36	RF Section-20
2	Borana	20/p	26.62	RF Section-20
3	Dhrab	169/p	23.43	RF Section-20
4	Dhrab	169/p	81.59	RF Section-20
5	Jarpara	169/p	26.61	RF Section-20
6	Mundra Mangrove Range	2	5333.73	RF Section-20
7	Mundra Rakhal Dhuvo	2	334.34	Reserve Forest
8	Navinal	223/p	21.85	RF Section-4
9	Navinal	223/p	89.52	RF Section-20
10	Siracha	295/p	125.00	RF Section-20
11	Siracha	295/p	209.20	RF Section-20
12	Siracha	517/p	130.00	RF Section-4

4.4.2. Mangroves Ecosystem

Kutch mangroves distributed in the arid to semi-arid coastal belts are traditionally considered as the low dense mangroves which are mostly degraded. Structural attributes of Kutch mangrove are not comparable with other luxuriant mangrove formations on other coasts of India (Sawale and Thivakaran, 2013). The semi-arid coastal belt of Kutch is known for its harsh environmental conditions like hyper-salinity (36-47 ppt), wider ambient temperature fluctuations (11.2 to 48.7oC), high evopo-transpiration (R/ETP-0.03–0.20) and frequent natural disasters like cyclones and earthquakes (Sawale and Thivakaran, 2013). Added, the recent spurt in inland watershed development schemes deprive the meagre seasonal run-off to neretic waters, rendering it singly conspecific formations of *Avicennia, marina*; a hardy species capable of tolerating high physiological stresses (Sawale and Thivakaran, 2013). Though eight true mangrove species were reported earlier from the Gulf of Kutch, *A. marina* was the only species recorded on the coast of Mundra with sporadic occurrence of *Rhizophora mucronata* and *Ceriops tagal* (Sawale and Thivakaran, 2013). Majority of the mangrove areas are represented by only one species i.e. *Avicennia marina*. Few other species such as *Rhizophora mucronata* and *Ceriops tagal* are planted by forest department as part of their mangrove conservation schemes. National

(forest conservation division) has granted Stage-I approval for diversion of 1576.81 ha. of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16 November 2018. Part of the diverted forest land area (253 acres) will be utilized for the proposed copper refinery project after all approvals.

As per the forest classification of Champion and Seth (1968), forest of Kutch district classified under the "Northern Tropical Thorn Forest". The forest area in the proposed project area consists of mostly Prosopis juliflora with scattered trees of *Anogeissus pendula, Acacia leucophloea, Zizyphus mauritiana, Prosopis cineraria, Salvadora persica* and *Salvadora oliodes etc.*

Apart from forest areas involved in the core area, there are forests areas present in the buffer zone which are under the jurisdiction of Kutch West Forest Division of Gujarat Forest Department (Table-4.3). These forest areas are well marked with a boundary wall indicating its possession by the forest department. These forest areas are of two vegetation types 1) Open scrub forest and 2) Mangroves. Total 6419.25 ha. of Reserved Forests area is present in the study area (Table-4.3). Most part of the reserve forest areas (83.0%) is in the form of mangrove forest falling in the creek systems on the coast. Remaining 17.0% falls in the open thorny scrubland forests dominated with *Prosopis juliflora*.

The inland open scrub forests are dominated with dense patches of *Prosopis juliflora* along with scattered plants of *Acacia nilotica*, *Prosopis cineraria*, *Zizyphus numularia, Salvadora persica, Salvadora oliodes, Capparis decidua, Calotropis procera, Balanites aegyptica, Butea monosperma, Acacia leucophloea, Casia auriculata etc.* The vegetation type of these forest areas are representative of desert eco-system. The details of the forest areas are given in Table-4.3.

The other type of reserve forests are located in the form of coastal area i.e. on high tidal mudflats which are harbouring sparse patches of mangroves and coastal vegetation details of these area is given in the section on mangroves.

Centre for Sustainable Coastal Management, Chennai, carried out a status survey ('Comprehensive and Integrated plan for preservation and conservation of mangroves and associated creeks in and around the Adani Ports and Special Economic Zone Ltd., Mundra, Gujarat') of the mangroves along the creeks and adjoining land/island as of 2016-17. The total mangrove cover of the area was estimated to be 2340 ha. There has been an increase of mangrove cover by 246 ha (~10%) compared to the mangrove area of 2011 (using aerial photo of 2011, NCSCM has estimated it to be 2094 ha). In 2016-17, out of 2340 ha, the dense mangroves were 629 ha contributing to 27% of total mangrove cover.

Most of the mangrove areas (83.0%) are located in the notified reserve Mangrove Forest areas of Navinal, Shiracha and Jarpara village coasts (Survey no-2 Mangrove Forests). The coastal area of Tunda, Navinal, Shiracha, Jarpara and Tragdi villages have patches of scattered, sparse and dense mangroves. Most of the mangroves are located on high-tidal mudflats and on the banks of creeks. Major creeks present in 10 km buffer zone study area are Kotdi-I, Kotdi-II, Baradimata-I and Baradimata-II. A sizable patch of dense mangrove is also located on the coast of Tragdi village. Closest mangrove distribution is located at 170 mtrs (on bank of Kotdi –II creek) from Southern most boundary of the proposed project site (Map-4.1, & Map-4.2, Plate-4.1). Dense mangrove formations are common on banks of creek from 0 to 75 meters where tidal water reaches every day. Rest of the mangroves are in the form of sparse stunted which are grown on the tertiary branches of tidal creeks.

Kotdi and Baradimata are shallow creeks compared to Bocha, Navinal and Khari creeks. Kotdi I exhibited least depth, and significant areas of the creek are exposed during low tide. In case of Kotdi II creek, though part of mouth is exposed during low tide, considerable sections of the inner parts of the creek have water at MLWS levels. The mouth regions of both main branches of Baradimata creek were covered with water during low tide. Due to the presence of water covered areas during low tide, both Kotdi II and both branches of Baradimata have conditions conducive for growth of mangroves.

4.4.3. Waterbodies

Our observation and literature review suggests that there are no major inland wetlands present within the study area i.e. core area or 10.0 km buffer area of the project site. Drainage pattern of the study area and project site are drained by several rivers and small tributaries, which are of dendritic pattern which remains dry in almost all the season. The Dhaneswari river (Danesri Nadi) a seasonal river (rain fed) flows in the western part of the project site. The water bodies flows through study area are Kotdi creek (0.5 km, S), Khari Nadi (1.9 km, W), Gulf of Kutch (3.9 km, S), Nagavanti Nadi (4.7 km, E) and Phot Nadi (8.7 km, ENE) from the project site. Natural drainage passing through the site will be suitably trained and maintained. These drainages have small check dams built on them which are known to accumulate overflowing runoff water for a short period. Apart from being important hydrological features in the semi-arid area, these check dams provide important habitat for many bird species and water source for wildlife in the region. One such drain is known as Khari River which flows from North-to South in western side of proposed project site. There is no check dam on this river in the vicinity of project site. However, all such drainages are seasonal in nature and flows only during rainy days. These drainages flows water from main land to Gulf of Kutch. Most of the stagnant water sources i.e. check-dams are located at substantial distances i.e. more than 2.5 km distance from the proposed project site. There will not be any diversion of rivers. Further, conveyer for copper concentrate and rock phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required.

4.4.4. Important Birdwatching Site

Majority of the waterbird species reported in the present study are found at Modhva mudflats located beyond 11.0 km south-west outside the study area. It is located adjacent to Sea water outfall of CGPL. Modhva area is a mix of sandy beach, saltpans, coastal mudflats with scattered mangroves and thorny bushes on the coast which provides a suitable mix of wetland habitat

to attract large populations of migratory and resident birds. Most importantly this area provides much needed staging and stop over sites for the migratory birds flying on Central Asian Migratory bird Flyway.

The Modhva coastal area is known amongst the birdwatcher as it is one of the important and prominent birdwatching and bird photography sites of Kutch. The national and international birdwatching tour agencies bring their keen birdwatching and bird photography clients to this birdwatching site of Kutch. The site is known for shore birds such as Crab plover, Oystercatcher and waterbirds such as flamingos etc. The site is therefore one of the important eco-tourism sites of Kutch. Therefore in view of its ecological and economical value, Modhva coastal area is considered as important site for conservation. Since it lies outside the study area i.e. 10.0km, there are negligible chances of impacts on this area by the proposed project.

4.5. Floral Diversity and Vegetation Type in Core & Buffer Area

We evaluated biodiversity and abundance parameters of vegetation/plant species in the core area and in the buffer area of the project site.

4.5.1. Vegetation Type & Community in Core Area & Buffer Area:

Core area: The proposed project site falls in the arid-semi arid climatic condition. Our field survey and literature review suggest that the vegetation types and community in the project area is that of semi arid-arid regions. It is represented by sparse thorny scrub vegetation in two industrial areas i.e. thermal power plants. The major part of the project area is devoid of large trees and mainly consists of dense and sparse shrubs i.e. *Prosopis juliflora, Prosopis cineraria, Acacia nilotica, Casia auriculata* and *Zizyphus numularia, caparis deciduas etc.* the major grasses include several species of *Cyperus* and herbs *Indigofera*. Details of vegetation survey results are discussed in forth coming sections.

Buffer area: The buffer area (10.0 km periphery) comprises mainly of agriculture fields, wastelands, forest plantation patches by forest department,

scattered bushes of *Prosopis juliflora, Prosopis cineraria, Acacia nilotica, Salvadora persica, Salvadora oliodes, Azadirachta indica. Prosopis juliflora* and *Zizyphus numularia* among the wild plants and cotton, coconut, dates, pomegranate, among the cultivated crops are the most dominant plants in the buffer area.

Except for highly scattered and small plants of *Commiphora wightii*, there were no rare, endangered or conservation concern species present in the close vicinity of the project area in the buffer zone. Major part of the buffer area is agriculture fields particularly on the Eastern side of the project area. Since ground water is saline up to 15 km from the coast and highly saline up to 4 km from the coast. Thus, dry land farming is practiced near the coast and irrigated farming is practiced in the farms that are 5-6 km away from the coast. Cotton, Jowar, Bajra are the main crops grown here. Some villages, especially in the central corridor are endowed with good surface water facilities, and irrigated agriculture is possible in these villages. Being semi-arid, arid zone, this region support low plant growth and therefore, not many large trees with sizable canopies are present in the buffer zone. However, at every village local people have managed to grow trees for shade, aesthetic and religious values.

Though, we could not report presence of some of the important species plant species (probably due to lack of rain species did not occur), according to literature survey, Navinal area at Mundra has representation of native vegetation of Kutch. Some of the important threatened plant species reported from the region include *Dipcadi erythraeum, Helichrysum cutchicum, Ephedra foliata, Heliotropium rariflorum, Tribulus rajasthanensis, Pavonia ceratocarpa, Convolvulus stocksii, Commiphora wightii*. Out of this *Helichrysum cutchicum, Ephedra foliata and Tribulus rajasthanensis* are endemic species. Gujarat State Biodiversity Board earlier proposed to declare the area as biodiversity heritage site. However the proposed development of the "Biodiversity Park at Navinal village, Mundra Taluka" has been shelved by Gujarat State Biodiversity Board, though initially proposed.

Hence, it is given to understand that the earlier proposed biodiversity park will not be further developed in the study area.

4.5.2. Floral Abundance, Frequency and Density

Based on our vegetation sampling data we derived various measures of abundance of plants species in the core and buffer area of the project site (Table-4.4). These parameters help understand the vegetation community structure in the project area/core area and buffer area/ surrounding area. We found total 12 species of Grass, 12 herbs, 4 shrubs and 2 tree species in the project core area. Where as we reported total 22 species of grasses, 26 species of herbs, 8 species of shrubs and 7 species of trees during our sampling efforts in the buffer areas. There could be more species of plants in the study area. However, our sampling and analysis of the vegetation data suggests that the abundance and density of plant species are lower in the core and buffer area (Table-4.4). This suggests that the area falls in Arid-semi arid condition. As per classification of biome, biogeographic zone, biogeographic province, this area falls in Indian Desert/Kutch Desert/Northern Thorny Scrub Forest. These classifications of the study area suggest lower abundance, density and diversity of plants in the region is reflected in our floral study of the project area.

4.5.3. Dominant Plant Species

Important Value Index is a parameter for calculating the dominance and diversity indices for vegetation as it is combination of frequency, density and dominance. Based on our survey results we found that *Prosopis juliflora* & *Zizyphus numularia, Salvadora,* in shrubs and *Cymbopogon martini, Aristida, Dichanthium annulatum,* in grasses and *Casia auriculata etc. in herbs* are the most dominant species in the region (Table4-4). This is derived through, the Important Value Index (IVI) that we calculated for various plant species through quadrate sampling (Table4-4). IVI for *Prosopis juliflora* was 58.7 in buffer and 103.0 in core area. Whereas, *Aeluropus lagopoides (9.5/47.2), Cymbopogon martinii (116.7/35.6)* were in the buffer and core areas respectively.

Table-4.4: Floral Diversity and their relative frequency, abundance density, important value index for core and buffer area.

No	Type/ Class	Species	Abundance		Relative Frequency		Relative Dominance		Relative Density		IVI	
			Buffer	Core	Buffer	Core	Buffer	Core	Buffer	Core	Buffer	Core
1	Grass	*Aeluropus lagopoides*	1.7	1.6	3.5	16.7	1.5	8.3	4.5	22.2	9.5	47.2

4.5.4. Invasive or Exotic Species

Prosopis juliflora is an evergreen tree native to South America, Central America and the Caribbean. In the United States, it is well known as mesquite. It is fast growing, nitrogen-fixing and tolerant to arid conditions and saline soils. *Prosopis juliflora* is an exotic and invasive widespread, multi-branched shrub/tree species in the India. It has been invading grasslands, native scrubland and forests of Gujarat and India.

Our study showed that the *Prosopis juliflora* is one of the most dominant and wide spread in the core and buffer areas of the project site. Our biodiversity, abundance, density measures suggests *Prosopis juliflora* is fast growing in the area.

4.5.5. Floral Biodiversity in the Study Area

In order to understand the status of vegetation communities in terms of stability, diversity indices such as species dominance, species diversity, similarity index and abundance are derived.

Table-4.5: Biodiversity indices (Averages) for core and buffer areas.

Indices	Buffer Area		Core Area	
	Grass	Other vegetation	Grass	Other vegetation
Specie Richness	22	41	12	18
Dominance_D	0.06	0.12	0.12	0.2573
Simpson_1-D	0.9446	0.881	0.8765	0.7427
Shannon_H	2.99	3.01	2.26	2.078
Evenness_e^H/S	0.90	0.4927	0.7988	0.4437

Shannon-Wiener Diversity Index: The biodiversity values for core and buffer areas were derived from the quadrate samples laid in the field. The value of the Shannon-Wiener Index usually lies between 1.5 and 3.5 for ecological data and rarely exceeds 4.0. Lower value of H' suggests degraded or arid conditions with low biodiversity values (Table-4.5). Our results suggest the H' value to be normal for the dry arid conditions. There was difference between the core and buffer area in terms of the diversity

indices. This was because core area mostly consists of Prosopis juliflora dominated bushes and saline land with open wasteland where as in buffer area there is variety of habitats and agriculture areas.

Species Richness (S): It is a count of the number of species found when the observers sample the community. It is represented by "S". Our data analysis for the core and buffer zone suggests that average species richness per sample is lower in core area compared to that of buffer area (Table-4.5). This is because of the difference in the land use types in core and buffer areas.

Simpson's Diversity Index (D): The Simpson index is one of the most meaningful and robust diversity measures available. In essence it captures the variance of the species abundance distribution. It is a diversity index proposed by Simpson (1949), to describe the probability that a second individual drawn from a population should be of the same species as the first. The value of D varies between 0 and 1. Our data analysis suggests that relatively core area is less diverse than the buffer area as the D value is higher in core area than in the buffer area (Table-4.5).

Evenness: It is a measure of species diversity, which quantifies how equal the community is numerically. The less variation in communities between the species show higher evenness. The value varies between 0 and 1. Our data analysis for core and buffer zone showed higher values of this index suggesting that the communities of vegetation does not vary much within the core and outside in the buffer areas (Table 4-5).

4.5.6. Endangered/Threatened/Protected Species

Our field survey in the project area suggest that there are no endangered, endemic, rare plant species present within the project boundary i.e. core area. However, we found an important species i.e. *Commiphora wightii*, in the buffer area with low abundance and frequency of occurrence (Table-4.4). This plant has high medicinal value and is facing the threats of extinction by

overexploitation for commercial purpose (GUIDE, 2009, Joshi et al. 2005) from Kutch.

4.6. Faunal Diversity and Species Inventory

The present study has made assessment of 3 major higher vertebrate classes such as Reptiles, Birds and Mammals. The assessment of fauna representing higher trophic levels in the ecosystem was carried out since their diversity acts as indicators of the health of the ecosystem in which they live. The details of the results/observations are given as following.

4.6.1. Reptiles Species Recorded During the Survey

Majority of the reptile species are fossorial in habit, therefore the assessment of reptiles and their diversity etc. holds special significance for any development project. In the present study we identified a total of 6 species of reptiles within the core area and 12 species in the buffer area (Table-4.6).

Table-4.6: Checklist of reptiles reported form the core and buffer area.

S. No.	Name of Species		Conservation Status as per IWPA-1972 (Schedule I to VI)	Conserv -ation Status as per IUCN	Observed/ Reported	
	Common Name	Scientific Name			Core Area	Buffer Area
1	Cheakered Keelback	*Natrix piscator*	Schedule-IV	LC		1
2	Common Skink	*Mubuya carinata*	Schedule-IV	LC	1	1
3	Fan Throated Lizard	*Sitana ponticeriana*	Schedule-IV	LC	1	1
4	Flap shell Turtle	*Lissemus punctatea*	Schedule-I	LC		1
5	Garden Lizard	*Calotes versicolor*	Schedule-IV	LC	1	1
6	Indian Fringe Toed Lizard	*Acanthodactylus cantoris*	Schedule-IV	LC	1	1
7	Indian monitor lizard	*Varanus bengalensis*	Schedule-I	LC		1
8	John Sand Boa	*Eryx johni*	Schedule-IV	LC	1	1
9	Rat Snake	*Ptyas mucosus*	Schedule-IV	NT		1
10	Saw scaled Viper	*Echis carinatus*	Schedule-IV	NT		1
11	Short tailed Agama	*Agama minor*	Schedule-IV	LC	1	1
12	Spiny-tailed Lizard	*Uromastix hardwickii*	Schedule-II	LC		1
VU=Vulnerable, EN=Endangered, NT=Near Threatened, LC=Least Concerned						

Of the reported reptiles species in the buffer area, 2 species (Flap shelled turtle and Indian Monitor Lizard) belong to Schedule-I of the Wildlife Protection Act 1972. No threatened species of reptiles as classified by the IUCN are reported from core or buffer area during our survey. The Indian Flap shell turtle was reported from waterbodies in buffer area which is common throughout country is also listed as least concerned by IUCN. However, one species belong to Schedule-II (Spiny tailed Lizard) where as reset of the species belong to Schedule-IV. Majority of the reptile species (except Rat snake and Saw scaled viper) reported from the buffer area fall in 'Least Concerned' category of IUCN. No endangered, rare, threatened or endemic species of reptiles was reported from the project core area.

4.6.2. Birds Species Recorded During the Survey

During the study we observed a total of 95 bird species in the study area. Majority of the species (74) are resident specie, where as only 21 species were found to be migratory (Table-4.7). Of these 95 recorded bird species, 89 belong to 'Least Concerned' category rated by IUCN where as total 6 species are i.e. Painted Stork, Oriental White Ibis, Eurasian Curlew, Lesser Flamingo, Oriental Darter and Black tailed Godwit belong to Near Threatened Species (Table-4.7).

Majority of the birds reported from the core and buffer area belong to the Schedule-IV of Wildlife Protection Act 1972 (Table-4.7). Whereas, total 5 species (Black shoulder kite, Eurasian Spoonbill, Indian Peafowl, Marsh Harrier, Shikra) belong to Schedule-I of IWPA 1972. Whereas House crow belong to Schedule-V.

The birds were recorded mainly from non-forested, degraded areas and in the surrounding agriculture landscape interspersed with scattered trees and drainages. The bird species groups observed in the study area were represented by species of open scrubland such as Passerines, Shrikes, Francolin, etc. and waterbodies birds such as Waders/shorebirds, Waterbirds, Egrets, Herons sandpipers, plovers etc. Majority of the birds

Table-4.7: Inventory of birds reported from the study area with their conservation status.

NT=Near Threatened, LC=Least Concerned; R=Resident, M=Migratory

observed in the study area represent birds of wetlands, coastal mudflats, wetland and semi arid non-forested landscapes etc. Moreover, many of the bird species reported in the present study are common even in human dominated landscapes such as urban cities, lakes and ponds etc. Majority of the waterbird species reported here are found from adjoining reserve forest areas, mangrove creeks, and mudflats located south-west side in the study area. Intertidal mudflats, saltpan and the coastal creeks provide suitable mix of wetland habitat which attracts large populations of migratory and resident birds. Most importantly this area provides much needed staging and stop over sites for the migratory birds flying on Central Asian Migratory bird Flyway. The Modhva coastal area is well known amongst the birdwatcher as it is one of the most important and prominent birdwatching and bird photography sites of Kutch. However, this site is located beyond 11.0 km therefore, lies outside the study area. Majority of the resident species reported in the study area are known to breed in this region as well as in entire Gujarat. No rare, endangered, endemic bird species were found to breed in the core project area.

4.6.3. Mammal Species Recorded During the Survey

We observed a total of 13 mammal species in the buffer area and 6 in the core area of the project site (Table- 4.8). The common mammalian species that were directly observed in the core area include Indian Jackal, Wild Pig, Common Mongoose, Indian Hare, Indian desert gerbil and Five Striped Squirrel etc.

No Threatened or Schedule-I species reported from the core area of the project site (Table-4.8). Indian Jackal, Jungle cat, Indian Fox, Common Mongoose belong to Schedule-II of IWPA 1972. Whereas Nilgai, Wildpig belong to Schedule-III. Rest of the species belong to Schedule-IV of WPA. Majority of the common mammalian species recorded during the survey in the core and buffer area are present throughout semiarid, non-forested and non-protected landscapes especially in Kutch region.

4.6.4. Dominant Faunal Species in the Core & Buffer Area

Based on our observations, interview survey of local people, forest officials and NGOs working in nature conservation activities in Kutch region, we found that Nilgai, Wild Pig are most common and dominant mammal species present in the landscape. Whereas there were several birds species belong to Passerine were most common and dominant group of birds present in the core and buffer area of the project site. Among reptiles, Spiny tailed Lizard, common garden lizard, monitor lizard etc. were most common species present in the buffer areas of the project site.

Table-4.8: Inventory and conservation status of mammals reported from study area.

S. No.	Name of Species		Conservation Status as per IWPA-1972	Conservation Status as per IUCN	Observation	
	Common Name	Scientific Name			Core	Buffer
1	Indian Jackal	*Canis aureus*	Schedule-II	LC	1	1
2	Jungle cat	*Felis chaus*	Schedule-II	LC		1
3	Indian Fox	*Vulpes bengalensis*	Schedule-II	LC		1
4	Nilgai	*Boselaphus tragocamelus*	Schedule-III	LC		1
5	**Chinkara**	***Gazella bennettii***	**Schedule-I**	**LC**		**1**
6	Indian Hare	*Lepus nigricollis*	Schedule-IV	LC	1	1
7	Wild Pig	*Sus scrofa*	Schedule-III	LC	**1**	1
8	Common mongoose	*Herpestes edwardsi*	Schedule-II	LC	1	1
9	Indian porcupine	*Hystrix indica*	Schedule-IV	LC		1
10	Palm squirrel	*Funambulus pennanti*	Schedule-IV	LC	1	1
11	Fruit Bat	*Cyanopterus sphynx*	Schedule-V	LC		1
12	Long-eared hedgehog	*Hemiechinus auritus*	Schedule-IV	LC	1	1
13	Indian desert gerbil	*Meriones hurrianae*	Schedule-IV	LC		1

4.6.5. Wildlife Corridors

Our observations suggested that there is no rare, endangered, conservation concern species of fauna present within the proposed project core area. The proposed project area for Copper Refinery Plant is not a part of any special habitat (breeding) for any of the Threatened or Schedule-I important fauna and does not provide any contiguity of habitats between two important habitats or any other protected areas. Moreover, the proposed project area is located in close to already industrialized zone therefore; it does not make part of any wildlife habitats. Apart from this, there are no protected areas located within 30.0km radius of the proposed project site therefore; the proposed area does not seem to make part of any wildlife corridors.

4.6.6. Identification of Species of High Conservation Significance

Based on our extensive field visits, literature survey, and consultation with experts & local people, we found following 8 species that are of high conservation significance (Table-4.9).

Table-4.9: Species of high conservation significance (Threatened or Schedule-I) present in the study area.

S. No.	Name of Species		IWPA-Status	IUCN Status
	Scientific Name	Common Name		
Reptiles	Flap shell Turtle	*Lissemus punctatea*	Schedule-I	LC
	Indian monitor lizard	*Varanus bengalensis*	Schedule-I	LC
Bird	Black shoulder kite	*Elanus caeruleus*	Schedule-I	LC
	Eurasian Spoonbill	*Platalea leucorodia*	Schedule-I	LC
	Indian Peafowl	*Pavo cristatus*	Schedule-I	LC
	Marsh Harrier	*Circus aeruginosus*	Schedule-I	LC
	Shikra	*Accipiter badius*	Schedule-I	LC
Mammal	Chinkara	*Gazella bennettii*	Schedule-I	LC

We found total 8 faunal species belong to Schedule-I of Wildlife Protection Act 1972. These species include 2 species of reptiles, 5 species of birds and one mammal. These species are present in the buffer zone of 10 km radius i.e. study area.

5. Potential impacts & Mitigations

Impacts of proposed Copper Refinery Plant on flora and fauna of surrounding area were identified mainly by using baseline ecological information presented in previous Chapter-4. The baseline information was collected through direct field visits and substantiated through secondary information including EIA, consultation with local people etc. We also utilized assessment provided in the EIA particularly Air modelling information. Finally, the baseline ecological information was juxtaposed with the project activities and impacts arising due to its construction and operation phases. The specific impacts were visualized in terms of issues related with the ecology of important species issues related with their habitats.

Following the above mentioned approach, impacts on various components of biodiversity were assessed. The component wise identification of potential impacts is deliberated below.

5.1. Anticipated Ecological Impacts of Proposed Project Activity

M/s. Adani Enterprises Limited (AEL) intends to set up a Greenfield copper refinery project of 1.0 MTPA (10 LTPA) capacity in 256.58 ha. of area, which includes facilities like copper smelter, sulphuric acid plant, copper refinery, continuous cast copper wire rod plant, precious metal recovery plant, phosphoric acid plant, aluminium fluoride plant, effluent treatment plant, utilities storage of water and fuel, etc. with the state of the art environment friendly technology, which will be located at Adani Port Special Economic Zone (APSEZ) land in villages Siracha and Navinal, Taluka Mundra, district Kutch, Gujarat.

The above mentioned project in absence of mitigation measures could have numerous ecological impacts during the construction and operation phases. The impacts during construction phase could be short term, temporary in nature and will be confined to the close boundary of the project site. Following are the general ecological impacts anticipated from the construction and operation phases of the copper refinery plant.

- Irreversible change in landuse/habitat worth the project area. Vegetation would be removed from the project site. Total 154.19 ha of APSEZ land and 102.39 ha. forest land would be converted to industrial use.

- Copper is a metal that occurs naturally in the environment, and also in plants and animals. Low levels of copper are essential for maintaining good health. Elevated levels of copper are toxic in aquatic environments and may adversely affect fish, invertebrates, plants, and amphibians.

- Chronic fugitive emissions and the material flow through water and air could potentially degrade aquatic and terrestrial eco-systems. Copper refinery is likely to release toxic fumes, pollutants such as compounds of sulphur, fumes of metals like Cd, Zn etc., & impurities like Ni, Fe, As, Sb in surrounding environment and cause irreversible damage to ecology if strict environment control measures are not implemented.

- The major impact on terrestrial ecology could be due to emission of dust which will settle on surrounding area soil and vegetation and it would gradually decrease biomass productivity of the eco-systems.

- During the construction work, the excavation of the soil take place and construction wastes such as oil, grease and debris may pollute the soil and decrease its productivity.

- The impact on the terrestrial ecology could be due to the emission of pollutants such as SO_2 and Particulate Matters (PMs) due to dusting. When sulfur dioxide combines with water and air, it forms sulfuric acid, which is the main component of acid rain. Acid rain can cause deforestation and could potentially acidify waterways to the detriment of aquatic life.

- Project site runoff drains into Kotdi creek system of Gulf of Kutch through minor drainages. Chronic spillage and flow of pollutants and

dust sediments from the project site through runoff could have severe impacts on flora and fauna of Kotdi creek system which include mangroves, birds, fishes, crabs etc.

5.2. Impacts on Terrestrial Flora

Baseline status of terrestrial vegetation clearly suggests that the project sites falls in semi-arid and coastal Biogeographic zone with low floral density and diversity.

Removal of vegetation: The proposed copper refinery Plant construction activities may involve removal of vegetation from the project site. Out of total 256.58 ha. 33% i.e. 85.79 ha. area would be used for green belt. Whereas 170.79 ha. area would be cleared off vegetation. Therefore, standing vegetation from total 170.79 ha. area would be removed permanently. The vegetation in the proposed project site consists of mostly *Prosopis juliflora* which is an invasive species. Therefore, the unavoidable removal of vegetation during construction activity from the core area could not be considered significant. However, it is recommended that minimum vegetation shall be removed from the project site and the important plant and tree species on the periphery of the project site be left as part of green belt development. Apart from this, project proponent would be providing compensatory land to forest department which would compensate the loss of forest land.

Pollution affecting soil, water & plants growth: Suspended particulate matter produced during construction and operational phase of the copper refinery plant would be deposited in the surrounding forest areas and water bodies including river will change habitat quality of aquatic and terrestrial ecosystem. Their direct deposition on vegetation causes loss of chlorophyll content in leaves, arrest of photosynthesis process, leaf injuries resulting in restricted growth and regeneration of plants. There are patches of forest plantations and mangroves located in the buffer area of the proposed project site.

According to air modelling carried out by EIA agency, it is predicted that the pollutants would travel up to 2.2 km North-East direction. The project area is partly located in the forest area. Also there are reserve forest areas located adjacent to the proposed project site, hence chances of pollutants and dust causing degradation of the forests and vegetation in surrounding area is higher if strict pollution control measures are not implemented. Development of thick green belt would also restrict pollutants spreading outside the premises. It is also recommended that a tall compound wall shall be built on the periphery of the project area premises this would restrict spread of pollutants.

Degradation of vegetation due to acid rain: It is also well known through number of studies that SO_2 emission from copper refinery plant has been a major cause of acid precipitation, commonly known as "acid rain," which can damage vegetation. These pollutants originate from copper plants and nearby thermal power plants would interact with reactants present in the atmosphere and result into acid deposition. Due to the interaction of these acids with other constituents of the atmosphere, protons are released causing increase in the soil acidity, lowering of soil pH mobilizes and leaches away nutrient cations and increases availability of toxic heavy metals. Such changes in the soil chemical characteristics reduce the soil fertility, which ultimately causes the negative impact on growth and productivity of forest trees and crop plants. Strict pollution control using state of the art technology measures would restrict emission of

Impacts on important flora: Though, we did not report presence of some of the important plant species (probably due to lack of rain species did not occur), according to literature survey, Navinal area at Mundra has representation of native vegetation of Kutch. Some of the important threatened plant species reported from the region include *Dipcadi erythraeum, Helichrysum cutchicum, Ephedra foliata, Heliotropium rariflorum, Tribulus rajasthanensis, Pavonia ceratocarpa, Convolvulus stocksii, Commiphora wightii.* Out of this *Helichrysum cutchicum, Ephedra foliata and Tribulus rajasthanensis* are endemic species. Our present survey

also reported presence of a 'Critically Endangered' species listed by IUCN i.e. *Commiphora wightii* in the surrounding forests and wasteland areas. If no strict pollution control measures are taken, these species and their habitats could be affected. *Commiphora wightii* is medicinally and economically important plant which has very slow growth rate in semi-arid zones. However, their population is quite small and isolated in the buffer area. Also they are found in quite stunted stage. It is recommended that project proponent shall financially support forest department's activities to conserve these endemic and important species found in this region by way of carrying out plantation activities specifically to conserve these species.

Impacts on Mangroves: The baseline information suggests that the coastal area of Tunda, Navinal, Shiracha, Jarpara and Tragdi villages have patches of scattered, sparse and dense mangroves. Most of the mangrove areas are located in the notified reserve Mangrove Forest areas of Navinal, Shiracha and Jarpara village coasts. Closest mangrove distribution is located at 170 meters South form the project areas on the bank of Kotdi creek (Map-4.2). However, a sizable patch of dense mangrove is also located on the coast of Tragdi village.

The closest mangrove distribution is located at 170 mtrs (on bank of Kotdi –II creek) from Southern most boundary of the proposed project site (Map-4.1, & Map-4.2). Therefore, the chances of damage to mangroves by fugitive emission are high which are located immediate south of the project site. Though the predominant wind direction is from south-west in the region, there are still chances of mangrove being impacted due to its close distance from the project site. It is therefore, recommended that strict pollution control measures shall be implemented so that the mangrove south of the project area are least affected.

Apart from the above mentioned impact, a drainage known as Dhaneshri Nadi flows through the western part of the project site and it drains into Kotdi Creek system. Kotdi creek system has sparse and dense mangrove growth on both sides. Therefore, if the Dhaneshri river/drainage is not trained

suitably, it may carry spilled out pollutant load from the project area to the mangrove eco-system of Kotdi creek. This may increase heavy metal toxicity to mangrove and its habitats. Therefore, it is recommended that Dhaneshri River should be trained in such a way so that it does not carry runoff from the project area.

Since mangroves are important plants and constitutes important eco-system in the study area, it is recommended that project proponent shall chalk out a detailed mangrove conservation plan. Aim & Objective of mangrove conservation plan shall be to strictly avoid any damage by the project activities, preserve and add more mangrove areas. The mangrove conservation plan shall include following aspects.

- Identification potential mangrove plantation area in the study area for taking up mangrove plantations.
- Systematic monitoring of mangrove stock at every 5 years for 20 years. Monitoring shall include monitoring of species diversity, tree density, tree height, tree girth (GBH), regeneration classes, recruitment classes etc. in the study area.
- Creating awareness about mangrove and their conservation among local villagers in the study area.
- Review of the actions taken at every 5 years and extend the plan accordingly if necessary.

5.3. Impacts on Fauna

Though, the impacts of proposed plant and related construction activities may be on several faunal taxa, but for the present study we focused mainly on vertebrate classes i.e. reptiles, birds and mammals for identification of impacts and future monitoring purpose. Therefore, in the present study we identified impacts on the reptiles, birds and mammals particularly important, threatened, endemic and flagship species of the landscape.

5.3.1. Impacts on Reptiles

The baseline study has reported total 12 species of reptiles reported from the study area and 6 species from core area. No rare, endangered or Schedule-I species are reported from the core area i.e project site. However, Flap shell Turtle, and Indian Monitor Lizard are reported from the buffer area which belongs to Schedule-I of Wildlife Protection Act 1972. These species are listed as Least Concerned as per IUCN Red list categories. However, a species i.e. *Uromastix hardwickii* belong to Schedule-II which is reported form buffer area. This is a resident and most vulnerable species as it is localized and sedentary unlike other reptiles such as snakes and lizards. This species is often hunted or poached for their oil and meat. Therefore, it is recommended that during construction phase no construction workers shall be involved in poaching of such species. Since no rare or high conservation significance species of reptiles is present in the core and immediate buffer area of the proposed project site, the impact on the reptiles could be low.

5.3.2. Impacts on Birds

We observed total 95 species of birds in the study area. We identified total 5 species of high conservation significance which are species protected as Schedule-I species under Wildlife Protection Act 1972. Most important bird habitat is identified near Modhva coast, is located beyond 11.0 km distance i.e. outside the study area. Intertidal mudflat, sandy beach, mangrove, coastal thorn forest etc. Provide favourable and suitable habitats to large number of resident and migratory birds. Since this area is located beyound 10.0km south west from the project site, the impact of project activities is expected to be negligible due to opposite wind direction most time of the year. However, project proponent shall take utmost care in controlling dust, fugitive emissions and pollutants flowing to this area thorugh water or air. Therefore, it is recommende that the pollutoin control measures shall be strictly implimented by project proponent during construction and operation phase.

It is often noticed, that construction workers engage in poaching of wild animals particularly birds which are easy to trap using various methods. It is therefore, recommended that construction workers shall be strictly instructed so that they don't engage in such acts. It is also recommended that project proponent shall monitor the status of this ecologically and economically important birdwatching habitat as part of their periodic comprehensive biodiversity monitoring programme.

5.3.3. Impacts on Mammals

We observed a total of 14 mammal species in the buffer area and 6 in the core area of the project site. No Threatened or Schedule-I species reported from the core area of the project site. Majority of the common mammalian species recorded during the survey in the core and buffer area are present throughout semiarid, non-forested and non-protected landscapes especially in Kutch region.

There are only few most common mammals species present in the core area reported during the study. These species would be displaced during construction phase and operation phase. There is only one schedule-I species, present in the buffer area. Overall habitat degradation due to change in landuse pattern, pollution (dusting, air, and noise), increase human presence, increased illumination, increased traffic etc. in and around proposed project area would displace majority of the mammal species from the project core and surrounding buffer areas. Therefore, project proponent shall control emission and dust pollution which would not affect the forest areas and vegetation in the surrounding area which provides resting and feeding habitats to mammalian species in the study area.

this project thousands of plants were raised and planted in entire Kutch region. This project has improved the number and density of the species in the region.

Impacts: The construction of copper refinery plant and allied industrial development operations would involve large scale removal or vegetation, excavation, material handling, could result in habitat degradation due to air borne dusting from copper plant, effluent discharge, pollution load, movement of vehicle etc. can potentially affect the density and distribution of this species in the buffer area.

Recommendations: AEL shall put in place all kinds of pollution control measures so that the surrounding vegetation is not degraded and this species along other plants survive normally in the study area. AEL shall carryout comprehensive biodiversity monitoring at regular intervals in order to check impact of their project activities on surrounding area and special emphasis shall be given to this species. It is also recommended that company should take up plantation of *Commiphora wightii* by involving local forest department, which has vast experience of carrying out plantation of this specialized plant species. Since removal of vegetation would be done in the first year of commencement of the project, it is advised that the plantation shall be carried out in the first year itself. Since the plant is slow growing, it is recommended that a total of 10.0 ha. of *Commiphora wightii* plantation shall be done in the first year itself. Rest of the time Kutch East Forest Division would carry out maintenance of the plants. This plantation shall be carried out in the reserved forests, unclassed forests or roadside areas as found suitable by the Kutch East Forest Division.

6. Wildlife Conservation Plan

Based on our field observations and literature survey we found several species important plant and animal species as well as Schedule-I wildlife species in the study area (Table-6.1). We reported a plant species and 12 animal species. The faunal wildlife species include 2 species of Reptiles, 9 species of birds and one species of mammal.

Table-6.1: Species of higher conservation significance present in the study area.

S. No.	Name of Species		IWPA-1972 Status	IUCN Status
	Common Name	Scientific Name		
Plants	Gugal	*Commiphora wightii*		CR
	Mangroves	*Avicennia marina*	Important	LC
Reptiles	Flap shell Turtle	*Lissemus punctatea*	Schedule-I	LC
	Indian monitor lizard	*Varanus bengalensis*	Schedule-I	LC
Bird	Black shoulder kite	*Elanus caeruleus*	Schedule-I	LC
	Eurasian Spoonbill	*Platalea leucorodia*	Schedule-I	LC
	Indian Peafowl	*Pavo cristatus*	Schedule-I	LC
	Marsh Harrier	*Circus aeruginosus*	Schedule-I	LC
	Shikra	*Accipiter badius*	Schedule-I	LC
Mammal	Chinkara	*Gazella bennettii*	Schedule-I	LC

Species wise status, impacts and the mitigation measures are suggested in as follow.

6.1. CRITICALLY ENDANGERED PLANT SPECIES:

Gugal: (*Commiphora wightii*)

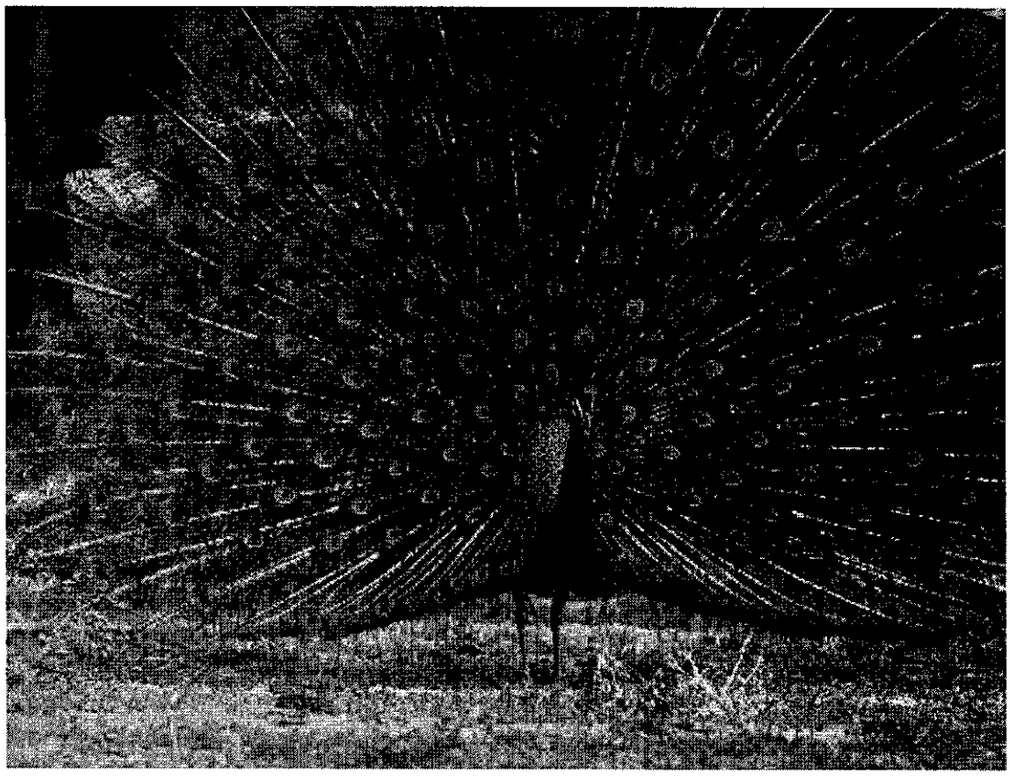
Status: Our field survey in the proposed project area revealed that there is a critically endangered plant species present in the buffer areas. However, this plant was found with low density in the buffer area. This plant has high medicinal values and is facing the threats of extinction by overexploitation for commercial purpose (Silori et al., 2004; Joshi, 2002; GUIDE 2009) from Kutch. However, recently Gujarat Forest Department has accomplished a large scale project on plantation of *Commiphora wightii* in Gujarat. Through

6.2. SCHEDULE-I FAUNA

Among the fauna, we reported total 8 animal species. As mentioned above, the faunal wildlife species include 2 species of Reptiles, 5 species of birds and a species of mammal.

6.2.1. REPTILE/ INDIAN FLAP SHELL TURTLE/ MONITOR LIZARD

Status: During our study this species of reptile was recorded form the small village ponds in the study area. The species is resident and breeding in the buffer areas. The Indian Flap shell Turtle (*Lissemys punctata*) is a freshwater species of turtles are widespread and common in the South Asian provinces. They are listed as Schedule-I species under Wildlife Protection Act 1972 and as Least Concerned as per IUCN threat categories. Monitor Lizard is also one of the reptile's species which is found in the study area.



Impacts: Since this species is an aquatic and cold blooded, it may be subjected to impacts related to water pollution and hydrological impacts arising due to project activities. These may include degradation of water sources, soil characteristics, choking of drainages etc. This species is otherwise not hunted or eaten by the people. Therefore, changes of degradation of overall aquatic habitat qualities in the buffer area are likely to affect these species and their distribution.

Recommendations: AEL shall put all kind of pollution control measures in place so that surrounding area ecological conditions are not degraded. During construction it shall be seen that no drainage, ponds etc. are damaged or altered. AEL shall carryout comprehensive biodiversity monitoring at regular intervals in order to check impact of their project activities on surrounding area and special emphasis shall be given to

monitoring of surface (drainage, check dams, ponds) water and wetlands in the buffer area.

6.2.2. BIRDS/ INDIAN PEAFOWL

Status: The Indian Peafowl *(Pavo cristatus)* is a resident breeder in the Indian subcontinent. The bird was justifiably declared as the national bird of India in year 1963 due to its 'flagship' value founded on its glorious position in mythology and its widespread distribution in the country.

The species is found in dry semi-desert grasslands, scrub and deciduous forests. It forages and nests on the ground but roosts on top of trees. It eats seeds, insects, fruits, small mammals and reptiles. The Indian Peafowl is a ground nesting bird and it lays a clutch of 4-8 eggs which take 28 days to hatch. The eggs are light brown and are laid every other day usually in the afternoon. The male does not assist with the rearing, and is polygamous. Poaching of peacocks for their feathers and poisoning by feeding on pesticide treated seeds are known threats to wild birds. Under the law, collection of tail feathers is allowed only when the bird sheds them. The

Indian peafowl is under various threats that include the demand for feathers and wild meat, conflict with farmers during cropping season, increased use of chemical fertilizers and pesticides and habitat degradation.

Impacts: Our field study reported presence of Indian Peafowl in the buffer areas of project site. The species was observed in the buffer area of 10 km radius particularly near human habitations, villages and agriculture fields. Since our study reported presence of Indian Peafowl in the buffer area, its possibility of nesting in buffer area could not be ruled out. Since Indian Peafowl is a ground nester, several project activitie can have adverse impacts on their nesting grounds such as pollution, degredation of soil and vegetation from surrounding ara and in the forest areas. Direct disturbance by presence of people, vehicle, their noise, vibrations, lights etc. can potentially disturb most of the bird species.

Recommendations: following actions for the conservation and protection are suggested in wildlife conservation action plan to reduce impacts of project related activities on the species. Based on our field observation on the distribution, behavioral ecology, conservation need, and envisaged impacts of proposed copper refinery project, we identified several species specific actions that would help reduce the impacts of project on Indian Peafowl as under.

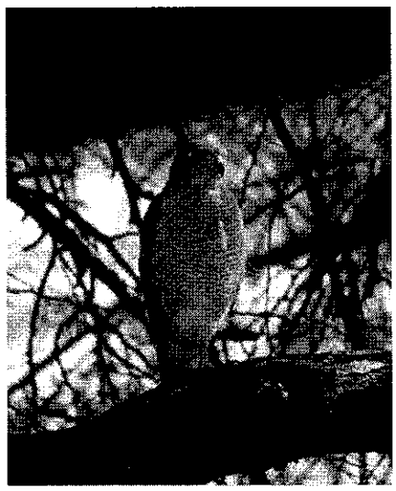
i. A rapid survey for the breeding population of Indian Peafowl during their nesting season shall be carried out in pre-monsoon season by wildlife experts so as to ensure that no nesting of the species is present in and around project or corea area.

ii. Since Indian Peafowl is a ground nesting bird, construction activities could disturb their nesting activities. Therefore if nesting of peafowl is found, in core area, construction activities should not be carried out in that particular block. Construction activities should resume only after egg hatching is completed and the fledglings leave the nest.

iii. Avoid vehicle movement in the area where nesting is found. The movement of vehicles or humans shoul be prohibited in vicinity of the nesting area.

iv. Electric lines within the project area and outside the project area shall be designed to minimize the potential for electrocution of indian peafowl and other such large birds.

v. Lightings within the project area could potentially deter the species presence. Therefore, AEL shall ensure that minimum illumination comes out from the project area. This can be done by adjusting the angles of the light sources and using low intensity focused bulbs inside the project area.



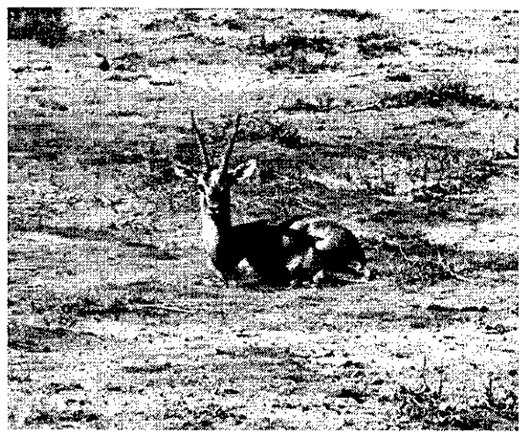
vi. Tree Plantation shall be carried out by AEL in the surrounding villages and schools etc. in the buffer area. This would help the species and provide them much needed roosting place.

vii. Staff involved in construction and operation activities shall be trained and made aware of Indian Peafowl's status as National Bird of India, and Schedule-I species protected under Indian Wildlife Protection Act 1972. This is important because if there any casualties of the species are found then they should report to the project authorities and the local forest department to carryout further necessary actions.

6.2.3. BIRDS/ SCHEDULE-I RAPTORS

Status: Total 3 bird species i.e. terrestrial Raptors belonging to Schedule-I of Wildlife Protection Act 1972 are reported from the study area. These species are Black shoulder kite, Marsh Harrier, Shikra. Of these 3 species of Raptors, none are reported from the core area and all 3 are reported from buffer area. The species of Harriers are migratory bird species whereas, rest of the species are resident species. Most of the raptor species are recently added to Schedule-I list through amendment made in year 2013.

Impacts: These 3 species of terrestrial raptors are predators and occupies tertiary consumers positions in the food chain and ecological pyramids. Therefore, any change in primary productivity would affect their distribution, density and population in the region. Therefore, project activities resulting in air, water and noise pollution, degradation of vegetation would potentially affect the habitat of these bird species and their population in the study area. Moreover, direct disturbance by presence of people, vehicle, their noise, vibrations, lights etc. can potentially displace most of the raptors species from the project area and its immediate surroundings.



Recommendations: It is recommended that AEL shall take utmost care in controlling dust, fugitive emissions using state of the art technologies and put in place all types of pollution control measures during construction and operation phases which would ensure minimum degradation of surrounding vegetation, forest area vegetation and waterbodies. Minimize vehicle movements around the project areas. Adjust lightings within core area and ensure minimum illuminations spreads outside the project area. Keep all the machineries maintained so that minimum noise and vibrations are generated in the surrounding area. Since most of the raw materials and products are to be carried through conveyer belts the impact related to vehicle movements would be low.

6.2.4. CHINKARA (*Gazella bennettii*)

Status: The important herbivore present in the buffer area is Chinkara which is protected as Schedule-I species in Wildlife Protection Act 1972. During our survey, we reported presence of Chinkara through direct sightings in the buffer area in the study area. Indian gazelle is a shy animal and avoids human habitation. It stands at 65 centimetres and weighs about 23 kilograms. It can go without water for long periods and can get sufficient

fluids from plants and dew. Although most individuals are seen alone, they can sometimes be spotted in groups of up to four animals. It lives in grasslands and desert areas in India. Its population is on the decline due to it being hunted for game. Narayan Sarovar Wildlife Sanctuary and its surrounding areas are known for Chinkara population. The sanctuary is also known as Narayan Sarovar Chinkara Sanctuary. The species is common in landscape of Kutch and North Gujarat. The species is listed as Schedule-I in Wildlife Protection Act 1972 and as Least Concerned by IUCN. The species needs safe, undisturbed arid semi arid plains with open and sparse vegetation.

Impacts: This mammal species is likely to be using surrounding area for their feeding and breeding. They are also likely to be using waterbodies in the buffer area for their requirement of water. The impacts of copper refinery and allied development activities on herbivore are likely to be direct as they are primary consumers in the eco-system. Degradation of soil, vegetation and habitat due to chronic pollution loads the species would lose its feeding ground and breeding area. Moreover, the direct loss of habitat worth the core area is also an irreversible loss to the species. Therefore, changes in overall habitat qualities in the buffer area are likely to affect these species. The direct disturbance to these species by vehicle traffic, poaching by workers, and human intrusion in wildlife habitat is also issue of some concern.

Recommendations: It is recommended that AEL shall comply with all the pollution control and other conditions imposed in the environmental clearance by MoEF&CC. Compliance of all the conditions in environment clearance by MoEF&CC would take care of major issue of habitat degradation for the species. AEL shall instruct their own staff members and workers not to indulge in chasing or killing of Chinkara in the study area. AEL

shall also support forest department in conducting awareness of local people towards wildlife conservation and law reinforcement and anti poaching activities in the study area. AEL shall support forest department in installing sign boards on roads and strategic locations of villages informing prohibition of killing, poaching etc. under wildlife protection act 1972.

6.3. IMPACT – MITIGATION MATRIX & CONSERVATION PLAN

Based on our observation, literature review and consultation with local people, and NGO, we formulated following impact *vs* mitigation matrix (Table-6.2). The matrix is created using information and data collected during our field visits and the information available in public domain. We calculated distances of sensitive ecological receptors such as protected areas, their eco-sensitive zones, biodiversity heritage sites, important bird areas, mangrove, reserve forests, wetlands, rivers etc. from project core areas. Professional judgements and recommendations are made based on our experiences and the parameters used for predicting impacts.

6.4. WILDLIFE MITIGATION MEASURES & RECOMMENDATIONS

Based on our field study, information collected and consultation with project proponent, local community etc. we recommend following mitigation measures as self regulatory, monitoring and compensatory measures for protection, conservation and betterment of wildlife and ecology in the surrounding area of project site.

6.4.1. REGULATORY MITIGATION MEASURES & RECOMMENDATIONS

i. Since project deals with heavy metals, acids and hazardous materials, it is recommended that strict control on fugitive emission, dust pollution shall be carried out using state of the art methods and technologies. Maximum area under intensive use shall be made of hard floor. Professional dust suction system from the area under intensive use shall be placed.

Table-6.2: General Impacts vs. mitigation matrix & Conservation plan.

Issue		Status	Impacts	Mitigation
Ecosystems	Protected Areas	All the protected areas of Kutch are located beyond 70 km from the proposed project area. Marine National Park and Sanctuary areas are located beyond 30 km south of the proposed project in Gulf of Kutch.	No impacts are envisaged, as these areas are located at greater distances.	• Nil
	Eco-sensitive zone	No eco-sensitive zones of any Wildlife Sanctuary or Naitonal park are located within 30 km from the proposed project area.	No impacts are envisaged, as these areas are located at greater distances.	• Nil
	Wetlands & waterbodies	No major inland wetlands are located within study area. Marine wetlands include Kotdi creek (0.5 km, S), Baradimata creek (4.0km SE), Gulf of Kutch (3.9 km, S), Seasonal drainage/rivers are Nagavanti Nadi (4.7 km, E) and Phot Nadi (8.7 km, ENE), Khari Nadi (1.9 km, W), A drainage known as Dhaneshri Nadi flows through the western part of the project site and it drains into Kotdi Creek system. Small check-dams and nallah are present in the study area at distance.	• Kotdi creek system has sparse and dense mangrove growth on both sides. • Dhaneshri river/drainage may carry spilled out pollutant load from the project area to the mangrove eco-system of Kotdi creek. This may increase heavy metal toxicity in mangrove habitats. • If dusting, fugitive emission are not controlled, it could cause major damage to mangroves.	• Therefore, it is recommended that Dhaneshri River should be trained in such a way so that it does not carry pollutants with runoff from the project area. • Install state of the art technologies so that pollution from the project area remains within applicable standards. • Check health of mangrove eco-system at regular intervals. • Prepare a comprehensive mangrove conservation plan for Kotdi and Baradimata creek system's mangroves located in the study area.

	Important Bird Areas	Banni & Naliya grasslands are two major IBAs of Kutch	No impacts are envisaged, as these IBAs are located far away, 70 km from the project site.	Nil
	Forest Area	Reserve Forest, Unclassed forest areas are located adjacent to proposed project area. In fact part of the project area would be located on diverted Forest land of Siracha village. The south of the proposed project area there are mangroves which are also declared as reserve forest areas by state forest department. Navinal reserve forest area is also located at 500 mtrs distance only from the proposed project area in east direction.	Direct loss of forest land worth 102.39 ha. Pollution loads from project activities could potentially degrade remaining forest land located in Siracha village, Navinal forest area and mangrove reserve forests. As per EIA/air modelling, it is learnt that 2.2 km North-East direction there will be impacts of air pollution. This means it would affect reserve forest area of Navinal. As per literature survey, Navinal area has presence important native species of plants. This forest area would be affected due to chronic air pollution impacts.	• Compensate loss or damage to Forest area due to pollution by taking up plantation of native species. • Construct tall wall around project boundary so that dusting, possibility of fire etc. are minimized. • No roads or trespassing shall be done by staff or workers through Forest area. • No collection of fuel wood from forest land shall be allowed. • No worker camps, dumping of solid waste, over burden inside forest land shall be allowed. • Fire and safety precautions shall be in place during construction and operation phases. • Green belts as per conditions of Environment Clearance shall be created using native species of plants in the periphery of project area. • Install state of the art technologies so that pollution from the project area remains within applicable standards.
	Mangroves	Mangroves are located at 170 mtrs from the project boundary in Kotdi and Baradimata creek systems on the coast of Gulf of Kutch	• Kotdi creek system has sparse and dense mangrove growth on both sides. • Dhaneshri river/drainage may carry spilled out pollutant load from the project area to the mangrove eco-system of Kotdi creek. This may increase heavy metal toxicity in mangrove habitats.	• It is recommended that Dhaneshri River should be trained in such a way so that it does not carry pollutants with runoff from the project area. • Ensure that strict pollution control measures are implemented in the project. • Check health of mangrove eco-system at regular intervals. • Prepare a comprehensive mangrove

2005

			• If dusting, fugitive emission are not controlled, it could cause major damage to mangroves.	conservation plan for Kotdi and Baradimata creek system's mangroves located in the study area. • Take up mangrove restoration and afforestation activities in consultation with Kutch East forest division.
	Ramsar Site	There are no Ramsar Sites in Kutch district.	Nil	Nil
Flora	General Vegetation	This area has native vegetation representative of semi arid zones. These include typical tropical thorn forest area comprising of *Acacia, Salvadora, Caparis, Ziziphus, Commphora species.*	There will be irreversible loss of native vegetation from the core area i.e. 256.58 ha. The native vegetation from the immediate surroundings of the proposed project site would also be affected due to pollution load.	• Remove minimum vegetation from core area. • Install state of the art technologies so that pollution from the project area remains within applicable standards. • Vehicle movements shall be minimum. • No vegetation shall be cut by workers from surrounding area. • No collection of fuel wood from surrounding land shall be allowed. • Fire and safety precautions shall be in place during construction and operation Thick green belts shall be created using native species of plants in the periphery of project site.
	Important plant Species	*Commiphora wightii is* an important plant which is listed as Critically Endangered by IUCN. This plant is present in core and buffer area.	This important plant species would be affected in the surrounding area due to air and water pollution loads from project activities. As per EIA/air modelling, it is learnt that 2.2 km North-East direction there will be impacts of air pollution. Chronic air pollution would affect plant growth in this area.	• Thick green belts shall be created using native species of plants in the periphery of project area. • In order to compensate for the potential damage/degradation of *Commiphora wightii* habitats AEL shall carry out plantation through Kutch-East Forest Division, Bhuj.

Fauna	Threatened or Endemic fauna Species	No threatened fauna species are reported from the study area during survey. i.e. core or buffer area during study.	Though, not reported during the present study, there may be presence of these species in future. Degradation of overall habitat could affect these species.	• Install state of the art technologies so that pollution from the project area remains within applicable standards. • Thick green belts shall be created using native species of plants in the periphery of project site. • Carryout biophysical monitoring of intertidal zone located south of project area at every 6 months.
	Schedule-I Reptiles	The Indian Flap shell Turtle (*Lissemys punctata*) is present in ponds and small wetlands of buffer area. Indian Monitor Lizard is present in agriculture, open scrubland and thorny bushes in the project area.	Degradation of overall terrestrial and aquatic habitat qualities in the buffer area are likely to affect these species and their distributions.	• Install state of the art technologies so that pollution from the project area remains within applicable standards. • Monitoring of biodiversity including these species and take corrective measures if needed. • Carry out habitat improvement activities through forest department in surrounding reserve forest areas, which would ensure their long term survival in the region.
	Schedule-I Birds	Indian peafowl and 7 Schedule-I bird species i.e. terrestrial Raptors are present in study area.	Pollution load, overall habitat degradation, direct loss of habitat worth 256.58 ha. and direct disturbance due to vehicle movements, illuminations and project activities could displace and disturb these species from the immediate surroundings of the project area.	• Install state of the art technologies so that pollution from the project area remains within applicable standards. • Maintain machinery so minimum vibrations and noise is controlled within the applicable standards at the boundary of the project. • Adjust lightings in the core area so minimum illumination spread outside core area. • Thick green belts shall be created using native species of plants in the periphery of project boundary. • Cary out tree plantations in surrounding villages to augment habitat for Indian Peafowl and other schedule-I birds species.

			• Monitor biodiversity including bird species and take corrective measures accordingly. • Carryout habitat improvement activities through forest department in surrounding reserve forest areas, which would ensure their long term survival in the region.
Schedule-I Mammals	Only one species of Schedule-I mammal is reported i.e. Chinkara from the study area. None from core area. It is mostly reported from the reserve forest areas within the study area.	Overall degradation of habitat due to pollution. Direct disturbance due to Noise, vibration due to vehicle movements could displace or deter this species. Lighting and illumination could displace the species from surrounding area. Hunting, chasing, killing by workers, road kills etc. are also envisaged.	• Install state of the art technologies so that pollution from the project area remains within applicable standards. • Maintain machinery so minimum vibrations and noise is generated. • Adjust lightings in the core area so minimum illumination spread outside core area. • Thick green belts shall be created using native species of plants in the periphery of project area. • Monitor biodiversity including mammal species and take corrective measures accordingly. • Provide funds for habitat improvement activities by the forest department in surrounding reserve forest areas, this could ensure their long term survival in the region.
Wildlife Corridors	No wildlife corridor is identified under any legal framework in the study area.	Nil	• Nil

ii. Ambient noise pollution and vibrations during construction and operation phases of copper refinery plant shall be within limits of the standards mentioned.

iii. Plantation of thick green belt on periphery of the project site shall be created using native and hardy tree species.

iv. Ensure no movement of vehicles or people through Forest Areas located immediate north (Siracha) and east (Navinal) of proposed copper refinery plant area.

v. Ensure zero discharge of waste water from the project site into surrounding area.

vi. Ensure safe passage of runoff through drainages located within and nearby the project area. It is recommended that a seasonal drainage/river (Dhaneshri River) should be trained in such a way so that it does not carry pollutants from the project site into mangrove eco-system located immediate south of the project boundary.

vii. Ensure no dust, fly ash, sediments, or any raw materials spill out from project areas and flow into nearby drainage, forest areas during the operation phase of the project.

viii. AEL shall ensure that their construction workers and other staff during construction or operational phase shall not be involved in poaching and hunting activities of birds, reptiles or mammals around the project site.

ix. Implement state of the art technologies to control pollution caused form the proposed project.

x. No trespassing or vehicle or people shall be allowed through, surrounding forest area or the mangrove eco-system. This shall be instructed to the workers and staff in advance.

xi. No workers camps shall be established within the surrounding forest area. This shall be instructed to the workers and staff in advance.

xii. No resources (i.e. fuel wood, stones, sand, soil etc.) from the surrounding forest area shall be collected by staff or workers. This shall be instructed to the workers and staff in advance.

xiii. No workers or staff members shall be involved in poaching or killing of any wild animals throughout the project life cycle. This shall be instructed to

the workers and staff in advance and sign boards to this effect within project area.

6.4.2. MONITORING MEASURES & RECOMMENDATIONS

xiv. AEL shall regularly monitor health of the forest areas (Siracha and Navinal village), mangrove eco-system (Kotdi and Baradimata creeks) and biodiversity in the study area.

xv. AEL shall carryout annual monitoring of mangrove eco-system in Kotdi and Baradimata creeks. Details of monitoring are provided in mangrove conservation plan.

xvi. After commencement of the project AEL shall carryout comprehensive ecological & biodiversity monitoring at every 2 years for 10 years. The monitoring shall include status of flora, fauna and health of reserve forests and mangrove eco-system present in the immediate proximity of the proposed project site. In case any changes, damage is reported to them AEL shall take necessary corrective measures accordingly. AEL shall bear the cost of third party monitoring.

xvii. Overall official monitoring would be carried out by Kutch-East Forest Division, Bhuj. AEL shall pay the administrative and monitoring cost for the same.

6.4.3. COMPENSATORY MEASURES & RECOMMENDATIONS

xviii. In view of the probable impacts of construction and operation of copper refinery project on mangroves of Kotdi and Baradimata creek areas, AEL shall chalk out Mangrove Conservation plan.

xix. In order to compensate for the potential damage/degradation of *Commiphora wightii* habitats AEL shall carry out 10.0 ha. of plantation through Kutch-East Forest Division, Bhuj.

xx. In view of the distribution of species of higher conservation significance and the Schedule-I species, in the study area particularly within the reserve forests around the project area, it is recommended that AEL shall financially support wildlife habitat improvement activities being carried out by Kutch East Forest Division.

6.5. IMPLEMENTATION OF MITIGATION PLAN

- Since the project is located away from protected area and their eco-sensitive zones, most of the wildlife mitigation recommendations are self regulatory for user agency, therefore the implementation of these mitigation measures shall be carried out by the user agency (AEL) through their own staff and CER budget.
- A special emphasis on ecological conservation shall be given by extending special responsibility to senior environment authority within the management of the proposed project authority. A senior ecologist shall be employed / consulted on regular basis to oversee ecological/wildlife conservation activates under CER. The senior personal responsible for the conservation of ecology shall report directly to the head of the organization.
- Substantial budget shall be allocated to carryout ecological conservation activities by the user agency (ACL).
- Any additional conditions towards wildlife mitigation activities by any of the Environment Appraisal Committees at state or central levels or by the Forest department shall be complied with.
- Annual Compliance report for these activities shall be submitted to Kutch West East Forest Division, Bhuj, Gujarat.

6.6. MONITORING OF MITIGATION & COMPLIANCES

Though, most of the recommendations are self regulatory for user agency, monitoring of these recommendations and other conditions imposed by various agencies towards wildlife mitigation measures shall be monitored by a third party agency. Third party monitoring would involve comprehensive ecological/biodiversity study at interval of 2 years for 10 years. These studies would be carried out to evaluated long term impacts of the proposed project activities on the wildlife, biodiversity, ecology and forest areas present in the 10 km periphery of the project site. Therefore, as per guidelines issued by the Principle Chief Conservator of Forests, Wildlife dated 13th August 2018, user agency shall allocate up to 5% of the total cost of mitigation plan as third party

monitoring cost. Total Rs. 560.0 Lakh shall be allocated by the AEL for monitoring of mitigation plan for the period of 10 years.

Since the area falls under the jurisdiction of Kutch East Forest Division, the overall official monitoring of the implementation of mitigation plan would be carried out by the Kutch East Forest Division, Bhuj. Therefore, as per guidelines issued by the Principle Chief Conservator of Forests, Wildlife dated 13th August 2018, user agency shall allocate and pay the monitoring and administrative cost to the forest department. For carrying out overall monitoring activities, user agency shall pay monitoring and administrative cost to the authorities of Kutch East Forest Division.

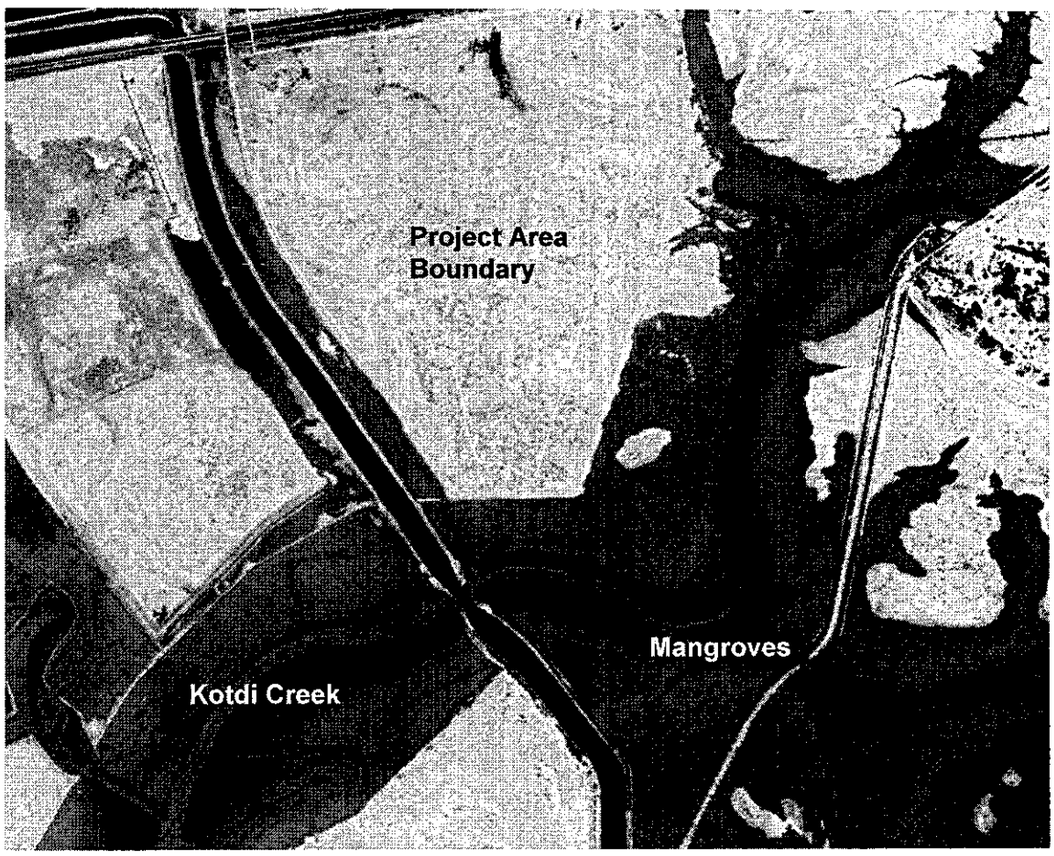
7. MANGROVE CONSERVATION PLAN

7.1. Background

M/s. Adani Enterprises Limited (AEL) intends to set up a Greenfield copper refinery project of 1.0 MTPA (10 LTPA) capacity which would include facilities like copper smelter, sulphuric acid plant, copper refinery, continuous cast copper wire rod plant, precious metal recovery plant, phosphoric acid plant, aluminium fluoride plant, effluent treatment plant, utilities storage of water and fuel, etc. with the state of the art environment friendly technology. These facilities would be located in 256.58 ha. of land which include 154.19 ha of APSEZ land and 102.39 ha. Reserve forest land. The Gulf of Kutch sea coast is located at 3.9 km south from the proposed project site.

As per Environmental Impact Assessment (EIA) Notification dated 14th September 2006, proposed project falls under category-'A' of project activity 3(a) and requires prior Environmental Clearance (EC) to be obtained from Ministry of Environment, Forest & Climate Change (MoEF&CC) before the commencement of ground activity. The application for prior EC for the proposed project has been submitted to MoEF&CC Terms of Reference (TORs) has been issued by MoEF&CC. The proposed industry is for handling heavy metals and hazardous chemicals which could lead to severe impacts on the surrounding environment and health of eco-systems if not done carefully. In view of the nature of proposed industry and processes involved, it is imperative to consider impacts of such industry on the surrounding eco-systems and take appropriate mitigation measures. Since mangrove eco-system is present south of project boundary, an action plan is proposed to protect and conserve the same.

7.2. Importance of Mangroves



In general, mangroves are known to provide multifold eco-system benefits to mankind. Mangrove ecosystems represent natural capital capable of producing a wide range of goods and services for coastal environments and communities and society as a whole. Some of these include protection of coast from cyclones and disasters, resistant against coastal erosion, carbon sequestration, provide fodder, timber, honey etc. Improved fish production in area where mangroves are present is also reported by many studies. Mangroves are

believed to be the bio-filters of pollutants. Most importantly it provides substratum to a wide range of associated micro& macro flora and fauna which in turn constitutes a dynamic and functional mangrove eco-system that provides multifold socio-economic and environmental benefits to mankind.

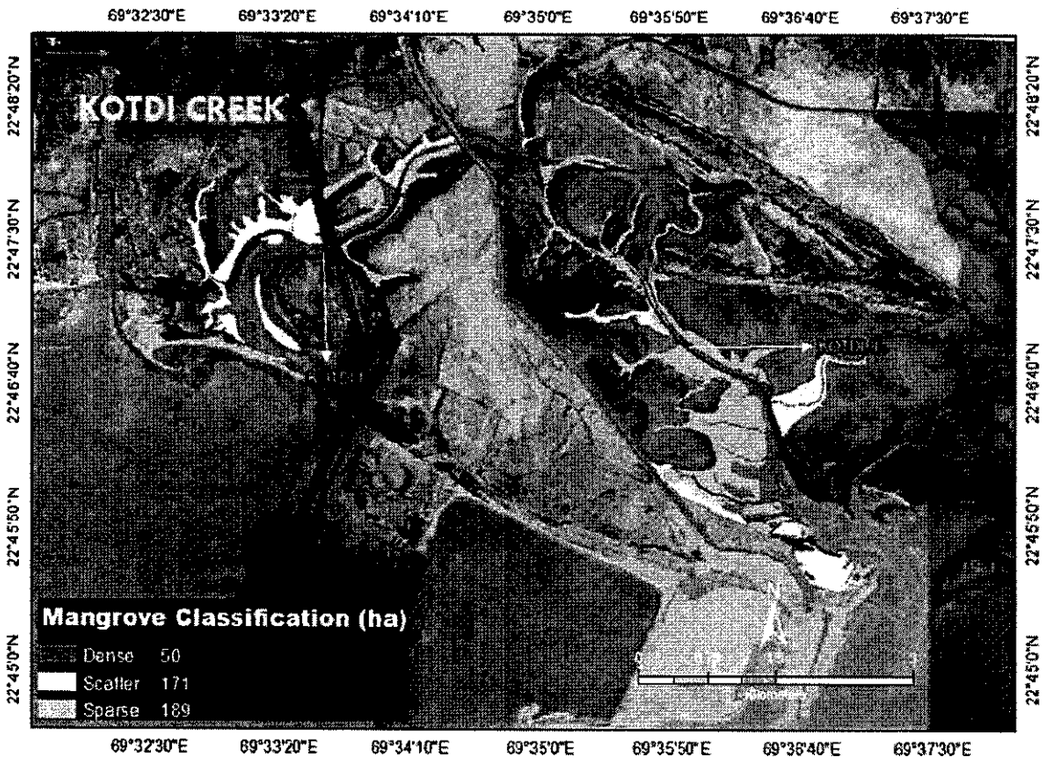
7.3. Status of Mangroves Around Project Site

The baseline information suggests that the coastal area of Tunda, Navinal, Shiracha, Jarpara and Tragdi villages have patches of scattered, sparse and dense mangroves. Most of the mangrove areas are located in the notified reserve Mangrove Forest areas of Navinal, Shiracha and Jarpara village coasts. Closest mangrove distribution is located at 170 meters South form the project areas on the bank of Kotdi creek (Plate-4.1, Map-4.2). The mangrove on the banks of Kotdi-I, Kotdi-II, Baradimata and Tragdi creeks fall within 10 km radius of the proposed project area. The mangroves of Kotdi–I and Kotdi-II creeks are closest mangrove (Map-7.1, Map-7.2).

Map-7.1: Mangroves of Kotdi Creek south of Project boundary.

There are total 3 species of mangroves present in the total three species of mangroves present these include *Avicennia marina, Ceriops tagal and Rhizophora mucronata.* A study carried out by National Centre for Sustainable Coastal Management (NCSCM), Chennai in year 2018, the total mangrove cover in Kotdi-I and Kotdi-II creeks was about 410 ha. out of which dense mangroves occurred to the extent of only 50 ha (12%), followed by sparse mangroves, distributed in 189 ha. The scattered mangrove covered an area of 171 ha. (Map-7.1). The above mentioned study reported an increase of 30.0ha between year 2011 and 2016. A study by Thivakaran and Sawale (2016) reported 47 species of macrofauna in the Mundra mangrove eco-system. Total 12 species of gastropods, 14 species of crustaceans, 9 species of bivalves, 8 species of polychaetes and 4 species belonged to the category "others". Increasing spread of mangrove area and high species richness of macrofauna suggests healthy and dynamic condition of mangrove ecosystem in this area.

Map-7.2: Status of mangroves of Kotdi – I & Kotdi – II creek systems in 2016-17. (Map source: study by NCSCM 2018).



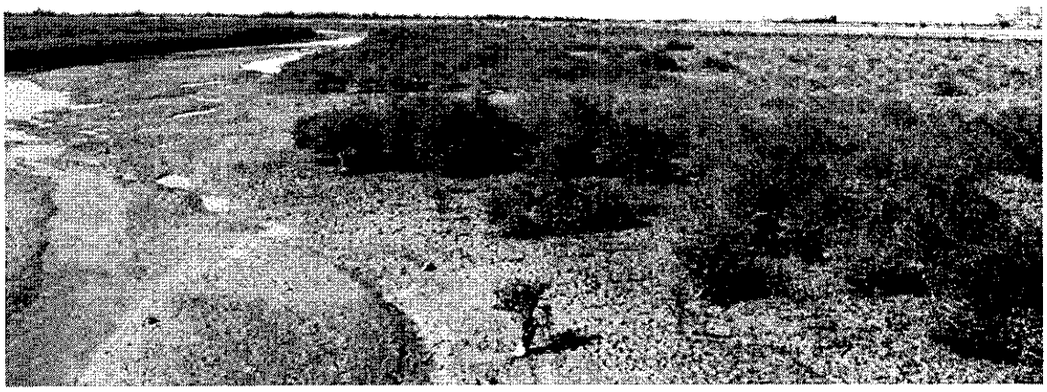


Plate-7.1: Mangroves of Kotdi-I creek.

7.4. Potential Impacts on Mangroves

Based on our survey and existing literature it is established that there are patches of scattered, sparse and dense mangroves located close to southern boundary of project area. The mangroves are located in Kotdi-I, Kotdi-II, Baradimata creeks. Since proposed project would involve large scale handling of heavy metals, hazardous chemicals and hazardous processes it could potentially affect mangroves located in the study area. Therefore, these mangroves which are located south of the project site are at higher risk of damage due to following impacts.

Air pollution: Though, the predominant wind direction is from south-west in the region, there are still chances of mangrove located on immediate southern boundary being impacted due to its close distance from the project site. Chances of damage to mangroves by fugitive emissions are high. The main sources of air pollution from the project will be from the processes and stacks. The pollutants from the plant include sulphur dioxide and particulate matter. Suspended particulate matter produced during construction and operational phases of the copper refinery plant would deposit in the surrounding mangrove ecosystem. Their direct deposition on mangrove could cause loss of chlorophyll content in leaves, arrest of photosynthesis process, leaf injuries resulting in restricted growth and regeneration of mangrove plants. Toxic metal fumes could also increase heavy metal toxicity of the mangrove eco-system.

Water pollution: There is a drainage known as 'Dhaneshri Nadi' flows through the western part of the project site and it drains into Kotdi Creek system. Kotdi creek system has sparse and dense mangrove growth on both sides. Therefore, if the Dhaneshri river/drainage is not trained suitably, it may carry spilled out pollutant load from the project area to the mangrove eco-system of Kotdi creek. This may increase heavy metal toxicity to mangrove eco-system and its components. Among the various types of pollutants released from such industry, heavy metals are one of the most serious pollutants owing to their toxicity, persistence and bioaccumulation problems (Macfarlane & Burchett, 2002). The metal contamination is a major environmental problem as the metals in contaminated sediments may accumulate in the various organisms of the estuarine ecosystem and ultimately enter the food chain, thereby affecting the human well-being (Shakeri & Moore, 2010). The concentrations of heavy metals in the sediments usually exceed that of the overlying water (Zabetoglouet et al., 2002) and the high concentrations of these metals in water and sediments affect both plants and animals (Doganlar & Atmaca, 2011). Chronic heavy metal toxicity could prove to be lethal for a range of fauna present in the mangrove habitat and affect the overall function of mangrove eco-system.

7.5. MITIGATION MEASURES

In view of the above mentioned status, importance and role of mangroves and potential impacts of proposed copper refinery plant on mangroves, it is recommended to take up following measures so that the mangroves are not harmed and their health and spread improves in the study area.

7.5.1. Mitigation of Air Pollution:

- It is recommended that a tall wall around the project boundary be constructed so that dusting is controlled during construction and operation phases.
- Thick green belt around the project boundary shall be created so that particulate matters are arrested.
- State of the art technology for arresting dust pollution shall be implemented for controlling different types of pollutions from various sources in the plant areas.

7.5.2. Mitigation of Water Pollution:

- State of the art water pollution control measures shall be in place including treating industrial effluents with heavy metals.
- Train Dhaneshri river/drainage in such a way so that it does not carry spilled out pollutants from the project area to the mangrove eco-system of Kotdi creek.
- Do not release untreated sewage or effluents in to the creek areas having mangroves.

7.5.3. Plantation of Mangroves to Mitigate Heavy Metal Toxicity

Mangroves are considered as best natural bio-filters of pollutants. Mangrove trees are reported to tolerate high levels of heavy metals (MacFarlane, 2007) with *Avicennia* species exhibiting greater tolerance and accumulative properties to numerous metals than other mangrove species (MacFarlane and Burchett, 2002). The inorganic industrial waste composed basically by heavy metals do not degrade and although they can be diluted in the long run they will always be responsible for the environmental damage even if the source has ceased to operate. Mangroves have natural ability to act as a sink of anthropogenic and industrial pollutants. Mangroves are also known to arrest and carryout bioremediation of certain pollutants in local environment. Mangroves not only act as a sink or transfer the pollutants but they also oxidize the metals present in the sediment by exuding oxygen into the anoxic soil through aerial roots. Mangrove wetlands are therefore considered as low cost waste disposal site.

It is in this context, not only preservation of Kotdi and Baradimata creek mangroves are important but there is a need to increase mangrove spread in this area so that it can mitigate the impacts of proposed industry on marine water and their biota. Therefore, it is recommended that AEL shall take up intensive mangrove plantation drive particularly on the bank of Kotdi-I, Kotdi-II and Baradimata creek systems. Total 50 ha. of plantation every year shall be taken up for 10 years period. It is recommended that mangrove plantation shall be carried out by Kutch East Forest Division as the area is under their jurisdiction and the staff has vast experience in mangrove plantation and management. AEL shall allocate budget of Rs.

7.5.4. Monitor Health of Mangroves:

- It is important to regularly check the health of mangrove eco-system located in the Kotdi-I, Kotdi-II and Baradimata creek systems.
- It is recommended to carryout monitoring of heavy metal contents in the sediments and mangrove plants (root & stem) at every 6 months intervals in the Kotdi-I, Kotdi-II and Baradimata creek systems. A minimum of 20 samples of sediments shall be collected and analyzed each time. The samples shall be collected at every 200 to 500 mtrs distances starting from northern most part of creeks to southern area.
- It is recommended to monitor the spread of mangroves in the Kotdi-I, Kotdi-II and Baradimata creek systems. This shall be done at the interval of every 2 years using standard high resolution satellite imageries and Remote-sensing & GIS techniques.
- The monitoring of floristic structure of mangrove stock shall be carried out annually to check if there are changes in its composition in terms of heights, girth and regeneration classes of Kotdi-I, Kotdi-II and Baradimata creek systems. This would enable us to check if the mangroves are degrading or healthy.
- It is recommended to monitor diversity and density of mangrove associated flora as well as macrofauna annually. This would help us monitor the functioning of food chains and food webs operating in mangrove eco-system of Kotdi-I, Kotdi-II and Baradimata creek systems. An initial baseline data shall be generated on this prior to commencement of the construction of the proposed project. It is recommended to fix the location of sample plots and follow the same locations for subsequent monitoring efforts.
- It is recommended that the biological parameters of the mangrove eco-systems i.e. spread of mangroves, floristic structure, diversity, density, as well as diversity of mangrove associated flora and fauna shall be monitored by and independent NABET accredited experts.
- The samples collected from the mangrove plant and mangrove habitat sediments shall be analyzed only through NABL accredited laboratory.

7.5.5. Indicators for Monitoring of Mangroves.

Following are the indicators for monitoring of conservation plan. These indicators shall be monitored and the effectiveness of mangrove conservation plan shall be determined (Table-7.1.).

Table-7.1: Indicators for monitoring of Mangrove Conservation Plan.

No	Monitoring	Frequency	Negative Impacts	No Impacts
1	Spread of mangroves (area in ha.)	2 years	Decrease	Increase
2	Content of heavy metals in sediments	6 months	Increase	no increase
3	Content of heavy metals in mangrove plants	6 months	Increase	no increase
4	Mangrove stock structure (height, girth and regeneration classes)	Annual	Altered with decrease of area	Altered with increase area
5	Diversity of mangrove associate flora	Annual	Decrease	no increase or increase
6	Diversity of mangrove associated fauna	Annual	Decrease	no increase or increase

8. FINANCIAL LAYOUT

8.1. FINANCIAL ALLOCATION FOR WILDLIFE CONSERVATION ACTIVITIES

Following is the proposed budget estimated in consultation with forest department for 10 years towards wildlife conservation plan after approval from all statutory bodies permitting the project (Table-8.1).

Table-8.1: Proposed financial allocation for mitigation and conservation measures.

Sl	Activity	Implementing Agency	Duration Years	Rate/ Year (Lakh)	Total Amount (Lakh)
A	**Implementation Activities**				
1	Carry out Mangrove Plantation activities through Forest Dept. 50 ha. per year for 10 years. by AEL @ Rs. 30000/ha.	KEFD	10 years	15.0	150.0
2	Mangrove monitoring by third party	Project Proponent	10 years	10.0	100.0
3	Habitat improvement for Schedule-I species in Reserve Forest areas	KEFD	10 yeas	10.0	100.0
4	Carryout plantation of *Commiphora wightii* 10.0 ha. in the first years with maintenance (to be paid by AEL) @ Rs.95000/ha.	KEFD	First Year	9.5	28.5
5	Carry out tree plantation in surrounding villages for birds and Indian Peafowl	Project Proponent	10 years	1.0	10.0
				Subtotal	**388.5**
B	**Monitoring & Compliances Activities**				
7	Comprehensive ecological & Biodiversity monitoring by third party once every 2 years for 10 years after commencement of project	Project Proponent	@ 2 year for 10 years	5	25.0
8	Monitoring and administrative activity cost (5% to be paid by AEL to KEFD) to Kutch East Forest Division	KEFD	10	2.0	20.0
9	Documentation and preparation of Annual compliance report. 10 years	Project Proponent	Annual	1	10.0
				Subtotal	**55.0**
	Total (A=B) amount in Lakh				**443.5**

EAC OBSERVATION

Storage arrangements made for the raw materials are found to be not adequate. Open storage of raw materials such as coal, limestone etc., shall be avoided.

REPLY:

Raw Material Storage Plan

Copper Concentrate:

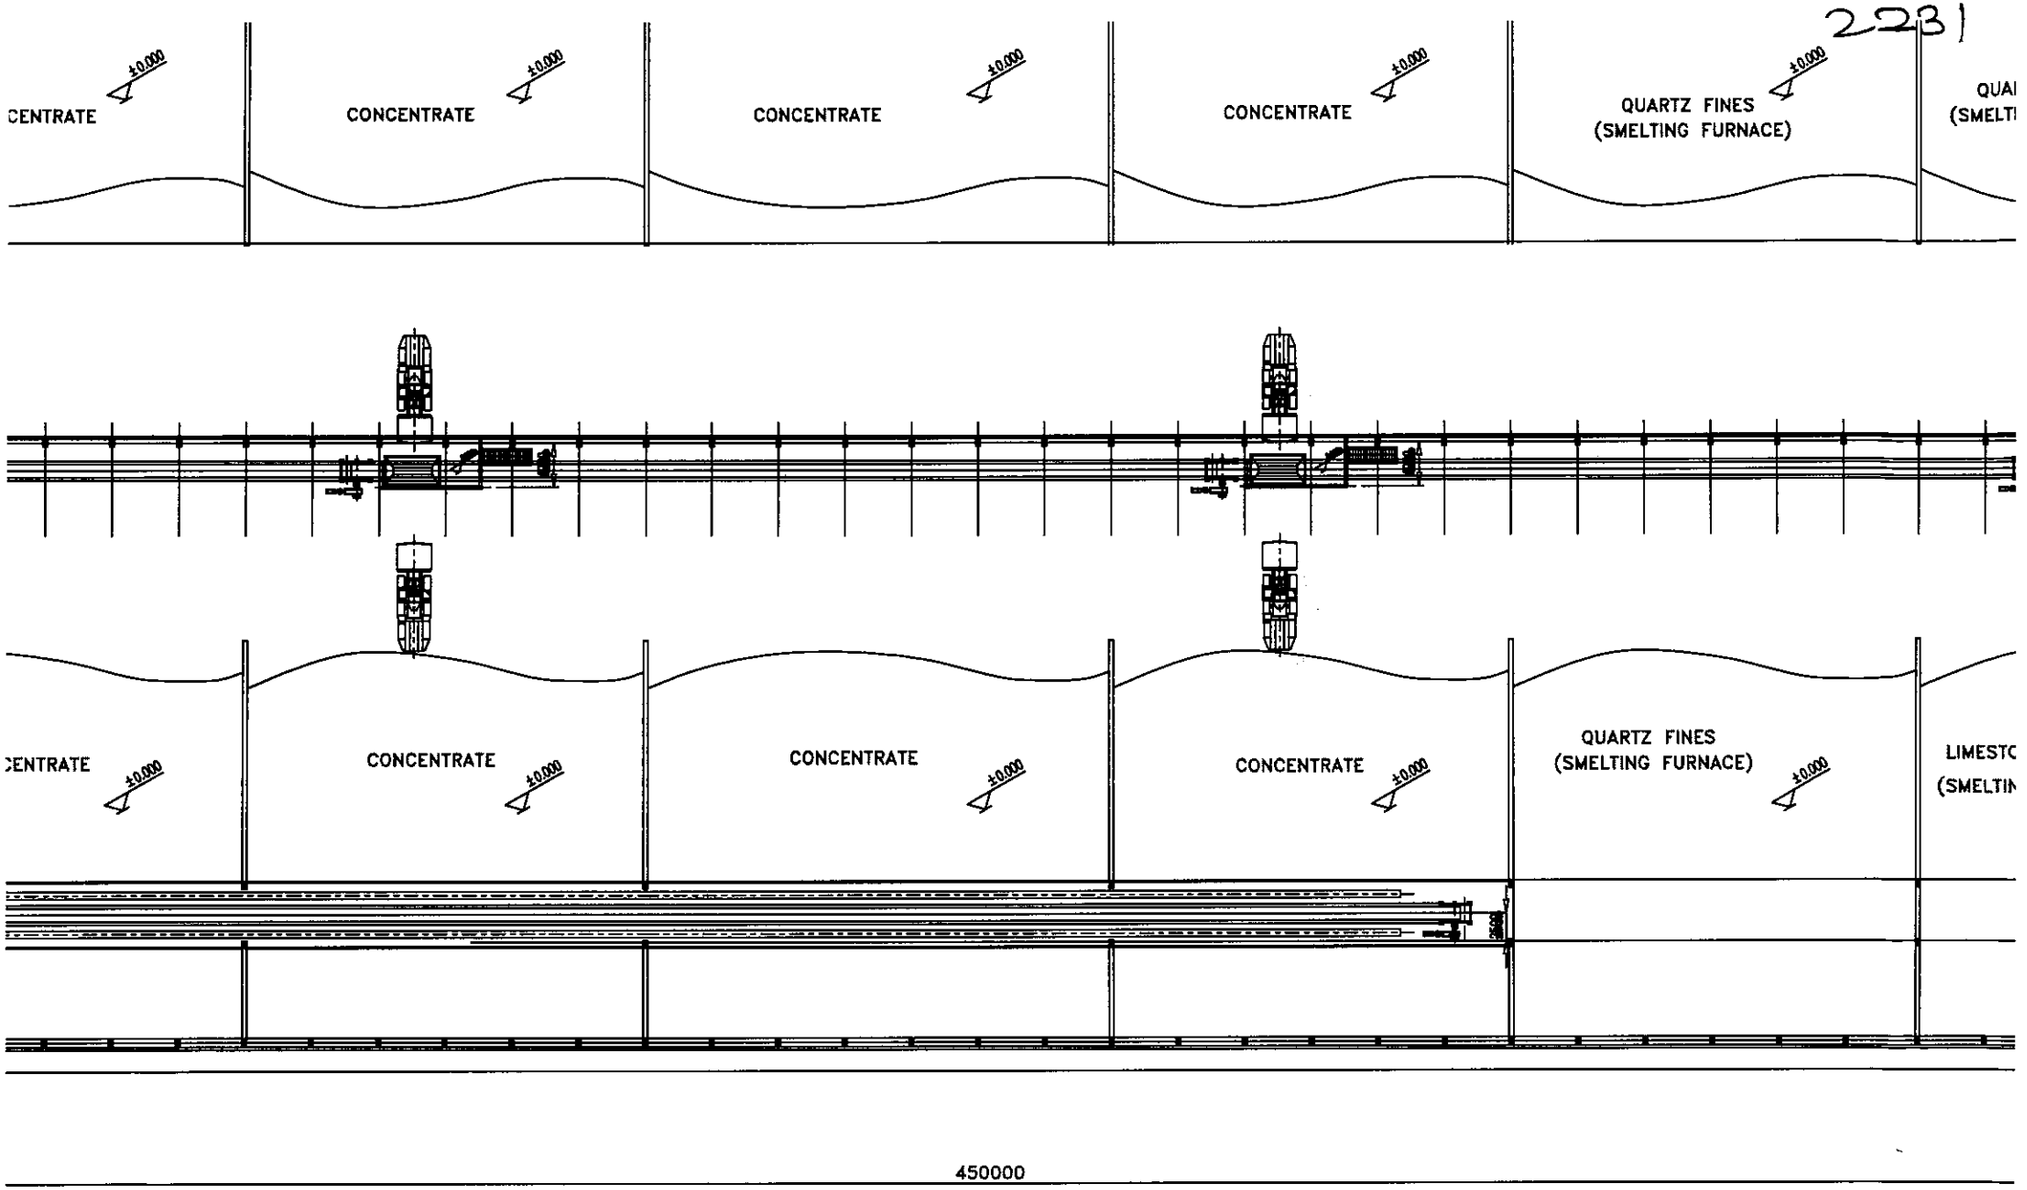
Copper Concentrate will be unloaded from the vessel and transported to port storage godown by closed conveyor system. Godown at the port and plant will be a concrete walled with covered roof and paved with concrete. All the transfer points will be fitted with dust extraction/ suppression system to handle dust.

A preliminary drawing is shown in **Annexure-11**.

Rock Phosphate:

Rock Phosphate will be unloaded from the vessel and transported to port storage godown by closed conveyor system. Godown at the port and plant will be a concrete walled with covered roof and paved with concrete All the transfer points will be fitted with dust extraction/ suppression system.

A preliminary drawing is shown below in **Annexure-11**.



Other Raw Materials in Copper Smelter:

Quartz Sand, Quartz Chips, Lime stone Powder, Crushed and Powdered Reverts:

Quartz Sand, Quartz Chips, Lime stone Powder, Crushed and Powdered Reverts will be received by covered trucks/ tippers and will be unloaded in the covered storage godown, which is paved with concrete and covered with roof. All the transfer points will be fitted with dust extraction/ suppression system to handle dust.

A preliminary drawing is shown below in **Annexure-11**.

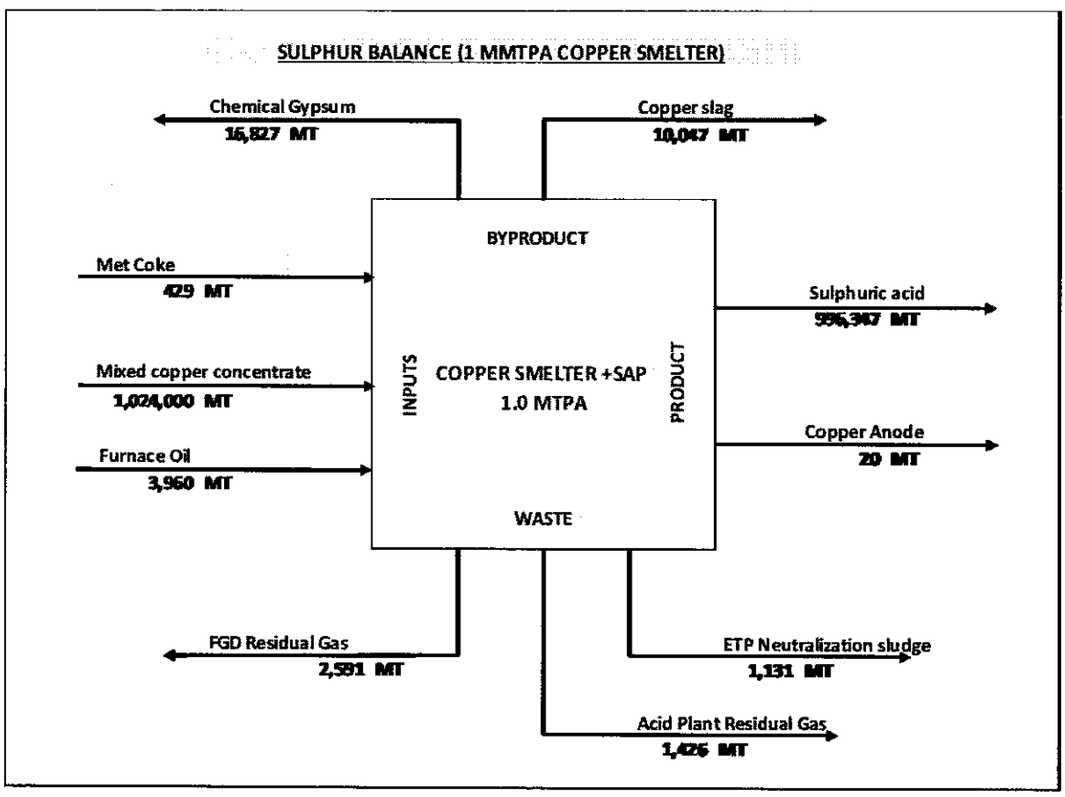
EAC OBSERVATION NO.-7

EAC OBSERVATION:



Sulphur balance of the copper smelter unit has not been submitted.

REPLY:

Sulphur is one of the major ingredient in the copper concentrate. Sulphur from the copper concentrate will be largely converted as Sulphur DI- Oxide during smelting process which will be input raw material for Sulphuric Acid plant for production of Sulphuric Acid with 98% concentration. Sulphuric Acid plant is designed to convert 99.847% of SO_2 into concentrated Sulphuric Acid.

A detail sulphur balance has been worked out considering various input and output material characteristics. Sulphur from various sources such as Copper concentrate, Furnace Oil, Met Coke will largely (~ 97%) converted into concentrated Sulphuric Acid and rest will be available in by product (Copper slag) and waste material such as chemical gypsum and ETP sludge. Residual Off- gas from Sulphuric Acid plant and Flue Gas Desulphurization system will have SO_2 ranging from 400-600 mg/Nm^3.

Below table provides the sulphur balance envisaged for the proposed Copper Plant.

EAC OBSERVATION:

Copper slag disposal site co-ordinates, concrete mode of utilization, maximum time frame envisaged for the storage at the disposal yard i.e., one month (or) 15 days has not been submitted.

REPLY:

Copper slag disposal site co-ordinates are marked in Plot Plan in **Annexure-8(a).**

Copper Slag from smelting furnace and PS Converter will be treated in Electric furnace and slag cleaning furnace for recovery of the Copper.

Copper Slag is known as Ferro Sand in Japan and Korea. In Europe it is also called as Iron Silicate.

Typical analysis is as below:

Sr. No.	Parameter	UOM	Value
1	Cu	%	< 1
2	Fe	%	40 - 50
3	SiO2	%	26 - 35
4	CaO	%	< 4
5	Al2O3	%	1 - 4
6	MgO	%	0.5 - 2
7	S	%	< 0.5

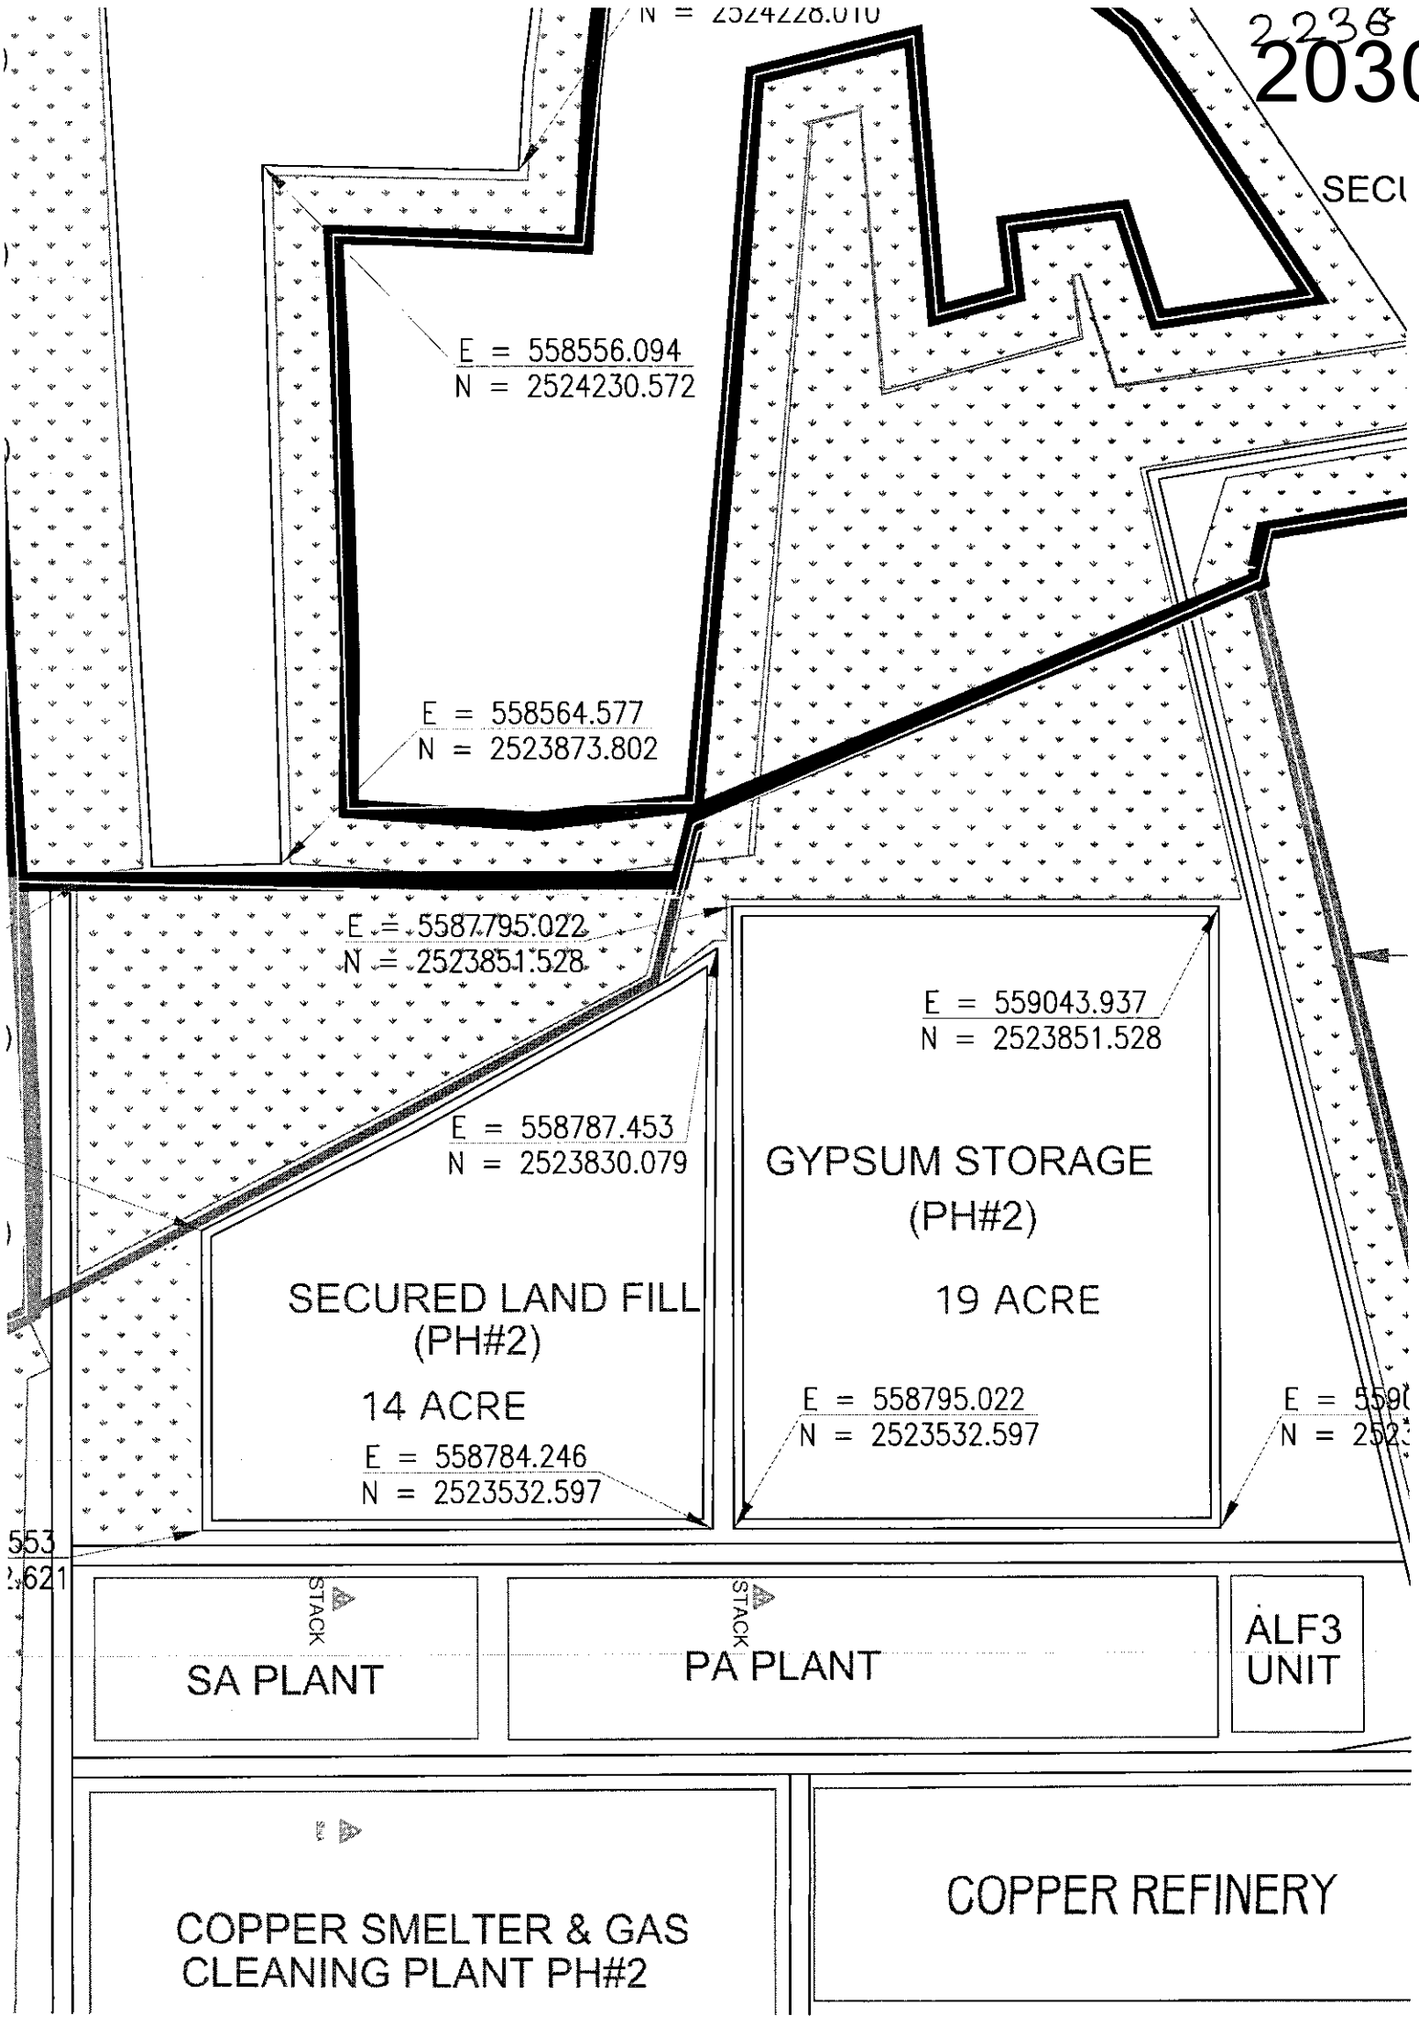
In India Copper slag is used in the following application:

- Abrasive Blasting Grit
- Aggregates for Concrete Mix
- Cement Manufacturing
- Pavement: As an additive to improve sintering and abrasion resistance.
- Road Construction: As an additive in bed structure stabilisation and substitute for stone flour in asphalt.

Directive from National Highway Authority of India for utilization of copper slag is attached for ready reference in **Annexure-8(b) and 8(c).**

Copper Slag/ Ferro Sand/ Iron Silicate is used in the following applications in European Countries, South East Asia and China:

- Abrasive Blasting Grit
- Aggregates for Concrete Mix
- Cement Manufacturing
- Pavement: As an additive to improve sintering and abrasion resistance.
- Reinforcement : Coastal, Riverside and land slide
- Road Construction: As an additive in bed structure stabilisation and substitute for stone flour in asphalt.
- Bricks: Partial substitute for natural clay – reduces shrinkage and enhances colour.
- Iron Making: Iron bearing material for sinter and pellet production.
- Backfilling: Additive for underground mine and road construction.



2235

EAC OBSERVATION NO.-8

Total Area allocated for storage of Copper Slag is around 47 Acres. Base of the storage will be prepared to take the load of copper slag to the height of minimum 15m. Greenbelt of 15 m width will be developed all around the storage area.

This area is sufficient for 6 years, considering NO sales.

For concrete mode of utilization of copper slag various cement companies and road construction companies were approached to utilize in the respective applications. The MoUs w.r.t. utilization of copper slag with various companies is attached in **Annexure-8(d).**

No. NHAI/TIC/R&D/2016-85846

19th July'16

To,
ALL Regional Officers
National Highways Authority of India.

Sub : Use of alternative material such as Steel Slag in road construction.

Sir,

The Hon'ble Minister of RT&H has shown his keen interest in use of alternative waste material in road construction such a Steel Slag etc.

2. In this regard, it is to inform that MoRT&H vide OM No. RW/NH—35075/1/2010-S&R (R) dated 6th August'14 **(copy enclosed)** has accredited the use of Processed steel slag Aggregate on trial basis as a replacement for natural aggregates in Bitumen roads. This will provide better bonding with bitumen, high abrasion resistance, improved skid resistance, cost effective alternative to natural aggregates and safe non-hazardous recycled material.

3. Further, Bureau of Indian Standards as per IS 383 :2016, Indian Standard for Coarse and Fine Aggregate for Concrete—Specification (Third Revision) vide para 4.2.2 (Table 4.2.1) has provision of following :

Sr. No.	Type of Aggregate	Maximum Utilization		
		Plain concrete	Reinforced concrete percent	Lean concrete (less than M15 Grade percent
(1)	(2)	(3)	(4)	(5)
i) Coarse aggregate	a) Iron slag aggregate	50	25	100
	b) Steel Slag aggregate	25	Nil	100
	c) Recycled concrete aggregate (RCA) (see note 1)	25	20 (only upto M25 grade)	100
	d) Recycled aggregate (RA)	Nil	Nil	100
	e) Bottom ash from Thermal Power Plants	Nil	nil	25
ii) Fine Aggregate	a) Iron Slag Aggregate,	50	25	100
	b) Steel slag aggregate	25	Nil	100
	c) Copper slag aggregate	40	35	50
	d) Recycled concrete aggregate (RCA) (see note 1)	25	20 (only upto M25 Grade)	100

See A-3 for brief information on recycled aggregates (RA) and recycled concrete aggregates (RCA)

Notes :

1. It is desirable to sources the recycled concrete aggregates from site being redeveloped for use in the same site.
2. In any given structure, only one type of manufactures coarse aggregate and one type of manufactured fine aggregate shall be used.
3. The increase in density of concrete due to use of copper slag and steel slag aggregates need to be taken into consideration in the design of structures.
4. While using manufactured aggregate as part replacement for natural aggregate, it should be ensured that the final grading meets the requirements specified in table 7 table 8 and table 9.

4. The same has also been accredited by Indian Road Congress (IRC) as per IRC letter no. IRC-24 (12)/2014 (ACC-129) dated 26th June 2014.

5. In view of the above, you are suggested to use steel slag in upcoming / on-going projects as per requirement and intimate the performance on the use of steel slag to the undersigned. Further, a quarterly statement to the extent of use of steel slag be provided to this office for record & perusal.

6. This may please be noted that NHAI should not bear any contractual implications on this account. The regulation of use of above material shall be kept in line with the existing provision of contract/ concessionaire Agreements. Deviation, if any should be got approved from competent Authority accordingly.

7. This issues with the approval of Competent Authority.

Yours faithfully,

Sabharwall 19/7/16

(Ajay Kumar Sabharwall)
General Manager (TIC)

GOVERNMENT OF INDIA
MINISTRY OF ROAD TRANSPORT & HIGHWAYS

Parivahan Bhavan,
1, Sansad Marg
New Delhi-110001

No. RW/NH-35075/1/2010- S&R (R) Dated: 6th August, 2014

OFFICE MEMORANDUM

Subject: Use of emerging new materials and techniques in construction of National Highways.

In continuation of SR&T (Roads) Zone's OM of even number dated 08.10.2013, the minutes of the meeting of Coordination Committee dated 22nd May, 2014 in respect of newly accredited materials/ techniques such as Instant road repair cold mix compound – INSSTAPATTCH, Anti stripping additive (Zycosoil) & water proofing compounds – Terrasil, Terraprime and IPPL SS –IX - Soil Stabilizer, containing merits and demerits were circulated to all project zones vide SR&T (Roads) Zone letter of even number dated 30th May, 2014 with the request to incorporate and utilize considering their suitability in different States on trial basis. The list of new accredited materials/ techniques, as on date, is as below:

(i) Geocells,
(ii) Warm Mix Asphalt Technology,
(iii) Water Proofing Membranes,
(iv) Non-woven, Woven Geotextiles & Techglass,
(v) Jarofix,
(vi) Thiopave – Asphalt Modifier,
(vii) Infrared Recycling Pothole Repair System,
(viii) Water proofing for Bridge decks and pavements,
(ix) Copper Slag,
(x) Processed Steel Slag Aggregates,
(xi) RoadstaB Technology,
(xii) Evercrete Deep Penetrating Sealer,
(xiii) RBI Grade-81,
(xiv) Tenax 3D Grids and
(xv) Roadcem
(xvi) Instant road repair cold mix compound - INSSTAPATTCH
(xvii) Anti stripping additive (Zycosoil) and water proofing compounds – Terrasil, Terraprime
(xviii) IPPL SS –IX - Soil Stabilizer

2. It is requested that the status of utilization of the new materials/ techniques along with performance feedback, if any, may be provided to SR&T (Roads) Zone for necessary action. The specific use and suitability of the new materials/ techniques is enclosed at Annex-I.

[Gulshan]

Annex-I

List of new materials/ technologies with their use and benefits on National Highways

S. No.	Name of the New material / Technology	General use and Benefits	Suitability
1.	Geocells	StrataWeb® is a 3D cellular confinement system which confines the infill material and improves the load bearing capacity of the base.	Over weak soils – expansive soils, clays and soils with low CBR values
2.	Warm Mix Asphalt Technology	Allows mix production at about 30°C lower temperatures that conventional hot mix, thus imparting performance benefits, constructability advantages and environmental benefits as well.	For bituminous woks.
3.	Water Proofing Membrane	Super Thermolay APP PI/MT Membranes are ideal for a wide range of water proofing applications including roofs, reservoirs, basements, basement roof, sunken slabs, tunnels, terrace garden and car parking. Advantages: (i) Total impermeability (ii) Excellent resistance to ageing and weathering. (iii) Outstanding bond-ability and seam integrity. (iv) Stability at high temperatures	To prevent the intrusion of corrosive substance into the concrete, which will result in deterioration of the structures, leading to spalling of concrete
4 (i).	Woven geo-textiles	Filtration / Separation and Soil Stabilization	It can be used between granular sub-base / base course and the sub-grade.
4 (ii).	Non-Woven geo-textiles	Filtration / Separation, Paving fabrics / Slope protection	It can be used in side drainage for its functions.
4 (iii).	Techglass	Rehabilitation & Preservation of Pavements	Used to reduce the development of reflection cracks.
5.	Jarofix	It is at par with conventional material and also the material is on OMC.	In embankment and sub-grade construction.
6.	Shell Thiopave	In cold and seasonal climates where thermal cracking is an issue, Shell Thiopave allows the use of softer bitumen with improved low temperature properties without sacrificing high temperature properties. In hot climates, where conventional bitumen often do not deliver the high level of stiffness required, Shell Thiopave improves anti-rutting performance while still allowing the effective use of locally available bitumen.	For bituminous woks
7.	Nu-phalt Infrared Recycling Pothole Repair System	(i) It rejuvenates the existing asphalt, thereby, saving on material and making the process eco-friendly. (iii) This system allows the surface to be heated to about 150 to 160 °C without damaging, destroying or burning the existing asphalt.	Suitable for potholes, failed joints, cracked and undulated road surface.

2241

8.	Polyguard NW-75 for Bridge Decks or pavement waterproofing	It can be applied to highways, bridge decks, parking garages etc. prior to overlay. Polyguard under seal provides an impermeable layer protecting seal rebar from moisture and corrosion.	For highways, bridge decks, parking garages
9.	Copper slag	Copper slag is non hazardous and best suited for (i) Land reclamation. (ii) Cement & concrete application. Benefits: (i) Huge saving on natural resources. (ii) Non-toxic and non leachable in nature.	It can be used as sub-base layer after mixing with pond ash. It can also be used in different bituminous mixes.
10.	Processed Steel Slag Aggregate	1. Intended use: As a replacement for natural aggregates in Bitumen roads. 2. Benefits: (i) Better bonding with Bitumen (ii) High abrasion resistance (iii) Improved skid resistance (iv) Cost effective alternative to natural aggregate (v) Safe / Non-hazardous recycled material.	In bituminous roads
11	RoadstaB Technology	RoadstaB Technology can be used in bases and sub-bases of the road crust.	For soil stabilization.
12.	Evercrete Deep penetrating Sealer	Evercrete Deep Penetrating Sealer (DPS), is water based, ready to use, concrete sealer that strengthens, preserves and enhances life of concrete structures.	It prevents concrete from chlorides ion ingress, corrosion and hence enhances the life of concrete structures.
13.	RBI Grade 81 – Soil Stabilizer	It reduces requirement construction materials like aggregates; borrow pit soil etc. thus reducing the transportation cost It also reduces Life Cycle Cost.	It can be used in various pavement layers i.e. for sub-grade, sub-base and base layers.
14.	Tenax 3D Grids	To increase the interlocking and bearing capacity of the unbound layers within Indian Highway Road Construction Layers (Sub-grade, GSB, WMM and DBM). Benefits: (1) Reduce the thickness of WMM and DBM thereby reducing the overall cost of the road pavement (2) Improve bearing capacity of soil.	It can be used in Sub-grade, GSB, WMM and DBM layers.
15.	RoadCem	It is used in combination with cement and sometimes fly-ash to form a base for a road with the soil available on site. Benefits: (1) No damage from water (2) High quality road with a low maintenance cycle (3) Faster construction (4) Stabilization of Black Cotton Soil (5) Environmental feasibility	
16.	Instant road repair cold mix compound - INSSTAPATTCH	INSSTAPATTCH can be used for Instant repairs of Potholes and Patches on city roads and Highways. Potholes repaired by INSSTAPATTCH are time saving, cost saving, does not cause any traffic hindrance and is environmental friendly.	For road repairs

2242

17.	Zycosoil Nano Technology Terrasil Terraprime	Reactive anti-strip additive in hot mix bnder and Soil & aggregate waterproofing Sub-grade multilayer waterproofing to eliminate capillary rise Penetrative waterproofed prime coat	Reactive anti-strip additive for asphalt layers Waterproofing of in-situ soil Waterproofing of soil/ stone base of WMM/ WBM
18	IPPL SS – IX (SoilTech MK-III) Soil Stabilizer	The product is used for stabilizing the base and sub-base layers of roads, Mine Haul Roads, Parking lots, hard stands and Container Depots. Benefit: The product intends to substantially reduce the quantity of aggregates from quarries / borrow pits. Due to the flexible nature of the Polymers, the pavement surface allows a certain amount of flexibility on the road and does not become brittle which dramatically reduces the maintenance of the stabilized roads.	The IPPL SS – IX Polymer stabilizer is water based which can be used extensively for stabilizing the base and sub-base layers of road. The product gains excellent strength from mechanical compaction and is an excellent solution for heavily trafficked roads and hard stands.

POLICY MATTERS – TECHNICAL (41/2010)
(Decision taken on TIC Division's File No. NHAI/Tech/TIC/Genl/2009)

Sub: Encouraging the use of Slag Aggregate in Granular Sub-Base (GSB).

The Steel Plants in the country generate large amount of slag which remains unutilized. Reference have been received from various steel plants such as Bokaro Steel Plant to use slag aggregates in road projects as an environmental friendly measure. Specification for Road and Bridge works issued by Ministry of Road Transport and Highways also allow the use of crushed slag for Granular Sub-Base (GSB).

2. It has been therefore, decided to use steel furnace/blast furnace/copper slag aggregates in Granular Sub-Base provided that the same satisfies the physical requirements/gradings etc. as stipulated in the specifications. The Contractors/Concessionaires shall use slag aggregates in GSB especially in the projects lying in the regions of these types of slag production.

3. This issues with the approval of Chairman, NHAI.

MEMORANDUM OF UNDERSTANDING (MOU) FOR UTILISATION OF COPPER SLAG

THIS MOU is entered on this 09 day of April Month 2019 Year between **Adani Enterprises Limited,** a company registered under the Companies Act, 1956, and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"AEL"**, which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **FIRST PART.**

AND

Adani Infra (India) Limited, a Company registered under the Company's Act 1956 and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"AIIL"** which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **SECOND PART.**

Both AEL and AIIL may hereinafter also be referred to jointly as the **'Parties'** and severally as a **'Party'**

WHEREAS

AEL is setting up 1 Million Copper Smelter Complex at Mundra, Gujarat (hereinafter referred to as **"CP"**) and shall be generating in process, 2 Million Ton per annum quantity of copper Slag (hereinafter referred to as **"Slag"**) which can be utilized in road construction activity and ready mix concrete (RMC), paver blocks manufacturing etc.

The Parties hereto have decided to enter into an MOU on the following terms and conditions:

NOW, THEREFORE, IN CONSIDERATION OF THE ABOVE PREMISES AND OF THE UNDERTAKINGS HEREIN FURNISHED, IT IS HEREBY AGREED BY AND BETWEEN THE PARTIES AS FOLLOWS:

1.0 AEL will make available Slag that will be generated from its copper smelter as per the requirement of AIIL from the commercial date of operation. The quantities, delivery schedule and the other commercial terms & conditions will be mutually decided by both the parties at a date closer to the commercial date of operation

2.0 AEL & AIIL shall discuss the further steps to be taken in order to carry out the purpose of this MoU. Both the parties will endeavour to finalize and enter into such requisite Agreements, as may be necessary in line with the related rules, regulation and notifications of State/Central Government Department/Agencies.

EFFECTIVE DATE, COMMENCEMENT DATE & VALIDITY OF THE MOU

1.0 The effective date shall be the date of this MOU.

MEMORANDUM OF UNDERSTANDING (MOU) FOR SUPPLY OF COPPER SLAG

This MOU is entered on this 24th Day of January 2019 between **Adani Enterprises Limited,** a company registered under the Companies Act, 2013, and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"AEL"**, which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **FIRST PART.**

AND

Sanghi Cement Ltd, a Company registered under the Company's Act 2013 and having its office at 10th Floor, Kataria Arcade, Off S.G. Highway, Makarba, Ahmedabad-380051, India (hereinafter referred to as **"SANGHI"** which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **SECOND PART.**

Both AEL and SANGHI may hereinafter also be referred to jointly as the **'Parties'** and severally as a **'Party'**

WHEREAS

AEL is setting up 1 Million Copper Refinery Complex at Mundra, Gujarat (hereinafter referred to as **"Project)** and shall be generating in process, 2.0 Million Ton per annum quantity of copper slag (hereinafter referred to as **"Slag"**) which can be utilized in cement for manufacturing and Ready mix concrete (RMC), Paver Blocks Manufacturing, Replacement of Sand for metal surface blasting purpose, Road Construction, etc.

AEL & SANGHI after discussion hereto have decided to enter into an MOU for utilizing this Slag in the SANGHI's cement plant.

NOW, THEREFORE, IN CONSIDERATION OF THE ABOVE PREMISES AND OF THE UNDERTAKINGS HEREIN FURNISHED, IT IS HEREBY AGREED BY AND BETWEEN THE PARTIES AS FOLLOWS:

1.0 AEL will make available to SANGHI, the Slag that will be generated from its Project from the commercial date of operation. The quantity, delivery schedule and the other commercial terms & conditions will be mutually decided by both the parties at a date closer to the commercial date of operation.

2.0 AEL & SANGHI shall discuss the further steps to be taken in order to carry out the purpose of this MoU. Both the parties will endeavour to finalize and enter into such requisite Agreements, as may be necessary in line with the related rules, regulation and notifications of State/Central Government Department/Agencies.

EFFECTIVE DATE, COMMENCEMENT DATE & VALIDITY OF THE MOU

1.0 The effective date shall be the date of this MOU.

2.0 This MOU shall remain valid till the time a definitive detailed agreement incorporating all the commercials, scope, penalty and legal related matters is executed between the parties.

SANGHI IND. LTD. AHMEDABAD

ADANI ENTERPRISES LTD. AHMEDABAD

2258

TERMINATION

1.0 Any party may terminate this MoU by giving thirty (30) days' notice to the other party during the tenure of this MoU.

SETTLEMENT OF DISPUTES

1.0 In case of any disputes, differences, claims between the parties hereto arising out of this MoU, the same shall be referred to the senior management of each Party for an amicable settlement.

OTHER CONDITIONS:

1.0 Any amendment to this MoU in order to be valid shall be in writing.

2.0 This MoU shall be executed in duplicate and both the counterparts shall be treated as original.

IN WITNESS WHEREOF THE .PARTIES HERETO HAVE HEREUNTO SET THEIR RESPECTIVE HANDS AND SEALS THE DAY, MONTH AND YEAR FIRST ABOVE WRITTEN.

MEMORANDUM OF UNDERSTANDING (MOU) FOR UTILISATION OF COPPER SLAG

THIS MOU is entered on this 09th day of April Month 2019 Year between **AdaniEnterprises Limited,** a company registered under the Companies Act, 1956, and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"AEL"**, which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **FIRST PART.**

AND

M/s Radheshyam Agrawal a Company registered under the Company's Act 1956 and having its registered office at Raigarh (hereinafter referred to as **"RSA"** which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **SECOND PART.**

BothAEL and RSA may hereinafter also be referred to jointly as the **'Parties'** and severally as a **'Party'**

WHEREAS

AEL is setting up 1 Million Copper Smelter Complex at Mundra, Gujarat (hereinafter referred to as "CP") and shall be generating in process, 2 Million Ton per annum quantity of copper Slag (hereinafter referred to as **"Slag"**) which can be utilizedinroad construction activity and ready mix concrete (RMC), paver blocks manufacturing etc.

The Partieshereto have decided to enter into an MOU on the following terms and conditions:

NOW, THEREFORE, IN CONSIDERATION OF THE ABOVE PREMISES AND OF THE UNDERTAKINGS HEREIN FURNISHED, IT IS HEREBY AGREED BY AND BETWEEN THE PARTIES AS FOLLOWS:

1.0 AEL will make available Slag that will be generated from its copper smelter as per the requirement of RSAfrom the commercial date of operation. The quantities, delivery schedule and the other commercial terms & conditions will be mutually decided by both the parties at a date closer to the commercial date of operation

2.0 AEL &RSA shall discuss the further steps to be taken in order to carry out the purpose of this MoU. Both the parties will endeavour to finalize and enter into such requisite Agreements, as may be necessary in line with the related rules, regulation and notifications of State/Central Government Department/Agencies.

EFFECTIVE DATE, COMMENCEMENT DATE & VALIDITY OF THE MOU

1.0 The effective date shall be the date of this MOU.

2.0 This MOU shall remain valid till the time a definitive detailed agreement incorporating all the commercials, scope, penalty and legal related matters is executed between the parties.

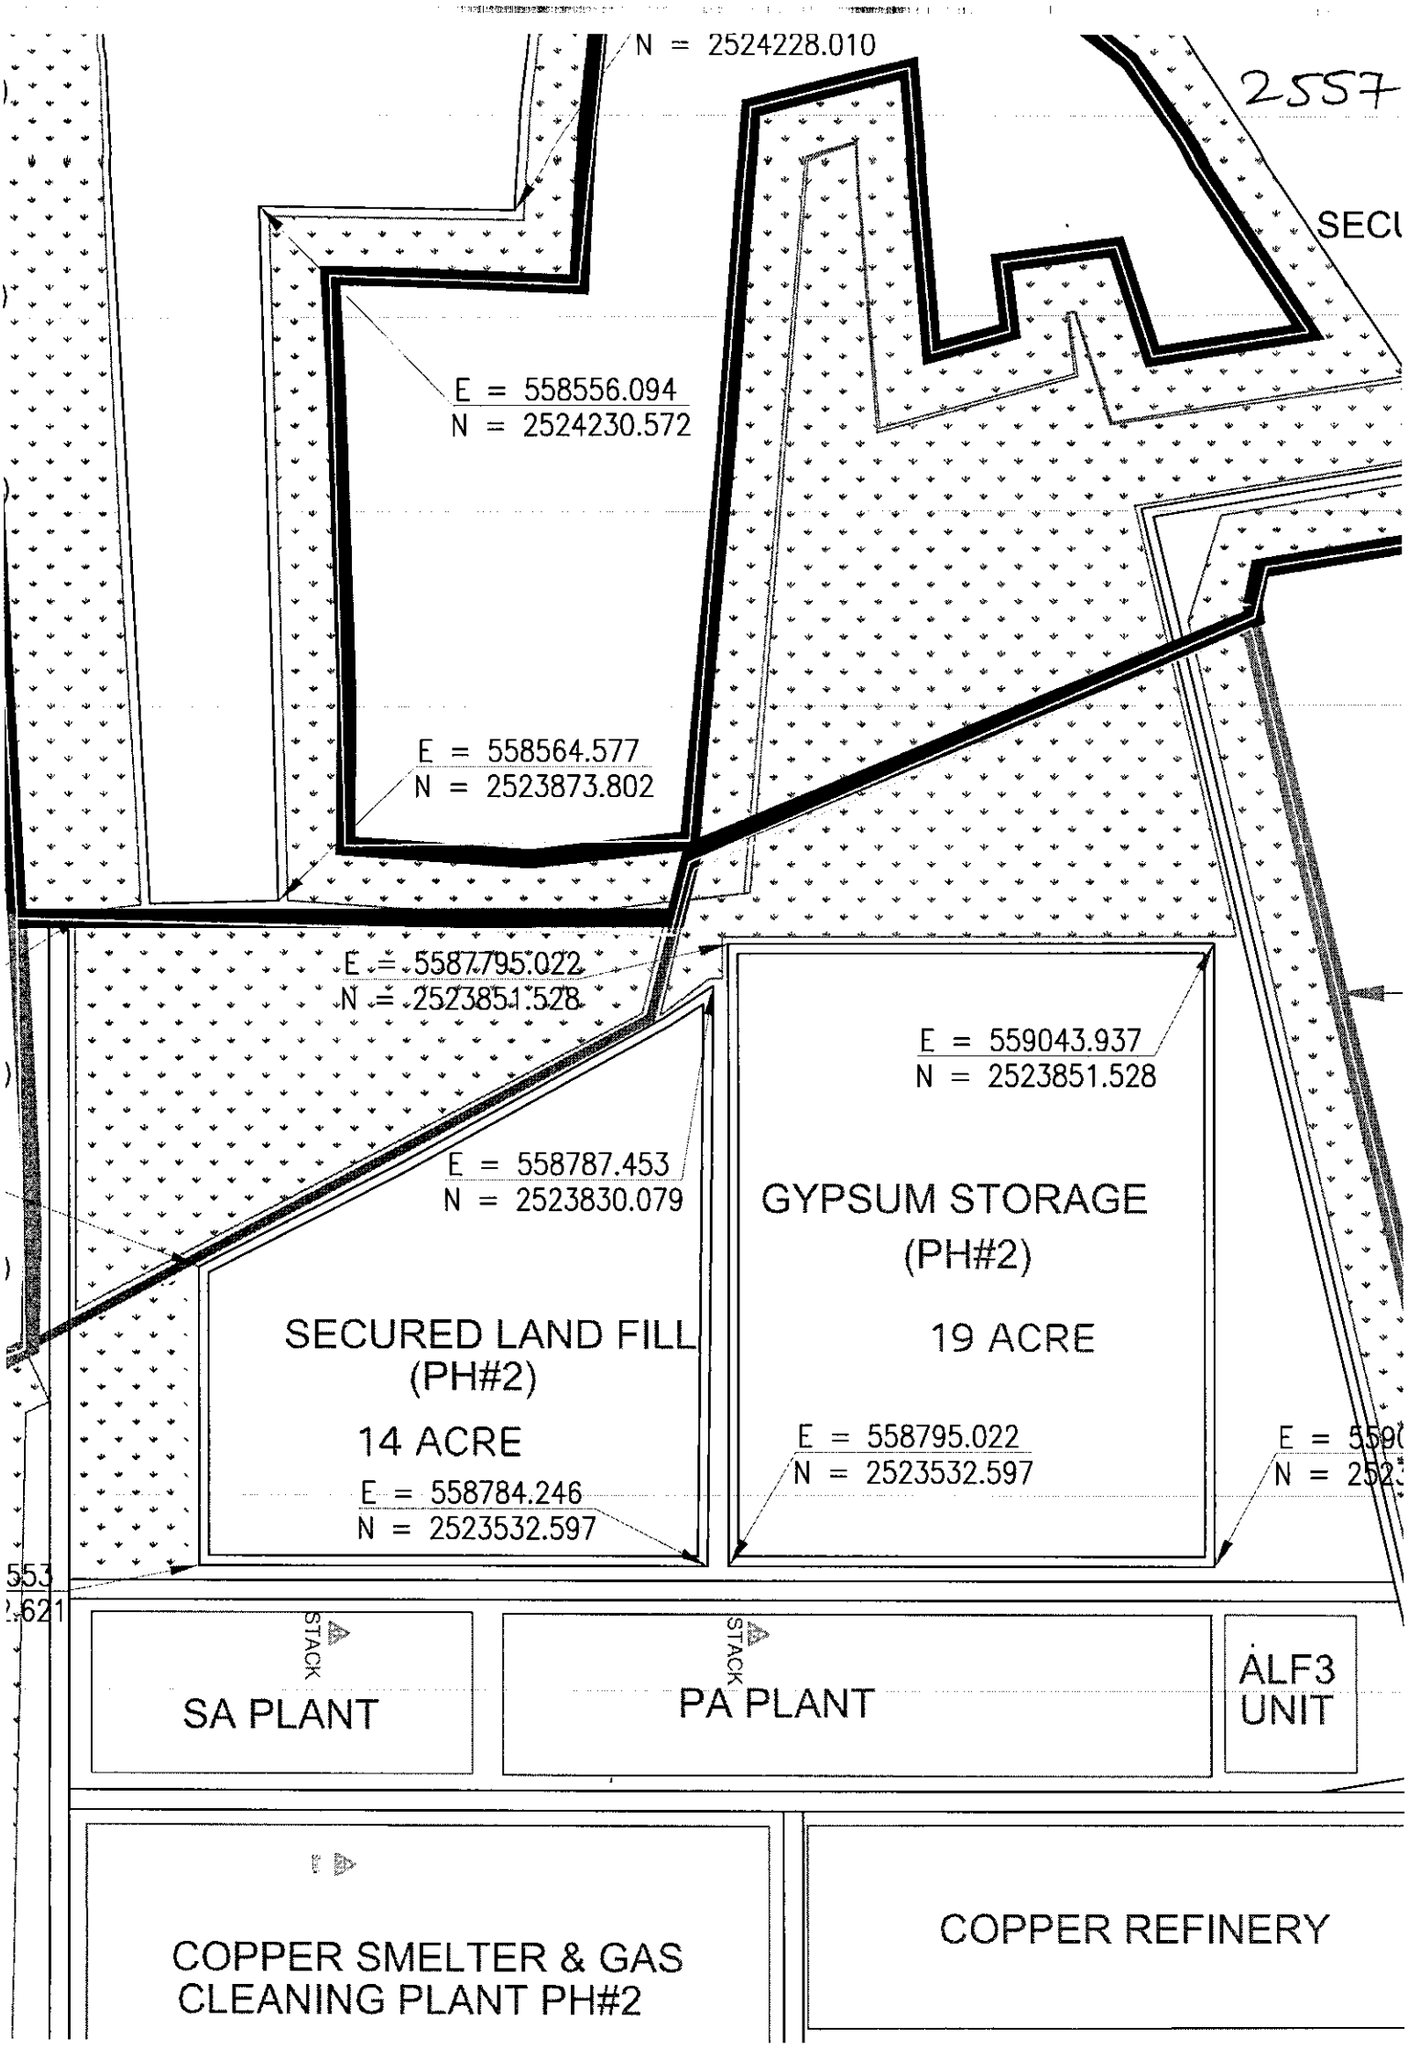
EAC OBSERVATION:

Phospho-gypsum disposal site co-ordinates, concrete mode of utilization, maximum time frame envisaged for the storage at the disposal yard i.e., one month (or) 15 days has not been submitted.

REPLY:

Phospho-gypsum disposal site co-ordinates are marked in Plot Plan and is attached in **Annexure-9(a)**

Criteria for Phospho Gypsum Storage (As per CPCB Guideline)



Sr. No.	Description	Locational Criteria	Compliance
1	Lake or Pond	Distance More than 200m	Storage-I: 850m from nearest pond Storage-II: 830m from nearest pond
2	Flood Plan	No Construction 100 Year flood Plain	Since no flow data is available for Danesri Nadi , a tentative estimate of run-off from Danesri Nadi catchment and discharge at railway line near project site is done based on the catchment characteristics.
3	Habitation	Distance More than 1 KM	Storage-I: 1350m from Navinal Storage-II: 1950m from Navinal

Phospho gypsum is widely used in cement manufacturing. Company will be making effort to sell the Phospho gypsum to nearby cement companies. MOU with the prospective cement companies are attached as **Annexure-9(b).**

Phospho gypsum is also used for agriculture purpose and therefore efforts will be made to sell for the agriculture requirement.

Total Area allocated for storage of Phospho Gypsum is around 51 Acres. Gypsum will be stored to 15 meter height above the base of the storage. Greenbelt of 15 m width will be developed all around the storage area.

This area is sufficient for 3 years, considering NO sales.

MEMORANDUM OF UNDERSTANDING (MOU) FOR SUPPLY OF PHOSPHO GYPSUM

THIS MOU is entered on this 31st day of December 2018 between **Adani Enterprises Limited,** a company registered under the Companies Act, 2013, and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"AEL"**, which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **FIRST PART.**

AND

Adani Cementation Ltd, a Company registered under the Company's Act 2013 and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"ACL"** which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **SECOND PART.**

Both AEL and ACL may hereinafter also be referred to jointly as the **'Parties'** and severally as a **'Party'**

WHEREAS

AEL is setting up 1 Million Copper Refinery Complex at Mundra, Gujarat (hereinafter referred to as **"CP"**) and shall be generating in process, 2.5 Million Ton per annum quantity of Phospho-gypsum (hereinafter referred to as **"Gypsum"**) which can be utilized in manufacturing cement, gypsum board fertiliser applications, etc.

AEL & ACL after discussion hereto have decided to enter into an MOU for utilizing this Gypsum in the ACL's cement plant.

NOW, THEREFORE, IN CONSIDERATION OF THE ABOVE PREMISES AND OF THE UNDERTAKINGS HEREIN FURNISHED, IT IS HEREBY AGREED BY AND BETWEEN THE PARTIES AS FOLLOWS:

1.0 AEL will make available to ACL 0.30 Million Ton per annum of cement grade Gypsum that will be generated from its CP from the commercial date of operation. The delivery schedule and the other commercial terms & conditions will be mutually decided by both the parties at a date closer to the commercial date of operation.

2.0 AEL & ACL shall discuss the further steps to be taken in order to carry out the purpose of this MoU. Both the parties will endeavour to finalize and enter into such requisite Agreements, as may be necessary in line with the related rules, regulation and notifications of State/Central Government Department/Agencies.

EFFECTIVE DATE, COMMENCEMENT DATE & VALIDITY OF THE MOU

1.0 The effective date shall be the date of this MOU.

2.0 This MOU shall remain valid till the time a definitive detailed agreement incorporating all the commercials, scope, penalty and legal related matters is executed between the parties.

MEMORANDUM OF UNDERSTANDING (MOU) FOR SUPPLY OF PHOSPHO GYPSUM

This MOU is entered on this 24th Day of January 2019 between **Adani Enterprises Limited,** a company registered under the Companies Act, 2013, and having its registered office at Adani House, Near Mithakhali Six Roads, Navrangpura, Ahmedabad 380009, Gujarat, India (hereinafter referred to as **"AEL"**, which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **FIRST PART.**

AND

Sanghi Cement Ltd, a Company registered under the Company's Act 2013 and having its office at 10th Floor, Kataria Arcade, Off S.G. Highway, Makarba, Ahmedabad-380051, India (hereinafter referred to as **"SANGHI"** which expression shall, unless excluded by or repugnant to the context or meaning thereof, be deemed to include its successors and assigns) being the party of the **SECOND PART.**

Both AEL and SANGHI may hereinafter also be referred to jointly as the **'Parties'** and severally as a **'Party'**

WHEREAS

AEL is setting up 1 Million Copper Refinery Complex at Mundra, Gujarat (hereinafter referred to as "**Project**) and shall be generating in process, 2.5 Million Ton per annum quantity of Phospho-gypsum (hereinafter referred to as "**Gypsum**") which can be utilized in manufacturing cement, gypsum board fertiliser applications, etc.

AEL & SANGHI after discussion hereto have decided to enter into an MOU for utilizing this Gypsum in the SANGHI's cement plant.

NOW, THEREFORE, IN CONSIDERATION OF THE ABOVE PREMISES AND OF THE UNDERTAKINGS HEREIN FURNISHED, IT IS HEREBY AGREED BY AND BETWEEN THE PARTIES AS FOLLOWS:

1.0 AEL will make available to SANGHI the cement grade Gypsum that will be generated from its Project from the commercial date of operation. Currently, SANGHI consumes around 0.20 MTPA of Gypsum in their manufacturing process which is likely to be increased to about 0.40 MTPA after their capacity expansion. The quantity, delivery schedule and the other commercial terms & conditions will be mutually decided by both the parties at a date closer to the commercial date of operation.

2.0 AEL & SANGHI shall discuss the further steps to be taken in order to carry out the purpose of this MoU. Both the parties will endeavour to finalize and enter into such requisite Agreements, as may be necessary in line with the related rules, regulation and notifications of State/Central Government Department/Agencies.

EFFECTIVE DATE, COMMENCEMENT DATE & VALIDITY OF THE MOU

1.0 The effective date shall be the date of this MOU.

2.0 This MOU shall remain valid till the time a definitive detailed agreement incorporating all the commercials, scope, penalty and legal related matters is executed between the parties.

EAC OBSERVATION:

Lining details for Phospo-gypsum disposal yard, leachate collection system envisaged and details of piezo-well installations has not been made available.

REPLY:

Phosphogypsum storage yard will be developed strictly as per CPCB Guidelines for Management and handling of phosphogypsum generated from phosphoric acid plants.

M/s. Garware Technical Fibres Limited (Geosynthetics Division), Pune; has been engaged to carry out a detailed technical study for the construction of the Phosphogypsum storage and same is attached as **Annexure-10(a)**

The thickness of the liner shall be 1.5 mm thick (min) made through flat cast extrusion technology to keep the thickness variation across the rolls to less than 5% and the minimum width of the membrane shall not be less than 7.5 m and length shall not be less than 150 m to reduce the number of joints. Understanding the seriousness of the project Naue –Germany / Equivalent -GSE-Germany make shall be used. HDPE liner make will be laid at the prepared base areas as well as on the dike slopes. A detailed technical specifications has been provided as a part of the technical proposal attached.

Leachate collection system shall be installed and leachate will be recycled back into Phosphoric Acid Plant operation and thereby reducing the fresh water requirement. Capacity of the leachate collection (Gypsum Return Water Pond) will be ~ 3000 m^3 per Gypsum storage.

Piezo well shall be installed based on the hydrogeology study carried out to identify any contamination of the ground water if any. Location of the Piezo wells have been marked on the plot plan and same is attached as **Annexure-10(b)**

Additionally there will be 2 nos of rainwater collection pond having capacity of 4,000 m^3 from gypsum storage runoff.

ANNEXURE-10(a)

1 Cover Note

With reference to the subject cited above, it give us pleasure to receive the enquiry and would like to place on record our desire to associate in the subject project for the construction of the Geosynthetic Lined Gypsum Stack construction. Sir, we at Garware Technical Fibres Ltd (GTFL)-Geosynthetics Divn have been striving tirelessly to Design, supply, install and commission the best Environmental protection Structures for the Waste/Process residue management for the industries as well as municipal corporations. We are also working in many diverse areas of Ground/Geotechnical/Geo-environmental engineering with prime focus on environmental protection, resource Conservation. In specific to the complexity of the project which Adani Enterprises Ltd is planning to undertake, we would like to put forth the following points

GTFL has been associated with similar Phosphogymsum Stack projects in the past for Coramnadal Fertilizers, Paradeep Phosphate and IFFCO (2006-2010).We are also executing Phosphogymsum Stack expansion for Paradeep Phosphate Ltd and IFFCO as per CPCB Guidelines-2014. GTFL has also been involved in design, engineering and execution of large number of Secure Landfill Projects for its customers including Indian Oil, Sterlite Industries, Cairn Energy, HZL, Vedanta Aluminium Ltd, Pimpri Chinchwad Municipal Corporation, KMML-Kerala to name a few.

We have also knowledge of the legal and statutory requirements of the project of such nature and have been associated with various Pollution Control Boards on behalf of the industry and thereby handling and holding hand in explaining the technicalities and compliance related issues.

Above all, our experience of past **20 years in Geosynthetic Lining and related construction with cutting edge technology** has always given industry the confidence to associate with us.

We would be pleased to associate with you to deliver the best available design, products and services for your project

We are also sure that your company will be equally interested to give us an opportunity to demonstrate our Supply/Service capability for the subject project.

2 Brief about Phosphogypsum Stack

The following pages gives only brief outline of key elements of the Phosphogypsum Stack for explanation purpose which Adani Copper Refinery is proposing. Adani Copper Refinery is proposing to construct at its upcoming Copper Refinery located at Mundra, Gujarat. At a later stage, detailed engineering, planning including drawing, material specifications shall be made and the same shall be submitted for approval before starting of the construction of the facility.

2.1 Phosphogymsum Stack Layout

The construction of Phospo Gypsum Stack facility at Adani Copper Refinery site is proposed to be executed with detailed planning and engineering, design of the facility. Broadly it shall consist of Access Road, Perimeter Road, Electrical Lighting, outer/perimeter embankment, inner embankment for disposal of the gypsum, installation of various Geosynthetics materials. drainage trench, outlet and lined channels around the gypsum stack, installation of the Geosynthetic materials, air vent system on the prepared base areas, installation of a 1.5 mm thick smooth & friction high density polyethylene (HDPE) liner-Naue Germany make and as per European standards on the inboard perimeter dike slopes and prepared base areas and construction of the under drains and outlets.

2.2 Site Investigation Criteria

2.2.1 Preliminary Boreholes and Geophysical Investigation:

At each site, as a part of preliminary data collection, one to two boreholes will be drilled and samples collected at every 1.5m interval to a depth of 20m below the ground surface. The following information will be obtained:

(a) soil type and stratification;

(b) permeability of each strata;

(c) strength and compressibility parameters (optional);

(d) ground water level & quality and depth to bedrock.

In addition to preliminary boreholes, geophysical investigations (electrical resistivity/seismic refraction/others) will be undertaken to assess the quality of bedrock at different sites.

A detailed site investigation program will comprise of

(a) subsoil investigation,

(b) ground water/hydrogeological investigation.

(c) hydrological investigation,

(d) topographical investigation and

(e) geological investigation.

The output expected from each investigation is listed below:

a) **Subsoil Investigation:** A detailed investigation plan may be drawn up in consultation with a geotechnical engineer The output from such an investigation should yield the following:

   (i) Stratification of subsoil -type of soil and depth

   (ii) Depth to ground water table and bedrock (if located within 15m of base of landfill)

   (iii) Permeability of various strata beneath the landfill.

   (iv) Strength and compressibility properties of subsoil

(v) Extent of availability of liner material, drainage material, top soil and protective soil in adjacent borrow areas.

(vi) Subsoil properties along approach road.

A minimum of 3 boreholes per hectare of landfill area upto 15m beneath the base of the landfill shall be drilled and in-situ tests as well as laboratory tests shall be performed for permeability, strength, compressibility and classification of soils.

In addition, test pits and boreholes shall be drilled at borrow area for liner and cover materials as well as along approach road.

b) **Ground Water/ Hydrogeological Investigation:** A detailed investigation plan may be drawn up in consultation with a ground water specialist or a hydrogeologist. The output from such an investigation should yield the following:

(i) Depth to groundwater table and its seasonal variations.

(ii) Ground water flow direction

(iii) Baseline ground water quality parameters -all drinking water quality parameters.

c) **Topographical Investigation:** Construction of a landfill involves a large quantity of earthwork. It is essential to have an accurate topographical map of the landfill site to compute earthwork quantities precisely. A map of 0.3m contour interval is considered desirable.

d) **Hydrological Investigation:** The objective of a hydrological investigation is to estimate the quantity of surface runoff that may be generated within the landfill to enable appropriate design of drainage facilities. If additional run off from areas external to the landfill is likely to enter the landfill, this quantity should also be estimated to design interception ditches and diversion channels. Such an investigation shall yield estimates of peak flows if seasonal rivers or streams run close to the site hydrological investigation should indicate the possibility of flooding of the site under one in 100 year flood flows. Surface water samples for water quality analysis may be collected from dUring hydrological studies.

e) **Geological Investigation and Seismic Investigation:** Geological investigations shall delineate the bedrock profile beneath the landfill base, if not confirmed by subsoil investigations. Geophysical surveys may be designed in consultation with a geologist. In hilly areas or in quarried rocks. Geological investigations should indicate the quality of surficial rock, depth to sound rock and the possibility of interconnected aquifers beneath the landfill base In the rock mass. Detailed seismic data may be obtained as a part of geological investigations.

2.2.2 Base Stability, Slope Stability and Seismic Aspects:

For landfills construction on the soil, the base will be checked for stability against bearing failure or excessive settlements.

The stability of side slopes of a landfill shall be checked for the following cases (Fig. 9).

(a) stability of excavated slopes

(b) stability of liner system along excavated slopes

(c) stability of temporary waste slopes constructed to their full height (usually at the end of a phase)

(d) stability of slopes of above-ground portion of completed landfills

(e) stability of cover systems in above ground landfills.

The stability analysis shall be conducted using the following soil mechanics methods depending upon the shape of the failure surface

(a) failure surface parallel to slope;

(b) wedge method of analysis;

(c) method of slices for circular failure surface and

(d) special methods for stability of anchored geomembranes along slopes.

In preliminary design of a landfill section, the following slopes will be adopted.

(a) Excavated soil slopes (2.5 horizontal : 1 vertical)

(b) Temporary waste slopes (3.0 horizontal : 1 vertical)

(c) Final cover slopes (4.0 horizontal : 1 vertical)

Slopes can be made steeper, if found stable by stability analysis results. Acceptable factors of safety may be taken as 1.3 for temporary slopes and 1.5 for permanent slopes.

In earthquake prone areas, the stability of all landfill slopes shall be conducted taking into account seismic coefficients as recommended by BIS codes.

2.3 Lining System

2.3.1 Bottom Liner System

The lining system is additional to the separation or unsaturated zone comprising soil or sand between the wet season high elevation of the ground water and the stack yard. These liner consist of native clayey soil/amended soil/ad-mixture soil. The permeability of the soil / amended soil should be less than or equal to 1×10-7 cm/sec. As an alternative to clay Geosynthetic Clay Liner made from Natural Sodium Bentonite sandwitched between two layer of Geotextile known as Bentofix made by Naue-Germany meeting the regulatory requirement may be used.

A schematic cross section of the bottom Liner system is given in **Figure 1**.

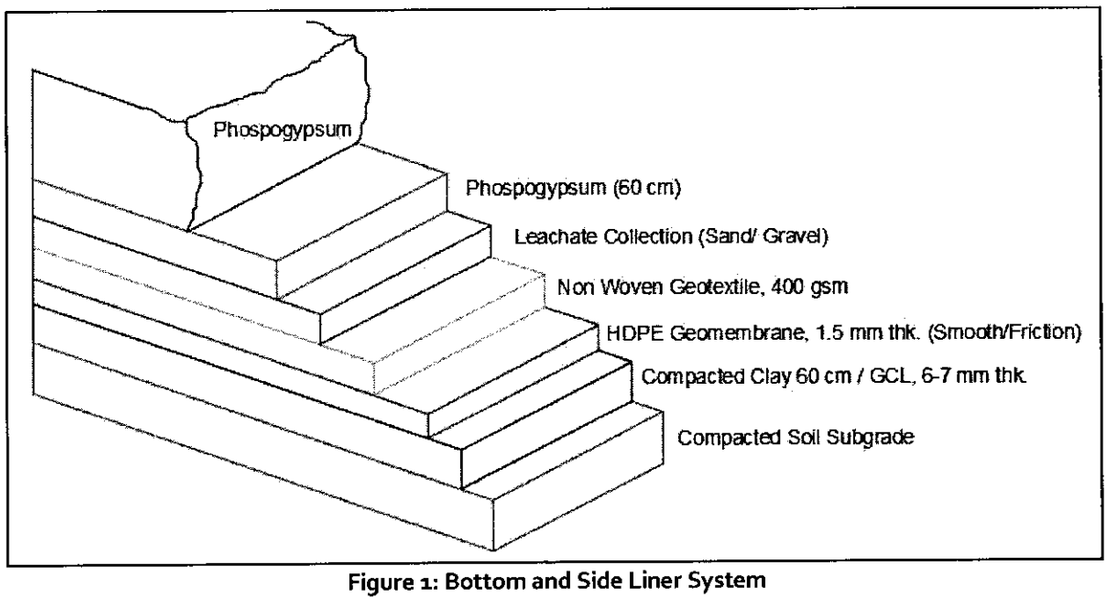

Figure 1: Bottom and Side Liner System

2.3.1.1 Geomembranes

These are flexible sheets made from various plastic materials. The recommended liner along the side as well as the bottom of the facility is HDPE Liner. HDPE lining is effected by overlapping the strips and joining them with a special welding technique.

The thickness of the liner shall be 1.5 mm thick (min) made through flat cast extrusion technology to keep the thickness variation across the rolls to less than 5% and the minimum width of the membrane shall not be less than 7.5 m and length shall not be less than 150 m to reduce the number of joints. Understanding the seriousness of the project Naue –Germany / Equivalent -GSE-Germany make has been recommended for use. Detailed Material Specifications are given in the annexure. Equivalent product's details must be shown to the Technical Engineer for review of its properties/performance.

2.3.1.2 Protection Layer (Non Woven geotextile)

To protect the geo membrane against the mechanical stress and failure thereby, non-woven needle punched Geo textile manufactured through mechanically bonding and made from continuous fibres/filaments and made of 100% UV stabilized Polypropylene is to be used on the HDPE Liner on the bed as well as the slopes. For the protection purpose, 400 gsm overlay Non-Woven Geotextile has been recommended. Equivalent product's details must be shown to the Technical Engineer for review of its properties/performance. The minimum width of the Non Woven Geotextile shall be 4 m and minimum length shall be 90.0m.

2.3.1.3 Drainage Layer

The Gypsum Stack facility essentially generates significant quantity of leachate due to inherent moisture present in the waste body and the rain water precipitation. This leachate is impregnated with harmful chemicals and pollutants. This is to be collected, removed from the facility and treated. In order to collect the leachate from the waste body a Drainage layer of 30 cm granular material of permeability>1*10-2 cm/sec is put over the protective layer of Geotextiles.

Looking at the following aspects of the Gypsum Stack the following drainage medium has been recommended:

(a) Structural profile and geometry

(b) Bottom and side slope pattern

(c) Performance of various geological and synthetic material for drainage function

Hence for the side slope geocomposite drainage net and for the bottom slopes, Sand/gravel as a drainage medium for the primary and secondary layer of desired specification has been recommended.

2.3.2 Side liner system of Gypsum Stack

The side liner system is on the inner side of soil bunds with slope 1:3 (V: H).The construction procedure of each layer of sideliner system is shown in Figure No: 02.

GCL-Bentofix-Naue Germany make of minimum 6-7mm thickness with powdered bentonite to be used instead of compacted clay as the slope is not so gentle and it is difficult to compact the clay on steep slope.

Moreover on the Non-Woven Geotextile, Geocomposite Drainage Net shall be used as a Drainage Medium instead of Sand/ Gravel. **A schematic sketch of the side liner system anchoring with gas venting system is shown in Figure 2.**

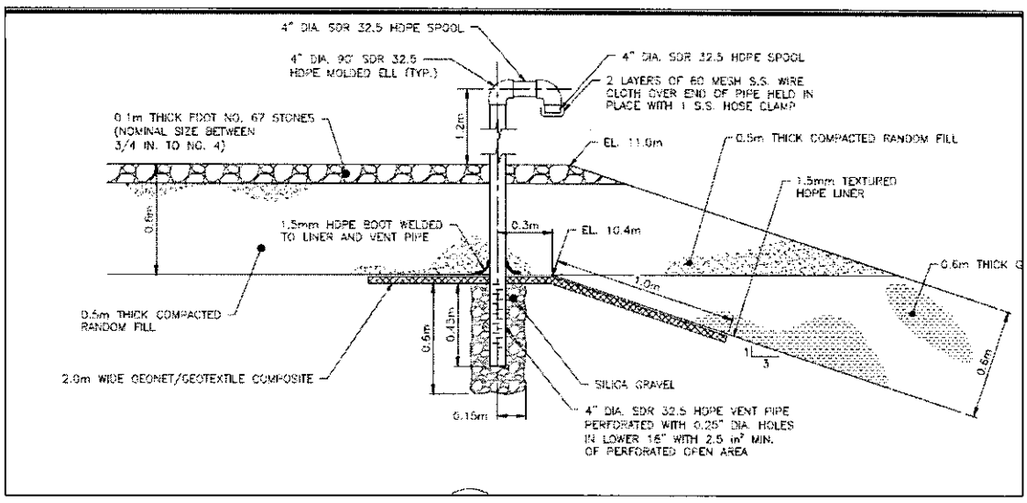

Figure 2: Side Liner System

2.4 Leachate Drainage, Collection & Removal System

In order to collect and convey the leachate generated to the collection sump, a Leachate collection System has been designed. It comprises of the following:

(a) Drainage Layer.

(b) A Perforated Pipe Collector System.

(c) Sump Collection Area.

(d) Removal of the leachate.

The leachate drainage is usually achieved using graded under-liner and drains which lead to a collection system/ Surge Pond leading to a sump. A typical layout of the stack area, leachate Channel and surge pond is shown in **Figure 3**.

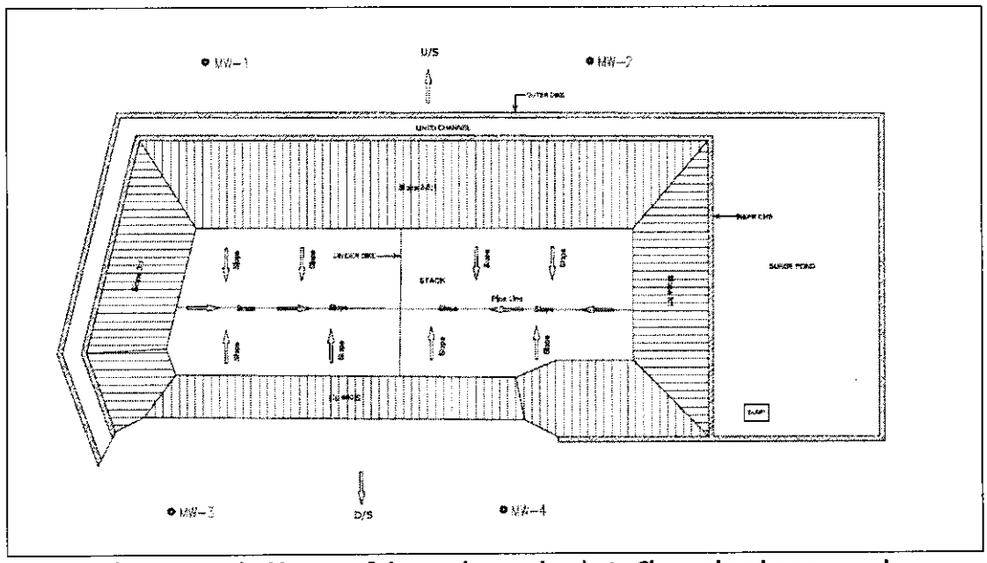

Figure 3: Typical layout of the stack area, leachate Channel and surge pond

The technical details of the leachate drainage are as under:

Thickness of the Drainage Layer should be designed in such a way so that, the leachate can be evacuated quickly. Broadly, 150 mm for arterial pipes for collecting and 200 mm main header line for transporting the leachate from the body of Gypsum stack would be able to carry the leachate to the sump. Gravel/Sand to be used for the smooth drainage of the leachate from the stack area to the piping system. A typical drain section is shown in **Figure 4**.

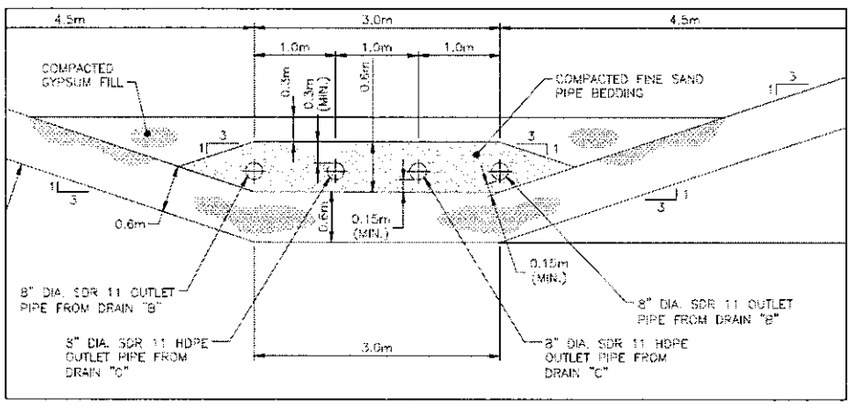

Figure 4: Typical Drain Section

2.5 Construction of Embankment

Embankment shall be designed based on sound engineering practices and also shall be checked for slope stability analysis considering seismic factors of Mundra-Gujarat region.

The embankment shall be constructed to the lines and grades shown on the drawings. Placement of fill shall be performed in an orderly way and in an efficient and workman like manner, so as to produce fills having such quantities of density, strength and permeability as will ensure the highest practicable degree of stability and performance of the embankment.

The slopes of embankment shall be maintained as per specific structures drawing.

2.5.1 Fill Materials

The materials for embankment shall be obtained from the available excavated material. Some earth material available from the excavation in the pond area if found suitable will also be used for the embankment construction. Morrum / Yellow soil or soil which satisfy the accepted civil engineering property of the bund construction shall be accepted.

2.5.2 Placing the fill material Compaction of the Embankment and Base: (IS: 2720)

The combined excavation and placing operations shall be such that the materials when compacted in the fill will be blended sufficiently to produce the specified degree of compaction and stability. The earth obtained from a particular borrow area as far as possible shall be used in forming the complete cross-section of the fill for a particular stretch.

No stones cobbles or rock fragments, having maximum dimensions of more than 5 cm shall be placed in the fill. Such stones and cobbles shall be removed either at the borrow pit or after being transported to the site but before the materials in the fill are rolled and compacted. Such stones or cobbles shall be placed in other portions of embankment if found suitable or rejected as directed. The materials shall be placed in the fill in continuous horizontal layers, stretching right across the whole section, not more than 0.4 m in compacted thickness

Vibratory rollers/static roller shall be used for compacting cohesive materials and pneumatic rollers and vibratory rollers shall be used for compacting cohesion less materials. The compaction in

horizontal layers will be done using standard compaction equipment or in inclined layers using slope compactors/appropriate method.

2.6 Inspection Test

Control tests shall be carried out in laboratory from time to time to determine whether the earth produced by methods employed satisfies the requirements of the specifications and documented for verification by the Officer- in –Charge of the regulatory authority and the work shall be inspected periodically.

Complete documentation of all quality control records and their submission to the GPPCB along with showing satisfactory achievement of acceptance criteria.

The quality control tests for compacted clay layer (or amended soils) as well as the leachate collection/drainage layer will include

(a) In-situ density tests.
(b) in-situ moisture content tests.
(c) Compaction tests.
(d) Permeability tests,
(e) Grain size distribution tests and
(f) Atterberg's limits tests
(g) Others as defined by GPCB.

The quality control tests for geomembrane liners shall be carried at as per QA/QC protocol and shall include the following:

(a) Thickness tests,
(b) Density tests,
(c) Strength tests,
(d) Field seam strength & leak tests

The Officer- in -Charge shall determine whether the desired results are being obtained.

Dressing and Trimming of the slopes

The outer slopes of the embankment shall be neatly dressed to line. Compaction shall extend over the full width of the embankment and the material in the slopes shall be compacted as for the rest of structure. To ensure proper compaction at the outer edge, the fill shall be constructed for a minimum of 0.5 m/1.0m extra width on either edges or the outer edge dressed to true width and slope after compaction. No earth slope shall be left without trimming to design slope.

2.7 Design of Storm Water Drain:

The catchment includes the top or cap of the Gypsum Stack facility as well as the outer slope of embankment and site upto fencing. Hence to divert the incoming water at the surface level as well as the slope and terraces of the Gypsum Stack facility, adequate storm water drainage channels need to be designed, constructed. The channel has to ultimately carry water to the storm water pond for storage or evaporation purpose in case not discharged outside.

2.8 Surface Water Drainage System

Surface water management shall be designed to ensure that rainwater run-off does not drain into the waste from surrounding areas and that there is no waterlogging/ponding on covers of landfills. A schematic surface water drainage system comprising of channels, drains, culverts and basins (Fig8) shall be designed to ensure the following:

(a) Rainwater running off slopes above and outside the landfill area shall be intercepted and channelled to water courses without entering the operational area of the site. This diversion channel may require a low permeability lining to prevent leakage into the landfill
(b) Rain falling on active tipping areas shall be collected separately and managed as leachate, via the leachate collection drain and leachate collection sumps to the leachate treatment and disposal system.
(c) Rainfall on areas within the landfill site, but on final covers of phases which have been completed and are not actively being used for waste disposal shall be diverted in drainage channels away from active tipping areas, and directed through a settling pond to remove suspended silt, prior to discharge.
(d) Any drainage channels or drains constructed on the restored landfill surface shall be able to accommodate settlement, resist erosion and cope with localised storm conditions.
(e) The horizontal surface of the final cover shall be provided a slope of 3 to 5% for proper surface water drainage. The slope of the cover on the sides will be higher and governed by slope stability considerations
(f) All Interceptor channels, drainage channels and settling ponds (storm water basins) shall be designed by a hydrologist using hydrometerological data.
(g) It shall be ensured that water collected by surface water drainage system and leachate collected by the leachate collection system do not get intermixed at any stage of collection or storage This shall apply to the 'active' and 'post closure' periods of the landfill

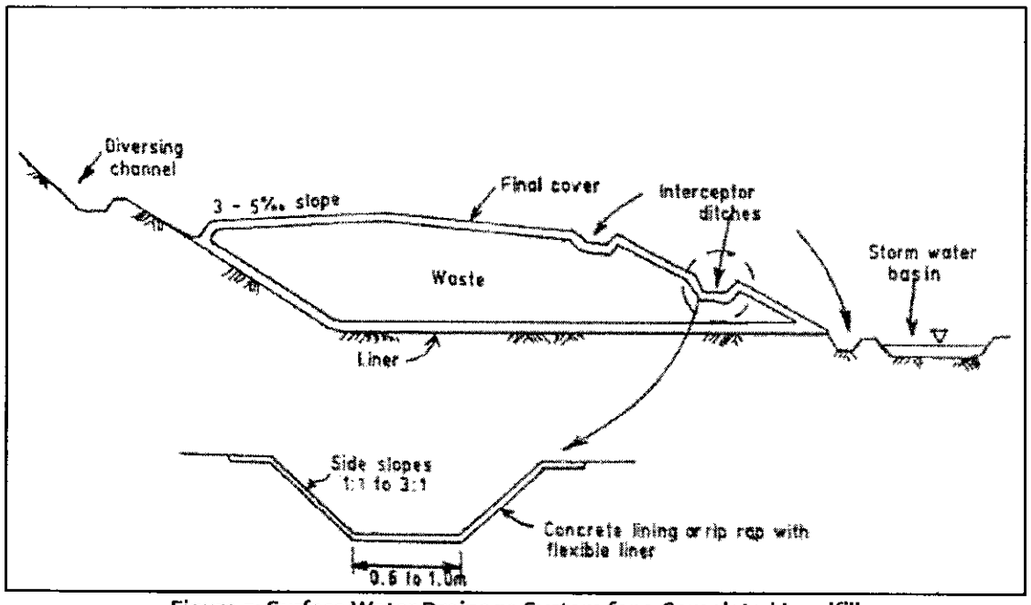

Figure 5: Surface Water Drainage System for a Completed Landfill

The design of following components will be undertaken:

(a) storm water drains, diversion channel
(b) storm water basin
(c) culverts if required

2.9 Piezometric Well

Piezometer shall be constructed to monitor the quality of groundwater. Two piezometers shall be installed on the downstream side of the SLF. Two piezometers shall be installed on the upstream side of the Gypsum Stack. At present, possible locations have been shown where the installation cane be done. But, exact location of the monitoring well shall be finalized in consultation with Gujarat State Pollution Control Board. The piezometer consist of a stand pipe made up of stainless steel/PVC which shall be screened along the entire aquifer depth i.e. the standpipe shall be- screened from a depth of 1 m to 10m or depending on ground water depth. The screened interval shall be encased in a filter zone made up of gravel and sand layer. The function of the filter zone is to allow free flow of groundwater into and out of standpipe and prevent fines from entering the standpipe. Immediately above the screened interval, a clay and bentonite seal shall be placed. The thickness of clay seal shall be 0.5 m. Above the clay and bentonite seal, a grout seal consisting of cement and bentonite shall be constructed which provides a barrier for preventing surface water and ground water from elsewhere from migrating into the screened interval. At the ground level, a steel casing embedded in concrete pad shall be employed. A cap shall be placed on the top of steel casing to prevent rainwater and surface water from entering into the standpipe. The piezometer shall be constructed at a minimum distance of 7 m from outside edge of the embankment. A schematic sketch of a Piezometer is shown in **Figure 6**. The location is shown in figure no 4.

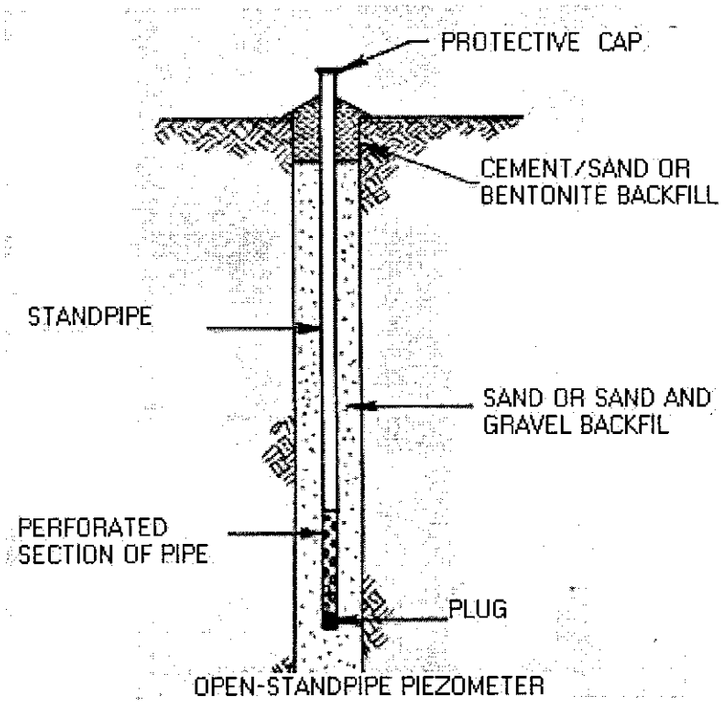

Figure 6: Piezometer

LAYOUT SHOWING PIEZOMETER LOCATIONS

EAC OBSERVATION NO.-11

227

EAC OBSERVATION:

Secured land fill site co-ordinates, lining details, leachate collection system envisaged and details of piezo-well installation has not been made available.

REPLY:

Site Coordinates are marked in Plot Plan and attached in annexure **Annexure-11(a)**

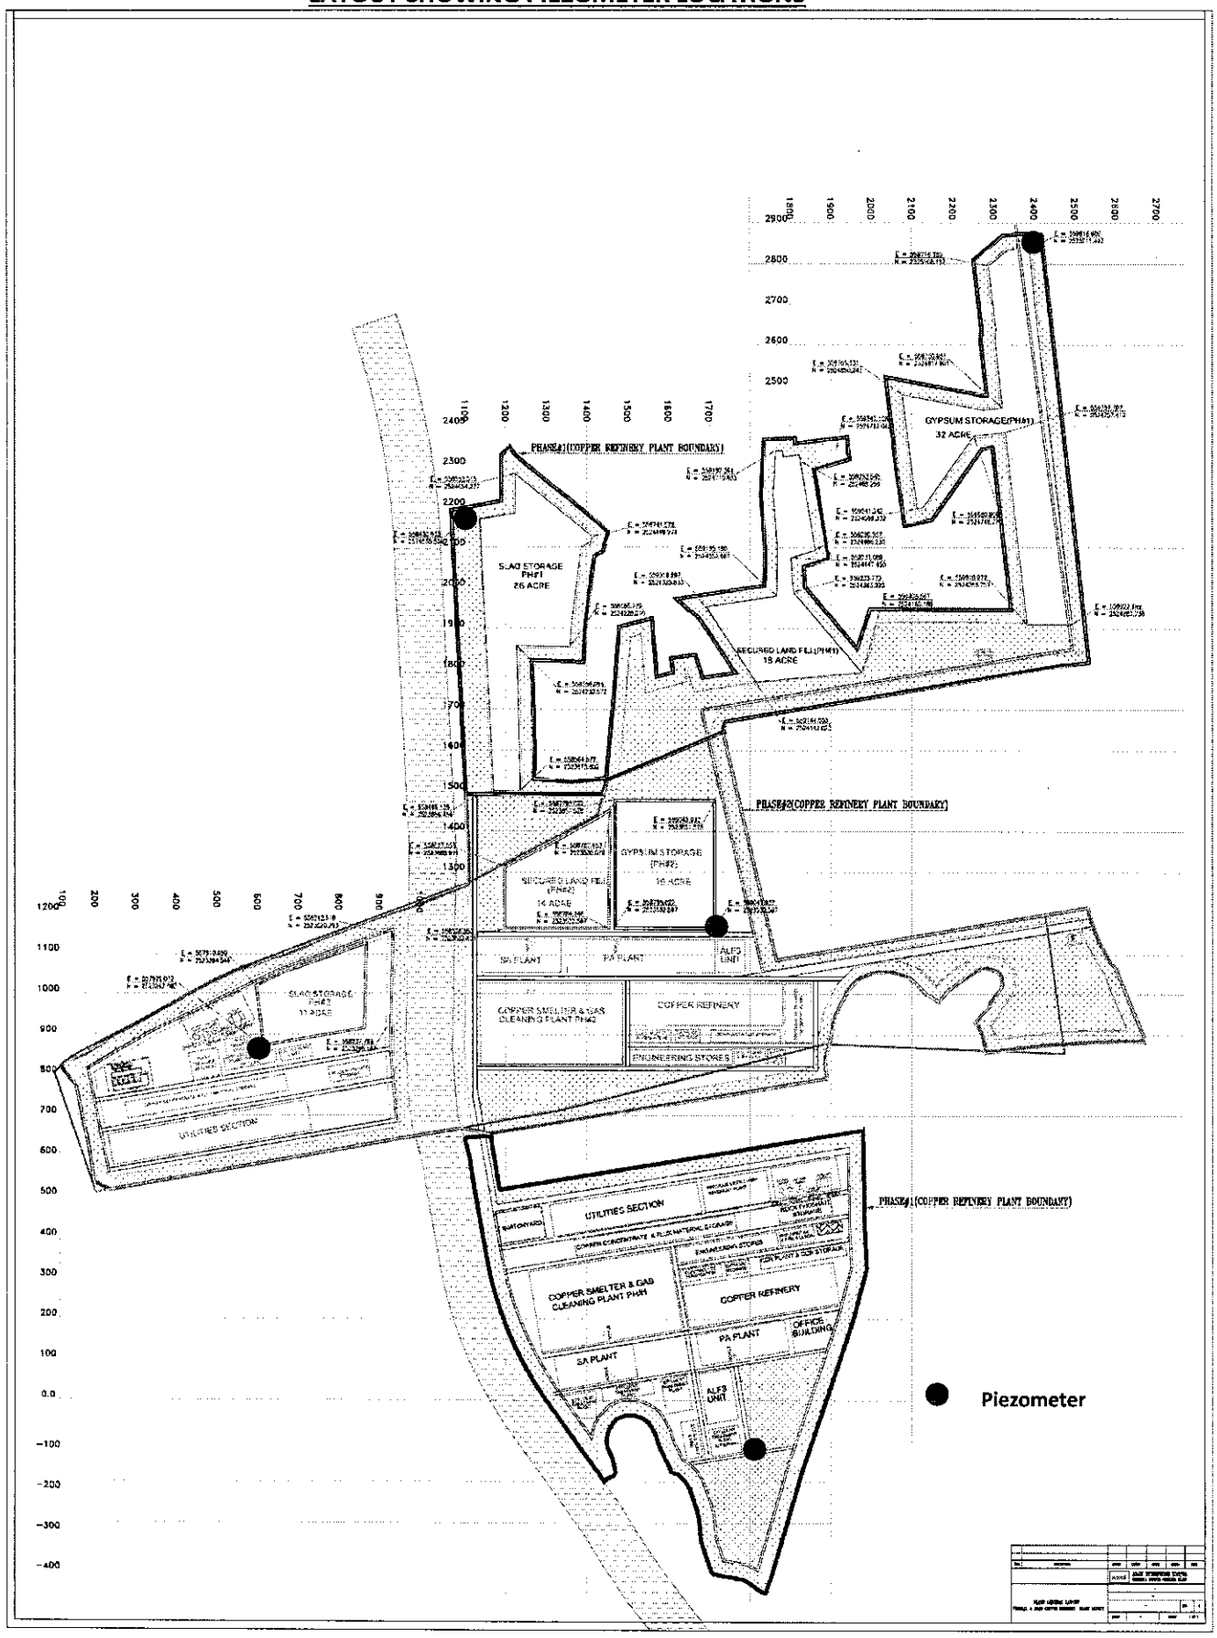
Secured land fill will be developed strictly as per CPCB Guidelines for Criteria for Hazardous Waste Landfills series: HAZWAMS/17/2000-01.

Criteria for Site Selection for storage of Hazardous Waste (As per CPCB Guidelines)

Sr. No.	Description	Locational Criteria	Compliance
1	Lake or Pond	Distance More than 200m	Storage-I: 550m from pond located on North West Side Storage-II: 850m from pond located on North Side
2	River	Distance More than 100m	Storage-I: 640m from River flowing on west side Storage-II: 50m from River flowing on west side
3	Flood Plain	No Construction 100 Year flood Plain	Since no flow data is available for Danesri Nadi , a tentative estimate of run-off from Danesri Nadi catchment and discharge at railway line near project site is done based on the catchment characteristics.
4	Highway	Distance More than 500m	Storage-I: 850m from SH-6 which is on north side Storage-II: 1900m from SH-6 which is on north side
5	Habitation	Distance More than 500m	Storage-I: 1800m towards north Storage-II: 2400m towards north
6	Public Parks	Distance More than 500m	Storage-I: 1850m towards north Storage-II: 2450m towards north
7	Critial Habitat Area	Nothing within critical Habitat areas including reserved forest area	NA
8	Wetlands	No construction within wetlands	Storage-I: 2.5 km from mangrove near kotdi creek Storage-II: 2.0 km from mangrove near kotdi creek
9	Airports	No construction within zone around aiports as notified by regulatory authority or aviation autority	Bhuj Airport: 50km Mundra Airport: 30km
10	Water Supply Well	Distance More than 500m	1.7km from well in navinal
11	Coastal Regulation Zone	No construction in Coastal Regulatory Zone	Storage-I: 750m from CRZ Line Storage-II: 600m from CRZ Line

12	Ground Water Table Level	No Construction where ground water table will be less than 2m below the base of the landfill	<2m to 10m

M/s. GARWARE TECHNICAL FIBRES LIMITED (Geosynthetics Division), Pune; has been engaged to carry out a detailed technical study for the construction of the secured land fill and same is attached as **Annexure-11(b).**



The thickness of the HDPE liner shall be 2.0 mm thick (min) made through flat cast extrusion technology to keep the thickness variation across the rolls to less than 5% and the minimum width of the membrane shall not be less than 7.5 m and length shall not be less than 120 m to reduce the number of joints. Understanding the seriousness of the project Naue– Germany/ Equivalent– GSE Germany make shall be used. HDPE liner make will be laid at the prepared base areas as well as on the dike slopes. A detailed technical specifications has been provided as a part of the technical proposal attached.

Leachate collection system shall be installed and leachate will be treated into effluent treatment plant. A 60 m^3 leachate collection sump will be provided along with pumping system to transfer to ETP for treatment and consumption.

Piezo well shall be installed based on the hydrogeology study carried out to identify any contamination of the ground water if any. Location of the Piezo wells have been marked on the plot plan and same is attached as **Annexure-11(a).**

1 Cover Note

With reference to the subject cited above, it give us pleasure to receive the enquiry and would like to place on record our desire to associate in the subject project for the Design and Development of Secure Landfill Facility as per the CPCB guidelines. Sir, we at Garware Technical Fibres Ltd (GTFL)-Geosynthetics Divn have been striving tirelessly to Design, supply, install and commission the best Environmental protection Structures for the Waste/Process residue management for the industries as well as municipal corporations. We are also working in many diverse areas of Ground/Geotechnical/Geo-environmental engineering with prime focus on environmental protection, resource Conservation. In specific to the complexity of the project which Adani Enterprises Ltd is planning to undertake, we would like to put forth the following points:

GTFL has been involved in design, engineering and execution of large number of Secure Landfill Facility –Design & Development Projects as per CPCB Guidelines for its customers including Indian Oil, Sterlite Industries, Cairn Energy, HZL, Vedanta Aluminium Ltd, Pimpri Chinchwad Municipal Corporation, KMML-Kerala to name a few.

We have also knowledge of the legal and statutory requirements of the project of such nature and have been associated with various Pollution Control Boards on behalf of the industry and thereby handling and holding hand in explaining the technicalities and compliance related issues to the regulators and other stakeholders.

Above all, our experience of past **20 years in Geosynthetic Lining and related construction with cutting edge technology** has always given industry the confidence to associate with us.

We would be pleased to associate with you to deliver the best available design, products and services for your project We are also sure that your company will be equally interested to give us an opportunity to demonstrate our Supply/Service capability for the subject project.

2 Brief about Secure Landfill Facility

The following pages gives only brief outline of key elements of the Secure Landfill Facility for explanation purpose which Adani Copper Refinery is proposing to construct at its upcoming Copper Refinery located at Mundra, Gujarat. At a later stage, detailed engineering, planning including drawing, material specifications shall be made and the same shall be submitted for approval before starting of the construction of the facility.

2.1 SLF Layout

The site layout shall be designed with the Secure Landfill Facility's construction, closure and end use closely in mind as this decides the final shape or the contours of the landfill. The Landfill broadly consists of the following in its proposed area:

- Body of the Facility where disposal will take place
- Supporting Infrastructure for smooth functioning of the facility.

The supporting infrastructures will also be decided based on the following:

- Size of the Facility. al
- Volume of waste it is going to handle.
- No. of trips the vehicle will make on daily basis.
- Loading and unloading conditions.
- No. of rainy days.
- Legal Requirements.

The processes taking place in a Secured Landfill Facility can be briefly described as the following. The waste coming into the landfill shall be checked and sent to the landfill facility. This waste when in contact with rain water produces leachate which is collected through leachate collection pipe network to the Leachate collection sump and further sent to Solar evaporation pond by pumping.

2.1.1 Associated Infrastructure

1. Main Entrance and Gate
2. Security cabin/ Administration building
3. Fill Soil Area
4. Storm Water Drain
5. Access Road
6. Ground Water Monitoring Well (Piezo metric Well)
7. Fencing & Greenery
8. Waste Stabilization Area of Hazardous Waste

2.1.2 SLF & its Elements

9. Secured Landfill Facility: for Hazardous and Non Hazardous Waste
10. Approach Ramp
11. Leachate Collection Sump
12. Leak Detection Sump

2.1.3 Site Investigation Criteria

2.1.3.1 Preliminary Boreholes and Geophysical Investigation:

At each site, as a part of preliminary data collection, one to two boreholes will be drilled and samples collected at every 1.5m interval to a depth of 20m below the ground surface. The following information will be obtained:

(a) soil type and stratification;
(b) permeability of each strata;
(c) strength and compressibility parameters (optional);
(d) ground water level & quality and depth to bedrock.

In addition to preliminary boreholes, geophysical investigations (electrical resistivity/seismic refraction/others) will be undertaken to assess the quality of bedrock at different sites.

A detailed site investigation program will comprise of:

(a) subsoil investigation,
(b) ground water/hydrogeological investigation.
(c) hydrological investigation,
(d) topographical investigation and
(e) geological investigation.

2.1.3.2 The output expected from each investigation is listed below:

I. **Subsoil Investigation:** A detailed investigation plan may be drawn up in consultation with a geotechnical engineer. The output from such an investigation should yield the following:

(a) Stratification of subsoil -type of soil and depth
(b) Depth to ground water table and bedrock (if located within 15m of base of landfill)
(c) Permeability of various strata beneath the landfill.
(d) Strength and compressibility properties of subsoil
(e) Extent of availability of liner material, drainage material, top soil and protective soil in adjacent borrow areas.
(f) Subsoil properties along approach road.

A minimum of 3 boreholes per hectare of landfill area upto 15m beneath the base of the landfill shall be drilled and in-situ tests as well as laboratory tests shall be performed for permeability, strength, compressibility and classification of soils.
In addition, test pits and boreholes shall be drilled at borrow area for liner and cover materials as well as along approach road.

II. **Ground Water/ Hydrogeological Investigation:** A detailed investigation plan may be drawn up in consultation with a ground water specialist or a hydrogeologist. The output from such an investigation should yield the following:

(a) Depth to groundwater table and its seasonal variations.
(b) Ground water flow direction
(c) Baseline ground water quality parameters -all drinking water quality parameters.

III. **Topographical Investigation:** Construction of a landfill involves a large quantity of earthwork. It is essential to have an accurate topographical map of the landfill site to compute earthwork quantities precisely. A map of 0.3m contour interval is considered desirable.

IV. **Hydrological Investigation**: The objective of a hydrological investigation is to estimate the quantity of surface runoff that may be generated within the landfill to enable appropriate design of drainage facilities. If additional run off from areas external to the landfill is likely to enter the landfill, this quantity should also be estimated to design interception ditches and diversion channels. Such an investigation shall yield estimates of peak flows if seasonal rivers or streams run close to the site hydrological investigation should indicate the possibility of flooding of the site under one in 100 year flood flows. Surface water samples for water quality analysis may be collected from during hydrological studies.

V. **Geological Investigation and Seismic Investigation:** Geological investigations shall delineate the bedrock profile beneath the landfill base, if not confirmed by subsoil investigations. Geophysical surveys may be designed in consultation with a geologist. In hilly areas or in quarried rocks. Geological investigations should indicate the quality of surficial rock, depth to sound rock and the possibility of interconnected aquifers beneath the landfill base In the rock mass. Detailed seismic data may be obtained as a part of geological investigations.

2.1.3.3 Base Stability, Slope Stability and Seismic Aspects:

For landfills construction on the soil, the base will be checked for stability against bearing failure or excessive settlements.

The stability of side slopes of a landfill shall be checked for the following cases (Fig. 9).

(a) stability of excavated slopes
(b) stability of liner system along excavated slopes
(c) stability of temporary waste slopes constructed to their full height (usually at the end of a phase)
(d) stability of slopes of above-ground portion of completed landfills
(e) stability of cover systems in above ground landfills.

The stability analysis shall be conducted using the following soil mechanics methods depending upon the shape of the failure surface.

(a) failure surface parallel to slope;
(b) wedge method of analysis;
(c) method of slices for circular failure surface and
(d) special methods for stability of anchored geomembranes along slopes.

In preliminary design of a landfill section, the following slopes will be adopted.

(a) Excavated soil slopes(2.5 horizontal : 1 vertical)
(b) Temporary waste slopes(3.0 hOrizontal : 1 vertical)
(c) Final cover slopes(4.0 horizontal : 1 vertical)

Slopes can be made steeper, if found stable by stability analysis results. Acceptable factors of safety may be taken as 1.3 for temporary slopes and 1.5 for permanent slopes.

In earthquake prone areas, the stability of all landfill slopes shall be conducted taking into account seismic coefficients as recommended by BIS codes.

2.2 Basic Design of Secured Landfill Elements

2.2.1 Bottom Liner System

The lining system is additional to the separation or unsaturated zone comprising soil or sand between the wet season high elevation of the ground water and the Landfill. These liner consist of native clayey soil/amended soil/ad-mixture soil. The permeability of the soil / amended soil should be less than or equal to 1×10-7 cm/sec.

A schematic cross section of the bottom Liner system is given in **Figure 1**.

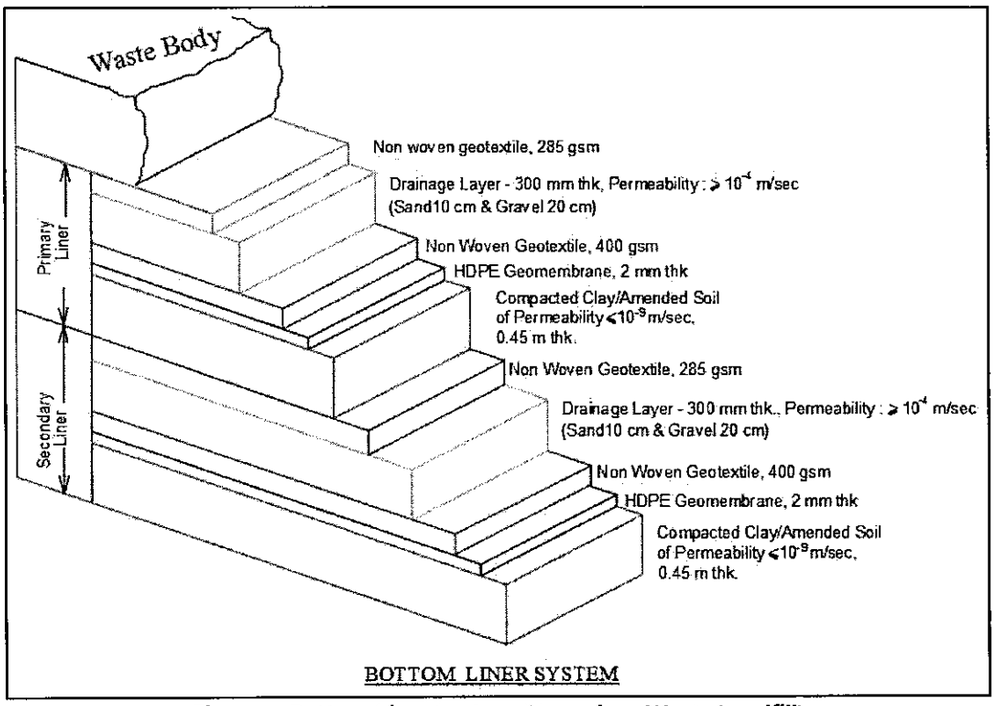

Figure 1: Bottom Liner System (Hazardous Waste Landfill)

2.2.1.1 Geomembranes

These are flexible sheets made from various plastic materials. The recommended liner along the side as well as the bottom of the facility is HDPE Liner. HDPE lining is effected by overlapping the strips and joining them with a special welding technique.

The thickness of the HDPE liner shall be 2.0 mm thick (min) made through flat cast extrusion technology to keep the thickness variation across the rolls to less than 5% and the minimum width of the membrane shall not be less than 7.5 m and length shall not be less than 150 m to reduce the number of joints. Understanding the seriousness of the project Naue –Germany / Equivalent -GSE-Germany make has been recommended for use. Detailed Material Specifications are given in the annexure.. Equivalent product's details must be shown to the Technical Engineer for review of its properties/performance.

2.2.1.2 Protection Layer (Non Woven geotextile)

To protect the geo membrane against the mechanical stress and failure thereby, non-woven needle punched Geo textile manufactured through mechanically bonding and made from continuous fibres/filaments and made of 100% UV stabilized Polypropylene is to be used on the HDPE Liner on the bed as well as the slopes. For the protection purpose, 400 gsm overlay Non-Woven Geotextile has been recommended. Equivalent product's details must be shown to the Technical Engineer for

review of its properties/performance. The minimum width of the Non Woven Geotextile shal be 4 m and minimum length shall be 90.0m.

2.2.1.3 Separation Layer (Non Woven geotextile)

After the construction of the primary lining system, separation textile of 285 gsm to be laid over the drainage layer before the waste laying is done. The minimum width of the Non Woven Geotextile shall be 4 m and minimum length shall be 125.0 m.

2.2.1.4 Drainage Layer

The landfill facility essentially generates significant quantity of leachate due to inherent moisture present in the waste body and the rain water precipitation. This leachate is impregnated with harmful chemicals and pollutants. This is to be collected, removed from the facility and treated. In order to collect the leachate from the waste body a Drainage layer of 30 cm granular material comprising of 10 cm coarse sand and 20 cm of gravel & having permeability>$1*10^{-2}$ cm/sec is to be laid over the protective layer of Geotextiles.

Looking at the following aspects of the landfill the following drainage medium has been recommended:

i. Structural profile and geometry

ii. Bottom and side slope pattern

iii. Performance of various geological and synthetic material for drainage function

Hence for the side slope geonet manufactured from Polyethylene and of minimum width of 4.0m to be used and for the bottom slopes, Sand/gravel as a drainage medium for the primary and secondary layer of desired specification has been recommended.

2.2.2 Side liner system of Secured Landfill Facility

The side liner system is on the inner side of soil bunds with slope 1:3 (V: H).The construction procedure of each layer of sideliner system is shown in **Figure 2**Figure 1.

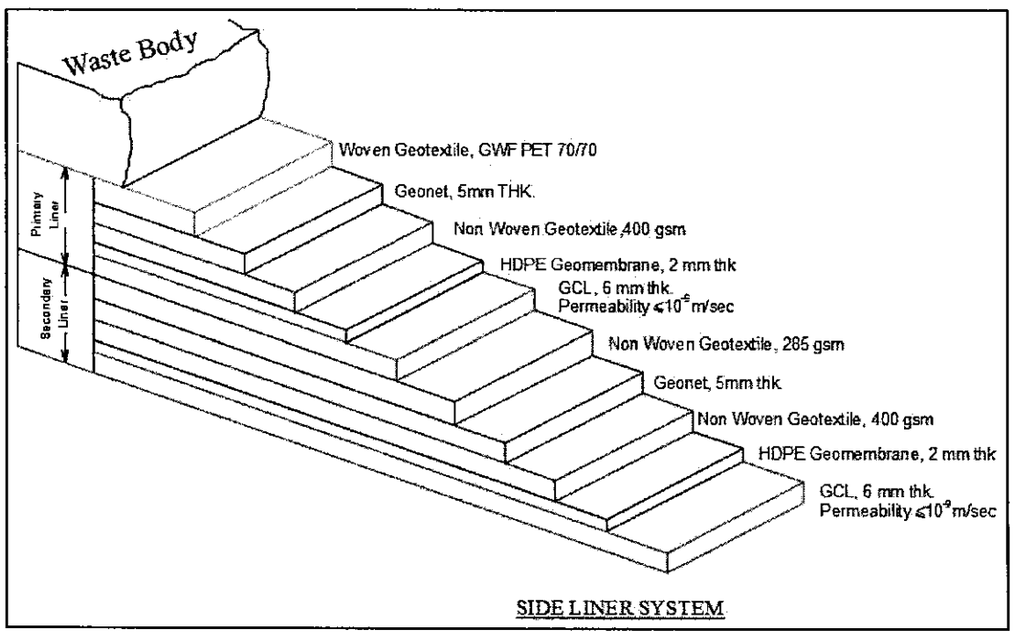

Figure 2: Side Liner system for Hazardous Waste Landfill

GCL-manufactured through use of powdered bentonite sandwitched between two layer of geotextiles and needle punched to keep the bentonite in place such as Bentofix-Naue Germany

make/equivalent of minimum 6-7mm thickness to be used instead of compacted clay as the slope is not so gentle and it is difficult to compact the clay on steep slope. Minimum width of the GCL shall be 5.0m and minimum length shall be 40.0m. Equivalent product's details must be shown to the Technical Engineer for review of its properties/performance.

2.2.3 Top Liner System

After the completion of each phase of the operation, the landfill has to be closed /insulated by putting the final cover. The final cover has the following advantages:

(a) It enhances surface drainage
(b) Minimizes infiltration
(c) Vegetation grows on it

The following Final Cover System is recommended. Over the waste body a soil cover of 150mm thick and a Gas collection media of 100mm thick is proposed. Geosynthetic Clay Liner (GCL of 6 to 7 mm thick) has to be laid over the Gas collection media. Beyond this compacted clay/GCL, HDPE of 1.5 mm is to be laid. Over the HDPE, a drainage layer of Geocomposite drainage net shall be laid. And the final top soil layer of 600 mm thick (450mm soil+150mm Vegetative soil) has to be put for restricting the soil erosion from the final cover.

A cross section of the top liner system is given below in **Figure 3**.

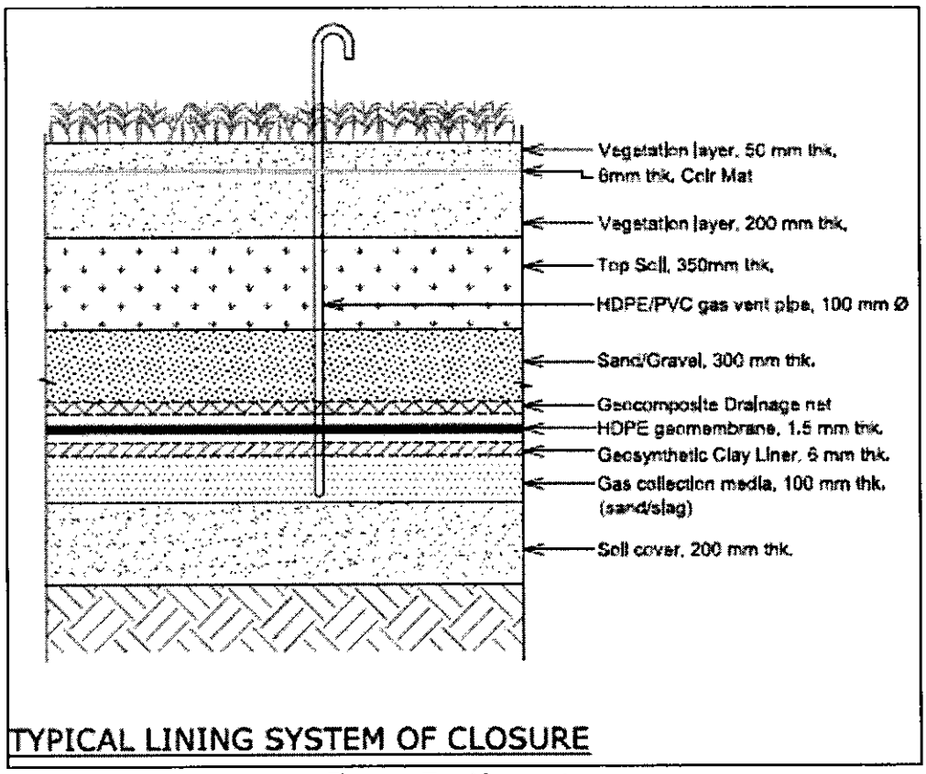

Figure 3: Top Liner system

2.2.4 Leachate Drainage, Collection & Removal System

In order to collect and convey the leachate generated to the collection sump, a Leachate collection System has been designed. It comprises of the following:

(a) Drainage Layer.
(b) A Perforated Pipe Collector System.
(c) Sump Collection Area.

(d) Removal of the leachate.

The leachate drainage is usually achieved using graded under-liner and drains which lead to a collection system or a sump. The technical details of the leachate drainage are as under:

(a) Thickness of the Drainage Layer: 150 mm for arterial pipes for collecting and 200 mm main header line for transporting the leachate from the body of SLF
(b) Material: Gravel/Sand for secondary bottom liner and geonet for primary bottom liner, primary and secondary side liner
(c) Permeability: 0.01 cm/sec

Natural slope shall be preferred for the transport of the generated leachate which will be collected in the channel and conveyed to the sump via collector pipe due to the designed longitudinal slope by gravity. A typical plan is shown in **Figure 4**:

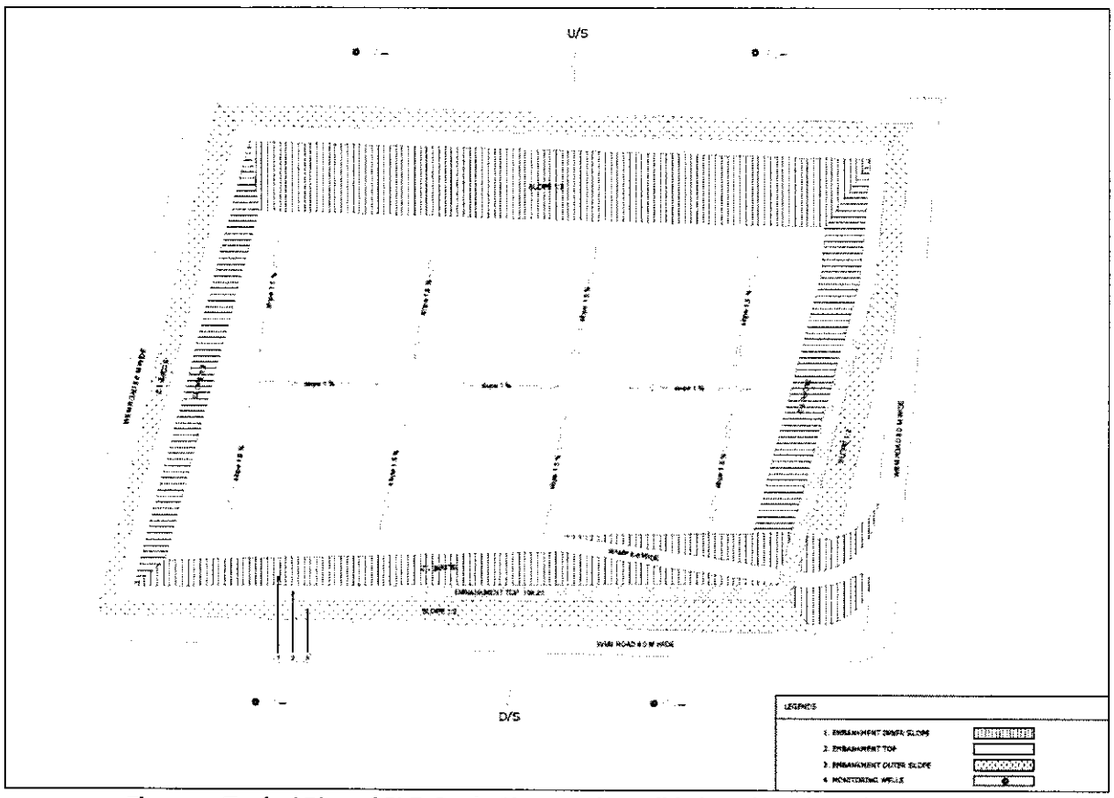

Figure 4: Typical Plan of SLF, Drain Slope and possible location of Monitoring well

The sectional plan for leachate conveyance system comprises of the following:

(a) Central Leachate carrying pipe in conjunction with the drainage layer
(b) Estimation of pipe diameter based on the leachate quantity
(c) Design of slope of Leachate Pipe

A schematic drawing of leachate conveyance is shown in **Figure 5** for reference purposes.

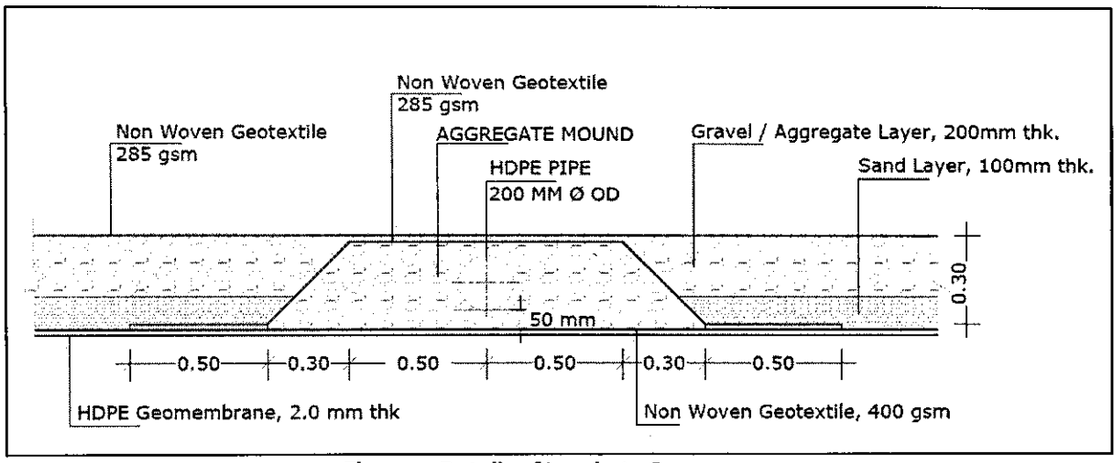

Figure 5: Details of Leachate Conveyance

A typical sectional view of the Landfill lining and anchoring system along with piping is shown below:

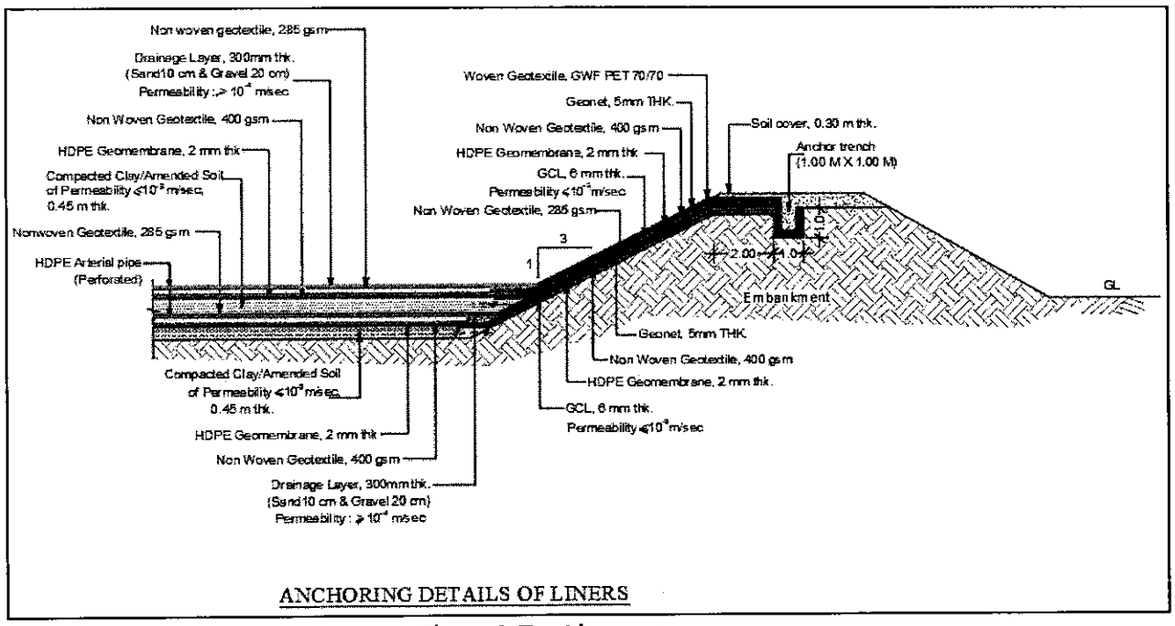

Figure 6: Top Liner system

2.2.5 Surface Water Drainage System

Surface water management shall be designed to ensure that rainwater run-off does not drain into the waste from surrounding areas and that there is no waterlogging/ponding on covers of landfills. A schematic surface water drainage system comprising of channels, drains, culverts and basins (Fig8) shall be designed to ensure the following:

(a) Rainwater running off slopes above and outside the landfill area shall be intercepted and channelled to water courses without entering the operational area of the site. This diversion channel may require a low permeability lining to prevent leakage into the landfill

(b) Rain falling on active tipping areas shall be collected separately and managed as leachate, via the leachate collection drain and leachate collection sumps to the leachate treatment and disposal system.

(c) Rainfall on areas within the landfill site, but on final covers of phases which have been completed and are not actively being used for waste disposal shall be diverted in drainage channels away from active tipping areas, and directed through a settling pond to remove suspended silt, prior to discharge.

(d) Any drainage channels or drains constructed on the restored landfill surface shall be able to accommodate settlement, resist erosion and cope with localised storm conditions.
(e) The horizontal surface of the final cover shall be provided a slope of 3 to 5% for proper surface water drainage. The slope of the cover on the sides will be higher and governed by slope stability considerations
(f) All Interceptor channels, drainage channels and settling ponds (storm water basins) shall be designed by a hydrologist using hydrometerological data.
(g) It shall be ensured that water collected by surface water drainage system and leachate collected by the leachate collection system do not get intermixed at any stage of collection or storage This shall apply to the 'active' and 'post closure' periods of the landfill

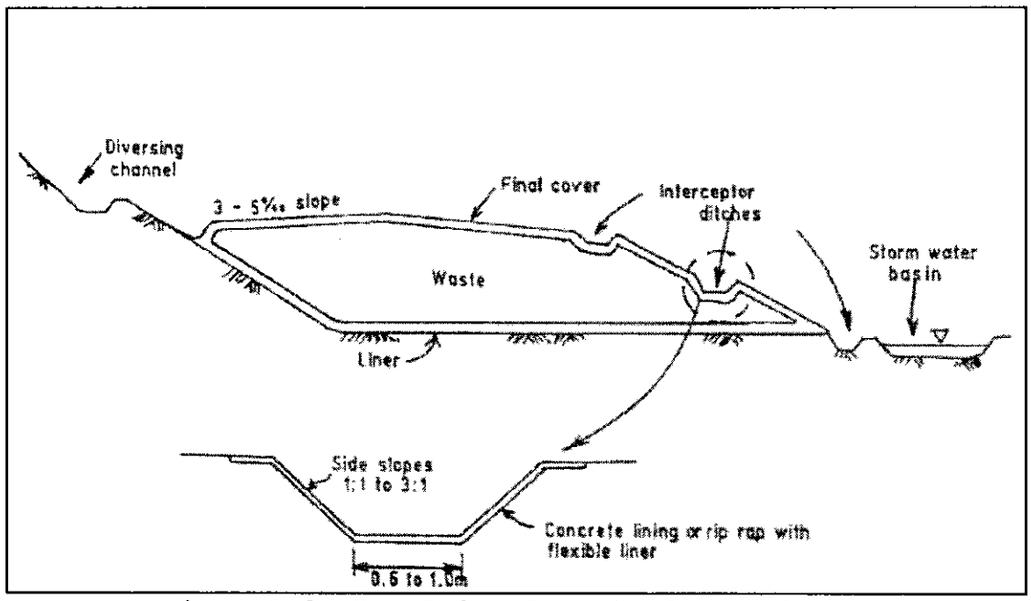

Figure 7: Surface Water Drainage System for a Completed Landfill

The design of following components will be undertaken:

(a) storm water drains, diversion channel
(b) storm water basin
(c) culverts if required

2.2.6 Construction of Embankment

Embankment shall be designed based on sound engineering practices and also shall be checked for slope stability analysis considering seismic factors of Mundra-Gujarat region.

The embankment shall be constructed to the lines and grades shown on the drawings. Placement of fill shall be performed in an orderly way and in an efficient and workman like manner, so as to produce fills having such quantities of density, strength and permeability as will ensure the highest practicable degree of stability and performance of the embankment.

The slopes of embankment shall be maintained as per specific structures drawing.

2.2.6.1 Fill Materials

The materials for embankment shall be obtained from the available excavated material. Some earth material available from the excavation in the pond area if found suitable will also be used for the embankment construction. Morrum / Yellow soil or soil which satisfy the accepted civil engineering property of the bund construction shall be accepted.

2.2.6.2 Placing the fill material, Compaction of the Embankment and Base: (IS: 2720)

The combined excavation and placing operations shall be such that the materials when compacted in the fill will be blended sufficiently to produce the specified degree of compaction and stability. The earth obtained from a particular borrow area as far as possible shall be used in forming the complete cross-section of the fill for a particular stretch.
No stones cobbles or rock fragments, having maximum dimensions of more than 5 cm shall be placed in the fill. Such stones and cobbles shall be removed either at the borrow pit or after being transported to the site but before the materials in the fill are rolled and compacted. Such stones or cobbles shall be placed in other portions of embankment if found suitable or rejected as directed. The materials shall be placed in the fill in continuous horizontal layers, stretching right across the whole section, not more than 0.4 m in compacted thickness.

Vibratory rollers/static roller shall be used for compacting cohesive materials and pneumatic rollers and vibratory rollers shall be used for compacting cohesion less materials. The compaction in horizontal layers will be done using standard compaction equipment or in inclined layers using slope compactors/appropriate method.

2.2.6.3 Inspection Test

Control tests shall be carried out in laboratory from time to time to determine whether the earth produced by methods employed satisfies the requirements of the specifications and documented for verification by the Officer- in –Charge of the regulatory authority and the work shall be inspected periodically.

Complete documentation of all quality control records and their submission to the GPPCB along with showing satisfactory achievement of acceptance criteria.

The quality control tests for compacted clay layer (or amended soils) as well as the leachate collection/drainage layer will include

(a) In-situ density tests.
(b) in-situ moisture content tests.
(c) Compaction tests.
(d) Permeability tests,
(e) Grain size distribution tests and
(f) Atterberg's limits tests
(g) Others as defined by GPCB.

The quality control tests for geomembrane liners shall be carried at as per QA/QC protocol and shall include the following:

(a) Thickness tests,
(b) Density tests,
(c) Strength tests,
(d) Field seam strength & leak tests

Dressing and Trimming of the slopes

The outer slopes of the embankment shall be neatly dressed to line. Compaction shall extend over the full width of the embankment and the material in the slopes shall be compacted as for the rest of structure. To ensure proper compaction at the outer edge, the fill shall be constructed for a minimum of 0.5 m/1.0m extra width on either edges or the outer edge dressed to true width and slope after compaction. No earth slope shall be left without trimming to design slope.

2.2.7 Design of Storm Water Drain

The catchment includes the top or cap of the landfill facility as well as the outer slope of embankment and site upto fencing. Hence to divert the incoming water at the surface level as well as the slope and

terraces of the landfill facility, adequate storm water drainage channels need to be designed, constructed. The channel has to ultimately carry water to the storm water pond for storage or evaporation purpose in case not discharged outside.

2.3 Piezometric Well

Piezometer shall be constructed to monitor the quality of groundwater. Two piezometers shall be installed on the downstream side of the SLF. Two piezometers shall be installed on the upstream side of the SLF. At present, possible locations have been shown where the installation cane be done. **But, exact location of the monitoring well shall be finalized in consultation with Gujarat State Pollution Control Board**. The piezometer consist of a stand pipe made up of stainless steel/PVC which shall be screened along the entire aquifer depth i.e. the standpipe shall be- screened from a depth of 1 m to 10m or depending on ground water depth. The screened interval shall be encased in a filter zone made up of gravel and sand layer. The function of the filter zone is to allow free flow of groundwater into and out of standpipe and prevent fines from entering the standpipe. Immediately above the screened interval, a clay and bentonite seal shall be placed. The thickness of clay seal shall be 0.5 m. Above the clay and bentonite seal, a grout seal consisting of cement and bentonite shall be constructed which provides a barrier for preventing surface water and ground water from elsewhere from migrating into the screened interval. At the ground level, a steel casing embedded in concrete pad shall be employed. A cap shall be placed on the top of steel casing to prevent rainwater and surface water from entering into the standpipe. The piezometer shall be constructed at a minimum distance of 7 m from outside edge of the embankment. A schematic sketch of a Piezometer is shown in **Figure 8**. The location is shown in figure no 4.

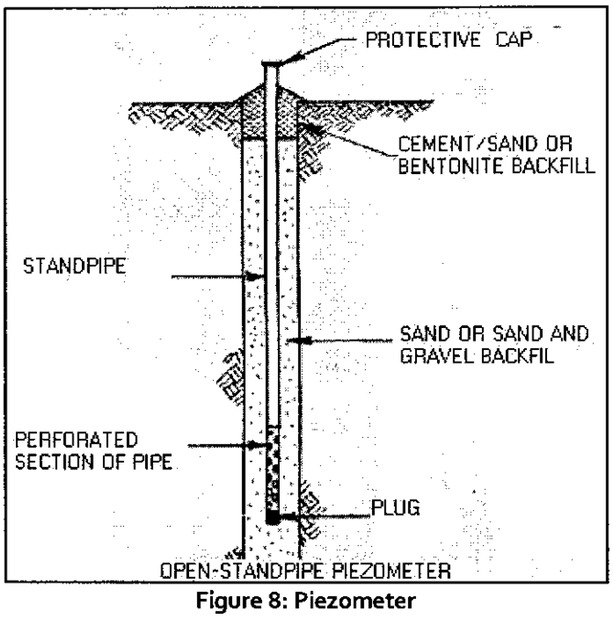

Figure 8: Piezometer

EAC OBSERVATION NO.-12

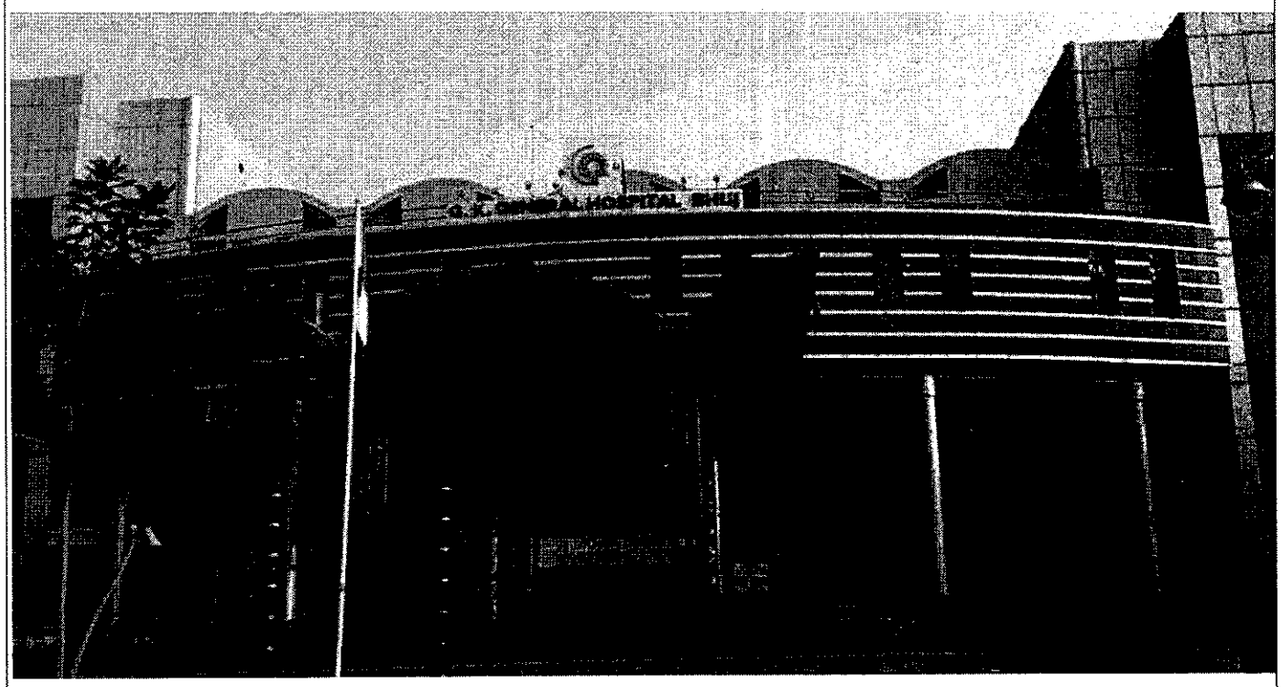
2295

EAC OBSERVATION:

Baseline health status of the people living in the study area of the project site has not been collected.

REPLY:

Baseline Health Status Study within 10 Km Radius of the Proposed Copper Refinery Project has been conducted by M/s TALEEM Foundation (A research unit of ZEE Group), Ahmedabad. The study was conducted based on the secondary data available at PHC, CHC, district hospital and relevant secondary report published by Ministry of Health & Welfare, Govt of India.



M/s TALEEM Foundation, Ahmedabad has engaged Prof. A K Sharma, IIT Kanpur and Dr. Sapan Pandya, medical consultant, Ahmedabad; for baseline Health Status Study. Prof. A K Sharma, IIT Kanpur has provided technical support for preparation health index and Dr. Sapan Pandya, medical consultant has provided orientation for collection of health data. The community health index has been developed using the statistical method adopted by World Health Organisation (WHO) considering the list of 47 diseases under classification of communicable and non-communicable diseases to compare the health performance of project area with the district and state as a whole.

A detailed study report is attached as **Annexure-12.**

Study to Establish Community Health Baseline Index within 10 Km Radius of the Proposed Copper Refinery Project in Mundra Taluka of Kutch District (Gujarat)

Preface and Acknowledgement

At the outset, we are grateful to Adani Enterprises Ltd. (AEL) for having entrusted TALEEM Research Foundation, Ahmedabad for the present study aiming to develop health index for the community residing in 16 villages within 10 kilometres radius of a proposed copper refinery project in Mundra taluka of Kutch district.

The study provides an overall health status of 16 project villages in comparison to block average and the district as a whole. This report is largely based on IDSP and HMIS data of six PHCs, two CHCs and District Hospital. Apart from collecting secondary data, health facility survey was conducted to understand the adequacy of health infrastructure and primary healthcare services. The present report is expected to serve as a baseline to measure the impact of the proposed project and various community development initiatives of AEL in future.

We express our sincere gratitude to the team of AEL for their continuous interaction with the core team of TALEEM and extending support and guidance to complete the study on time.

We express our appreciation to Dr Kashyap M Buch, Chief District Medical Officer (CMO) of District Hospital of Kutch district and MIS staff of PHC, CHC and DH for extending their support and cooperation in providing the relevant information for their respective health facilities. We express our sincere thanks to all of them.

We gratefully acknowledge the participation and technical support provided by Professor A.K. Sharma of IIT, Kanpur for developing health index and Dr Sapan Pandya, Medical Consultant for reorienting the survey team on health facility survey tools.

We greatly acknowledge the untiring efforts of TALEEM core team members and support staff for the timely completion of the study.

Md. Irfan Khan, Ph.D. (IIT, Kanpur)
Director, TALEEM Research Foundation,
Ahmedabad

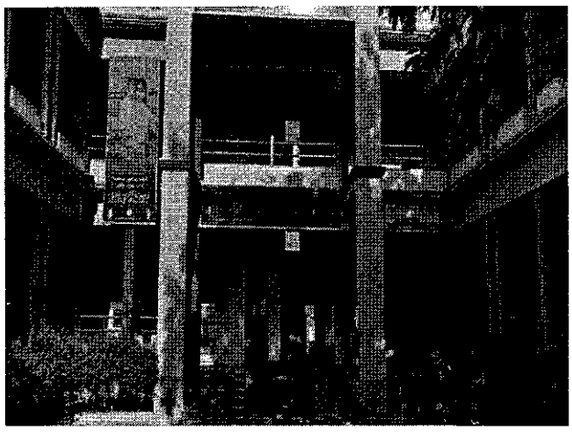
Chapter 1: Introduction

Health, as defined by World Health Organization (WHO), is "a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity." Health is influenced by a number of factors that broadly include genetics, environment, lifestyle, socio-economic conditions and access to health services.

Knowing status of health of community or any area is very crucial for policy decision, planning and need-based-demand-driven programme intervention. Adani group have been pioneers in corporate social responsibility and made significant contributions to improve quality of people's life in the entire region they operate in. Gujarat, APSEZL and AEL have started key initiatives in support of sustainable development aiming at bettering the socio-economic and cultural status of local people.

The present study covering 16 villages within 10 km radius of proposed "*Copper Refinery Project*" at Adani Port Special Economic Zone (APSEZ) intends to generate a health index of the catchment area and to establishing benchmark indicators to measure the impact of various community development initiatives by AEL over a period of time.

Objectives



The broad aim of the present study is to develop community health index of area within 10 km radius of proposed copper refinery project. The specific objectives of study are as under:

1. To establish the Community Health Index of 10 Km. radius area using suitable methodology and input parameters (a. Communicable diseases, b. Non-Communicable diseases, c. Status of facilities available, d. Utilization of health services)
2. Compare the data of BASELINE parameters (Communicable and Non-Communicable diseases) of the study area with data of district and the State as a whole.

2301

3. Mapping of Community Health Resources present in the study area.

Data Collection

PHC Mota Kandagara, Kachchh

In order to establish health index of project areas covering 16 villages (Table 1) catered by six PHCs namely Kandagara Mota, Bhujpur, Jarpara, Nani Tunbadi, Talwanaand Gundiyari and one CHC Mundra where these six PHCs generally refer the patients for specialized health services insub-district hospital (upgraded CHC) of Mandvi and district hospital of Bhuj, Kachchh district were covered.

2302

From these facilities, data were collected on existing building infrastructure, human resources (medical, para-medical, lab technicians and support staff), pathology laboratory, surgical and examination equipments, labour room and operation theatre, drugs and drugs kits, medicine dispensing, indoor and outdoor health services. Apart from existing facilities, service statistics for last three years were collected.

Type of Data

Mainly secondary data has been collected from a CHC, PHCs and a District Hospital. In addition, secondary data from Department of Health and Family Welfare, Govt. of Gujarat, Census of India 2011, SRS Bulletin, HMIS for 2017-18 and 2018-19 were collected.

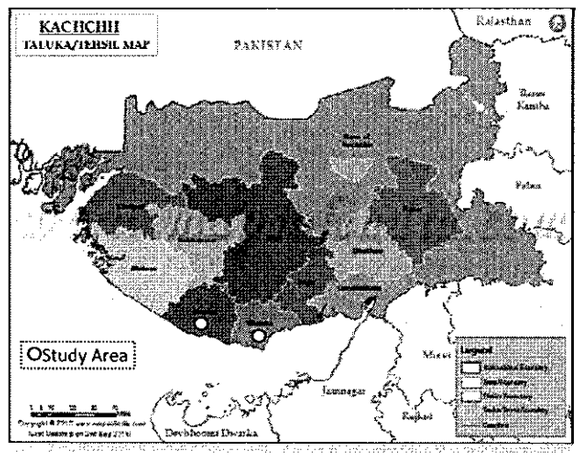
Operational Plan

A very experience research team having experience of developing MIS were pooled from the Foundation's core team who were deputed for data collection from health facilities.

These teams were reoriented one day by the medical doctor who broadly covered all technical aspects of medical infrastructure, equipments, operation theatre and drug dispensing. The data collection was carried out during March 12 to 22, 2019.

Data Analysis and Report Preparation

Brain Storming Session at TALEEM with Adani representative



The Sr. faculty members of the Foundation and Statistician Expert involved in the study have prepared detailed analysis and tabulation plan. The community health index has been developed using the statistical method adopted by WHO considering the list of 47 diseases under classification of communicable and non-communicable diseases to compare the health performance of project area with the district and state as a whole. The same statistical technique was more or less adopted by IIM for developing health index of Indian States.

2302

Chapter 2: Profile of the District and Study *Taluka*(Mandvi and Mundra)

Kachchh is district of Gujarat State in western India covering an area of 45652 sq. km which is 23.3% of the total state geographical areas. It is the largest district in the State of Gujarat and second largest district of India after Leh. It is bounded on the north and north-west by Pakistan, on the north-east by Rajasthan state, on the east by the Banas Kantha and Patan districts of Gujarat, on the south- east by Surendranagar district, on the south by the gulf of Kachchh and Rajkot district and on the south-west by the Arabian sea.

It lies between the parallels of latitude 220.45' to 240 .40' and the meridians of longitude 680.9' to 710 .45.The length from north to south of this territory is about 220.32 km. and from east to west about 376.80 km. The district has the longest coast line of about 406 km. The district has 10 *Talukas* (namely Bhuj, Mandvi, Mundra, Abdasa, Bhachau, Lakhpat, Anjar, Nakhatrana, Rapar and Gandhidham), six Nagar Palika and 949 Revenue villages. Interestingly, there are 19 villages from different sub-districts of Kachchh having population less than 50.

Kachchh district is the 14th most populated district in the State with a total population of 2092371 as per 2011 Census. The district has a population density of 46 inhabitants per sq. kilometer. Its population growth over the decade 2001-2011 was 32.16%. Kachchh has a sex ratio of 908 female for every 1000 males. The distribution of population indicates that Bhuj is the most populous (443269) and Lakhpat is the least populous(62552)*Taluka* of the district. The urban population of

District at a Glance

Area (sq. km)	45652
Population	2092371
Urban Population	34.8%
SC Population	12.37%
ST Population	1.16%
Hindu	76.89%
Muslims	21.14%
Sex Ratio	908
Literacy Rate	70.6%
No. of Taluka	10
Nagar Palika	6
Revenue Villages	949

Source: Census2011

2304

the district accounted for only 34.82 percent of the total population. The district has 76.89% Hindu while Muslims constitute the second largest religious group with 21.14% of the total district population. Similarly, Scheduled Castes (SC) and Scheduled Tribes (ST) constitute 12.37% and 1.16% of the total district population.

The literacy rate of the district as per Census 2011 was 70.6% (with 79.4% for male and 60.9% for female) which is significantly lower than the State average of 78.0%. The rural urban literacy gap is of about 16.0% (64.9% rural and 80.8% urban). The district is ranked 23rd in education in 2011 among all the districts of Gujarat.

The district has a total of 277 SCs, 42 PHCs and 14 CHCs. The number of PHCs providing health services is highest in Bhuj *Taluka* with seven followed by Mundra *Taluka* with sixin number. The highest number of sub-centres (SC) is found to be in Mundra with 52 followed by Bhuj *Taluka* having 44. Anjar *Taluka* has maximum of three CHCs while Bhuj and Mundra *Taluka* have two CHCs in each. The remaining seven *Taluka* has one CHC each.

Taluka	SC	PHC	CHC

10. Gandhidham	7	1	1
Total	**277**	**42**	**14**

Source: District Human Development Report- 2016

Mandvi and Mundra *Talukas* have about 2.3 and 1.5 lakhs populations respectively. Mandvi constitutes 25.2% urban population as against 13.2% for Mundra. SC population constitutes 13.3% of the total population of each of the two *Talukas.* Sex ratio is more skewed in Mundra (868) as compared to Mandvi with 970 female for every 1000 male. Overall, literacy rate is 75.1% for Mandvi as compared to a little over 77.4% in Mundra. Mundra *Taluka* has relatively more number of SC, PHC and CHC as compared to Mandvi.

Mandvi and Mundra *Talukas* at a glance		
Indicators	Mandvi	Mundra

2305

Chapter 3: Existing Government Health Facilities

As mentioned in Chapter 1, one District Hospital (DH) (Bhuj), two Community Health Centres (CHCs) and six Primary Health Centres (PHCs) have been covered in the study. District hospital is located at district headquarters, i.e. Bhuj and is known as G K General Hospital. Two Community Health Centres one at Mundra and other at Mandvi were included in the study to obtain information on vital statistics. At sector level, six PHCs covering 16 villages around the project sites have been covered for collecting data.

CHC, Mundra, Kachchh

Health Care Delivery System in Gujarat

Before getting into detail of health facilities covered in this study, it is worth while taking a peep into the health care Delivery System in Gujarat. The health care delivery in Gujarat is organized in a three tier system;

i) At the primary level, there are sub health centres and primary health centres (PHCs).

ii) At the intermediate level, there are community health centres (CHCs), taluka hospitals and district hospital. About 3-4 PHCs are affiliated to CHCs. It has been planned to develop CHCs as a first referral units (FRU), because they are scattered all over the state and can provide hospital services at the doorstep of the patient. Almost all CHCs are located in taluka headquarters or other important towns of a taluka. There is at least one operational hospital in each district headquarters

2306

iii) The tertiary or referral level facilities are affiliated to medical college and specialized hospitals. Norms for health facilities are ;

Table 3.1: Population covered under Health Facility for specific Areas

Sr. No.	Health Facility	Areas	Population covered
1	PHC	All Areas	30,000
2	PHC	Tribal, Hilly & Inaccessible areas	20,000
3	Sub-Centre	All Areas	5,000
4	Sub Centre	Tribal, Hilly & Inaccessible areas	3,000
5	CHC	All Areas	100,000

In view of very small number of private practitioner providing health care services, Government sub health centres, primary health centres, community health centres and hospitals are very important in the sense that they provide essential basic health services to the rural as well as urban population. In the entire district of Kachchh 361 government health facilities are functioning. Taluka-wise view of number of health facilities is given in Table 3.2.

Table 3.2: Taluka-wise SCs, PHCs and CHCs in Kachchh district

Sr. No.	Taluka	Sub-Health Centre (SCs)	Primary Health Centres (PHCs)	Community Health Centres (CHCs)
1	Abdasa	34	6	1
2	Anjar	34	7	2
3	Bhachau	19	7	3
4	Bhuj	44	11	3
5	Gandhidham	7	2	0
6	Lakhpat	27	4	1
7	Mandvi	30	8	1
8	Mundra	52	7	2

Total		**277**	**67**	**17**

Source: https://gujhealth.gujarat.gov.in/images/pdf/1474-list-18.pdf

2307

As per Table 3.2, there are 277 health sub centres SCs), 67 Primary Health Centres (PHCs) and 17 Community Health Centres (CHCs) in Kachchh district of Gujarat.

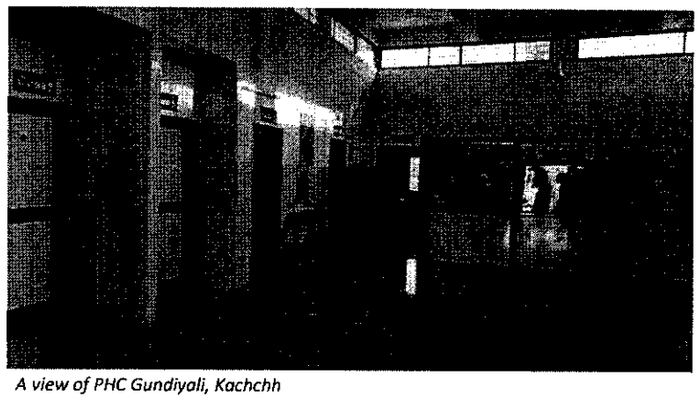
Functional Status of Health Facilities

As mentioned earlier, one district hospital (DH) at Bhuj, two (02) CHCs (one each at Mandvi-upgraded into SDH and Mundra) and six (06) PHCs (2 in Mandvi and 4 in Mundra) have been covered under this study. Brief description of infrastructure facility, available at the health facilities covered, has been presented hereunder;

Infrastructure

Seven out of nine health facilities covered, i.e. one (01) district hospital (DH), two (02) community health centres (CHCs) and six (06) primary health centre (PHCs) have own building, PHC at Mota Kandagara and Bhujpur villages do not have own building for PHCs. Two PHCs, i.e. PHC at Zarpara and Bhujpur have borewell/tubewell as main source of water while seven other health facilities including district hospital at Bhuj have piped water as main source of water supply. Water supply is available round the clock in all health facilities covered. Operation theatres and labour rooms in each health facility at taluka level (CHC) and at district level (DH) has regular water supply, however, at sector level, two out of six PHCs, one at Mota Kandagara (no OT or labour room as it is running in a sub-centre) and other at Zarpara villages do not have regular water supply in labour room.

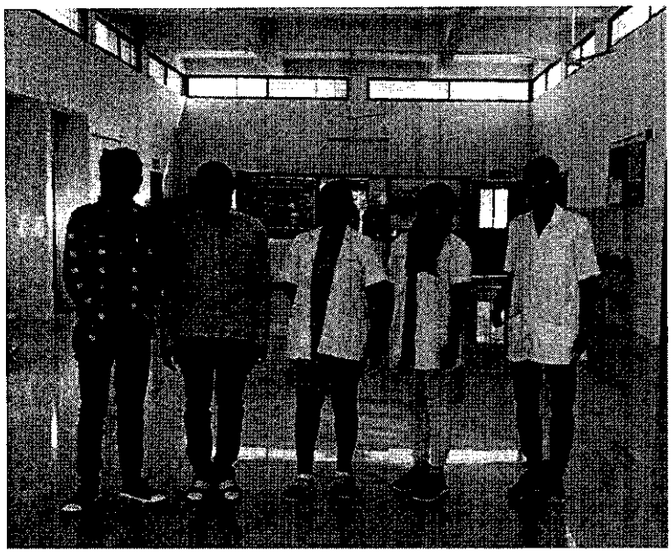
Functional toilet facility with running water is available at all nine health facilities while all but one health facilities (PHC at Kandagara) does not have separate toilet facility for male and female. Three health facilities, i.e. district hospital and two CHCs at Mandvi and Mundra do provide food to in-patients; laundry facility is also available at district hospital and CHC at Mandvi. Outsourced laundry facility is also available at CHC Mundra.



Electricity connection is available in all health facilities and its parts the data indicates while standby facility (generator/inverter) is not available in four out of six PHCs (Table 3.3). Generator backup is assured at all time and is connected to labour room/Ice refrigerator

2308

(ILR)/wards of health facilities where standby facility is available. It has been revealed that adequate funds are available for operating generator/standby facility.



Facilities like Vehicle including Ambulance, Jeep and Car in functional condition, OPD for RTI/STI, name plates/guidelines and counseling is available in all nine health facilities covered at sector, taluka and district level. Barring one PHC at Mota Kandagara village, Eight (08) out of nine (09) health facilities covered have facility available for privacy during examination and separate aseptic labour room. Gynecology /obstetrics OPD facility is available only at CHC and District hospital, not at PHC while telephone facility is available at district hospital, both community health centres and PHCs at Bhujpur and Nani Tumbdi villages.

Staff quarters for RMO and Nurses are available only at Mandvi health facility (CHC/SDH). General medicine ward for male and female separately is available at all health facilities covered. Data also indicates that ANC ward is available in all health facilities covered for obtaining secondary information. Separate registration counters (DH-1, CHCs-2 and PHC-1), complaint/suggestion box, drug storage and drug dispensing (DH-1, CHCs-2 and PHCs-4) and facility for sterilizing instruments (DH-1 and CHCs-2) are available but facility for disposing of bio medical waste is outsourced in all nine health facilities (Table 3.3 – appendix 1).

The Staff of PHC Gundiyali, Kachchh

Staff Position

As regards staff position, data indicates status of medical and paramedical staff in position in health facilities. Medical superintendent/PMO is in position in all nine health facilities. Barring district hospital, no other health facility has specialist in Medicine and surgery. Obstetrician/gynaecologist, general duty doctor, staff nurse, dresser, lab technician and ophthalmic assistant are available at Mandvi and Mundra CHCs. More number of staff is available in Mandvi CHC (now upgrades as sub district hospital) than Mundra CHC. At Mandvi CHC/SDH one pediatrician, one Pathologist/Microbiologist one ophthalmologist, one dentist, 17 public health Nurses, two technicians, five pharmacists, one physiotherapist are in position. At PHC level, four PHCs have AYUSH physician, two PHCs namely, Zarpara and Bhujpur do not have AYUSH Physician. All PHCs do have at least one pharmacist, medical officer and laboratory technician (Table 3.4– appendix 1).

Training Received by Staff

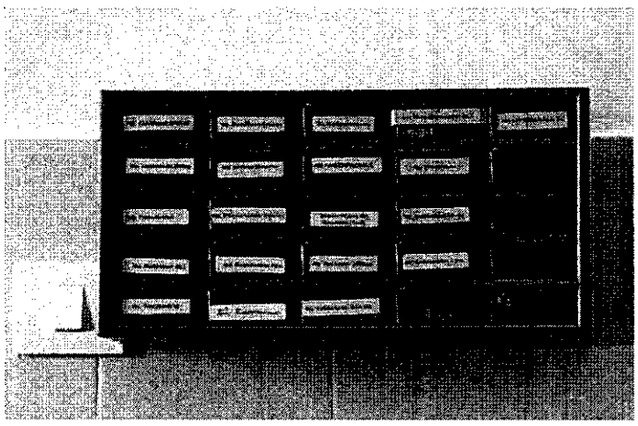
Information on training received by the staff during past five years or ever reveals that no medical staff is trained for RTI/STI, SBA or basic emergency obstetric care, non scalpel vasectomy (NSV) and Mini laprotomy at district hospital whereas at least one medical staff has received training for other major areas mentioned in the Table 3.5. At CHC level, Mandvi CHC/SDH has at least one trained medical staff for new born care, RCH foundation skill, F-IMNCI, SBA/basic emergency obstetric care, integrated management of neonatal and childhood illness (IMNCI), HIV/AIDS prevention, care and support and immunization whereas Mundra CHC has at least one medical person having received training on new born care, RCH foundation skill, F-IMNCI, SBA/basic emergency obstetric care, NSSK (Navjat Shishu Suraksha

2310

Karyakram), vector borne diseases, adolescent reproductive sexual health (ARSH), IUD insertion and immunization.

The laboratory of CHC Mundra, Kachchh

Table 3.5 points out at medical/support staff posted at PHCs having received training on various areas. According to table 3.5, medical officer posted at all six PHCs have received training on new born care, Navjat Shishu Suraksha Karyakram (NSSK), Maternal death review (MDR) and immunization. Medical officer of all six PHCs (except PHC at Nani Tumbdi) have received training on RTI/STI, integrated management of neonatal and childhood illness (IMNCI) and SBA or basic emergency obstetric care (except PHC at Zarpara) and directly observed treatment short course (DOTS) (except PHC Bhujpur). Similarly, medical staffs at four out of six PHCs have received training on vector born disease control program (VBDCP) (except PHCs at Bhujpur and Nani Tumbdi) and, adolescent reproductive sexual health (ARSH) (except PHCs at Bhujpur and Gundiyali) (Table 3.5– appendix 1).



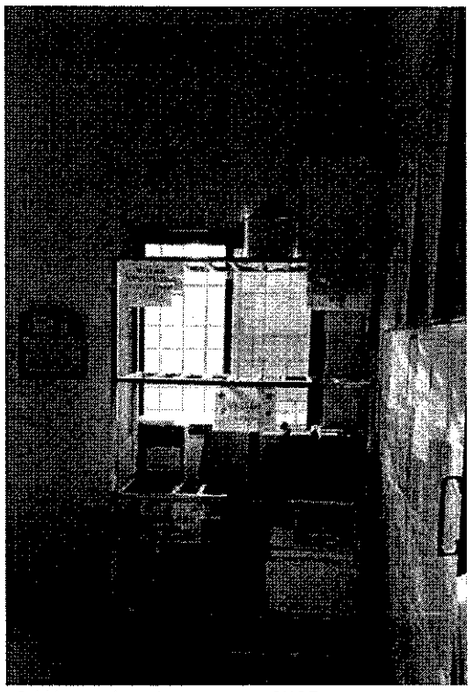
Investigation and Laboratory Services

Among investigation /laboratory services, facilities for urine analysis, pap smear test, sputum test, blood sugar test, RPR for syphilis and pregnancy test are available at district hospital, both CHCs and all six PHCs covered whereas hematology test, blood creation, diagnosis of RTI/STD with wet mounting, grams stain test coomb's test, widal test and X-ray facility is available only at district hospital and both CHCs. Apart from this, some of the investigation facility like stool (PHC Gundiyali), diagnosis of RTI/STDs with wet mounting grams stain (Bhujpur, Nani Tumbdi and Gundiyali PHCs)), ELISA test for HIV (Mota Kandagara & Gundiyali) and VDRL test (Mota Kandagara) is available at few PHCs. However, most of the investigating/laboratory facilities mentioned in the table are available at district hospital Bhuj only and are not supposed to be available at CHCs and PHCs as per standard norms (Table 3.6– appendix 1).

2811

Other Services

Other services like conducting deliveries (normal and assisted) and new born care, administration of parental oxytopics, antibiotics, administration of magnesium sulphate injection, management of post-partum hemorrhages, management of other delivery complications, management of low birth weight babies and C-section are available 24x7 at district hospital and both CHC at Mandvi and Mundra. In addition, blood storage facility, services like resuscitation, thermal protection, manual vacuum aspiration (MVA), electric vacuum aspiration (EVA) and dilation & curettage are also available at district hospital and both CHCs (Mandi & Mundra). Services for conducting normal deliveries and new born care, administration of parental antibiotics and resuscitation are available at PHC Zarpara and PHC Bhujpur, PHC Talvana and PHC Gundiyali. Besides, resuscitation facility at PHCs (Bhujpur, Talvana and Gundiyali), thermal protection at PHCs (Bhujpur&Gundiyali) and manual and electric vacuum aspiration are available at PHC Zarpara (Table 3.7 -appendix 1).



Essential drugs storage in PHC Gundiyali, Kachchh

Supply of Healthcare Kits

So far as supply of health care kit is concerned, all kits mentioned in Sr. 1 to 9 of Table 3.8 are available at CHC Mundra. This information, however, is not obtained from district hospital (Bhuj) and Sub district hospital (Mandvi). The same is true for PHC Bhujpur barring Kit O and Kit P (donor blood transfusion). In that respect the worst could be seen in PHC Kandagara where there is no supply of any kit mentioned in the Table 3.8. PHC at Nani Tumbdi has supply of only one kit, i.e. Kit I (normal delivery equipment) whereas PHC Talvana has supply of four kits (emergency obstetric care drug kit, RTI/STI laboratory kit, Kit G (IUD insertion kit) and Kit N (equipment for neonatal resection)and PHC at Gundiyali has RTI/STI laboratory kit, Kit G (IUD insertion kit) and Kit N (equipment for neonatal resection), Kit I (normal delivery kit/labour room kit) and Kit N (equipment for neonatal resection)(Table 3.8 -appendix 1).

2312

Cold box and vaccine storage at PHC Zarpara

Stock of Specific Items

Among other supplies, stock of specific items like Nirodh pieces, Oral pill cycles, IUDs, IFA (large), Vitamin A solution and ORS packets are available at all six PHCs and one CHC at Mundra. However, this information has not been obtained from district hospital and sub district hospital at Mandvi (Table 3.9 -appendix 1).

Equipments

Equipments such as Cardiac monitor, Oxygen cylinder, Shadow less lamp pedestal for minor OT, High pressure sterilizer (horizontal /vertical), X-ray machine (functional), ECG machine (functional), Ice Lined Refrigerators and Deep Freezer are available at CHC Mundra. At PHC level, cold chain equipment and deep freezer are available at all six PHCs whereas ice lined refrigerator is available in all but Nani Tumbdi PHCs and shadow less lamp pedestal is reported to be available at only three out ofsix PHCs i.e. Bhujpur, Talvana and Gundiyali (Table 3.10-appendix 1).

Adequacy of Means

Based on the criterion of adequately equipped (if health center is having 60 percent of sanctioned, infrastructure, supply, equipment, etc.) position of the Primary Health Centers, Community Health Centers and District Hospitals have been given in the Table 3.11, 3.12 and 3.13 respectively.

2313

According to Table 3.11, PHC Mota Kandagara adequately is equipped in medical staff, paramedical staff and supplies but not in infrastructure and equipments. PHC Zarpara is adequately equipped in infrastructure, medical staff, paramedical staff, supply and equipment. PHC Bhujpur is adequately equipped in medical staff, paramedical staff, supply and equipment. PHC Nani Tumbdi, is equipped adequately in infrastructure, medical staff, paramedical staff and supply. In the two PHCs of Mandvi- Talvana and Gundiyali the latter is more adequately equipped than Talvana in terms of paramedical staff and equipment.

A view of G.K. District Hospital, Bhuj, Kachchh

Community Health Centres (Table 3.12) at Mandvi and Mundra too are adequately equipped as per the criterion. Mandvi Community Health Centre is lacking in terms of staff position such as General Surgeon, Radiologist and a Dental Assistant whereas in the Mundra CHC, General Surgeon, Pediatrician, Radiographer and Dental Assistant are not in position.

According to Table 3.14, the District Hospital at Bhuj is adequately equipped so far as infrastructure, medical staff, paramedical staff, supply and equipment are concerned. Barring Dilatation and Curettage (D&C) and Facility of Blood Bank, the

District Hospital is adequately equipped (Tables 3.11, 3.12, 3.13 and 3.14 – Appendix 1).

Infrastructure includes overhead tank pump and facility, electricity in all parts of hospital, availability of generators, telephone functional vehicles, laboratory, operation theatre, and separate aseptic labour room.

1. Includes obstetrician/gynaecologist, paediatrician and anaesthetist.
2. Include staff nurse. ANM, pharmacist, laboratory technician, PHN, health assistant

Waiting Area of Maternity Ward Of PHC Gundiyali, Mandvi, Kachchh

2314

male and female.

3. Includes tual ring, set of standard surgical kits, emergency obstetric care kit, new born care kit, RTI/STI kits and delivery kit I.
4. Includes Boyle's apparatus, shadow less lamp and oxygen cylinder.
5. Calculated from the number of health facilities which facilities have conducted delivery.

2815

Chapter 4: Health Index Measurement

Better health status of the population leads to demographic transition steadying the population growth rate essential for sustainable development. Health index provides relative measures of the health status of a particular area or population.

In the present study efforts were made to develop methodology for measuring the health index for 16 project villages and compared with blocks and district in which these villages fall. In order to do so, secondary data from six PHCs, two CHCs and district hospital were collected. In addition, relevant data from Census (2011), IDSP (2017-180, HMIS (2017-18), and Human Development Report of Kachchh district (2016) were pooled for this purpose.

Health Management Information System (HMIS) is the main source of data for public health indicators covered under National Health Mission (NHM) that combines both National Rural Health Mission (NRHM) launched in 2005 and National Urban Health Mission (NUHM) initiated later in the year 2013. In addition, Government of India also initiated Integrated Diseases Surveillance Programme (IDSP) under National Surveillance Programme for Communicable Diseases (NSPCD) to strengthen diseases surveillance for communicable and non-communicable infectious diseases to detect and respond to outbreak immediately. IDSP data is collated at National Centre for Diseases Control (NCDC) by compiling State/District surveillance data to interpret diseases trend in any specific area of the country. However, there has been several limitations of reporting and compiling diseases related data at PHC, CHC and even at District level.

Table 4.1 indicates that data for most of the infectious diseases are not available at all levels. Even if data is available for some diseases, the numbers are too small. Thirdly, there have been relative inconsistencies in PHC, CHC and DH data. Consequently, HMIS data on relevant public health indicators was used for developing Health Index (HI).

2316

It must be mentioned that efforts were made to use IIM Ahmedabad methodology for development and estimation of Health Index for the 16 project villages. IIM Ahmedabad collected data on a large number of outcome and input variables and ran the principal component analysis to identify factor loadings/weights of a smaller set of variables and classified the Indian States according to outcome and input factors. Taking lead from there, detailed schedules were developed for collecting secondary data from PHCs, CHCs and the district hospital.

However, a number of difficulties were faced in applying the method:

a. Lack of data at all levels –village, PHC and CHC– for all the outcome and input variables
b. A low case- variable ratio that does not permit us to apply factor analysis
c. While some values are shown in percentages, e.g. percent ANC-4, other values are given in absolute numbers, e.g. malaria in children 0-5 years of age
d. There is also a methodological issue. The project villages are subject to three different effects - intervention effect, programme effects, and other effects such as ongoing development and media effects. Therefore the difference, if any, between baseline and endline indices cannot be routinely attributed to intervention effects only

   In notations, change in health status of the Project villages

   $\delta V = \delta I + \delta P + \delta O$

   δI = change in health status due to intervention

   δP= change in health status due to programme

   δO= change in health status due to other effects

   Therefore, $\delta I = \delta V - \delta P - \delta O$
e. At the grassroots level there is an interaction between input and outcome processes.

Keeping the above facts in mind we first identified all the variables on which information for all aspects of health is available at the village level. Those variables are:

1. % Pregnant Women who received four or more ANCs
2. % Pregnant Women who are not anemic i.e. HB >11 Mg
3. % Total Institutional Births
4. % Live Births (among total pregnancies)

2317

5. % Live Births > 2.5 KG
6. % Mothers received TT
7. % Children who received BCG
8. % Children immunized for measles
9. % Children who received Vit-A
10. % Infant Survived Till the First Birthday

Then seven more variables were identified on which information for both the Blocks were available. They are,

11. % Pregnant Women Examined for Syphilis
12. % Women Getting 1st Post Partum Checkup Between 48 Hours and 14 Days
13. % Newborns Breastfed within 1 Hour of Birth to Total Live Births
14. Sex Ratio at Birth (Female Live Births/ Male Live Births *1000)
15. %Children Fully Immunized (9-11 Months)
16. % Children Immunized for both BCG and Measles
17. % Children (0-5 Yrs) who never had Diarrhea

Except sex ratio, values of all the indicators lie between 0 and 100. Now the values of different indicators were standardized using the formula:

$$SI_i = \frac{SI_{iv} - MinSI_{id}}{MaxSI_{id} - MinSI_{id}}$$

Where SI_i refers to standardized value of the i^{th} indicator, $MinSI_{id}$ refers to minimum value of the SI_i, for any district in Gujarat and Max SI_{id} refers to the maximum value of the SI_i for any district in Gujarat. It may be noted that originally some indicators such as infant deaths in one year moved in a reverse direction. For exhibiting them in the table of health indicators they were replaced by a positive indicator by subtracting their value from 100. For them the following formula was used to arrive at SI_i:

$$SI_i = \frac{Max\ SI_{id} - SI_{iv}}{Max\ SI_{id} - MinSI_{id}}$$

Finally, the Health index was defined as an average value of all the SI_is. Separately, all SI_is lie between 0 and 1. Therefore, the average of them also lies between 0 and 1.

2318

Using the same approach SI_is were computed for the Block level 17 indicators. Finally, the similar exercise was done for the district in which these Blocks and villages fall. Finally, a number of health indices were constructed:

- Village Health Index based on ten variables
- Block Health Index based on ten variables
- Block Health Index based on all 17 variables
- District Health Index based on all 17 variables
- State Health Index based on all 17 variables

The health indices lies between 0 and 1 and for analytical purpose, may be broadly interpreted as the probability that a randomly selected person from the population is healthy. Here, health is defined in the context of Gujarat as the framework of good and bad indicators depends on the minimum and maximum values for different districts of Gujarat. One may use the standards of India as well and compute new indices but health being a state subject and socio-economic and cultural conditions within states being more homogeneous it makes greater sense to use state standards.

To test for the significance of difference in health indicators, interpreted as probabilities, the test for independent samples is applied

$$t_{n1+n2-2} = \frac{p_1 - p_2}{\sqrt{\frac{p_1 q_1}{n_1} + \frac{p_2 q_2}{n_2}}}$$

Where, n_1 refers to the size of one sample and n_2 to the size of the other sample. For villages and Blocks the respective values of n_1 and n_2 are 16 and 2.

For comparing villages and Blocks with the district, 95% confidence interval is estimated and it is checked whether the district and state Health Indices fall within the confidence interval or not. The confidence interval is given as:

$$p_1 \pm 2 \sqrt{\frac{p_1 q_1}{n_1}}$$

2319

We believe that change of any other more sophisticated formulae would not change the inference considerably.

Findings

Tables 4.2 and 4.3 exhibit the estimates of Health Index. Table 4.2 is based on 10 indicators for which all data were available for all the 16 villages. Table 4.3 is based on 17 variables for which data were available only for Blocks, district and the State.

Table 4.2 shows that the Project villages are better than the Blocks in the following aspects:

1. ANC- 4
2. Live Births

On the other hand the Project villages are not as good as the Blocks in terms of:

1. Anemia among pregnant women
2. BCG among children

The table also shows that the Project villages are better than the district in terms of:

1. ANC – 4
2. Live Births
3. Infant Survival

But the villages are not as good as the district in terms of anemia, %TT injection and BCG.

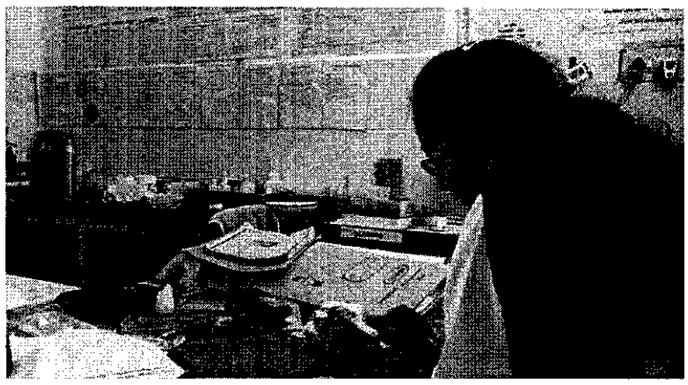


Table 4.2 shows that the estimate of the village Health Index is 0.81. The estimate of Block Health Index is 0.75.

It is found that the difference between the village Health Index and the Block Health Index is not statistically significant (t= .19). The 95% confidence interval of the village Health Index is .7 – .91 which contains the value of the district, but not the State and, therefore, it may be said that the differences between villages, Blocks and district are not statistically significant. Yet, the 16 project villages are significantly better than the state.

Table 4.3 shows that on the basis of 17 indicators of health, the two Blocks seem to be slightly backward Blocks (.62) of the district (.65) but they are at the same level of health as the Gujarat state (HI=.62).However, the difference between Blocks and the district is not statistically

2320

significant (t = -.15). The 95 percent Confidence Interval of the Health Index of the two Blocks is - .10 – 1.26 and the value of the Health Index of the district lies within this interval.

Medical Officer at PHC Mota Kandagara, Kachchh

Table 4.3 also exhibits that when 17 rather than 10 indicators are used there is deterioration in the Health Index at all levels – Block, district and state. This is because of the relatively lower values of sex ratio at birth, full immunization, breastfeeding and diarrhoea at all the levels. This implies that the project should particularly focus on gender sensitization and full immunization amongst children. Since the health indicators for them are lower, greater investment in these aspects of health may yield better results and will be cost effective.

Limitations

There are several limitations of the study:

1. In developing the health index, input and outcome variables are not separated because the outcome variables such as IMR, <5 MR cannot be estimated at the village level
2. In cases such as diarrhea in children 0-5 years of age the size of exposed population is not available and therefore in constructing the index total population of the village, Block, district or state was used for computing indicator ratios.
3. Due to errors in data and otherwise due to specific rule of standardization, if a SI showed a value of more than 1 it was replaced by 1.

2321

Table 4.1 Absolute number of cases reported at different PHC, CHC and DH for Communicable and Non-Communicable diseases – 2017-18 (as per WHO indicators)

Diseases List	Kandagara Mota	Jarpara	Bhujpur	Nani Tunbadi	Talwana	Gundiyari	CHC-Mundra	DH-Bhuj

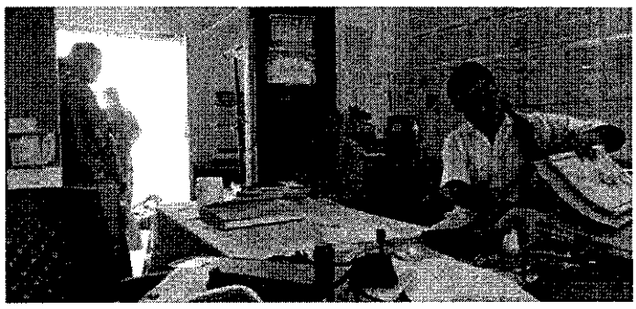
Chapter 5: Conclusion and Recommendations

The present study broadly attempted to examine the adequacy of government health services and determining the health index of 16 project villages in comparison of *Taluka*(Block) and District as a whole. For this purpose, IDSP and HMIS data of six PHCs, two CHCs and District Hospital were examined and facility survey was conducted.

The analysis of facility survey data indicated that more or less all six PHCs are adequately equipped to provide primary healthcare services to their respective catchment areas. While both the CHCs are not adequately equipped as per the norms particularly, in areas of medical and para-medical staff affecting the delivery of specialized medical services to PHCs referral patients. However, District Hospital at Bhuj seems to be adequately equipped in terms of infrastructure, medical and para-medical staff in position, supply and equipments compensating the demand of specialized medical services of both rural and urban areas of the district.



A broader view of PHC Gundiyali, Kachchh

Due to limitations of IDSP data on communicable and non-communicable infectious diseases, HMIS data on relevant public health indicators was used for developing health indices. Further, due to non-availability of village level public health data at PHCs, health index for 16 project villages falling under six PHCs of Mundra and Mandvi CHCs was measured on 10 available health indicators. The analysis demonstrated that project villages are better than the block average in terms of ANC coverage and live birth but lag behind anaemia among pregnant women and BCG vaccination coverage.

It was also found that project villages are better than the district in ANC coverage, live birth and infants' survival but the project villages are not as good as the district in terms of anaemia, %TT and BCG. It is evident from Table 4.1 that the Health Index of project villages are 0.81 as compared to block level of 0.75. Moreover, the differences between project villages, block and district are not statistically significantly though better than the state.

2324

Doctor examining patient in PHC Mota Kandagara, Mundra, Kachchh

Further, considering all 17 health indicators available for Block, district and state rather than 10 indicators, the health index at block, district and state levels deteriorated because of the relatively lower values of sex ratio at birth, full immunization, breastfeeding and diarrhoea at all the levels. This implies that the project should particularly focus on gender sensitization and full immunization coverage amongst children. Since the health indicators for them are lower, CRS investment in coordination with government existing Health facilities which are by and large adequately equipped may yield better results and will be cost effective too.

Based on the present exercise, it is greatly felt that there is a need for collecting primary data at village level on all major health indicators at the household level in all intervention villages to have more sound estimates. For instance, If we have primary data on deaths by age we can calculate life expectancy at the village/Block level for comparison between the start of the intervention and its completion even without data on age distribution. Life expectancy is a good summary measure of health and changes in age-distribution of deaths will affect the changes in the disease burden, due to communicable and non-communicable diseases and other causes and overall improvement in life expectancy. It is further suggested that a few qualitative interviews with stakeholders and administrators will also help in identifying the priorities areas and the approaches to delivery which is area-specific and as per the needs of the people.

Alternatively, if it is not possible to collect primary data at village level, the baseline value of 0.81 may be taken as the value of Health Indicator of the Project villages and using the same methodology a similar value may be obtained for project evaluation in the endline study. This comparison will show the effect of project intervention net of other factors which may change the health conditions in the villages.

Appendix 1

Table 3.3: Infrastructure Available at Covered Health Facilities

Sr. No.	Infrastructure facility	District Level	Taluka Level (CHC)		Sector Level (PHC)					
		DH	Mandvi (SDH)	Mundra	Mundra PHC 1 (Mota Kandagara)	Mundra PHC 2 (Zarpara)	Mundra PHC 3 (Bhujpur)	Mundra PHC 4 (Nani Tumbdi)	Mandvi PHC 5 (Talvana)	Mandvi PHC 6 (Gundiyali)
1.0	Own Building	Yes	Yes	Yes	No	Yes	No	Yes	Yes	Yes
2.0	Main source of Water	Piped	Piped	Piped	Piped	Borewell/ Tubewell	Borewell/ Tubewell	Piped	Piped	Piped
2.1	Running water supply available for 24 hours at facility (DH/CHC/PHC)	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
2.1	Regular water supply available in OT?	Yes	Yes	Yes	-	-	-	-	-	-
2.3	Regular water supply available in Labour room	Yes	Yes	Yes	-	-	Yes	Yes	Yes	Yes
3.0	Proper drainage and sanitation system for waste water, surface water, sub soil water and sewerage exists in the facility	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
4.0	Functional toilet facility with running water available	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
4.1	Separate toilet facility available for males and females	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes
5.0	Is in-house laundry facility available at facility DH/CHC/PHC)	Yes	Yes	No		-	-	-	-	-
5.1	If in-house laundry not available, is it outsourced?	No	No	Yes		-	-	-	-	-
6.0	Facility of providing food for inpatients available	Yes	Yes	Yes		-	-	-	-	-
7.0	Electricity connection available	Complete	Complete	Yes	Complete	Complete	Complete	Complete	Complete	Complete
7.1	Standby facility of generator/inverter available in working condition	Yes	Yes	Yes	No	No	Yes	No	Yes	No
7.2	Capacity of the generator in KW	1000			-	-	-	-	-	-

2120

7.3	Generator supply is connected to Labour room/Ice line refrigerator (ILR)/wards	Yes	Yes	Yes	-	-	Yes	-	Yes	-
7.4	Generator backup is assured at all time	Yes	Yes	Yes	-	-	Yes	-	Yes	-
7.5	Adequate fund available for operating Generator	Yes	Yes	Yes	-	-	Yes	-	Yes	-
8.0	Operation Theatre	Yes	Yes	Yes		-	-	-		-
9.0	Separate aseptic Labour room available	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes
10.0	Telephone facility available/Intercom	Yes	Yes	Yes	No	No	Yes	Yes	No	No
11.0	Vehicle on road (Ambulance, Jeep, and Car functional)	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
12.0	OPD facility for RTI/STI	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
12.1	Gynecology/obstetric OPD facility	Yes	Yes	Yes	No	No	No	No	No	No
12.2	Nameplates guidelines	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
12.3	Privacy during examination	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes
13.0	Facilities for counseling available	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
14.0	Linkage with district blood bank	Yes	Yes	Yes	-	-	-	-		-
14.1	Regular blood supply available	Yes	Yes	Yes	-	-	-	-		-
15.0	Quarters for obstetrician/gynecologists	No	No		No	No	No	No	No	No
15.1	Quarters for RMO	No	Yes		No	No	No	No	No	No
15.2	Quarters for Nurse	No	Yes		Yes	No	No	No	No	No
16.0	Security (at least 1 person available round the clock)	Yes	Yes	No	No	No	No	Yes	No	No
16.1	Critical care Area available at DH/SDH	Yes	Yes	Yes	-	-	-	-	-	-
16.2	Integrated Counseling and Testing Center (ICTC) there in DH/SDH	Yes	Yes	Yes	-	-	-	-	-	-

EAC OBSERVATION NO.-13

EAC OBSERVATION:

Details regarding disposal of arsenic bearing sludge has not been submitted.

REPLY:

Effluents from the gas cleaning plant of Sulphuric Acid and Copper Refinery will be treated in a state of art Effluent Treatment Plant (ETP) facility. The process flow is shown as below.

The Arsenic bearing sludge generated in ETP will be sent to Secured Land Fill (SLF), which will be constructed as per CPCB Guideline. For construction of secured land fill (SLF) refer Annexure-11(b).

Disposal Procedure:

Arsenic bearing sludge will be collected at the outlet of the filter press in the truck and will be transported to SLF for safe disposal. Waste shall be discharged by tipping at the

working area of the SLF. Once the waste has been discharged it shall be spread in layers and compacted with the help of Roller in a well-defined manner to ensure that the completed slopes are at the designated gradients.

Leachate collected through the leachate collection system will be sent to ETP through pipeline for treatment purpose and the treated effluent will be recycled for the plant operations.

Dust from the Landfill:

Dust from landfill operations is mainly a problem during periods of dry weather. Fugitive dust control will be addressed by;

a. Limiting vehicle speed;
b. Spraying roads with water; and
c. Spraying site and powder type waste with water;
d. Green Belt around the Landfill.

Road Maintenance:

To avoid the mud/ dust is not carried off site by vehicles adequate wheel cleaning facilities will be provided. The water after cleaning will be recycled back in the ETP operation.

Landfill Safety Aspects:

Employees training shall include site safety, first aid and the handling of dangerous materials where appropriate. Emergency plans shall be laid down. Landfill sites shall be regarded as potentially hazardous locations and the operator shall have a written safety plan for the site and Safety hazards present at landfill sites. All employees and visitors to the site shall be made aware of the potential hazards and the safety procedures to be implemented including fire safety.

Record Keeping:

Record keeping procedures as well as waste acceptance procedures to be followed at the landfill site shall be formulated.

Records shall be kept as per the consent conditions. In addition a site Manual shall be kept at the site office giving all site investigation, design and construction details.

Landfill Closure:

When landfill reaches the final height, it will be closed as per CPCB Guidelines. HDPE liner with 1.5 mm thickness will be used for landfill cover. It is compacted with smooth steel drum rollers and provided a suitable gradient (3 to 5%) to encourage surface water

to run-off from the cover and thus minimise infiltration. The side slopes of the intermediate cover are compacted by the crawler tracked dozer moving up and down the slope. An access road is provided on the landfill cover to enable easy approach for routine inspection of the landfill cover. Long-term vegetative stabilisation will be undertaken to return the land to its original and natural vegetative landform.

Landfill Layout Display Board:

A site layout will be displayed at the entrance of the SLF entry in Local as well as Hindi and English language. Layout will typically will include

a. Access roads;
b. Equipment shelters;
c. Temporary waste storage and/or disposal sites for special wastes:
d. Demarcation of the landfill areas and areas for stockpiling cover maternal and liner material;
e. Location of surface water drainage facilities,
f. Location of landfill leachate management facilities;
g. Location of gas management facilities (optional);
h. Location of monitoring wells/environmental monitoring facilities,
i. Fencing and green belt along the peripheral boundary and
j. Emergency exit.

EAC OBSERVATION NO.-14

2343

EAC OBSERVATION:

Mercury in ambient air has not been monitored.

REPLY:

Mercury (Hg) in ambient air was monitored during the period of month of January and February 2019 at eight locations within the 10 km radius study area.

For the mercury sampling IS: 5182-Part-23 has been followed. The collected sample has been extracted by microwave extraction (Method IO-3.1) method. The extract has been analysed by the ICP MS having least count of 5.0 ng/m^3

The Hg content in the ambient air found to be <5.0 ng/m^3

Details of Mercury in ambient air sampling locations and analysis is provided in **Annexure-14.**

2344

ANNEXURE-14
MERCURY ANALYSIS IN AMBIENT AIR

1.0 INTRODUCTION

During the EAC meeting, it was desired by the EAC to monitor the concentration of mercury in ambient air quality within the study area. Hence, mercury concentration in ambient air was monitored during 28th January, 2019 till 2nd February, 2019 at eight locations within the 10 km radius study area. The sampling methodology and concentrations are given below:

The details of sampling locations are given in **Table-1** and shown in **Figure-1.**

TABLE-1
DETAILS OF AMBIENT AIR QUALITY MONITORING LOCATIONS

Station Code	Location	Distance from Centre of Project Site (km)	Direction w.r.t. Centre of Project Site
AAQ1	Project Site	-	-
AAQ2	Navinal	1.7	ENE
AAQ3	Bhujpar Mota	6.2	NE
AAQ4	Jarpara	6.8	ENE
AAQ5	Wandh	1.8	SW
AAQ6	Kandagara	4.4	NW
AAQ7	Siracha	1.7	NNW
AAQ8	Moti Khakhar	5.9	NNW

2.0 METHODOLOGY OF SAMPLING

Sampling Procedure

For the mercury sampling, IS: 5182-Part-23 has been followed. The Respirable Dust Sampler (RDS) has been used and 24-hour sample was collected by using whatman filter paper (8 inch x 10 inch). Flow rate of 1.0-1.5 m^3/min has been maintained. During the monitoring period, hourly reading of flow rate has been recorded to capture the flow fluctuations. After the required time of sampling, the flow meter reading was recorded and the filter paper from the sampler and put in a envelope for further analysis.

Sample Storage

After collecting samples, The filter papers have been transported the laboratory, taking care to minimize contamination and loss of the sample. These samples have been stored in a protective environment up to 30°C until analysis. Even though, the sample holding can be up to 180 days, the samples have been analyzed within 10 days' time after collection.

Extraction of Samples

The collected sample has been extracted by microwave extraction (Method IO-3.1) method. The extract has been injected into the ICP MS.

2345

ANNEXURE-14
MERCURY ANALYSIS IN AMBIENT AIR

Microwave Extraction

The filter paper was cut 1"x 8" strip or half the filter from the 8"x10" filter sample and placed on its edge in a labeled centrifuge tube using vinyl gloves or plastic forceps. Using the plastic forceps, crush the filter strip down into the lower portion of the centrifuge tube to ensure acid volume will cover entire filter. Add 10.0 ml of the extraction solution to each of the centrifuge tubes (3% conc. HNO_3 and 8% conc. HCl). Place the centrifuge tubes in a 3Teflon vessel containing 31 ml of deionized water. Place the vessel caps with the pressure release valves on the vessels hand-tight and tighten using the capping station to a constant torque of 12 ft-lb. Place the vessels in the microwave carousel. Connect each sample vessel to the overflow vessel using the Teflon connecting tubes. Place the carousel containing the 12 vessels on to the turntable of the microwave unit. Irradiate the sample vessels at 486 W (power output) for 23 min.

Allow the pressure to dissipate, then remove the carousel containing the vessels and cool in tap water for 10 min. Using the caping station uncap the microwave vessels, remove the labeled centrifuge tube containing samples. Add 10 ml of deionized water to each centrifuge tube. Cap the centrifuge tube tightly and mix the contents thoroughly for 2-3 minutes to complete extraction. The final extraction volume is 20 ml based upon the above procedure. Filter the extracted fluid with Whatman No. 41 and make up the final volume to 100 ml, the filtered sample is now ready for analysis.

Metal Concentration

$C\ ng/m^3$ $(Ms - Mb) \times Vs \times Fa \times 1000/V \times Ft$

Where,

C = Concentration, ng/m^3

Ms = Metal concentration µg/ ml
Mb = Blank concentration µg/ ml
Vs = Total volume of extraction in Ml
Fa = Total area of exposed filter in cm^2
V = Volume of air sampled in m^3
Ft = Area of filter taken for digestion in cm^2

ANNEXURE-14
MERCURY ANALYSIS IN AMBIENT AIR

FIGURE-1
AIR QUALITY SAMPLING LOCATIONS

EAC OBSERVATION:

Conservation plan prepared for the Schedule-I species is not meeting the requirement of the conservation of the species that are identified. Therefore, the plan shall be revised considering the requirements of the conservation of the species identified and shall be approved by the competent authority concerned.

REPLY:

Wildlife Conservation Plan & Mangrove Conservation Plan study for Proposed Greenfield Copper Refinery Project has been conducted by Dr. Bharat Jethva, NABET Accredited FAE Cat-I, Ecology & Biodiversity of M/s Bhagwati Enviro Care Pvt. Ltd.

The study was conducted during month February-March 2019. During the primary field survey study total 8 faunal species belong to Schedule-I of Wildlife Protection Act 1972 were found in the study area. These species include 2 species of reptiles, 5 species of birds and one mammal.

The impacts during construction phase could be short term, temporary in nature and will be confined to the close boundary of the project site. General ecological impacts anticipated from the construction and operation phases of the copper refinery plant and mitigation measures are presented in the report as **Annexure-5**.

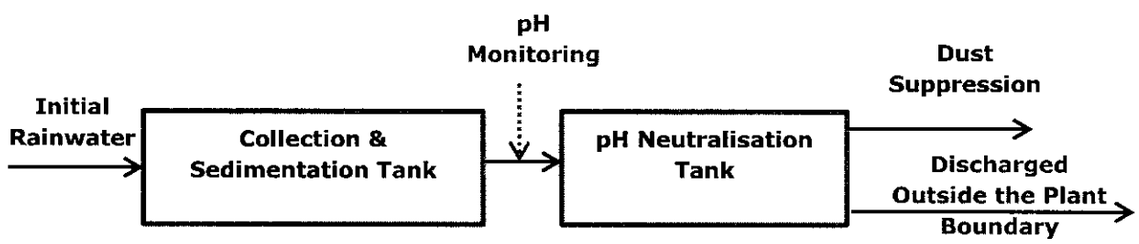
Budget for conservation for Schedule 1 spices has been revised as per field scientific study from **Rs 40 Lakhs** to **Rs. 193 Lakhs.**

A detailed report (**Annexure-5**) is submitted to Divisional Forest Officer (Kutch- East) on 25th March 2019 and onwards for approval of Conservation and Management Plan from Chief Wildlife Warden (CWLW), Kutch and the approval is pending at level of Deputy Conservator of Forest, East, Kutch.

2349

EAC OBSERVATION NO.-16

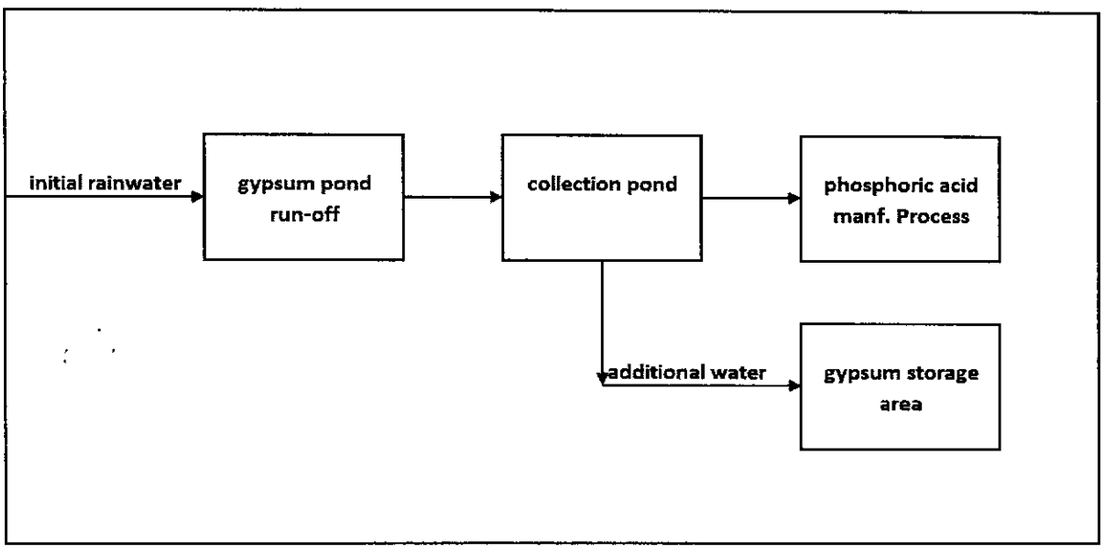
EAC OBSERVATION:



Collection of runoff water from the raw material storage area, slag and gypsum storage yard and its treatment has not been submitted.

REPLY:

Treatment of Initial Rainwater



Part A: (raw material storage area & slag)

The rainwater runoff from raw material storage area & slag will be collected in a storm water collection pond for sedimentation of suspended solid materials. Provision for pH monitoring and provision for neutralisation will be made as required. The preliminary flow diagram is as shown below. The water after sedimentation and neutralisation will be utilised within the plant for dust suppression in raw material storage areas and copper slag granulation. The balance water will be discharged outside the plant boundary after conforming to the discharge standards. The bottom sludge of the sedimentation tank will be recycled back to smelter.

Part B: Treatment of Initial Rainwater (Gypsum Storage)

Collecting amount of initial rainwater: The initial rainwater in gypsum storage area will be collected through the garland drains to the dedicated collection pond of 4,000 m^3. This water will be reused in the phosphoric acid manufacturing process and for dust suppression in the Gypsum Storage Area.

initial rainwater
gypsum pond run-off

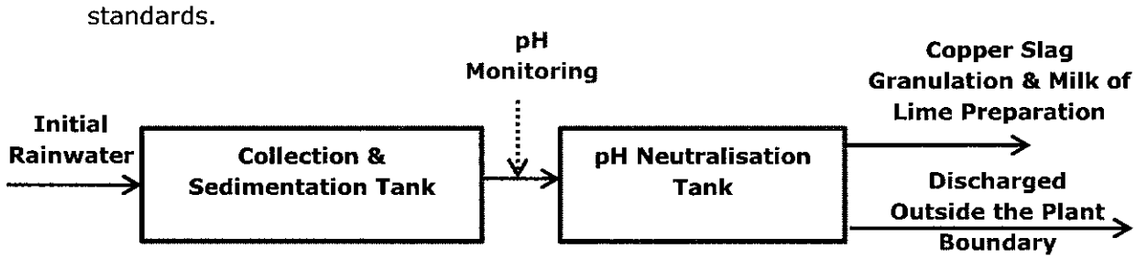
gypsum storage area

EAC OBSERVATION NO.-17

2351



EAC OBSERVATION:

Study on installation of rain water harvesting structure based on annual rain fall pattern and details regarding amount of water to be conserved has not made available.

REPLY:

Rain water harvesting:

a. **Within the production plant premises:** The initial rainwater collecting tank shall be installed in the areas to collect the all rooftops runoff. The same will be connected to a common collection tank; where the runoff from the other areas such as raw material storage, Smelter Plant area is collected in a storm water collection pond. Here, the provision for pH neutralisation will be provided. The water after sedimentation and neutralisation will be utilised within the plant for copper slag granulation and milk of lime preparation. The balance water will be discharged outside the plant boundary after conforming to the discharge standards.

b. **Within the administrative building premises:** The initial rainwater collecting tank shall be installed in the areas to collect the all roofs runoffs from the administrative buildings. The run offs will be pass through the sand soak pits and reused for domestic sewage requirements (Flushing purpose).

Total plant area 634 acre

1. Green Belt Area -212 acre
2. Storage of Slag Gypsum and Hazardous Waste- 138 acre
3. Road and Drains - 40 acre
4. Roof area – 65 acre
5. Paved area- 187 acre

The annual volume of rain water available from the project site spread in 256.57 ha (634 acres) is estimated at 6,43,658 m^3 (0.64 MCM) and during South West (SW) and North East (NE) monsoon periods is 6,32,123 m^3 (0.63 MCM). Considering only 80% of the run-off as available volume after evaporation, spillage and first flush wastage, 5,566 m^3 (0.006 MCM) of rain water is available from the roof top areas for harvesting and use.

Two nos. of 4,000 m^3 capacity each for rain water collection are proposed for the project.

A detailed report on hydrogeology and rainwater harvesting has been conducted and is available as **Annexure-18**

EAC OBSERVATION:

Impact on hydro geology regime of the project site has not submitted.

REPLY:

Detailed Hydrogeology studies were conducted in 10-km radius areas of the proposed copper Greenfield copper refinery project. No ground water is proposed to abstract for the project usage. The plant will be designed and operated on Zero Liquid Discharge (ZLD) system. No effluent will be discharged outside of the plant premises. Hence, there will not be any impact envisaged on ground water regime. Additionally, a ground water level monitoring system shall be established within the plant premises for monitoring of ground water quality.

The total study area of 413.68 sq km, 75.67 sq km (18.29%) of the southern part is covered by Arabian Sea, the Gulf of Kachchh. Remaining study area is entirely occupied by Holocene/ Quaternary sediments with surface lithological boundaries running almost parallel to coast line (E-W). Proposed project site, Adani Power & other industrial set-ups in APSEZ area are located on older coastal plain. Resistivity of different lithological units in the study area range from <1 Ωm to >300 Ωm. ERT1 and 2 are located in project site lying on older tidal flat and marsh deposit with resistivity ranging from <1.0 Ωm to 5.0 m. The resistivity at these locations decreases to <1.0 Ωm with depth indicating saline nature.

The average ground water recharge by rainfall infiltration and increment in ground water storage is 78.15 MCM. However, the huge difference in recharge by rainfall infiltration and increment in ground water storage indicates that the ground water draft is much more than ground water recharge.

The annual volume of rain water available from the project site spread in 256.57 ha (634 acres) is estimated at 6,43,658 m^3 (0.64 MCM) and during SW and NE monsoon periods is 6,32,123 m^3 (0.63 MCM). Considering only 80% of the run-off as available volume after evaporation, spillage and first flush wastage, 5,566 m^3 (0.006 MCM) of rain water is available from the roof top areas for harvesting and use.

Ground water in the study area is developed through shallow dug wells and tube wells for domestic, irrigation and industrial purpose. Dug wells are mainly seen along and in the stream courses and near water bodies/check dams. With the increase of tube wells in the area and lowering of water table, most of the dug wells are abandoned. The depth to water level in dug wells during field visit (2^{nd} week of February 2019) ranges from 7.85 m to 16.12 m bgl whereas the depth to water level in tube wells ranges from 2.00 m bgl in Adani Power's piezometers near project site to 44.38 m bgl in an agricultural well near Gelada. The average water levels in dug wells during field visit, pre and post monsoon are 12.42 m, 12.13 m and 6.23 m bgl respectively with a water level fluctuation of 7.15 m.

General ground water flow direction in major part of the study area is towards Gulf of Kachchh with depressions of deeper levels below mean sea level between Bhadia Mota and Bhadia Nana, around Navinal and east of Bhujpar Mota. Reduced water levels <0 around Bhadia Mota, Bhadia Nana, Tragadi, CGPL and Wandh in the west and to the east of Bhujpar Mota in the northeast indicate that ground water movement is towards inland encouraging sea water intrusion.

EAC OBSERVATION NO. -18 2353

TDS of Moti Khakhar, Desalpar and Siracha (2660.7 mg/l to 3322.3 mg/l), Total Hardness of Siracha (659.9 mg/l), Chlorides of Siracha (1321.6 mg/l), Sulphates of Moti Khakhar (486.5 mg/l), Manganese of Siracha (0.36 mg/l) and Iron of Jarpara (0.31 mg/l) samples show higher values than permissible limits. In the present study, water type of all ground water samples is Sodium Chloride indicating brackish/saline origin.

The present stage of ground water development in the study area is estimated as 102.37% and can be categorized as "Over-exploited". However no ground water extraction is envisaged for the Project.

The Secured Land Fill will have impervious layers of clay liner and HDPE liner. This will ensure that the ground water will not be impacted by the storage of the ETP cake. In case of any rupture/breakage or failure of the SLF bottom liner, any contaminant reaching sub-surface strata and water table will move towards Gulf of Kachchh following the ground water flow direction in the project area.

Danesri Nadi, a seasonal stream passes through western part of the project site. Danesri Nadi originates from north of study area (3.80 km from study area) and has a catchment area of 3.75 sq km from railway line near project site. There are no other drainage courses in the project site. Danesri Nadi along the project boundary will not be disturbed and maintained with necessary bank stabilization will be done with compaction/stone pitching and raising the bund up to 2.0m. The Danesri Nadi conservation plan will include a 50 m corridor from HFL along the stream course for green belt development and another 50 m along the green belt where any storage is coming (Total of 100 m from HFL along the stream course near the storage areas) as presented in plant layout hereunder. No effluent will be discharged into this stream from the plant. Storm water drains carrying excess storm water from the plant area will be provided sand filters to arrest any suspended particles and quality will be monitored periodically to ensure contaminant free storm water only reaches Danesri Nadi.

1.0 INTRODUCTION

1.1. Background

Adani Group is one of India's leading global integrated infrastructure players holding a company of M/s Adani Enterprises Limited (AEL). It was ranked among the top 50 Asian companies by Forbes Asia in 2009. Adani Enterprises is quoted on the Indian Stock Exchange, together with its fourgroup companies – Adani Ports SEZ Limited, Adani Green Energy Limited, Adani Gas Limited and Adani Power Limited. M/s Adani Enterprises Limited is listed on the Bombay Stock Exchange (BSE) and National Stock Exchange of India (NSE).

Adani Enterprises Limited is one of the fastest growing diversified conglomerates with business interests across – Integrated Coal Management and mining, solar cells and module manufacturing, agri-storage infrastructure and services as well as edible oils and food products. This business mix – business-to-business and business-to-consumer – is directed at enhancing access to basic services (electricity through timely coal availability), creating a less polluted world, delivering quality food grain and providing healthy cooking media.

1.2 Project

M/s Adani Enterprises Limited (AEL) intends to set up a Greenfield Copper Refinery project at Adani Port Special Economic Zone (APSEZ) land in villages Siracha and Navinal, taluka Mundra, district Kutch, Gujarat. The project includes facilities like copper smelter, sulphuric acid plant, copper refinery, continuous cast copper wire rod plant, precious metal recovery plant, phosphoric acid plant, aluminium fluoride plant, effluent treatment plant, utilities storage of water and fuel etc. with state of art environment friendly technology.

M/s Vimta Labs Limited, Hyderabad has assigned Multi-Tech Services, Hyderabad carrying out geological and hydrogeological studies in 10 km radius area of proposed Copper Refinery project indicating the impact of the project on the water regime along with rain water harvesting and artificial recharge strategies.

1.3 Location, Extent and Communication

The proposed project will be located in Siracha and Navinal villages at APSEZ, Mundra taluka, Kutch district, Gujarat. AEL proposes to set up a Greenfield Copper Refinery project of 10 LTPA (1.0 MTPA) capacity in 256.57 ha (634 acres) of area.

The proposed project site lies between latitudes 22°48'15.65"N to 22°50'03.86"N and longitudes 69°33'38.12"E to 69°35'10.76"E. The area is covered by Survey of India toposheet no. F42J9-10 (41F9-10) on the scale of 1:50000.

Geographically, the study area lies between 22°42'49.30"N to 22°55'29.74"N latitudes and 69°27'45.00"E to 69°41'02.95"E longitudes and is covered by Survey of India toposheet nos. F42J9-10 (41F9-10) and F42J5 (41F5) on the scale of 1:50000. The study area encompasses the geographical area of Mundra and Mandvi taluks, Kutch district, Gujarat.

The proposed project site is well connected by the existing National/State highways, cargo rail link which is about 2.0 km away from the project site. The nearest airport is Mundra airport owned by Mundra International Airport Pvt. Ltd., a subsidiary of Adani Group located at 20 km in SE direction of the project site and another is at Bhuj, located at a distance of 65 km from the project site. The nearest railway station is Adipur/Gandhidham, which is about 80 km from project site and nearest town is Mundra which is about 20 km from the project site. The national highway NH-8A is passing at about 15.0 km away from the site. State highway SH-6 is about 3.0 km north of proposed site. The site is well connected with Ahmedabad city located at about 460 km.

Location of the proposed project site is shown in **Figure-1** and the study area is presented in **Figure-2**.

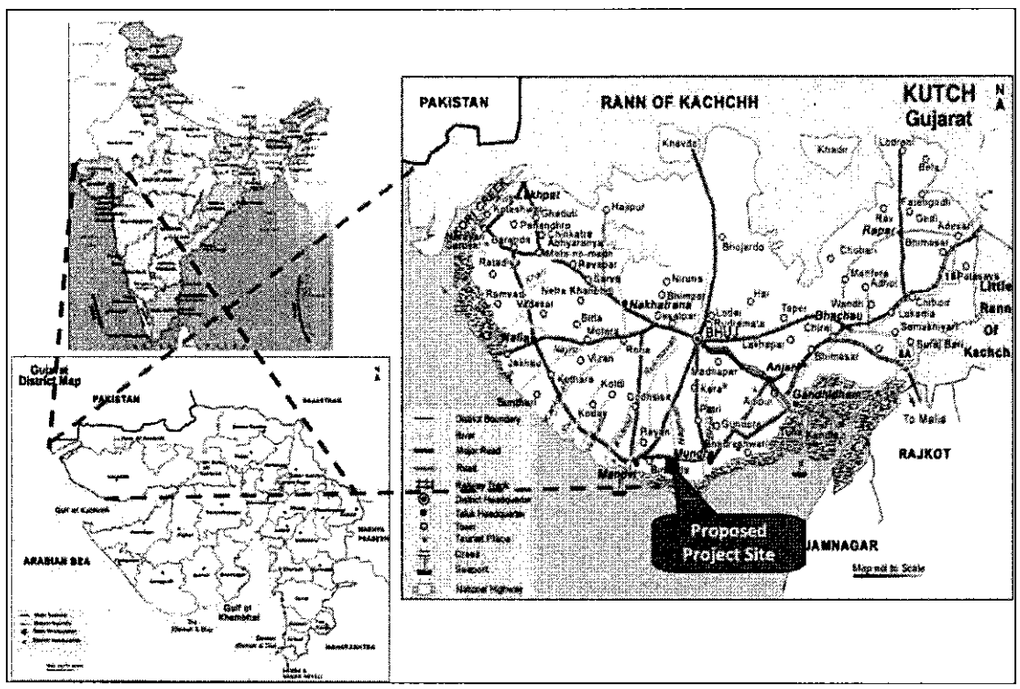


Figure-1. Location Map of Proposed Copper Refinery

22°48'56.62"N, 69°35'08.94"E

22°48'41.07"N, 69°34'14.03"E

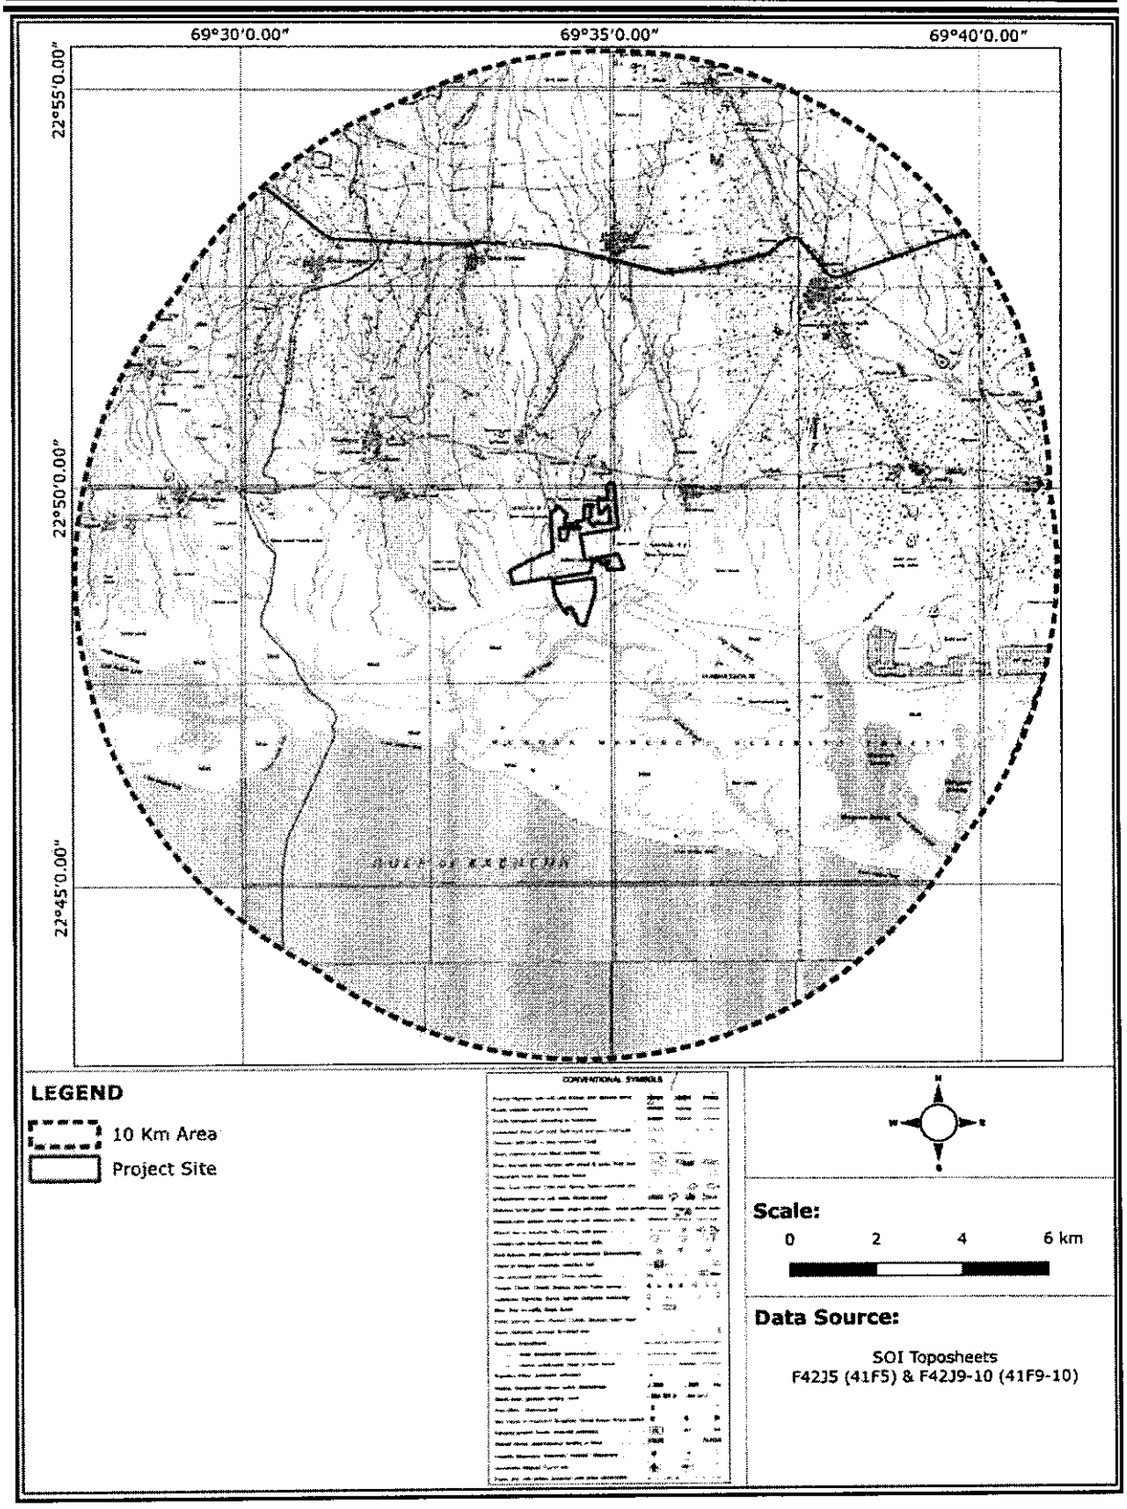

Figure-2. Study Area – 10 km Radius Area of the Project

2357

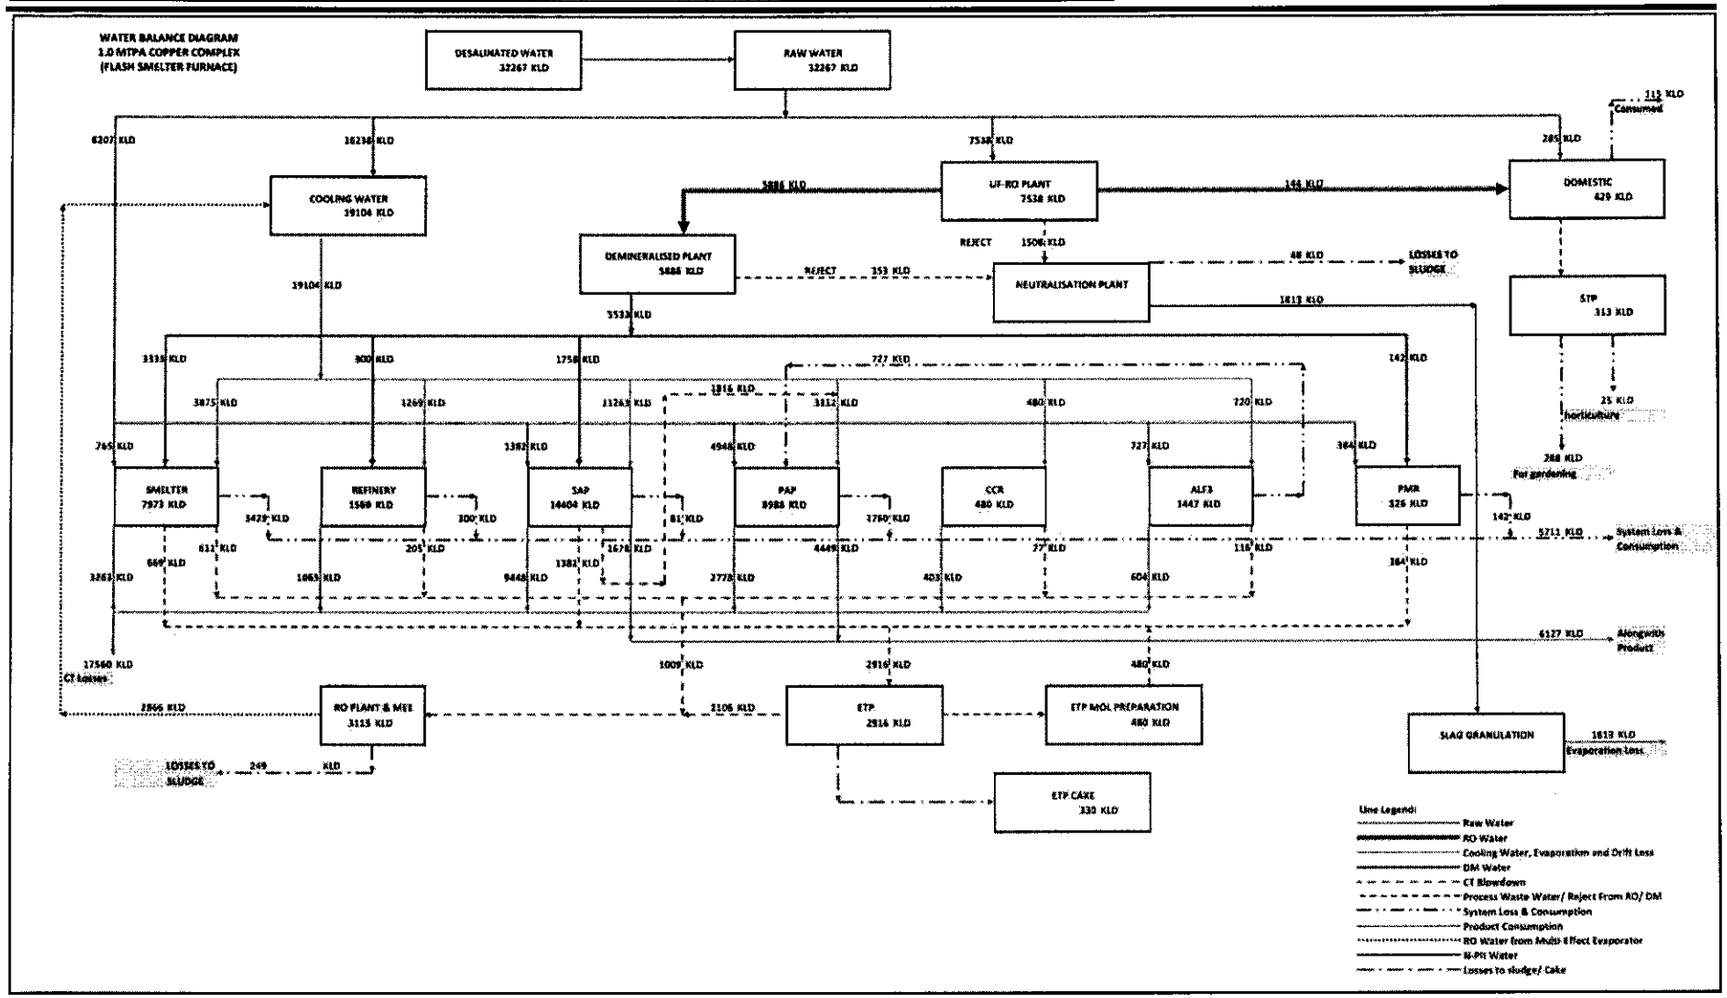

Figure-3. Water Balance – 1 MTPA Copper Plant

1.4 Water Source and Requirement

The total water requirement for the project (phase-I & phase-II) is about 35,496 KLD (35.5 MLD). 32,267 KLD (32.27 MLD) would be sourced from desalination plant of APSEZ Limited and supply through M/s. Mundra Utility Private Limited (MUPL). Balance will be met from treated/blowdown recycled water for greenbelt/cover, lime slurry preparation and reverse osmosis plant and multi effect evaporator. The water allocation letter is enclosed as **Annexure-I**.

An integrated water system is proposed. The effluent from the process units is treated and reused to reduce water demand. It is also proposed to install a secondary Reverse Osmosis (RO) plant to further treat water from the effluent plant facility for effective use. Rejects from the reverse osmosis plant will be sent to Multi Effect Evaporator (MEE) for further recovery and solids generated will be sent to Secured Land Fill (SLF).

Water demand is made up of the following:

- Water for product purpose like sulphuric acid and phosphoric acid;
- Make-up losses for copper slag granulation preparation;
- Make-up losses in the cooling towers and heat exchangers/circuits;
- Steam losses from the steam and power systems; and
- Steam consumed directly in the process etc.

The details of usage of water and water balance are presented in **Table-1** and **Figure-3**.

Table-1. Water Requirement for Copper Refinery Plant

2.0 HYDROLOGY

2.1 Climate

The study area falls in South Kachchh and North Kathiawar Peninsular, which is hot arid Ecological Sub Region (L12Et2) with deep, loamy saline and alkali soils, low Available Water Capacity (AWC) and a Length of Growing Period (LPG) of 60-90 days.

Regional Climate around Bhuj

The climate in Bhuj area is called a desert climate. During the year, there is virtually no rainfall in Bhuj area. The average annual temperature is 26.3°C. The rainfall here averages 358 mm. Bhuj has a borderline hot desert climate just short of hot semi-arid climate. Although annual rainfall "averages" around 330 mm on 14.3 average rainy days, the variability is among the highest in the world with coefficient of variation of around 60%. Recorded annual rainfall has been as low as 21.9 mm in 1899 – yet in 1926 a total of 1,177.1 mm fell and in the incomplete year of 1959 rainfall exceeded 1,160 mm of which 730.6 mm fell during Bhuj's wettest-ever month of July 1959. The heaviest rainfall recorded in 24 hours was 467.9 mm on 15.07.1959.

Apart from the cool mornings of the "winter" season from December to February, temperatures are very warm to sweltering throughout the year, which further reduces the effectiveness of the erratic monsoonal rainfall. During the "hot" season from mid-March to mid-June, temperatures of 40°C are frequent, whilst during the monsoon season they exceed 34°C with high humidity except during rainy spells accompanied by cooler temperatures but oppressive humidity.

Climate around Mundra and Mandvi

The climate around Mundra and Mandvi area is called a desert climate. During the year, there is virtually no rainfall in this area. The average annual rainfall based on IMD data is 432.4 mm on 15 average rainy days. About 94.71% of the rainfall is received during South West monsoon (June-September). The highest average monthly rainfall, 206.92 mm occurs in July contributing 47.85% of the total rainfall.

A review of annual rainfall at Mundra and Mandvi for 124 years between 1879 and 2013 indicate that the average annual rainfall in the area during this period is 415.45 mm. The lowest rainfall recorded at Mundra and Mandvi are 30.80 mm and 2.20 mm respectively during 1987 where as the highest rainfall recorded at Mundra and Mandvi are 1079.60 mm during 1961 and 1193.04 during 1926 respectively. The rainfall pattern in the area during this period shows a standard deviation of 222.01 mm with coefficient of variation of 54.21%.

The annual mean temperature is 26.2°C and monthly mean temperatures range between 10.1°C during January to 38.7°C during May. Summer temperature ranges from 18.3°C in March to 38.7°C in May. December and January are coolest months with temperature ranging from 10.1°C to 26.1°C.

Being arid climatic conditions, air is generally dry except during the monsoon season. However, the relative humidity in the coastal parts of the area is high throughout the year exceeding 60% on the average. During monsoon months, the relative humidity exceeds 80% in the coastal region and over 65% in the interiors of the area. The rest of the year the air is dry with relative humidity to the order of 25% or less. March and April months are the driest months.

The prevailing wind direction in the study area is south-westerly during summer and monsoon seasons and north-easterly during winter season. The mean wind speed ranges from 5.9 to 13 kmph during winter months and 26 to 36.9 kmph during monsoon months. During the months of April-May, the mean wind speed is around 17.5 to 23.8 kmph.

Meteorological data of Mundra and Mandvi from IMD, Bhuj is presented in **Table-2** and graphical representation is made in **Figure-4a&4b**.

Table-2.Meteorological Data of Mundra and Mandvi - IMD, Bhuj

Month	Temperature (^{0}C) (Max-Min)		Humidity (%) (Max-Min)		Mean Total Rainfall (mm)		Wind Speed (km/hr)

Figure-4a.Climate Graph – Mundra

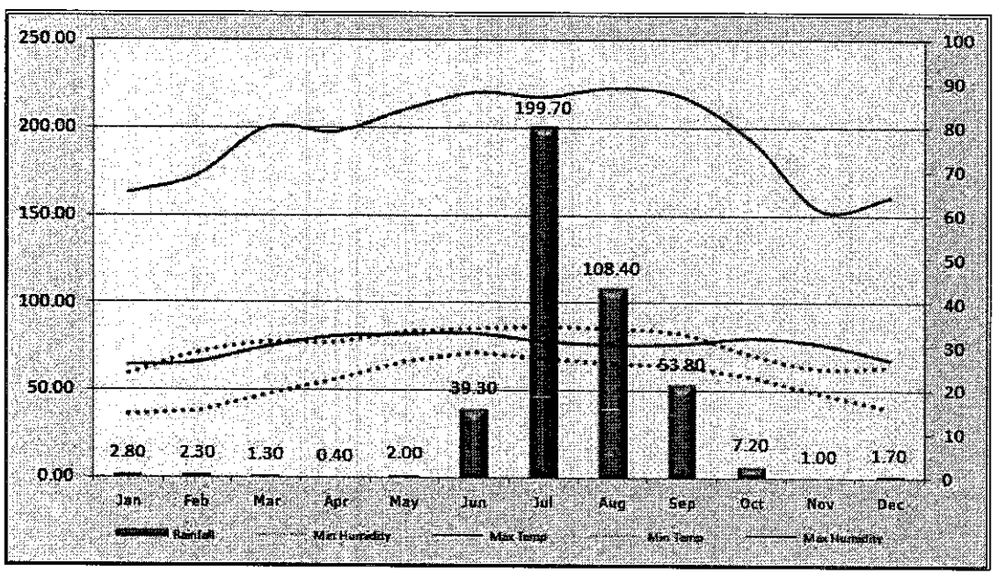

Figure-4b.Climate Graph – Mandvi

2.2 Physiography and Drainage

2.2.1 Physiography

Physiographically, Kachchh district can be divided into:

a) Central high land and the upland in the Rann area;
b) Central plain in the southern part;
c) Little and Great Rann areas; and
d) Banni plains.

The study area forms part of central plain with fringes of ridges in the northern part around Gelada.The study area is fairly flat with growth of prosopisjuliflora. The highest elevation and lowest topographic elevations of the area are around 65.00 m(in the northern part west of Gelada) and 0.00 m above mean sea level (amsl) along coast line. The general slope in the study area is towards south towards Gulf of Kachchh. Elevation in the project site ranges from 3.0 m amsl in the south 9.0 m amsl in the north with general slope towards south into Gulf of Kachchh.

Danderi RF NW of project site, Siracha RF in the western part of project site, Navinal RF towards east of project site, Dhrab RF in the east (south of Dhrab) and Mundra Mangrove RF along Baradi Mata Creek are the forest covers in the study area.

2.2.2 Drainage

According to River Basin Atlas of India, Ministry of Water Resources, the study area forms part of B20RAN14, 15 & 16 watersheds in Rann Sub-basin of West Flowing Rivers of Kutch and Saurashtra including Luni Basin.

The drainage of the study area is largely governed by the combination of lithology and tectonics however, the influence of sea level fluctuations during Quarternary period is also obvious. Khari nadi (1.9 km, W), Danesri Nadi (in the western part), Nagavantinadi(4.7 km, E) and Phot nadi(8.7 km, ENE) are the streams in the study area flowing southwards into Arabian Sea, the Gulf of Kachchh. The drainage network in the study area is generally dendritic to sub-parallel and controlled by these streams. These streams are seasonal and rarely seen in flowing condition only during peak rainfall events. The study area is having a drainage density of 1.27 km/sq km. There are a few small to medium ponds/tanks spread over the entire study area and a number of check dams were constructed on stream courses.

Kotdi creek towards south of project site and Boradi Mata creek towards southeast of project site are the major creeks in the study area. Arabian Sea, the Gulf of Kachchh is in the southern part occupying 18% of the study area. Physiography and drainage network in the study area is presented in **Figure-5**.

Danesri Nadi , a seasonal stream passes through western part of the project site.Danesri Nadi originates from north of study area (3.80 km from study area) and has a catchment area of 3.75 sq km from railway line near project site. Stream flow only for a few hours after peak rainfall events is reported in this stream at Siracha, 1.5 km NW of project site. Danesri Nadi merges into Kotdi creek area after railway crossing near project site and after this point, it has more of tidal/backwater influence than run-off from rainfall.Since no flow data is available for Danesri Nadi , a tentative estimate of run-off from Danesri Nadi catchment and discharge at railway line near project site is done based on the catchment characteristics.

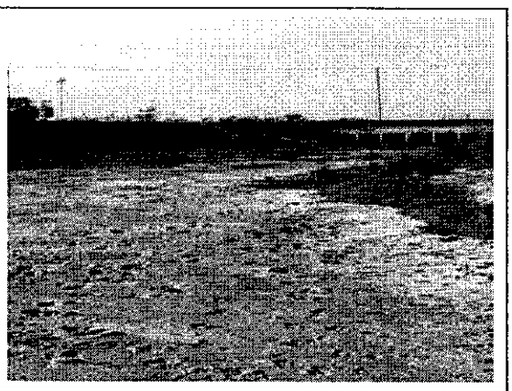
The run-off values calculated for different land uses in the catchment area are presented in **Table-3**. The annual volume of surface run-off available from the catchment area is

estimated at 5.33 MCM while the volume of water available during southwest monsoon period is 5.05 MCM.

Table-3. Annual and Monsoon Run-off from Danesri Nadi Catchment

Sr.No.	Land Use	Area (sq.km)	Run-off Coefficient	Annual Rainfall (m)	Annual Run-off (MCM)	Monsoon Rainfall (m)	Monsoon Run-off (MCM)
1	Residential Land	0.68	0.50	0.432	0.15	0.410	0.14
2	Industrial Land	0.45	0.70	0.432	0.14	0.410	0.13
3	Barren Land	0.15	0.70	0.432	0.05	0.410	0.04
4	Forest Land	0.76	0.20	0.432	0.07	0.410	0.06
5	Scrub Land	5.33	0.25	0.432	0.58	0.410	0.55
6	Cultivated Land	29.99	0.30	0.432	3.89	0.410	3.68
7	Water Body	1.20	0.90	0.432	0.47	0.410	0.44
Total/average		**38.57**	**0.51**	**0.432**	**5.33**	**0.410**	**5.05**

Danesri Nadi discharge at railway crossing near project site is estimated using Rational Formula considering maximum one day rainfall of 129 mm for Mundra area. In the absence of short duration rainfall data, India Meteorological Department (IMD) empirical reduction formula has been used for estimation of 1 hour rainfall (44.72 mm/hr). Danesri Nadi peak discharge at railway crossing near project site is estimated at 256.83 cumecs which will occur only for few hours after peak rain events of magnitude mentioned above.



Rational Formula as applicable for catchments <50 sq km: Qp = 1/36(KPcA)

where Qp = Discharge in Cumecs
K = Run-off Coefficient
Pc = Critical rainfall intensity in cm/hr
A = Catchment area in ha

Qp = 1/36(0.536 x 44.72 x 3875)
= 256.83 cumecs

Figure-6. Geomorphology of the Study Area

Note: The older tidal flat deposits are currently inactive or no tidal activity at present in the older tidal flat deposits. Part of this area around Tragadi, Siracha, Navinal, Dhrab and Jarpara has been converted into agriculture and/plantations.

3.0 GEOLOGY

3.1 Geomorphology

Geomorphological features on earth surface craft by various geomorphic processes such as erosional, depositional, tectonic etc. Geomorphological characteristics of the region facilitate important hydrologic processes like surface run-off and infiltration. Geomorphology map of the study area has been prepared based on Geomorphology Theme (2005-06), Bhuvan, National Remote Sensing Center (NRSC) with landforms classified at Level-2 and is presented in **Figure-6**.

Geomorphologically, the study area can be divided into:

- Denudational origin
  - Pediment-Pediplain complex
- Fluvial origin
  - Younger Alluvial plain
- Coastal origin
  - Older Coastal plain
  - Younger Coastal plain
- Anthropogenic origin
  - Anthropogenic terrain
- Water bodies

The geomorphological boundaries in the study area run W-E following the coast line trend.

Pediment occurs as gently sloping rocky surface covered intermittently with weathered debris, residual gravel, wind-blown and sheet wash sand/silt deposits of variable thickness (Twidale, 1978b). Pediplain is an extensive plain formed by the coalescence of pediments. Pediment-Pediplain complex occurrence in the study area is mainly in the form of pediplain covering central to northern part.

Alluvial Plainis a largely flat landform created by the deposition of sediment over a long period of time by one or more rivers coming from highland regions, from which alluvial soil forms. Alluvial plains of the study area are compositionally sand dominant and occur along Danesri and Nagavantinadis in the northern part.

Coastal Plain is flat, low-lying land adjacent to a sea coast. Older coastal plain extends E-W from Bhadia Nana and Jarpara between pediplain and younger coastal plain. Younger coastal plain extends E-W between younger coastal plain and Gulf of Kachchh. Proposed project site, Adani Power & other industrial set-ups in APSEZ area are located on older coastal plain.

Anthropogenic Terrain is a landform created due to human intervention. Reclaimed lands for industrial set-ups in younger coastal plain of the study area are shown as anthropogenic terrain.

3.2 Regional Geology

The Katchchch district comprises lithounits of the Mesozoic sediments, the Deccan Volcanics, the Palaeogene and Neogene sediments of Tertiary age and the Quarternary sediments.

The Mesozoic sediments, represented by the Pachchham, the Chari, the Katrol and the Bhuj Formations, comprise mainly conglomerate, sandstone, shale, siltstone, clay, limestone, marl, etc. Various vertebrate, including dinosaurian remains (near Ler and Anjar) and footprints (near Fategarh) and invertebrate fauna and flora of Gondwana affinity are present in these sediments.

Alkaline intrusive, basaltic flows, basaltic/doleritic and olivine gabbro intrusive and andesitic trachyte represent the Deccan Volcanics. The basaltic flows, are also associated with inter-trappean horizons containing dinosaurian remains.

The Deccan Volcanics are unconformably overlain by the lateritic horizons of the Matanomadh Formation and the sedimentary rocks belonging to the Kakdinadi, the Fulra, the Maniyara Fort, the Khari Nadi, the Gaj and the Sandhan Formations. These sediments are fossilliferous and include limestone, shale, siltstone, marl, sandstone, conglomerate, etc.

The Pleistocene sediments include coarse clastics of the Kothara Formation and predominantly calcareous rocks of the Miliolite Formation.

The youngest sediments belong to the Holocene period and are represented by the Rann Clay and MahuvaFormatios (marine), Rann Formation (fluvio-marine), Katrol and Varahi Formations (fluvial) and Jantral Formation (Aeolian).

The regional stratigraphic succession based on Geological Survey of India (GSI) publication, 2000 is given in **Table-4**.

Table-4. Regional Stratigraphic Succession

Lithology	Formation	Group/Series	Age
Younger tidal flat and marsh deposits	Mahuva Formation (ME)		
Older tidal flat and marsh deposits	Rann Clay Formation (ME)		
Rann clay and mud deposits	Rann Formation (FME)		Holocene
Younger flood plain, channel-fill and deltaic deposits	Varahi Formation (FE)		
Older flood plain and channel-fill deposits	Katpur Formation (FE)		
Unstabilized sand sheet and sand dune deposits	Jantral Formation (AE)		

Lithology	Formation	Group/Series	Age
Miliolite limestone, shell limestone, calcareous sandstone, pebbly limestone and conglomerate	Miliolite Formation	Porbander Group	Lower Pleistocene
Pebbly sandstone, conglomerate gravel and sand	Kothara Formation		Lower Pleistocene
Micaceous sandstone, mottled clay, siltstone, conglomerate and calcareous clay and marl	Sandhan Formation		Pliocene
Shale interbedded with fossilliferous marl	Gaj Formation		Lower to Middle Miocene
Variegated siltstone and gypseous claystone	Khari Nadi Formation		Upper Oligocene to Lower Miocene
Calcareous and gypseous claystone/siltstone, clay, coral limestone and sandstone	Maniyara Fort Formation		Middle to Upper Oligocene
Foraminiferal limestone, glauconitic shale and clay	Fulra Formation		Middle Eocene
Gypseous, lignite-bearing shale, fossilliferous nodular limestone and clay, ferruginous shale and clay with intercalated marl	KakdiNadi Formation		Lower Eocene
Laterite, sandstone, conglomerate and bentonitic and kaolinitic clay	Matanomadh Formation		Palaeocene
Andesitic trachyte	Extrusive	Deccan Volcanics	Upper Cretaceous to Eocene
Olivine gabbro	Intrusive		
a. Basalt and dolerite dyke, b. Plug and sill			
Basalt flows with inter-trappean sediments	Extrusive		
a. Alkali gabbro, b. Alakali basalt			
Gluconitic and burrowed sandstone, siltstone, shale, limestone, marl, conglomerate, ironstone and clay with marine and plant fossil	Bhuj Formation		Cretaceous
Shale, fossilliferous sandstone, marl and conglomerate	Katrol Formation		Upper Jurrasic to Lower Cretaceous
Gypseous shale, siltstone and conglomerate with phosphatic nodule, colitic limestone	Chari Formation		Middle to Upper Jurassic
Gypseous shale, siltstone, limestone, sandstone and conglomerate	Pachchham Formation		Middle Jurassic

(Source: GSI Publication, 2000)

3.3 Geology of the Study Area

Of the total study area of 413.68 sq km, 75.67 sq km (18.29%) of the southern part is covered by Arabian Sea, the Gulf of Kachchh. Remaining study area is entirely occupied by Holocene/Quarternary sediments with surface lithological boundaries running almost parallel to coast line (E-W).

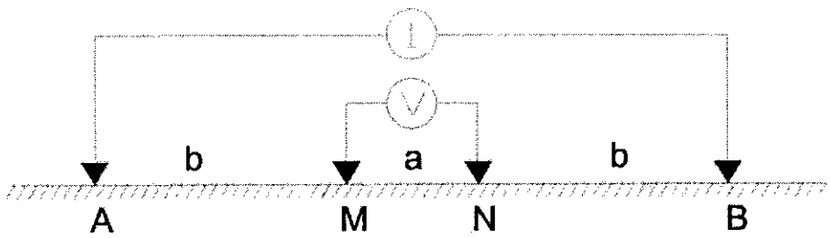
Holocene sediments of the study area comprises of younger and older tidal flat and marsh deposits of Mhuva and Rann Clay Formations respectively from sea towards inland and younger flood plain, channel-fill and deltaic deposits from tidal flats towards inland. The tidal flat and marsh deposits occupy 41.31% of the study area covering170.88 sq km. Flood plains belonging to Varahi Formation extend from central to northern part of the study area covering 161.48 sq km (39.03%). Coastal region also have aeolian sands deposited under strong wind action from gulf occupying a small area 5.65 sq km (1.37%).

Recent flood plain sediments are deposited by rivers flowing southerly and ultimately meet to Gulf of Kachchh in south. Alluvium sediments composed of sand, gravel, beachsand, dunal sand and tidal mud. The thickness of alluvium is observed to be 2.0 m in the north to 18.0 m. The recent sediments are well exposed in cliff sections of Danesri, Nagavanti and Phot nadis. Alluvium is highly porous in nature and is a good aquifer of coastal region.

Geology of the study area based on GSI publication, 2000 is presented in **Figure-7**.

3.4 Sub-Surface Lithology and Resistivities in the Study Area

3.4.1 Sub-Surface Lithology



Sub-surface lithological information collected from the local tube well driller for two tube well locations in Bhujpur and Siracha is presented in the form of lithologs in **Figure-8**.Top soil at these locations is reported to be around 2.00 m followed by alluvium extending up to 15.00 m. At Bhujpur, alluvium is underlain by compact sandstone and disintegrated sandstone occurring as alternate layers up to 182.00 m with lateritic gravel between 61.00 m and 76.00 m. Disintegrated/fractured sandstone from 122.00 m to the bottom of the well is water yielding acting as aquifer. At Siracha, alluvium is followed by calcareous kankar up to a depth of 30.00 m. Below this, compact sandstone and disintegrated sandstone occur as alternate layers up to 122.00 m. Disintegrated/fractured sandstone from 107.00 m to the bottom of the well is water yielding and acting as aquifer.

3.4.2 Sub-Surface Resistivities

Application of geophysical methods will help us to identify the nature and thickness of sub-surface formation by studying the variation of their physical properties through the measurements made at the surface. Several surface geophysical methods are deployed to reach the purpose. All these methods rely upon the principle that each lithological assemblage has independent physical properties and identification of these properties helps to recognize the formation. One such property easily detectable is its electrical character for the passage of known strength of current. These testing methods are applied for arriving information on sub-surface lithological data and vertical layering of water structure in the surveyed area.

In geo-electrical methods, the centre of the configuration (O) is kept at fixed location and measurements are made by successively increasing electrode spacing. In this, current is sent into the ground through a pair of electrodes called current electrodes and resulting potential difference across the ground is measures with the help of another pair of electrodes called potential electrodes. The ratio between the potential difference (ΔV) and current (I) gives the resistance (R), which depends on the electrode arrangement and on the resistivity of the sub-surface formations. The apparent resistivity values obtained with increasing values of electrode separations are used to estimate the thickness and resistivity of the sub-surface formations. The plot between apparent resistivity values obtained with increasing values of electrode separations and corresponding current electrodes separation from the centre is used for analysis of thickness and true resistivity of the sub-surface formations.

There are two popular surface electrical methods in geophysical investigations namely Schlumberger and Werner configurations. The Schlumberger method of Electrical Resistivity Test (ERT) was used in the present study with the help of a DC resistivity meter - DDR-3 of IGIS, Hyderabad. In Schlumberger configuration, all the four electrodes (A, B, M and N) are kept in a line. The outer electrode spacing (b) is kept large, compared to the inner electrode spacing (a), usually more than 5 times. Field resistance values will be obtained at every change of electrode spacing for calculating apparent resistivity values. The disposition of electrodes for Schlumberger configuration is shown in below picture and the apparent resistivity ρ_a for a specified configuration is computed with below mentioned formula.

Schlumberger Configuration

Apparent Resistivity $\rho_a = \pi kR$

where, 'k' is the constant = $\pi/a(AB/2^2-MN/2^2)$
'AB' is current electrode spacing and
'MN' is potential electrode spacing
$R = \Delta V/I$

For obtaining the thickness and true resistivity of sub-surface lightological units within the study area, Electrical Resistivity Tests (ERTs) were conducted at 15 different locations following Schlumberger configuration with a maximum AB/2 separation of 100.5 m. The DC resistivity meter model DDR-3 of IGIS, Hyderabad make is used in the present geophysical investigations.Locations for conducting ERTs were selected considering topography & space to run electrodes up to 100 m on either side, site conditions including surface moisture etc.

Out of these, 2 ERT locations were within the project site and rest are spread in the study area. These locations are designated as ERT1 to ERT15 and shown in **Figure-7**.

At ERT1, 2, 5, 6, 7, 10, 12, 13, 14 and 15, field data could not be captured for the complete AB/2 separation of 100.5 m even after several attempts and the data capture at these locations ranged from 21.0 m to 59.0 m. The following reasons may be attributed for not capturing data beyond mentioned AB/2 separation at these locations:

- The layers present below respective depths having very low resistivity values <1Ωm
- The layers are highly altered or highly brackish or saline

The resistivity data obtained is interpreted in terms of physical parameters viz., resistivity and thickness of the formations. In the present study, Inverse Slope method of interpretation is used to interpret the data acquired from the field. Resistivity and thickness of each layer at 15 locations are presented in **Table-5**.

Resistivities of different lighological units in the study area range from <1 Ωm to >300 Ωm.ERT1 and 2 are located in project site lying on older tidal flat and marsh deposit with resistivities ranging from <1.0 Ωmto 5.0 m. The resistivity at these locations decreases to <1.0 Ωm with depth indicating saline nature. The other sub-surface lithological units in the study area represent alluvium of fluvial origin, laterite as capping and extending as lens into sandstone and sandstone with resistivities ranging between 5.0 Ωm to >300 Ωm. At ERT5, 6, 7, 10, 12, 13, 14 and 15 also, resistivity below 21.0 m to 59.0 m is very low <1.0 Ωm indicating formation salinity.

A review of soil analysis results indicate that the soils in the proposed project site are of clay loam type with slow permeability, high water holding capacity, 1.1 g/cc of bulk density and saline in nature. The project proponent is advised to take up detailed geo-technical investigations to further gaining an engineering decision on foundation and construction of buildings.

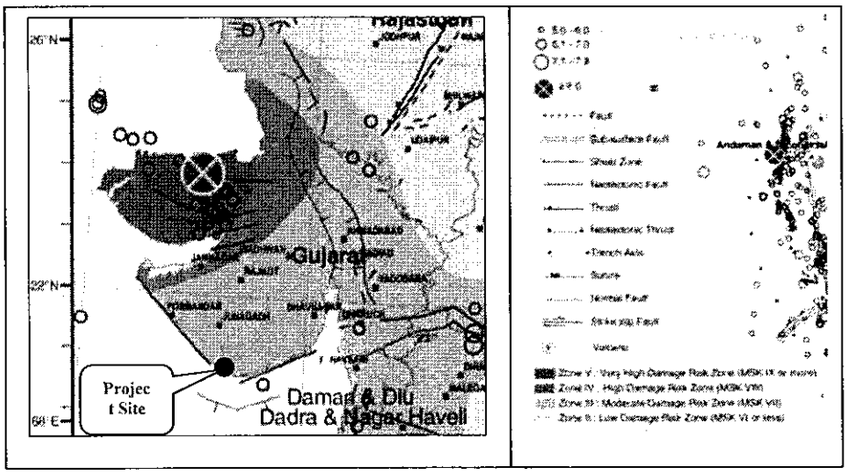
3.5 Tectonic Setup and Lineaments/Faults

The Kachchh district lies 3-400 km from the plate boundary between the Indian Plate and the Eurasian Plate, but the current tectonics is still governed by the effects of the continuing continental collision along this boundary. During the break-up of Gondwana in the Jurassic, this area was affected by rifting with a roughly west-east trend. During the collision with Eurasia the area has undergone shortening, involving both reactivation of the original rift faults and development of new low-angle thrust faults. The related folding has formed a series of ranges, particularly in central Kachchh.

Kachchh geological province, Gujarat is often referred to as "Kachchh Basin", "Kachchh Rift Basin" or "KachchhAulacogen", in tune with the usage by workers involved in the exploration of oil in the terrain. The Kachchh basin is bounded between the Nagar Parkar Fault (NPF) in the north and North Kathiawar Fault towards south.

(Source: Current Science, Vol 112, No.5, 10 Mar 2017)

The study area form part of Kachchh Basin and does not show any major tectonic evidences except few geomorphic lineaments parallel to drainage courses and a minor fault of structural origin in the SE (**Figure-7**). The nearest major fault is North Kathiawar Fault (NPF) towards south.



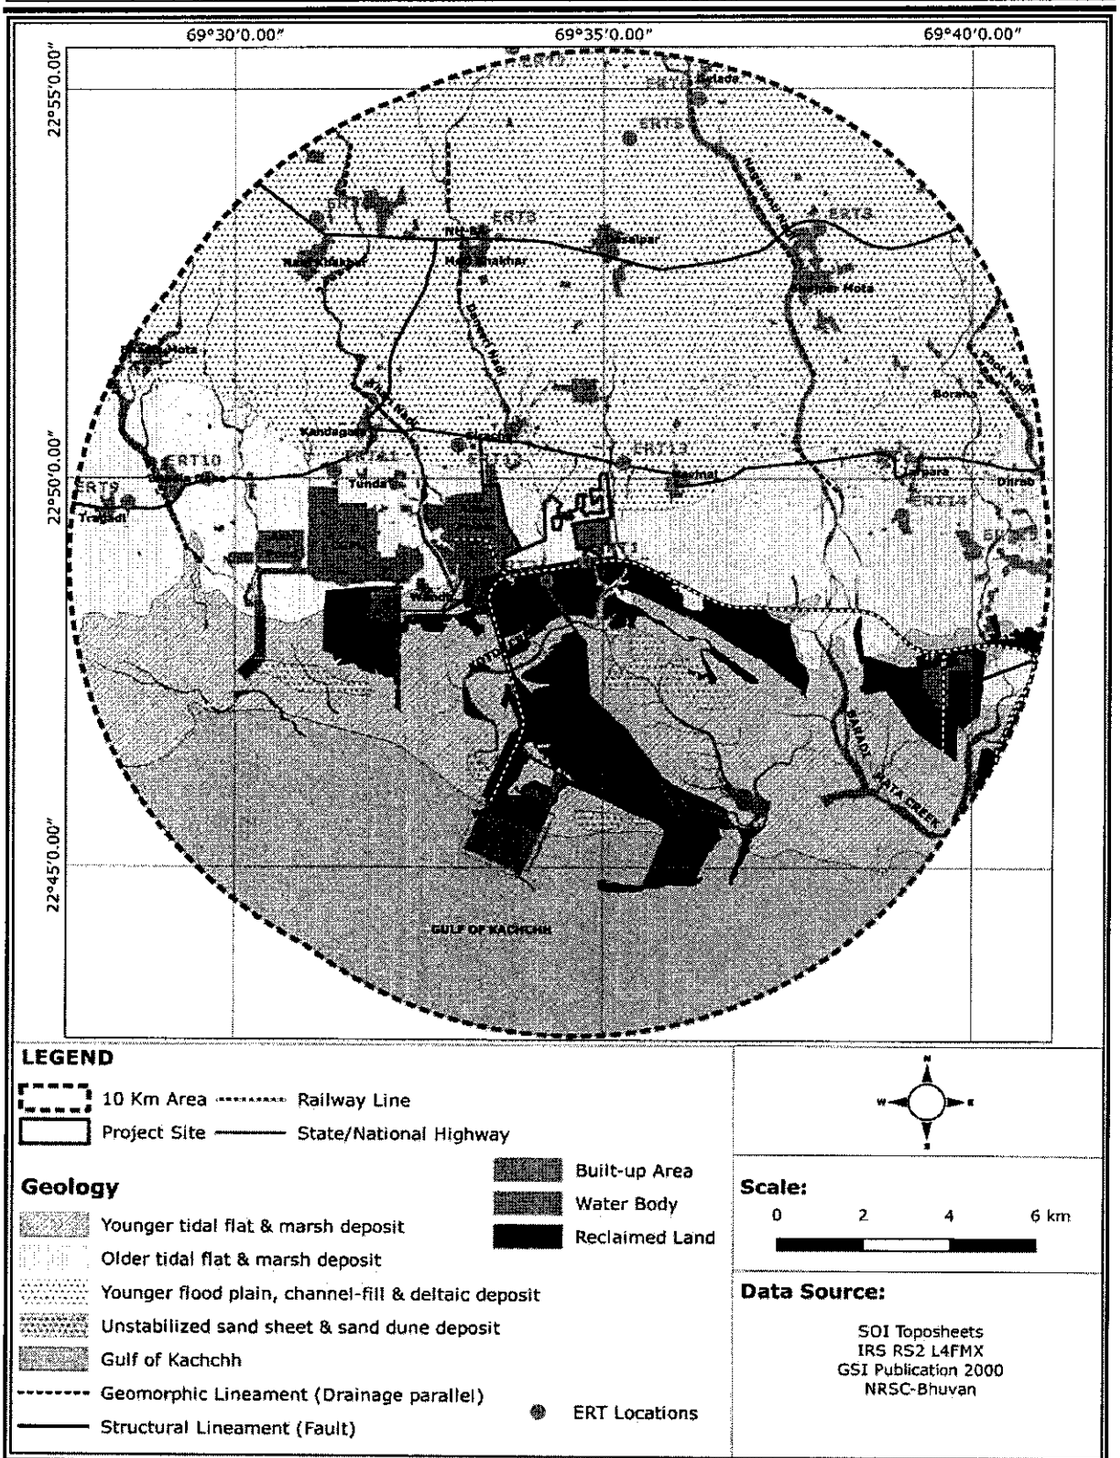
3.6 Earthquakes

The Indian subcontinent has a history of devastating earthquakes. The major reason for the high frequency and intensity of the earthquakes is that the Indian plate is driving into Asia at a rate of approximately 47 mm/year. Geographical statistics of India show that almost 54% of the land is vulnerable to earthquakes. The latest version seismic zoning map of India given in the earthquake resistant design code of India (IS 193 (Part 2) 2002) assigns four levels seismicity for India in terms of zone factors. In other words, the earthquake zoning map of India divides India into 4 seismic zones (Zone 2, 3, 4 and 5) unlike its previous version, which consisted of five or six zones for the country. According to the present zoning map, Zone 5 expects the highest level seismicity whereas Zone 2 is associated with the lowest level of seismicity. The MSK (Medvedev-Sponheuer-Karnik) intensity broadly associated with the various seismic zones is VI (or less), VII, VIII and IX (and above) for Zone 2, 3, 4 and 5 respectively, corresponding to Maximum Considered Earthquake (MCE). Each zone indicates the effects of an earthquake at a particular place based on the observations of the affected areas and can also be described using a descriptive scale like Modified Mecalli Intensity Scale or the Medvedev-Sponheuer-KarnikSclae.

Earthquake risk is very high in Gujarat and the state has suffered major earthquakes in 1819, 1845, 1847, 1848, 1864, 1903, 1938, 1956 and 2001 (9 times in past 200 years). The 2001 Kachchh earthquake also known as Bhuj earthquake was the third largest and second most

destructive earthquake in India over the last two centuries. The epicentre was about 9 km south-southwest of the village Chobari in Bachau taluka of Kachchh district. The intraplate earthquake reached 7.7 on the moment magnitude scale.

As per Earthquake Hazard Map of India, Building Material and Technology Promotion Council (BMTPC) prepared based on digitized data of SOI, GOI; Seismic Zones of India Map IS:1893-2002, BIS, GOI; Seismotectonic Atlas of India and its Environs, GSI, GOI, the study area falls in Very High Damage Risk Zone – Zone V (MSK IX or more).



In order to provide a guiding framework to undertake mitigation investments and activities, Gujarat State Disaster Management Authority (GSDMA) initiated a study for preparation of a Composite Hazard Risk & Vulnerability Atlas for the state covering six natural and man-made hazards and the physical, social and economic vulnerability of its people, asses and economy at taluka level. The estimated mean taluka Peak Ground Acceleration (PGA in g) zonation with event magnitude for a 100 year return period is presented in **Figure-9**. This zonation would typically be used for the design of critical buildings that need to have a mean design service life of 100 years.

The cities of Ahmedabad, Baruch, Rajkot and Bhavnagar fall into the severe intensity zone, while Bhuj and Jamnagar fall in the very severe intensity zone over this time frame. The project site is located in unclassified zone covering Little and Great Rann of Kachchh including Mundra coastal area, but close to very severe intensity zone.

Figure-9. Gujarat Earthquake Zonation: 100 Year Return Period

4.0 HYDROGEOLOGY

Hydrogeology is the area of geology that deals with the distribution and movement of ground water in the soil and rocks of earth's crust commonly in aquifers. The hydrogeological studies have been carried out in the area to understand the local geology, geo-morphological features, drainage network, aquifer characteristics and yield of water. Accordingly various components controlling the hydrogeological regime of the study area have been studied. Hydrogeological investigations were carried out in the area between 06.02.2019 and 08.02.2019. Hydrogeology of the study area is presented in **Figure-10**.

4.1 Nature of Occurrence of Ground Water

Ground water systems are a result of the complex combination of different lithological and structural types within an area that together constitute an aquifer within which ground water accumulates and moves. Rather than describing individual lithologies and their tendencies to form aquifers or otherwise, it is useful to describe the ground water as **one continuous across** various lithological types (Kulkarni and Deolankar, 1995).

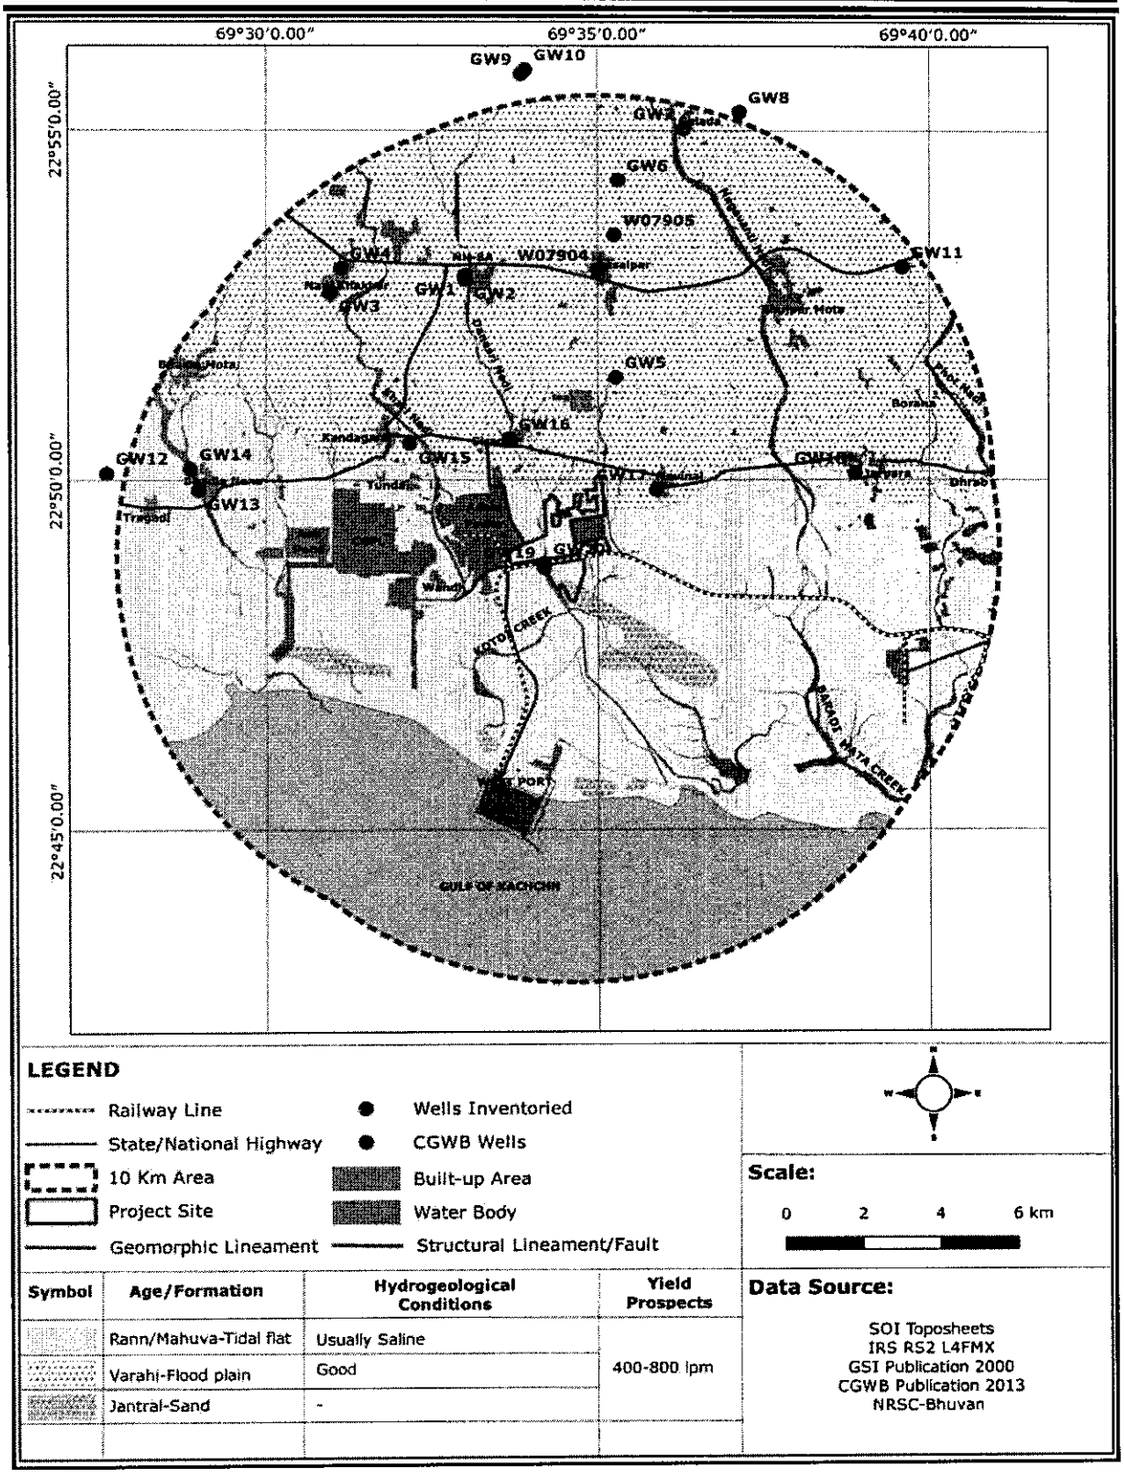
Of the total study area of 413.68 sq km, 75.67 sq km (18.29%) of the southern part is covered by Arabian Sea, the Gulf of Kachchh. Remaining study area is entirely occupied by Holocene/Quarternary sediments with surface lithological boundaries running almost parallel to coast line (E-W).

Holocene sediments of the study area comprises of younger and older tidal flat and marsh deposits of Mhuva and Rann Clay Formations respectively from sea towards inland and younger flood plain, channel-fill and deltaic deposits from tidal flats towards inland.

The thickness of alluvium is observed to be 2.0 m in the north to 18.0 m and tidal flat and marsh deposits are more than 20 m in thickness. The alluvium is underlain by sandstone of Sandhan Formation and laterite at places. Sandstone forms productive aquifer at places. The alluvium yields small quantities of brackish water to shallow wells.

4.2 Wells, Water Levels and Yields

Ground water in the study area is developed through shallow dug wells and tube wells for domestic, irrigation and industrial purpose. Dug wells are mainly seen along and in the stream courses and near water bodies/check dams. With the increase of tube wells in the area and lowering of water table, most of the dug wells are abandoned. Only a few dug wells near water bodies/check dams have water during the field visit. Depth of dug wells inventoried range from 7.58 m to 16.90 m below ground level (bgl) and of tube wells range from 54.86 m to 137.16 m bgl. Depth of tube wells in the study area range from 30.00 m to 180.00 m bgl with a diameter of 12". 46% of the dug wells inventoried are dry during the field visit. Of the total dug wells inventoried only two wells are being used for domestic purpose and rest of the wellsare not being used. Tube wells are used for both domestic in the villages and for agriculture in the fields installing 3.5 HP to 20 HP submersible pumps.



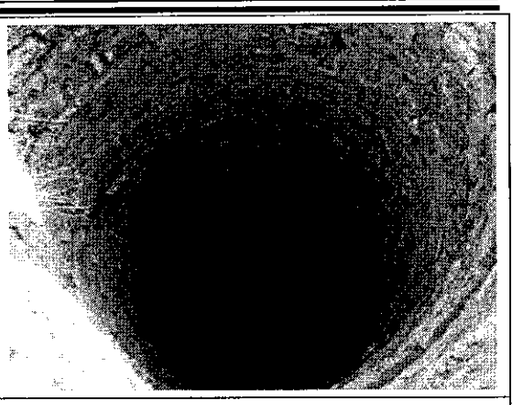


Figure-10. Hydrogeology of the Study Area

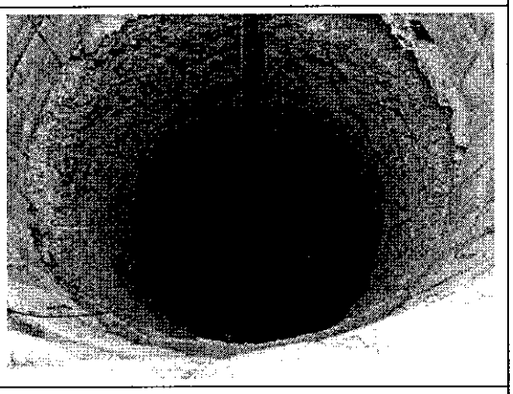

Note: The older tidal flat deposits are currently inactive or no tidal activity at present in the older tidal flat deposits. Major portion of this is turned to be waste land mainly with prosopis/thorny shrub and existing industrial set-ups in Adani SEZ are located in this area. Part of this area around Tragadi, Siracha, Navinal, Dhrab and Jarpara has been converted into agriculture land/plantations.

Well with Water near a Check dam, Depa

Tube well for Agriculture, Gelada

Village Water Supply Well, Nana Bhadiya

4.3 Movement of Ground Water

Ground water movement mainly takes place through the fractures and joints of the crystalline rocks and the ground water is transmitted through voids and interstitial openings in sedimentary rocks and unconsolidated formations. In other words, movement of ground water is controlled by the hydraulic conductivity of the aquifer and hydraulic gradient.

Based on the water level data during field visit, ground water level contour map has been prepared for February 2019 considering water levels reduced to mean sea level and presented in **Figure-11**. The reduced water levels in the study area range from 41.00 m

Water levels during field visit are recorded measuring depth to standing water and post monsoon water levels are recorded up to the moisture indication in the dug wells. Pre monsoon water levels are recorded through interaction with well owner or local person available at the site. The depth to water level in dug wells during field visit (2nd week of February 2019) ranges from 7.85 m to 16.12 m bglwhere as the depth to water level in tube wells ranges from 2.00 m bgl in Adani peizometers near project site to 44.38 m bgl in an agricultural well near Gelada. Of the total dug wells inventoried, all wells except three in Depa and Navinal are reported to go dry during summer. Pre monsoon water levels in the three wells range from 10.00 m to 14.20 m bgl. The depth to water level in dug wells during post monsoon ranges from 3.25 m bgl in Depa to 9.80 m bgl in NaniKhakhar. The average water levels in dug wells during field visit, pre and post monsoon are 12.42 m, 12.13 m and 6.23 m bgl respectively with a water level fluctuation of 7.15 m. Well inventory data is furnished in **Table-6**.

Two to 10 tube wells for domestic use and village water supply and 50 to 300 tube wells for agriculture purpose are reported to be drilled in each village depending on village size and about 30% of these were reported as low or no yielding. Yields from tube wells in the study area range from <75 m^3/day (<1 lps) to around 2000 m^3/day (around 20 lps).

There were two dug wells in Deshalpur under CGWB water level monitoring network (Well Code: W07904 & W07905) and these wells were monitored till 2001. Pre and post monsoon average water levels in these wells between 1996 and 2001 are17.13 m and 0.52 m respectively. Water level monitoring data of these wells is presented hereunder:

SITE_NAME	SITE_TYPE	WLCODE	YEAR_OBS	MONSOON	POMRB	POMKH	PREMON

POMKH: Post Monsoon Kharif **PREMON:** Pre Monsoon

above mean sea level (amsl) in the north to -22.00 m below mean sea level (bmsl) between BhadiaMota and Bhadia Nana in the west. General ground water flow direction in major part of the study area is towards Gulf of Kachchh with depressions of deeper levels below mean sea level between BhadiaMota and Bhadia Nana, around Navinal and east of BhujparMota. These ground water depressions indicate either ground water pumping in these areas is heavy and/or piezometric head of the aquifer is not reaching the general water table.

Reduced water levels <0 around BhadiaMota, Bhadia Nana, Tragadi, CGPL and Wandh in the west and to the east of BhujparMota in the northeast indicate that ground water movement is towards inland encouraging sea water intrusion. The hydraulic gradient in the study area ranges from 3.33 m/km towards project site from upstream to 6.26 m/km in the northeast.

Figure-11. Water Level Contours – February 2019

4.4 Aquifer Characteristics

Ground water is stored in the open spaces and fractures within geologic material such as soil, sand and rock that occur beneath the land surface. Aquifers are the geologic layers that are filled with water and that can transmit enough water to supply a well under normal hydraulic gradients.

Pumping tests are conducted to determine the performance characteristics of a well and to determine the hydraulic properties of the aquifer such as permeability/hydraulic conductivity, transmissivity and storage coefficient. Permeability is the ease with which water can flow in a soil mass or a rock. These properties determine how easily water moves through the aquifer, how much water is stored, and how efficiently it produces water. During an aquifer test, the hydraulic head in the aquifer declines as the time of pumping increases. Analysis of hydraulic head decline, or drawdown, allows for the estimation of aquifer hydraulic properties. There are many pumping test solution methods but most commonly used for different aquifers and conditions have some general assumptions: a) aquifer extends radially and infinitely, b) single pumping well, c) fully penetrating well (except for Neuman method).

A medium duration test was conducted on a bore well in Navinal on 07.02.2019 and corresponding drawdown measurements were done on the pumping well. The bore well is 91.44 m deep with a discharge of 4.2 lps. The pump test was conducted for 300 minutes till steady state condition was achieved. After stopping the pump, recovery was continued for 100 minutes. In the absence of observation well, interpretation of single well tests with Cooper-Jacob straight line method remains more reasonable than most alternatives. The aquifer parameters were determined using Cooper-Jacob straight line method for pumping and Theis Recovery method for recovery data.

Pumping and recovery data are presented in **Table-7** and **Table-8** respectively and flows are shown in **Figure-12**. The results of pumping and recovery analysis are presented in **Table-9**.The average transmissivity is found as 54.75 m^2/day while storage coefficient is 8.93E-03 and hydraulic conductivity is found as 5.475 m/day. Aquifer characteristics in the region as summarized from different studies are presented in **Table-10**.

5.0 GROUND WATER RESOURCES

5.1 Ground Water Recharge

Ground water recharge or deep drainage or deep percolation is a hydraulic process where water moves downward from surface water to ground water. Recharge is the primary method through which water enters an aquifer. This process usually occurs in the vadose zone below plant roots and is often expressed as a flux to the water table surface. Recharge occurs both naturally through the water cycle (rainfall) and through anthropogenic processes (artificial ground water recharge), where rain water and or reclaimed water is routed to the sub-surface. Most of the rainfall flows downstream as run-off and the amount of rainfall reaching ground water naturally after meeting evaporation and evapo-transpiration losses is very limited. The anthropogenic processes of ground water recharge in the study area include return flow from irrigation, check dams etc.

Of the total study area of 413.68 sq km, 75.67 sq km (18.29%) of the southern part is covered by Arabian Sea, the Gulf of Kachchh. Remaining study area is entirely occupied by Holocene/Quarternary sediments with surface lithological boundaries running almost parallel to coast line (E-W).

Holocene sediments of the study area comprises of younger and older tidal flat and marsh deposits of Mhuva and Rann Clay Formations respectively from sea towards inland and younger flood plain, channel-fill and deltaic deposits from tidal flats towards inland.

Since most of the ground water abstraction is in alluvial deposits, only 161.48 sq km of flood plain area has been considered to estimate the ground water recharge. Recharge in the study area has been worked out by rainfall infiltration and increment in ground water storage methods as per the guidelines of Ground Water Estimation Committee (GEC), 1997 and details are presented in **Table-11** and **12**respectively. Recharge by rainfall infiltration is estimated considering average rainfall of IMD, Mundra and Mandvi and rainfall infiltration factors of geological units in the study area. The average ground water fluctuation in dug wells between pre and post monsoon in the study area has been considered to estimate recharge by increment in ground water storage.

Table-11. Recharge by Rainfall Infiltration

Sr.No.	Recharge Unit	Area (sq.km)	Rainfall Infiltration	Annual Rainfall (m)	Recharge (MCM)
1	Younger flood plain, channel-fill & deltaic deposit	161.48	0.10	0.43	6.98
2	Recharge from return flow (irrigated + aquaculture)	40.59	0.25	0.43	4.39
3	Water Body	11.57	0.20	0.43	1.00
	Total Ground water recharge				12.37

Table-12. Recharge by Increment in Ground Water Storage

Sr.No.	Recharge Unit	Area (sq.km)	Specific yield	Increment in groundwater storage (fluctuation) (m)	Recharge (MCM)
1	Younger flood plain, channel-fill & deltaic deposit	161.48	0.120	7.15	138.55
2	Recharge from return flow	40.59	0.250	0.43	4.39
3	Water Body	11.57	0.200	0.43	1.00
Total Ground water recharge					**143.94**

The average ground water recharge by rainfall infiltration and increment in ground water storage is 78.15 MCM. However, the huge difference in recharge by rainfall infiltration and increment in ground water storage indicate that the ground water draft is much more than ground water recharge.

5.2 Ground Water Discharge

The ground water discharge in the study area is mainly for domestic and irrigation purposes. The annual ground water draft has been estimated as per GEC 97 guidelines and is given in **Table-13**.

Wheat, bajra, millets and **pulses** are the major food crops, while **cotton, castor**and **groundnut** are the major commercial crops grown in the area. Mango,**papaya, Date Palm**, Sapota, Lemon and **Pomegranate** are the important horticultural crops. While wheat and cotton are most water intensive crops, water requirement for other crops and plantations is less. As the area receives very low rainfall, no canal irrigation facilities (Narmada Canal running across north central part of study area is under construction), deep water levels resulting in dry open wells, the local agriculture is dependent on only tube wells for irrigating the crops and plantations.

The total ground water draft for different purposes in the study area is 11.40 MCM.

Table-13. Annual Ground Water Draft/Discharge

Sr.No.	Purpose	Usage in Days	Requirement/Usage m^3/day	No. of Units	Ground water draft (MCM)
1	Domestic human population and livestock	365	0.075	60525	1.66
2	Irrigation	120	40 (per ha)	2030	9.74
4	Existing Industries	365	0	0	0.00
Total groundwater draft					**11.40**

5.3 Ground Water Balance

Ground water balance in respect of the study area has been estimated as per GEC 97 guidelines and is indicated in **Table-14**. Ground water balance flow diagram is placed as **Figure-13**. As per GEC 97 norms, areas where ground water resources assessment shows stage of ground water development at 70% or lower and there is no significant long term decline of pre or post monsoon ground water levels are categorized as "Safe" areas with potential for development; more than 70%, but less than 90% and either pre or post monsoon ground water level shows a significant long term decline are categorized as "Semi Critical" areas with cautious ground water development; more than 90% but less than 100% are categorized as "Critical"; more than 100% are categorized as "Over-exploited".

The study area forms part of Mundra and Mandvi blocks of Kachchh district. The average stage of ground water development in these blocks as per CGWB assessment is 82.26% and categorized as "Semi-critical" (Mundra at 63.28% as "Safe" and Mandvi at 101.23% as "Over-exploited").

The following factors of the study area make it difficult to arrive at a reasonable water balance:

- The study area has a complex geological setup with 59% of the under Gulf Of Kachchh and tidal flat and marsh deposits;
- Very low rainfall, meagre natural recharge and higher ground water draft
- The study area covers 10 km radius area from the project site and not defined as a hydrological unit (watershed or catchment);
- Non availability of exact information on ground water draft through tube wells or number of tube wells; etc.,

However, an attempt has been made to arrive at a water balance for the study area based on available information. The present stage of ground water development in the study area is estimated as 102.37% and can be categorized as "Over-exploited".

Table-14. Ground Water Balance

Sr.No.	Particulars	Quantity (MCM)
I	Gross groundwater recharge	12.37
ii	Natural discharge to drain and other losses – 10% of (i)	1.24
Iii	Net groundwater availability (i-ii)	11.13
iv	Annual groundwater draft for all uses	11.40
v	**Groundwater balance (iii-iv)**	**-0.26**
vi	Water requirement for the proposed project	0.00
Vii	Balance of groundwater left for development	-0.26
viii	Present stage of groundwater development in study area	102.37
iX	Present stage of groundwater development in Mundra&Mandvi blocks as per CGWB District Profiles	82.26% (Semi-critical)
X	**Stage of ground water development in the study area**	**102.37**

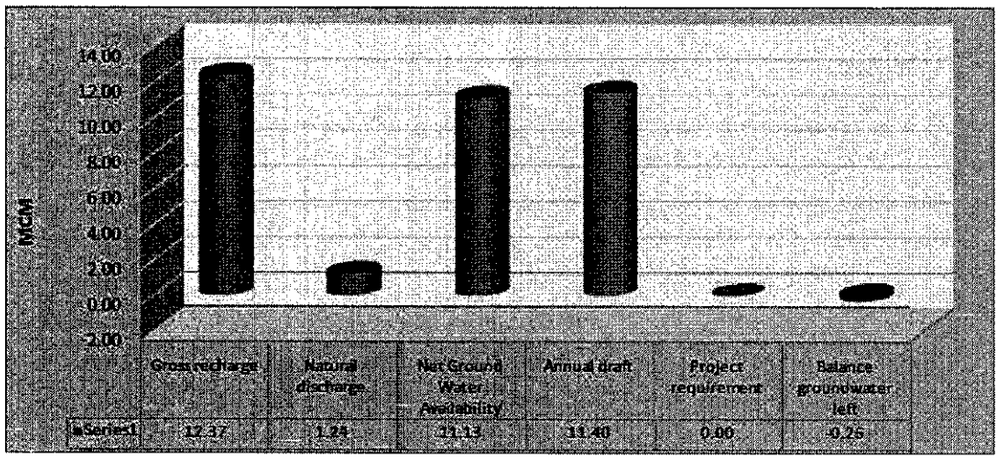

Figure-13. Ground water Balance in Study Area

6.0 WATER QUALITY

For any water body to function adequately in satisfying the desired use, it must have corresponding degree of purity. Drinking water should be of highest purity. As the magnitude of demand for water is fast approaching the availability supply, the concept of management of the quality of water is becoming as important as its quantity. Each water use has specific quality need. IS 2296 : 1992 specifies surface water quality standards based on the following designated best uses:

A. Drinking water source without conventional treatment but after disinfection
B. Outdoor bathing (organized)
C. Drinking water source after conventional treatment and disinfection
D. Propagation of wild life and fisheries
E. Irrigation, industrial cooling, controlled waste disposal

Drinking water is water intended for human consumption for drinking and cooking purposes from any source. It includes water (treated or untreated) supplied by any means for human consumption. IS 10500 : 2012, Indian Standard was formulated with the objective of assessing the quality of water resources, and specified the acceptable and the permissible limits in the absence of alternate source. It is recommended that the acceptable limit is to be implemented. Values in excess of those mentioned under "acceptable" render the water not suitable. Such value may, however, be tolerated in the absence of an alternate source.

Since all surface water bodies and streams courses in the study area are dry during field visit, surface water quality of samples analyzed during previous monitoring period are discussed to present the surface water quality in the study area. Ground water sampling and analysis of physical, chemical & heavy metals have been undertaken during field investigation period (February, 2019). 8 ground water samples were collected from tube wells at different locations in the study area. These samples were collected as grab samples and were analyzed for 37 water quality parameters. The location details of ground water samples collected and results of the samples analyzed at VIMTA Labs Ltd., are presented in **Table-15, 16** and **17** respectively and locations are shown in **Figure-14**.

6.1 Surface Water

The analysis results indicate that pH is found to be 7.2 to 8.0, which is well within the specified standard 6.5-8.5. The TDS is observed to be 41,645 to 43,572 mg/l. Dissolved oxygen is observed to be 5.6 to 5.9 mg/l. The chlorides and sulphates are found to be 16,078.9 to 20,915.5 mg/l and 2,139.1 to 2,734.0 mg/l respectively. Bacteriological studies reveal the 5 MPN/100ML. The surface water is observed to be saline in nature.

6.2 Ground Water

The analysis of ground water samples indicate that these are mild alkaline with pH values ranging between 7.53 and 8.49 and found to be within drinking water standard (IS : 10500).

TDS of Navinal, BhujparMota, Jarpara, Kandagara and Nana Badia(955.60 mg/l to 1973.91 mg/l), Total Hardness of all samples except Jarpara (248.6 mg/l to 573.6 mg/l), Total Alkalinity of all samples, Calcium of Navinal, Moti Khakhar, Desalpar, Jarpara and Siracha (97.2 mg/l to 132.6 mg/l), Magnesium of all samples except Nana Badia (46.5 mg/l to 79.8 mg/l). Total Boron of Navinal, Desalpar and Siracha (0.52 mg/l to 0.62 mg/l), Chlorides of all samples except Nana Badia (472.6 mg/l to 996.8 mg/l), Sulphates of all samples except Moti Khakhar and Nana Badia (261.2 mg/l to 366.8 mg/l), Flourides of Moti Khakhar, Desalpar and Siracha (1.1 mg/l to 1.2 mg/l), Copper of BhujparMota and Jarpara (0.06 mg/l) and Manganese of all samples except BhujparMota and Jarpara (0.12 mg/l to 0.16 mg/l) samples shows slightly higher values than acceptable limits but are within permissible limits.

TDS of Moti Khakhar, Desalpar and Siracha (2660.7 mg/l to 3322.3 mg/l), Total Hardness of Siracha (659.9 mg/l), Chlorides of Siracha (1321.6 mg/l), Sulphates of Moti Khakhar (486.5 mg/l), Manganese of Siracha (0.36 mg/l) and Iron of Jarpara (0.31 mg/l) samples show higher values than permissible limits.

Cyanide, Cadmium, Arsenic, Lead, Chromium and Mercury, parameters concerning toxic substance and the all other parameters are well within acceptable limits.

Table-15. Water Sampling Locations

Sample Code	Location	Distance from Project Site (km)	Direction
Surface Water Samples

6.2.1 Ion Distribution and Water Types

Since the chemistry of water directly hints the quality of water for various purposes, its monitoring and assessment gained substantial importance in the century. Water type/hydro-chemical facies evaluation is extremely useful in providing a preliminary idea about the complex hydro-chemical processes in the sub-surface. Determination of hydro-chemical facies was extensively used in the chemical assessment of ground water and surface water of several decades. This method is able to provide sufficient information on the chemical quality of water, particularly the origin.

The first attempt in this direction was made by Hill (1940) and which is modified by Piper (1944), Duroy (1948) further improved the piper plot. Piper diagrams are made in such a way that the milli-equivalent percentages of the major cations and anions are plotted in separate triangle. These plotted points in the triangular fields are projected further into the central diamond field, which provides the overall character of the water. In general, the sample points in Piper diagram can be classified into 6 major fields. They are 1. Calcium Magnesium Chloride, 2.Calcium Bicarbonate, 3.Sodium Chloride, 4.Calcium Sodium Bicarbonate, 5.Calcium Chloride and 6.Sodium Bicarbonate types. Details of Ion distribution and water type classification based on major anion and cation variation are presented in **Table-18** and Piper diagram with Ion distribution of ground water samples is presented in **Figure-15**.

In the present study, water type of all ground water samples is Sodium Chloride indicating brackish/saline origin.

7.0 IMPACT OF PROPOSED PROJECT ON WATER REGIME AND MITIGATION MEASURES

The construction, commissioning and expansion of any type of developmental projects have significant influence on the existing physical, biological and social components of environment.

The impact of proposed Copper Refinery on water regime may be in different ways and on surface or ground water or both. Water environment may be affected by the proposed project in terms of disturbing natural water courses or change in drainage pattern of the area, quantity and quality – due to drawl of water, discharge of polluted/water water, by contaminated leachate from disposal/dumping of solid waste etc.

7.1 Natural Drainage and Water Bodies

Danesri Nadi , a seasonal stream passes through western part of the project site. Danesri Nadi originates from north of study area (3.80 km from study area) and has a catchment area of 3.75 sq km from railway line near project site. There are no other drainage courses in the project site.

7.1.1 Danesri Nadi Conservation Plan

Danesri Nadi along the project boundary will not be disturbed and maintained with necessary bank stabilization will be done with compaction/stone pitching and raising the bund up to 2.0m. The Danesri Nadi conservation plan will include a 50 m corridor from HFL along the stream course for green belt development and another 50 m along the green belt where any storage is coming (total of 100 m from HFL along the stream course near the storage areas) as presented in plant layout hereunder. No effluent will be discharged into this stream from the plant. Storm water drains carrying excess storm water from the plant area will be provided sand filters to arrest any suspended particles and quality will be monitored periodically to ensure contaminant free storm water only reaches Danesri Nadi . Danesri Nadi conservation plan is presented in **Figure-16**.

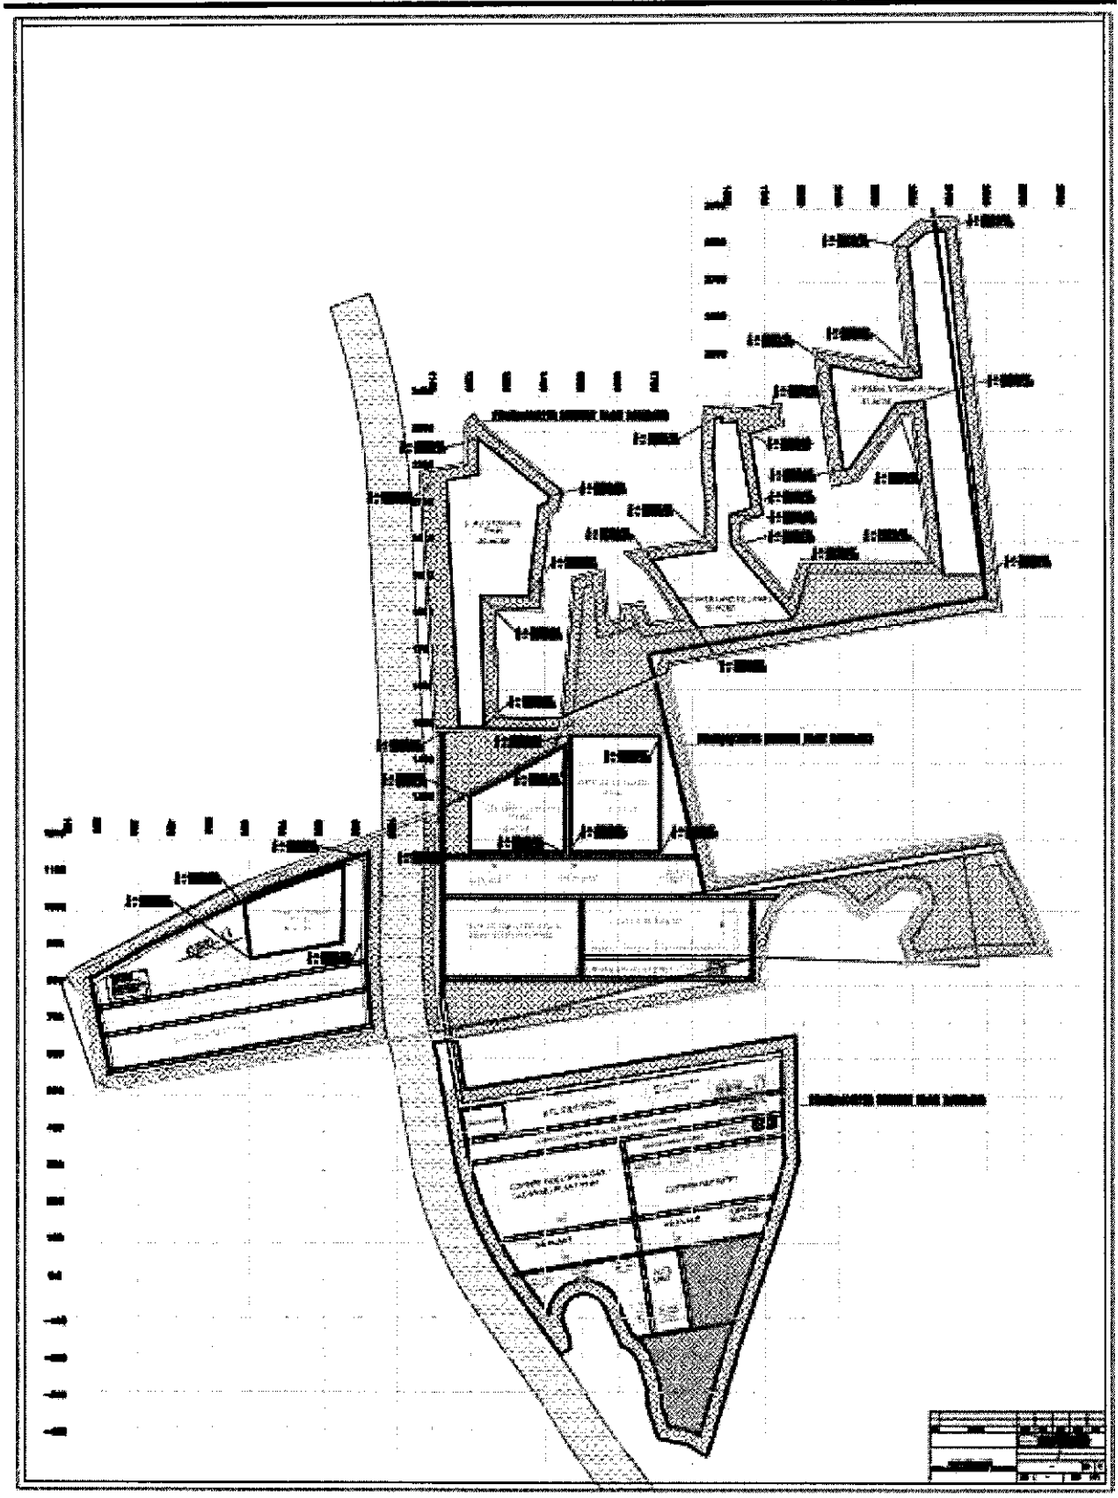

Figure-16.Danesri Nadi Conservation Plan

7.2 Drawing Surface/Ground Water

The total water requirement for the project (phase-I & phase-II) is about 35,496 KLD (35.5 MLD). 32,267 KLD (32.27 MLD) would be sourced from desalination plant of APSEZ Limited and supply through M/s. Mundra Utility Private Limited (MUPL). Balance will be met from treated/blowdown recycled water for greenbelt/cover, lime slurry preparation and reverse osmosis plant and multi effect evaporator. The water allocation letter is enclosed as **Annexure-I**. The details of usage of water and water balance for Flash Smelter Furnace (FSF) and TSL Furnace technologies are presented in **Table-1** and **Figure-3** &**3b**.

No ground water is proposed to abstract for the proposed project.

7.2.1 Water Availability

Use of sea water is in favour of saving fresh water resources, easing tensions in industrial water, availability in abundant quantity, scope of economy, environment etc.

7.3 Water Quality

A review of water quality during field visit and analysis results during February 2019 indicates that surface and ground water quality in the study area in general is poor.

TDS of Moti Khakhar, Desalpar and Siracha (2660.7 mg/l to 3322.3 mg/l), Total Hardness of Siracha (659.9 mg/l), Chlorides of Siracha (1321.6 mg/l), Sulphates of Moti Khakhar (486.5 mg/l), Manganese of Siracha (0.36 mg/l) and Iron of Jarpara (0.31 mg/l) samples show higher values than permissible limits.

Impact on water quality during construction and operation of any industry may be due to sewage generated from the domestic facilities, waste water generated from different plant operations, waste and oil spillage from the workshop, ash or other waste disposal etc. It is important to ensure that the water discharged from the project meet the relevant disposal norms and water used in the project meets the relevant national standards.

7.3.1 Waste Water

An integrated water system is proposed, wherethe effluent from the process units will be treated and reused to reduce water demand. It is also proposed to install a secondary Reverse Osmosis (RO) plant to further treat water from the effluent plant facility for effective use. Rejects from the reverse osmosis plant will be sent to Multi Effect Evaporator (MEE) for further recovery and solids generated will be sent to Secured Land Fill (SLF). This water would be utilized to meet the DM water and plant/utility requirement of proposed project. The water system is highly integrated and is designed for Zero Liquid Discharge (ZLD).

313 m^3/day(in both FSF and TSL Furnace technologies)of sewage generated from service water will be treated in STP and used for greenbelt, gardening and horticulture.

2916 m^3/dayin the case of FSF technology and 5028 m^3/day in the case of TSL Furnace technology of waste water generated from different plant operations will be treated in 5 ETPsand reused within the plant for process, cooling and other purposes.

7.3.2 Solid Waste

The main solid wastes envisaged from the proposed project are:

- Copper slag from copper smelter plant;
- Phosphogypsum from phosphoric acid plant;
- Hazardous cake produced from effluent treatment plant; and
- Scrubber cake from fugitive gas handling scrubbers.

Hazardous cake, ETP waste sludge, scrubber cake, spent catalyst and spent resins (from DM, RO and refinery) will be stabilized and stored in secured land fill of 13.35 ha as per guidelines of MoEF& CC/CPCB/GPCB. Further, an area of 18.2 ha and 20.63 ha are identified for the intermediate/emergency storage of copper slag and phosphogypsum. Provision would be made to reclaim the disposed copper slag and phosphogypsum from gypsum pond at a later stage for various utilization ventures.

The ETP cake, because of its hazardous nature, will be stored in a Secured Land Fill (SLF)). The SFL will be constructed as per CPCB guidelines. The SLF will have impervious layers of clay liner and HDPE liner. This will ensure that the ground water will not be impacted by the storage of the ETP cake. In case of any rupture/breakage or failure of the SLF bottom liner, any contaminant reaching sub-surface strata and water table will move towards Gulf of Kachchh following the ground water flow direction in the project area. The SLF facility will be provided with monitoring piezometric bore wells around it and the samples will be collected periodically to have a check on the sub-soil water quality.

Spillage of hazardous material such as waste oil, used paints, colour material, used batteries from store, workshop etc., may reach surface and ground water causing deterioration of water quality. These hazardous wastes shall be disposed off as per Hazardous Waste Amendment Rules and it shall be sent to an authorized dealer.

8.0 WATER RESOURCE MANAGEMENT PLAN

8.1 Ground Water Development

Since the entire water requirement would be sourced from desalination plant of APSEZ Ltd and supply through M/s Mundra Utility Private Limited (MUPL), no ground water development is envisaged for the proposed project.

8.2 Rain Water Management

Considering the ground water scenario in and around the project site (<2.0 m during post monsoon) and ground water flow direction in major part of the project site towards Gulf of Kachchh, the water conservation and artificial recharge system in proposed project may be more on water harvesting and reuse to reduce the dependency on external water and less on artificial recharge.

8.2.1 Rain Water Potential

To understand the quantum of water available from the project area for rain water harvesting, reuse and ground water recharge, a tentative run-off estimation based on different land uses in the area is worked out and presented in **Table-19**. The annual volume of rain water available from the project site spread in 256.57 ha (634 acres) is estimated at 6,43,658 m^3 (0.64 MCM) and during SW and NE monsoon periods is 6,32,123 m^3 (0.63 MCM).

Rain water from the contamination potential areas like plant operations, storage areas, landfill shall be diverted to effluent treatment facilities for treatment and reuse and from contamination free areas like administration and other buildings, open areas and green belt shall be directed to rain water harvesting and use for non-domestic usage and recharge.

Table-19. Annual & Monsoon Run-Off from Project Site

Sr.No.	Land Use	Area (ha)	Run-off Coefficient	Annual Rainfall (m)	Annual Run-off (m^3)	Monsoon Rainfall (m)	Monsoon Run-off (m^3)
1	Buildings	2.30	0.7	0.432	6957.44	0.425	6832.75
2	Plant area	24.01	0.7	0.432	72668.66	0.425	71366.32
3	Roads & paved area	91.86	0.9	0.432	357529.93	0.425	351122.44
4	Green belt	85.79	0.25	0.432	92751.28	0.425	91089.03
5	Storage of Waste (Secured Landfill)	52.61	0.5	0.432	113751.57	0.425	111712.96
Total/average		**256.57**	**0.69**	**0.432**	**643658.88**	**0.425**	**632123.51**

8.2.2 Rain Water Management in Smelter, Production Plan, Storage and Landfill Areas

Rain water from Concentrate Storage, Smelter Area and Slag Storage will be collected in separate tank installed in the areas of feed stock storage and conveying, smelting system which are potentially pollute the collected rain water. 4000 m^3 of rain water is expected to collect from these areas. The water collected in these tanks will be treated in initial rain

water treatment station and then goes to the advanced treatment section of the production effluent treatment plant for treatment before it is reused for production. The process flow of collection and treatment is presented in **Figure-17**.

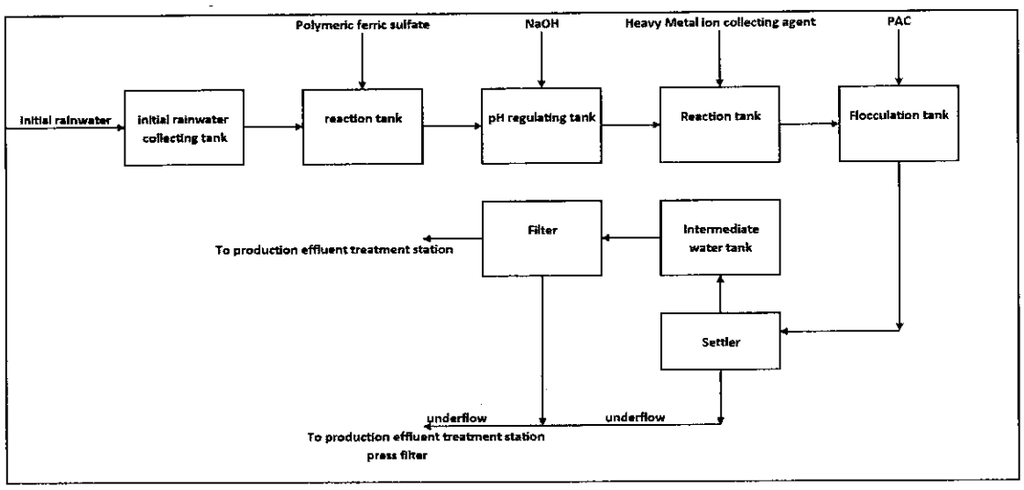

Figure-17.Process Flow of Treatment of Rain Water from Concentrate Storage, Smelter & Slag Storage

Rain water from the Gypsum Storage will be collected in a separate tank installed in Gypsum Storage area and about 4000 m^3 of rain water is expected to be collected from this area. The rain water collected in this tank will reused in the phosphoric acid manufacturing process and thereby reducing the fresh water consumption to that extent. Additional water if any will be used for spraying purpose in the Gypsum Storage area.

Rain water from Production Plant premises will be collected in a separate tank installed in the plant premises to collect rain water from all roofs. The collected rain water will be treated in initial rain water treatment station and then goes to the advanced treatment section of the production effluent treatment plant for treatment before it is reused for production. The process flow of collection and treatment is presented in **Figure-17.**

Rain Water from Secured Landfill (SLF)isrequired to minimize:

- ❖ Leachate generation by preventing ponding and the infiltration of water into the fill;
- ❖ Transport of contaminants from the landfill; and
- ❖ Erosion of the liner, solid waste or cover material.

The surface water drainage system performs the function of collecting and transporting run-off from the landfill and surrounding area to drains at the periphery of the landfill. Drainage channels should be located so that surface water run-off from the surrounding area is intercepted and diverted before it reaches the waste. Perimeter surface water control systems are usually designed to accommodate both off site run-off and onsite run-off.

Surface water run-off arising within the landfill area may be classified as that from cells under construction, operational areas and restored areas. Surface water can be controlled

using drainage blankets, ditches, french drains and garland drains. It is necessary to provide a settlement pond to remove solids from surface water running off restored areas. The surface water from these areas may be used for plantation, toilets etc., provided they meet the receiving water standards.

Water from cells under construction may need to be pumped to the drainage channels or retention pond. Surface water from the restored areas should be transported via drainage layers incorporated in the capping system to the perimeter drainage channels. Surface water in active cells should be directed into the leachate collection system.

Surface water run-off from paved areas and site access roads shall be directed to storm water retention ponds or if necessary to leachate storage facilities. Provision should be made for surface water from parking/fuelling/repair/maintenance/paved areas to pass through petrol/oil interceptors.

8.2.3 Rain Water Harvesting

Of the total project site, rain water from plant area, and secured landfill areas will be treated and used for plant and other purposes as described under 7.3. Admin building, canteen, SAP office building and engineering stores (shown as building area in **Table-19**) are found to be feasible for roof top water harvesting and use. An amount of 6,832 m^3 (0.007 MCM) of rain water will be available from these roof areas. Considering only 80% of the run-off as available volume after evaporation, spillage and first flush wastage, 5,566 m^3 (0.006 MCM) of rain water is available from the roof top areas for harvesting and use. A typical roof top rain water harvesting model is presented in **Figure-18**.

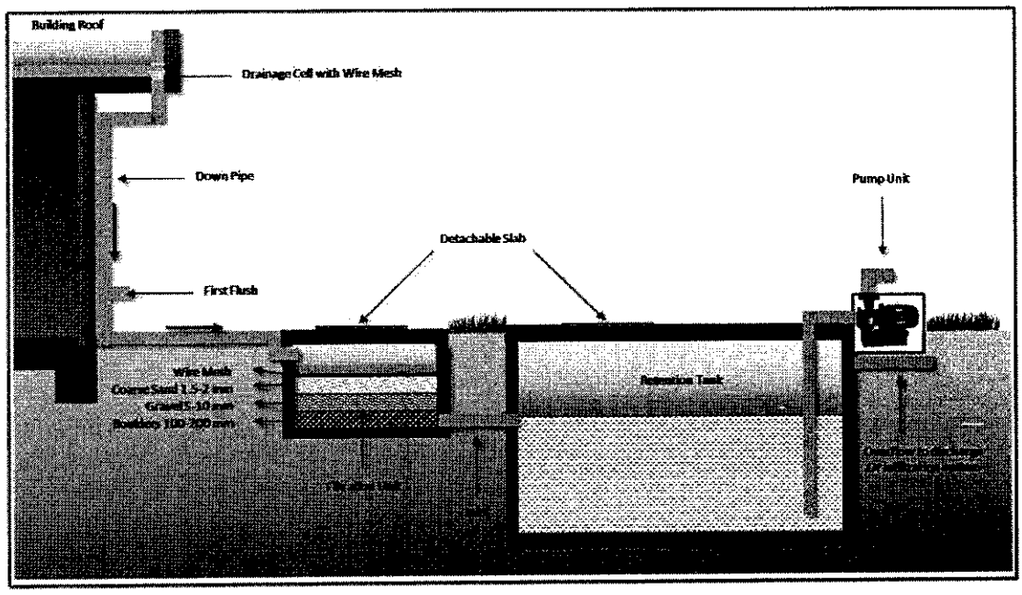

Figure-18. Typical Roof Top Rain Water Harvesting Model

To hold 80% of rainfall from these buildings during wettest months of July and August (308.1 mm) and use for the project during non monsoon period, the volume of storage structure(s)

shall be 4096 m^3. This storage may be spread in 3 locations with pit sizes of 32 m x 32 m x 4 m. For simultaneous use, the volume of storage structure may be reduced to 50%.

Considering 25% of the roads and paved area 50% of the green belt area free fromcontamination, 1,35,758 m^3 (0.136 MCM) of run-off from the rainfall collected in these areas is available for harvesting.

The amount of run-off available from the above areas if managed with at least 70% efficiency (70% of 0.142 MCM : 0.099 MCM) would meet 68% of proposed green belt water requirement.

8.3 Environmental Monitoring and Maintenance Plan

The objectives of an environmental monitoring plan in terms of water resources in the present scenario include:

- Water usage and its impact on water potential in the area
- Waste water generation, discharge and its impact on water quality
- Maintenance of storm water management system and its impact on natural water flow conditions

8.3.1 Water Usage for the Project

The total water requirement for the project (phase-I & phase-II) is about 35,496 KLD (35.5 MLD). 32,267 KLD (32.27 MLD) would be sourced from desalination plant of APSEZ Limited and supply through M/s. Mundra Utility Private Limited (MUPL). Balance will be met from treated/blowdown recycled water for greenbelt/cover, lime slurry preparation and reverse osmosis plant and multi effect evaporator. The water allocation letter is enclosed as **Annexure-I**. The details of usage of water and water balance for Flash Smelter Furnace (FSF) and TSL Furnace technologies are presented in **Table-1** and **Figure-3** &**3b**.

The conveyance, storage and discharge system shall be monitored regularly for any leakage, spill or overflow and necessary preventive measures shall be taken up immediately.

No ground water is proposed to abstract for the project usage. However, a ground water level monitoring system shall be established by installing 5 piezometers within the plant premises and monitoring water levels at a monthly interval. Locations of piezometers are shown in **Figure-19**.

Piezometer is a bore/tube well used only for measuring the water level by lowering the tape/sounder or automatic water level measuring equipment. It is also used to take water sample for water quality testing whenever needed.

A permanent display board shall be installed at these piezometer sites providing the location, piezometer number, depth and zone tapped of piezometer for standard referencing and identification.

8.3.2 Waste Water Generation and Discharge

Waste water in the proposed project will be generated from plant facilities, plant operations, cooling system and landfill areas. Sewage generated from plant domestic facilities will be treated in STP and used for plantation, toilets etc. Waste water/reject water generated from plant operations and landfill will be treated in ETPs and will be recycled for horticulture and plantation.

Discharge water quality of STP and ETP outlets shall be monitored quarterly as per EPA-198 Schedule-VI Part-A, General Standards for Discharge of Effluents and necessary corrective measures shall be taken up immediately in the case of any contamination identification.

Ground water quality in the area shall be monitored quarterly collecting samples from piezometers installed.

8.3.3 Storm Water Management System

Storm water from plant operations, storage areas, landfill and other pollution prone areas shall be separated and diverted to ETP for treatment and reused for plantation and other non-potable uses.Provision should be made for surface water from parking/fuelling/repair/maintenance/paved areas to pass through petrol/oil interceptors. Necessary sand filters/gratings shall be arranged before storm water reaching rain water harvesting measures to arrest any suspended pollutants and silt from storm water diverted.

Storm water and garland drains, drains leading to rain water harvesting measures and filtration units shall be regularly monitored and maintained at least before monsoon.

9.0 CONCLUSIONS

Adani Enterprises Limited proposes to set up a Greenfield Copper Refinery project of 10 LTPA capacity in 256.57 ha (634 acres) of area in Siracha and Navinal villages at APSEZ, Mundra taluka, Kutch district, Gujarat.

The climate around Mundra and Mandvi area is called a desert climate. During the year, there is virtually no rainfall in this area. The average annual rainfall based on IMD data is 432.4 mm on 15 average rainy days.

Elevation in the project site ranges from 3.0 m amsl in the south 9.0 m amsl in the north with general slope towards south into Gulf of Kachchh. Danesri Nadi , a seasonal stream passes through western part of the project site. Danesri Nadi originates from north of study area (3.80 km from study area) and has a catchment area of 3.75 sq km from railway line near project site. Stream flow only for a few hours after peak rainfall events is reported in this stream at Siracha, 1.5 km NW of project site. Danesri Nadi along the project boundary will not be disturbed and maintained with necessary bank stabilization will be done with compaction/stone pitching and raising the bund up to 2.0 m.

Of the total study area of 413.68 sq km, 75.67 sq km (18.29%) of the southern part is covered by Arabian Sea, the Gulf of Kachchh. Remaining study area is entirely occupied by Holocene/Quarternary sediments with surface lithological boundaries running almost parallel to coast line (E-W). Proposed project site, Adani Power & other industrial set-ups in APSEZ area are located on older coastal plain. Resistivities of different lighological units in the study area range from <1 Ωm to >300 Ωm. ERT1 and 2 are located in project site lying on older tidal flat and marsh deposit with resistivities ranging from <1.0 Ωm to 5.0 m. The resistivity at these locations decreases to <1.0 Ωm with depth indicating saline nature.

The study area form part of Kachchh Basin and does not show any major tectonic evidences except few geomorphic lineaments parallel to drainage courses and a minor fault of structural origin in the SE. The nearest major fault is North Kathiawar Fault (NPF) towards south. As per Composite Hazard Risk & Vulnerability Atlas, Gujarat State Disaster Management Authority (GSMDA), the project site is located in unclassified zone covering Little and Great Rann of Kachchh including Mundra coastal area, but close to very severe intensity zone.

The thickness of alluvium is observed to be 2.0 m in the north to 18.0 m and tidal flat and marsh deposits are more than 20 m in thickness. The alluvium is underlain by sandstone of Sandhan Formation and laterite at places. Sandstone forms productive aquifer at places. The alluvium yields small quantities of brackish water to shallow wells. The depth to water level in dug wells during field visit (2nd week of February 2019) ranges from 7.85 m to 16.12 m bglwhere as the depth to water level in tube wells ranges from 2.00 m bgl in Adani peizometers near project site to 44.38 m bgl in an agricultural well near Gelada. The average water levels in dug wells during field visit, pre and post monsoon are 12.42 m, 12.13 m and 6.23 m bgl respectively with a water level fluctuation of 7.15 m.

General ground water flow direction in major part of the study area is towards Gulf of Kachchh with depressions of deeper levels below mean sea level between BhadiaMota and Bhadia Nana, around Navinal and east of BhujparMota. Reduced water levels <0 around BhadiaMota, Bhadia Nana, Tragadi, CGPL and Wandh in the west and to the east of BhujparMota in the northeast indicate that ground water movement is towards inland encouraging sea water intrusion.

TDS of Moti Khakhar, Desalpar and Siracha (2660.7 mg/l to 3322.3 mg/l), Total Hardness of Siracha (659.9 mg/l), Chlorides of Siracha (1321.6 mg/l), Sulphates of Moti Khakhar (486.5 mg/l), Manganese of Siracha (0.36 mg/l) and Iron of Jarpara (0.31 mg/l) samples show higher values than permissible limits. In the present study, water type of all ground water samples is Sodium Chloride indicating brackish/saline origin.

The present stage of ground water development in the study area is estimated as 102.37% and can be categorized as "Over-exploited".

The total water requirement for the project (phase-I & phase-II) is about 35,496 KLD (35.5 MLD). 32,267 KLD (32.27 MLD) would be sourced from desalination plant of APSEZ Limited and supply through M/s. Mundra Utility Private Limited (MUPL). Balance will be met from treated/blowdown recycled water for greenbelt/cover, lime slurry preparation and reverse osmosis plant and multi effect evaporator.

An integrated water system is proposed. The effluent from the process units is treated and reused to reduce water demand. It is also proposed to install a secondary Reverse Osmosis (RO) plant to further treat water from the effluent plant facility for effective use. Rejects from the reverse osmosis plant will be sent to Multi Effect Evaporator (MEE) for further recovery and solids generated will be sent to Secured Land Fill (SLF).

This water would be utilized to meet the DM water and plant/utility requirement of proposed project. The water system is highly integrated and is designed for Zero Liquid Discharge (ZLD).

The Secured Land Fill will have impervious layers of clay liner and HDPE liner. This will ensure that the ground water will not be impacted by the storage of the ETP cake. In case of any rupture/breakage or failure of the SLF bottom liner, any contaminant reaching sub-surface strata and water table will move towards Gulf of Kachchh following the ground water flow direction in the project area.

The annual volume of rain water available from the project site spread in 256.57 ha (634 acres) is estimated at 6,43,658 m^3 (0.64 MCM) and during SW and NE monsoon periods is 6,32,123 m^3 (0.63 MCM). Considering only 80% of the run-off as available volume after evaporation, spillage and first flush wastage, 5,566 m^3 (0.006 MCM) of rain water is available from the roof top areas for harvesting and use.

EAC OBSERVATION:

Occupational health assessment envisaged for the employees and workers has not been submitted.

REPLY:

A detailed study on Occupational health hazards assessment & monitoring plan was carried out by **M/s. Indian Council of Medical Research-National Institute of Occupational Health (ICMR-NIOH);** Department of Health Research, Ministry of Health & Family Welfare, Government of India; to protect and promote health of human resources employed at the Copper Refinery Project.

Report covers the following:

- Potential Health Hazards
- Health Effects and Prevention
- Summary of Occupational Health and work place monitoring unit-wise.
- Occupational Health Assessment/ Medical Evaluation

Unit-wise various tests and frequency of the test has been identified based on the comprehensive Occupational Health study. Adani Enterprises Ltd. has allocated **Rs. 2000/ person/ year as budget** for monitoring the health of the human resources engaged at the Copper Refinery Project.

A detail study report on Occupational Health Hazards Assessment and Monitoring Plan for proposed Copper Refinery project by ICMR- NIOH is attached as **Annexure-19.**

Foreword

We are grateful to Adani Enterprises Ltd. (AEL) for having entrusted Indian Council of Medical Research- National Institute of Occupational Health (ICMR- NIOH), Ahmedabad for preparing Occupational Health Monitoring plan for the employees and workers for the proposed 1.0 MTPA Copper Refinery project at Adani Port Special Economic Zone Land in Village(s) Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat.

The purpose of this Occupational Health Monitoring plan is to protect and promote the health of human resource employed at proposed project. This plan is prepared, considering the possible hazards from the proposed copper refinery project. The objective of this plan is to bridge this gap, and give insight to all possible hazards involved in the activity of Copper Refinery project.

We express our sincere gratitude to the team of AEL for their continuous interaction with the core team members of ICMR- NIOH and extending support and guidance to complete the study on time.

We gratefully acknowledge the involvement and intellectual support provided by scientists from the division of "Clinical Epidemiology", "Occupational Hygiene" and "Regional Occupational Health Centre – Bengaluru" towards development and preparation of this report.

We greatly acknowledge the untiring efforts of ICMR- NIOH core team members and support staff for timely completion of the study.

Preamble

The National Institute of Occupational Health (NIOH), is premier institute under the aegis of the Indian Council of Medical Research, Department of Health Research, Ministry of Health and Family Welfare, Govt. of India. The NIOH is India's specialist research organization engaged in research in the field of occupational health. The NIOH has a dedicated endeavour with the following purpose and function:

- To promote intensive research in the field of occupational and environmental health;
- To promote the highest quality of occupational health through fundamental and applied research.
- To use basic data towards devising of new technique(s) for the clinical or experimental purposes.

The research and training activities of the Institute are primarily focused on national priorities adopting a multi-disciplinary approach, encompassing epidemiological, experimental studies, ergonomics and intervention technologies, wherever necessary. The ICMR-NIOH and its regional centres are being constantly sought by judiciary and policy makers in decision-making regarding occupational health and its related activities.

Section 1: Introduction to occupational health

The purpose of this Occupational Health manual is to protect and promote the health of human resource employed at proposed Copper Refinery Project by M/s Adani Enterprises Limited (AEL) at villages Navinal and Siracha, Taluka Mundra, District Kutch, Gujarat.

It is the application of preventive medicine principles in all places of employment. The scope of occupational health is not limited to diagnosis of specific occupational diseases and their treatment alone, but its horizon goes far beyond, to the realms of promotion of health, prevention of illnesses, early diagnosis and rehabilitation. Its roots seek out the deep reaches of the psycho-social environment inside the work place thus meeting the definition of health as 'being a state of complete physical, social and mental wellbeing of a person, and not merely the absence of disease or infirmity' as defined by the World Health Organisation.

Occupational Health deals with:

- Prevention of exposure to occupational hazards / working conditions among the employees that might lead to departure from health;
- Protection of employees in their employment from risks factors that result adverse health;
- Placing and maintenance of the employees in an occupational environment adapted to his physiological requirement.
- Promotion and maintenance of the highest degree of physical, mental and social well-being of employees in all occupations

To summarize Occupational health services, facilitate "The adaptation of work to man and each man to his job."

The occupational health manual:

Occupational Health, is yet in a neonatal form in India, and is thus not understood by management and employees. Occupational Medicine is a branch of Preventive Medicine, which is not understood by doctors themselves. Yet, it is closely related to all three groups (management, employee and doctors / health care providers).

This manual is prepared considering the possible hazards from the proposed copper refinery project. The manual is based on the current understanding and literature, while a definite protocol should be prepared after precisely the weighing the hazards later to the establishment of copper refinery. The objective of this manual is to bridge this gap, and give insight to the employer of Copper Refinery project, so as to establish a safe place along with lucrative business.

The manual is meant to be a guideline for the development of uniform Occupational Health Practices, and to provide a healthy, happy and productive worker at the work place. The importance of such a worker is well known in international labour circles, for not only earn millions but also save billions.

A road map is hereby suggested, which should lead to the highway of established occupational health practices in the future.

The AEL has expressed to employ approximately 1000 on roll employees (regular employment) and 1000 off roll employees (on contractual basis), working in various units of the copper plant.

2420

Section 2: ADANI copper plant

Copper is a strategic metal for development of industry in India. It is considered to be the third most important industrial metal next only to iron and aluminium. Combination of its excellent properties such as high electrical and thermal conductivity, high strength, malleability, easy workability, corrosion resistance and its ability to produce alloys with other metals in an attractive range of colours has made copper a strategic metal for the engineering industry. Specific applications of copper include power cables and wires, jelly filled cables, building wires, air conditioning and refrigeration tubing, telecom, power, construction, transportation, handicrafts, engineering, consumer durable, defence etc.

Table 2.1: List of units in the ADANI group proposed copper refinery plant

	Plant (facilities) in the proposed Coper Refinery
1	Raw material handling area
2	Copper smelter
3	copper refinery
4	Copper rod plant
5	Precious metal recovery plant
6	Sulphuric acid plant
7	Effluent treatment plant
8	Phosphoric acid plant
9	Aluminium fluoride plant

Table 2.2: List of possible hazards in each of the units of proposed copper refinery plant.

Plant (facilities) in the proposed Coper Refinery	**Potential hazards**
Construction of the individual facilities / units	• Hand-arm vibration (grinders, cutters, etc.). • Whole-body vibration (Dozers and loaders, driving heavy vehicles etc.) • Dust • Noise
Raw material handling area	• Exposure to dust of Copper concentrate and Rock Phosphate • Noise • Moving equipment
Copper smelter	• Dust (Copper concentrate) * • Heat (Hot metal) • SO_2 gas • Noise • Work at height
Copper refinery	• Acid fumes (Copper sulphate) • Heat (Steam and hot electrolyte of Copper Sulphate) • Noise • Work at height

Copper rod plant	• Heat (Hot metal) • Noise • Work at height
Precious metal recovery plant	• Dust (Anode slime containing Pb, As, Se) • Heat (Hot metal) • SO_2 gas • Acid fumes • Noise • Work at height
Sulphuric acid plant	• SO_2 gas • sulphuric acid fumes • Vanadium Pentoxide • Heat (Steam and hot sulphuric acid) • Noise • Work at Height
Effluent treatment plan (ETP)	• Dust (ETP Sludge containing Arsenic, Cadmium, Chromium, Lead and other heavy metals) • Acid fumes • Noise • Work at Height
Phosphoric acid plant	• Dust (Rock Phosphate) ** • Acid Fumes (Phosphoric Acid with Fluorine) • Heat (Steam, hot water, hot Phosphoric Acid & slurry) • Phosphoric Acid • Hydro-Fluro-Silicic acid fumes • Noise • Work at Height
Aluminium fluoride plant	• Dust (Aluminium Hydrate) • Aluminium Fluoride Slurry Fumes • Heat (Steam, hot Hydro-Fluro-Silicic Acid, Aluminium Fluoride slurry) • Hydro-Fluro-Silicic acid fumes • Noise • Work at Height
Maintenance in various units of the Refinery	• Vibration (due to use of vibrating equipment such as grinders, cutters, drilling machine, etc.) • Dust • Noise • Heat • Light in metal unit area

*Copper concentrate consist of Copper, Lead, Arsenic, Selenium, Fluorine, Iron, sulphur, SiO_2, CaO, MgO, Al_2O_3, Zinc, Fe_3O_4, Bismuth, Antimony, Nickel, Cadmium, Chlorine, Mercury, Silver, Gold Moisture

**Rock Phosphate consist of P_2O_5, Fe_2O_3, Al_2O_3, CaO, MgO, SiO_2, SO_3, Chlorine, Fluorine, $CaCO_3$, CO_2, Na_2O, K_2O, TCP / BPL, organic matter as Carbon.

2422

Section 3: Potential health hazards

Employees of the proposed copper plant are exposed to all types of hazards. Broadly these hazards can be classified as:

3.1. Physical hazards

- Noise
- Heat
- Vibration
- Work at Height

3.2. Biological hazards

The biological hazards to which employees are exposed include:

3.2.a. Animal and snakebites

During exploration and preparation of the site for drilling operations, employees have to work in difficult and unfamiliar terrains. Chance encounters may result in animal and snakebites in those working at these sites.

3.2.b. Arthropod borne diseases

At times workers employed both at indoors as well outdoors are exposed to certain arthropod borne diseases such as malaria, dengue, etc.

3.2.c. Rodent and Insect borne diseases

Workplaces such as catering services, garbage disposal areas often attract rodents and vermin, which act as vectors for disease transmission. Thus, exposing these employees to rodent / insect borne diseases.

3.2.d. Food borne diseases

If proper hygienic conditions are not practiced for storage, handling and preparation of food, it will expose a large group of employees to food borne diseases. Food handlers themselves, who are either infected or carriers of disease agents may also be a source of such food borne diseases.

3.2.e. Water borne diseases

Water, which is not properly treated, poses a major hazard. If proper disinfection and storage of supplied water is not done, it may result in water borne diseases.

3.3. Psychological hazards

Stress can commonly result from

1. Constant fear of personal injury.
2. Inherent / personal psychological problems and phobias.
3. Loneliness / family separation due to working at remote and isolated locations.
4. Working at variable duty shifts for a very long time.
5. Increasing demands of the Job

3.4. Ergonomic hazards

Prolonged hours of physical strenuous work as well results in musculo-skeletal problems (viz. general body ache and low back pain).

Administrative and office staff, due to their sedentary nature of work over prolonged periods, using furniture that is not ergonomically designed are subjected to ergonomic hazards. Employees occupied in handling computer work stations at various locations (viz. control rooms and offices) are a major area of concern.

3.5. Injuries / accidents

Injuries / accidents may result from many causes, including slips and falls, lifting heavy weight and handling of heavy machinery / tools / equipment.

3.6. Burns

Burns may be caused by steam, fire, chemicals, corrosives, acids and alkalis.

3.7. Electric shock

Construction workers and labourers are exposed to electric shocks. The consequences of electric shock are transient muscle paralysis, burns, electrocution, arrhythmias and death depending on the voltage of the current.

3.8. Chemical hazards

- Heavy metals (Arsenic, lead, copper, aluminium, selenium, etc.)
- Sulphides
- Oxides
- Nitrites
- Sulphuric oxide
- Sulphuric acid
- Phosphoric acid
- Fluorides
- Hydro-Fluro-Silicic acid
- Other chemicals

2428

Section 4: Health effects and prevention:

Effects of hazards on the health of employees could be attributed to one or multiple hazards they are exposed, as described earlier. This chapter elaborates these effects.

There are usually four methods of prevention of health effects of Occupational Hazards. They are:

1. Engineering control
2. Administrative control
3. Use of Personal Protective Equipment (PPE)
4. Medical control

4.1. Physical hazards

4.1.a. Noise

Employees exposed to high level of noise at risk for

- Hearing loss (Temporary or Permanent)
- Psychological effects
- Cardiovascular effects

Preventive steps

Noise in industry can be controlled by various means.

Engineering control

The first attempt to reduce noise is engineering control, starting from procurement of machinery to its installation. In some cases, the noise can be reduced in the sound transmission path.

Administrative control

- Pre-employment audiometric examinations are a must for selecting incumbents who are to be placed in potentially high noise areas.
- Noise level meter for octave band analysis & octave frequency analysis, to be measured monthly at minimum of 10 locations as recommended by Central Pollution Control Board (CPCB)
- Equipment Procurement Procedures should have clear equipment specification guidelines on noise and vibration parameters that are tolerable.
- Minimizing exposure duration through reduction in exposure time or by job rotation.
- Organizing for high-risk operation to be conducted out of hours when few employees will be exposed.
- Employees should strictly incline to the work hours as per the Threshold limit values (TLV) to prevent the hazards of exposure to noise

Table 4.1: Threshold limit values for employees exposed to continuous noise.

Hours of exposure / employment	Decibels
≤ 8 hours	90 dBA
≤ 4 hours	95 dBA
≤ 2 hours	100 dBA
≤ 1 hour	105 dBA

Medical control

- Pre-placement & periodic audiometric examinations of employees engaged in high noise areas should be evaluated. If deterioration is noticed, withdrawal of the employee from the source of exposure should be done.
- Periodical Audiometric testing. The periodicity of testing is Six monthly
- A drop in 20-30 db of hearing loss as assessed by pure tone audiometry (in all frequencies) should indicate SNHL and suggest a change in workplace of the employee

Personal protection equipment (PPE)

- Noise transmission from source to the human ear can be reduced with the wearing of hearing protectors like earmuffs & earplugs. Hearing protectors have shown to provide attenuation from 15 to 30 dB.

4.1.b. Heat

Heat exposure can produce effects like:

- Heat Syncope
- Prickly Heat
- Heat Hyper pyrexia
- Water and Electrolyte Depletion and Heat Exhaustion
- Heat Cramps
- Heat Stroke

Preventive steps

Engineering control

- Engineering control to minimize exposure to heat will depend upon the nature of the work place.
- Insulation, altering the path of transmission of heat, exhaust ventilation systems are some of the methods employed to reduce heat exposure.

Administrative control

- Persons that are to be placed in such areas should be properly selected. A young, healthy, short, robust, relatively darker complexion individual is more suitable for 'hot work', as compared to his taller, fairer counterpart of comparable health.
- Lightweight cotton clothing should be prescribed as safety gear in workplaces that have a heat hazard.
- Acclimatization & adaptation with the work process will allow employees to become used to heat. When employees are away from hot conditions for more than several days, a re-acclimatization schedule should be adopted.
- Employee's diet should be of proper caloric value depending on their workload requirements in hot conditions, and in addition, contain adequate electrolytes.
- There should be frequent short breaks during shift hours (Table 4.2).

2426

Table 4.2 Permissible heat exposure & threshold limit values (Values are given in Celsius / Fahrenheit as measured using Wet Bulb Globe Thermometer)

	Work Load		
Work – Rest Regimen	Light	Moderate	Heavy
Continuous work	30.0°C / 86°F	26.7°C / 80°F	25.0°C / 77°F
75% Work – 25% Rest, each hour	30.6°C / 87°F	28.0°C / 82°F	25.9°C / 78°F
50% Work – 50% Rest, each hour	31.4°C / 89°F	29.4°C / 85°F	27.9°C / 82°F
25% Work – 75% Rest, each hour	32.2°C / 90°F	31.1°C / 88°F	30.0°C / 86°F

Medical control

- Pre-placement / pre-employment medical examination: The individual's medical data is to be re assessed before he is placed in a heat hazard area. A particular attention towards renal and cardiovascular system should be exercised.
- Periodic medical examinations must be carried out six monthly.
- If the workplace is outdoors, it may be difficult to eliminate the hazard, in which case, plenty of potable water & salt tablets (where excessive sweating occurs) should be provided to employees.
- Employees with frequent pyrexia (fever) / history of recent fever should be avoided.
- Training and awareness of hazards due to heat, should be provided to employees/supervisors and first aiders
- An outline of thermoregulation, symptoms of heat illness, acclimatization, work demand and clothing
- First -aid measures for each heat related disorders to be made available at the site.
- Emphasis on the hygiene practices, such as adequate hydration, individual responsibility and self-pacing of work.

4.1.c. Vibration

Generalized vibration may give rise to Musculo-skeletal (osteo-arthrosis) and neurological sequelae, whereas localized body part vibrations can result in conditions such as Vibration induced White Finger.

Preventive steps

Engineering control

- Elimination or Reduction of vibration at the design stage.
- Proper & timely maintenance of Engineering control
- Isolation of disturbance from the vibrating surface.
- Reducing the mechanical disturbance causing the vibration
- Anti-vibration devices should be used on vibrating tools and holding tongs.

Administrative control

- Adapting procedures to purchase tools or equipment with minimal vibration.
- Reducing exposure time by breaks and shorter working hours.

Table 4.3: Threshold limit values for exposure of hand to vibration in Xh, Yh or Zh directions

Total daily exposure (Duration in hours)	Values of the Dominant Frequency – Weighted, rms, Component Acceleration, Which Shall not be Exceeded ^{a}K ($^{a}K_{eq}$)	
	m/s^2	g^{Δ}
4 - 8	4	0.40
2 - 4	6	0.61
1 - 2	8	0.81
< 1	12	1.22

Medical control

Pre-employment medical examination to assess employees who may be susceptible to the effects of exposure to whole body and segmental vibration

The following advice could be given regarding risk associated with exposure to vibration:

- Keep the hands warm and do not allow to become wet & cold
- Employees using vibrating hand Tools must not smoke, as smoking predisposes them to vaso-constrictive disorders.
- Awareness regarding seeking early medical advice at the signs of numbness, tingling or white or blue fingers.

PPE

- Use Anti –Vibration gloves with full fingers.

4.1.d. Working at height:

Physical injuries are common among employees employed at height. It is necessary the employees have adequate control over their balance to work at height and prevent hazard of injuries

Preventive steps

Administrative & Engineering control

- Provision for safety / protective measures (whole body harness, safety net / ropes for sky folding. Extra precautions to be taken to prevent electric shocks.

Medical control

- Pre-employment medical examination should be directed at the detection of neurologic, visual, cardiovascular and general health.
- Individuals with above mentioned disorders should be avoided from engaging in work at height.

PPE

This includes use of helmets, ropes for sky folding.

4.1.e. Illumination

Proper illumination of the work place is of prime importance. Improper illumination is detrimental to the health of the worker. Its effects include – Eyestrain, excessive (general) fatigue, reduced efficiency and accuracy of the worker.

Preventive steps

2928

Engineering control

- Replace light sources as soon as they get fused.

Administrative control

- Ensure proper illumination from the planning stage of the work place.

Table 4.4: Recommended Values of Illumination are given below:

Areas	Illumination LUX
Canteens	150
Entrances, Corridors & Stairs	100
Stockyard, Main entrances, Roads	20
Bathrooms	100
Stairs	100

4.2. Biological hazards

The hazards vary as per the geographical location. General preventive measures are listed below. Specific strategies should be prepared during the project implementing phase.

- Elimination of the hazardous biological agent.
- Adequate ventilation
- Isolation of the persons with infection
- Immunization and health surveillance
- Personal protective equipment like aprons, gloves, eyewear, face shields, respirators, gowns etc.
- Good hygienic and sanitary facilities.
- Periodic examination of food handlers and isolation of food handlers found to be infected
- Providing adequate and quick treatment facilities for animal bites and snakebites

4.3. Psychological hazards

- Psychological effects on the employees are very subtle, and have to be 'looked for' very meticulously by the Occupational Health Physician. They may manifest as obsessive-compulsive behaviour, paranoia, hypochondriac behaviour and absenteeism from work.
- Psychological effects may also manifest as Medical complaints like respiratory infection, fatigue, backache, insomnia, headache, irritability, etc. It is important to differentiate these symptoms from the organic diseases producing them.
- The occupational physician in charge must have proper knowledge of stress related factors and be trained and equipped to advise regarding – proper job placement, counselling and medications to alleviate these problems.

4.4. Ergonomic hazards

Their ergonomic problems should be solved by work place modification and/or mechanization of the processes if possible. Periodic examination of these employees should include radiography of the lumbo-sacral region once a year and employees with chronic symptoms or bony changes should not be further exposed to this type of job. Proper posture and exercise may be taught to these employees to minimize the problem of backache. Administrative staffs also need health education for their ergonomic problems.

4.5. Injuries/ accidents

Injuries are common events in the different operations. Accidents should be prevented by proper maintenance of the machinery, good housekeeping, safety training and use of personal protective devices. First aid treatment must be available for trivial injuries and employees must be trained in first aid.

4.6. Burns

The sites where burns can occur should be identified. Employees should be provided with personal protective devices like fire – proof clothing. There should be also provision of continuous water in case of emergency events.

4.7. Electric shock

Electrical accidents are caused by a combination of unsafe factors including: Equipment and/or installation, environment, and work practices.

- Enclose all the exposed electrical parts
- Isolate electrical parts: Use guards or barriers, replace covers. All conductors must be protected and unused openings to be closed
- Junction boxes, pull boxes and fittings must have approved covers
- Unused openings in cabinets, boxes and fittings must be closed
- Use proper wire for extension cord while using the power tools. If wire is too small the tool will draw more current than the cord can handle, causing overheating & possible fire.
- Avoid usage of damaged extension cords & tools. Cords can be damaged by aging, contact with door / window edges, staples or fastenings, Abrasion from materials and activity in the area.
- Frequent inspection of the ground power supply, electric equipment and electrical circuits to ensure path to ground is continuous
- Inspect electrical equipment every time before usage
- Use Ground Fault Circuit Interrupter (GFCI)
- Worker should use appropriate PPEs as per electrical load

4.8. Chemical hazards

Employees at the proposed copper refinery plant are possibly exposed to many hazardous chemicals; every precaution should be taken to prevent these hazards. Chemicals used vary from region to region, from workplace to workplace. Hence it is beyond the scope of this manual to enumerate all chemicals hazards the employees are exposed to.

However, few hazardous chemicals are being mentioned as a guideline:

1. Copper Concentrate (dust)
2. SO_2 Gas
3. Copper Sulphate Acid fumes
4. Lead, arsenic, selenium dust
5. Sulphuric Acid fumes
6. Phosphoric acid fumes
7. Acid fumes of fluorine
8. Phosphoric Acid
9. Hydro-fluro-silicic acid fumes
10. Aluminium hydrate dust

2430

11. Aluminium Fluoride Fumes
12. Chlorine Gas
13. HCL Acid
14. Iso Propyl Alcohol
15. Sodium Sulphide
16. Ferric Sulphate

General preventive measure for all chemical hazards:

Chemical burns, irritation / inflammation of respiratory tract / pulmonary system and irritation / inflammation of the anterior chamber of eye (conjunctivitis, keratitis, etc.) are the common injuries encountered in employees exposed to dust / irritants / acid fumes. The general toxic action of acid causes alkaline depletion of the body i.e. an acidosis that affects the nervous system and produces agitation, hesitant gait and generalized weakness.

Preventive steps

Engineering control

- Total enclosure of the process using acid / acid fumes / dust.
- Mechanization of handling procedures to prevent all personal contact with hazards.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages

Administrative control

- Acids should be stored in separated well-ventilated cool, dry premises with an acid resistant cement floor, sheltered from direct sunlight and away from all sources of ignition.
- Empty containers should always be drained and rinsed clean with water.
- Spilt acid should be covered with sand or ashes and never with organic material.
- Showers, baths and washing fountains should be available and eye fountains and emergency showers should be provided.

Medical control

- Pre-employment Medical Examination should be directed at the detection of chronic respiratory, gastrointestinal, hepatic, cardiovascular, nervous disease and any eye & skin disease.
- Periodic Medical Examination of employees

PPE

This includes use of chemical goggles, face screens, mask (Dust/gas), gloves, neoprene or PVC boots and acid resistant clothing.

4.9. Hazards from individual units:

4.9.a. Raw material handling area:

Hazards expected:

- Dust containing Coper Concentrate* and Rock Phosphate**
- Noise (Refer section 4.1.a. "Noise" for details)
- Handling heavy machines / moving equipment

*Copper Concentrate consist of Copper, Lead, Arsenic, Selenium, Fluorine, Iron, sulphur, SiO_2, CaO, MgO, Al_2O_3, Zinc, Fe_3O_4, Bismuth, Antimony, Nickel, Cadmium, Chlorine, Mercury, Silver, Gold Moisture

**Rock Phosphate consist of P_2O_5, Fe_2O_3, Al_2O_3, CaO, MgO, SiO_2, SO_3, Chlorine, Fluorine, $CaCO_3$, CO_2, Na_2O, K_2O, TCP / BPL, organic matter as Carbon.

4.9. a.1. Dust containing copper concentrate and rock phosphate:

Possible harmful effects due to dust containing copper concentrate:

The dust particles can affect eyes, skin, respiratory system, liver, nervous system and kidney due to inhalation, oral ingestion and dermal absorption.

Preventive steps

Engineering control

- Total enclosure of the process using dust.
- Mechanization of handling procedures to prevent all personal contact with the dust.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages

Administrative control

- Monthly evaluation of the metal and metalloid particulates (Cu, Pb, As, Se, Ni, Cd, Hg, Bi, Sb) in workplace atmosphere, using air sampling and inductive coupled plasma (ICP) analysis, as recommended by the occupation safety and health administration (OSHA) method (ID-125G) or Central Pollution Control Board (CPCB) or Bureau of Indian standards methods for monitoring metals at the workplace.
- The occupational exposure limit of Copper, Lead, Arsenic, Selenium, Fluorine, Iron, sulphur, SiO_2, CaO, MgO, Al_2O_3, Zinc, Fe_3O_4, Bismuth, Antimony, Nickel, Cadmium, Chlorine, Mercury, Silver, Gold for 8-hour time weighted average (TWA) for inhalable dust should be limited as per Indian Factories act / NIOSH / OSHA guidelines.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, hepatic, renal disease as well eye & skin disease.
- Serum copper & ceruloplasmin feroxidase, urinary copper should be measured (the difference in urinary copper levels before and after work / shift hours is essential)
- Screen for heavy metals (e.g. mercury, lead, copper, arsenic, cadmium, Bismuth, Antimony and Nickel) in blood and urine. Delta aminolevulinate dehydratase levels should be checked to identify lead toxicity.
- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days
- Frequency of medical examination should be increased when the work place copper / heavy metal levels are higher than threshold limit value.
- An increase in the values of heavy metal/s in the biological samples (blood / urine) as compared to baseline during follow-up is an indication of accumulation of the respective metal/s, necessitating immediate mobilization (replacement) of the worker from further exposure to hazard (metal/s).

PPE

This includes use of chemical goggles, face screens, mask (Dust/gas), gloves, neoprene or PVC boots and acid resistant clothing.

Dust containing Rock phosphate

Possible harmful effects due to containing rock phosphate:

The dust particles can affect eyes, skin, respiratory system, liver, kidneys, blood and skeletal system due to inhalation, oral ingestion and dermal absorption.

Preventive steps

Engineering control

- Total enclosure of the process using dust.
- Mechanization of handling procedures to prevent all personal contact with the dust.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages
- Provide shower at nearby location

Administrative control

- Monthly evaluation by air samplers to collect particulate matter (PM) 2.5 & PM10 with respirable suspended particulate matter (RSPM) analyser as recommended by CPCB guidelines.
- The occupational exposure limit of P_2O_5, Fe_2O_3, Al_2O_3, CaO, MgO, SiO_2, SO_3, Chlorine, Fluorine, $CaCO_3$, CO_2, Na_2O, K_2O, TCP / BPL, organic matter as Carbon for 8-hour time weighted average (TWA) for inhalable dust should be limited as per NIOSH / OSHA guidelines.
- Phosphoric acid fumes and fluorine (as fluoride) has to be evaluated in the work place and the concentration of phosphorous acid should not exceed 1 ppm or 1mg/m^3 and, fluoride (as F) should not exceed 2.5 mg/m^3, while fluorine should be limited < 1 ppm or 2 mg/m^3.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, hepatic, renal disease, blood and gingival tissue as well eye & skin disease.
- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days
- Frequency of medical examination should be increased when the work place PM2.5 / PM 10 levels are higher than threshold limit value.

PPE

This includes use of chemical goggles, face screens, mask (dust/ gas), gloves, neoprene or PVC boots and acid resistant clothing.

4.9. a.2. Handling heavy machines / Moving equipment

Injuries are common events among employees handling heavy machines / moving equipment. Accidents should be prevented by proper maintenance of the machinery, safety training and use of personal protective devices. First aid treatment must be available for trivial injuries and employees must be trained in first aid.

Their ergonomic problems should be solved by workplace modification and/or mechanization of the processes where applicable. Periodic examination, corrective posture training and exercise may be taught to these employees to minimize Musculo-skeletal problems.

It is necessary the employees are attentive and have adequate control over the heavy machines to prevent accident / injuries

Preventive steps

Administrative & Engineering control as per the recommendations of Indian Factories Act

- Provision for safety / protective measures
- Extra precautions to be taken to prevent electric shocks.
- Adequate training and education regarding the usage of machines

Medical control

- Pre-employment medical examination should be directed at the detection of neurologic, visual, cardiovascular and general health.
- Individuals with above mentioned disorders should be avoided from engaging in heavy machine operation.

PPE

This includes use of helmets, goggles, steel toe boots and other specific recommendations as mentioned in the safety manual of the heavy machines.

4.9.b. Copper smelter:

Hazards expected:

- Dust containing copper concentrate
- Heat due to hot metals (Refer section 4.1.b. "Heat" for details)
- Sulphur dioxide
- Noise (Refer section 4.1.a. "Noise" for details)
- Working at height (Refer section 4.1.d. "Working at height" for details)

4.9. b.1. Dust containing copper concentrate:

Possible harmful effects:

The dust particles can affect eyes, skin, respiratory system, liver and kidney due to inhalation, oral ingestion and dermal absorption.

Preventive steps

Engineering control

- Total enclosure of the process using dust.
- Mechanization of handling procedures to prevent all personal contact with the dust.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages

Administrative control

- Monthly evaluation of the metal and metalloid particulates (Cu, Pb, As, Se, Ni, Cd, Hg, Bi, Sb) in workplace atmosphere, using air sampling and inductive coupled plasma (ICP) analysis, as recommended by the occupation safety and health administration (OSHA)

method (ID-125G) or Central Pollution Control Board (CPCB) or Bureau of Indian standards methods for monitoring metals at the workplace.

- The occupational exposure limit of Copper, Lead, Arsenic, Selenium, Fluorine, Iron, sulphur, SiO_2, CaO, MgO, Al_2O_3, Zinc, Fe_3O_4, Bismuth, Antimony, Nickel, Cadmium, Chlorine, Mercury, Silver, Gold Moisture for 8-hour time weighted average (TWA) for inhalable dust should be limited as per Indian Factories act / NIOSH / OSHA guidelines.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, hepatic, renal disease as well eye & skin disease.
- Serum copper & ceruloplasmin feroxidase, urinary copper should be measured (the difference in urinary copper levels before and after work / shift hours is essential)
- Screen for heavy metals (e.g. mercury, lead, copper, arsenic, cadmium, mercury, selenium, bismuth, antimony) in blood and urine. Delta aminolevulinate dehydratase levels should be checked to identify lead toxicity.
- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days
- Frequency of medical examination should be increased when the work place copper / heavy metal levels are higher than threshold limit value.
- An increase in the values of heavy metal/s in the biological samples (blood / urine) as compared to baseline during follow-up is an indication of accumulation of the respective metal/s, necessitating immediate mobilization (replacement) of the worker from further exposure to hazard (metal/s).

PPE

This includes use of chemical goggles, face screens, mask (dust/gas), gloves, neoprene or PVC boots and acid resistant clothing.

4.9. b.2. Sulphur dioxide:

Possible harmful effects:

The SO_2 gas can affect eyes, skin, respiratory system and occasionally kidneys due to inhalation, oral ingestion and dermal absorption.

Preventive steps

Engineering control

- Total enclosure of the process using SO_2 gas.
- Mechanization of handling procedures to prevent all personal contact with the gas.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages
- Provide shower at proximity location

Administrative control

Monthly evaluation of air quality monitoring by air samplers, to measure gaseous samples like SO_2 and NO_x as per the recommendations of CPCB / Indian factories Act.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, renal disease as well eye & skin disease.

- To be vigilant to detect acidosis among the employees.

PPE

This includes use of chemical goggles, face screens, mask (dust/gas), gloves, neoprene or PVC boots and acid resistant clothing.

4.9.c. Copper refinery:

Hazard expected:

- Acid Fumes of copper sulphate
- Extreme high temperature due to the steam & hot electrolyte (Copper Sulphate) (Refer section 4.1.b. "Heat" for details)
- Noise (Refer section 4.1.a. "Noise" for details)
- Working at Height (Refer section 4.1.d. "Working at height" for details)

4.9. c.1. Acid fumes of copper sulphate

Burns, irritation / inflammation of respiratory tract / pulmonary system and irritation / inflammation of the anterior chamber of eye (conjunctivitis, keratitis, etc.) are the common injuries encountered in employees exposed to acid fumes. Acid fumes can be absorbed systemically (surface absorption, oral ingestion and inhalation) causing alkaline depletion i.e. acidosis affecting nervous system would lead to agitation, hesitant gait and generalized weakness.

Preventive steps

Engineering control

- Total enclosure of the process using acid fumes.
- Mechanization of handling procedures to prevent all personal contact with hazards.
- Installation of local exhaust ventilation and warning devices for leakages
- Provide shower at nearby location

Administrative control

- Monthly evaluation of the metal and metalloid particulates in workplace atmosphere, including copper dust and copper fume levels using air sampling and ICP analysis, as recommended by the OSHA method (ID-125G) or CPCB.
- Air samplers to collect gaseous samples like SO_2 and Arsine as per the recommendations from CPCB / OSHA / BIS

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, hepatic, renal disease as well eye & skin disease.
- Serum copper & ceruloplasmin feroxidase, urinary copper should be measured (the difference in urinary copper levels before and after work / shift hours is essential)
- Frequency of medical examination should be increased when the work place copper levels are higher than threshold limit value.

PPE

This includes use of chemical goggles, face screens, mask (dust/ gas), gloves, neoprene or PVC boots and acid resistant clothing.

4.9.d. Copper rod plant

Expected hazards:

- Heat (Hot Metal) (Refer section 4.1.b. "Heat" under "Physical hazards", page 7)
- Noise (Refer section 4.1.a. "Noise" under "Physical hazards", page 6)
- Work at Height (Refer section 4.1.d. "Working at height", page 10)

4.9.e. Precious recovery plant:

- Dust from the anode slime containing heavy metals such as lead, arsenic, selenium
- Heat (hot metal) (Refer section 4.1.b. "Heat" for details)
- SO_2 gas (Refer section 4.9. b.2. "Sulphur dioxide" for details)
- Acid fumes (Refer section 4.9. c.1. "Acid fumes of copper sulphate" for details)
- Noise (Refer section 4.1.a. "Noise" for details)
- Work at Height (Refer section 4.1.d. "Working at height" for details)

4.9. e.1. Dust from anode slim

Anode slime contains heavy metals such as lead, arsenic, selenium.

Dust of heavy metals can be absorbed systemically by inhalation, oral ingestion and surface absorption leading to systemic effects. Irritation / inflammation of respiratory tract / pulmonary system and irritation / inflammation of the anterior chamber of eye (conjunctivitis, keratitis, etc.) and rarely dermatitis can be caused in these employees. Systemic absorption can cause chronic kidney, hepatic, bone, gastrointestinal, blood, neurological diseases.

Preventive steps

Engineering control

- Total enclosure of the process using heavy metal dust.
- Mechanization of handling procedures to prevent all personal contact with dust.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages
- Provide shower at nearby location

Administrative control

- Monthly evaluation of the metal and metalloid particulates in workplace atmosphere including lead, arsenic, selenium levels using air sampling and ICP analysis, as recommended by OSHA method (ID-125G) or CPCB or Indian Factories Act or American Conference of Governmental Industrial Hygienists (ACGIH) or National Institute of Occupational Safety and Health (NIOSH)
- The occupational exposure limit of lead, arsenic, selenium for 8-hour time weighted average (TWA) for inhalable dust should be limited as per Indian Factories act / NIOSH / OSHA guidelines.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of chronic kidney, hepatic, bone, gastrointestinal, blood, cardiovascular, neurological diseases in addition to chronic respiratory, eye & skin disease.
- Serum & urinary levels of arsenic, lead, selenium should be measured. Delta aminolevulinate dehydratase levels should be checked to identify lead toxicity.

- Frequency of medical examination should be increased when the work place heavy metal levels are higher than threshold limit value.

PPE

This includes use of chemical goggles, face screens, gloves, neoprene or Steel Toe boots and acid resistant clothing.

4.9.f. Sulphuric acid plant

- SO_2 Gas (Refer section 4.9. b.2. "sulphur dioxide" for details)
- Sulphuric Acid fumes
- Heat due to steam and hot sulphuric acid (Refer section 4.1.b. "Heat" for details)
- Noise (Refer section 4.1.a. "Noise" for details)
- Work at Height (Refer section 4.1.d. "Working at height" for details)
- Vanadium Pentoxide

4.9. f.1. Sulphuric acid fumes:

Burns, irritation / inflammation of respiratory tract / pulmonary system and irritation / inflammation of the anterior chamber of eye (conjunctivitis, keratitis, etc.) are the common injuries anticipated in employees exposed to sulphuric acid fumes. Sulphuric acid fumes can be absorbed systemically (oral ingestion, surface absorption and inhalation) and lead to alkaline depletion i.e. acidosis affecting the nervous system and produces agitation, hesitant gait and generalized weakness.

Preventive steps

Engineering control

- Total enclosure of the process using sulphuric acid fumes.
- Mechanization of handling procedures to prevent all personal contact with sulphuric acid fumes.
- Installation of local exhaust ventilation and warning devices for leakages
- Provide shower at proximity location to wash accidental exposure

Administrative control

- Monthly monitoring for 4 – 8 hours for SO_2, SO_3 & acid mist levels by air sampling using silica gel sorbent tubes with personal sampling pump (with calibrated flow in line with silica get tube) followed by analysis with ion exchange chromatograph & electrical conductivity detector / using field monitoring stations as recommended by the OSHA method (ID-113/165SG) or CPCB / Indian factories act.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, renal disease as well eye & skin disease.

PPE

This includes use of chemical goggles, face screens, mask (dust/ gas), gloves, neoprene or PVC boots and acid resistant clothing.

4.9. f.2. Vanadium pentoxide:

Occupational exposure can affect eyes, respiratory system and skin. Irritation / inflammation of respiratory tract / pulmonary system and irritation / inflammation of the anterior chamber

of eye (conjunctivitis, keratitis, etc.) are possible injuries among employees exposed to vanadium pentoxide. Vanadium pentoxide can be absorbed systemically (inhalation, surface absorption and oral ingestion) and lead dysfunction in reproductive system, suspected carcinogenesis and foetal malformation (exposure to pregnant woman).

Preventive steps

Engineering control

- Total enclosure of the process using Vanadium pentoxide.
- Mechanization of handling procedures to prevent all personal contact with Vanadium pentoxide.
- Ensure adequate ventilation, especially in confined areas.
- Provide shower / washing facilities at proximity location to wash accidental exposure

Administrative control

- Monthly monitoring of respirable dust (as vanadium pentoxide) and fumes (as vanadium pentoxide) by ICP analysis as per OSHA guidelines.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, eye & skin disease.
- Caution while employing woman of reproductive age group (risk of foetal malformations).

PPE

This includes use of chemical goggles, face screens, mask (dust/ gas), gloves, neoprene or PVC boots and protective clothing.

4.9.g. Effluent treatment plant

- Dust of the ETP Sludge containing Arsenic, Bismuth, Cadmium, Chromium, Cobalt, Nickel, Lead, Antimony, Selenium, iron, copper, zinc CaO, Sulphates, Silica, etc.)
- Acid fumes (Refer section 4.9. f.1. "sulphuric acid fumes" for details)
- Noise (Refer section 4.1.a. "Noise" under "Physical hazards" for details)
- Work at Height (Refer section 4.1.d. "Working at height" for details)

4.9. g.1. Dust containing heavy metals

Dust of heavy metals can be absorbed systemically by inhalation and dermal absorption and lead to systemic effects. Irritation / inflammation of respiratory tract / pulmonary system and irritation / inflammation of the anterior chamber of eye (conjunctivitis, keratitis, etc.) and rarely dermatitis can be caused in employees exposed to dust. Systemic absorption can cause chronic kidney, hepatic, and bone diseases.

Preventive steps

Engineering control

- Total enclosure of the process using heavy metal dust.
- Mechanization of handling procedures to prevent all personal contact with dust.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages

- Provide shower at nearby location

Administrative control

- Monthly evaluation of the metal and metalloid particulates in workplace atmosphere including lead, arsenic, selenium, cadmium, bismuth, chromium, cobalt, nickel, antimony and zinc levels using air sampling and ICP analysis, as recommended by OSHA method (ID-125G) or CPCB or Indian Factories Act or ACGIH or NIOSH.
- The occupational exposure limit of Arsenic, Bismuth, Cadmium, Chromium, Cobalt, Nickel, Lead, Antimony, Selenium, iron, copper, zinc CaO, Sulphates, Silica for 8-hour time weighted average (TWA) for inhalable dust should be limited as per Indian Factories act / NIOSH / OSHA guidelines.
- Hand or foot swab samples of workers involved in collection, transportation and disposal of ETP sludge should be analysed for heavy metals using ICP-MS methods

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of chronic kidney, hepatic, bone, gastrointestinal, blood, cardiovascular, neurological diseases in addition to chronic respiratory, eye & skin disease.
- Blood & urinary levels of lead, arsenic, selenium, cadmium, bismuth, chromium, cobalt, nickel, antimony and zinc should be measured. Delta aminolevulinate dehydratase levels should be checked to identify lead toxicity.
- Frequency of medical examination should be increased when the work place heavy metal levels are higher than threshold limit value.
- An increase in the values of heavy metal/s in the biological samples (blood / urine) as compared to baseline during follow-up is an indication of accumulation of the respective metal/s, necessitating immediate mobilization (replacement) of the worker from further exposure to hazard (metal/s).

PPE

This includes use of chemical goggles, face screens, mask (dust/ gas), gloves, neoprene or PVC boots and acid resistant clothing.

4.9.h. Phosphoric acid plant

- Dust containing rock phosphate
- Acid fumes of phosphoric acid and fluorine
- Heat due to steam, hot water, hot phosphoric acid & slurry (Refer section 4.1.b. "Heat" for details)
- Phosphoric acid
- Hydro-fluro-silicic acid fumes
- Noise (Refer section 4.1.a. "Noise" for details)
- Work at Height (Refer section 4.1.d. "Working at height" for details)

4.9. h.1. Dust containing Rock phosphate:

Possible harmful effects:

The dust particles can affect eyes, skin, respiratory system, liver, kidneys, blood, spleen, GIT, CNS, gingival tissue due to inhalation, oral ingestion and dermal absorption.

Preventive steps

2440

Engineering control

- Total enclosure of the process using dust.
- Mechanization of handling procedures to prevent all personal contact with the dust.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages
- Provide shower at nearby location

Administrative control

- Monthly evaluation by air samplers to collect particulate matter (PM) 2.5 & PM10 with respirable suspended particulate matter (RSPM) analyser as recommended by CPCB guidelines.
- The occupational exposure limit of P_2O_5, Fe_2O_3, Al_2O_3, CaO, MgO, SiO_2, SO_3, Chlorine, Fluorine, $CaCO_3$, CO_2, Na_2O, K_2O, TCP / BPL, organic matter as Carbon for 8-hour time weighted average (TWA) for inhalable dust should be limited as per NIOSH / OSHA guidelines.
- Phosphoric acid fumes and fluorine as fluoride has to be evaluated in the work place and the concentration of phosphorous acid should not exceed 1 ppm or 1mg/m^3, fluoride (as F) should not exceed 2.5 mg/m^3 and Fluorine should not exceed 1 ppm or 2 mg/m^3.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, hepatic, renal disease, blood and gingival tissue as well eye & skin disease.
- Screen for heavy metals (e.g. mercury, lead, copper, arsenic, cadmium) in blood and urine.
- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days
- Frequency of medical examination should be increased when the work place PM2.5 / PM 10 levels are higher than threshold limit value.

PPE

This includes use of chemical goggles, face screens, mask (dust/ gas), gloves, neoprene or PVC boots and acid resistant clothing.

Acid fumes of phosphoric acid and fluorine

Common hazards incited include dermal burns, inflammation of respiratory system & eyes. Prolonged exposure to acid fumes of phosphoric acid & fluorine can have immediate fatal effects (acidosis) and rarely chronic effects (osteoflurosis, osteoporosis, hepatitis, periostitis, skeletal deformity)

Preventive steps

Engineering control

- Total enclosure of the process using acid fumes.
- Mechanization of handling procedures to prevent all personal contact with hazards.
- Installation of local exhaust ventilation and warning devices for leakages

Administrative control

- Daily evaluation of the air samples as recommended by OSHA method ID-111 / Bureau of Indian standards (BIS).

- The occupational exposure of Phosphoric acid fumes and fluorine as fluoride has to be evaluated in the work place and the concentration of phosphorous acid should not exceed 1 ppm, fluoride (as F) should not exceed 2.5 mg/m^3 and Fluorine should not exceed 1 ppm or 2 mg/m^3.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, hepatic, renal disease as well eye & skin disease.
- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days

PPE

This includes use of chemical goggles, face screens, gloves, neoprene or PVC boots and acid resistant clothing.

4.9. h.2. Phosphoric acid

Accidental contact with phosphoric acid can lead to dermal burns, inflammation to anterior chamber of eyes (accidental spurting). At high temperatures, phosphoric acid might be present as acid fumes which can cause inflammation of respiratory tract leading to acidosis (affecting nervous system leading to agitation, altered sensorium, etc.) Occasional chronic effects include hepatitis, periostitis, skeletal deformity (commonly mandible & maxilla)

Preventive steps

Engineering control

- Total enclosure of the process using phosphoric acid.
- Mechanization of handling procedures to prevent all personal contact with phosphoric acid.
- Provide shower at nearby location for washing out accidental exposure

Administrative control

- Daily evaluation of the air samples as recommended by OSHA method ID-111 / Bureau of Indian standards (BIS) / Indian factories Act.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, renal disease as well eye & skin disease.

PPE

This includes use of chemical goggles, face screens, gloves, neoprene or PVC boots and acid resistant clothing.

4.9. h.3. Acid fumes of hydro-fluro-silicic acid

Employees exposed to acid fumes of hydro-fluro-silicic acid are prone for accidental dermal burns, inflammation of anterior chamber of eyes (conjunctivitis, keratitis, etc.). Additionally, inhalation of acid fumes can lead to inflammation of respiratory system. Systemic absorption of acid fumes could deplete alkali causing systemic acidosis. Long term systemic absorption could cause osteoflurosis.

Preventive steps

Engineering control

- Total enclosure of the process using acid fumes of hydro-fluro-silicic acid.
- Mechanization of handling procedures to prevent all personal contact with acid fumes.
- Installation of local exhaust ventilation and warning devices for leakages
- Provide shower at nearby location

Administrative control

- 6 monthly airborne fluoride levels through personal air monitoring for both particulate and gaseous phase fluorides.
- Exposure to hydro-fluro-silicic acid should be restricted to below the threshold limit values as per OSHA/NIOSH guidelines. The occupational exposure of fluoride has to be evaluated in the work place and the concentration of fluoride (as F) should not exceed 2.5 mg/m^3 and Fluorine should not exceed 1 ppm or 2 mg/m^3.
- Biological monitoring for fluorides to be undertaken

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, renal disease as well eye & skin disease.
- Contact lens should be avoided in the workplace.
- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days.
- Fluoride levels in urine should not exceed 4 mg/ gm creatinine (indicate over exposure).

PPE

This includes use of chemical goggles, face screens, gloves, neoprene or PVC boots and acid resistant clothing.

4.9.i. Aluminium fluoride plant

- Dust (Aluminium Hydrate)
- Aluminium Fluoride Slurry Fumes
- Heat (Steam, Hot hydro-fluro-silicic acid, Aluminium Fluoride Slurry) (Refer section 4.1.b. "Heat" for details)
- Hydro-Fluro-Silicic acid fumes (Refer section 4.9. h.3. "Acid fumes of hydro-fluro-silicic acid" for details)
- Noise (Refer section 4.1.a. "Noise" for details)
- Work at Height (Refer section 4.1.d. "Working at height" for details)

4.9. i.1. Dust containing Aluminium Hydrate

Possible harmful effects:

The dust particles can affect eyes, skin, respiratory system due to surface irritation and systemically via inhalation, oral ingestion and dermal absorption.

Preventive steps

Engineering control

- Total enclosure of the process using dust.
- Mechanization of handling procedures to prevent all personal contact with the dust.
- Installation of local exhaust ventilation fitted with bag filters and warning devices for leakages

- Provide shower at nearby location

Administrative control

- Monthly evaluation by air samplers to collect PM2.5 & PM10 with respirable suspended particulate matter analyser for Aluminium hydrate, aluminium fluoride & other fluoride dust levels as recommended by CPCB guidelines.
- The occupational exposure limit of Aluminium hydrate (raw material) for 8-hour time weighted average (TWA) for inhalable dust should be limited as per NIOSH / OSHA guidelines, Additionally, fluoride (as F) levels should be monitored and kept below 2.5 mg/m^3 and Fluorine should not exceed 1 ppm or 2 mg/m^3.

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, eye & skin disease.
- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days
- Frequency of medical examination should be increased when the work place PM2.5 / PM 10 levels are higher than threshold limit value.

PPE

This includes use of chemical goggles, face screens, gloves, neoprene or PVC boots and acid resistant clothing.

4.9. i.2. Fumes of Aluminium Fluoride Slurry

Burns, irritation / inflammation of respiratory tract / pulmonary system and irritation / inflammation of the anterior chamber of eye (conjunctivitis, keratitis, etc.) are the common injuries anticipated in employees exposed to the acid fumes. Systemic absorption of the acid can lead to alkaline depletion i.e. acidosis affecting the nervous system and produces agitation, hesitant gait and generalized weakness. Long term systemic absorption could cause osteoflurosis.

Preventive steps

Engineering control

- Total enclosure of the process using Acid fumes of Aluminium fluoride slurry.
- Mechanization of handling procedures to prevent all personal contact with acid fumes.
- Provide shower at nearby location

Administrative control

- 6 monthly air Quality monitoring by air samplers to collect PM 2.5 and PM 10 with RSPM sampler, fluoride analysis, assessment of metals and metalloid particulates in workplace atmosphere (air sampling and ICP analysis) as per CPCB guidelines
- Fluoride (as F) should not exceed 2.5 mg/m3 and Fluorine should not exceed 1 ppm or 2 mg/m3.
- Biological monitoring for fluorides to be undertaken

Medical control

- Pre-employment and 6 monthly medical examinations should be directed at the detection of respiratory, eye & skin disease.
- Contact lens should be avoided in the workplace.

- Measure fluoride levels in blood and urine before and after working for 5 – 6 consecutive days
- Fluoride levels in urine should not exceed 4 mg/ gm creatinine (indicative of over exposure).

PPE

This includes use of chemical goggles, face screens, gloves, neoprene or PVC boots and acid resistant clothing

4.9.j. Maintenance in various units of the Refinery

- Vibration (due to use of vibrating equipment such as Grinder, Cutter, Drilling machine, etc.) (Refer section 4.1.c. "Vibration" for details)
- Noise (Refer section 4.1.a. "Noise" for details)
- Heat (Refer section 4.1.b. "Heat" for details)
- Light in metal unit area (Refer section 4.1.e. "illumination" for details)

Summary of the occupational health and work place monitoring for each of the units (for detailed description, refer the respective text)

Project construction phase

Hazards	**Possible routes of entry / hazard**	**Common target organ damage**	**Screening of hazard event / compound**	**Frequency**	**Test (Section 5)**
Vibration (use of vibrating equipment such as Grinder, Cutter, Drilling machine, etc.).	Physical	Neurological (peripheral), musckulo-skeletal, circulatory	Peripheral circulation, peripheral nerves, locomotor	Annual	Sensory assessments for peripheral nerves (clinical assessment)
Dust	Inhalation, surface absorption	Eyes, Skin, Respiratory system	Respiratory system evaluation	Annual	Eyes, Skin, Respiratory system evaluation recommended
Noise	physical	Auditory, Circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, circulatory system

Hazards	**Workplace monitoring**	**Frequency of monitoring**	**Test protocol/Method**
Vibration (due to use of vibrating equipment such as Grinder, Cutter, Drilling machine, etc.).	As indicated in the text	As indicated in the text	As indicated in the text
Dust	Air samplers sampling PM 2.5 and PM 10 with respirable suspended particulate matter (RSPM) sampler.	Monthly	As per bureau of Indian standards (BIS)/ central pollution control board (CPCB) /Indian factories act
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines

2496

Raw material handling
(for detailed description refer Section 4.9.a.)

Hazards	**Possible routes of entry / hazard**	**Common target organ damage**	**Screening of hazard event / compound**	**Frequency**	**Test (Section 5)**
Dust (Copper Concentrate & rock phosphate)	Inhalation, surface absorption, oral ingestion	Eyes, skin, respiratory system, liver, kidney blood, nervous system and skeletal system	Respiratory system evaluation, Serum copper & ceruloplasmin feroxidase, urinary copper (measured before and after work / shift hours), serum & urine fluoride levels before and after 5 – 6 consecutive working days, blood & urinary levels of heavy metals (mercury, lead, copper, arsenic, cadmium, mercury),	6 monthly, more frequent monitoring is recommended if the workplace copper, heavy metal levels are higher than TLV	Tests to evaluate eyes, skin, respiratory system, liver, kidney, blood, skeletal system (X-ray) & nervous system
Handling heavy machines / moving equipment	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (
Noise	physical	Auditory, Circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, Circulatory system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Dust (Copper Concentrate & rock phosphate)	Metal and metalloid particulates (Cu, Pb, As, Se, Ni, Cd, Hg, Bi, Sb) in workplace atmosphere, (by Air sampling and inductive coupled plasma (ICP) analysis). Evaluation by air samplers to collect particulate matter (PM) 2.5 & PM10 with respirable suspended particulate matter (RSPM) analyser for rock phosphate and fluoride levels. Phosphoric acid fumes and fluorine (as fluoride) has to be evaluated in the work place	Monthly	As per occupation safety and health administration (OSHA) method ID-125G or CPCB guideline
Handling heavy machines / moving equipment	Provision for safety / protective measures. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines.	Daily	Indian factories act
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations), octave band analyser, octave frequency analysis	Monthly	As per CPCB guidelines

2448

Copper smelter
(for detailed description refer Section 4.9.b.)

Hazards	**Possible routes of entry / hazard**	**Common target organ damage**	**Screening of hazard event / compound**	**Frequency**	**Test (Section 5)**
Dust (Copper Concentrate)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidney blood, nervous system and skeletal system	Respiratory system evaluation, Serum copper & ceruloplasmin feroxidase, urinary copper (measured before and after work / shift hours), serum & urine fluoride levels before and after 5 – 6 consecutive working days, blood & urinary levels of heavy metals (mercury, lead, copper, arsenic, cadmium, mercury),	6 monthly, more frequent monitoring is recommended if the workplace copper, heavy metal levels are higher than TLV	Tests to evaluate eyes, skin, respiratory system, liver, kidney, blood, & nervous system
Heat (Hot Metal)	physical	Circulatory system, renal system	Renal system	Annual	Tests to evaluate cardiovascular system and kidney
SO_2 Gas	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin respiratory system	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking test)
Noise	physical	Auditory, Circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, Circulatory system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Dust (Copper Concentrate)	Metal and metalloid Particulates (Cu, Pb, As, Se, Ni, Cd, Hg) in workplace atmosphere, copper dust and copper fumes levels to be measured (by Air sampling and ICP analysis)	Monthly	As per OSHA method ID-125G or CPCB guideline / BIS method – monitoring of metals at workplace
Heat (Hot Metal)	Heat stress monitoring , wet bulb globe temperature (WBGT) index	Monthly	Indian factories act
SO2 Gas	Air Quality monitoring by Air samplers to collect gaseous samples like SO_2 and NO_x	Monthly	As per CPCB / Indian factories act guidelines
Work at Height	Provision for safety / protective measures: Such as whole body harness, elevated working platforms, safety net to prevent fall should be practiced. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines when working at heights more than 6 feet from the ground	Daily	Indian factories act & National Safety Council Guidelines for work at heights to be followed if available. If not "Working at Height: A Brief Guide" to be followed (http://www.hse.gov.uk/pubns/indg401.pdf)
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations), octave band analyser, octave frequency analysis	Monthly	As per CPCB guidelines

2450

Copper refinery
(for detailed description refer Section 4.9.c.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
Acid Fumes (Copper Sulphate)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidney	Respiratory system evaluation, Serum copper & ceruloplasmin feroxidase, urinary copper (measured before and after work / shift hours)	6 monthly, more frequent monitoring is recommended if the workplace copper levels are higher than TLV	Target organ evaluation recommended
Heat (Steam and Hot Electrolyte of Copper Sulphate)	physical	Circulatory system, renal system	Renal system	Annual	Target organ evaluation recommended
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking)
Noise	physical	Auditory, circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, circulatory system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Acid Fumes (Copper Sulphate)	Air quality monitoring by air samplers to collect gaseous samples like SO_2 and Arsine, followed by metal and metalloid analysis	Monthly	As per BIS / CPCB / OSHA
Heat (Steam and Hot Electrolyte of Copper Sulphate)	Heat stress monitoring , WBGT index	Monthly	Indian factories act
Work at Height	Provision for safety / protective measures (such as net / ropes for sky folding)	Daily	Visual inspection as per Indian factories act
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines

Copper rod plant
(for detailed description refer Section 4.9.d.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
Heat (Hot Metal)	physical	Circulatory system, renal system	Renal system	Annual	Tests to evaluate circulatory system & renal system
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking test)
Noise	physical	Auditory, circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, circulatory system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Heat (Hot Metal)	Heat stress monitoring , WBGT index	Monthly	Indian factories act
Work at Height	Provision for safety / protective measures: such as whole body harness, elevated working platforms, safety net to prevent fall should be practiced. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines when working at heights more than 6 feet from the ground	Daily	Indian factories act & National Safety Council Guidelines for work at heights to be followed if available. If not "Working at Height: A Brief Guide" to be followed (http://www.hse.gov.uk/pubns/indg401.pdf)
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines

2452

Precious metal recovery
(for detailed description refer Section 4.9.e.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
Dust (As)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys, bone	Arsenic levels urine (preferred) / blood	6 monthly	ICP-MS method
Dust (Pb)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, kidneys, blood, GIT, CNS	Blood Lead & Delta-aminolevulinate dehydratase levels, urine lead levels	6 monthly	ICP-MS method
Dust (Se)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver,	Selenium levels in blood	6 monthly	ICP-MS method
Heat (hot metal)	NA	Circulatory system, renal system	Renal system	Annual	Tests to evaluate circulatory system & renal system
SO_2 Gas	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin respiratory system	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking)
Noise	physical	Auditory, Circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, Circulatory system
Acid Fumes	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, Liver, kidney	Respiratory system evaluation	6 monthly	Tests to evaluate eyes, skin, respiratory system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Dust (As)	Metal and metalloid Particulates in workplace atmosphere (Air sampling and ICP analysis)	Monthly	As per American Conference of Governmental Industrial Hygienists (ACGIH) / NIOSH / OSHA method ID-125 or CPCB guideline / Indian factories act
Dust (Pb)	Metal and metalloid Particulates in workplace atmosphere (Air sampling and ICP analysis)	Monthly	As per ACGIH / NIOSH / OSHA method ID-125 or CPCB guideline / Indian factories act
Dust (Se)	Metal and metalloid Particulates in workplace atmosphere (Air sampling and ICP analysis)	Monthly	As per ACGIH / NIOSH / OSHA method ID-125 or CPCB guideline / Indian factories act
Heat (hot metal)	Heat stress monitoring, WBGT index	Monthly	Indian factories act
SO_2 Gas	Air Quality monitoring by Air samplers to collect gaseous samples like SO_2 and NO_x	Monthly	As per CPCB / Indian factories act guidelines
Work at Height	Provision for safety / protective measures: Such as whole body harness, elevated working platforms, safety net to prevent fall should be practiced. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines when working at heights more than 6 feet from the ground	Daily	Indian factories act & National Safety Council Guidelines for work at heights to be followed if available. If not "Working at Height: A Brief Guide" to be followed (http://www.hse.gov.uk/pubns/indg401.pdf)
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines
Acid Fumes	Air Quality monitoring by Air samplers to collect gaseous samples like SO_2, ozone , oxygen and NO_x	Monthly	As per CPCB guidelines or OSHA method ID-200 / Indian factories act

2454

Sulphuric acid plant
(for detailed description refer Section 4.9.f.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
SO_2 Gas	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin respiratory system	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking test)
Noise	physical	Auditory, circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, circulatory system
Sulphuric Acid fumes	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, renal	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system, kidney
Vanadium pentoxide	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system, kidney
Heat (Steam and Hot Sulphuric Acid)	Inhalation, surface absorption, oral ingestion, local hazard	Circulatory system, renal system	Renal system	Annual	Tests to evaluate kidney, cardiovascular system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
SO2 Gas	Air Quality monitoring by Air samplers to collect gaseous samples like SO_2 and NO_x	Monthly	As per CPCB / Indian factories act guidelines
Work at Height	Provision for safety / protective measures: Such as whole body harness, working platforms, safety net to prevent fall should be practiced. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines when working at heights	Daily	Visual inspection as per Indian factories act
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines
Sulphuric Acid fumes	Air sampling by Silica gel sorbent tubes with personal sampling pump (with calibrated flow in line with silica gel tube) followed by analysis with Ion exchange chromatograph with electrical conductivity detector or field monitoring stations (monitoring of SO_2, SO_3 & acid mist levels)	4/8 hourly	As per OSHA method ID-113/165SG OR CPCB Guideline / Indian factories act
Heat (Steam and Hot Sulphuric Acid)	Heat stress monitoring , WBGT index	Monthly	Indian factories act

2456

Effluent treatment plant
(for detailed description refer Section 4.9.g.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
Dust (ETP Sludge containing heavy metals)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys, bone	screen for key heavy metals in blood and urine e.g. Hg, Pb, Cu, Ar, Cd, fluoride	6 monthly (Measure fluoride levels before and after 5 - 6 consecutive days of work)	ICP-MS method
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking test)
Noise	Physical	Auditory, circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, circulatory system
Acid Fumes	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, Liver, kidney	Respiratory system evaluation	Annual	Tests to evaluate eyes, skin, respiratory system, liver and kidney

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Dust (ETP Sludge containing heavy metals)	Air Quality monitoring by Air samplers to collect PM 2.5 and PM 10 with RSPM sampler. Metal and Metalloid Particulates in workplace atmosphere to be measured as well (Air sampling and ICP analysis). Swab samples from foot & hand of employees should be evaluated for heavy metals	Monthly	As per CPCB guideline
Work at Height	Provision for safety / protective measures: Such as whole body harness, elevated working platforms, safety net to prevent fall should be practiced. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines when working at heights more than 6 feet from the ground	Daily	Indian factories act & National Safety Council Guidelines for work at heights to be followed if available. If not "Working at Height: A Brief Guide" to be followed (http://www.hse.gov.uk/pubns/indg401.pdf)
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines
Acid Fumes	Air sampling by Silica gel sorbent tubes with personal sampling pump (with calibrated flow in line with silica gel tube) followed by analysis with Ion exchange chromatograph with electrical conductivity detector or field monitoring stations (monitoring of SO_2, SO_3 & acid mist levels)	4/8 hourly	As per OSHA method ID-113/165SG OR CPCB Guideline / BIS

2458

Phosphoric acid plant
(for detailed description refer Section 4.9.h.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
Dust (Rock Phosphate)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys, blood, spleen, GIT, CNS, Kidneys, Blood, gingival tissue	Respiratory system evaluation screen for key heavy metals in blood and urine e.g. Hg, Pb, Cu, Ar, Cd,	Annual	Tests to evaluate Eyes, skin, respiratory system, liver, kidneys, blood, spleen, GIT, CNS.
Acid Fumes (Phosphoric Acid with Fluorine)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys	Respiratory system evaluation & urinary fluoride by ICP-MS	Annual (Measure fluoride levels before and after 5 - 6 consecutive days of work)	Tests to evaluate eyes, skin, respiratory system, liver and kidney
Heat (Steam, Hot Water, Hot Phosphoric Acid & Slurry)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys, circulatory	Respiratory system	6 monthly	Tests to evaluate eyes, skin respiratory system, liver, kidney and circulatory system
Phosphoric Acid	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system, and liver
Hydro-Fluro-Silicic Acid fumes	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system, liver and kidney
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking test)
Noise	physical	Auditory, Circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, circulatory system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Dust (Rock Phosphate)	Personal air monitoring to collect respirable dust PM10 & 2.5 dust for rock phosphate and fluoride exposures to be undertaken. phosphoric acid fumes and fluorine as fluoride has to be evaluated in the work place and the concentration of phosphorous acid should not exceed 1 ppm or 1 mg/m^3, fluoride (as F) should not exceed 2.5 mg/m3 and Fluorine should not exceed 1 ppm or 2 mg/m^3. Additionally Co, K, Mg, Mn, Na, Cd, Cu, Cr, Ni, Pb, Zn levels should be monitored	Monthly	As per CPCB guideline NIOSH guidelines
Acid Fumes (Phosphoric Acid with Fluorine)	Phosphorous acid should not exceed 1 ppm, fluoride (as F) should not exceed 2.5 mg/m^3 and Fluorine should not exceed 1 ppm or 2 mg/m^3. Collection by air sampling followed by analysis as per OSHA method ID 111, fluoride analysis	Half hourly and 24 hourly	As per OSHA method ID-111 /BIS
Heat	Heat stress monitoring , WBGT index	Monthly	Indian factories act
Phosphoric Acid	Collection by air sampling followed by analysis as per OSHA method ID 111	Half hourly and 24 hourly	As per OSHA method ID-111 or CPCB guidelines / BIS
Hydro-Fluro-Silicic Acid fumes	Airborne Fluoride estimation through personal air monitoring for both particulate and gaseous phase fluorides. Exposure to hydro-fluor-silici acid should not exceed 2.5 mg/m^3 as per US OSHA/ACGIH/NIOSH guidelines. Contact lens should be avoided in the workplace. Fluoride levels in urine should not exceed 4 mg/L, indicate over exposure. Biological monitoring for fluorides to be undertaken	Once in 6 Months	As per OSHA/NIOSH methods
Work at Height	Provision for safety / protective measures: Such as whole body harness, elevated working platforms, safety net to prevent fall should be practiced. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines when working at heights more than 6 feet from the ground	Daily	Indian factories act & National Safety Council Guidelines for work at heights to be followed if available. If not "Working at Height: A Brief Guide" to be followed (http://www.hse.gov.uk/pubns/indg401.pdf)
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines

2460

Aluminium fluoride plant
(for detailed description refer Section 4.9.i.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
Dust (Aluminium Hydrate)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system	Respiratory system evaluation urinary fluoride by ICP-MS method	Annual (Measure fluoride levels before and after 5 - 6 consecutive days of work)	Tests to evaluate eyes, skin, respiratory system
Aluminium Fluoride Slurry Fumes	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system	Respiratory system evaluation & urinary fluoride by ICP-MS method	Annual (Measure fluoride levels before and after 5 - 6 consecutive days of work)	Tests to evaluate eyes, skin, respiratory system
Heat (Steam, Hot Hydro-Fluro-Silicic Acid, Aluminium Fluoride Slurry)	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys, circulatory	Respiratory system	6 monthly	Tests to evaluate eyes, skin, respiratory system, liver, kidneys, circulatory system
Hydro-Fluro-Silicic Acid fumes	Inhalation, surface absorption, oral ingestion, local hazard	Eyes, skin, respiratory system, liver, kidneys	Respiratory system evaluation urinary fluoride by ICP-MS method	Annual (Measure fluoride levels before and after 5 - 6 consecutive days of work)	Tests to evaluate eyes, skin, respiratory system, liver, kidneys
Work at Height	NA	General	General health, circulatory system, vision, neurological evaluation	Annual	Circulatory system, vision, neurological evaluation (vertigo test, tandem walking test)
Noise	physical	Auditory, circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, circulatory system

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Dust (Aluminium Hydrate)	Air Quality monitoring by Air samplers to collect PM 2.5 and PM 10 with RSPM sampler, fluoride analysis	Monthly	As per CPCB guideline
Aluminium Fluoride Slurry Fumes	fluoride (as F) should not exceed 2.5 mg/m3 and Fluorine should not exceed 1 ppm or 2 mg/m3. Air Quality monitoring by Air samplers to collect PM 2.5 and PM 10 with RSPM sampler, fluoride analysis, assessment of metals and metalloid particulates in workplace atmosphere (Air sampling and ICP analysis)	Monthly	As per CPCB guidelines
Heat (Steam, Hot Hydro-Fluro-Silicic Acid, Aluminium Fluoride Slurry)	Heat stress monitoring , wet bulb globe temperature (WBGT) index	Monthly	Indian factories act
Hydro-Fluro-Silicic Acid fumes	Airborne Fluoride estimation through personal air monitoring for both particulate and gaseous phase fluorides. Contact lens should be avoided in the workplace. Fluoride levels in urine should not exceed 4 mg/L, indicate over exposure. Biological monitoring for fluorides to be undertaken	at least once in 6 months	As per NIOSH/OSHA/ACGIH methods
Work at Height	Provision for safety / protective measures: Such as whole body harness, elevated working platforms, safety net to prevent fall should be practiced. Extra precautions to be taken to prevent contact electric shocks with HT/LT lines when working at heights more than 6 feet from the ground	Daily	Indian factories act & National Safety Council Guidelines for work at heights to be followed if available. If not "Working at Height: A Brief Guide" to be followed (http://www.hse.gov.uk/pubns/indg401.pdf)
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations) to evaluate octave band octave frequency	Monthly	As per CPCB guidelines

2462

Maintenance of other units in the refinery
(for detailed description refer Section 4.9.j.)

Hazards	Possible routes of entry / hazard	Common target organ damage	Screening of hazard event / compound	Frequency	Test (section 5)
Vibration (due to use of vibrating equipment's).	Mechanical	Neurological (peripheral), musckulo skeletal, circulatory	Peripheral circulation, peripheral nerves, locomotor	Annual	Sensory assessments for peripheral,
Dust	Inhalation, surface absorption,	Eyes, Skin, Respiratory system	Respiratory system	Annual	Target organ evaluation recommended
Noise	physical	Auditory, Circulatory	Screen for sensory neural hearing loss	Annual	Pure - tone audiometry, Circulatory system
Heat	NA	Circulatory system, renal system	Renal system	Annual	Target organ evaluation recommended
Light in metal unit area	NA	Eyes, skin	ophthalmic evaluation	Annual	Target organ evaluation recommended

Hazards	Workplace monitoring	Frequency of monitoring	Test protocol/method
Vibration	As indicated in the text	Refer text	As indicated in the text
Dust	Work place air quality monitoring using Personal and low volume (area) air samplers to collect PM 2.5 and PM 10. The dust concentrations to be compared with permissible exposure limits (PELs) of Indian Factories Act 1948.	Monthly	As per CPCB guideline / Indian factories act 1948
Noise	Noise level meter equivalent noise level-dB (A) (minimum 10 locations), octave band analyser, octave frequency analysis	Monthly	As per CPCB guidelines
Heat	Heat stress monitoring , WBGT index	Monthly	Indian factories act
Light in metal unit area	Intensity of light in lumens or lux to be measured by Lux meter to be compared with IS:6665:1972 (Reaffirmed in 2005)	Once in 6 Months	National Lighting Standards 2010 applicable for industrial lighting (BIS) or updated version. Or "Code of Practice for Industrial Lighting" IS: 6665:1972 (Reaffirmed in 2005) or ISO 8995-1:2002 to be followed

2463

Table: Reference permissible limit of exposure values for individual hazards

Hazards identified	Permissible limits of exposure (TWA - 8 Hours) @
Copper dust *, (raw)[3]	$(0.2)^3$ mg/m^3
Copper fume *	0.2 mg/m^3
Lead*	0.15 mg/m^3
Arsenic*	0.002 mg/m^3
Selenium^	0.2 mg/m^3
Fluorine *	2 mg/m^3
Iron *	5 mg/m^3
Silicon dioxide *	(30mg/m^3) or (% of SiO_2 + 2)
MgO ^	5 mg/m^3
CaO *	2 mg/m^3
Al_2O_3 ^	5 mg/m^3
Zinc *	5 mg/m^3
Fe_2O_3 *	5 mg/m^3
Bismuth ^	5mg/m^3
Antimony ^	0.5mg/m^3
Nickel *	0.05 ppm or 0.35 mg/m^3
Cadmium *	0.05 mg/m^3
Chlorine *	1 ppm or 3 mg/m^3
Mercury (alkyl compounds) *	0.01 mg/m^3
Mercury (non-alkyl compounds) *	0.05 mg/m^3
Mercury (aryl & inorganic compounds) *	0.1 mg/m^3
Silver ^	0.01mg/m^3
gold	Data NA
P_2O_5 $^{\Psi}$	1 mg/m3
SO_3 ^	1 mg/m^3 / Sulphuric Acid
$CaCO_3$ ^	5mg/m^3
CO_2 ^	9000mg/m^3
SO_2 Gas *	5 mg /m^3
Acid Fumes (Copper Sulphate) ^	0.1 mg/m^3
Sulphuric Acid fumes *	1 mg/m^3
Chromic acid / chromates *	0.05 mg/m^3
Chromous salts *	0.05 mg/m^3
Cobalt ^	0.1mg/m^3
Phosphoric acid *	1 mg/m^3
Fluorides *	2.5 mg/m^3
Hydro Fluro Silicic Acid fumes as fluoride ^	2.5 mg/m^3
Dust (Aluminium Hydrate) ^	5 mg/m^3
Aluminium Fluoride Slurry Fumes as fluoride ^	2.5 mg/m^3
Vanadium pentoxide @	0.5 mg / m^3 (as respirable dust) & 0.1 mg / m^3 (as fumes)

2464

* Data as per Indian factories act

^ Data as per OSHA

ψ Data as per American Industrial hygiene association

@ The exposure values of vanadium pentoxide is ceiling levels unlike the other hazards that TWA measurement for permissible exposure limit.

Section 5: Occupational health assessment / medical evaluation:

Pre-placement and periodic clinical evaluation is the key towards early identification of occupational illness / disease. All employees should be educated regarding the hazards exposed, as well preventive measures to reduce the hazard. The employees should be trained with first aid measures.

Following clinical evaluation is recommended for the early identification of illness.

Pre-placement & periodic clinical evaluation:

Following details are to be extracted during the clinical examination

1. Socio-demographic details: including age, sex, education, tobacco usage, alcohol usage pattern (habits & addiction)
2. Occupational history (past & present employment): Details of previous employment, exposure risk, type of industry, duration of employment, work hours, etc.
3. Details of previous and present medical illness / diseases or symptoms or reasons for long term medications.
4. Family history of diseases and illnesses
5. For female employees:
    a. Menstrual & obstetric history
6. Clinical assessments:
    a. General physical examination: Temperature, pulse, respiratory rate, blood pressure, anthropometry (height, weight, hip circumference, waist circumference) pallor, icterus, lymphadenopathy (swelling of lymph nodes), oedema, clubbing, cyanosis, thyroid swelling, prominent veins (neck, lower limbs)
    b. System specific examination: should include detailed history of signs and symptoms (if any) of the particular system
        i. Respiratory system
        ii. Cardiovascular system
        iii. Central nervous system
        iv. Gastrointestinal system
        v. Dermatological assessment
        vi. Musculoskeletal system
7. Respiratory system evaluation:
    a. Clinical evaluation should include detailed history of respiratory symptoms, dyspnoea, exertional dyspnoea, cough, cough with expectoration, haemoptysis, pharyngitis, laryngitis, sore throat, respiratory tract infections etc.
    b. Pulmonary function tests (spirometry) as per American Thoracic Society (ATS) / European Respiratory Society (ERS) criteria
    c. Chest X-ray Posterio-Anterior as recommended by the "Guidelines for the use of the ILO international classification of radiographs of pneumoconiosis" (contraindicated in case of pregnant women)

8. Cardiovascular system: Electrocardiogram (ECG) for persons aged > 45 years.
9. Blood investigations:
    a. Complete hemogram: Hemoglobin, cell count (TC, DC), blood grouping, platelet, RBC count, peripheral blood smear (PBS), bleeding time (BT), clotting time (CT), erythrocyte sedimentation rate (ESR),
    b. Random blood sugar (RBS)
10. Liver function test:
    a. Clinical examination: change in appetite, jaundice, nausea, vomiting, dyspepsia etc.
    b. Laboratory investigation: Albumin, globulin, AG ratio, SGOT, SGPT, ALP, serum bilirubin, GGT
11. Renal function test:
    a. Blood: Serum urea & creatinine, uric acid,
    b. Urine examination: Protein, sugar
12. Audiometry: Persons exposed to noise / sound level > 90 db time weighed average, are required to undergo 6 monthly periodic screening for noise induced hearing loss (NIHL) using pure tone average (PTA) audiometry.
13. Ophthalmic evaluation:
    a. History such as burning, dryness, redness, water of eyes etc. should be inquired along with clinical evaluation of conjunctiva, cornea, sclera, lens etc.
    b. Screen for refractory errors, colour vision, binocular Vision, peripheral vision etc. (preferably using Titmus vision tester).
14. Dermatological evaluation: clinical evaluation and recording for blisters, keratosis, infection, wound, hyperpigmentation etc. (if any found, these lesions to be recorded and monitored every 3 months)
15. Neurological evaluation (in addition to routine clinical neurological evaluation)
    a. Peripheral: clinical evaluation including detection of paraesthesia, tingling and sensory abnormalities
    b. Balance: clinical vertigo test & tandem walking test
    c. Higher mental (cognitive) functions such as attention, orientation, comprehension and memory should be evaluated.
16. Biological monitoring programme (to be performed periodically post-employment):
    a. Blood, urine, hair, nail samples of representative groups of workers to be evaluated for heavy metal such as arsenic, lead, copper, cadmium, mercury, chromium, nickel, aluminium, iron and zinc

Clinical assessments, at the described frequency should include detailed clinical assessment i.e. "6. Clinical assessments" as well the target organ evaluation tests (described above 7 – 14) mentioned in the list.

If workplace monitoring reveal additional hazards such as arsenic / other heavy metals, the employees will undergo additionally screened accordingly.

- The screening tests described in the document are meant to early detection of the anticipated chronic illness / harmful effects of the particular hazard, however the factory

medical officer is expected to watch for other possible acute illnesses and report the notifiable occupational diseases to the local DISH authorities.

- The individuals are expected to be in their best possible health, individuals identified with compromised clinical parameters should not be employed in the particular work place /industry / unit as the occupational exposure could aggravate the aforementioned clinical parameter / illness
- The frequency of evaluation indicated is for individuals with all parameters within normal range and all recommended hazard control measures have been employed.
- A particular individual employed in a particular unit, has the risk of being exposed to all the hazards mentioned, therefore has to be evaluated for the entire hazards described (e.g. individual employed in copper smelter is expected to be screened for all the identified hazards such as noise, dust of copper concentrate, heat, sulphur dioxide, noise and working at height).
- Clinical assessments described under the hazards of "dust", "heat" and "working at heights" are to prevent accidents / ill effects, due to the particular hazards.
- Re-assessment of the employee, confirming the fitness is mandatory at the time of joining back to duty post illness / injury
- Exit examinations of employees are mandatory at the time leaving / discontinuing services at the industry.

2468

ICMR-National Institute of Occupational Health
Meghani Nagar, Ahmedabad-380016, Gujarat, India

EAC OBSERVATION:

As per the Public hearing proceedings, it is noted that there are strong oppositions from the stake holders against the installation of copper smelter unit. Consolidated list of point-wise issues raised and response provided along with action plan for implementation has not been submitted.

REPLY:

The consolidated point-wise issues raised and responses along with action plan for implementation has been provided in Chapter-7 of final EIA Report.

The following issues were raised by the public and the following actions plan has been prepared,

Sr. No.	Issue Raised	Action Plan
1	Skill development and employment opportunity	A budget of Rs. 4.8 Crore under CER project has been kept for Skill development and employment opportunity
2	Drinking Water facility	The infrastructure facility for drinking water, construction of overhead water tanks and piped water supply have been proposed as part of the CER. A budget of Rs. 12.42 Crore has been kept for the same.
3	Budget Allocation for Environmental protection.	Rs 1,044 Crore has been allocated and details of the same is available in the EIA Chapter-6, Table No- 6.5.
4	CSR activities to be undertaken and budget allocation	Adani Foundation, CSR wing of Adani Enterprises Limited is carrying out the CSR activities in the vicinity of the project area. The CSR amounts will be allocated and spend as per the prevailing guidelines of Company's Act.
5	NABET Accreditation for EIA consultant.	M/s VIMTA Labs was engaged as EIA consultant, which is NABET Accredited consultant. The NABET Certificate No- NABET/ EIA/ 1720/ SA 088 valid till 19th November 2020.
6	Survey Numbers of land for said project.	Survey numbers are provided as part of EIA Report, Chapter- 1, Table-1.1 and Form-1.
7	Arrangement of raw materials and fuel.	The comfort letters from the various raw material (Copper Concentrate) suppliers has been provided as **Annexure- 3 of ADS Reply.**
8	Utilization of Copper slag and Phosho- gypsum	Details have been provided as **Annexure- 8 &9 of ADS reply.**

EAC OBSERVATION NO.-20

2470

9	ETP Details and Handling of rejects from RO and ETP sludge.	State of art ETP will be constructed and waste generated from the ETP will be stored as per the CPCB guidelines. ETP details has already been provided in EIA Report, Chapter-2, and Section: 2.4.2 along with schematic diagram.
10	Details of Secured Land Fill.	Secured land fill will be developed strictly as per CPCB Guidelines for Criteria for Hazardous Waste Landfills series: HAZWAMS/17/2000-01. The thickness of the HDPE liner shall be 2.0 mm thick (min) made through flat cast extrusion technology to keep the thickness variation across the rolls to less than 5% and the minimum width of the membrane shall not be less than 7.5 m and length shall not be less than 120 m to reduce the number of joints. A detail study note is provided as **Annexure- 11 (b) of ADS Reply**.
11	Air Emission and Solid Waste Management	High efficiency pollution abatement equipment shall be installed for controlling the pollution. Mitigation measures for the pollution has been already provided in the EIA Chapter-6, section: 6.4. A budgetary provision of Rs. 1, 044 Crore has been kept for pollution control devices. Air modelling for the worst case scenario including Hg has been carried out and the predicted GLC has found to be well within the NAAQ standards. The detail report is available in **Annexure- 31 of ADS Reply**.
12	Incremental $PM_{2.5}$ pollution.	The predicted maximum GLC for $PM_{2.5}$ for worst case scenario has been modelled. The GLC during night time were observed to on higher side when compared to day time. The incremental GLC was 0.85 $\mu g/m^3$. However, the night time GLC's were found to be within the NAAQ limits.
13	Mangrove Conservation	Mangrove Conservation Plan study for Proposed Greenfield Copper Refinery Project has been conducted by Dr. Bharat Jethva, NABET Accredited FAE Cat-I, Ecology & Biodiversity. Detail Report is attached as **Annexure-5 of ADS Reply.** Budget of Rs 2.5 Crores has been allocated for plantation and third party monitoring.
14	Impact on agriculture	The predicted maximum GLC for worst case scenario has been modelled and found to be well within the limits as per NAAQ

		standards, 2009. Hence no impact on the agriculture is envisaged.
15	Impact on Public Health	The predicted maximum GLC for worst case scenario has been modelled and found to be well within the limits as per NAAQ standards, 2009. Hence no significant adverse impact on the community health is envisaged. Study of Community Health Baseline as at present has also been conducted by M/s TALEEM Foundation (**Annexure- 12) of ADS Reply**. A budgetary provision of Rs. 12.25 Crore has also been kept for community health and infrastructure development under CER.

The action plan for addressing the issues have been prepared. A budgetary provision of Rs 1044 Cr for Environmental protection and provision of Rs. 58 Cr has been allocated as Corporate Environment Responsibility (CER). The allocation of fund in CER has been arrived on the basis of issues raised in public hearing and findings of Social Impact Assessment (SIA) study.

The budgetary provision of Rs 1044 Cr for Environmental protection has been detailed in the **chapter-6 of EIA in table-6.5**. The details about CER is provided in **Annexure-33 of ADS Reply.**

Details of PH proceedings along with action plan is attached as **Annexure-20 of ADS Reply.**

2472

ANNEXURE-20

PUBLIC HEARING PROCEEDINGS AND RESPONSE ALONG WITH THE ACTION PLAN

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
1	Shri Punshibhai Gadhavi Member of Taluka Panchayat, Mandvi Village: Mota Bhadiya Taluka: Mandvi	He represented that: • How many villages of the Mandvi and Mundra taluka are affected in this project? Provide the details about distance. I was a Sarpanch for a period of ten years and I made submissions during that time also but the company did not provide a proper reply. • At the time of making this report, how many numbers of villages have been visited by the company and were the local people present at that relevant point of time? • How does police behave with ladies of our village? The people of Nana Bhadiya, Mota Bhadiya and Kandagra village are sent back.	The representative of project proponent informed about his designation and qualification and then replied that: • The area of this project includes Siracha and Navinal villages. As per the guidelines under EIA Notification of Ministry of Environment, Forests and Climate Change, Government of India 16 villages within the 10 km radius are included. Out of this, the monitoring is done in 8 villages.	• The proposed project is located at Adani Port Special Economic Zone (APSEZ) land in villages Siracha and Navinal, taluka Mundra, district Kutch, Gujarat. • The environmental baseline monitoring location have been decided based on the predominant upwind and down wind direction and other environmental sensitive locations and based on EIA guidelines. • The study area of 10 km radial distance from the boundary of the proposed project consists of 16 villages. This includes 12 villages from Mundra Taluka (Tunda, Siracha, Navinal, Deshalpar, Khakhar Moti, Kandagara Mota, Nani Bhujpur, Jarpara, Moti Bhujpar, Borana, Pratappar and Dhrab), 4 villages from Mandvi Taluka (Nani Khakhar, Nana Bhadiya, Mota Bhadiya, and Tragadi). The list of Number and locations of monitoring stations (as per CPCB guidelines) are decided based on the nature of project, meteorological conditions, Topography, selected pollution pockets in the area and likely impact areas. • The list of villages with demographic details are enclosed as Annexure-X in the EIA report.
2	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra Shri Rambhai Kanani Village: Zarpara, Taluka: Mundra	He represented that: • All our questions shall be replied to in Gujarati language. The project representative does not reply in Gujarati language and therefore this means that the local public will not receive employment. The project officer should provide his qualification and identification	The regional officer asked the project representative to translate the replies from Hindi to Gujarati language. Representation of project Proponent replied that: • As per the guidelines under EIA Notification	• The baseline ambient air quality, noise and soil monitoring was carried out at 8 location. The monitoring locations were selected based on the nature of project, meteorological conditions, topography, land use conditions, existing pollution pockets in the area and the likely impact areas.

82473

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		before giving reply in Gujarati. • How many villages are affected? What is the radius of affected area? How many people were met? How many villages were visited? • At the time of presentation the list of only 8 villages is shown. Why other villages are not included? Why is monitoring done in only 8 villages? Show us the list of 16 villages. Give the proof of 08 villages visited.	of Ministry of Environment, Forests and Climate Change, Government of India, 16 villages within 10 km radius are included. Names of villages where monitoring is carried out are mentioned in the EIA report. All the villages falling within the 10 km radius are covered as per the EIA notification. The date of lab testing report is also provided in the EIA report. The company has prepared the EIA report as per the guidelines. The EIA report was made available at five places.	• The study area of 10 km radial distance from the boundary of the proposed project consists of 16 villages. This includes 12 villages from Mundra Taluka (Tunda, Siracha, Navinal, Deshalpar, Khakhar Moti, Kandagara Mota, Nani Bhujpur, Jarpara, Moti Bhujpar, Borana, Pratappar and Dhrab), 4 villages from Mandvi Taluka (Nani Khakhar, Nana Bhadiya, Mota Bhadiya, and Tragadi). • The list of villages with demographic details are enclosed as Annexure-X in the EIA report. • Monitoring photographs along with the respective sampling locations are given Annexure-VIII in the EIA report.
		• The laboratory reports should be provided. How old are these reports? At which five places were the sampling done? Which organization has conducted the study? We should be provided with the analysis report of the company. Which laboratory has conducted the monitoring? Provide certificate of the same. • At which five places were the EIA reports placed? We have objection to the hearing and proposed project. We have objection as there will be impacts on environment.	• With the due permission of chairman, the regional officer informed that the person is asking for monitoring reports and requested the representative of the project proponent to provide the same. Representation of project Proponent replied that: • The Chapter-3 (page no. 43) of the EIA report provides the entire information as to the analysis of air at 8 (eight) places. The monitoring was carried out by Government of India, NABET Accredited M/s. VIMTA Labs Ltd., Hyderabad. The certificate is provided in the report. • As per the EIA notification of the Government of India, the draft EIA report is made available at following offices: 1. District Collector office, Kutch-Bhuj 2. Office of District Development officer, Kutch-Bhuj	• The baseline ambient air quality, noise and soil monitoring was carried out at 8 location. The monitoring locations were selected based on the nature of project, meteorological conditions, topography, land use conditions, existing pollution pockets in the area and the likely impact areas. • **M/s. Adani Enterprises Limited (AEL)** has retained the services of NABL/ISO 17025 Certified Laboratory, MOEF&CC and NABET accredited EIA Consultant **M/s. Vimta Labs Limited (VLL)**, Hyderabad to prepare EIA report and Environment Management Plan (EMP) for mitigating possible adverse impacts. • The Consultant details (like certification and list of team member involved in the proposed project) are given as Chapter-11. The QCI issued certificate no. NABET/EIA/1720/SA 0088, Valid upto 19th November 2020. The details of consultant

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
			3. District Industrial Center, Bhuj-Kutch, 4. Office of the Taluka Development officer, Mundra 5. Office of the Taluka Development officer, Mandvi • The executive summary of EIA report is provided in 14 gram panchayats. The monitoring is done in 8 villages. The monitoring has been carried out as per the EIA guidelines. We have come here to provide the replies to the objections related to the information provided under the EIA report. You will be heard and a proper reply will be provided. This will be included as part of public hearing proceedings and the final EIA report will be submitted to MoEF. • Analysis report will be provided after public hearing is completed.	along with certificaties are given in Chapter-12 in the EIA report. • The analysis results are already included in the EIA Report (Chapter-3).
3	Shri Punsibhai Gadhavi, Taluka Panchayat Member – Mandvi Village: Mota Bhadiya Taluka: Mandvi	He represented that, when was the report submitted to Mandvi Taluka Panchayat? Is the report provided to community leaders? We oppose this public hearing.	The regional officer has informed that the copy of report and CD is provided to Mandvi Taluka Panchayat office on 27.03.2017.	-
4	Shri Vishrambhai Gadhavi, Village: Zarpara Taluka: Mundra	He represented that, • The photographs of place and equipment used shall be shown from where the samples were collected. • You are showing the photographs of your proposed project, show the photographs of the monitoring carried out.	The representative of the project proponent replied that, we have photographs of 8 locations and these will be provided.	• The photographs of monitoring had been shown during the public hearing. • Monitoring photographs along with the respective sampling locations are given Annexure-VIII in the EIA report.
5	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that the person providing the reply on behalf of the company must provide the company photo ID card, only then he will be allowed to reply. Our boys are not permitted to enter the company without an ID-card.	The representative of the project proponent showed the photo ID-card on LED screen.	-
6	Shri Gopalbhai Gilwa Village: Zarpara	He represented that,	The representative of the project proponent replied that:	This question is not directly connected to the proposed project. However, in the proposed

2475

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
	Taluka: Mundra	• Give the information about how much carbon dioxide is emitted from the thermal power plant at Mundra? Provide the figure of carbon dioxide that is emitted in 24 hours. • At the time when I went to Mr. Mukesh Saxena for job, he stated that the recruitment of job is done from Ahmedabad. I was kept as apprentice, after a period of 4 months, for duration of 12 months. Thereafter I was given the job as supervisor at the Power Mech Company. I have not been taken on roll in the company. I was shown my social category. The people coming from outside are given direct jobs while I was not kept on permanent job at any place. Therefore I left the job after 6 months and at present I run a shop. • I did not get the job as per my studies and thus provide job. Will I be given job at the new plant? • What is the duty time and salary of on roll employees?	• The amount of carbon dioxide is 870 gram/kilowatt hour. 67,525 tonnes of CO_2 equivalent is emitted per day. • The representative of the project proponent replied that, you came directly to me and there was no recommendation for you. We kept you on training for a period of 12 months on apprentice. For this you were given a stipend of Rs. 12000 per month. During the apprentice required training is provided. The company provides you further training when you become an employee from apprentice. You were in a list wherein there were 60 persons and out of which 15 were engineers. We gave you job on contract after the apprentice. You will be provided the list of the resident of Zarpara who have been given employment. • One should not expect that he shall get a job as per his wish. Intention of learning is important for any job. • The employee on contract has a service of 8 hours but the employee has to stay for longer hours when there is additional work load. No discrimination is done in the company. • The local hearing video copy may be provided by presiding officer.	project employment about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
7	Shri Dayabhai Viram Gadhavi, Village: Mota Kandagara, Taluka: Mundra	• He represented that; provide video copy of local hearing.	The local hearing video copy may be provided by presiding officer.	-
8	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that a person becomes an engineer by spending lacs of rupees and you give such replies to him!	-	Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
9	Shri Gopalbhai Gilwa	He represented that,	The regional officer stated that,	The proposed project is an independent

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
	Village: Zarpara Taluka: Mundra	• Adani Power has obtained the permission for Phase-IV. Why have you installed FGD? The pollution load had increased in Mundra. • At Mundra one tonne Carbon Dioxide is produced per Megawatt. Adani Power and TATA Power emit CO_2 that is much more than the capacity of Mundra. Then, why do you wish to bring this new plant?	• This public hearing is for the Copper Refinery project and therefore the questions related to that issue only shall be asked. Your representations shall be noted down. Your representations and objections will be included as part of the proceedings. The CD will be submitted along with the proceedings to Ministry of Environment, Forests and Climate change of Govt. of India. • The representative of the project proponent replied that, 0.87 Ton carbon dioxide is produced for 1 Mega Watt. The FGD system is installed as per the clearance provided by Ministry of Environment, Forests and Climate change. This is installed for sulphur dioxide scrubbing. There is no statutory limit for carbon dioxide emissions.	greenfield copper refinery plant. The anticipated potential impacts analysis, cumulative impacts due to increase of pollutant and its mitigation measure are provided in Section-4.2.2 of Chapter-4 in the EIA report. The cumulative impacts of exiting power plants of Adani and Tata power have been considered and incorporated in the Section-4.2.2 of EIA Report. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
10	Shri Dayabhai Gadhavi Village: Mota Kadagra Taluka: Mundra	He represented that, why are you not listening to us? Why don't you reply? Are the questions raised by us relevant or not?	-	-
11	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that the company conducted the public hearing for power plant also in this manner. The promises that were made at that time have not been fulfilled and now you wish to establish a new project.		-
12	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra	He represented that we have been informed to ask questions related to environment only. Should we not be provided with the platform to make representations on other questions?	-	-
13	Shri Gajendrasinh Jadeja Sarpanch Navinal Village: Navinal Taluka: Mundra	He represented that, • You were complained through email for cancellation of the public hearing on 11.04.2017 and a meeting was held with Mr. D R Patel. But no reply was given for the	The representative of the project proponent replied that: • As per the circular of MoEF&CC dated 31.03.2011, if the forest land cannot be avoided, the application shall be filed by	MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. Stage-I FC has been

2477

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		same. The project proponent has not complied with the terms of reference as per my complaint. How can the public hearing be conducted for this project when the process of forest clearance is still going on? • The project proponent has concealed the information in Form-1. As per the S.No. 16 and 26 of Basic Information of Form-1, with reference to the Gochar land, PIL no. 17/2011 judgment, the project proponent has mentioned that there is no pending PIL for this land. This information is not mentioned in Form-1. • In the S.No. 2 and 10 of Form-1, it is not mentioned that the Daneshwari river passes through the forest land.	project proponent to obtain forest clearance. After this stage-I application, the project proponent can apply for TOR. • The TOR application is filed after the Stage-I application for forest clearance is applied. Thereafter the MOEF&CC provides the TOR to project proponent. Afterwards EIA can be made. After the entire process of EIA, the MOEF&CC checks the status of the application for forest clearance and the project is approved on that basis. • We have not concealed any information. The PIL has been disposed. The judgment is under review. The application is filed for the acquisition of forest land. Under the Form-1, it is stated that the non-forest land is of APSEZ and the application for forest land is under process. • In the EIA report, maps are provided and Daneshwari river is shown in it.	obtained as given in Annexure-V in the EIA report. The PFR submitted along with the Form-I application clearly shows the water stream passing through proposed project site. The same is available in the Annexure-VII of the PFR submitted along with the Form-I. Dhaneshwari river also refered as Danesri Nadi (as per Topo sheet no: F42 J9 & 10) stream passing within site (west side). Dhaneshwari, a seasonal river which flows in the western part of the proposed site. The river will not be diverted but suitably trained along the boundary. The flow of the river will be maintained, as shown in the plant layout on Figure-2.1 of EIA report.
14	Shri Pravinsinh Bhurubha Chauhan Village: Siracha Taluka: Mundra	He represented that, • As per the EIA report, you state that no perennial river is present within the project land. There is no perennial river in whole of Kutch. From the 2011, 2013 and the present Satellite image, it is clear that you have diverted the river. • Your hospital is also constructed on the river. It is clear from the Satellite image of year 1991. Show the CD of Satellite image to all. • I wish to show Figure No. 1 from the EIA report. The river is tampered with in the Figure.	-	Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the plant layout on Figure-2.1 of Chapter-1 in the EIA report.
15	Shri Punshi Gadhavi Taluka Panchayat member, Mandvi,	He represented that: • What will Adani do for the education, health	The representative of the project proponent replied that Adani Foundation is already carrying out development works in areas of	A budget of Rs. 58 ,07,83,796 for the period of 5 years (From day 1 of the project construction) has been allotted toards

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
	Village: Mota Bhadiya Taluka: Mandvi	and fodder for cattle? A written submission is also done for this. • You have not given the reply to the previously asked question of Punshibhai Gadhavi. Provide reply to it.	education, health and other social sectors on the basis of the written representation of Punshi bhai. This will also be done for this project. A budget of 8 crores rupees per year is allotted for CSR activities. Particular focus shall be given to the villages that are affected.	Corporate Environmental Responsibility-CER activities (1st May, 2018 Office Memorandum of MoEF & CC). Based on the needs identified during SIA study in the study area. The CER fund is distributed in the following development initiatives: • Education Initiatives – Rs. 7,92,57,390 • Community Health Initiatives – Rs. 12,25,04,434 • Sustainable livelihoods and womenempowerment - Rs. 27,59,09,755 • Community Rural Infrastructure Development – Rs. 9,76,12,217 • Independent monitoring sudit snd ipact assessments of CSR activities – Rs. 55,00,000
16	Shri Asariya Lakha Gilwa Village: Zarpara Taluka: Mundra	He represented that the company officers should make submissions in the local Gujarati language.	It is noted down and replied in Guajarati language only	-
17	Shri Bharat Kalyan Sheda Village: Zarpara Taluka: Mundra	He represented that the people residing here want clean environment and we don't need any project. Why do you want to establish this project here?	-	The proposed project is an independent greenfield copper refinery plant. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. About Rs.1044 crores will be spent for environmental pollution control measures in this project. For establishment of this project, three alternative sites have been studied. These three sites include: Site-I: near Gundala & Mokha villages; Site-II: near east side of Adani power plant; and Site-III: near near Mundra village.

2479

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
				Among three above sites, the site-II near east side of the Adani Power Plant has been chosen based on the comparative merits and demerits of the three sites. The comparison of salient features of alternative sites done and details are presented in Table-5.1 and shown in Figure-5.1 of the EIA report.
18	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that; • A total 12 crore ton of CO_2 is generated daily. Why is the FGD for phase-IV installed? • This plant will emit 30 lakh tons of Sulphuric acid so why do you want to establish this plant?	The representative of the project proponent replied that: • Adani Power produces 25 million ton of CO_2 per year and around 25 million ton is produced by TATA Power. In this manner the total CO2 produced is around 50 million ton. • In the Adani Power Phase-IV, MoEF had stipulated a condition based on which the FGD system is fixed. • Sulphur Dioxide will be produced from Copper Smelter. In the sulphuric acid plant, the sulphur dioxide will be absorbed and sulphuric acid will be produced. The residual amount of sulphur dioxide from the proposed project will be within the limits stipulated by CPCB, Government of India.	• The SO_2 generation is a continuous process during smelting activity. Primary gas stream will be routed to sulphuric acid plant (SAP) plant and the fugitive gas stream will be routed through scrubber. Further, there is no provision in the plant/process for storage of SO_2 gases and will be processed immediately to produce sulphuric acid. • Sulphuric acid plant (SAP) will be installed with highly efficient (Double Conversion Double Absorption) DCDA process to control the SO_2 emission to less than 1 kg/t of sulphuric acid produced. • The residual amount of sulphur dioxide from the proposed project will be within the limits stipulated by CPCB, Government of India. • The process of extraction of copper metal, sulphuric acid is recovered as a by-product from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced is utilized for phosphoric acid production and rest will be sold in the market based on market requirement.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
				• About Rs. 1700 crores will be invested to install sulphuric acid plant. • Regular stack emission monitoring shall be carried out at all stacks for particulate matter, HF, SO_2 and NOx for checking the compliance to emission standards by respective plant. • The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. • About Rs. 639 Crores will be spent on air pollution control system installation.
19	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra	He represented that, in one day, a total of 1,25,988 ton of CO_2 is emitted in the atmosphere. The average temperature of emitted CO_2 is 150 degree Celsius. Why should the new plant be approved even thereafter?	The representative of the project proponent replied that: • The average temperature is 120 to 130 degree Celsius. World level efforts are made to stop global warming. The power plant is based on super critical technology and produces lesser amount of CO_2 in the atmosphere. Till date it is not found that the level of CO_2 would have decreased on world level. The government of India has targeted to reduce CO_2 emissions by 30 to 35% in comparison with the year 2005. The power plant that is based on old technology produces 1 to 1.5 Ton CO_2 per Megawatts hour, while the plant based on new Super Critical technology produces a total of 0.8 ton CO_2 per Megawatt hour.	• The emissions of carbon dioxide from the proposed copper refinery project will 490 tonnes per day. Further, the project will have 85.79 ha (33% of the project area) of greenbelt/green cover to absorb any gaseous emissions in the proposed project. • Further, regular post project monitoring will be carried out for the gaseous emissions and the test reports will be submitted to GPCB and MoEF&CC. Regular monitoring will help to keep a check on the gaseous emissions.
20	Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	He represented that, • Our agriculture is adversely impacted. The characteristics of the Male Date Seeds	-	The proposed project will implement all the control measures at the source level, which are incorporated in the Draft and Final EIA report.

2481

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		seem to be transforming to that of Female Date Seeds. • We do not want this project. EIA report states that there is no living organism and only wild plants are present. No information is provided about river, vegetation and other living organisms. No ground reality is provided. 80% people of this area are dependent on agriculture. We do not want this project.		Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project. A budget of Rs. 58,07,83,796 have been allotted for CER activities for five years. In which the support for effective utilization of available water through dripping systems will be implemented.
21	Shri Vishrambhai Gadhavi, Village: Zarpara Taluka: Mundra Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	He represented that, • Our agriculture is adversely impacted. The characteristics of the Male Date Seeds seem to be transforming to that of Female Date Seeds. • We do not want this project. EIA report states that there is no living organism and only wild plants are present. No information is provided about river, vegetation and other living organisms. No ground reality is provided. 80% people of this area are dependent on agriculture. We do not want this project.	-	The proposed project will implement all the control measures at the source level, which are incorporated in the Draft and Final EIA report. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project. A budget of Rs. 58,07,83,796 have been allotted for CER activities for five years. In which the support for effective utilization of available water through dripping systems will be implemented.
22	Shri Vishrambhai Gadhavi, Village: Zarpara Taluka: Mundra	He represented that; • Why is the chimney of Adani Power tilted? What is the height of Chimney? • It rains less due to this. A large amount of difference in rain is seen in Bhadiya and Zarpara village due to this.	The representative of the project proponent replied that: • The height of chimney of power plant of Adani Power having a capacity of more than 500 megawatts is 275 m. The height of chimney is kept for the dispersion of gases in the air. There are no norms on limit of carbon dioxide emissions. • The pollution is diluted around 2000 times due to the height of chimney. There is no study done which suggests that due to	The proposed project is a greenfield copper refinery project. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures under this project.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		• Crores of tons of CO_2 is emitted daily. Is there any limit to it?	power plant it would have rained less at any place. Rain is almost found same in both villages. • The estimate of CO_2 in atmosphere at world level is around 350 to 400 ppm. There is no statutory limit for this. As per the NAAQ standard for sulphur dioxide, the 24 hour average limit is 80 microgram/m^3.	
23	Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	• He represented that the wind direction is shown wrong.	• The representative of the project proponent replied that the wind direction is shown as per the winter season data. It is shown from South South West (SSW) to North North East (NNE).	The wind directions given in the wind roses indicate from direction. During the study period (October-December, 2016), the predominant wind direction is from SSW to NNE. This is generally in agreement with the nearest IMD data at Kandla and represent coastal conditions.
24	Shri Bharat Kalyan Seda Village: Zarpara Taluka: Mundra	• He represented that It is submitted that the reply be given in Gujarati	Point noted and agreed.	-
25	Shri Nanji Mithubhai Maheshwari Village: Mota Kandagra Taluka: Mundra	He represented that; • Show on LED screen the letter with signatures and stamp of Sarpanch and Talati for the 8 affected villages that have been surveyed. • How will employment be provided in this plant?	-	It may be noted that the project area falls in two villages namely Siracha and Navinal. The proposed project will provide employment to about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available. A budget of Rs. 58,07,83,796 have been allotted for CER activities for five years.
26	Shri Bahrat Kalyan Seda Village: Zarpara Taluka: Mundra	He represented that; Thousands of people are objecting. Show us the photographs of your visit in 16 villages.	-	The monitoring photographs and name of sampling locations are enclosed as Annexure-VIII in the EIA report.

2483

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
27	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that; • In the executive summary of page no. 2.1 the nearest village is shown as Mundra. Provide the list of all the affected 16 villages. Why is village Mundra included in affected villages? • What would be the time limit of this public hearing?	The representative of the project proponent replied that: • Through this public hearing, all your representations will be provided to the MoEF. The company will work in a transparent way. Mundra is the closest town to the Project area. The land of Siracha and Navinal villages are covered in this project. • In the EIA report, the Annexure-X contains demographic report. It contains list of 16 villages. This includes Siracha, Tunda, Mota Kandagra, Moti Khakhar, Nani Khakhar, Moti Bhujpur, Nani Bhujpur, Desalpar, Bharora, Zarpara, Pratapur, Mota Bhadiya, Dhrub, Tragadi, Nana Bhadiya and Navinal. • In chapter-3 of the EIA report, details of all the villages are provided. The EIA report is made as per the MOEF guideline. • The presentation contains the details of the impacts on environment. Moreover these details are also included in the EIA report. EIA covers study of all the aspects and its management plan is also shown. • The regional officer stated that, the public hearing will be completed after all the representations are heard.	Mundra is the closest town (22 km – road distance) to the project area. The land of Siracha and Navinal villages are only covered in this project. The demographic details of the entire study area is given in Section-3.10 of Chapter-3 in the EIA report.
28	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that when any company comes, it is required that 33% green belt shall be provided and as part of the same when Sunita Narayan committee visited, the plants were grown on both sides of the road. These plants do not exist at present.	The representative of the project proponent replied that Respectable Sunita Narayan came in the year 2013. The green belt at present is much more than what was at the time of her visit. Even further plantation will be done.	About 85.79 ha of the proposed copper refinery complex (33%) will be reserved for greenbelt / green cover development as per prevailing guidelines from GPCB/CPCB/MoEF&CC. Native species with rich canopy will be planted. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report.
29	Shri Gadhavi Kalyan Asariya	He represented that in the past, I came for	The representative of the project proponent	About 85.79 ha of the proposed copper smelter

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
	Village: Zarpara Taluka: Mundra	training in Adani Foundation on behalf of the KSKV University. At that time in the river and other places, around 60 thousand trees were planted but these are not found at present.	replied that you both have asked different questions. One relates to village and the other relates to APSEZ.	complex (33%) will be reserved for greenbelt / green cover development as per prevailing guidelines from GPCB/CPCB/MoEF&CC. Native species with rich canopy will be planted. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report.
30	Shri Gajendrasinh Jadeja, Sarpanch Navinal Gram Panchayat Village: Navinal Taluka: Mundra	He represented that; • The sr. no. 10 on page C1-4 of the draft EIA report states that, there is no archaeological place at this site. However, at a distance of around 500 to 1000 meters from the proposed project site, the site of Navinal Archaeological site is present. I have the report of the MS University which states that it relates to the Harappa civilization. • The fisheries harbour is not developed at Bhadreshwar. The access roads for the fishermen were closed and are not opened again.	The representative of the project proponent replied that: • There is no mention of such a site on the Archaeological Survey of India Website. You shall be provided the list of notified site. • There was no permission to go to the Randh bunder (Bhadreshwar) at the time of Sunita Narayan committee visit. At present Foundation provides various facilities like water, electricity, etc. at that place. • After the visit of Sunita Narayan committee, the fishermen access roads were developed which are open even as on date.	There is no notified archaeological site within 10 km from the proposed project site.
31	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that: • The road to Bharadi Mata has been opened after a lot of troubles. You did not spare any effort to close down the road.	The representative of the project proponent replied that the road leading to Bharadi Mata has been kept open. As on date, not just one but two approach roads are available.	-
32	Shri Valji Bhai Tapariya Village: Zarpara Taluka: Mundra	He represented that; • In the production of copper plant, Sulphur is to be used and this will have acidic processes. • Environment will be impacted due to this. The effect of this sulphuric acid is shown in radius of around 10 km. This is around 20 to 25 km as per the opinion of experts. • At a humanitarian level, the GPCB should also take interest in this considering its personal responsibility for longer terms. No one is against development. The effect of copper refinery is even more than power plant. The plant should be taken away from	The representative of the project proponent replied that: • No addition in the capacity of the copper smelter is envisaged for the refinery after the project approval. • The copper concentrate is processed in the copper smelter. Sulphur dioxide is generated from it. It is captured and sulphuric acid is produced. This sulphuric acid is converted into phosphoric acid. • The sulphuric acid will be converted to phosphoric acid in the phosphoric acid plant. It will used in fertilizer plants. • Other than this, a by-product, fluoro-silicic	The process of extraction of copper metal, sulphuric acid will be recovered as a by-product from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced will be utilized for phosphoric acid production and rest will be sold in the market based on market requirement. The impacts and mitigation measures are given in Section-4.2.2.3 of Chapter-4. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels.

ANNEXURE-20

		human population if its place can be moved. In the past, electricity was generated with atoms and this eradicated the entire lineage of people. The fishermen should also not be affected. The government should take proper care and consider that no negative effect is found.	acid will be made which will be used in the making of toothpaste.	Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
33	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that; • Will you make a residential place near the plant and reside at that place? If that is the situation, we do not object. We reside in the farms outside. • Is there any power plant, at any other place, with such big capacity?	The representative of the project proponent replied that: • Many a times our high ranking officers reside at the guest house of power plant. Many copper plants in the entire world are present beside cities. We will also make guest house in our copper plant. • Yes, there are power plants of total 20 thousand Megawatt capacities at Singroli. Angul, Andhra Pradesh has 16 thousand Megawatts capacity power plants. Tuticorin at Tamilnadu has 12 thousand Megawatt capacity of power plants. These all are coal based power plants. Now the government of India approves all big power plants with FGD only.	The employees of the proposed copper plant will be staying in the existing township of Adani at Mundra. The copper plant will have guest houses in its premises.
34	Shri Naran Gadhavi Village: Zarpara Taluka: Mundra	He represented that • The highest officer of the district was addressed and a letter was written on 27/4/17 and it was mentioned that the land on which the copper plant is proposed is subjudice matter. The collector has not taken any decision till date. • It is mentioned under it that after the Honorable sitting principal judge and Sunita Narayan committee, two other committees also visited. First of all the committee of the Honorable sitting judge visited. The visit report was submitted to	The representative of the project proponent replied that: • I give an elaborate reply to your question. With respect to the PIL no 12/2011, the committee visited APSEZ and its report was kept on record of the Honourable High Court. The matter was disposed by the Honourable Gujarat High Court on 17.04.2015. • As per previous proceedings the contempt petition (no. 9124) dated 12.07.2011 was filed. Thereafter on 15.10.2015, the order was passed. The matter with reference to	The proposed project area is not under the disputed land as claimed. All the show cause notices have been disposed. This proposed copper refinery project does not have any connection with this case pending before the Honourable Gujarat High court.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		the high court. The report of this committee is subjudice. The second report (dated 05.11.2015 and 01.04.2016) one expert was called from Goa and another from Calcutta on the basis of the order passed by the Honourable Gujarat High Court. • The committee recommended that the 6 thousand acres of land should be returned to the government. No decision till date has been taken in this regard. • As for this the contempt of court proceedings shall be held against the competent officer. The map is also shown in the EIA report. Why is the public hearing been done, even if the matter is subjudice? • GPCB is also a party in this matter. On the basis of our complaint, the Sunita Narayan committee provided a report on 17.09.2015 to MoEF&CC, government of India. • Two maps have been submitted to the Gujarat High Court committee. These are on the record of the high court. You submitted the map with topo sheet. These were for entire land. This includes your project. • As mentioned by you, the forest area is to come under the project. The High court committee has stated that, the land should be taken away from Adani and provided to the government. The 5,333 ha of forest area should be restored. • This matter is under consideration at the	the Sunita Narayan committee report, was disposed of in the year 2015. As per the order passed by the Honourable Gujarat High Court there is no contempt order. The report was submitted by the committee including expert from Goa and Calcutta on 08.06.2016. That particular matter is pending before the Honourable High Court of Gujarat. The committee recommended that 100 ha or more mangroves plantation should be undertaken. The project area is not part of the disputed land. All the show cause notices have been disposed. The recommendation is done in the survey by the committee. It is not an order. The company will accept the final order passed by the Honourable High Court. The land of the proposed project does not have any relation with this matter. The land under notified SEZ shall be used for this land. The MOEF will consider the matter that is pending before the High Court. The proposed project does not have any connection with this matter. • The MOEF has provided the direction to the company and the company is working on it. The report for this is submitted to the MOEF every 6 months. The matter you have stated is about the survey of the report of the committee. It is a recommendation and not a decision. The Gujarat High Court will consider the submissions of the company along with the committee report and the company will comply to the guidelines provided by the court thereafter. • The government of India will decide	

2487

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		Gujarat High Court. Why is this case not mentioned in your EIA report?	further course of action on your matter and our reply. • The representative of the project proponent replied that this proposed project does not have any connection with this case pending before the Honourable Gujarat High court. This is our submission.	
35	Shri Bharubhai Ranshibhai Shankra Secretary, Kehti Vikas Seva Trust, Village: Zarpara Taluka: Mundra	• He represented that: Do thing that would be favourable for the people. Do not leave after taking money. I do not have any objection for the company to either come or not. Do all that is in the interest of people.	-	A budget of Rs. 58 ,07,83,796 for the period of 5 years (From day 1 of the project construction) has been allotted toards Corporate Environmental Responsibility-CER activities (1st May, 2018 Office Memorandum of MoEF & CC). Based on the needs identified during SIA study in the study area. The CER fund is distributed in the following development initiatives: • Education Initiatives – Rs. 7,92,57,390 • Community Health Initiatives - Rs. 12,25,04,434 • Sustainable livelihoods and womenempowerment - Rs. 27,59,09,755 • Community Rural Infrastructure Development – Rs. 9,76,12,217 • Independent monitoring sudit snd ipact assessments of CSR activities – Rs. 55,00,000 The CSR details (like CSR policy, initiatives & activities, CSR budget expenditure data from 2010 to 2016, and CSR implemented photographs) is given in Section-8.5 of Chapter-8 in the EIA Report.
36	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that, we will not let the permission be granted for a new plant. The regulations laid down by the GPCB, CPCB,	-	There is no violation with respective to GPCB, CPCB, MOEF&CC by the proposed project.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		MOEF&CC are violated by the company and the officers present at this place should inspect the matter. We do not want a new project.		The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
37	Shri Bharat Kalyan Shetha Village: Zarpara Taluka: Mundra	He represented that, the people here do not want this project to come. The people here want clean environment. The people do not want this progress; the people do not want the long term destruction, Kindly take note of this.	-	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
38	Shri Anwarbhai Ibrahimbhai Vagher, Village: Navinal Taluka: Mundra	He represented that, no damage has been done to the fishermen access roads or any other things. Our access roads are not closed. The people from Patel community and our villagers do not have any objection for the plant to be established.	-	There will be no damage to fisherman due to the proposed project. A budget of Rs. 58 ,07,83,796 for the period of 5 years (From day 1 of the project construction) has been allotted toards Corporate Environmental Responsibility-CER activities (1st May, 2018 Office Memorandum of MoEF & CC). Based on the needs identified during SIA study in the study area. The CER fund is distributed in the following development initiatives: • Education Initiatives – Rs. 7,92,57,390 • Community Health Initiatives - Rs. 12,25,04,434 • Sustainable livelihoods and womenempowerment - Rs. 27,59,09,755

2489

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
				• Community Rural Infrastructure Development – Rs. 9,76,12,217 • Independent monitoring sudit snd ipact assessments of CSR activities – Rs. 55,00,000
39	Shri Kadar Ismail Village: Navinal Taluka: Mundra	He represented that our roads are open and we do not have any objection.	-	-
40	Shri Gajendrasinh Jadeja Sarpanch, Navinal Gram panchayat Village: Navinal Taluka: Mundra	He represented that, • The fishermen of my village do not have proper knowledge. I can show the maps of forest department and other maps to confirm which access roads are closed down. The access road which is shown in the map belongs to forest dept. The fishermen access road to the sea passes through the project site. • This is government road. It is not owned by you. I am talking about the road that has been made by the government for the fishermen.	-	There will be no damage to fisherman due to the proposed project. The roads used by fishermen will not be disturbed due to the proposed copper smelter project. Further, a total budget of Rs. 58 crores will be spent on CER activities in which fishermen welfare will also be included.
41	Shri Anwarbhai Ibrahimbhai Vagher/ Shri Kadar Ismail, Village: Navinal Taluka: Mundra	He represented that our roads are open. Kotdi Bandar and Sodawadi Creek are open. We do not have any kind of objection.	-	-
42	Shri Pravinsinh Bhurubha Chauhan Village: Siracha Taluka: Mundra	He represented that information be provided if the road from Navinal to Daneshwar, which existed, is closed down or not?	-	The existing roads will not be disturbed due to the proposed copper smelter project.
43	Shri Asariya Lakha, Village: Zarpara Taluka: Mundra	He represented that, it is the responsibility of the chairman to ascertain that no one comes for the purpose of praising someone. The proceeding should be as per instruction from chair. The purpose of this public hearing is to hear the representations of the affected people.	-	-
44	Shri Gandrasinh Jadeja Sarpanch, Navinal Gram Panchayat, Village: Navinal	He represented that first of all compliance of existing environmental clearance for power and SEZ should be met and then this project should come.	-	The proposed project is an independent greenfield copper refinery plant. The proposed project will implement all the

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
	Taluka: Mundra			control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
45	Shri Rambhai Kanani Village: Zarpara Taluka: Mundra	He represented that the company has a strategy to bring some hired people after two hours of hearing and these people will take the entire hearing out of track.	-	-
46	Shri Gandrasinh Jadeja Sarpanch, Navinal Gram Panchayat, Village: Navinal Taluka: Mundra	He represented that • 102 ha of land of the forest department will be used in this project. Adani had in the year 2004 made a demand of 1576.81 ha of land but the forest department has not approved it till date. Navinal and Shiracha, both villages have claimed their rights under the Forests Rules. The people of Navinal and Shiracha graze their cattle and obtain livelihood. If this forest is given, where will the wild animals and grazing domestic animals go? And lastly when, the remaining forest land, government land and Gochar land is given, where will the people, animals and birds go? • This is the last reserve forest of this area. Bharadi Mata is sand dunes. This is coastal and mangrove forest. This area is under the CRZ-1 area. There is no provision for approval of such land.	The representative of the project proponent replied that: • You know very well what is the land use of the 102 ha of forest land and as per the report of the forest department, no major displacement would be required. The 33% green belt will be developed at the time when plant comes. As per the report of the forest department, no major displacement would be required. The land of this area will be used by the company for the development of green belt and specific care will be taken for the animals and birds. The animals shall be provided fodder through CSR activities. • The forest department will take all these aspects into consideration while providing clearance. • Other than this, the Bharadi Mata reserve and coastal forest is situated near the project site. The animals obtain fodder from that place. The project will utilize 111 ha of Navinal land. While 102 ha of land of Shiracha will be used for	The total land required for the proposed project is about 256.58 Ha (634 acres), out of which 154.19 ha (381 acres) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Memorandum of Understanding (MoU) is in place between Adani Ports & Special Economic Zone Limited (APSEZL) and Adani Enterprises Ltd (AEL) for 154.19 ha (381 acres). MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. Stage-I FC has been obtained as given in Annexure-V in the EIA report. The conditions stipulated in the Forest Clearance and Environmental Clearance will be strictly adhered to and complied with. It is also committed that the fodder to cattle in the nearby villages such Siracha and Navinal will be provided through CER initiatives.

2491

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
			development of green belt.	About 85.79 ha of the proposed copper refinery complex (33%) will be reserved for greenbelt/green cover development as per prevailing guidelines from GPCB/CPCB & MoEF&CC. Native species with rich canopy will be planted. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report. About Rs. 40 lakhs is allocted for tentative budget for peacock conservation plan. Further, the proposed project is outside the CRZ area, the approved CRZ map with proposed project is shown in Figure-1.5 of Chapter-1 in the EIA report.
47	Shri Pravinsinh Bhurubha Chauhan, Village: Siracha Taluka: Mundra	He represented that, • The Dates, Deshi Babool, etc. trees present on the forest department land and located adjacent to the power plant have dried out due to smoke from stack and cooling tower. • Where will the animals like Nilgai, Jackal, fox and others go? They will come at our farms.	The representative of the project proponent replied that: • Even at present the land is under the forest department and the plants that you state are alive. No such thing has occurred. • This is not true and the forest department would have informed us if such a thing would have occurred.	The plants are existing in the study area. The proposed green belt/green cover will also have native plants. The proposed plant area does not have the presence of Nilgai, Jackal. However, they are present in the buffer area and all the precautions will be implemented as suggested under Forest Clearance and Environmental Clearance.
48	Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	He represented that there is a difference between the EIA report and the presentation. The details mentioned in the Gujarati report are not actually true. There is difference in the description of environment. Under the project area, only Babool and peacock are shown. But the actual situation is different. There are medicinal plants also at this place. The description of the nature is given but it is not ground reality.	The representative of the project proponent replied that, the summary of the EIA report is shown as part of the presentation. The entire EIA report is not to be shown in the public hearing. In case if you have found any discrepancy in the EIA report, you may draw attention as to the same in writing and this will be included under the public hearing proceedings and it will also be submitted to MoEF&CC, Government of India. Moreover EIA report is prepared based on the information obtained at that relevant point of time.	As per primary ecology and biodiversity survey the details are given Section-3.9 of Chapter-3 in the EIA report. The faunal species were categorized as per conservation status of Wildlife Protection Act, 1972 and reveals that peacock is the only Sch-I species in the study area. However, it has been assessed as Least Concern bird as per the International Union for Conservation of Nature (IUCN). Further, the conservation plan and measures for Peacock are recommended in

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
				Section-3.9.9 of Chapter-3 in the EIA Report.
49	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that the company has shown its video during the hearing. All good things are being projected. No information is provided about the side effects, risk, etc. from the project. The video of the person submitting representation shall be shown.	The chairman stated that, • Please submit your CD we will be include the same in proceedings. Note: It was tried to show the video of representation by mobile on LED screen however it could not be run due to any reasons.	-
50	Shri Pravinsinh Bhurubha Chauhan Village: Siracha Taluka: Mundra	He represented that, I wish to show the CD related to the scams committed by the Adani Power and SEZ. It is mentioned under the Form-1 that there is no mangrove at this site but as per my view there are mangroves presents.	-	There is no mangrove planation within the proposed project site.
51	Shri Rambhai Kanani Village: Zarpara Taluka: Mundra	He represented that the people are facing problems from your existing plants and therefore people do not welcome your project.	-	-
52	Shri Usman Gani H Sheraseeya Village: Vakaner Taluka: Morbi	He represented that • How much water will be obtained for this project and from which place will it be taken? • Will you discharge salty water after desalination in the sea?	The representative of the project proponent replied that, 32800 cubic meters of water will be required for this project which will be used after desalination of the sea water by APSEZ.	The total water requirement for the project is about 32,267 KLD which will be sourced from desalination plant of APSEZ Ltd, through M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD). The water requirement details are given in Section-2.2.3 of Chapter-2 of the EIA Report.
53	Shri Devendrasinh Jadeja Village: Mota Kardagra Taluka: Mundra	He represented that, we are in favour for the company to establish this plant. But what is the percentage of local public that will get employment? Provide in writing.	The representative of the project proponent replied that the company will require around 3000 persons at the time of construction. We will try that maximum unskilled labour is employed from local people.	The proposed project will employment about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employments will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
54	Shri Lakhubhai Rabari Village: Tunda Wandh Taluka: Mundra	He represented that: • The officer present at the time of construction of the project are transferred	The representative of the project proponent replied that: • The feeling of the local public will be	The proposed project will employment about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and

2493

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		after the starting of operation of the project and therefore proper solution to our problems are not provided. • What kind of employment will be given to the unskilled people?	considered and problems will be properly solved. Efforts will be made to ensure that local public is provided employment to an extent possible. • Efforts will be made to ensure that unskilled people also get employment.	5000 indirect employments will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
55	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that the company wishes to bring project at this place for its own benefit not for the development of the local public.	The representative of the project proponent replied that the company can establish industry at other place also but the decision to establish project at this place is for the development of Mundra.	A budget of Rs. 58 ,07,83,796 for the period of 5 years (From day 1 of the project construction) has been allotted toards Corporate Environmental Responsibility-CER activities (1st May, 2018 Office Memorandum of MoEF & CC). Based on the needs identified during SIA study in the study area. The CER fund is distributed in the following development initiatives: • Education Initiatives – Rs. 7,92,57,390 • Community Health Initiatives - Rs. 12,25,04,434 • Sustainable livelihoods and womenempowerment - Rs. 27,59,09,755 • Community Rural Infrastructure Development – Rs. 9,76,12,217 • Independent monitoring sudit snd ipact assessments of CSR activities – Rs. 55,00,000 The CSR details (like CSR policy, initiatives & activities, CSR budget expenditure data from 2010 to 2016 and CSR implemented photographs) is given in Section-8.5 of Chapter-8 in the EIA Report. Further, Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
56	Shri Valjibhai Tapariya Village: Zarpara Taluka: Mundra	He represented that in the forthcoming projects and the existing projects, Adani and other voluntarily organizations should make an exchange centre, the record of qualified persons should be prepared and the people should be taken on service as per the requirement of the company and their qualifications.	The representative of the project proponent replied that, we are in process of making Adani Skill development centre. Efforts will be made in future to create employment opportunities. Moreover linkages will be established with the employment exchange and the registered persons having appropriate qualification shall be given priority.	As promised, Adani skill development centre will be developed at the project site. Necessary budgetary allocation will be done.
57	Shri Hussain Vasu Luhar Village: Tunda Taluka: Mundra	He represented that how many people of Tunda village serve at Adani? I was also provided employment but was terminated without providing any reason.	The representative of the project proponent replied that more than 100 persons of the Tunda village serve at Adani company. In the year 2012, a total of 35 persons were given employment on the basis of the representation of the Gram Panchayat. You were given much better salary increments as you were the resident of village. You are not terminated from service as on date.	Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
58	Shri Gulabsinh Babubha Jadeja Village – Mota Kandagara Taluka: Mundra	He represented that we do not have any objection towards this project. Due to company we have progressed.	-	-
59	Shri Viram Naran Shekhara On behalf of Bharatiya Kisan Sangh Village: Zarpara Taluka: Mundra	He represented that • A large number of objections are represented during public hearing. If the company comes and if there are any chances of environmental degradation, then the government authority should consider it seriously. The work should not remain only on paper. • It should be considered that the local public are not receiving employment. • If the NGT can issue notice to even Shri Ravishankar, then no one is over and above the environment. • Even in the past, before the establishment of the solar plant, the number of jobs were promised but the same is not observed.	The representative of the project proponent replied that: We undertake all kinds of work in a transparent manner. We are making efforts so that at least ten persons from each village receive employment. The suggestion of tissue culture laboratory for the development of agriculture is welcome and the relevant process will be considered for the same. We are ready to consider the requirements of the farmers through meeting with their committee, we shall do work on required issues, a 5 year plan will be undertaken with you and such opportunities will be undertaken that the employment opportunities are created through employment exchange. The company will work towards satisfaction of local people. Efforts will be made to provide the Drip Irrigation system for Date farming.	The proposed project will generate employment about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employments will be provided. Locals people will be given preference in employment based on skill set & eligibility requirement as per the job and the vacancies available. The total water requirement for the project is about 32,267 KLD which will be sourced from desalination plant of APSEZ Ltd, through M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is

2495

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		• The company should work for developing new sources of water. • By ignoring agriculture and developing industries, how many days will we survive? Agriculture development should also take place. • Moreover development of education is also necessary. Also, the Adani Company should establish a laboratory at Mundra for Tissue culture development of date farming. So farmers concerns can be addressed.	As part of CSR activities, provision of eight crores rupees every year has been done separately for this project.	designed for Zero Liquid Discharge (ZLD). Pollution Control: The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project. CER Initiatives: A budget of Rs.58,07,83,796 have been allotted for CER activities for five years. The Tissue Culture Laboratory development will be taken up. Further, drip irrigation system for date farming will be included in the CER initiatives.
60	Shri Dayabhai Gadhavi Village: Mota Kandagara Taluka: Mundra	He represented that • As per the page no. 8 of the EIA report, the impact of sulphur dioxide on environment is negligible. How is it possible? • Why do you not operate the ESP at night in the Adani Power?	The representative of the project proponent replied that, • In order to avoid harmful impacts to environment, concentration of sulphur dioxide emissions is regulated by stipulated norms. The emissions of sulphur dioxide will be within the prescribed limits after the erection of copper plant. • At the Adani Power, the ESP is always in operation when the plant is in operation.	The SO_2 generation is a continuous process during smelting activity. Primary gas stream will be routed to sulphuric acid plant (SAP) plant and the fugitive gas stream will be routed through scrubber. Further, there is no provision in the plant/process for storage of SO_2 gases and will be processed immediately to produce sulphuric acid. Sulphuric acid plant (SAP) will be installed with highly efficient (Double Conversion Double Absorption) DCDA process to control the SO_2 emission to less than 1 kg/t of sulphuric acid produced.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
				About Rs. 1700 crores will be invested to install sulphuric acid plant. The details of episodal SO_2 stack emissions are addressed in Section-4.2.2.3 of Chapter-4 of the EIA Report. The process of extraction of copper metal, sulphuric acid is recovered as a by-product from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced is utilized for phosphoric acid production and rest will be sold in the market based on market requirement. • Regular stack emission monitoring shall be carried out at all stacks for particulate matter, HF, SO_2 and NOx for checking the compliance to emissionstandards by respective plant. About Rs. 639 Crores will be spent on air pollution control system installation.
61	Shri Ranjitsinh Jadeja President, Taluka Panchayat Mundra Taluka: Mundra	He represented that, I hereby submit as a political leader that due to the establishment of the company, employment opportunities will be increased and the local people, taluka, state and entire country will develop.	-	The employment of local people in primary and secondary sectors of project shall upgrade the prosperity of the region. This in-turn will improve the socio-economic and infrastructure conditions of the area. Further, a total budget of Rs.58,07,83,796 will be spent towards CER nitiatives in the five year period, which will help the socio-economic development of the region.
62	Mrs. Devalben Gadhavi Village: Shekhadiya Taluka: Mundra	She represented that, it is submitted that by way of this project, care should be taken that the local ladies and other local public is given employment.	The representative of the project proponent replied that, as for the employment of ladies, arrangement has been made so that 120 ladies will get employment. Moreover, we will sign an MOU with Welspun Company in order to provide proper training and employment to ladies so that their condition will improve.	Locals will be given preference in employment in the proposed copper refinery project. As promised, about 120 ladies will get employment. Further, proper training will be imparted to the ladies so that their employability will increase.

2497

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
63	Shri Ibrahim Turk Village: Dhurb Taluka: Mundra	He represented that you are portraying this project as a green field project. But around 103 ha of land of forest department is taken in this project. How can this project be termed as green field project?	The representative of the project proponent replied that, any new project is stated to be green field project. There is no relation of word 'green field' with vegetation. It is only an English word.	About 85.79 ha of project area (33% of the project area) will be developed with greenbelt / green cover as per prevailing guidelines from GPCB/CPCB/MoEF&CC. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report.
64	Shri Hirabhai Patariya Sarpanch, Deshalpar Kanthi Gram Panchayat, Village: Deshalpar Kanthi Taluka: Mundra	He represented that this project is only 5 km away from our village. Therefore it is submitted that our village should also be given priority in the manner that Navinal and Shiracha are given priority.	The representative of the project proponent replied that, as discussed earlier, attempts will be made to employ 10 persons from each village.	As promised by the project proponent, about 10 persons from each village in the study area will be employed. Necessary skills will be developed through the Skill Development Centre as proposed.
65	Shri Ibrahim Turk Village: Dhurb, Taluka – Mundra	He represented that • You are to take sea water for this project and therefore what would be the impacts of this activity on the marine ecology? Have you conducted any study in this regard? • What will be the impact of salinity ingress on agriculture? • There is increase in salinity and loss to agriculture in the Tunda, Kandagra and other such areas due to cutting of mangroves.	The representative of the project proponent replied that: • The NIO organization has conducted study for the Intake and Outfall channels per the rules and regulations of MoEF&CC. The 11 km long outfall channel will meet the sea near West port and will dilute the quality of outfall. Moreover it is always ensured that the water temperature does not exceed more than 5 degree higher than the sea water ambient temperature and the salinity does not exceed 57 PPT. • We had undertaken a study through M/s Gujarat Institute of Desert Ecology (GUIDE) for assessment salinity of underground water. The salinity in the underground water has increased not only in the project surrounding area but also in the entire Kutch area. This is due to lack of rain and over-drawl of ground water. • The industries of this area are not dependable on ground water.	The total water requirement for the project is about 32,267 KLD which will be sourced from desalination plant of APSEZ Ltd, through M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).
66	Shri Natubha Jadeja Village: Shiracha, Taluka: Mundra	He represented that 100 people of my village were employed by Adani Power Company. Hence, my village has received employment.	-	As promised by the project proponent, about 10 persons from each village in the study area will be employed. Thus local people will be

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		Thus it is our submission that this plant should be established so that the employment is increased and the problem of unemployment of rest of our villagers is resolved.		given preference. Necessary skills will be developed through the Skill Development Centre as proposed. The employment of local people in primary and secondary sectors of project shall upgrade the prosperity of the region. This in-turn will improve the socio-economic and infrastructure conditions of the area.
67	Shri Bharat Kalyan Seda Village: Zarpara Taluka: Mundra	He represented that • The water to be sourced from sea will be through pipeline of open canal? In case if you dig a canal, the farmers will be impacted. • He represented that a charge of Rs. 200 is levied on trucks at entry gate by Adani Company.	The representative of the project proponent replied that • The water to be used in this project will be obtained from existing intake channel. Thereafter, the desalinated water from APSEZ will be transferred through pipeline to proposed project. • The contractor that works in the area of the company or APSEZ are provided with zero amount gate pass for their trucks and therefore no charge is levied from them.	The total water requirement for the project is about 32,267 KLD (32.3 MLD). The total desalinated water requirement for the project would be sourced from APSEZ Ltd, through M/s. Mundra Utility Pvt Ltd (MUPL). The desalinated water from the APSEZ will be transferred through the pipeline only. There will not be any open channel flow. Further, an integrated water system is proposed, the effluent from the process units is treated and reused to reduce water demand. It is also proposed to install a secondary Reverse Osmosis (RO) plant to further treat water from the effluent plant facility for effective use. Rejects from the reverse osmosis plant will be sent to Multi Effect Evaporator (MEF) for further recovery and solids generated will be sent to Secured Land Fill (SLF). This water would be utilized to meet the DM water and plant/utility water requirement of proposed project. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).
68	Shri Valji Sumar Gadhavi Village: Zarpara Taluka: Mundra	He represented that, I have been working with the Adani Company since the last 15 years. My 50 trucks are working for this company. Rs. 200 charge is not charged for my trucks.	-	-
69	Shri Kirtibhai Gor Village: Tunda,	He represented that there was no such public hearing conducted for the solar project. Certain	The representative of the project proponent replied that for the protection of the	Pollution Control:

2499

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
	Taluka: Mundra	boys have received employment in this project. Around 50% of people from the bio-data sent by me have received employment. The persons that have completed B.E. should receive employment after the completion of apprenticeship and thus what are the plans of the company to employ such persons? Such projects are welcome. We are 100% in favour of the development but not at the cost of environment. I had written to the GPCB officer that large amount of emission is emitted from the chimney. If the emission that is emitted today comes out regularly, then it is acceptable. The letter is written to GPCB for emission. Also received reply from GPCB. The development should be such that no one suffers due to impacts on environment.	environment, latest technology and equipment will be installed and operated in this project. Treatment plants for air and water both will be installed. The entire process will be as per the rules and regulations stipulated by the government so that environment will not be damaged due to this.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project. CER Initiatives: A budget of Rs.58,07,83,796 has been allotted for CER activities for five years.
70	Shri Dayabhai Gadhavi Village: Mota Kandagra, Taluka: Mundra	He represented that the project is entirely chemical based, which will be spread in water, air, noise, land, etc. and it will affect the agricultural land. I feel that such kind of project should be around 20 to 25 km away from the residential area. What are the measures for protection from such kind of project?	The representative of the project proponent replied that as part of this project, manufacturing of copper from copper concentrate will be through smelting and electrochemical process, the polluted water that comes out from this project will be sent to the RO plant after treatment in ETP. Therefore, no polluted water will be released outside. Thereafter, this water will be used again in the process. The rejects will be treated through multi effect evaporation and thus the water will be removed from it. Flue gases released from the process will be captured and converted to intermediate products through chemical process. It shall be ensured that no storage leakage is possible by performing the risk analysis and hazard identification. Thus, there will be minimal chances of water and air pollution.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
71	Shri Lakhdirbhai Gilwa	He represented that the farming of Chickoo and	The representative of the project proponent	There is no ground water withdrawal

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
	Village: Zarpara, Taluka: Mundra	Dates have suffered a lot due to existing projects. The ground water levels have gone down after establishment of these projects. It has impacted production of Chickoo and Dates and thus the farmers have strong objection against this project.	replied that: Adani Port and Adani Power do not use ground water. The new project will also not use ground water. Both these projects use sea water.	(consumption/ utilization) for proposed project and project operates on zero discharge concept. Hence, due to proposed project there is no scope of ground water levels reduction and contamination.
72	Shri Khengar Gilva Village: Zarpara, Taluka: Mundra	He represented that the plantation from Bhadreshwar to Tunda Vandh was removed after establishment of projects. Due to this reason, the wild animals like pigs and Nilgai enter our farms. Therefore, it is our submission that please do something for the protection of the crops.	The representative of the project proponent replied that prior to this also, support for drip irrigation is provided to the farmers from many villages since last three years. Special attention will be given to provide support for drip irrigation as and when required.	As part of the CER program, drip irrigation facilities will be provided in the nearby villages. The total budget of Rs. 58,07,83,796 will be spent on CER activities in five-years period.
73	Ms. Shital Rajgor Village: Mota Kandagra, Taluka: Mundra	She represented that we do not have any objection for the establishment of company. Ladies like us get employment. We are in favour of the company.	-	-
74	Shri Dayabhai Gadhavi Village: Mota Kandagra, Taluka: Mundra	He represented that • What would be the concentration of Sulphur Dioxide and at what height it will be released? • How sludge will be disposed? • How much quantity of Sulphur Dioxide will	The representative of the project proponent replied that: • Sulphur dioxide will enter the sulphuric acid plant directly from the copper smelter. Acid will be made in this plant. After making acid, it will be scrubbed in tail gas scrubber and after that the gas will be released in air which will mainly contain oxygen and nitrogen. Concentration of sulphur dioxide will be below the prescribed limits by the Government of India. • Gypsum will be manufactured from gas scrubber using lime. This will be used in the cement industry. The flue gases will be released in atmosphere at a height of 100 m. • As per CPCB norms, 1 kilogram sulphur	• The SO_2 generation is a continuous process during smelting activity. Primary gas stream will be routed to sulphuric acid plant (SAP) plant and the fugitive gas stream will be routed through scrubber. Further, there is no provision in the plant/process for storage of SO_2 gases and will be processed immediately to produce sulphuric acid. • Sulphuric acid plant (SAP) will be installed with highly efficient (Double Conversion Double Absorption) DCDA process to control the SO_2 emission to less than 1 kg/t of sulphuric acid produced. About Rs. 1700 crores will be invested to install sulphuric acid plant. The process of extraction of copper metal, sulphuric acid is recovered as a by-product from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced is utilized for

2496

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		be released in air? What will be the density of Sulphur Dioxide?	dioxide will be released per ton of sulphuric acid produced. The density of the flue gas will be same as the air. It will contain very less amount of sulphur dioxide. The same will be around 150 to 200 ppm. We will establish a plant that would be one of the best plants in the world.	phosphoric acid production and rest will be sold in the market based on market requirement. • Secured Land Fill (SLF) is proposed over 30 acres within the project premises for disposal of ETP waste sludge and spent catalyst. Other hazardous waste will be disposed through the approved recyclers.
75	Shri Ashariya Lakha Gilwa, Village: Zarpara, Taluka: Mundra	He represented that the average temperate keeps on increasing every year. In copper project 300 Megawatt power will be required and you will generate steam that would be capable to produce 40 Megawatt of electricity and thus will this increase the temperate?	The representative of the project proponent replied that there will be no increase in temperature due to this project. It would be preferable to use steam for production of electricity instead of releasing it in air. Fuel consumption can be reduced. The electricity will be produced using steam as per rules and regulations. Thus the temperature outside the plant will not increase.	The electricity will be produced using steam as per rules and regulations. Thus the temperature outside the plant will not increase. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project
76	Shri Naran Gadhavi, Village: Zarpara, Taluka: Mundra	He represented that the objection is done because the effect of pollution will be same for all. We are talking about the impacts that are found on the environment, ground water, human health, mangroves, fishermen, cattle rearers, Dates crop, children, etc. should be discussed. We do not object to the development. We would welcome the development if proper environmental measures are taken care of. The objection is only against pollution and randomly placed electric lines. CRZ rules have been violated. Water has turned saline and its TDS has become more than 4500.	The representative of the project proponent replied that • Proper attention will be given to your representations. You have raised important points as an NGO and we have undertaken the appropriate actions as well. One should always talk as a responsible citizen. • We will undertake all kinds of development by following the rules and regulations and we hereby give assurance for the same. The guidelines will be considered while development of new plant.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. The budget allotted for environmental protection will be about Rs. 1044 Crores, out of which for air pollution control systems is Rs. 639 Crores, water pollution control system is Rs. 360 Crores and other environmental management systems (like solid waste, greenbelt, post project monitoring, gas collection and energy conservation) is Rs. 45 crores. Further, a total budget of Rs. 58,07,83,796 will

2296

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
				be spent on CER activities in five year period.
77	Shri Paresh Rajgour Village: Tunda, Taluka: Mundra	He represented that it is our expectation that the plant will be established by considering the rules framed by the Government of Gujarat and Central Government as well as considering the public interest.	The representative of the project proponent replied that the company is responsible for maintaining public interest and environment. The company will operate the plant by considering the public interest and environment.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC.
78	Shri Pravinsinh Bhurubha Chauhan Village: Siracha, Taluka: Mundra	He represented that TATA Power plant took Gochar land. They have entered into agreement to provide either green or dry fodder. Why you do not enter into such kind of written agreement?	The representative of the project proponent replied that: • In your case the Gujarat High Court has ordered to provide fodder for a particular duration and this duration is even now in effect. Thus, there is no question of entering into any kind of agreement or contract as the order is passed by the High Court. • We are providing the dry and wet fodder to the villages having requirement on the basis of the order passed by the Honourable High Court. We are also providing fodder voluntarily to the villages from which the people have not gone to the courts.	A budget of Rs. 58,07,83,796 has been allotted for CER activities for five years. The provision of fodder to the needy villages will be covered under CER initiatives.
79	Shri Viram Naran Sankhra (Member of Kishan Sangh) Village: Zarpara, Taluka: Mundra	He represented that the issue is not limited to fodder, it is a request to maintain positive attitude from your side on permanent basis. So that such a public hearing would not even be required in the years to come. Such kind of submission is done.	-	-
80	Shri Vishram Gadhavi, Village: Zarpara, Taluka: Mundra	He represented that, I am worried about my existence, the existence of my village, the existence of agriculture and therefore I have come to object. It is expected that you undertake your role in an unbiased manner.	-	-
81	Shri Naran Gadhavi, Village: Zarpara, Taluka: Mundra	He represented that • Three reports have been found for the production of copper plant. Out of this 1) Regional Institute of technology,	The representative of the project proponent replied that: • The reports that you are mentioning are	The proposed project will be designed as per the latest technology with all in built pollution control measures.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		Jamshedpur, 2) Energy Laboratory and department of biology science Cambridge University, London and 3) Public Health report. Which reports contains the details of serious side effects of production of copper. Therefore provide the information that what diseases are possible due to the dust of copper? • As per the report, hair falls, stomach ache, cancer and other inhalation related diseases, etc. occur due to dust. How you will control the dust? How many teams will you have? How many doctors will be available? • The second question is that, how will you control the air emissions that will be released in the atmosphere? What is the facility that is done by you as for this? • The sulphur dioxide that is released in air will damage health and so what steps have been taken by the company?	related to plants that are very old. The plants with latest technology are even present in developed countries. The dust from the plant is collected and used in furnace. Moreover, the dust on the road is also collected by vacuum truck. At the places where the workers are required to work in dusty area, they will be provided personal protective equipment (PPE). • Copper concentrate material contains 8 to 10% moisture and therefore there is very less chance of dust emissions. Even thereafter, if this dust goes into breathing, the material is inert and therefore there would not be any specific effect. The effect is just like the diseases that are caused by normal dust. • The sulphur dioxide will be used as intermediate product, its chemical process will be undertaken and sulphuric acid will be made from it. Therefore, there is no question of the toxic gases releasing in the atmosphere. • The chemical process of these gases will be done and intermediate product will be developed. It shall be ascertained that no leakage is possible by performing the risk analysis and hazard identification. Thus, there will be minimal chances of air pollution. • After making sulphuric acid, it will be scrubbed in tail gas scrubber and the gas will be released in air. The lime will be used during the gas scrubbing process and gypsum will be made. This will be used in cement industry.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
82	Shri Dayabhai Gadhavi, Village: Mota Kandgara, Taluka: Mundra	He represented that what kind of storage would be done by the company for raw material and how raw material will be transferred?	The representative of the project proponent replied that the company's copper concentrate storage will be entirely covered. The pipe conveyor will be used to transfer material from port to plant.	-
83	Shri Valjibhai Tapariya, Village: Zarpara, Taluka: Mundra	He represented that with bottom of their hearts, everyone wishes that industries should come. Industries should take corrective actions when there are objections. Industries are welcome with the conservation of environment.	The representative of the project proponent replied that all points that are represented here will be taken care of. We will also consider the benefits of common public on behalf of the company. We are 100% responsible for the common public as a developer. We will consider that properly.	-
84	Shri Mayur Aatu Maheswari Village: Tunda, Taluka: Mundra	He represented that • What is number of the employment opportunities provided to the local public by the existing industries? Why are the local people sacked from their jobs? A committee should be constituted so that the local public gets employment and an open discussion / meeting should be held between the company officers and committee for the purpose of providing employment to local public. This discussion should be done openly not behind closed doors. As per the rules of the government, the local public should receive 85% of employment. • Provide the list showing how many local persons have received employment / work in the existing industries.	The representative of the project proponent replied that the list of the local persons working in the company will be provided. We undertake the process of employing the local people in consultation with the Sarpanch and Gram panchayat. Even this process will be made further transparent. The main reason for termination of job is that the workers are irregular.	The proposed project will give employment to about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
85	Shri Mithu Jakhu Maheshwari Village: Mota Kandagara, Taluka: Mundra	He represented that • The preservation of water and environment should be made for farming. Farming gets affected due to sea water, Dates do not grow up. Water is not fit for drinking within the radius of 3 KM. Therefore the company should think about this loss. • The work for 3 storage area for Cowsheds is stopped in Kandagara. The	The representative of the project proponent replied that Considering your representation, without any pressure, the work will be done and efforts will be made to finish incomplete works.	The total water requirement for the project is about 32,267 KLD which will be sourced from desalination plant of APSEZ Ltd, through M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the construction and operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).

2500

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		representation has been made to restart the construction work of storage area. • The representation has been made for fair work.		The work for 3 storage area for Cowsheds will be completed in a time bound schedule. Required fund will be allocated for these works.
86	Shri Salu Kumbhar, Village: Tunda, Taluka: Mundra	He represented that three Fishermen access roads towards sea have been closed, due to which we have to take 5 km long route, we do not have vehicles, therefore, the demand has been made to open three routes.	The representative of the project proponent replied that we will fully cooperate with fishermen and will make sure that no hindrance is made in the route of fishermen, if there is any obstacle, they can approach us any time.	As committed, the fishermen routes will not be disturbed during the construction and operation of the proposed green field copper plant.
87	Shri Kirtibhai Gor, Village: Tunda, Taluka: Mundra	He represented that which water will be used in the upcoming plant?	The representative of the project proponent replied that in the proposed plant, seawater will be used after removing salt (desalination).	The total water requirement for the project is about 32,267 KLD (32.3 MLD). The total desalinated water requirement for the project would be sourced from APSEZ Ltd, through M/s. Mundra Utility Pvt Ltd (MUPL).
88	Shri Dayabhai Gadhavi Village: Mota Kandagara, Taluka: Mundra	He represented that • As per the notification of Government of Gujarat / Government of India, 85% of people shall be employed from local areas, how many have you employed? • What steps have been taken to develop the unskilled people to give them the right opportunity?	The representative of the project proponent replied that we are trying to provide employment to the local people to a great extent, but in the initial stage, due to the lack of requisite qualification, the company was facing problem to provide the employment. After the ITI has started and after the training of RTG is provided, the proportion of local employment has increased and will continue to increase.	The proposed project will give employment about to 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
89	Shri Hamir Rabari Village: Wandh, Taluka: Mundra	He represented that one of my two handicapped children who cannot hear and the other one cannot speak. The representation had been made for their job.	The representative of the project proponent replied that we had employed their children, but they said that one of their boys is working in the Tata Company; and they do not want to join here now.	-
90	Shri Dosabhai Gadhavi Bhurubha Chauhan, Village: Siracha Taluka: Mundra	He represented that if the industry comes then damage will be done. We are not against the plant. You will fill the vacancy on contract basis. But, what will you do for farmers like us and our children? TDS analysis been carried out by me in the 2007 and 2012, the TDS was reached up to 2200, which is not fit for drinking. We used to get drinking water from bore well, now we have to buy water bottle. In the last 5 years 800 to	The representative of the project proponent replied that, we will work towards solving problems of farmers. Efforts will be made to open the Kishan School for the children of the farmers. The planning as to how the ground water level can be increased, has been made by Adani Foundation, along with Mr. Yogesh Jadeja to improve the water supply in 10 villages and for the purpose of employment,	The issues raised will be covered under CER/CSR development program. Under this project a total budget of Rs. 58,07,83,796 will be spent on CER activities in five year period. Out of Rs. 58,07,83,796 crores, Rs. 9,76,12,217 is allocated for Community Rural Infrastructure Development, which includes safe drinking water facilties.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		900 TDS has been increased. In fact, nothing has been done for the farmers; we demand that something is done for the farmer and farming. The fruits from our farm are not worth eating.	the children of farmer will be given priority for this purpose.	
91	Shri Pravin Singh Bhurubha Chauhan, Village: Siracha Taluka: Mundra	He represented that the power plant's intake channel, the outfall channel, and the water reservoir are *Kuchcha* or *Pucca*?	The representative of the project proponent replied that, Outfall channel is Stone Masonry Lined, while the Reservoir is Clay Lined and Sheet Piling is done. This question is not about the proposed project.	-
92	Shri Khimraj Gadhavi Village: Zarpara Taluka: Mundra	He represented that the people from village used to drink the water with high TDS and the company uses Narmada water for sprinkling on coal piles.	-	The total water requirement for the project is about 32,267 KLD which will be sourced from desalination plant of APSEZ Ltd, through M/s. Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).
93	Shri Pravin Singh Bhurubha Chauhan Village: Siracha, Taluka: Mundra	He represented that • What does High water line, Low water line in the figure No. 1 in the E.I.A. report indicate? • Different CRZ maps are submitted in the Public Hearing for the years 1991, 2008, 2010 and 2017, which is the correct map out of those? If one map is correct out of four then this shows that the other three are false which indicates the Company has violated the rules of CRZ. • The tidal waters were reaching at a place in Siracha, now waters are not reaching there which shows that the company has violated the CRZ Act. • There is no clarification in the report about from where the Conveyor belt, Road, Railway line will pass and how they will be	The representative of the project proponent replied that • CRZ maps are prepared by the institution recognized by the Government of India. Project proponent has no authority over it. Projects are approved on the basis of maps prepared by the authorized institution. • The map of proposed project is superimposed on CRZ map of the area prepared by an institution recognized by Government of India in 2011. • CZMP plans are prepared by the Government of India which are not public domain. When any approval is required for CRZ by any project then the CRZ map is submitted to compare with CZMP and on that basis only approval is accorded.	As informed, the proposed project is outside the CRZ boundary. The map of proposed project is superimposed on CRZ map of the area prepared in 2011 by Centre for Earth Science Studies (CESS) Thiruvanantapuram, an institution recognized by Government of India. The proposed project site is outside CRZ and doesn't attract CRZ clearance. The approved CRZ layout is shown in Figure-1.5 of Chapter-1 in the EIA report.

2502

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		used in the plant. • Three sites in total were selected for the project, site number 2 is selected from that. What is your purpose behind it? • When you already own the site No. 1, why you have selected site No. 2? You have selected site No. 2 to get forest land.	We do not agree with your opinion in this matter. • The project is proposed in notified SEZ area and part of the forest land. So the Roads, Railway line falling under APSEZ will be used. Conveyer belt will pass through the existing conveyor corridor; this matter is mentioned on Page No. C 2/6 Point No. 2.2.7 of EIA report. • Detailed information regarding this matter is mentioned in Chapter-5. • For analysis of three alternative sites for project, about 18 factors were examined. The site No. 2 was found to be more suitable, so it is selected. • We have submitted our reasons in EIA report. We do not agree with your view.	
94	Shri Dayabhai Gadhavi Village - Mota Kandagara Taluka: Mundra	He represented that we have received report of VIMTA. This VIMTA is a Private organization which is favouring the company. We don't accept VIMTA's report.	The representative of the project proponent replied that VIMTA is a NABET accredited agency.	M/s. Vimta Labs Limited (VLL), Hyderabad is a QCI/NABET accredited and MoEF&CC recognized and NABL accredited Laboratory. The credentials of M/s. Vimta Labs Limited are given in Chapter-11 of the EIA Report.
95	Shri Vajjibhai Taparya Village – Zarpara Taluka: Mundra	He represented that what area of land will be affected during Acidic Process in the plant? Where the Acidic Water and Chemicals will be released?	The representative of the project proponent replied that the process of this copper plant is not acidic, but along with production of copper, sulphur dioxide will also be produced which will be used for making sulphuric acid. And, it will be transported through pipeline of suitable material and there is no possibility of leakage. The tail gas will be scrubbed in the scrubber by lime stone.	The proposed project will be designed as per the latest technology with all in built pollution control measures. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC.

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
				About Rs.1044 crores will be spent for environmental pollution control measures in this project.
96	Shri Dayabhai Gadhavi Village - Mota Kandagara Taluka: Mundra	He represented that • Will waste material be generated from the plant? • What is the arrangement for waste material? • Is there any chance of any kind of blast? • In what manner will the finished product be taken out?	The representative of the project proponent replied that: • Lime will be used in the scrubber process and Gypsum will be made. This will be used in the cement industry. • Certain part of the waste material coming out of the plant will be sent to the CPCB authorized processor and other non-recyclable hazardous waste will stored in secured land field constructed as per guidelines of CPCB. • The finished goods in the form of copper plate will be transported in truck or container. Sulphuric acid will be transported in tanker. Chances of blast are not possible.	The details of solid waste generation and their disposal is addressed in Section-2.4.3 of the EIA Report. A total budget of Rs.1044 crores will be spent for environment pollution control and management.
97	Shri Pravinsinh Bhurubha Chauhan, Village: Shiracha, Taluka: Mundra	He represented that, • You have mentioned that you will make road from the waste. So what will do for making road from this waste? • What would be the constituents in raw material that would be stored? • Which chemicals will be contained in the waste that comes out from the plant and will mercury come out from this waste?	The representative of the project proponent replied that: • We will not make roads from waste. • The waste material coming out of the plant will contain calcium, silica and arsenic. This waste material will be stored in secure land fill sites. • Mercury product is made from the waste material that contains mercury and material named calomel is produced. This material will be exported. No process for mercury will be done in this plant.	Secured Land Fill (SLF) is proposed over 13.35 ha within the project premises for disposal of ETP waste sludge and spent catalyst. Other hazardous waste will be disposed through the approved recyclers.
98	Shri Naran Gadhavi Village: Zarpara, Taluka: Mundra	He represented that, • What steps have been taken for reducing	The representative of the project proponent replied that: • This question does not relate to this	A total of 32,267 m^3/d of water will be used in the plant and out of that 3,925 m^3/d of polluted water will be produced. This will be

2504

ANNEXURE-20

Sr. No.	Name and Address of the Representative	Issuses Raised/Represented	Chronological Response given by Representative of Project Proponent	Action Plan
		emissions and water conservation as per the gazette notification dated 07.12.2015 of MoEF&CC, Government of India? • What effect will this project produce on sea creatures that have direct connection with fishermen?	project. • No liquid will be discharged from this plant. • A total of 32,800 m^3/d of water will be used in the plant and out of that 6,448 m^3/d of polluted water will be produced. This will be treated in ETP, the water will be purified by process in RO plant and it will be again used in the plant. The rejects will be treated through the multi effect evaporation process. Therefore there is no question of discharge of any kind of liquid from this project	treated in ETP, the water will be purified by process in RO plant and it will be again used in the plant. The rejects will be treated through the multi effect evaporation process. Therefore there is no question of discharge of any kind of liquid from this project. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD). About Rs. 360 crores will be spent for ETP design and wastewater management

EAC OBSERVATION NO.-21

2505

EAC OBSERVATION:

The Chapter-5 consists of only listing of alternative technologies. The committee opined that the PP shall select out of alternative technologies available, based on the selection of the technology, the impact prediction shall be made and mitigation measures shall be proposed.

REPLY:

Adani Enterprises Ltd has shortlisted Outotec Flash Smelting followed with Pierce smith Converting and Anode furnace as its process technology for Copper Smelter Plant.

Outotec Flash Smelting: In Outotec flash smelting process copper concentrate and flux additives need to have moisture content to the level of < 0.3% moisture. Moisture in the feed mix is around 8%, which is reduced to <0.3% with the help of rotary steam dryer; which is fitted with bag filter to collect the dried dust particles. Dried feed mix is conveyed with the help of pneumatic conveying system to the smelting furnace through day bin system. Day bins are also equipped with bag filters.

Smelting furnace is thoroughly sealed and is under negative draft for evacuating the generated process gases with the help of ID Fan through waste heat recovery boiler and hot gas electrostatic precipitator through closed gas ducting to Sulphuric Acid plant for production of the Sulphuric Acid.

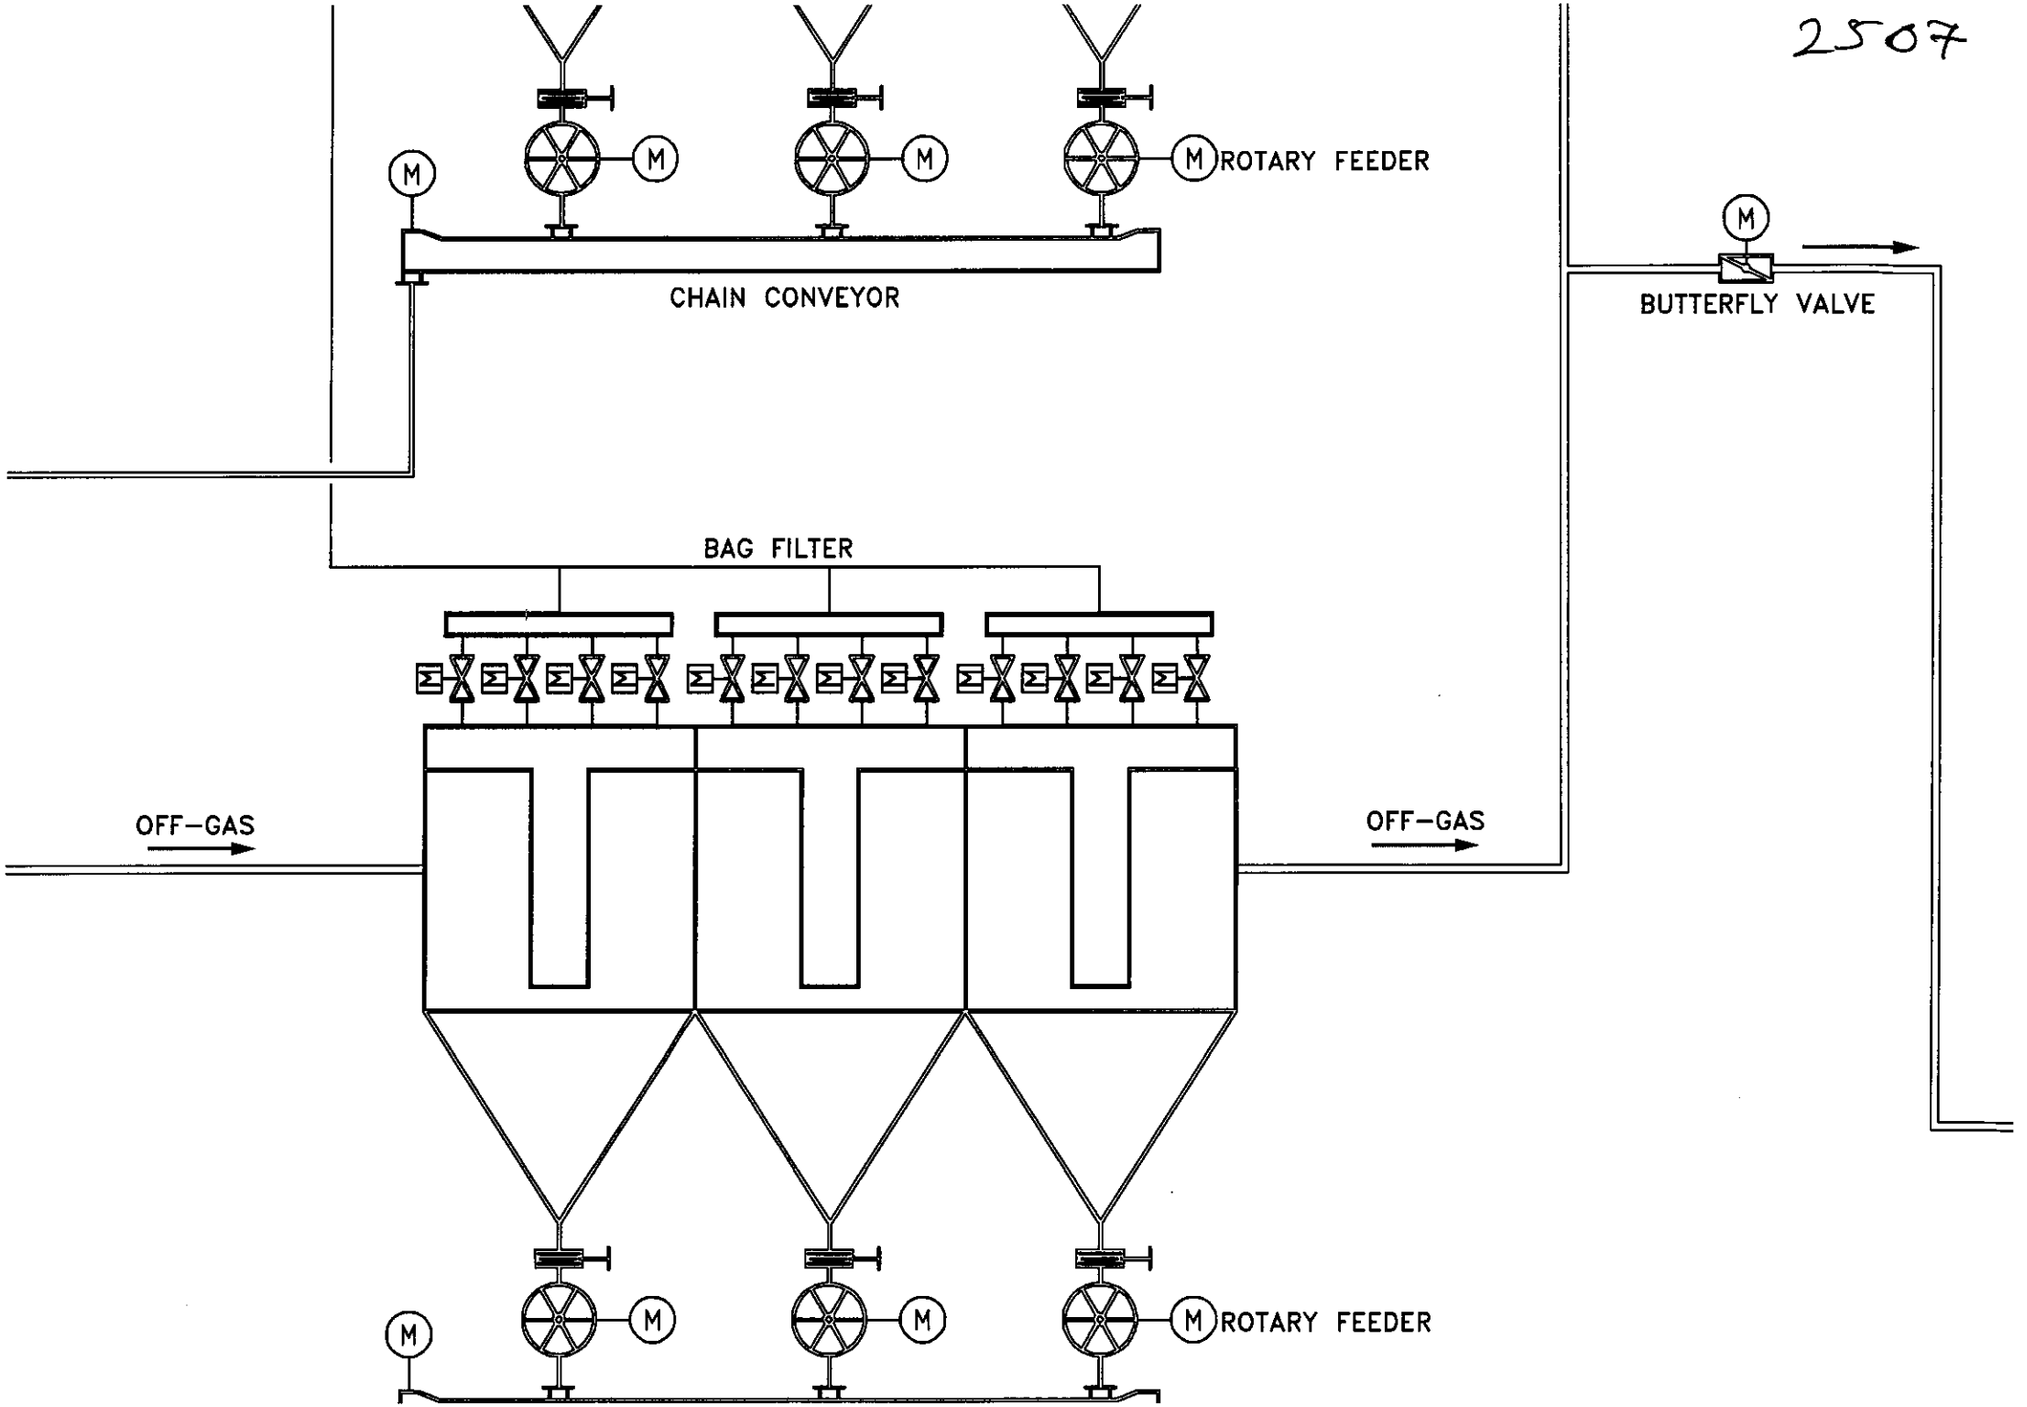
Flash furnace is having settler to segregate the Matte and Slag. Copper Matte is tapped from the settler of flash furnace to the ladles and copper slag is tapped to electric furnace for further treatment of the copper slag to reduce the copper content < 1%. Fugitive gases from the Furnace Tapping are collected by hood system with the help of ID Fan. Fugitive gases will be treated first in the bag filter to collect the dust in the gases and later will be scrubbed in the scrubber, before releasing to atmosphere through stack.

Matte from the Flash furnace settler and electric furnace will be transported with the help of ladles to pierce smith converter for production of Blister Copper (> 98% Cu) and Slag produced will be returned back to electric furnace & slag cleaning furnace for recovery of the Copper. PS Converter furnace is under negative draft for evacuating the generated process gases with the help of ID Fan through waste heat recovery boiler and hot gas electrostatic precipitator through closed gas ducting to Sulphuric Acid plant for production of the Sulphuric Acid.

Blister Copper from PS Converter will be transported with the help of ladles to Anode Furnace for production of Anode Copper (> 99% Cu) and onwards to anode casting wheel for production of Copper anodes. Copper Anodes is the input material for Copper Refinery for production of Copper Cathode (> 99.99% Cu).

Fugitive emissions from all the furnaces are collected and treated in the flue gas desulfurization system. Residual gases post desulphurisation are released to atmosphere through well designed stack meeting the statutory standards.

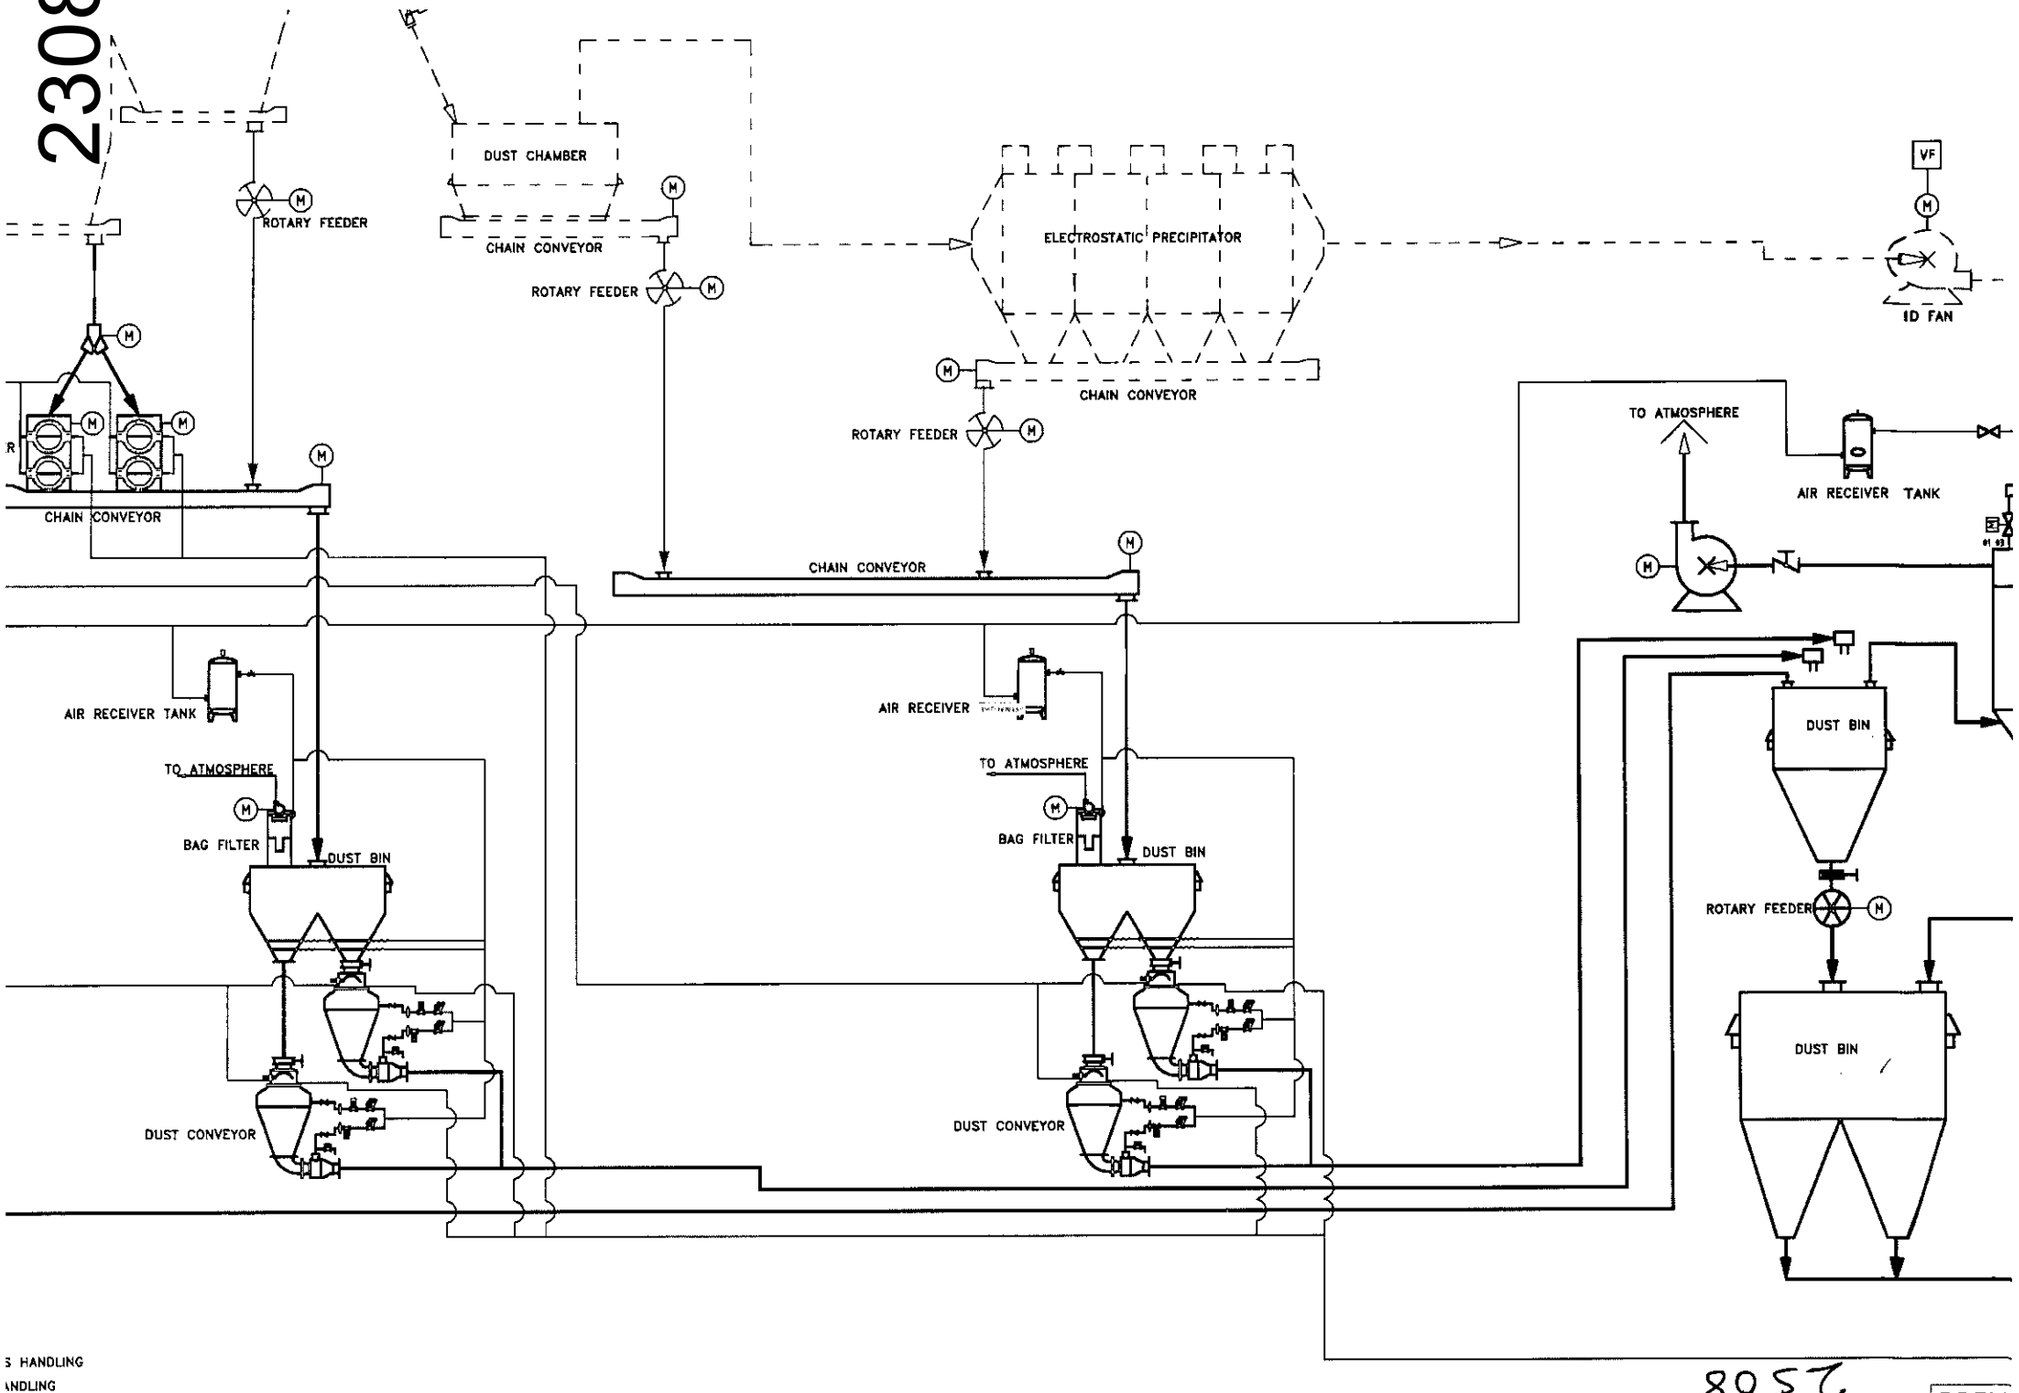
Equipment such as Electric Furnace, waste heat recovery boiler, hot gas electrostatic precipitator, ID Fan, gas cleaning plant of the sulphuric acid plant, effluent treatment plant and fugitive gas handling system inclusive of flue gas desulphurisation system will be designed and sized to meet the regulatory norms.



The drawing of the various mitigation measures provided in **Annexure-21(Drawing 1 to 7)**.

2506

EAC OBSERVATION NO.-21



Sr. No.	Parameter	Flash Technology	Mitigation Measure	Support Document
1	Concentrate Feed Mix	Dry – Moisture < 0.3% Q: ~ 62,150 Nm3/Hr	Bag Filter and pneumatic Conveying for recycling within the process	Drawing No. 1
2	Smelting Furnace Off Gas Handling	ID Fan is used to evacuate through WHRB and Hot gas electrostatic precipitator to Sulphuric Acid Plant Q: ~111,994 Nm3/Hr	Sizing of the equipment (WHRB, HESP, ID Fan and Effluent Treatment Plant) based on the Gas Volume. Dust in the gas is recovered and pneumatic Conveying system is used for recycling.	Drawing No. 2
3	Fugitive emissions from Smelting furnace and electric furnace metal tapping and ladles	Fugitive Emission No of Metal Tap Hole: 8 (3 Operating at a time) Q: ~300,000 Nm3/Hr	Collection hood, Bag Filter and Flue gas Desulfurization Equipment sizing will be based on the total fugitive gas flow to the desulfurization.	Drawing No. 3
4	Pierce Smith Converter off gas Handling	ID Fan is used to evacuate through WHRB and Hot gas electrostatic precipitator to Sulphuric Acid Plant Q: ~2,05,618 Nm3/Hr	Sizing of the equipment (WHRB, HESP, ID Fan and Effluent Treatment Plant) based on the Gas Volume. Dust in the gas is recovered and pneumatic Conveying system is used for recycling.	Drawing No. 4
5	Pierce Smith Converter Fugitive Gas Handling and Dust Handling System	ID Fan is used to evacuate through Collection hood, Bag Filter and Flue gas Desulfurization system to process stack Q: ~3,26,400 Nm3/Hr	Sizing of the equipment in Collection hood, Bag Filter and Flue gas Desulfurization system shall be based on the Gas Volume and gas characteristics. Dust in the gas is recovered and pneumatic Conveying system is used for recycling.	Drawing No. 5
6	Anode Furnace Off Gas Handling	ID Fan is used to evacuate through desulfurization system to process stack Q: ~87,183 Nm3/Hr	Sizing of the equipment in flue gas desulfurization including Bag Filter shall be based on the Gas Volume and gas characteristics. Dust in the gas is recovered and recycled through closed bins.	Drawing No. 6
7	Anode Furnace Fugitive Gas Handling	ID Fan is used to evacuate through Collection hood, Bag Filter and Flue gas Desulfurization system to process stack system to process stack Q: ~144,000 Nm3/Hr	S Sizing of the equipment in Collection hood, Bag Filter and Flue gas Desulfurization system shall be based on the Gas Volume and gas characteristics. Dust in the gas is recovered and recycled through closed bins.	Drawing No. 7

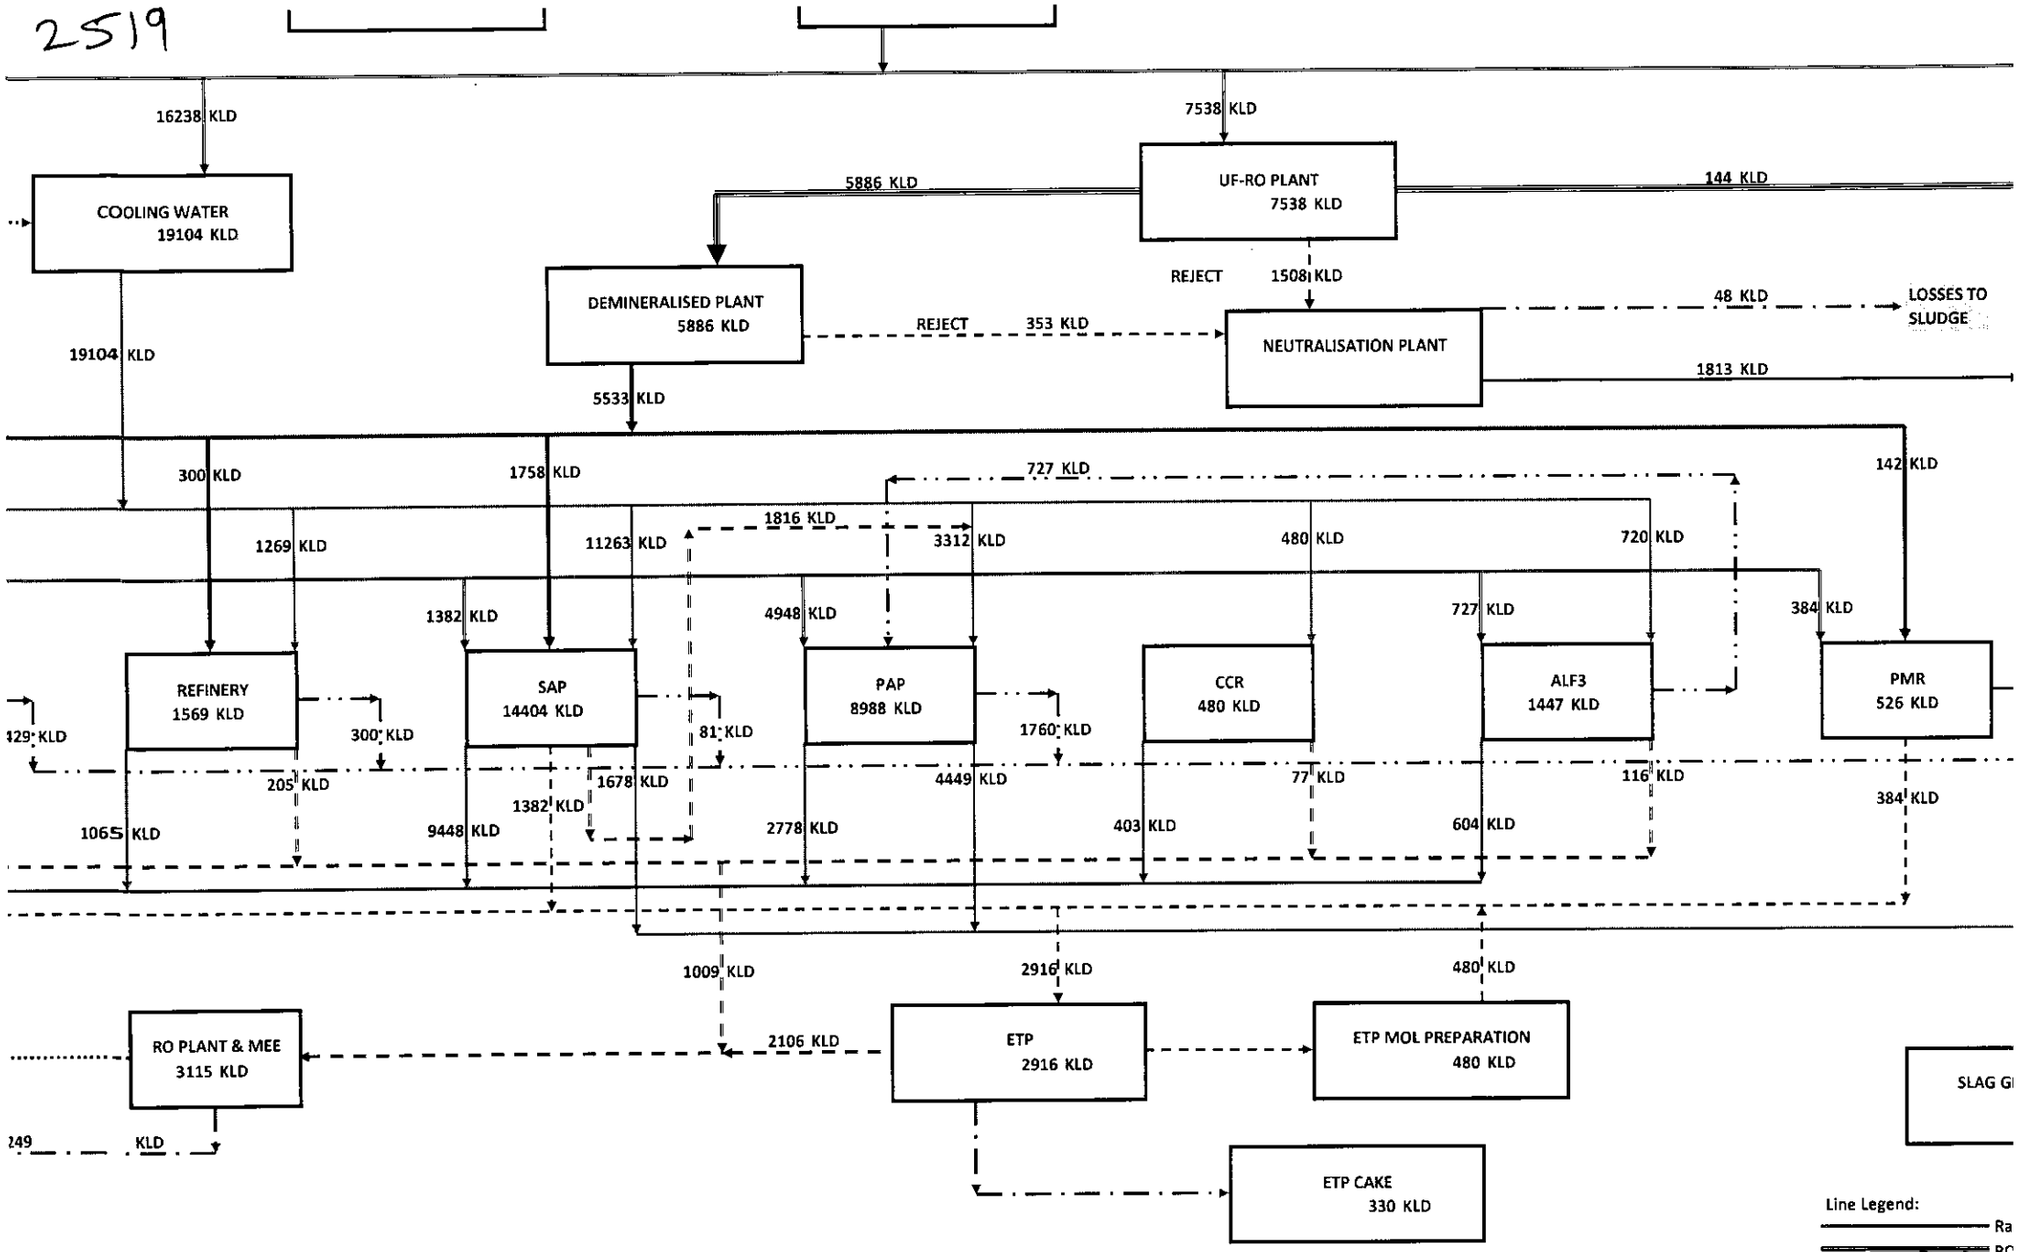
EAC OBSERVATION NO.-23

2518

EAC OBSERVATION:

Revised water balance shall be submitted.



REPLY:

The water consumption for the proposed copper plant has been prepared based on the information submitted by various technology licensers.

The revised water balance is prepared facility wise providing details of fresh water requirement, recycled water, effluent generation, DM water and cooling water requirement along with the evaporation and system losses.

Revised Water Balance is presented in **Annexure-23.**

EAC OBSERVATION NO.-24

EAC OBSERVATION:

HIRA shall be prepared for worst case scenario

REPLY:

The HIRA study has been prepared based on the methodology using a comprehensive checklist of hazards guidelines provided by the ISO 17776: 2002.

Considering the details of the various units and storage systems, the Nodes of Copper Smelter Plant including converter and anode furnace, Sulphuric acid plant and LPG storage bullets were taken up for the HIRA study for the worst case scenarios.

- Metal leak from furnace
- Failure of Sulphuric Acid Tank
- Fire in LPG bullet

Detailed report on worst case scenario for proposed Copper Refinery project with recommendations is presented as **Annexure-24.**

ADANI ENTERPRISES LIMITED

COPPER REFINERY - MUNDRA

Hazard Identification & Risk Assessment Study
for
Worst Case Scenarios

2522

1. INTRODUCTION

Adani Enterprises Limited have taken up a project for installation of Copper Refiney with 9,00,000 TPA capacity at Mundra in Gujarat State.

In the process of granting Environmental Clearance for the Project, the Expert Appraisal Committee recommend to carry out a Hazard Identification & Risk Assessment (HIRA) study for the Worst Case Scenarios.

Accordingly this document presents the HIRA study report for the worst case scenarios in the process plants and storage units in the Copper Refinery facility.

2. FACILITY DESCRIPTION

The Copper Refinery facility of Adani Enterprises Limited at Mundra consists of the following major units.

S. No.	Plant	Units	Phase-I	Phase-II	Overall Plant Configuration
1	Copper Smelter Plant	TPA	4,50,000	4,50,000	**9,00,000**
2	Copper Refinery Plant	TPA	5,00,000	5,00,000	**10,00,000**
3	Continuous Cast Copper Rod Plant	TPA	2,50,000	2,50,000	**5,00,000**
4	Copper Scrap & E-Scrap Melting Facility	TPA	50,000	50,000	**1,00,000**
5	Sulphuric Acid Plant	TPA	15,00,000	15,00,000	**30,00,000**
6	Phosphoric Acid Plant (as100% P2O5)	TPA	2,50,000	2,50,000	**5,00,000**
7	Aluminum Fluoride Plant	TPA	15,000	15,000	**30,000**
8	Oxygen (Industrial) Plant	TPM	48,000	48,000	**96,000**
9	Precious Metal Recovery Plant				
a	Gold	TPA	25	25	**50**
b	Silver	TPA	250	250	**500**
10	Selenium Recovery Plant	TPA	144	144	**288**
11	Waste Heat recovery boiler based power plant	MW	20	20	**40**

The following major storage tanks are provided in the Copper Refinery facility.

Sr. No.	Chemical Stored	No. of Tanks	Capacity of Each Tank	Total Capacity	Type of tank
1	Sulphuric acid (98%)	15	5500 KL	**1,50,000 T**	Vertical cone roof tanks. Carbon steel
2	Phosphoric acid	8	4500 KL	**30,000 T**	Vertical cone roof tanks. Carbon steel with rubber lining
3	LPG	4	100 T	**400 T**	Above ground horizontal cylindrical tanks (bullets)
4	Furnace oil	4	1000 T	**4000 T**	Vertical cone roof tanks. Carbon steel
5	HSD	2	500 KL	**1000 KL**	Vertical cone roof tanks. Carbon steel

2524

3. OBJECTIVE AND METHODOLOGY OF HAZID STUDY

The objective of this HIRA review is to identify all significant hazards associated with the proposed facility which have potential consequences with high severity level to harm people, environment or property, with a view to eliminating or reducing the hazards through the application of inherent safety at an early stage of the design.

The stated objectives of a HIRA review are to:

a) Identify potential hazardous events which can cause large impacts on impact/s on people, property, or the environment.
b) Identify existing safeguards;
c) If existing safeguards are considered inadequate, propose additional risk reduction measures by eliminating hazards, minimizing their effect or controlling the consequences of events as required.

HIRA Study Methodology

The HIRA study follows a structured, systematic methodology using a comprehensive checklist of hazards prepared on the basis of guideline provided by the standard ISO 17776: 2002.

The HIRA study proceeds as follows:

1. Select the system / section (or the activity) for review
2. Describe the main features of the system (layout, safety measures, operating conditions, etc.) or activity.
3. Select the first (or next) guideword category from the selected list
4. Consider the hazard and discuss its applicability in relation to the system / section under review
5. For each applicable hazard, consider if the hazard can be removed or reduced. If a hazard cannot be removed, note the main existing or planned safeguards and review their adequacy.
6. Perform risk rating.
7. Identify safeguards, as applicable
8. Make recommendations for further action, as required
9. Repeat steps 3 - 8 for all guidewords in the selected list
10. Repeat steps 1-9 for all systems / sections of the plant under review (or activities described in the procedure under review)

The following Risk Assessment Matrix prepared as per the guideline provided by Energy Institute (formerly known as Institute of Petroleum) UK.

Risk Assessment Matrix		Likelihood of Occurrence				
		A	B	C	D	E
Severity of Consequence	1	Low Risk				
	2					
	3					
	4		Moderate Risk			

Severity of Consequence			
Severity Level	Description		
	People	Environment	Asset
1	Slight injury or health effect	Slight effect	Slight damage
2	Minor/ reportable injury or health effect	Minor effect	Minor damage
3	Moderate/ lost time injury of health effect	Moderate effect	Moderate damage
4	Major injury or health effect/ Single fatality	Major effect	Major damage
5	Multiple fatalities	Massive effect	Massive damage

Likelihood of Occurrence	
A	Never heard of it in the industry
B	Heard of it in the industry
C	Happened more than once per year in the industry
D	Happened more than once per year in the organization/ group
E	Happened more than once per year in the location

2526

4. LIST OF NODES & DOCUMENTS

This HIRA study covers the Copper Refinery Facility of Adani Enterprises Limited at Mundra.

Considering the details of the various units and storage systems, the following Nodes were taken up for the HIRA study of the worst case scenarios.

Node No.	Node Description
1.	Copper smelter plant including converter and anode furnace
2.	Sulphuric acid plant & storage
3.	LPG storage bullets

Derailed HIRA work sheets for the above plants/ units are provided at Attachment-I.

The wort case scenarios emerging from the HIRA study are described below.

Copper Smelter Plant

Worst Case Scenarios:

1. Spill of Molten Metal
   Large quantity of molten copper and slag are contained in the process equipment and ladle used for transfer.
   Spillage of molten metal may cause damage as follows:
   - Serious burn injury to personnel in the area
   - Steam explosion if the molten metal comes into contact with water, which may cause local damage and splatter of molten metal.

   The damage is expected to be limited.

   The following safeguards are provided:
   - Refractory lining for the smelter process equipment
   - Interlocks with limit switches to prevent excess tilting of equipment holding molten metal
   - Periodic inspection and testing of ladles, EOT cranes and other lifting equipment
   - Good housekeeping to prevent water accumulation in the smelter area

2. Release of sulphur dioxide (SO2) gas from smelter/ converter.
   SO_2 gas evolved during smelting on copper sulphide ore is evacuated by SO_2 gas blower in sulphuric acid plant. Thus the smelter is always under negative pressure to prevent release of SO_2 gas in the work area.

   In case the SO_2 gas blower stops on power failure, the SO_2 gas from smelter will escape into the surrounding work area resulting in toxic gas exposure of plant personnel.

   The following safeguards are provided:
   - Safety instrument interlock to stop the smelter unit automatically in the event of stoppage of SO_2 gas blowers or excess gas pressure in smelter. Being a gas at

atmospheric pressure, the hold up inventory of SO_2 in the system is limited in quantity.

- Automatic starting of Bypass fan installed after electrostatic precipitator (ESP) to evacuate the SO_2 gas from the system and divert it to flue gas desulphurisation (FGD) unit for safe disposal.

Sulphuric Acid Plant & Storage

There are 6 tanks for storage of concentrated Sulphuric Acid with a capacity of 5,500 M^3 each for Plant #1 and Plant #2.

Worst Case Scenarios:

1. Spill of Sulphuric Acid from Storage Tanks
   Considering the large inventory of sulphuric acid in storage tanks, spillage of s acid may cause damage as follows:
   - Serious acid burn injury to personnel in the vicinity
   - Contamination of soil and surface/ sub-soil water
   - Damage of concrete on prolonged contact.

   The following safeguards are provided:
   - RCC dyke containment with internal acid-resistant tile lining and sump pump for transfer of collected acid
   - Tank overfill protection with multiple level instruments of high reliability
   - Adequate free space in each tank to facilitate emergency transfer from the tank under distress
   - Periodic inspection and maintenance of equipment & piping in acid service

2. Earthquake event
   In the event of an earthquake, there is potential for damage of tank and dyke structures which may result in release of sulphuric acid and cause the following damages.
   - Serious acid burn injury to personnel in the vicinity
   - Contamination of soil and surface/ sub-soil water
   - Damage of concrete on prolonged contact.

   The following safeguards are provided:
   - RCC dyke containment with internal acid-resistant tile lining and sump pump for transfer of collected acid
   - The acid storage tanks, their foundations and RCC dyke structures shall be designed for seismic zone – V representing the highest seismic activity.
   - Sizing of foundations and dyke (length, width & height) will ensure adequate space inside the dyke to prevent spillage of acid outside.

There are 4 tanks of the Phosphoric Acid with a capacity of about 5,500 m^3 each and 4 clarifier with a capacity of about 1800 m^3 each for plant 1 and plant 2. and 4. Tanks and clarifier will be made of carbon steel with natural Rubber lining for the shell, carbon steel material of construction with additionally carbon brick lining at the bottom of the tank as well as 1 meter height along the circumference. The hazards and safeguards are similar to those mentioned for sulphuric acid storage tanks.

LPG Storage

There are 2 Nos. of above-ground horizontal cylindrical vessels (bullets) for storage of LPG.

Worst Case Scenarios:

1. LPG leak from storage tanks or associated piping resulting in jet fir, pool fire or vapour cloud explosion
2. Engulfment of above-ground LPG bullet in jet fire or pool fire resulting from leakage of LPG or spillage of fuel oil or HSD from tanks located in the nearby area leading to rupture of the LPG bullet and BLEVE/ fire ball.

The damage distances for the worst case scenario of catastrophic failure of LPG bullet estimated using DNV Phast software are as follows.

Worst Case Scenario: Catastrophic Failure of LPG Bullet		
Damage Effect	Parameter	Damage Distance (metres)
Vapour Cloud Explosion Overpressure9	0.02 barg (0.3 psig)	470
	0.07 barg (1 psig)	290
	0.2 barg (3 psig)	Not reached
Fire Ball Thermal Radiation Intensity	4 kW/m^2	380
	12.5 kW/m^2	190
	37.5 kW/m^2	Not reached

It is seen that the effect distances for light injury/ damage may extend outside the plant boundary.

The following safeguards are provided:

- Dyke containment is provided for FO and HSD tanks to prevent oil spreading to LPG bullet area.
- Water spray system is provided for the LPG bullets to prevent overheating of the shells exposed to external fire, thus preventing failure of the vessel.

5. RECOMMENDATIONS

The recommendations emerging from this HIRA study of the Worst Case Scenarios at Mundra Copper Refinery Facility of Adani Enterprises Limited are listed below.

Copper Smelter & Related Units

1. Ensure installation of LPG header and connecting pipes away from possible dropped object and impact by crane.
2. SO_2 gas piping should be covered under the condition monitoring system (NDT).
3. Provide redundancy for safety critical limit switches for tilting of equipment containing molten metal and other such service.
4. Provide emergency power supply to the Bypass fan installed after electrostatic precipitator (ESP) so that it is available when SO_2 gas blower stops on main power failure.

Sulphuric Acid Plant & Storage

1. Keep flange joints in sulphuric acid piping to the minimum required

   Provide flange guards for flange joints in sulphuric acid piping.
2. Provide overfill protection for acid storage tanks with independent level transmitters, one for high level alarm and another to close shut-off valve in tank inlet.

LPG Storage

1. Provide spiral wound metallic gasket or ring joint in LPG service as per OISD standard 144.
2. The flange joint in liquid outlet pipe should be located 3 m away from shadow of the bullet.
3. Provide remote operated shut off valve in LPG liquid outlet line from bullet.
4. Provide emergency power supply for the pump supplying water for the spray system around LPG bullets.

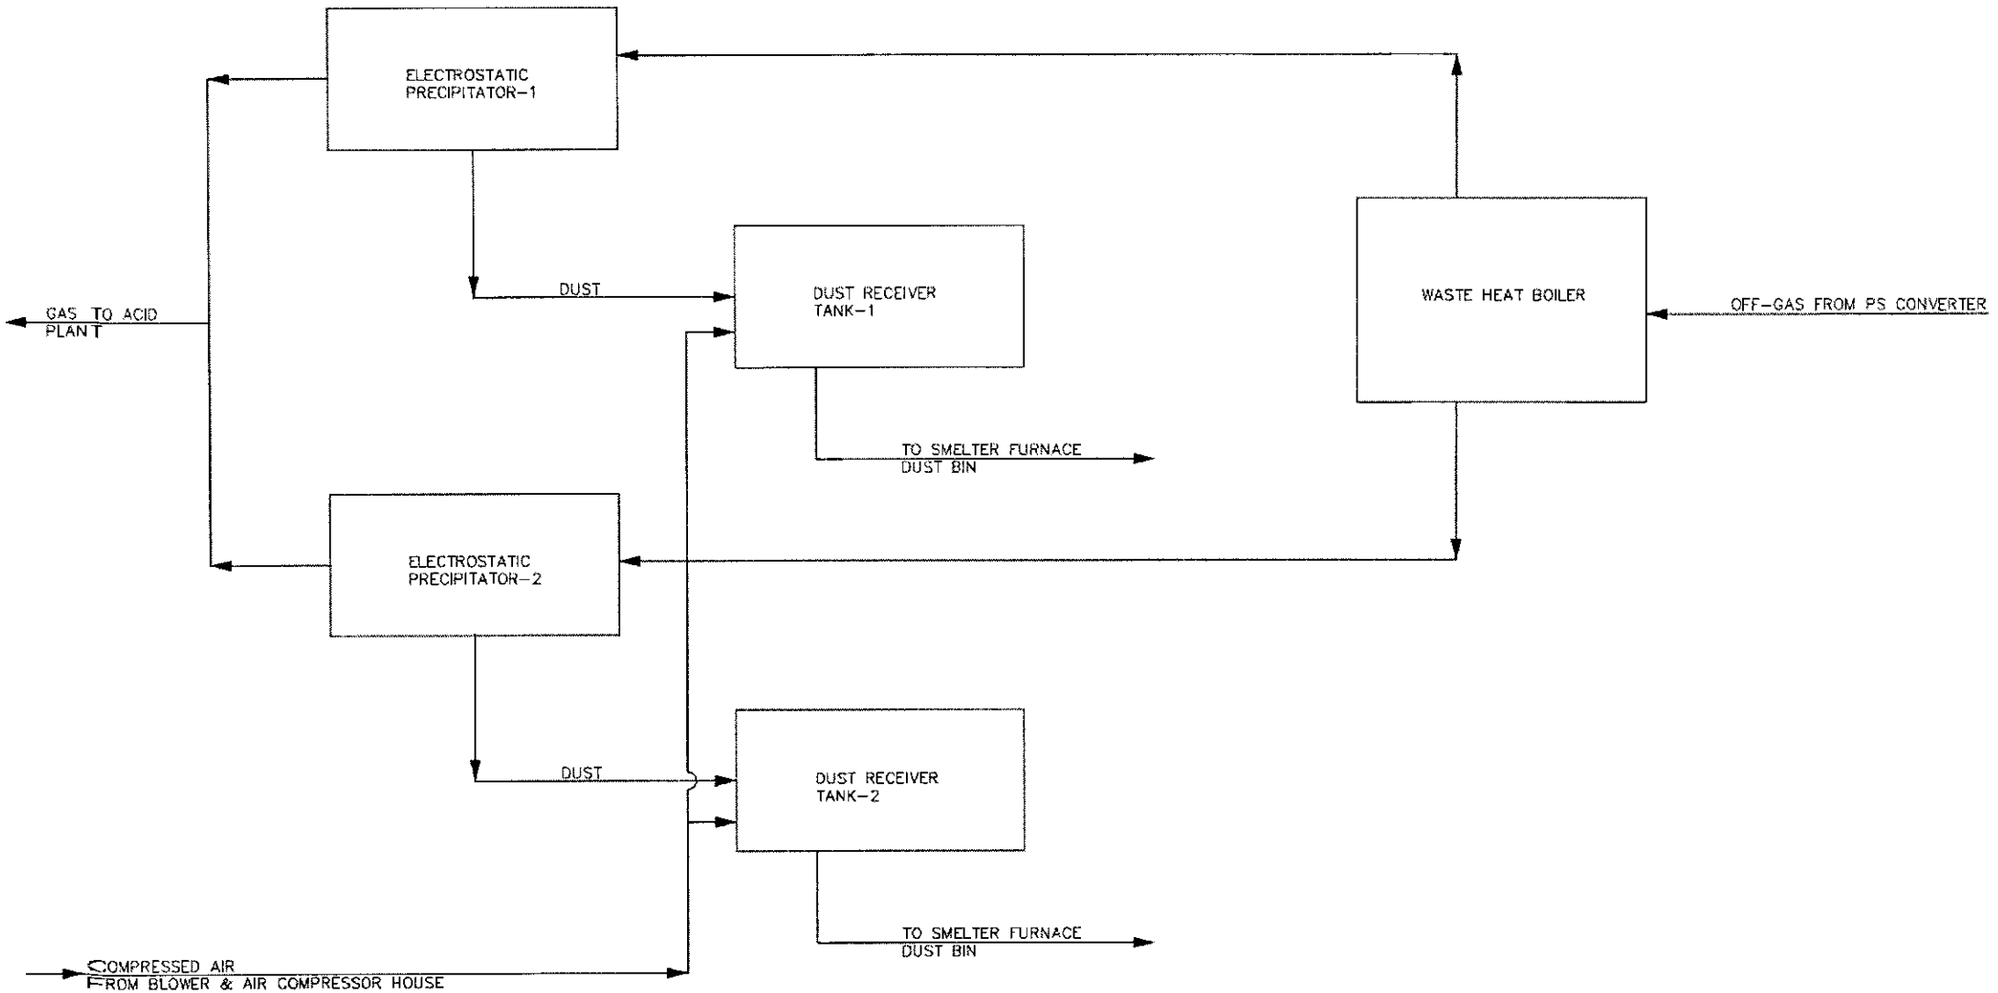
---x---

2530

EAC OBSERVATION NO.-25

EAC OBSERVATION:

Management of white ash shall be spelled out.



REPLY:

White Ash (Dust) Management:

High temperature dust-laden gas ~1200^{0}C from Peirce Smith Converter (PSC) goes to the waste heat boiler to recover waste heat and produce steam and cool itself down to about 360^{0}C; while allowing much of the dust entrained in the gas to settle down at the same time; the dust-laden gas from all waste heat boilers reports in the balloon gas duct before it goes to the dust chamber for precipitation and then the ESP for dust removal. Dust-removed gas is sent by high temperature exhaust fan to the Sulphuric Acid Plant. The dust captured in the ESP is also called as white dust. This dust contains copper along-with impurities. Dust captured in the PSC ESP is delivered by chain conveyor to the white dust bin from which it is sent to smelting furnace dust bin to get blended with the feed concentrate mix by pneumatic conveying system.

EAC OBSERVATION:

The involvement of geological expert shall be provided.

REPLY:

Mr. J Rajendra Prasad, Functional Area Expert (FAE) is QCI- NABET empanelled consultant.

EAC OBSERVATION:

The compliance of specific conditions of the Environmental Clearance of the SEZ shall be provided.

REPLY:

A copy of the Environmental Clearance of Adani Ports & SEZ Limited (APSEZ) is attached as **Annexure-28(a)** and Certified EC Compliance of APSEZ is also attached as **Annexure-28(b)** for ready reference.

Half yearly Compliance report of Environment Clearance under CRZ notification for the period October– 2018 to March– 2019 for "Port expansion project including dry/break bulk cargo container terminal, railway link and related ancillary and back-up facilities at Mundra Port, Dist. Kutch in Gujarat by M/s. Adani Ports & SEZ Limited has been submitted to Ministry of Environment, Forest and Climate Change, Regional Office (WZ), Bhopal dated 23.11.2018 and the same is attached as **Annexure-28(c).**

ANNEXURE-28(a)

354.0

F. No. 10-138/2008-IA.III
Government of India
Ministry of Environment & Forests

Paryavaran Bhawan,
CGO Complex, Lodhi Road,
New Delhi - 110 003.

Dated: July 15, 2014

To
M/s Adani Port and SEZ Ltd
Adani House, Near Mithakhali Six Roads,
Navarangpura, Ahmedabad,
Gujarat- 380 009.

Subject: EC for proposed Multi- Product SEZ and CRZ clearance for Desalination, sea water intake, outfall facility and pipeline, at Mundra by M/s Adani Port and SEZ Ltd. – Reg.

This has reference to letter No. ENV-10-2010-1601-E dated 27.03.2012 of the Director (Environment) & Additional Secretary, Govt. of Gujarat and your subsequent letters dated 10.05.2012, 14.05.2012, 26.05.2012 and 29.04.2013 seeking prior Environmental and CRZ Clearance for the above project under the EIA Notification, 2006 and Coastal Regulation Zone Notification, 2011. The proposal has been appraised as per prescribed procedure in the light of provisions under the EIA Notification, 2006 and the Coastal Regulation Zone Notification, 2011 on the basis of the mandatory documents enclosed with the application viz., the Questionnaire, EIA, EMP, recommendations of the State Coastal Zone Management Authority and the additional clarifications furnished in response to the observations of the Expert Appraisal Committee constituted by the competent authority in its meetings held on 16th –17th April, 2012, 4th –5th June, 2012 and 9th -10th July, 2012.

2. It is, interalia, noted that the project involves development of multi product SEZ on a plot area of 18,000 ha. of which 6641.2784 ha. is presently notified under Special Economic Zone (SEZ). As per the proponent, the Multi product SEZ at Mundra comprising of various processing zones, non-processing zones, warehousing zones, Road Network (trunk as well as internal), Bridges or culverts over natural drains, Rail Network, IT-Telecommunication network, Electrical Network, Water supply, conservation & drainage Network, Effluent collection network, Desalination Plant with proposed intake & outfall locations, Common Effluent Treatment Plants & Sewage Treatment Plants, Natural Gas line network, Social Infrastructure, Existing Airstrip, Municipal Solid Waste Disposal site, utilities & supporting infrastructure etc. For the first phase of development total water requirement will be 150 MLD. Power requirement will be approx. 360 MW. Desalination plant of 150 MLD output capacity is proposed. 11 MLD water will be sourced through Narmada water pipeline. Two CETP each of capacity 50 MLD and 17 MLD as well as STP of 62 MLD is proposed. This will require 375 MLD of seawater intake and 241 MLD of treated waste water outfall into the sea. For final phase of development total water requirement will be 450 MLD and power requirement will be approx. 1000 MW.

3. A suitable seawater intake point has been identified on the eastern end of the approved East Port Basin at Latitude 22°48'30.76"N; Longitude 69°46'34.06"E where a depth of 6 m below CD would be available after the port development. As per modelling study the combined discharge of 241MLD which includes 16MLD from CETP and 225 MLD from desalination plant as RO reject is expected having 57.57ppt of salinity, 14.41 mg / l of BOD and 94.39 mg/l of COD. After careful consideration of many aspects a suitable outfall location is identified on the west of the Eastern basin at Latitude 22°46'44.04"N; Longitude 69°45'5.51"E taking advantage of the expected 7.5m below CD basin depth. The outfall pipe line length is approximately 5.7 km and diffuser designed to attain a minimum dilution of 40-50 times.

4. The Centre for Earth Science Studies demarcated HTL, LTL and CRZ area. As per the CESS report and GCZMA, out of 6641.2784 ha of SEZ area, 1473.39 ha area falls within CRZ area. No SEZ industrial activity is proposed in the CRZ area. Only the Desalination plant pipeline for intake and outfall is proposed in CRZ areas. The Gujarat SCZMA in their 14th meeting held on 27-02-2012 considered the proposal of intake, outfall facilities, Desalination plant and laying pipeline and recommended the same vide their letter no.ENV-10-2010-1601-E dated 27th March 2012. Gujarat Pollution Control Board has granted Consent to Establishment of Marine outfall (NOC) vide letter dated 10.11.2011. The length of the intake will be approximately 5 Kms. As the sea water intake demand is 15000m3/h, drawal by pipe system is suitable by incorporating a wet well structure at the location. The intake point proposed is within the proposed East Port basin with a depth of 6 m below CD. The projected quantity of water can be transported through a single pipe of 1.3 m dia with a flow velocity of 3 m/ s or with a 1.6 m pipe with flow velocity of 2m/s.

5. The Expert Appraisal Committee, after due consideration of the relevant documents submitted by the project proponent and additional clarifications furnished in response to its observations, have recommended for the grant of Environment and CRZ Clearance for the SEZ in an area of 8481.2784 ha. However, SEZ for 1840 ha has been approved in principle by Ministry of Commerce and Industries.

6. Hon'ble High Court of Gujarat in WP No. 21 of 2013 vide order dated 13.01.2014 has directed that the Ministry to take a decision of its own so far as the issue of grant of environmental clearance is concerned considering the position prevailing as on date and also the aspects which have been highlighted by us in this judgment, within a period of thirty days from the date of this judgment without fail. Further, vide order dated 27.01.2014 Hon'ble Supreme Court in SLP No. 1526 of 2014 which was filed against the Order of High Court by the Respondent-1 has passed order that in case, the MOEF is unable to complete the process within the time stipulated by the High Court, it will be open for them to approach this Court for extension of time. Accordingly, Ministry has filed a petition before the Hon'ble Supreme Court seeking extension of two months time.

7. It is noted from the Judgement dated 13.01.2014 of Hon'ble High Court of Gujarat in PIL 21 of 2013 the Hon'ble Court has construed the grant of lease to units prior to

3542

(viii) *"Consent for Establishment" for the SEZ shall be obtained from Gujarat Pollution Control Board under Air and Water Act and a copy shall be submitted to the Ministry before start of any construction work at the site.*

(ix) *PP shall get detailed bathymetry done for all the creeks and rivers within Port and SEZ areas along with mapping of co-ordinates, running length, HTL, CRZ boundary, mangrove areas including buffer zone through NCSCM / NIOT. PP shall also get prepared a detailed action plan for conservation and protection of creeks/ mangrove area etc through NCSCM / NIOT and submit the same to GCZMA for their examination and recommendation. GCZMA will submit its recommendations to MoEF for approval.*

(x) *PP shall demarcate the CRZ area on land with GPS coordinates in consultation with GCZMA/ the agency which has done the HTL/LTL demarcation for the area. There shall be no allotment of plot/s in CRZ area to industries. No industrial activity within CRZ area except the port and harbor & the foreshore facilities shall be allowed as committed*

(xi) *Till the approval of action plan for conservation and protection of creeks/ mangrove area, the CRZ area within SEZ shall be demarcated as "No Development Zone". PP shall not allow/ undertake any development in CRZ area of SEZ.*

(xii) *The implementation of action plan approved by the MoEF shall be monitored by the NCSCM/ NIOT. Compliance with action plan shall be submitted to GCZMA and to MoEF, RO. at Bhopal along with six monthly monitoring report.*

(xiii) *PP shall earmark separate budget for the implementation of the above action plan. The details of the expenditure shall be submitted to GCZMA and to MoEF, RO. at Bhopal along with six monthly monitoring report.*

(xiv) *All the industry in SEZ shall be connected through impervious drainage lines to the STP/ CETP for the discharge of their sewage or industrial effluent. There shall not be any discharge to creeks / rivers. PP shall be accountable for implementing this condition and necessary clause shall be incorporated in the MoU while allotting the plot to the individual industries*

(xv) *PP shall not carry out any river course modification.*

(xvi) *The individual industrial units shall obtain prior EC under EIA Notification, 2006 as applicable.*

(xvii) *Proponent shall identify 200 ha of land for mangrove plantation as per the condition laid by SEAC.*

(xviii) *50 meter buffer from the existing mangrove area should be provided for any developmental activity,*

obtaining EC by M/s APSEZL as violation of EIA, Notification, 2006. Therefore, according to the OMs dated 12.12.2012 and 27.06.2013, PP was addressed for Board Resolution and the State Government was addressed to take credible action against the PP for the violation. Direction under Section 5 of E(P)Act, 1986 was also issued to APSEZ not to take up and allow any further construction activity within SEZ till the grant of clearance.

8. Further, Hon'ble Supreme Court video order dated 02.05.2014 in SLP 1526 of 2013 had ordered for stay of Ministry's letter dated 3.04.2014 addressed to Government of Gujarat to initiate legal action for the violation, also directed that the Ministry to complete the process of EC within eight weeks.

9. M/s APSEZ Ltd. has stated that the Board resolved that since the matter is sub-judice before the Hon'ble Supreme Court of India, will fully abide by the out come of the decision of the Hon'ble Supreme Court.

10. In view of the above and to comply with the orders of Hon'ble Courts, Ministry hereby accords necessary Environment Clearance for proposed Multi- Product SEZ in an area of 6641.2784 ha and CRZ clearance for desalination, seawater intake, outfall facility and pipeline for as per the provisions of Environmental Impact Assessment Notification – 2006 and its subsequent amendments and Coastal Regulation Zone Notification, 2011, subject to strict compliance of the terms and conditions as follows:

11. PART A - SPECIFIC CONDITIONS

(i) PP shall abide by the final order/decision of Hon'ble Supreme Court in SLP (Civil) no. 1526/2014 and connected matters.

(ii) Properly conserve the creeks, river and the mangroves area in the area.

(iii) Ensure that mouths of all the creeks are kept open to ensure flushing of the creeks.

(iv) Bring the creeks to the condition as was seen in the satellite map of 2005 which will be a "reference" satellite map and a copy of which shall be sent to you separately.

(v) Submit once in a year latest satellite map which can be compared with the reference satellite map of 2005 to ensure that no modification in the creeks, rivers, mangroves and mouth of creeks have taken place.

(vi) Any direction issued by the MoEF with respect to the report submitted by Ms Sunita Narain Committee shall be complied with by the Proponent as applicable.

(vii) At its cost get Inspection study done once in a year by the organizations like NEERI or any organization approved by this Ministry to - (i) ensure compliance of all the EC conditions (ii) development of SEZ meeting of the environment norms, and (iii) advise any mid-term correction that can be introduced depending on the recommendation of the independent Third Party.

2564

(xix) Proponent shell develop the green belt with 3 layers of canopy all along the periphery.

(xx) All the recommendation of the EMP shall be complied with in letter and spirit. All the mitigation measures submitted in the EIA report shall be prepared in a matrix format and the compliance for each mitigation plan shall be submitted to MoEF along with half yearly compliance report to MoEF-RO.

(xxi) There shall be no disturbance to the sand dunes. The pipelines shall be laid using advanced method viz. Horizontal Directional Drilling (HDD) so as to avoid disturbance to the sand dunes/ creeks/ mangroves.

PART – B. GENERAL CONDITIONS

Construction Phase.

(i) Provision shall be made for the housing of construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, safe drinking water, medical health care, crèche etc. The housing may be in the form of temporary structures to be removed after the completion of the project.

(ii) A First Aid Room will be provided in the project both during construction and operation of the project.

(iii) All the topsoil excavated during construction activities should be stored for use in horticulture/landscape development within the project site.

(iv) Disposal of muck during construction phase should not create any adverse effect on the neighbouring communities and be disposed, taking the necessary precautions for general safety and health aspects of people, only in approved sites with the approval of competent authority.

(v) Soil and ground water samples will be tested to ascertain that there is no threat to ground water quality by leaching of heavy metals and other toxic contaminants.

(vi) Construction spoils, including bituminous material and other hazardous materials, must not be allowed to contaminate watercourses and the dump sites for such material must be secured so that they should not leach into the ground water.

(vii) Any hazardous waste generated during construction phase should be disposed off as per applicable rules and norms with necessary approvals of the Gujarat Pollution Control Board.

(viii) The diesel generator sets to be used during construction phase should be low sulphur diesel type and should conform to Environment (Protection) Rules prescribed for air and noise emission standards.

(ix) *The diesel required for operating DG sets shall be stored in underground tanks and if required, clearance from Chief Controller of Explosives shall be taken.*

(x) *Vehicles hired for bringing construction material to the site should be in good condition and should have a pollution check certificate and should conform to applicable air and noise emission standards and should be operated only during non-peak hours.*

(xi) *Ambient noise levels should conform to residential standards both during day and night. Incremental pollution loads on the ambient air and noise quality should be closely monitored during construction phase. Adequate measures should be made to reduce ambient air and noise level during construction phase, so as to conform to the stipulated standards by CPCB/GPCB.*

(xii) *Fly ash should be used as building material in the construction as per the provisions of Fly Ash Notification of September, 1999 and amended as on 27th August, 2003. (The above condition is applicable only if the project site is located within 100 Kms of Thermal Power Stations).*

(xiii) *Ready mixed concrete must be used in building construction.*

(xiv) *Storm water control and its re-use should be regulated as per CGWB and BIS standards for various applications.*

(xv) *Water demand during construction should be reduced by use of pre-mixed concrete, curing agents and other referred best practices.*

(xvi) *Permission to draw ground water shall be obtained from the competent Authority prior to construction/operation of the project.*

(xvii) *Separation of grey and black water should be done by the use of dual plumbing line for separation of grey and black water.*

(xviii) *Fixtures for showers, toilet flushing and drinking should be of low flow either by use of aerators or pressure reducing devices or sensor based control.*

(xix) *Use of glass may be reduced by upto 40% to reduce the electricity consumption and load on air-conditioning. If necessary, use high quality double glass with special reflective coating in windows.*

(xx) *Roof should meet prescriptive requirements as per Energy Conservation Building Code by using appropriate thermal insulation material to fulfill requirements.*

(xxi) *Opaque wall should meet prescriptive requirement as per Energy Conservation Building Code which is proposed to be mandatory for all airconditioned spaces while it is aspirational for non-airconditioned spaces by use of appropriate thermal insulation material to fulfil these requirement.*

2546

(xxii) The approval of the competent authority shall be obtained for structural safety of the buildings due to earthquake, adequacy of fire fighting equipments, etc. as per National Building Code including protection measures from lightning etc.

(xxiii) Regular supervision of the above and other measures for monitoring should be in place all through the construction phase, so as to avoid disturbance to the surroundings.

(xxiv) Under the provisions of Environment (Protection) Act, 1986, legal action shall be initiated against the project proponent if it is found that construction of the project has been started without obtaining environmental clearance.

Operation Phase

(i) The PP while issuing the allotment letter to individual member units shall specifically mention the allowable maximum quantity of water usage and effluent generated by each member unit.

(ii) The PP shall establish an environmental monitoring cell with all the potential polluting units as members to review the environmental monitoring data and suggest improvements.

(iii) Treated affluent emanating from STP shall be recycled/reused to the maximum extent possible. Treatment of 100% grey water by decentralised treatment should be done. Discharge of unused treated affluent shall conform to the norms and standards of the Pollution Control Board. Necessary measures should be made to mitigate the odour problem from STP.

(iv) The solid waste generated should be properly collected and segregated. Wet garbage should be composted and dry / inert solid waste should be disposed off to the approved sites for land filling after recovering recyclable material.

(v) Diesel power generating sets proposed as source of back up power for elevators and common area illumination during operational phase should be of enclosed type and conform to rules made under the Environment (Protection) Act, 1986. The height of stack of DG sets should be equal to the height needed for the combined capacity of all proposed DG sets. Low sulphur diesel should be used. The location of the DG sets may be decided in consultation with the Gujarat Pollution Control Board.

(vi) Noise should be controlled to ensure that it does not exceed the prescribed standards. During night time the noise levels measured at the boundary of the building shall be restricted to the permissible levels to comply with the prevalent regulations.

(vii) Green belt of adequate width and density preferably with local species along the periphery of the plot shall be raised so as to provide protection against particulates and noise.

(viii) Weep holes in the compound walls shall be provided to ensure natural drainage of rain water in the catchment area during the monsoon period.

(ix) Rain water harvesting for roof run- off and surface run- off, as plan submitted should be implemented.

(x) The ground water level and its quality should be monitored regularly in consultation with Central Ground Water Authority.

(xi) Traffic congestion near the entry and exit points from the roads adjoining the proposed project site must be avoided. Parking should be fully internalized and no public space should be utilized.

(xii) A Report on the energy conservation measures conforming to energy conservation norms finalised by Bureau of Energy Efficiency should be prepared incorporating details about building materials & technology, R & D Factors etc and submitted to the Ministry along with six monthly monitoring report.

(xiii) Energy conservation measures like installation of CFLs/TFLs for the lighting the areas outside the building should be an integral part of the project design and should be in place before project commissioning. Used CFLs and TFLs should be properly collected and disposed off/sent for recycling as per the prevailing guidelines/ rules of the regulatory authority to avoid mercury contamination. Solar panels may be used to the extent possible.

(xiv) Adequate measures should be taken to prevent odour problems from solid waste processing plant and STP.

(xv) The buildings should have adequate distance between them to allow movement of fresh air and passage of natural light, air and ventilation.

(xvi) The environmental safeguards contained in the EIA Report should be implemented in letter and spirit.

(xvii) Adequate drinking water facility be provided.

(xviii) Incremental pollution loads on the ambient air quality, noise and water quality should be periodically monitored after commissioning of the project.

(xix) Application of solar energy should be incorporated for illumination of common areas, lighting for gardens and street lighting in addition to provision for solar water heating. A hybrid system or fully solar system for portion of the apartments should be provided.

(xx) Ozone depleting substance (Regulation & Control) Rules should be followed while designing the air conditioning system of the project.

12. Officials from the Regional Office of MOEF, Bhopal who would be monitoring the implementation of environmental safeguards should be given full cooperation, facilities and documents / data by the project proponents during their inspection. A complete set of all the

2548

documents submitted to MoEF should be forwarded to the CCF, Regional office of MOEF, Bhopal

13. In the case of any change(s) in the scope of the project, the project would require a fresh appraisal by this Ministry.

14. The Ministry reserves the right to add additional safeguard measures subsequently, if found necessary, and to take action including revoking of the environment clearance under the provisions of the Environmental (Protection) Act, 1986, to ensure effective implementation of the suggested safeguard measures in a time bound and satisfactory manner.

15. All other statutory clearances such as the approvals for storage of diesel from Chief Controller of Explosives, Fire Department, Civil Aviation Department, Forest Conservation Act, 1980 and Wildlife (Protection) Act, 1972 etc. shall be obtained, as applicable by project proponents from the respective competent authorities.

16. These stipulations would be enforced among others under the provisions of Water (Prevention and Control of Pollution) Act, 1974, the Air (Prevention and control of Pollution) act 1981, the Environment (Protection) Act, 1986, the Public Liability (Insurance) Act, 1991 and EIA Notification, 2006.

17. The project proponent should advertise in at least two local Newspapers widely circulated in the region, one of which shall be in the vernacular language informing that the project has been accorded Clearance and copies of clearance letters are available with the Gujarat Pollution Control Board and may also be seen on the website of the Ministry of Environment and Forests at http://www.envfor.nic.in. The advertisement should be made within 10 days from the date of receipt of the Clearance letter and a copy of the same should be forwarded to the Regional office of this Ministry at Bhopal.

18. Clearance is subject to final order of the Hon'ble Supreme Court of India in the matter of Goa Foundation Vs. Union of India in Writ Petition (Civil) No.460 of 2004 as may be applicable to this project.

19. "Any appeal against this clearance shall lie with the National Green Tribunal, if preferred, within a period of 30 days as prescribed under Section 16 of the National Green Tribunal Act, 2010".

20. A copy of the clearance letter shall be sent by the proponent to concerned Panchayat, Zilla Parisad/Municipal Corporation, Urban Local Body and the Local NGO, if any, from whom suggestions/ representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the company by the proponent.

21. The proponent shall upload the status of compliance of the stipulated EC conditions, including results of monitored data on their website and shall update the same periodically. It shall simultaneously be sent to the Regional Office of MoEF, the respective Zonal Office of CPCB and the SPCB.

22. The project proponent shall also submit six monthly reports on the status of compliance of the stipulated EC conditions including results of monitored data (both in hard copies as well as by e-mail) to the respective Regional Office of MoEF, the respective Zonal Office of CPCB and the SPCB.

23. The environmental statement for each financial year ending 31st March in Form-V as is mandated to be submitted by the project proponent to the concerned State Pollution Control Board as prescribed under the Environment (Protection) Rules, 1986, as amended subsequently, shall also be put on the website of the company along with the status of compliance of EC conditions and shall also be sent to the respective Regional Offices of MoEF by e-mail.

Monitoring the Implementation of Environmental Safeguards
Ministry of Environment, Forest & Climate Change
Western Region, Regional Office, Bhopal
MONITORING REPORT
PART – I
DATA SHEET

1.	Project type: River- valley/ Mining/ Industry / Thermal / Nuclear/Other (specify)	:	Other (CRZ Port & Harbour)
2.	Name of the project	:	Waterfront Development Project at Mundra, District Kutchh, Gujarat
3.	Clearance letter (s)/OM No. & date	:	F. No. 10-47/2008-IA-III dated 12.01.2009 F. No. 10-47/2008-IA-III dated 19.01.2009 F. No. 10-47/2008-IA-III dated 18.09.2015 F. No. 10-47/2008-IA-III dated 07.10.2015
4.	Location: a) District (s) b) State (s) c) Latitude/Longitude	: : : :	 Kutchh Gujarat 69°41'37.58" E 22°44'15.95 N (South port) 69°34'11.88" E 22°45'20.12 N (West port)
5.	Address for correspondence a. Address of the Concerned Project Chief Engineer (with Pin Code & telephone/ telex/ fax numbers) b. Address of the Executive Project Engineer / Manager (with Pin Code & telephone/ telex/ fax numbers).	 : :	 Chief Operating Officer, Mundra and Tuna port, Adani Ports and SEZ Ltd., Adani House, Navinal Island, Mundra Kutchh, Gujarat Pin – 370 421, Tel: 02838 – 255 000 Head, Environment dept., APSEZL, Infrastructure House, Nr. Adani House, Nr. Mithakhali circle, Navrangpura, Ahmedabad, Gujarat Pin – 380 009, Tel: 079 – 2555 5362
6.	Salient features a. Of the project	:	**Salient Feature of the Project are as under** 1. West Port 2. South Port 3. East Port 4. North Port 5. Two Shipyards (near West port and East port) 6. Sea water Intake channel 7. Desalination plant 8. Combined outfall for safe disposal of power plant and desalination reject 9. Dredging and Reclamation 10. Backup facilities like rail sidings, rail and truck loading facilities, open paved areas and associated buildings, utilities and other amenities

2553

	b. Of the Environment Management Plan	:	**Salient Feature of the EMP are as under** 1. Strategy should be to prevent spillages of petroleum through proper design and dependable construction materials and components. 2. The basin structures, jetty structures, bunds, breakwaters, intake water channel, navigational channels, should be designed and oriented in a manner that it does not restrict the prevailing tidal ingress in the creek and mangroves habitats in the vicinity to ensure their health. 3. It should be insured that reclamation, dredging, widening and slope stabilization measures do not significantly alter the stabilized erosional-accretion regime of the intricate creek system as well as the free flow of tidal water, to protect the mangroves 4. Temporary colonies of workforce should be established sufficiently away from the HTL and proper sanitation including toilets and bathrooms should be provided to the inhabitants to prevent abuse of the intertidal area. 5. Wastewater such as generated during cleaning of jetties, floor washings, domestic use etc should be collected in a settling pond and released to marine environment only after ascertaining that it is free from oil and SS. 6. Corrective measures such as water sprinkling should be practiced if the SS increases beyond permissible limits. 7. It should be ensured that the effluent released into the Gulf meets the prescribed GPCB criteria at all times.
7.	Breakup of the project area a. Submergence area: forest & non-Forest b. Others	: :	No forest land involved. Reclaimed land - 2193 ha.
8.	Breakup of the project affected population with enumeration of those losing houses/dwelling units only agricultural land only, both dwelling units & agricultural land & landless laborers/artisans. a) SC, ST, Adivasi b) Others (please include weather these figures are based on any scientific and systematic survey carried out. Give details and year of survey)	:	Nil
9.	Financial details: a) Project cost as originally planned and subsequent revised estimates and the year of price reference b) Allocation made for EMP with item wise and year wise break-up c) Benefic Cost ratio/Internal Rate of Return and the year of assessment (if applicable) d) Whether (c) includes the cost of Environment Management as shown in the above	: : : :	a) Rs. 5000 crores (block estimate) b) Please Refer Annexure – 1 c) -- d) Yes

2353

	e) Actual expenditure incurred on project so far f) Actual expenditure incurred on EMP so far	: :	e) Rs. 12,947 crores Approx. (as on 30.09.2017) f) Please Refer Annexure – 1
10.	Forest land requirement a. The status of approval for diversion of forest land for non-forestry use b. The status of cleaning felling c. Comments on the viability & sustainability of compensatory afforestation programmer in the light of actual field experience so far	: : :	Forest land not involved Nil 200 ha mangrove afforestation is completed at Jakhau village, Kutchh and 50 ha gap filling is also completed during the year 2012 – 15. It may be noted that in totality, APSEZ has completed mangrove afforestation in over 2800 ha area to enhance the biodiversity of coastal stretches of Gujarat. Please Refer Annexure – 2 for further details.
11.	The status of clear felling in non-forest areas (Such as submergence area or reservoir, approach Roads.), if any with quantitative information required.	:	Not Applicable (No clearing/felling trees is involved in the project).
12.	Status of construction (Actual &/or planned) a. Date of commencement b. Date of completion	: : :	Construction activities as per the Environmental & CRZ clearance are ongoing. Please refer Annexure - 3 for the status of the same. January 2009 Ongoing
13.	Reason for the delay if the project is yet to start.	:	Not Applicable
14.	Dates of site visits a. The dates on which the project was monitored by the MoEF&CC, RO on previous occasions, if applicable b. Date of site visits for this monitoring report	: :	21- 23, Jan 2013 21 – 22, December, 2016 02 – 03, May, 2018
	Details of correspondence with project authorities for obtaining act on plans/ information on status of compliance to safeguards other than the routine letters for logistic support for site visits. (The first monitoring report may contain the details of all the letters issued so far, but the later reports may cover only the letter issued subsequently)		
	Date **Letter from RO**		**Date** **Letter from PA**
	10.05.2018: PAs have been directed to submit comprehensive compliance report vide letter dated 10.05.2018		14.05.2018 Comprehensive CR received vide letter dated 11.05.2018 received in MoEFCC, RO Bhopal on 14.05.2018

Cost of Environmental Protection Measures

Sr. No.	Activity	Cost incurred (INR in Lacs)			Budgeted Cost (INR in Lacs)
		2015 – 16	2016 – 17	2017 – 18	2017 – 18
1.	Environmental Study / Audit and Consultancy	45.45	36.78	9.0	21.00
2.	Legal & Statutory Expenses	3.30	4.76	5.07	16.00
3.	Environmental Monitoring Services	26.80	27.95	27.02	36.00
4.	Hazardous / Non Hazardous Waste Management & Disposal	34.56	12.52	65.62	90.84
5.	Environment Day Celebration	7.18	6.71	2.85	10.00
6.	Treatment and Disposal of Bio-Medical Waste	1.22	1.27	1.13	1.44
7.	Mangrove Plantation, Monitoring & Conservation	73.64	72.38	60.0	60.0
8.	Other Horticulture Expenses	434.72	555.00	547.0	547.0
9.	O&M of Sewage Treatment Plant and Effluent Treatment Plant (including STP, ETP of Port & SEZ & Common Effluent Treatment Plant)	18.18	61.50	70.02	69.35
10.	Expenditure of Environment Dept. (Apart from above head)	135.90	131.83	102.15	104.91
	Total	837.73	910.70	889.86	956.54

Further year wise breakup of the cost is mentioned in table below:

Year	Environment	Horticulture	Total
2013-2014	250.00	433.75	683.75
2014-2015	462.87	380.27	843.14
2015-2016	346.23	434.72	780.95
2016-2017	355.70	555.00	910.7
2017-2018	342.86	547.00	889.86
Total	1757.66	2350.74	4108.4

3557

	b. Of the Environment Management Plan	:	**Salient Feature of the EMP are as under** • Water sprinkling in vulnerable areas • Enforce proper maintenance of vehicles and construction equipment. Allowing only PUC approved vehicles in the site. • Enforce usage of covered trucks for transport of construction material. • Enforce use of earmuffs / earplugs to workers in high noise level areas. • Good quality non-corrosive type pipeline should be used. Regular checking of the pipelines for early detection of any possible leakage and damage. Regular ground water monitoring should be done within the SEZ. • The waste should be transported in covered trucks. Vermi-composting is highly recommended for treatment and disposal of biodegradable and kitchen wastes. • Other domestic solid waste (garbage) shall be disposed through MSW facility or as per prevailing norms.
7.	Breakup of the project area a, Submergence area: forest & non-Forest b; Others	: :	No forest land involved.
8.	Breakup of the project affected population with enumeration of those losing houses/dwelling units only agricultural land only, both dwelling units & agricultural land & landless laborers/artisans. a) SC, ST, Adivasi b) Others (please include weather these figures are based on any scientific and systematic survey carried out. Give details and year of survey)	:	Nil
9.	Financial details: a) Project cost as originally planned and subsequent revised estimates and the year of price reference b) Allocation made for EMP with item wise and year wise break-up c) Benefic Cost ratio/Internal Rate of Return and the year of assessment (if applicable) d) Whether (c) includes the cost of Environment Management as shown in the above e) Actual expenditure incurred on project so far f) Actual expenditure incurred on EMP so far	: : : : : :	a) Rs. 9000 crores (block estimate) b) Please Refer Annexure – I c) Details not mentioned by the PP d) Yes e) Rs. 806 crores Approx. (as on 30.09.2017) f) Please Refer Annexure – I
10.	Forest land requirement a. The status of approval for diversion of forest land for non-forestry use b. The status of cleaning felling c. Comments on the viability & sustainability of compensatory afforestation programmer in the light of actual field experience so far	: : :	Forest land not involved Nil 100 Ha. Mangrove plantation is carried out by SAVE at Tala Tadav village of Khambhat Taluka of Anand district. 100 Ha. Mangrove plantation is being carried out

PART - II & III

DESCRIPTIVE REPORT ON STATUS OF COMPLIANCE TO CONDITIONS OF ENVIRONMENTAL CLEARANCE AND ENVIRONMENTAL MANAGEMENT

i. Compliance Status of Environmental Clearance for the period October 2017 to March 2018 issued by MoEF&CC, New Delhi vide letter No.: 10-47/2008-IA-III dated 12.01.2009

(Details of the project: Environmental and CRZ clearance granted to the Waterfront Development Project (WFDP) at Mundra, Kutch being developed by Adani Ports and Special Economic Zone Ltd. (APSEZL) (Formerly, M/s. Mudra Port and SEZ Ltd.))

As per the information furnished by the PP, the details of Activities/facilities approved, major components completed and proposed future activities as per Environment and CRZ Clearance are as below:

Description (Type of Facility or Berth*)	Approved Berths or Length as per Environmental & CRZ Clearance	So far Developed and In Operation	To be Developed as per Environmental & CRZ Clearance
	Nos. of Berths or Length	Nos. of Berths	Nos. of Berths/Facilities
Multipurpose	4 (550 m + 2 Berths)	4	-
Container	16 (2680 m + 2000 m)	7 (2110 m)	9
Ro-Ro	2	-	1
Coal	6	4	2
Dry-Bulk Cargo	5	-	5
Liquid/POL	9*	-	9
LNG	2	Progressive towards commissioning (being developed by GSPC LNG Limited as per NOC given by APSEZ)	-
Light & Heavy Engineering	2	-	2
Port Craft	1 (330 m)	-	1
Shipyard	2	-	2

* Liquefied Petroleum Gas (LPG) Terminal is being developed under Waterfront Development Project and will be handled at existing Multipurpose Terminal. LPG terminal is being developed by M/s. Mundra LPG Terminal Pvt. Ltd., which is 100% subsidiary of APSEZ.

In addition to above berths or facilities, following components were also approved.

1. Dredging Quantity: 210 Mm^3. Overall dredging to the tune of 123 Mm^3 is completed till date
2. Back-up area, back-up facilities like railway line, rail slidings, rail truck loading, open paved areas, associated buildings, utilities, amenities, etc. and connectivity to rail and road corridor for each port

were approved and majority of them are constructed and in operation. Remaining facilities will be developed based on future requirements.

3. Seawater intake channel and outfall channel for power plants, desalination plants (47 MLD is operational out of 300 MLD) and other industrial requirements approved and is already in operation.

Further, the point-wise compliance status of Environmental / CRZ Clearance granted to the Waterfront Development Project (WFDP) at Mundra, Kutch being developed by Adani Ports and Special Economic Zone Ltd. (APSEZL) is furnished below:

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
Specific Conditions		
i	No existing mangroves shall be destroyed during construction / operation of the Project.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Project is being developed as per permissions granted. Conservation of mangroves: • In and around APSEZ, approx. 1800 ha. mangrove area was identified by NIO in an EIA report prepared the year 1998. • Out of this 1800 ha area, 1254 ha area was further demarcated as potential mangrove conservation by NIO in the year 2008 (as part of the EIA report of WFDP). • It may be noted that the entire area of 1254 ha is not covered with mangroves. • Entire area is being conserved and there is no disturbance to the mangroves in this area. Measures such as restricted entry and regular surveillance have resulted in overall growth of mangroves within this area. • As per MoEF&CC directive, APSEZ entrusted NCSCM to demarcate mangroves in and around APSEZ area. As per their study, presently, mangrove cover in and around APSEZ is over 2340 ha. The analysis of the comparison between 2011 and 2016-17 has shown an overall growth of 246 ha. Please refer **Annexure – 1 in the main report** for a copy of the report. **In view of the information furnished by the PP supported by the study report of NCSCM, the stipulated condition is considered complied.** **COMPLIED**
ii	There shall be no filling up of the creek and reclamation of the creeks.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Conservation of creeks: • The prominent creek system (main creeks and small branches of creeks) in and around APSEZ are: (1) Kotdi (2) Baradimata (3) Navinal (4) Bocha (5) Mundra (Oldest port (Juna Bandar) leading to Bhukhi river).

2581

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
		• All above creek mouths are open allowing free flow of water in to the creeks and surrounding areas and there is no filling or reclamation of any creek area. • This aspect is also confirmed from the recent study of NCSCM **(Annexure – 1 in the main report)** which highlights the bathymetry data of the entire coast around APSEZ. • From the bathymetry data it can be concluded that there are sufficient depths at the creek mouths and all creek mouths are open allowing flushing of water. • APSEZ has so far constructed 19 culverts having total length of approx. 1100 m with total cost of INR 20 Crores. Three RCC Bridges have also been constructed over Kotdi creek with total length of 230 m and cost of INR 10 Crores. Photographs of the same are attached as **Annexure – 2 in the main report**. • From the APSEZ operations, there is no discharge of any sewage or effluent to the water streams **In view of the information furnished by the PP supported by the study report of NCSCM showing the bathymetry data, the stipulated condition is considered complied.** **COMPLIED**
iii	The Project proponent shall comply with all the Orders/directions of the Honorable High Court of Gujarat and Supreme Court in the matter.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. There are two ongoing matters pending (one pending at High Court and other pending at Supreme Court). Details regarding both the matters including their status are mentioned below. 1) Kheti Vikas Seva Trust (an association of 200 villagers) has filed a writ petition dated 24th January 2011 before the Gujarat HC against the state of Gujarat, our Company, Adani Power Limited and others alleging that the power plant set up by Adani Power Limited, on the land allotted to our Company for the setting up of a special economic zone, is in violation of the necessary requirements for setting up such plants, including environmental laws. The writ petition has been dismissed by the Gujarat High Court on 17th April 2015. The Hon'ble Supreme Court of India on 18.3.2016 dismissed the appeal against the said order dated 17th April, 2015 of the Gujarat High Court. However, an application filed by the petitioner alleging non-compliance of an order of the Gujarat HC dated 12th July 2011 prohibiting the cutting of mangroves and other forests during the pendency of the petition without permission of the state forest and environment department in relation to the writ petition is still pending. 2) Pravinsingh Bhurabha Chauhan filed a public interest litigation by way of a writ petition before the High Court of Gujarat alleging that a certain plot of land known as 'Mor Dhuva' was not allotted to our Company and accordingly that our Company should be restrained from carrying out any activity, including ship recycling activities, without any prior

2562

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
		permission or authorization in and around sand dunes including 'Mor Dhuva' in Tunda and Vandh villages, Kutch, Gujarat. In view of the affidavits filed by MOEF, and Govt of Gujarat the High Court dismissed the petition on 18.2.2015. The petitioner filed a special leave to appeal before the Supreme Court of India, challenging the order dated 18.2.2015 of Gujarat High Court and the same is pending. As a law abiding company, we have been regularly complying with all the directions/orders issued by Hon'ble Courts from time to time. Similarly, as both the matters are still pending in the Hon'ble Courts, we agree to comply with all the orders/directions, if any, issued by the Honorable High Court of Gujarat and Supreme Court at any later stages of the cases. **In view of the information furnished by the PP, the condition is considered as agreed to comply by the PP.** **AGREED TO COMPLY**
.iv	Adequate safety measures for the offshore structure and ship navigation shall be taken in view of the High Current in the area.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. The hydrodynamic study for the waterfront area has been carried out by HR Wallingford, a maritime design expert. As per the recommendations in their report, the following safety measures are implemented. 1. The alignment of the berth has been kept in line with the current flow in order to reduce the effect of current on vessels moored alongside. 2. The breasting dolphins have been designed in such a configuration so as to provide appropriate lead to the vessels mooring ropes. 3. The berth being in line with the current flow will facilitate Pilotage operation and provide better maneuverability of vessels. 4. The strength of the berth structure has been calculated to absorb the energy transferred to fenders while berthing of tanker vessels at the terminal. 5. Navigational buoys and lead lights marking the channel and clearing distance off the breakwater are installed. 6. The strength of the fenders at the berth and the SWL of the bollards / winches are sufficient to absorb the forces of vessels alongside keeping in mind the monsoon weather conditions. 7. Sufficient depths are maintained at all times to ensure 10% UKC at the time of berthing / un-berthing. 8. The capstans / winches / bollards are of adequate strength with respect to the vessels being handled. 9. The berth has been designed at an appropriate distance from the existing berths at MMPT-1 in order to safely allow berthing / un-berthing of vessels at MMPT-1 with vessels berthed at the South Port tanker terminal. 10. Berths have been planned close to the breakwater as there is a reduced

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
		strength of current along the coastline. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
v	The shore line changes in the area shall be monitored periodically and the report submitted every 6 months to Regional Office Bhopal.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. The shore line change aspect of the project area is monitored periodically and the report of the same is submitted every 6 months to Regional Office Bhopal. Please refer below details in this regard. Shoreline change study for the entire coast of Gujarat was carried out by Anna University, Chennai and same is published by MoEF&CC, Govt. of India in 2011. APSEZ has carried out CRZ mapping of development areas through MoEF&CC authorized agencies in June, 2011 (National Centre of Earth Science Studies) and January, 2013 (National Institute of Oceanography). Same are submitted to MoEF&CC as part of compliance. Shore line change aspect has been studied in detail as part of following two studies; • Bathymetry & Topography study, preparation of plan for protection of creeks/ mangrove area including buffer zone, mapping of co-ordinates, running length, HTL, CRZ boundary. • A Regional Impact Assessment study to identify impacts of all the existing as well as proposed project activities in Mundra region. As per the outcome of these studies, no erosion is observed on the coast of the project area. As part of the Regional Impact Assessment study, the possible changes in shoreline that may occur due to the proposed developments in 10 km area on either side of the waterfront development project have been predicted. It has been inferred from the modelling study that the shift in the shoreline will be less than 0.5 m/year, which reconfirms that the APSEZ facility would pose insignificant impact on the Mundra shoreline. Accretion is observed at South port and at West port due to approved reclamation activities. Based on the study outcome, it is recommended to map the coastal morphology (shoreline change) at least once in three years. The said recommendation will be implemented and the next shoreline change assessment will be carried out during 2020-21. Please refer **Annexure – A in the main report** (Compliance of MoEF&CC Order dated 18th Sep, 2015) for further details regarding the mentioned studies.

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
		The updated status on monitoring report on shoreline changes is being submitted to MoEF&CC, RO, Bhopal on a six monthly basis. **In view of the information furnished by the PP and the six-monthly reporting of shoreline changes in the compliance reports, the stipulated condition is considered complied.** **COMPLIED**
vi	The recommendations of the risk assessment shall be implemented; any change in the design of the project shall come before the committee for seeking necessary approval.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Risk Assessment was carried out at the time of preparation of the EIA report for the Liquid Berths and LNG terminal. However, it may be noted that liquid berths are not yet developed. Hence recommendations of Risk Assessment will be implemented once the liquid berths & pipelines are developed by APSEZ. The LNG terminal is being constructed by GSPC LNG Ltd. and a separate Environment and CRZ clearance is obtained by them. Please refer general condition no ix below for details regarding the same. LPG is proposed to be handled from the existing multipurpose terminal and storage tanks are being constructed in the back up area. A detailed risk assessment study as per MoEF&CC letter no. F. No. 10-47/2008-IA-III dated 31st May, 2016 is carried out by iFluids Engineering for handling as well as storage activities. Recommendations of the risk assessment are being implemented as part of the construction activity. Some of the recommendations are mentioned below. For a detailed list of the recommendations please refer **Annexure – 3 in the main report.** • Selection of the loading arms and commissioning checks to ensure proper operation of the PERC in the event of ESD actuation (maximum time shall not exceed more than 2 min for complete isolation, loading arm release and ship pumps stop in case of hydrocarbon leak) • All flanges shall be connected for bonding for electrical continuity • Kerb wall height shall be minimum 30 cm but shall not exceed 60 cm. • Leak detection systems based on pressure, temperature and flow • A suitable continuous back-up power supply shall be provided for the control system and operation of ROVs both at jetty end and tank end • Consider HAZOP and SIL study before commissioning the facility and concerns addressed • Ensure CCTV coverage of critical locations and remote monitoring is done continuously There are no other activities which attract requirement of Risk Assessment. **In view of the information furnished by the PP and the detailed compliance of recommendations mentioned in the Annexure-3 in the main report, the stipulated condition is considered as compliance in**

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
		progress. **COMPLIANCE IN PROGRESS**
vii	Mangrove plantation of 200 ha to be done in consultation with GEER / GEC of Forest Department, a detailed plan shall be submitted within six months from the date of receipt of this letter.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. APSEZ has consulted Gujarat Institute of Desert Ecology (GUIDE) as they are one of the authorized agencies of Dept. of Forest & Env., Govt. of Gujarat for carrying out mangrove afforestation. GUIDE has completed mangrove plantation in an area of 200 ha at Jakhau, Gujarat during the year 2012-13. Copy of the mangrove plantation completion certificate is attached as **Annexure – 5 in the main report.** Total expenditure for the said work was INR 40 lakh. It may be noted that to enhance the marine biodiversity, till date APSEZ has carried out mangrove afforestation in more than 2800 ha. area across the coast of Gujarat. Total expenditure for the same till date is INR 782 lakh. Please refer **Annexure – 6 in the main report** for green belt development and mangrove afforestation efforts done by APSEZ and the Master Plan of Greenbelt development at APSEZ. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
viii	It shall be ensured that during construction and post construction of the proposed jetty the movement of fishermen vessel of the local communities are not interfered with.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. During project proposal, APSEZ proposed to provide four (4) dedicated accesses at Juna Bandar, Luni, Bavdi Bandar and Zarpara for the fishermen to approach the sea for fishing activity. However, during construction as well as operation, through fishermen consultative process, so far APSEZ has provided seven (7) access roads instead of four (4). Total length of all the approach roads is approx. 23 Kms and expenditure involved is Rs. 637 Lacs. There is no hindrance to the movement of fisherman boats. Further, APSEZ is actively working with local community (including fishermen community) around the project area and provides required support for their livelihood and other concerns through the CSR arm – Adani Foundation. Following activities have been carried out during the period FY 2017-18.

Area	Activity
Sustainable Livelihood – Fisher folk	• Average 118 KL of water was supplied to 983 households from different settlements on a daily basis under Machhimar Shudhh Jal Yojana. • Computer Training: 20 Fisherman Youth • Sewing Training: 20 Women • RTG Crane Operator: 02 Fisherman Youth • Dori Work Training: 60 Women • Mangrove Plantation: 4526 Man-days

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
		• Painting Labour: 47 Fisherman • AF has started poly culture project with consultancy of GUIDE In this system we stocked 6000 fingerlings fishes of 3 gm weight in six different cages. There was 80% survival with 100 to 150 gm each weight after 5 month culture period. • We have facilitated 560 daughters with Kit (Small Bed sheet, Mosquito net, Soap and Cream with nutritious food for mother) under Beti Vadhavo Programme. Please refer **Annexure – 7 in the main report** for full details of CSR activities carried out by Adani Foundation in the Mundra region. Budget for CSR Activity for the FY 2017-18 is to the tune of INR 1565 lakh. Out of which, Approx. INR 1399 lakh are spent during the year. **In view of the information furnished by the PP and the access roads provided at several locations, the stipulated condition is considered complied.** **COMPLIED**
ix	Relocation of the fishermen community if any shall be done strictly in accordance with the norms prescribed by the State Government.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Not Applicable The project was conceptualized in such a way that there are no fishermen settlements in the project proposal. Hence there is no relocation of fishermen communities required. **In view of the information furnished by the PP, the stipulated condition is considered as not applicable to PP.** **COMPLIANCE NOT APPLICABLE TO PP**
x	Marine ecology monitoring shall be done regularly during construction of breakwater and dredging /disposal operation.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Constructions as well as dredging operations are ongoing activities. Marine monitoring is being carried out once in a month by NABL and MoEF&CC accredited agency namely M/s. Pollucon Laboratory Pvt. Ltd. Summary of the same for duration from Oct'17 to March'18 is mentioned below. **Total Sampling Locations & frequency: 09 Nos. (once a month)**

Parameter	Unit	Surface		Bottom	
		Max	Min	Max	Min
pH	--	8.28	7.1	8.4	7.2
TSS	mg/L	55	14	47	18
BOD (3 Days @ 27 °C)	mg/L	8.6	0	10	3
DO	mg/L	6.6	4.8	8	4.2
Salinity	ppt	44.72	30.6	4209	37.8
TDS	mg/L	538320	34120	56780	35330

Please refer **Annexure – 8 in the main report** for detailed analysis reports. Approx. INR 27 Lakh is spent for all environmental monitoring activities during the FY 2017-18. Marine monitoring for west port area has been

Sr. No.	Condition as per clearance letter	Compliance Status as on 31-03-2018
		carried out by M/s. Adani Power Limited. Monitoring reports are also enclosed as **Annexure – 8 in the main report.** Summary of ecological parameters is given below: **Plankton Diversity:** A total of five stations were distributed throughout the sampling effort. Samples were collected during September 2017. A maximum 24 genera of Amphidinium, Amphora, Bacteriastrum, Cerataulina, Ceratium, Chaetoceros, Coscinodiscus, Cylindrotheca, Ditylum, Fragilaria, Gunardia, Hemialus, Lauderia, Melosira, Navicula, Odontella, Pleurosigma, Pseudonitzschia, Rhizosolenia, Scrippsiella, Skeletonema, Surirella, Thalassionema and Thalassiosira identified from station 3 during the period of investigation and a minimum 18 genera of phytoplankton Cerataulina, Chaetoceros, Coscinodiscus, Cylindrotheca, Ditylum, Dinophysis, Fragilaria, Leptocylindrus, Melosira, Meuneria, Navicula, Odontella, Pleurosigma, Protoperidinium, Rhizosolenia, Skeletonema, Thalassionema and Thalassiosira identified from station 2 & 4. The phytoplankton abundance in the study region was ranged from 10000 to 41952 cells L-1. Highest phytoplankton abundance was observed at the ST-3 Surface water. However, lowest phytoplankton abundance was observed at the ST-5 Surface water. The maximum number of groups (24) found at ST-3. **Benthic Diversity:** Benthic invertebrates in the present study area were distributed on the surface of bed forms i.e. sandy and Silty clay in nature. The abundance and diversity, species composition of benthic invertebrates were recorded which is the indicators of changing environmental conditions. A total 5 sub tidal stations and 3 intertidal transect were distributed throughout the sampling effort. Samples were collected during December 2017. Sub tidal: A maximum 4 group of Bivalvia, Polychaeta, Amphipoda, and Sipuncula identified from station 1 & 5 during the period of investigation and a minimum 2 Polychaeta and Amphipoda Benthic fauna recorded from station 2. In the sub tidal region macro benthos abundance was higher at ST-1 (575 no. m-2), whereas lowest abundance was recorded at ST-2 (100 no. m-2). Benthic group count was ranged from 2 to 4, with maximum groups at ST-1&5. High biomass was recorded at ST-5 (8.63mg. m-2) as compared to other stations. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xi	Regular Monitoring of air quality shall be done in the settlement areas around the Project site and appropriate safeguard measures shall be taken.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Ambient Air Quality and Noise monitoring are being carried out by NABL accredited and MoEF&CC authorized agency namely M/s. Pollucon Laboratory Pvt. Ltd. Please refer Annexure – 7 in the main report for detailed analysis reports and accreditation certificate. Approx. INR 27 Lakh is spent for all environmental monitoring activities during the FY 2017-18. Marine monitoring for west port area has been carried out by M/s. Adani Power Limited. Monitoring reports are also enclosed as Annexure – 7 in the main report.

Summary of ecological parameters is given below:
Plankton Diversity: A total of five stations were distributed throughout the sampling effort. Samples were collected during September 2017. A maximum 24 genera of Amphidinium, Amphora, Bacteriastrum, Cerataulina, Ceratium, Chaetoceros, Coscinodiscus, Cylindrotheca, Ditylum, Fragilaria, Gunardia, Hemialus, Lauderia, Melosira, Navicula, Odontella, Pleurosigma, Pseudonitzschia, Rhizosolenia, Scrippsiella, Skeletonema, Surirella, Thalassionema and Thalassiosira identified from station 3 during the period of investigation and a minimum 18 genera of phytoplankton Cerataulina, Chaetoceros, Coscinodiscus, Cylindrotheca, Ditylum, Dinophysis, Fragilaria, Leptocylindrus, Melosira, Meuneria, Navicula, Odontella, Pleurosigma, Protoperidinium, Rhizosolenia, Skeletonema, Thalassionema and Thalassiosira identified from station 2 & 4. The phytoplankton abundance in the study region was ranged from 10000 to 41952 cells L-1. Highest phytoplankton abundance was observed at the ST-3 Surface water. However, lowest phytoplankton abundance was observed at the ST-5 Surface water. The maximum number of groups (24) found at ST-3.

Benthic Diversity: Benthic invertebrates in the present study area were distributed on the surface of bed forms i.e. sandy and Silty clay in nature. The abundance and diversity, species composition of benthic invertebrates were recorded which is the indicators of changing environmental conditions. A total 5 sub tidal stations and 3 intertidal</td></tr>

transect were distributed throughout the sampling effort. Samples were collected during December 2017. Sub tidal: A maximum 4 group of Bivalvia, Polychaeta, Amphipoda, and Sipuncula identified from station 1 & 5 during the period of investigation and a minimum 2 Polychaeta and Amphipoda Benthic fauna recorded from station 2. In the sub tidal region macro benthos abundance was higher at ST-1 (575 no. m-2), whereas lowest abundance was recorded at ST-2 (100 no. m-2). Benthic group count was ranged from 2 to 4, with maximum groups at ST-1&5. High biomass was recorded at ST-5 (8.63mg. m-2) as compared to other stations.

Ambient Air Quality and Noise monitoring are being carried out by NABL accredited and MoEF&CC authorized agency namely M/s. Pollucon Laboratory Pvt. Ltd. Summary of the same for duration from Oct'17 to Mar'18 is mentioned below.

Air sampling locations & frequency: 8 nos. (twice a week) & Noise sampling locations & frequency: 5 nos. (once in a month)

Parameter	Unit	Max	Min	Perm. Limit*

* as per NAAQ standards, 2009

Values recorded confirms to the stipulated standards.

Following safeguard measures are taken for abatement of dust emissions.

- Regular sprinkling on road and other open area
- Regular cleaning of roads
- Dry fog Dust Suppression System (DSS) in hopper, transfer towers and conveyor belts
- Use of water mist canon
- Closed type conveyor belts
- Regular sprinkling on coal heaps
- Covering other types of dry bulk cargo heaps
- Installation of wind breaking wall
- Development of greenbelt along the periphery of the storage yards/back up area
- Mechanized handling system for coal and other dry bulk cargo
- Wagon loading and truck loading through closed silo

Entire quantity of sewage generated is being treated in designated ETP / STP and treated sewage is used for Horticulture purposes.

Values recorded confirms to the stipulated standards.

Please refer **Annexure – 7 in the main report** for detailed analysis reports and accreditation certificate. Approx. INR 27 Lakh is spent for all environmental monitoring activities during the FY 2017-18.

Liquid Effluent & Sewage – It is being treated at decentralized treatment plants and treated water confirming the stipulated norms is being utilized for horticulture purposes within APSEZ. Please refer specific condition no xii above for details regarding the same.

Waste Management – APSEZ has adopted 5R concept for environmentally sound management of different types of solid & liquid wastes. Please refer below details about management of each type of waste.

Municipal Solid Waste: A well-established system for segregation of dry & wet waste is in place. All wet waste (Organic waste) is being segregated & utilized for compost manufacturing. The compost is further used by in house horticulture team for greenbelt development. Whereas dry recyclable waste is being sorted in various categories. Presently manual sorting is being done for sorting of different types of solid waste. Segregated recyclable materials such as Paper, Plastic, Cardboard, PET Bottles, Glass etc. are then sent to respective recycling units, whereas remaining non-recyclable waste is bailed and sent to

<tr><td></td><td></td><td>
cement plant (M/s. Sanghi Industries Ltd.) for Co-processing as RDF (Refused Derived Fuel).

Hazardous Waste:
• E – Waste & Used Batteries are being sold to GPCB registered recyclers namely M/s. e-Processing House.
• Solid Hazardous Waste is being disposed through common facility i.e. M/s. Recycling Solutions Pvt. Ltd., Panoli and/or co-processing at Sanghi Industries Ltd., Kutch. Used/Waste Oil is being sold to GPCB authorized recyclers / re-processors namely M/s.Western India Petrochem Industry, Bhavnagar.
• Downgrade chemicals generated from cleaning of storage tanks / pipelines are being sold to authorized solvent recovery facilities namely M/s. Acquire Chemicals, Ankleshwar however during the compliance period, there was no disposal of downgrade chemicals.
• Slop Oil received from vessels is treated to separate water and oil particles in Oil Water Separator system. Separated oil from the same is being sold to authorized recycler / reprocessor namely M/s.Western India Petrochem Industry, Bhavnagar and water is sent to ETP for further treatment. However during the compliance period, there was no disposal of Slope Oil.

The following table summarizes the waste management practice (for Oct'17 to March'18) for different types of wastes at APSEZ:

APSEZ had informed the Regional Office of MoEF&CC at Bhopal as well as MoEF&CC, New Delhi regarding the date of financial closure and the date of start of land development work vide letter sent in August, 2009. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xiv	Any appeal against this environmental clearance shall lie with the National Environment Appellate Authority, if preferred, within period of 30 days as prescribed under section 11 of the National Environment Appellate Act, 1997.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Point noted and agreed. This EC and CRZ clearance was challenged in National Environment Appellate Authority. In this matter, Order has also been passed in favour of APSEZ. Copy of the same is attached as **Annexure – 15 in the main report.** **In view of the information furnished by the PP, the stipulated condition is noted for compliance.** **NOTED AND AGREED**

ii. Compliance Status of Environmental Clearance for the period October 2017 to March 2018 issued by MoEF&CC, New Delhi vide letter no. 10-138/2008-IA.III, dated 15th July, 2014

(Details of the project: Environmental and CRZ clearance granted to the Multi Product SEZ, Desalination, Sea Water Intake, Outfall Facility and Pipeline project at Mundra, Kutch being developed by Adani Ports and Special Economic Zone Ltd. (APSEZL) (Formerly, M/s. Mudra Port and SEZ Ltd.))

As per the information furnished by the PP, the status details of Activities/facilities approved, major components completed and proposed future activities as per Environment and CRZ Clearance are as below:

Facilities / Components Approved	Capacity	Status as on 31.03.2018
Desalination Plant	150 MLD	Construction has not been started.
Sea water Intake & Outfall Facility	375 MLD: Intake 241 MLD: Outfall	Construction has not been started.
Common Effluent Treatment Plant	17 MLD	MPSEZ Utilities Pvt. Ltd. (MUPL) has been granted environmental clearance for CETP having 17.0 MLD capacities. Out of which at present one module of CETP having 2.5 MLD capacities has been constructed and is in operation.
	50 MLD	Construction has not been started.
Social Infrastructure Projects	--	Adani Mundra SEZ Infrastructure Pvt. Ltd. (AMSIPL) has granted environmental clearance for township and area development project in 255 Ha. Out of 10,000 no. of residential units, 1368 units are constructed.
Sewage Treatment Plant	62 MLD	APSEZ has installed Sewage Treatment Plant @ 150 KLD Capacities within SEZ for treatment of sewage generated from port user buildings.
Airstrip	--	Airstrip has been developed within SEZ area after obtaining requisite permissions.
Municipal Solid Waste Site	--	Material Recovery site is provided for the management of Municipal Solid Waste.
Free Trade & Ware House Zone (FTWZ)	--	Construction is completed and in operation.

Note:

Environmental / CRZ clearance has been granted for additional facilities like Processing Zones, Non-processing Zones, Warehousing Zones, Road Network (Trunk as well as Internal), Bridges or Culverts over natural drain, Rail Network, IT-Telecommunication Network, Electric Network, Water Supply, Conservation & Drainage Network, Effluent Collection Network and Utilities & Supporting Infrastructure within SEZ area.

Boundary wall is constructed along the project periphery. In some of areas level raising and area development of SEZ area, wherever required is also under progress.

The list of Industrial Units within SEZ area are as given below:

Sr. No.	Name of Unit	Nature of Business	Status
1	SKAPS INDUSTRIES	Textile	Operation
2	TERRAM EOSYNTHETICS	Textile	Operation
3	AHLSTROM	Textile	Operation
4	ASHAPURA GARMENTS	Textile	Not in Operation
5	THERMAX	Engineering	Operation
6	OWS	Ware House	Operation
7	DORF KETAL	Chemical	Operation

11	EMPEZAR LOGISTICS	Ware House	Operation
12	SEABIRD CFS	CFS	Operation
13	HONEYCOMB CFS	CFS	Operation
14	ALL CARGO CFS	CFS	Operation
15	MUNDHRA CFS	CFS	Operation
16	SAURASHTRA CFS	CFS	Operation
17	FORBES CFS	CFS	Operation
18	TRANSWORLD CFS	CFS	Operation
19	MICT CFS	CFS	Operation
20	MARUTI SUZUKI INDIA LIMITED	Pre Delivery Inspection Yard	Operation
21	MSTPL (Mundra Solar Technopark Pvt. Ltd.)	Electronics Manufacturing Cluster	Operation
22	STEINWEIGE	FTWZ	Operation
23	KERRY INDEV LOGISTIC	FTWZ	Operation
24	BRITANNIA INDUSTRIES LIMITED	Food Products	Construction work completed
25	ADANI POWER LIMITED	Thermal Power Plant	Operation

During the site visit, following industries were randomly visited to check the compliance of EC conditions at individual industry level:

- Oriental Carbon & chemicals Ltd.
- Garg Tubes Exports LLP
- Britannia Industries Ltd.
- Terram Geosynthetics Pvt. Ltd.
- Dorf Ketal Chemicals Pvt. Ltd.
- Adani Mundra SEZ Infrastructure Pvt. Ltd.-Samudra Township STP
- MPSEZ Utilities Pvt. Ltd.(CETP)
- Mundra Solar PV Limited

Based on the site visit and information furnished by the PP, the point-wise compliance status of Environmental / CRZ Clearance granted to the Multi Product SEZ, Desalination, Sea Water Intake, Outfall Facility and Pipeline project at Mundra, Kutch being developed by Adani Ports and Special Economic Zone Ltd. (APSEZL) is prepared and furnished below:

Sr. No.	Conditions	Compliance Status as on 31-03-2018
Part – A: Specific Conditions		
i.	PP shall abide by the final order/decision of Hon'ble Supreme Court in SLP (Civil) no. 1526/2014 and connected matters.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Point noted and will be complied. Vide order dated 14.07.2014, the Hon'ble Supreme Court directed MoEF&CC to complete the process of environmental clearance to the MSEZ project of APSEZ within eight weeks. MoEF&CC issued EC and CRZ clearance to the proposed project vide letter dated 15.07.2014. Hence, the SLP (Civil) no. 1526/2014 is deemed closed. Copy of the order is attached as **Annexure – 1 in the main report.** **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
ii.	Properly conserve the creeks, river and the mangroves area in the area.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. This reply covers condition no ii, iii, ix, x, xi, xii & xiii. Conservation of creeks and rivers: • The prominent creek system (main creeks and small branches of creeks) in and around APSEZ are: (1) Kotdi (2) Baradimata (3) Navinal (4) Bocha (5) Mundra (Oldest port (Juna Bandar) leading to Bhukhi river). • Rivers passing through the APSEZ area are: (1) Khari (2) Nagmati (3) Phot (4) Bhukhi (5) Dhaneshwari (6) Buchiya (7) Jidal. • All the rivers passing through the SEZ area are dry throughout the year except for monsoon season. • All creeks as well as rivers are in existence allowing free flow of water and there is no filling or reclamation of any creek or river area. APSEZ has so far constructed 19 culverts having total length of approx. 1100 m with total cost of INR 20 Crores. Three RCC Bridges have also been constructed over Kotdi creek with total length of 230 m and cost of INR 10 Crores. Photographs of the same are attached as **Annexure – 2.** • From the APSEZ operations, there is no discharge of any sewage or effluent to the water streams Conservation of mangroves: • In and around APSEZ, approx. 1800 ha. mangrove area was identified by NIO in an EIA report prepared the year 1998. • Out of this 1800 ha area, 1254 ha area was further demarcated as potential mangrove conservation by NIO in the year 2008 (as part of the EIA report of WFDP).

Sr. No.	Conditions	Compliance Status as on 31-03-2018
		• It may be noted that the entire area of 1254 ha is not covered with mangroves. • Entire area is being conserved and there is no disturbance to the mangroves in this area. Measures such as restricted entry and regular surveillance have resulted in overall growth of mangroves within this area. • As per MoEF&CC directive, APSEZ entrusted NCSCM to demarcate mangroves in and around APSEZ area. As per their study, presently, mangrove cover in and around APSEZ is over 2340 ha. The analysis of the comparison between 2011 and 2016-17 has shown an overall growth of 246 ha. Please refer **Annexure – 3 in the main report** for a copy of the report. **In view of the information furnished by the PP supported by the study report of NCSCM, the stipulated condition is considered complied.** **COMPLIED**
iii.	Ensure that mouths of all the creeks are kept open to ensure flushing of the creeks.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. • The prominent creek system (main creeks and small branches of creeks) in and around APSEZ are: (1) Kotdi (2) Baradimata (3) Navinal (4) Bocha (5) Mundra (Oldest port (Juna Bandar) leading to Bhukhi river). • All above creek mouths are open allowing free flow of water in to the creeks and surrounding areas and there is no filling or reclamation of any creek area. • This aspect is also confirmed from the recent study of NCSCM **(Annexure – 3 in the main report)** which highlights the bathymetry data of the entire coast around APSEZ. • From the bathymetry data it can be concluded that there are sufficient depths at the creek mouths and all creek mouths are open allowing flushing of water. **In view of the information furnished by the PP supported by the study report of NCSCM, the stipulated condition is considered complied.** **COMPLIED**
iv.	Bring the creeks to the condition as was seen in the satellite map of 2005 which will be a "reference" satellite map and a copy of which shall be sent to you separately.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Not applicable This reply covers condition no iv, v, vi. The stated conditions were stipulated in the EC and CRZ clearance with respect to the pending SCNs and based on Ms. Sunita Narain committee report. In continuation to the SCNs and subsequent submissions by APSEZ, MoEF&CC issued a final order vide letter dated 18.09.2015 (which disposed the pending Show Cause Notices). Full compliance of the directions issued vide the said order is provided as **Annexure – A in the main report.** It may be noted that the stated conditions related to the satellite image

Sr. No.	Conditions	Compliance Status as on 31-03-2018
		of 2005 are not imposed to APSEZ as part of the said order. Hence, APSEZ has made submission to MoEF&CC vide letters dated 23.05.2016 and 07.11.2016. Copies of the said letters are attached as **Annexure – 4 in the main report**. Further there are no directions from MoEF&CC. **In view of the submission by the PP, the stipulated condition is considered complied subject to acceptance by MoEF&CC, New Delhi.** **COMPLIED SUBJECT TO ACCEPTANCE BY MOEF& CC, New Delhi.**
v.	Submit once in a year latest satellite map which can be compared with the reference satellite map of 2005 to ensure that no modifications in the creeks, rivers, mangroves and mouth of creeks have taken place.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Not applicable This reply covers condition no iv, v, vi. The stated conditions were stipulated in the EC and CRZ clearance with respect to the pending SCNs and based on Ms. Sunita Narain committee report. In continuation to the SCNs and subsequent submissions by APSEZ, MoEF&CC issued a final order vide letter dated 18.09.2015 (which disposed the pending Show Cause Notices). Full compliance of the directions issued vide the said order is provided as **Annexure – A in the main report.** It may be noted that the stated conditions related to the satellite image of 2005 are not imposed to APSEZ as part of the said order. Hence, APSEZ has made submission to MoEF&CC vide letters dated 23.05.2016 and 07.11.2016. Copies of the said letters are attached as **Annexure – 4 in the main report**. Further there are no directions from MoEF&CC. **In view of the submission by the PP, the stipulated condition is considered complied subject to acceptance by MoEF&CC, New Delhi.** **COMPLIED SUBJECT TO ACCEPTANCE BY MOEF& CC, New Delhi.**
vi.	Any direction issued by the MoEF with respect to the report submitted by Ms Sunita Narain Committee shall be complied with by the Proponent as applicable.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Not applicable Based on Ms. Sunita Narain Committee report and subsequent submissions from APSEZ, MoEF&CC disposed the pending Show Cause Notices and issued 10 specific directions. Full compliance of the directions issued vide the said order is provided as **Annexure – A in the main report.** **In view of the information furnished by the PP and the detailed compliance submitted against the 10 directions issued by the MoEF&CC, the stipulated condition is considered complied.** **COMPLIED**
vii.	At its cost get Inspection study done once in a year by the organizations like NEERI or any organization	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. NEERI has been appointed to carry out the inspection study up to the

Sr. No.	Conditions	Compliance Status as on 31-03-2018
	approved by this Ministry to - (i) ensure compliance of all the EC conditions (ii) development of SEZ meeting of the environment norms, and (iii) advise any mid-term correction that can be introduced depending on the recommendation of the independent Third Party.	year 2020 at a cost of INR 12 Lacs. Compliance report of the period from April'17 to Sept'17 was submitted to NEERI. Based on the site visit during period Oct'17 to Mar'18 as well as the said compliance report NEERI has given their feedback. No non-compliance is observed by NEERI. Copy of the same is annexed as **Annexure – 5 in the main report.** **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
viii.	"Consent for Establishment" for the SEZ shall be obtained from Gujarat Pollution Control Board under Air and Water Act and a copy shall be submitted to the Ministry before start of any construction work at the site.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Consent to Establish (CtE) is obtained for the project from Gujarat Pollution Control Board vide their letter no. GPCB/CCA-KUTCH-1044/ GPCB ID 31463/ 109800, dated 16.04.2012. Copy of the same was submitted to MoEF&CC, Regional Office, Bhopal vide our letter dated 05th Aug, 2014. APSEZ has been granted Consent to Operate (CtO) from GPCB for common infrastructure facilities developed vide Order No. AWH-88998, dated 26.10.2017. Copy of the CtE and CtO are attached as **Annexure – 6 in the main report.** **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
ix.	PP shall get detailed bathymetry done for all the creeks and rivers within Port and SEZ areas along with mapping of co-ordinates, running length, HTL, CRZ boundary, mangrove area including buffer zone through NCSCM /NIOT. PP shall also get prepared a detailed action plan for conservation and	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied Based on the MoEF&CC directions, APSEZ has entrusted NCSCM to carry out the detailed study. Scope of the study include the following: • Detail bathymetry and topography survey of creeks • Demarcation of mangrove areas and buffer zone • Demarcation of HTL and CRZ areas with co-ordinates • Preparation of a comprehensive and integrated conservation plan for protection of creeks and mangroves In order to complete the study, NCSCM has carried out number of site surveys which are mentioned below:

Sr. No.	Conditions	Compliance Status as on 31-03-2018
	protection of creeks /mangrove area etc through NCSCM/NIOT and submit the same to GCZMA for their examination and recommendation. GCZMA will submit its recommendations to MoEF for approval.	• Bathymetry survey of creeks • Topography survey of intertidal areas • Mangrove survey (health and area demarcation) • Sampling of soil and water for analysis of physico-chemical and biological parameters • Tide and currents data collection (including residence time of tidal water) study Based on the study, the following points can be summarized: • There is no obstruction to any water stream (creeks / branches of creeks / rivers) • Presently, mangrove cover in and around APSEZ is over 2340 ha. There is substantial growth in mangrove cover to the tune of 246 ha (comparison between 2011 and 2016-17) • Majority of the development at Mundra has happened between this tenure. Hence it can be interpreted that the infrastructure development has not left any adverse impacts on ecology. The study report is submitted to GCZMA (with a copy to MoEF&CC) for their examination and recommendation. Copy of the same is attached as **Annexure – 3 in the main report**. Please refer the survey maps in the report for interpretation of the details mentioned above. Cost of the study as per the NCSCM proposal is 315.5 Lakh. 90% of the payment against the proposal value is already paid to NCSCM. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
x.	PP shall demarcate the CRZ area on land with GPS coordinates in consultation with GCZMA/ the agency which has done the HTL /LTL demarcation for the area. There shall be no allotment of plot/s in CRZ area to industries. No industrial activity within CRZ area except the port and harbor & the foreshore facilities shall be allowed as committed.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Being complied Based on the MoEF&CC directions and in consultation with GCZMA, APSEZ has entrusted NCSCM for demarcation of HTL and CRZ areas. NCSCM has prepared the draft maps. Once the maps are finalized, they will be submitted to GCZMA and MoEF&CC for their examination and recommendation. In addition to that please note that • There is no allotment of plot(s) in CRZ area to any industry. • Only those activities which are allowed within CRZ area are being carried out (with due approvals from concerned authorities) • No industrial activity within CRZ area except the port and harbor & the foreshore facilities are carried out. **In view of the information furnished by the PP and the progress made w.r.t. demarcation of HTL/LTL maps, the stipulated condition is**

Sr. No.	Conditions	Compliance Status as on 31-03-2018
		considered compliance in progress. **COMPLIANCE IN PROGRESS**
xi.	Till the approval of action plan for conservation and protection of creeks /mangrove area, the CRZ area within SEZ shall be demarcated as "No Development Zone". PP shall not allow / undertake any development in CRZ area of SEZ.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied The action plan for conservation of creeks and mangrove areas is prepared by NCSCM and the same is submitted to GCZMA and MoEF&CC for their examination and recommendation. The main action plan as per the study are mentioned summarized below: • Monitoring of mangrove cover in Jan/Mar, 2020 using latest satellite images and validation with field observations • Monitoring of tidal range in the mangrove areas and comparison with the data collected during 2017 • Removal of silt / sand spits from the central part of navinal creek • Dredging of shallow area off Bocha Island to reduce current velocity. These measures will be discussed with GCZMA and the same will be implemented after obtaining their approval. No development is carried out in the 'No Development Zone' (i.e. CRZ area of SEZ) **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xii.	The implementation of action plan approved by the MoEF shall be monitored by the NCSCM/NIOT. Compliance with action plan shall be submitted to GCZMA and to MoEF, RO at Bhopal along with six monthly monitoring report.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Point noted and will be complied The action plan for conservation of eco sensitive areas prepared by NCSCM is submitted to GCZMA and MoEF&CC for their approval. Implementation of the action plan will be carried out by APSEZ and same will be monitored by NCSCM and compliance report in this regard will be submitted to all the concerned authorities as part of the six monthly compliance report. **In view of the information furnished by the PP, the stipulated condition is considered as agreed to comply by the PP.** **AGREED TO COMPLY**
xiii.	PP shall earmark separate budget for the implementation of the above action plan. The details of the expenditure shall be submitted to GCZMA and to MoEF, RO at	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Point noted and will be complied A separate budget will be allocated for implementation of this action plan and details of the same will be submitted as part of the six monthly compliance report.

Sr. No.	Conditions	Compliance Status as on 31-03-2018
	Bhopal along with six monthly monitoring report.	**In view of the information furnished by the PP, the stipulated condition is considered as agreed to comply by the PP.** **AGREED TO COMPLY**
xiv.	All the industry in SEZ shall be connected through impervious drainage lines to the STP/CETP for the discharge of their sewage or industrial effluent. There shall not be any discharge to creeks / rivers. PP shall be accountable for implementing this condition and necessary clause shall be incorporated in the MoU while allotting the plot to the individual industries.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. As per the Lease Deed agreement, all existing industries are well connected with impervious pipeline to discharge their effluent / sewage after confirming to the inlet norms of CETP. Typical copy of the Lease Deed (Agreement) is attached as **Annexure – 7 in the main report**. Entire quantity of treated wastewater from CETP is being utilized for horticulture purpose within SEZ area. No discharge is allowed in to creeks / rivers. Same practice will be continued in future as well and capacity enhancement of CETP will be carried out based on requirement. List of CETP member units discharging their effluent and details regarding effluent characteristics are submitted as **Annexure – 8 in the main report.** The industries which treat the sewage / effluent within their premises comply the stipulated norms of discharge given by GPCB. Through regular monitoring it is ensured by APSEZ that the treated water is used for gardening within the respective industries and there is no discharge to any water body including rivers or creeks. **In view of the information furnished by the PP and the site observation that 2 industries (namely, M/s. Dorf Katl, M/s. Ahlstorm) have been connected to CETP and the remaining industries (located in SEZ) discharging their treated effluents as per the consent guidelines of GPCB after complying to the discharge norms, the stipulated condition is considered complied subject to acceptance by MOEF&CC, New Delhi.** **COMPLIED SUBJECT TO ACCEPTANCE BY MOEF&CC, New Delhi.**
xv.	PP shall not carry out any river course modification.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied The project was conceptualized in such a way that no river course modification is required to be carried out. All the river passing through SEZ are maintained through proper path for area drainage. **In view of the information furnished by the PP, the stipulated condition is considered complied.**

Sr. No.	Conditions	Compliance Status as on 31-03-2018
		COMPLIED
xvi.	The individual industrial units shall obtain prior EC under EIA Notification, 2006 as applicable.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. All industrial units coming up in within the SEZ are informed and aware about the said requirement. Out of total units established within SEZ, only APL & Dorf Ketal falls under purview of EIA Notification 2006 and they have obtained their specific EC as applicable. During the compliance period of Oct'17 to Mar'18, no new such industry has been established at SEZ which requires EC under EIA Notification, 2006. The condition is being followed on case to case basis as applicable. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xvii.	Proponent shall identify 200 ha of land for mangrove plantation as per the condition laid by SEAC.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. 100 Ha. Mangrove plantation is carried out by SAVE at Tala Tadav village of Khambhat Taluka of Anand district. 100 Ha. Mangrove plantation is carried out by GEC. Out of 100 ha., 38 ha. plantation is completed at Tala Tadav village of Khambhat Taluka of Anand district during 2017-18. Remaining 62 ha. plantation is carried out at Aliya Bet of Bharuch district during 2017-18. Completion report of SAVE and GEC are enclosed as **Annexure – 9 in the main report**. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xviii.	50 meter buffer from the existing mangrove area should be provided for any developmental activity.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. 50 meter buffer from the existing mangrove area as per the CRZ notification is being maintained and all developmental activities are being carried out as per the approval only. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xix.	Proponent shall develop	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO

Sr. No.	Conditions	Compliance Status as on 31-03-2018
	the green belt with 3 layers of canopy all along the periphery.	Bhopal on 14.05.2018 submitted the following: Being complied. APSEZ has developed "Dept. of Horticulture" which is taking measures/ steps for terrestrial greening as well as mangrove plantation. Development of greenbelt at various locations within the SEZ is an ongoing activity. Green belt of 3 layer canopy will be developed as part of the development of SEZ. The species such as Ficus Infectoria, Ficus religiosa, Terminalia arjuna, Cocos nucifera, Washingtonia fillifera, Casurina spp., Azadirachta Indica, Eucalyptus spp., Jatropha curacus, Ficus bengalensis, Subabool spp., Casia fistula, Date Palm and Delonix regia were grown in SEZ area. Width of the green belt varies from 2 m to 8 m and density varies from 2000 to 2500 trees per hectare at various locations. Total 99.5 hectares of land with approx. 2.2 Lacs trees is developed within SEZ area till date. So, far more than 400 ha. area is developed as greenbelt with plantation of more than 8.0 Lacs trees within the entire APSEZ area. Please refer **Annexure – 10 in the main report** for further details regarding greenbelt development and mangrove afforestation. An updated green belt development plan is also attached as part of the said annexure. Total expenditures of the horticulture dept. for the F.Y. 2017-18 periods are INR 607 lakh. It may be noted that individual industrial units will also developed the greenbelt within their premises based on their planning & approvals and new industries coming up any will also comply as per their approvals. The same will be ensured by the environment monitoring committee of APSEZ. For the area where further development is yet to be carried out, APSEZ will ensure that greenbelt with 3 layer canopy is developed by either APSEZ or the industrial unit to whom the land is allotted. **In view of the information furnished by the PP and as per the site observation of excellent greenbelt developed in the saline soils which is commendable, the stipulated condition is considered compliance in progress in light of the proposed phase-wise green belt development.** **COMPLIANCE IN PROGRESS**
xx.	All the recommendation of the EMP shall be complied with in letter and spirit. All the mitigation measures submitted in the EIA report shall be prepared	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. 			utilized for area development.
		Thermal Environment	
		Enforce (i) use of Portland Pozzalano Cement / (ii) use of Portland Slag Cement / (iii) use fly ash as admixture in construction	Part of fly ash generated from Adani Power Limited, Mundra is being utilized by Adani Group to manufacture paver blocks and the same paver blocks are used for development of back up area, footpath, colonies area, parking area, approach road etc. Please refer Condition No. xi of Part-B (General Conditions: Construction phase) of EC and CRZ Clearance.
		Energy	
		Wherever possible, piping shall be along the natural topography to permit gravity flow. Else, energy efficient pumps shall be used. Pipe material shall be such as to minimize friction losses. Wherever possible, natural light shall be used. Energy efficient electrical fittings and fixtures shall be used.	Energy efficient pumps and HDPE Pipelines are used for supply of utilities. Refer point no. xii of EC & CRZ Clearance in Part – B (Operation Phase) for energy efficient electrical fittings. Few of the buildings in MSTPL are designed as green building.
		Operation Phase:	
		Land / Soil Environment	
		Good quality non-corrosive type pipeline should be used. Regular checking of the pipelines for early detection of any possible leakage and damage. Regular ground water monitoring should be done within the SEZ.	HDPE pipelines are used for supply of utility. Regular visual surveillance along the utility lines corridor is being done to check leakage or damage. Third party analysis of the ground water is being carried out at every three month by NABL and MoEF&CC accredited agency namely M/s. Pollucon Laboratories Pvt. Ltd. Please refer Condition No. v of Part-B (General Conditions: Construction phase) of EC and

Sr. No.	Conditions	Compliance Status as on 31-03-2018	
			CRZ Clearance.
		The waste should be transported in covered trucks. Vermi-composting is highly recommended for treatment and disposal of biodegradable and kitchen wastes. Other domestic solid waste (garbage) shall be disposed through MSW facility or as per prevailing norms.	Please refer Condition No. iv of Part-B (General Conditions: Construction phase) of EC and CRZ Clearance.
		The waste should be transported in covered trucks. Transporter should be informed of remedial measures required to be taken in case of spillage of waste	Waste handling vehicles are being handled through covered trucks only. Details were submitted along with last compliance report submission i.e. Apr'17 to Sep'17.
		Socio-Economic Environment	
		It will encourage development of surrounding areas & further generate employment. People from various cultures shall mingle encouraging a more tolerant society.	Please refer Condition No. vii of Annexure – B (Compliance Status of MoEF & CC Order dated 18.09.2015).
xxi.	There shall be no disturbance to the sand dunes. The pipelines shall be laid using advanced method viz. Horizontal Directional Drilling (HDD) so as to avoid disturbance to the sand dunes/creeks/ mangroves.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. There is no sand dune in the SEZ area. Point noted. No pipelines for intake and outfall of sea water are laid till now and same will be studied as and when required. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**	
Part – B: General Conditions			
	Construction Phase		
i.	Provision shall be made for the housing of construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, safe drinking water, medical	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Not applicable at present. Most of the construction labours reside in the nearby villages where all basic facilities are easily available. There are no housing requirements for labours inside the project area.	

Sr. No.	Conditions	Compliance Status as on 31-03-2018
	health care, creche etc. The housing may be in the form of temporary structures to be removed after the completion of the project.	**In view of the information furnished by the PP, the stipulated condition is considered not applicable to PP.** **COMPLIANCE NOT APPLICABLE TO PP**
ii.	A first aid room will be provided in the project both during construction and operation of the project.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. APSEZ has established Occupational Health Center & First Aid facility, which will be utilized during entire construction as well as operation phase of SEZ project. In case of emergency situation requiring higher level of treatment, the facilities at Adani hospital located with SEZ area can be utilized. **In view of the information furnished by the PP and as per the site observation, the stipulated condition is considered complied.** **COMPLIED**
iii.	All the topsoil excavated during construction phase should be stored for use in horticulture/landscape development within the project site.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Excavated topsoil, if any, will be used for the horticulture /landscape development within the project site. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
iv.	Disposal of muck during construction phase should not create any adverse effect on the neighboring communities and be disposed, taking the necessary precautions for general safety and health aspects of people, only in approved sites with the approval of competent authority.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. No excavated muck has been generated and disposed-off. Construction waste, if any, is utilized for area development within the project site. **In view of the information furnished by the PP and as per the site observation, the stipulated condition is considered complied.** **COMPLIED**
v.	Soil and ground water samples will be tested to ascertain that there is no threat to ground water quality by leaching of heavy metals and other	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. 8	Total Chromium as Cr	mg/L	0.022	0.003
9	Cadmium as Cd	mg/L	0.17	0.01
10	Mercury as Hg	mg/L	BDL*	BDL*
11	Zinc as Zn	mg/L	2.74	0.02
12	Copper as Cu	mg/L	50.40	0.03
13	Iron as Fe	mg/L	16.30	0.04
14	Insecticides/Pesticides	mg/L	BDL*	BDL*
15	Depth of Water Level from GL	meter	2.84	1.70

*BDL = Below Detectable Limit

Soil Sampling:

Sampling locations & frequency: 4 nos. (Half Yearly)

Sr. No.	Parameter	Unit	Max. Value	Min. Value
1	pH	--	8.15	7.41
2	Nitrogen as N	%	0.0088	0.0045
3	Phosphorus as P	mg/kg	680	134
4	Potassium as K	mg/kg	52	16
5	Baron as B	mg/kg	3.2	2.1
6	Calcium as Ca	mg/kg	1210	55
7	Magnesium as Mg	mg/kg	1456	6
8	Iron as Fe	%	0.53	0.24
9	Moisture	%	14.8	10.4
10	Organic Matter	%	0.069	0.023
11	CEC	meq/100 gm	8.1	5.9
12	TVC	CFU/gm	2.2x10-6	4.0x10-7
Heavy Metal				
13	Cadmium as Cd	mg/kg	4.70	1.92
14	Thorium as Th	mg/kg	BDL*	BDL*
15	Antimony as Sb	mg/kg	BDL*	BDL*
16	Arsenic as As	mg/kg	BDL*	BDL*
17	Lead as Pb	mg/kg	30.6	17.8
18	Chromium as Cr	mg/kg	18.2	15.4
19	Cobalt as Co	mg/kg	2.2	0.9
20	Copper as Cu	mg/kg	12.6	10.1
21	Nickel as Ni	mg/kg	136	64
22	Manganese as Mn	mg/kg	490	88
23	Vanadium as V	mg/kg	12.6	7.6

*BDL = Below Detectable Limit

From the above results it can be inferred that

- The ground level in this area is saline in nature due to close proximity to the coast.
- There is no threat to ground water quality by leaching of heavy metals and other toxic contaminants.
- There is no leaching of heavy metals and other toxic contaminants through soil.

remaining non-recyclable waste is bailed and sent to cement plant (M/s. Sanghi Industries Ltd.) for Co-processing as RDF (Refused Derived Fuel).

Hazardous Waste:
• E – Waste & Used Batteries are being sold to GPCB registered recyclers namely M/s. e-Processing House.
• Solid Hazardous Waste is being disposed through common facility i.e. M/s. Recycling Solutions Pvt. Ltd., Panoli and/or co-processing at Sanghi Industries Ltd., Kutch. Used/Waste Oil is being sold to GPCB authorized recyclers / re-processors namely M/s.Western India Petrochem Industry, Bhavnagar.
• Downgrade chemicals generated from cleaning of storage tanks / pipelines are being sold to authorized solvent recovery facilities namely M/s. Acquire Chemicals, Ankleshwar however during the compliance period, there was no disposal of downgrade chemicals.
• Slop Oil received from vessels is treated to separate water and oil particles in Oil Water Separator system. Separated oil from the same is being sold to authorized recycler / reprocessor namely M/s.Western India Petrochem Industry, Bhavnagar and water is sent to ETP for further treatment. However during the compliance period, there was no disposal of Slope Oil.

The following table summarizes the waste management practice (for Oct'17 to March'18) for different types of wastes at APSEZ:
<table>
<tr><th>Waste</th><th>Quantity in MT</th><th>Disposal method</th></tr>
<tr><td colspan="3">Hazardous Waste</td></tr>
<tr><td>Pig Waste</td><td>5.4</td><td>Co-processing at common facility and/or cement industry</td></tr>
<tr><td>Tank Bottom Sludge</td><td>33.4</td><td>Co-processing at common facility</td></tr>
<tr><td>Oily Cotton waste</td><td>55.2</td><td>Co-processing at Cement Industry</td></tr>
<tr><td>Used / Spent Oil</td><td>86.1</td><td>Sell to GPCB approved recycler</td></tr>
<tr><td>Discarded Containers</td><td>8.7</td><td>Sell to GPCB approved recycler</td></tr>
<tr><td>E-Waste</td><td>2.32</td><td>Sell to GPCB approved recycler</td></tr>
<tr><td colspan="3">Municipal Solid Waste</td></tr>

<tr><td>Wet Waste</td><td>467.4</td><td>Converted to Manure for horticultural use</td></tr>
</table>

SEZ industries were visited to check measures taken for Energy Conservation, Water Conservation, Waste and Hazardous waste management and phase out plan of Ozone depleting substance during the compliance period. Various industries shared the data in line with above reference. Such supervision will be undertaken once in every six months. Please refer Annexure – 18 in the main report for a typical sample of the data collection sheet from an industry within SEZ.
</td></tr>
</table>

<table>
<tr><th>Sr. No.</th><th>Conditions</th><th>Compliance Status as on 31-03-2018</th></tr>
<tr><td></td><td></td><td>It may be noted that condition number xvi to xxi are imposed on all member industries coming up within the SEZ areas (as part of the Lease Deed agreement). The same practice will continue in future also. As suggested by RO, Bhopal during the site visit, an environment monitoring committee is formed which will ensure strict compliance of the stipulated conditions by individual industries.
In view of the information furnished by the PP, the stipulated condition is considered complied.
COMPLIED</td></tr>
<tr><td>v.</td><td>Diesel power generating sets proposed as source of backup power for elevators and common area illumination during operational phase should be of enclosed type and conform to rules made under the Environment (Protection) Act, 1986. The height of stack of DG sets should be equal to the height needed for the combined capacity of all proposed DG sets. Low sulphur diesel should be used. The location of the DG sets may be decided in consultation with the Gujarat Pollution Control Board.</td><td>Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following:

Complied
DG sets are being used only as power back up source in case of power failure. Presently, cumulative capacity of all DG sets installed at APSEZ is 4843 KVA. All the generators are of enclosed type. During the compliance period of Oct'17 to Mar'18, there was no instance of power failure hence it was not required to operate the DG sets. However, for the air and noise emission assessment, the DG sets were turned on. Assessment was carried out by NABL accredited and MoEF&CC approved agency namely M/s. Pollucon Laboratories Pvt. Ltd. The summary of analysis results is mentioned below.

<table>
<tr><th>Parameter</th><th>Unit</th><th>Max</th><th>Min</th><th>Perm. Limit$</th></tr>
<tr><td>PM</td><td>mg/Nm^3</td><td>15.62</td><td>10.84</td><td>150</td></tr>
<tr><td>SO_2</td><td>ppm</td><td>4.53</td><td>2.46</td><td>100</td></tr>
<tr><td>NOx</td><td>ppm</td><td>31.72</td><td>26.69</td><td>50</td></tr>
</table>
$GPCB Permissible Limit

From the above results it can be inferred that the air and noise emissions are well within the stipulated norms. Please refer Annexure – 11 in the main report for detailed analysis reports and accreditation certificate. Approx. INR 27 Lakh is spent for all environmental monitoring activities during the period of FY 2017-18.

All the DG sets are of low sulphur diesel type. Certificate showing Sulphur content in diesel is attached as Annexure – 13 in the main report. DG sets are being used in conformance to the EPA norms and proof for the same is attached as Annexure – 14 in the main report.

Heights of stacks are maintained as needed for the combined capacity of all attached DG Sets. Locations of the DG sets are checked by GPCB officials during the site visits. Details of all DG set stack heights are mentioned below.

Values recorded confirms to the stipulated standards.

Noise monitoring is being carried out on regular basis at stipulated frequencies. The analysis results are being closely observed for incremental pollution load. From the above results and past data, it can be inferred that the noise levels are well within the prescribed standards. All the analysis data collected are submitted to the concerned authorities as part of the six monthly compliance reports. The data is also submitted to GPCB on monthly basis as part of the online submission – Monthly Patrak.

Please refer Annexure – 11 in the main report for detailed analysis reports and accreditation certificates. Approx. INR 27.0 Lakh is spent for all environmental monitoring activities during the period FY 2017-18.

Following safeguard measures are taken for abatement of noise emissions.
• Development of greenbelt along the periphery of the storage yards/back up area
• D.G. Sets having Acoustic enclosures
In view of the information furnished by the PP, the stipulated condition is considered complied.
COMPLIED</td></tr>
<tr><td>vii.</td><td>Green belt of adequate width and density preferably with local species along the periphery of the plot shall be raised so as to provide protection against particulates and noise.</td><td>Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following:
Being complied.

APSEZ has developed "Dept. of Horticulture" which is taking measures/ steps for terrestrial greening as well as mangrove plantation. Development of greenbelt at various locations within the SEZ is an ongoing activity. Green belt of 3 layer canopy will be developed as part of the development of SEZ.

The species such as Ficus Infectoria, Ficus religiosa, Terminalia arjuna, Cocos nucifera, Washingtonia fillifera, Casurina spp., Azadirachta Indica, Eucalyptus spp., Jatropha curacus, Ficus bengalensis, Subabool spp., Casia fistula, Date Palm and Delonix regia were grown in SEZ area.

Width of the green belt varies from 2 m to 8 m and density varies from 2000 to 2500 trees per hectare at various locations. Total 99.5 hectares of</td></tr>
</table>

Sr. No.	Conditions	Compliance Status as on 31-03-2018
		land with approx. 2.2 Lacs trees is developed within SEZ area till date. So, far more than 400 ha. area is developed as greenbelt with plantation of more than 8.0 Lacs trees within the entire APSEZ area. Please refer **Annexure – 10 in the main report** for further details regarding greenbelt development and mangrove afforestation. An updated green belt development plan is also attached as part of the said annexure. Total expenditures of the horticulture dept. for the F.Y. 2017-18 periods are INR 607 lakh. It may be noted that individual industrial units will also developed the greenbelt within their premises based on their planning & approvals and new industries coming up any will also comply as per their approvals. The same will be ensured by the environment monitoring committee of APSEZ. For the area where further development is yet to be carried out, APSEZ will ensure that greenbelt with 3 layer canopy is developed by either APSEZ or the industrial unit to whom the land is allotted. **In view of the information furnished by the PP and as per the site observation of excellent greenbelt developed in the saline soils which is commendable, the stipulated condition is considered compliance in progress in light of the proposed phase-wise green belt development.** **COMPLIANCE IN PROGRESS**
viii.	Weep holes in the compound walls shall be provided to ensure natural drainage of rain water in the catchment area during the monsoon period.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Boundary walls are constructed in such a way by keeping weep holes for defined river path to facilitate free flow of water and it is ensured that water is not stagnant at any given point during rainy season. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
ix.	Rain water harvesting for roof run-off and surface run-off, as plan submitted should be implemented.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Ground water recharge may not yield good results due to close proximity to the sea coast. Hence, APSEZ has carried out rainwater harvesting activities in the nearby villages for benefit of the locals. Following measures are taken for the same during the year 2011 – 13 which have benefited to the local farmers. 1. Pond deepening activities at villages 2. 18 check dams were constructed under the 'Sardar Patel Sahbhagi

2711

Sr. No.	Conditions	Compliance Status as on 31-03-2018
		Jalsanchay Yojna' Total cost of these efforts was approx. INR 320 lakh. During FY 2017-18, pond deepening work in Mota Bhadiya, Vadala and Bhujpur villages was carried out. The total cost incurred for this work was INR 16.7 Lakhs. Adani foundation has started participatory ground water management project. The objective of the project was to reduce the salinity ingress in and around the coastal regions of Mundra, Kutchh and mitigate the ill-effects of this manmade problem to improve the livelihoods of the rural people. The Project will help to get water table high, also it will help in agricultural activities. – as part of this initiative, below listed activities are initiated: • Ground Water Recharge activities at Jharpara, Navinal, Siracha, Nana Kapaya and Baroi villages • Monitoring of 109 wells by sample collection and analysis of the same (analysis is under progress) to measure the quality of water For further details please refer **Annexure – 20 in the main report** for CSR report. It may be noted that the individual industrial units will also be encouraged for taking various initiatives for rainwater harvesting within their premises / in the villages around the SEZ area. **In view of the information furnished by the PP, the stipulated condition is considered complied subject to acceptance by EC issuing authority.** **COMPLIED SUBJECT TO ACCEPTANCE BY EC ISSUING AUTHORITY**
x.	The ground water level and its quality should be monitored regularly in consultation with Central Ground Water Authority.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. Environment Monitoring is being carried out on regular basis in Port & SEZ areas through NABL accredited and MoEF&CC approved agency namely M/s. Pollucon Laboratories Pvt. Ltd. Summary of the ground water assessment for duration from Oct'17 to Mar'18 is mentioned below. **Bore Hole Water Sampling:** **Sampling locations & frequency: 4 nos. (every quarter)**

Sr. No.	Parameter	Unit	Max. Value	Min. Value
1	pH	--	8.12	6.93

Please refer **Annexure – 11 in the main report** for detailed analysis reports and accreditation certificates. Approx. INR 27 Lakh is spent for all environmental monitoring activities during the FY 2017-18 period. It may be noted that the analysis results of ground water quality are submitted to CGWB, West Central region, Ahmedabad. Copy of the last submission is attached as **Annexure – 21 in the main report.** **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xi.	Traffic congestion near the entry and exit points from the roads adjoining the proposed project site must be avoided. Parking should be fully internalized and no public space should be utilized.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied. The entry and exit gates of SEZ and port are provided with ample parking area (210838 m^2) near the gate. The entry / exit complex is fully equipped with traffic control equipments and round the clock security is provided for seamless support. No public space is utilized for parking of the vehicle. Please refer **Annexure – 22 in the main report** for photographs and area demarcation. **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xii.	A report on the energy conservation measures conforming to energy conservation norms finalized by Bureau of Energy Efficiency should be prepared incorporating details about building materials	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied Energy audit of port user buildings (including the details about building materials and technology etc.) is carried out once in three years. Last energy audit was done during Oct-2016. Report of the same is submitted to Chief Electrical officer, Gandhinagar. The said report was submitted to MoEF&CC, RO, Bhopal as part of the compliance report for the period Apr – Sept, 2017. Recommendations of the report are attached as **Annexure –**

2713

Sr. No.	Conditions	Compliance Status as on 31-03-2018
	& technology, R & D Factors etc. and submitted to the Ministry along with six monthly monitoring report.	**23 in the main report**. Some of the recommendations of these reports have already been implemented as follows. • Saving in PAC by overhauling with repairing damage fall ceiling and window curtain • Saving with Improving Power Factor • APFC Panel has already been installed and average PF maintained during last 2 months comes to 0.987 • The system voltage at load end is being maintained 230V and therefore there is no need to install AVC **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**
xiii.	Energy conservation measures like installation of CFLs/TFLs for the lighting the areas outside the building should be an integral part of the project design and should be in place before project commissioning. Used CFLs and TFLs should be properly collected and disposed off/sent for recycling as per the prevailing guidelines / rules of the regulatory authority to avoid mercury contamination. Solar panels may be used to the extent possible.	Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted the following: Complied Energy Conservation through Installation of Motion Sensor (Occu switch) & AC Temp. controls in few of the buildings are provided. Measures for energy conservation are incorporated at design stage. Few of the buildings in MSTPL are designed as green building. Some features of the same are as below. • Used fly ash based cement and bricks • Special types of glasses were used which gives maximum sunlight and less heat • VOC free paint used certified by CII (Certificate of Indian Industries) • Water flow reducer installed in the entire building CFL / LED lighting are being used at various common areas of SEZ. Used CFL are collected and sent for recycling through authorized e-waste collection agency. APSEZ installed & commissioned 1.5 MW roof top solar plant at residential township. Additional 1.7 MW roof top solar plants at the various locations of SEZ area are ready for commissioning. Please refer **Annexure – 24 in the main report** showing the photographs of the same. It may be noted that the individual industrial units will also be encouraged for taking various initiatives with respect to energy conservation (such as energy audit, installation of renewable energy sources, utilization of energy efficient fixtures etc.) **In view of the information furnished by the PP, the stipulated condition is considered complied.** **COMPLIED**

Sr. No.	Conditions	Compliance Status as on 31-03-2018	
			construction materials is being carried out on regular bases.
		Enforce proper maintenance of vehicles and construction equipment. Allowing only PUC approved vehicles in the site.	Please refer Condition No. ix of Part-B (General Conditions Construction phase) of EC and CRZ Clearance.
		Enforce usage of covered trucks for transport of construction material.	Covered trucks are being used for handling of construction materials.
		Noise Environment	
		Enforce proper maintenance of vehicles and construction equipment. Enforce use of earmuffs / earplugs to workers in high noise level areas.	The vehicles of on-going construction work enter inside the premises after the fitness check. Ear protection device is provided to workers in high noise areas.
		Water Environment	
		Provide temporary drinking water supply and proper sanitation facilities within the site	Provision of drinking water and sanitation facility is being provided.
		Land / Soil Environment	
		Proper disposal of construction debris at regular intervals	Construction debris is being kept at identified temporary storage area and is being utilized for area development.
		Thermal Environment	
		Enforce (i) use of Portland Pozzalano Cement / (ii) use of Portland Slag Cement / (iii) use fly ash as admixture in construction	Part of fly ash generated from Adani Power Limited, Mundra is being utilized by Adani Group to manufacture paver blocks and the same paver blocks are used for development of back up area, footpath, colonies area, parking area, approach road etc. Please refer Condition No. xi of Part-B (General Conditions: Construction phase) of EC and CRZ Clearance.
		Energy	
		Wherever possible, piping shall be along the natural topography to permit gravity flow. Else, energy efficient pumps shall be used. Pipe material shall be such as to minimize friction losses. Wherever possible, natural light	Energy efficient pumps and HDPE Pipelines are used for supply of utilities. Refer point no. xii of EC & CRZ Clearance in Part – B (Operation Phase) for energy efficient electrical

Sr. No.	Conditions	Compliance Status as on 31-03-2018	
		shall be used. Energy efficient electrical fittings and fixtures shall be used.	fittings. Few of the buildings in MSTPL are designed as green building.
		Operation Phase:	
		Land / Soil Environment	
		Good quality non-corrosive type pipeline should be used. Regular checking of the pipelines for early detection of any possible leakage and damage. Regular ground water monitoring should be done within the SEZ.	HDPE pipelines are used for supply of utility. Regular visual surveillance along the utility lines corridor is being done to check leakage or damage. Third party analysis of the ground water is being carried out at every three month by NABL and MoEF&CC accredited agency namely M/s. Pollucon Laboratories Pvt. Ltd. Please refer Condition No. v of Part-B (General Conditions: Construction phase) of EC and CRZ Clearance.
		The waste should be transported in covered trucks. Vermi-composting is highly recommended for treatment and disposal of biodegradable and kitchen wastes. Other domestic solid waste (garbage) shall be disposed through MSW facility or as per prevailing norms.	Please refer Condition No. iv of Part-B (General Conditions: Construction phase) of EC and CRZ Clearance.
		The waste should be transported in covered trucks. Transporter should be informed of remedial measures required to be taken in case of spillage of waste	Waste handling vehicles are being handled through covered trucks only. Details were submitted along with last compliance report submission i.e. Apr'17 to Sep'17.
		Socio-Economic Environment	
		It will encourage development of surrounding areas & further generate employment. People from various cultures shall mingle encouraging a more tolerant society.	Please refer Condition No. vii of Annexure – A (Compliance Status of MoEF & CC Order dated 18.09.2015).

*BDL = Below Detectable Limit

From the above results it can be inferred that

- The ground level in this area is saline in nature due to close proximity to the coast.
- There is no threat to ground water quality by leaching of heavy metals and other toxic contaminants.
- There is no leaching of heavy metals and other toxic contaminants through soil.

Such environmental monitoring is being carried out on continuous basis at stipulated frequencies. The analysis results are being closely observed for incremental pollution load. From the above results and past data, it can be inferred that the emission levels are well within the prescribed standards. All the analysis data collected are submitted to the concerned authorities as part of the six monthly compliance reports. The data is also submitted to GPCB on monthly basis as part of the online submission – Monthly Patrak.

Please refer **Annexure – 11 in the main report** for detailed analysis reports and accreditation certificates. Approx. INR 27.0 Lakh is spent for all environmental monitoring activities during the period FY 2017-18.

In view of the information furnished by the PP, the stipulated

Sr. No.	Conditions	Compliance Status as on 31-03-2018
	respective Regional Offices of MoEF by e-mail.	

A. Sumary Note for Waterfront Development Project (WFDP)

i. Implementation of Conditions:

Out of 31 total conditions, it may be seen that 22 are fully complied, 1 is agreed to comply, 3 are compliance not applicable to PP, 1 is partly complied, 2 are compliance in progress, 1 is complied subject to condition and 1 is noted and agreed. These have been explained in the foregoing compliance report against each of the conditions, and the PP needs to take necessary and time bound action for early compliance in respect of the relevant conditions.

ii. Court Cases and show cause/closure notices:

Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted that there are two court cases pending against the project (details below) and no show cause /closure notices have been issued by GPCB over the past 3 years.

Court cases:

There are two ongoing matters pending (one pending at High Court and other pending at Supreme Court). Details regarding both the matters including their status are mentioned below:

1) Kheti Vikas Seva Trust (an association of 200 villagers) has filed a writ petition dated 24th January 2011 before the Gujarat HC against the state of Gujarat, our Company, Adani Power Limited and others alleging that the power plant set up by Adani Power Limited, on the land allotted to our Company for the setting up of a special economic zone, is in violation of the necessary requirements for setting up such plants, including environmental laws. The writ petition has been dismissed by the Gujarat High Court on 17th April 2015. The Hon'ble Supreme Court of India on 18.3.2016 dismissed the appeal against the said order dated 17th April, 2015 of the Gujarat High Court.

   However, an application filed by the petitioner alleging non-compliance of an order of the Gujarat HC dated 12th July 2011 prohibiting the cutting of mangroves and other forests during the pendency of the petition without permission of the state forest and environment department in relation to the writ petition is still pending.

2) Pravinsingh Bhurabha Chauhan filed a public interest litigation by way of a writ petition before the High Court of Gujarat alleging that a certain plot of land known as 'Mor Dhuva' was not allotted to our Company and accordingly that our Company should be restrained from carrying out any activity, including ship recycling activities, without any prior permission or authorization in and around sand dunes including 'Mor Dhuva' in Tunda and Vandh villages, Kutch, Gujarat. In view of the affidavits filed by MOEF, and Govt of Gujarat the High Court dismissed the petition on 18.2.2015. The petitioner filed a special leave to appeal before the Supreme Court of India, challenging the order dated 18.2.2015 of Gujarat High Court and the same is pending.

2725.

B. Summary note for Multi Product SEZ, Desalination, Sea Water Intake, Outfall Facility and Pipeline project:

i. Implementation of Conditions:

Out of 77 total conditions, it may be seen that 59 are fully complied, 2 is agreed to comply, 3 are compliance not applicable to PP, 4 are complied subject to acceptance by MoEFCC, New Delhi, 5 are noted and agreed, 3 are compliance in progress, 1 is complied subject to needful amendment in EC by EC issuing authority. These have been explained in the foregoing compliance report against each of the conditions, and the PP needs to take necessary and time bound action for early compliance in respect of the relevant conditions and the general observations mentioned below.

ii. General Observations

Greenbelt needs to be further strengthened at individual industry level (located within the SEZ), which shall be reviewed Monitoring Committee constituted at SEZ level.

iii. Court Cases and show cause/closure notices:

Project Proponent vide letter dated 11.05.2018 received in MOEF&CC, RO Bhopal on 14.05.2018 submitted that there are two court cases pending against the project (details below) and one show cause notice have been issued by GPCB over the past 3 years (details below):

Court cases:

There are two ongoing matters pending (one pending at High Court and other pending at Supreme Court). Details regarding both the matters including their status are mentioned below:

1) Kheti Vikas Seva Trust (an association of 200 villagers) has filed a writ petition dated 24th January 2011 before the Gujarat HC against the state of Gujarat, our Company, Adani Power Limited and others alleging that the power plant set up by Adani Power Limited, on the land allotted to our Company for the setting up of a special economic zone, is in violation of the necessary requirements for setting up such plants, including environmental laws. The writ petition has been dismissed by the Gujarat High Court on 17th April 2015. The Hon'ble Supreme Court of India on 18.3.2016 dismissed the appeal against the said order dated 17th April, 2015 of the Gujarat High Court.
   However, an application filed by the petitioner alleging non-compliance of an order of the Gujarat HC dated 12th July 2011 prohibiting the cutting of mangroves and other forests during the pendency of the petition without permission of the state forest and environment department in relation to the writ petition is still pending.
2) Pravinsingh Bhurabha Chauhan filed a public interest litigation by way of a writ petition before the High Court of Gujarat alleging that a certain plot of land known as 'Mor Dhuva' was not allotted to our Company and accordingly that our Company should be restrained from carrying out any activity, including ship recycling activities, without any prior permission or authorization in and around sand dunes including 'Mor Dhuva' in Tunda and Vandh villages, Kutch, Gujarat. In view of the affidavits filed by MOEF, and Govt of Gujarat the High Court dismissed the petition on 18.2.2015. The petitioner filed a special leave to appeal before the Supreme Court of India, challenging the order dated 18.2.2015 of Gujarat High Court and the same is pending.

Show cause notices:

Sr. No.	Date of Show Cause Notice issued	Reason	Our Reply / Compliance	Reply submitted vide letter dated
1	01.12.2017	1. Resisted the Natural flow of River by providing of dredging material in Kevadi River 2. Diverted the Naturalflow of River	1. APSEZ has developed 3 culverts on the river Kevli to maintain the flow of the river and thus flow of the river is nowhere blocked. 2. Dredged material is used to provide proper bund so as to maintain the natural flow of Kevli River. No diversion of the Natural flow of River is made, rather it is channelized to meet main stream of Bhukhi River.	13.12.2017

Sr. No.	Conditions	Compliance Status as on 31-03-2019
v	All efforts shall be made for water conservation and rain water harvesting. Arrangements shall be made for roof top rain water harvesting from various structures.	Complied. Under the Water Conservation and Optimization Drive at APSEZ, various initiatives were taken for conservation of water such as, 1. 100% utilization of treated water for horticultural purpose. 2. Total 128 Water-free urinals are installed and in operation within APSEZ. 3. Recirculation of water from fixed firefighting system to reservoir through flexible pipe during testing of firefighting system. 4. Conservation of Condensate from Air Conditioner and use for gardening. 5. Water flow reducers (total 8740 nos.) are provided in taps of Adani House, Tug Berth, CT2, CT3 & CT4 buildings to reduce the water consumption and are in use. 6. Water Maker machine is installed near Tug Berth jetty which generates drinking water from atmospheric moisture. The capacity of this machine is 250 liters per day. 7. Attending leakages and damages of water lines at various locations of APSEZ. Above initiative have saved substantial amount of water consumption. Groundwater recharge cannot be done at the project site since the entire project is in the intertidal / sub tidal areas. Rain water within project area is managed through storm water drainage. During current year approx. 24 KL of rain water from storm water collected and utilized on land for gardening / plantation purpose. We have also connected roof top rain water duct of operational building (Tug Berth Building within MPT) with u/g water tank for utilization of collected rain water for gardening / horticulture purpose. Photograph showing roof top rain water harvesting system is attached as **Annexure – 2.** However, APSEZ has carried out rainwater harvesting activities in the nearby villages for benefit of the locals. Following measures are taken for the same during the

Sr. No.	Conditions	Compliance Status as on 31-03-2019
		year 2011 – 13 and the same have benefited to the local farmers. 1. Pond deepening activities at villages 2. 18 check dams were constructed under the 'Sardar Patel Sahbhagi Jalsanchay Yojna' Total cost of these efforts was approx. INR 320 lakh. Under Sujlam Suflam project Adani Foundation has successfully completed pond deepening work in Mundra & Abdasa Taluka in record time. 26 pond deepening in Mundra and 7 pond deepening in Abdasa accomplished with all parameters calculated. In Mundra taluka 51723 cum excavation work has been done which increase storage capacity of 51 ML. In Naliya taluka 14550 cum excavation work has been done which increase storage capacity of 15 ML. Total 66 ML storage capacity will be increased. **Participatory Ground Water Management:** Adani foundation has started participatory ground water management project. The objective of the project was to reduce the salinity ingress in and around the coastal regions of Mundra, Kutchh and mitigate the ill-effects of this manmade problem to improve the livelihoods of the rural people. The Project will help to get water table high, also it will help in agricultural activities. As a part of pre monsoon activities with ACT (Arid Communities and Technologies – NGO) under this program, we have carried out following work. But, due to negligible rainfall we are not able to find out outcome of this project. i. Borana – Artificial bore well recharge (work completed) ii. Mangara – Artificial bore well recharge (work completed) iii. Dhrub – Pond deepening work (work completed) iv. Mota Kapaya – abended bore well recharge (work completed) Please refer **Annexure – 3** of detailed CSR activity report for more details upon participatory ground water management initiatives and ground water recharging

<tr><td>viii</td><td>The mangrove afforestation shall be</td><td>Complied.</td></tr>
</table>

Sr. No.	Conditions	Compliance Status as on 31-03-2019
	undertaken at the identified sites and the progress report in this regard shall be submitted to this Ministry regularly. All the recommendations suggested in the NIO report for restoration of the coastal habitat by mangrove afforestation at Navinal island shall be strictly implemented.	All construction activities are completed and project is in operation phase since long time. 24 hectare of mangrove afforestation was carried out at identified sites in consultation with Dr Maity, (Mangrove Consultant of India). Green belt was developed in 78.87 ha. Total 159197 trees were planted with the density of 1993 trees per hectare within the port area. To enhance the marine biodiversity, till date APSEZ has carried out mangrove afforestation in more than 2850 ha. area across the coast of Gujarat. Total expenditure for the same till date is INR 832 lakh. So, far APSEZ has developed more than 455 ha. area as greenbelt with plantation of more than 8.3 Lacs saplings within the APSEZ area. Details on mangroves afforestation & Green belt development carried out by APSEZ till date is annexed as **Annexure – 5**.
ix	No ground water shall be withdrawn for this project.	Complied. Present source of water for various project activities is desalination plant of APSEZ and/or Narmada water through Gujarat Water Infrastructure Limited. Average water consumption for entire APSEZ area is 4.2 MLD during compliance period i.e. Oct'18 to Mar'19.
x	The project proponent shall ensure that the construction workers do not cut the Mangroves for fuel wood etc.	Complied. All construction activities are completed and project is in operation phase since long time.
xi	The project proponent shall ensure that no creeks are blocked and the natural drainage of the area is not affected due to project activities.	Complied. Prominent creek system (main creeks and small branches of creeks) in the study region are: (1) Kotdi (2) Baradimata (3) Navinal (4) Bocha (5) Mundra (Oldest port (Juna Bandar) leading to Bhukhi river) All above creeks are in existence allowing free flow of water and there is no filling or reclamation of any creek area. APSEZ has so far constructed 19 culverts having total length of approx. 1100 m with total cost of INR 20 Crores. Apart from that three RCC Bridges have been constructed over Kotdi creek with total length of 230 m at the cost of INR 10 Crores. Photographs of the same were attached as part of compliance report for the

adani	Adani Ports and SEZ Limited	From : Oct'18 To : Mar'19

Status of the conditions stipulated in Environment Clearance under CRZ notification

		duration of Apr'17 to Sep'17.
xii	The project proponent shall ensure that there will be no disposal of sludge and sewage generated from construction camps, surface run-off from construction sites, and oil and grease spillage from the construction equipment's in the creeks.	Complied. Project is in operation phase. Sewage generated from port is being treated in designated STP and treated sewage is used for horticulture purposes. **Location** / **Capacity** / **Quantity of Wastewater (Avg. from Oct'18 to Mar'19)** / **Type of ETP / STP** LT / 265 KLD / 99 KLD / Activated Sludge Third party analysis of the treated water is being carried out once in a month by NABL and MoEF&CC accredited agency namely M/s. Pollucon Laboratory Pvt. Ltd. Summary of the same for duration from Oct'18 to Mar'19 is mentioned below. **Parameter** / **Unit** / **Max** / **Min** / **Perm. Limit$** pH / -- / 8.4 / 7.1 / 6.5 to 8.5 TSS / mg/L / 72 / 25 / 100 TDS / mg/L / 1921 / 1024 / 2100 COD / mg/L / 94 / 68 / 100 BOD (3 Days @27°C) / mg/L / 26 / 18 / 30 $ as per CC&A granted by GPCB Please refer **Annexure – 4** for detailed analysis reports. Approx. INR 20.36 Lakh is spent for all environmental monitoring activities during the FY 2018-19.
xiii	The project proponent shall stick to the time bound program submitted to the Department of Environment, Government of Gujarat for the proposed activities including installation of desalination plant for meeting the entire water requirement. They shall coordinate their construction/operations	Complied. Desalination plant has already been installed as per time bound program and is in use. Details regarding water consumption are mentioned in Sr. no. ix above.

Sr. No.	Conditions	Compliance Status as on 31-03-2019
	schedule with the installation schedule of desalination plant.	
xiv	The project proponent shall ensure that the commercial fisheries are not hampered due to presence of barges, vessels and other activities in the region. Necessary plan in this regard shall be prepared in consultation with the NIO and submitted within 3 months.	Complied. No commercial fisheries are prevailing in this area except Pagadia and fishermen with small boats. Unhindered access is provided to the fishing boats. During project proposal, APSEZ proposed to provide four (4) dedicated accesses at Juna Bandar, Luni, Bavdi Bandar and Zarpara for the fishermen to approach the sea for fishing activity. However, during construction as well as operation, through fishermen consultative process, APSEZ has provided seven (7) access roads. Total length of all the approach roads is approx. 23 Kms and expenditure involved was Rs. 637 Lacs. There is no hindrance to the movement of fisherman boats. Details of the same were submitted along with last EC Compliance report for the period Apr'18 to Sep'18.
xv	The project proponent shall bear the cost of the external agency that may be appointed by the Department of Environment, Government of Gujarat for carrying out the supervision and/or the monitoring of the construction activities.	Complied. Construction activities are completed and project is in operation phase. As part of the directions given by MoEF&CC vides order dated 18th Sep, 2015, following studies were proposed. • NCSCM final report on comprehensive and integrated plan for preservation and conservation of mangroves and associated creeks in and around has been submitted to the concerned authorities i.e. MoEF&CC, New Delhi and GCZMA, Gandhinagar vide our letter dated 04.06.2018 and details of the same were submitted along with last EC Compliance report for the period Apr'18 to Sep'18. • A Regional Impact Assessment study to identify impacts of all the existing as well as proposed project activities in Mundra region. Total cost of the study is approx. INR 1.3 cr. which is financed by APSEZ. The study is recently concluded and the final report is submitted vide our letter dated 30.04.2018 to GCZMA and MoEF&CC for their consideration. Details of the same were submitted along with last EC Compliance report for the period

Sr. No.	Conditions	Compliance Status as on 31-03-2019
		Apr'18 to Sep'18.
xvi	The project proponent shall carry out the post-project monitoring of various environmental parameters in consultation with the Department of Environment, Government of Gujarat and Gujarat Pollution Control Board.	Complied. Monitoring of various environmental parameters for Ambient Air, Noise, Wastewater, ground water, marine water and sediments along with the parameters mentioned in the consent order issued by GPCB is being carried out by NABL and MoEF&CC accredited agency namely M/s. Pollucon Laboratory Pvt. Ltd. Monitoring reports for the period from Oct'18 to Mar'19 are enclosed as **Annexure – 4**.
xvii	The project proponent shall prepare the detailed traffic control management plan for the port and shall participate in the VTMS to be developed for the Gulf of Kachchh.	Complied. APSEZ is practicing well defined traffic control procedure. A VTS service for Gulf of Kutch is operated by Directorate General of Lighthouses and Lightships (DGLL), Govt. of India. APSEZ is practicing well defined traffic control procedure. Marine Control of APSEZ provides traffic update to vessels in Mundra Port Limit on VHF Channel-77. Arrival and departure information in Gulf of Kutch is provided to VTS information cell through an agent or directly by sending an e-mail to vtsmanagergulfofkutch @yahoo.com and vtsgok@yahoo.com.
xviii	Action plan shall be prepared by the project proponents to prevent damage to marine life and also to the coastline in case of any oil spillage and the same shall be strictly implemented. Regular mock drills shall be carried out to ensure fitness of the equipment in place.	Complied. Oil spill contingency response plan updated on 01.10.2018 is in place and implemented. Copy of updated plan is enclosed as **Annexure – 6**. A Joint Inspection of Port Oil Spill Response (OSR) capability by Indian Coast Guard (ICG), Gujarat Maritime Board (GMB) & Oil Industry Safety Directorate (OISD) was held on 13 Feb 2018 at APSEZ. The final assessment rating was given as "Very Satisfactory." Mock drills are conducted regularly. Latest mock drill was conducted on 25.08.2018 for overflow of bunkers from vessel during inter tank transfer. Report was submitted along with last EC Compliance report for the period Apr'18 to Sep'18.

adani	Adani Ports and SEZ Limited	From : Oct'18 To : Mar'19

Status of the conditions stipulated in Environment Clearance under CRZ notification

Sr. No.	Conditions	Compliance Status as on 31-03-2019
xix	The project proponents shall work out the maximum quantity of spilled material, which can find its way into the coastal waters, under different accident scenarios, and their impact on aquatic life shall be studied after clearly demarcating the impact zones. On the basis of such studies, the necessary action plan to mitigate the likely impacts shall be prepared before commencement of the operations. Action taken report in this regard shall be submitted to the Ministry.	Complied. Oil spill contingency plan is in place to handle Tier 1 level oil spills considering different accident scenarios, and the vulnerable areas are identified and mitigation plan is prepared. Based on the oil spill modeling study, it has been observed that crude oil spill of 700 tons (Tier-I) will spread over an area having radius of around 400 m within 4hr. APSEZ already has facilities for combating a Tier-1 spill. Recommendations of Marine EIA by NIO with respect to pollution emergency contingency plan for Multipurpose Terminal, Container, Dry & Break Bulk Terminal as well as associated facilities are addressed in Oil Spill Response Plan. This action plan prepared by APSEZ to combat the oil spill (LOS-DCP) is in accordance with the NOS DCP, International Petroleum Industry Environmental Conservation Association (IPIECA). A Joint Inspection of Port Oil Spill Response (OSR) capability by Indian Coast Guard (ICG), Gujarat Maritime Board (GMB) & Oil Industry Safety Directorate (OISD) was held on 13 Feb 2018 at APSEZ. The final assessment rating was given as "Very Satisfactory." The copy of updated Oil Spill Contingency Response Plan is attached as **Annexure – 6**.
B. General Condition		
i	Construction of the proposed structures should be undertaken meticulously conforming to the existing Central / local rules and regulations. All the construction designs / drawings relating to the proposed construction activities must have approvals of the concerned	Already complied. Not applicable at present. All construction activities are carried out confirming to the existing rules and regulation and as per the CRZ notification. Approval under the preview of GMB, PESO and Factories act were taken prior to start of construction.

Sr. No.	Conditions	Compliance Status as on 31-03-2019
vii	To prevent discharge of sewage and other liquid wastes in to the water bodies, adequate system for collection and treatment of the wastes must be provided. No sewage and other liquid wastes without treatment should be allowed to enter into the water bodies. The quality of treated effluents, emissions, solid wastes and noise levels must confirm to the standards laid down by the competent authority including the Central/State Pollution Control Board.	Complied. Adequate pipelines are provided to ensure the collection and treatment of effluent. Raw sewage is collected from 30 different collection pits at APSEZ locations through browsers and is transferred to ETP/STPs for treatment. Sewage generated from port is being treated in designated ETP/STPs and treated sewage is used for horticulture purposes. No treated water is discharged into the water bodies. Summary of treated effluent for the duration from Oct'18 to Mar'19 is provided in Specific Condition No. xii above. Third party analysis of the treated water, Flue Gas, Ambient Air and Noise is being carried out regularly by NABL and MoEF&CC accredited agency namely M/s. Pollucon Laboratories Pvt. Ltd. Summary of six monthly monitoring of Flue gas emission is provided below. **Total Nos. of Stacks: 16 Nos.** **Parameter** | **Unit** | **GPCB Limit** | **Min** | **Max** PM | mg/Nm^3 | 150 | 14.28 | 24.62 SO_2 | ppm | 100 | 2.93 | 6.68 NO_x | ppm | 50 | 23.70 | 39.45 Six monthly reports of flue gas emissions for duration from Oct'18 to Mar'19 are attached as **Annexure – 4.** Summary of Ambient Air and Noise for duration from Oct'18 to Mar'19 is provided in general condition No. v above. **Waste Management** – APSEZ has adopted 5R concept for environmentally sound management of different types of solid & liquid wastes. Please refer below details about management of each type of waste. **Municipal Solid Waste**: A well-established system for segregation of dry & wet waste is in place. All wet waste (Organic waste) is being segregated & utilized for

Sr. No.	Conditions	Compliance Status as on 31-03-2019
		compost manufacturing and/or biogas generation for cooking purpose. The compost is further used by in house horticulture team for greenbelt development. Whereas dry recyclable waste is being sorted in various categories. Presently manual sorting is being done for sorting of different types of solid waste. Segregated recyclable materials such as Paper, Plastic, Cardboard, PET Bottles, Glass etc. are then sent to respective recycling units, whereas remaining non-recyclable waste is bailed and sent to cement plant (M/s. Sanghi Industries Ltd., Kutch and/or M/s. Ambuja Cement Ltd., Kodinar) for Co-processing as RDF (Refused Derived Fuel). **Hazardous Waste:** • E – Waste & Used Batteries are being sold to GPCB registered recyclers namely M/s. e-Processing House. • Solid Hazardous Waste is being disposed through co-processing through common facility i.e. M/s. Saurshtra Enviro Projects Pvt. Ltd., Bhachau and/or cement industries of Sanghi Industries Ltd., Kutch and/or Ambuja Cement Ltd., Kodinar. Used/Waste Oil is being sold to GPCB authorized recyclers / re-processors namely M/s. Western India Petrochem Industry, Bhavnagar. • Downgrade chemicals generated from cleaning of storage tanks / pipelines are being sold to authorized solvent recovery facilities namely M/s. Acquire Chemicals, Ankleshwar however during the compliance period, there was no disposal of downgrade chemicals. • Slop Oil received from vessels is treated to separate water and oil particles in Oil Water Separator system. Separated oil from the same is being sold to authorized recycler / reprocessor namely M/s. Western India Petrochem Industry, Bhavnagar and water is sent to ETP for further treatment. However during the compliance period, there was no disposal of Slope Oil. Details of permissions / agreements of hazardous waste authorized vendors were submitted along with last EC Compliance Report for the period Apr'18 to Sep'18.

Sr. No.	Conditions	Compliance Status as on 31-03-2019	
xvii	The recommendations made in the Environmental Plan and Disaster Management Plan, as contained in the EIA and Risk Analysis Reports of the project, shall be effectively implemented.	Complied All the recommendations are being implemented. **Few Marine EIA recommendations:**	
		Operational protocols and safety procedure should be printed and freely available to concerned staff. The employees must be adequately trained to inculcate a high level of competence not only in day to day operations but also during emergency situations. Periodic refresher courses must also be organized to maintain the level of their competence.	The company has written the operational protocols and safety procedures as a part of ISO 14001:2015, ISO 45001:2018 and ISO 9001:2015 certifications. APSEZ has established training department to impart training to its employees. IMO module course organized by Maritime Training Institute is conducted & 36 personnel have achieved IMO level 1 & 4 personnel have achieved IMO Level 2. Different training modules as Oil Spill, Oil Spill Equipment, Notification exercise, Incident are conducted at different frequency.
		Periodic monitoring should be undertaken at the designated sites after the terminals become operational and the results of each monitoring should be carefully evaluated to identify changes if any and to take corrective measures, if warranted.	Monitoring of various environmental parameters for Ambient Air, Noise, Wastewater, ground water, marine water and sediments is being carried out by NABL and MoEF&CC accredited agency namely M/s. Pollucon Laboratories Pvt. Ltd. Monitoring reports for the period from Oct'18 to Mar'19are enclosed as **Annexure – 4**.
		Adequate vigilance is required to adherence of ships to Marpol protocol and related regulations.	During the vessel declaration compliances with respect to Air Pollution and Oil are monitored by the Port Authority. The ships are certified with international certification bodies only after complying with the Marpol protocol.
		Manual Listing Procedure for conducting ship movement operations in the port area must be available to the concerned staff.	Berthing Policy & Tariff Structure is made available for conducting ship movement to the concerned staff and made available on web link www.adaniports.com/pdfs/PIB_06122013.pdf Port Information Booklet is also made available on web link www.adaniports.com/Port_Operations_Port_Tariffs.aspx

Status of the conditions stipulated in Environment Clearance under CRZ notification

Sr. No.	Conditions	Compliance Status as on 31-03-2019
		Few Risk Assessment Recommendations of EIA of Multipurpose Terminal carried out in 1995:
		There should be a provision for activating a fire alarm at the fire control room from various strategic/hazard prone areas in the factory. In areas where there is high level of Noise, It may be necessary to install more than one audible alarm transmitter or flashing lights. — Provision of activating a fire alarm is available at Control Room. Employees are provided with communication system with which they can communicate about any emergency to Control Room. Emergency alarm systems are installed which is audible from any port location. Alarm testing is carried out at a frequency of once in a month.
		Wind sleeves with adequate lightings around them should be provided at various places to guide personnel to escape in a direction perpendicular to the prevailing wind direction. — Wind sleeves with adequate various lighting system around them are available at various places of Port locations to guide personnel to escape in a direction perpendicular to the prevailing wind direction.
		Succession or second line Coordinators should be named for assuming responsibilities in case disaster occurs in the absence of principal coordinators. — Disaster Management Plan for APSEZ is in place and that includes second line coordinators to assume responsibilities in absence of principal coordinators.
xviii	A separate Environment Management Cell with suitably qualified staff to carry out various environment related functions should be set up under the charge of a Senior Executive who will report directly to the Chief Executive of the company.	Complied. M/s APSEZL has a well structured Environment Management Cell, staffed with qualified manpower for implementation of the Environment Management Plan. The Environment Management Cell is headed by Sr. Manager who directly reports to the top management. The organogram of Environment Cell is enclosed as **Annexure – 8**.
xix	The project affected people, if any, should be properly compensated and rehabilitated.	Not applicable. The project was conceptualized in such a way that there are no impacts on the local settlements due to the project proposal. However, the project is already implemented and is in operation phase.
xx	The funds earmarked for environment protection measures should be maintained in a separate	Complied. Separate budget for the Environment protection measures is earmarked every year. All environment and horticulture activities are considered at corporate level

Sr. No.	Conditions	Compliance Status as on 31-03-2019
	account and there should be no diversion of these funds for any other purpose. A year wise expenditure on environmental safeguards should be reported to this Ministry.	and budget allocation is done accordingly. No separate bank account is maintained for the same however, all the expenses are recorded in advanced accounting system of the organization. Budget for environmental management measures (including horticulture) for the FY 2018-19 is to the tune of INR 1069 lakh. Out of which, Approx. INR 1008 lakh are spent during the FY 2018-19. Detailed breakup of the expenditures for the past 3 years is attached as **Annexure – 9**.
xxi	Full support should be extended to the officers of this Ministry's Regional office at Bhopal and the officers of the Central and State Pollution Control Boards by the project proponents during their inspection for monitoring purposes, by furnishing full details and action plans including the action taken reports in respect of mitigative measures and other environmental protection activities.	Complied APSEZL is always extending full support to the regulatory authorities during their visit to the project site. Last visit of Regional Office, GPCB was done on 20.11.2018 for Main port. APSEZL has submitted the reply to the site visit report vide letter dated 22.11.2018 incorporating details of action taken in respect of the observations of the GPCB representative. The details of the same are attached as **Annexure – 10**.
xxii	In case of deviation or alteration in the project including the implementing agency, a fresh reference should be made to this Ministry for modification in the clearance conditions or imposition of new ones for ensuring environmental protection. The project proponents should be responsible for implementing the suggested safeguard measures.	Point Noted.
xxiii	This Ministry reserves the right to revoke this	Point Noted.

Sr. No.	Conditions	Compliance Status as on 31-03-2019
	clearance, if any of the conditions stipulated are not complied with to the satisfaction of this Ministry.	
xxiv	This Ministry or any other competent authority may stipulate any other additional conditions subsequently, if deemed necessary, for environmental protection, which shall be complied with.	Point Noted.
xxv	A copy of the clearance letter will be marked to concerned Panchayat / local NGO. If any, from whom any suggestion / representation has been received while processing the proposal.	Not applicable at present
xxvi	State Pollution Control Board should display a copy of the clearance letter at the Regional Office, District Industries centre and Collector's Office/Tehsildar's Office for 30 days	Applicable for State Pollution Control Board.
xxvii	The project proponent should advertise at least in two local newspapers widely circulated in the region around the project, one of which shall be in the vernacular language of the locality concerned informing that the project has been accorded environmental clearance and copies of clearance letters are available with the State Pollution Control	Already Complied.

Sr. No.	Conditions	Compliance Status as on 31-03-2019
	Board and may also be seen at Website of the Ministry of Environment and Forests at http://www.envfor.nic.in/.	
xxviii	The Project Proponents should inform the Regional Office as well as the Ministry the date of financial closure and final approval of the project by the concerned authorities and the date of start of Land Development Work.	Already Complied.
xxix	The Project Proponent should make specific arrangements for rainwater harvesting in the project design and the rainwater so harvested should be optimally utilized.	Complied Groundwater recharge cannot be done at the project site since the entire project is in the intertidal / sub tidal areas. Rain water within project area is managed through storm water drainage. Please refer specific condition no. v for further details upon ground water recharging and rain water harvesting is being done by Adani Foundation as a part of CSR activity.

Annexure - A

adani	Adani Ports and SEZ Limited	From : Oct'18 To : Mar'19
Status of the conditions stipulated under CRZ Recommendation		

Half yearly Compliance report of CRZ recommendation for "Port expansion project including dry/break bulk cargo container terminal, railway link and related ancillary and back-up facilities at Mundra Port, Dist. Kutch in Gujarat vide DoEF, GOG letter no. ENV-1098-6477-p1 dated 28th October 1999.

Sr. No.	Conditions	CRZ Compliance Status as on 31-03-2019
A. Specific Condition		
1	The company shall submit comprehensive Environmental Impact Assessment Report and Risk Assessment Report containing worst case scenario and detailed oil spill control management plan before carrying out the construction activities and shall implement all the mitigative measures/suggestions/recommendations given in the report of NIO and Tata AIG Risk Management Services.	Already Complied. Not applicable at present Environmental Clearance was granted based on the submission of said documents. Rapid EIA was submitted on Feb 29, 2000 & Risk Assessment Report containing worst case scenario and detailed oil spill control management plan was submitted on Dec 28, 1999. For more details, please refer to general condition no xvii of the compliance of EC and CRZ clearance
2	The company in no case tap ground water.	Complied. Please refer to Specific Condition no. ix of the compliance of EC and CRZ clearance above for details.
3	The company shall not cut mangroves for the project activities except for stray mangrove seeding required for the railway line only after detailed assessment through NIO and 25 acre of land shall be planted with mangroves in consultation with NIO.	Already Complied. Not applicable at present The company has not cut any mangroves. APSEZ has carried out 24 hectare of mangrove plantation near Navinal creek. To enhance the marine biodiversity, till date APSEZ has carried out mangrove afforestation in more than 2850 ha. area across the coast of Gujarat. Total expenditure for the same till date is INR 832 lakh. So, far APSEZ has developed more than 455 ha. area as greenbelt with plantation of more than 8.3 Lacs saplings within the APSEZ area. Details on mangroves afforestation & Green belt development carried out by APSEZ till date is annexed as **Annexure – 5**. EIA report was prepared by NIO in which all impacts on
4	The company shall carry out the mangroves plantation programme in addition to 25-acre	

adani	Adani Ports and SEZ Limited	From : Oct'18 To : Mar'19

Status of the conditions stipulated under CRZ Recommendation

Sub: - Correction of Consolidated Consent and Authorization (CC& A) of this Board.

Ref: -

1. Consent Renewal Order No: AWH-83561 dated 9.1.2017 validity up to 20.11.2021 issued vide letter No: GPCB/CCA-Kutch-39 (4)/ID-17739/403658 dated 9.2.2017
2. Your CCA- Amendment Application Inward no-124026 dated 12.7.2017
3. CCA Amendment vide No: GPCB/CCA-Kutch -39 (4)/ID-17739/424578 dated 03.10.2017
4. CCA Amendment vide No: GPCB/CCA-Kutch -582(3)/ID-35427/448701 dated 22.03.2018
5. CTE obtained vide letter No PC/CCA-Kutch-582 (3) / ID-35427/1700294 dated 4.1.2014
6. Your Letter dated 5.09.2018

2. The Products mentioned at Condition No: 2 of the above said CCA issued dated 03.10.2017 corrected as under: -

No.	Name Of Product	Existing Quantity	Proposed Quantity	TOTAL Quantity
1	General Cargo	4.0 Lac MT/Month	------	4.0 Lac MT/Month
2	Liquid Cargo (Chemical/Poc Products	2.65 Lac MT/Month	--------	2.65 Lac MT/Month
3.	Storage And Distribution Of Bitumen	26,400 MT/Month	------	26,400 MT/Month
4.	Dry Cargo Handling	9 MMT/Month	------	9 MMT/Month
5.	Container Terminal Handling Operation	4.5 Million TEUs/Annum	1.2 Million TEUs/Annum	5.7 Million TEUs/Annum
6.	Waste destruction system for decomposition/destruction of municipal solid waste	3.5 Cubic Meter (MSW Destruction Capacity @ 500 Kg/day)	-----	3.5 Cubic Meter (MSW Destruction Capacity @ 500 Kg/day)
7.	Oil water separate (Flame Proof) to remove –Oil portion from slope oil received from Vessels/Ships	25 M^3/Hr	---	25 M^3/Hr
8.	Import, Storage And Distribution Of Edible Oil	1.25 Lac MT/Month	0.6 Lac MT/ Month	1.85 Lac MT/Month

Outward No: 12577 24/10/2018

3. Earlier, Board has granted CTE with reference to point No 5 of reference and accordingly, certain project activities to be further developed like cargo handling facilities for Adani port and SEZ limited for various commodities like Container, Coal, Iron ore, Steel & Scrap, Dry Bulk, Project and Heavy Engineering, Crude oil (SPM), POL, Chemicals and vegetables oils, automobiles etc.

   The Development for this balance cargo handling capacity will be done in future based on your business requirements and CCA amendment will be applied and issued in their respective PCB IDs as and when specific commodities will be commissioned only after completing the necessary formalities for obtaining of CCA amendment.

4. Remaining all other conditions of Consolidated Consent (CC&A) vides order No: AWH-83561 dated 9.1.2017 validity up to 20.11.2021 issued vide letter No: (1) GPCB/CCA-Kutch-39 (4)/ID-17739/403658 dated 9.2.2017. (2) No: GPCB/CCA-Kutch -39 (4)/ID-17739/424578 dated 03.10.2017 (3) No: GPCB/CCA-Kutch -39 (4)/ID-17739/424578 dated 03.10.2017 shall remains unchanged.

Subject : Amendment to Consolidated Consent and Authorisation (CC&A).

Reference :
1) CCA of the Board issued to your unit vide order No.AWH-83561 dated 09/01/201,No.PC/CCA-KUTCH-39(4)/GPCB ID17739/403658 date 09/02/201 .
2) Correction of CCA of the Board issued to your unit vide order No. PC/CCA-KUTCH-39(5)/GPCB ID17739/473575 date 24/10/2018.
3) Your CCA Amendment Application Inward ID No.146485, dated 24/10/2018.

Sir,

In exercise of the power conferred under section-27 of the Water (Prevention and Control of Pollution) Act-1974, under section-21 of the Air (Prevention and Control of Pollution)-1981 and Authorization under rule 6(2) of the Hazardous & Other Waste (Management & Transboundary Movement) Rules-2016 & as amended framed under the Environmental (Protection) Act-1986 and without reducing your responsibility under the said Acts/Rules in anyway; this Board is empowered to amend consent order conditions. Accordingly, the Consolidated Consent and Authorisation (CC&A) issued vide letter no. Consent order no. AWH-83561, dated 09/01/2018 no. PC/CCA-KUTCH-39(4)/GPCB ID17739/403658 date09/02/2017.which is valid up to 20/11/2021 under reference (1) and (2) stands amended in respect of the following conditions.

1. **Consent Order No.: H-98086 Date of Issue: 25/12/2018.**
2. The consent order shall be valid up to **20/11/2021.**
3. There shall be no change in any manufacturing activity and Air Details.
4. **CONDITIONS UNDER WATER ACT 1974 AMENDED AS FOLLOWS:**
   - The condition no. 3.1 shall be read as;

3.1 The quantity of the industrial effluent from manufacturing process and other ancillary operations shall not exceed 90.31KL/day. further generated waste water of 60 KL/day from washing of tank is treated in exiting ETP & treated waste water shall be used for Gardening and Plantation purpose.

SUBJECT TO THE FOLLOWING SPECIFIC CONDITIONS:

1. Unit shall strictly adhere to provisions of Hazardous and Other Wastes (Management and Trans boundary Movement) Rules, 2016 (H&OW (M&TBM) Rules-2016 and generated waste oil within ship shall be disposed as per the provisions of (H&OW (M&TBM) Rules-2016 only.

2. Unit shall not import of waste oil/ slope oil as per provisions of Hazardous and Other Wastes (Management and Trans boundary Movement) Rules, 2016.
3. Unit shall provide port reception facility to channelize the disposal of waste oil generated from ships/ vessels in environmentally sound manner.
4. Unit shall submit waste oil records and submit waste oil details with quantity to Board for every six months to this office and also to Regional office, Kutch (East) for its review and inspection.
5. Unit shall dispose of entire waste oil of ships/ vessels to the Registered Recyclers/ Re-processors as per the provisions of Hazardous and Other Wastes (Management and Transboundary Movement) Rules, 2016.

5. **CONDITIONS OF AUTHORIZATION UNDER HAZARDOUS AND OTHER WASTE (M & TM) RULES – 2016 AMENDED AS FOLLOWS:**

- The conditions no 5.1 shall be read as:

5.1 Adani Ports & Special Economic zone Limited, is hereby granted an authorization to operate facility for following hazardous wastes on the premises situated at Plot No: 169/P At Navinal Island, Taluka: Mundra, Dist: Kutch

Sr. No.	Waste	Quantity per Year			Cat.	Facility
		Existing	Proposed	Total		
1	Used Spent Oil	238 MT	--	238 MT	5.1	Collection, storage, Transportation, Disposal by selling out to registered recyclers
2.	ETP Sludge	1.095 MT	--	1.095 MT	35.3	Collection, storage, Transportation, Disposal at TSDF site of SEPPL/NECL
3.	Contaminated cotton rags or other cleaning materials	31 MT	--	31 MT	33.2	Collection, storage, Transportation, Disposal by Co-processing at cement plant of CHWIF
4	Asbestos Waste	Whatever quantity generated	--	Whatever quantity generated	B-1	Collection, storage, Transportation, Disposal at TSDF site
5	Glass Wool waste (Thermal insulation material)	Whatever quantity generated	--	Whatever quantity generated	H-6.1	Collection, storage, Transportation, Disposal at TSDF site
6	Down grade chemicals	Whatever quantity generated	--	Whatever quantity generated	20.2	Collection, storage, Transportation, Disposal by sending to authorized Solvent
7	Discarded Container/ Barrel/ Contaminated Liners	16 MT/year	--	26 MT/year	33.3	Collection, storage, Transportation, Disposal by selling out to registered decontamination facility

ANNUAL REPORT 2018-19

For a better tomorrow

Adani Foundation
Adani House, Port Road, Mundra – Kutch 370 421
[info@adanifoundation.com] [www.adanifoundation.com]

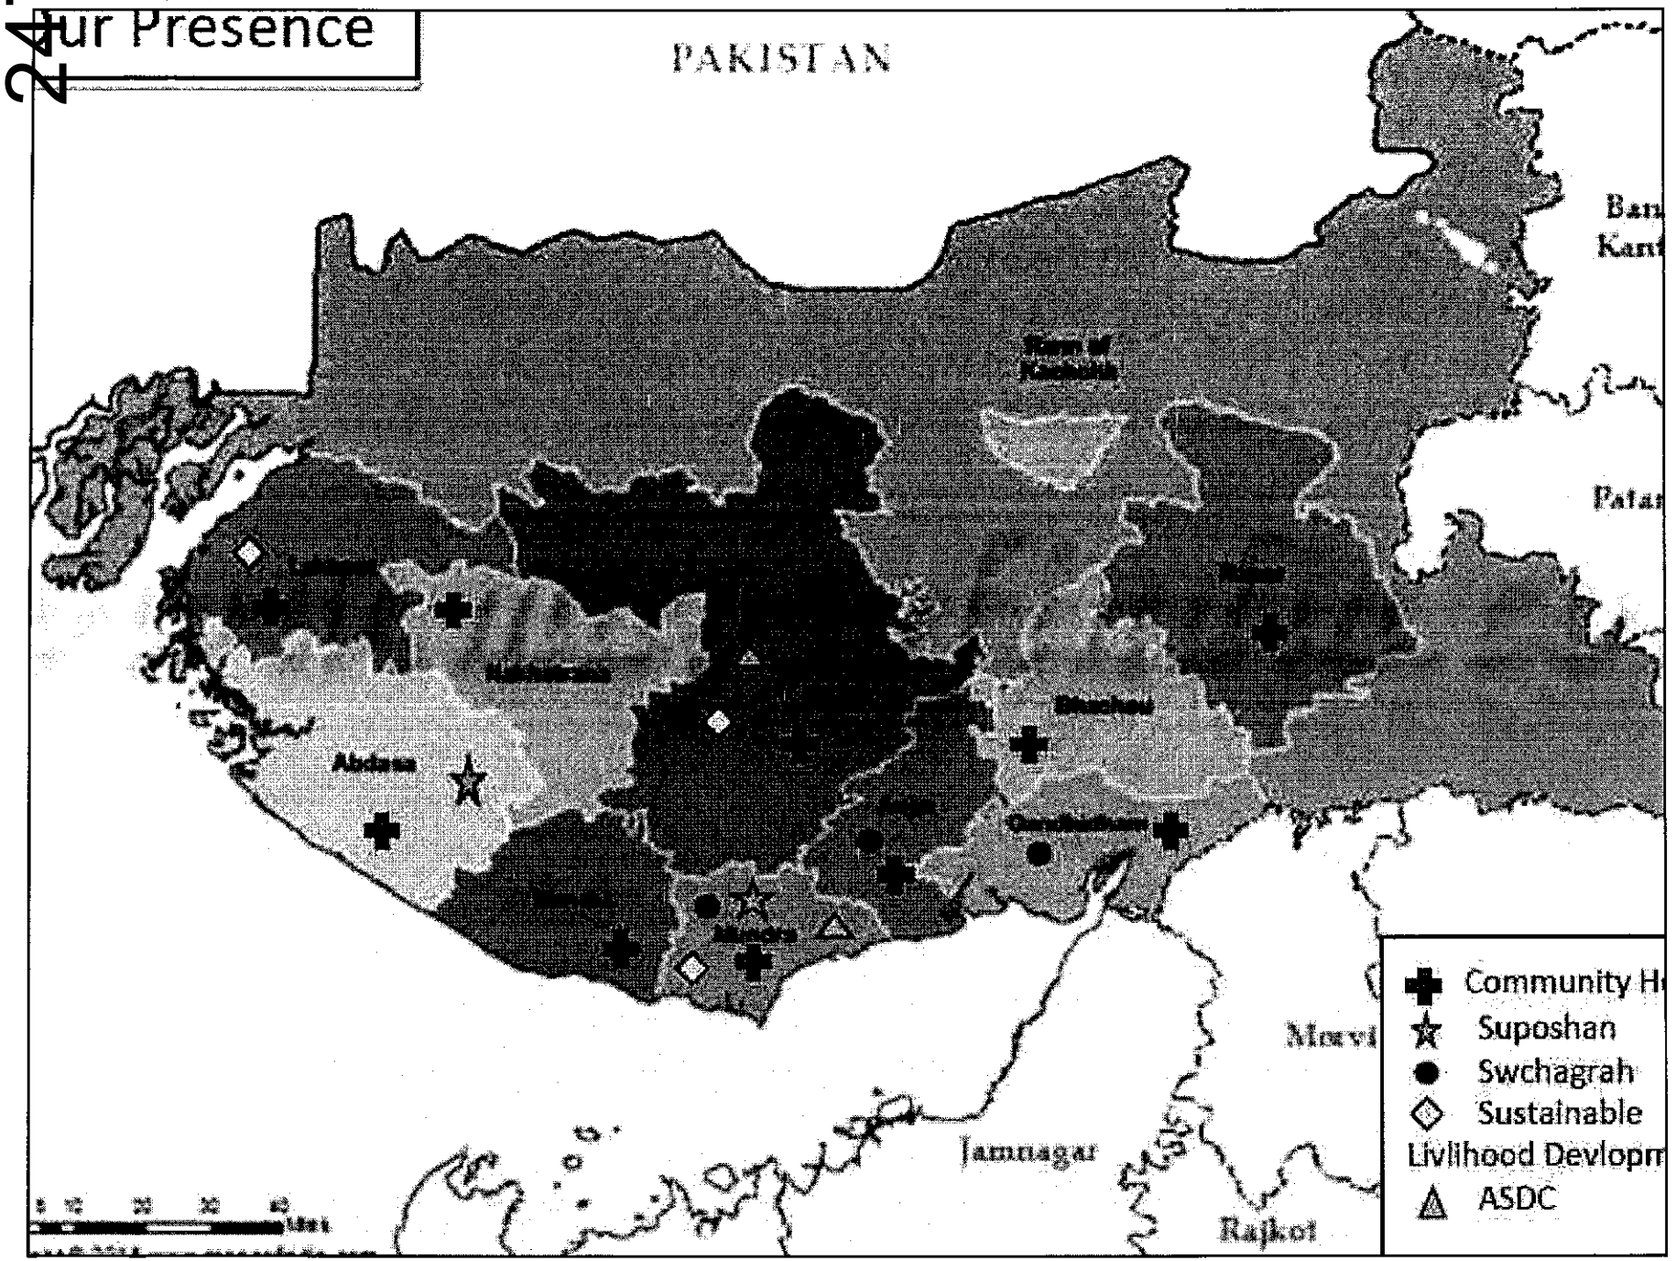
Our Journey

The year 2018-19 has passed off with passion and courage to work for the commitment given to the community. It is essential that sustained growth is achieved at rural level along with the industrial development. This can be made possible by involving more and more people in the rural development programme.

Since 1996, The Adani Foundation Mundra is committed to the cause of the deprived and underprivileged. It has been working relentlessly across 6 Talukas, covering 81 villages, to uplift the lives of more than 42,000 families with a multi-faceted approach.

This year conceded with more streamline projects of Education i.e. Utthan – to enhance primary education of 17 schools of Mundra, milestone achievement in malnourishment project, Launched Swachhagraha in four talukas and 400 schools of Kutchh, considerable impact created by fisherman amenities projects and new era defined in agriculture projects i.e. tissue culture and fodder sustainability .

The people of Kutch, especially that of Mundra, have generously supported the activities carried out by the Adani Group or else this wouldn't have been possible. Their determination, understanding and commitment have strengthened the development even more.



Thanks to Mr. Rakshit Shah and Mr. Avinash Rai for being mentor of the team Always !

Our Achievement would not be possible without the ultimate support by Mr. P N Roy Chaudhry, Executive Director - AF and plentiful faith and passionate support by Dr. (Mrs.) Priti G Adani, Chairperson– Adani Foundation

Education

Beneficiaries Detail

- 2598 Students : 17 Schools Utthan
- 2300 Enrollment Kit : 118 Schools
- 704 Students : Dignity of Workforce
- 345 Mothers : Mother's meet
- 5542 Students : 116 Institute Udaan
- 387 Students : Adani Vidya Mandir
- 206 Teachers : Guruvandana- I,II,III,I

Project Utthan

Project Utthan : Adani foundation has been promoting various educational and human initiatives in education, community health, sustainable livelihood and Rural Infrastructure.

In this context with an aim to enhance the quality of primary education in Kutch district, Adani foundation adopted 17 government school located at Mundra Taluka under the project 'UTTHAN' a drive of quality education.

Adani foundation is expected to achieve visible and measurable important in scholastic area.

Adani foundation will be focusing to bring the positive evidences of change in the personal, behavior and academic development of the students.

2480 2778.

Kick Start of "Utthan"

School improvement and teachers development is a multilayered approach. Therefore, school reform and initiative need to be carefully planned and executed by involving all stakeholders. In the process of implementing school improvement programme, teachers play critical role in institutionalizing change initiative.

A number of activities have been taken into account bring about change and enhance quality education in schools by Government, NGO and CSR,

From Year 2018 – Government of Gujrat has given responsibility through memorandum of understanding of 17 Schools for academic and overall development of school under Project "Uthhan" to Adani Foundation. Many workshops and training programmes are organized to improve the quality of education and support government schools.

In Utthan, main focus on upbringing of students (Priya Vidhyarthi) to the minimum level of reading, writing and counting (Vachan, Lekhan and Ganan). For making this mission successful, para teacher is appointed for each school.

Apart from this, English is introduced from standard first to create strong base. Also distributed science kit, sports kit, music kit to all 17 schools along with library cupboard and 100 books.

Smart class is given to all 17 schools with proper training to teachers for optimum utilization.

Objective of "Utthan"

- To improve basic knowledge of Math, Languages, English and Computer among students of Govt. schools.
- To Raise Minimum Level of weak students

Output of "Utthan"

- Increase enrolment ratio of students to 100%
- 100% regular present of students in school
- To improve their arithmetic, reading capacity in various languages, English etc.
- To increase confidence level of students
- Involvement of local community, village leaders and local Govt. through various activities

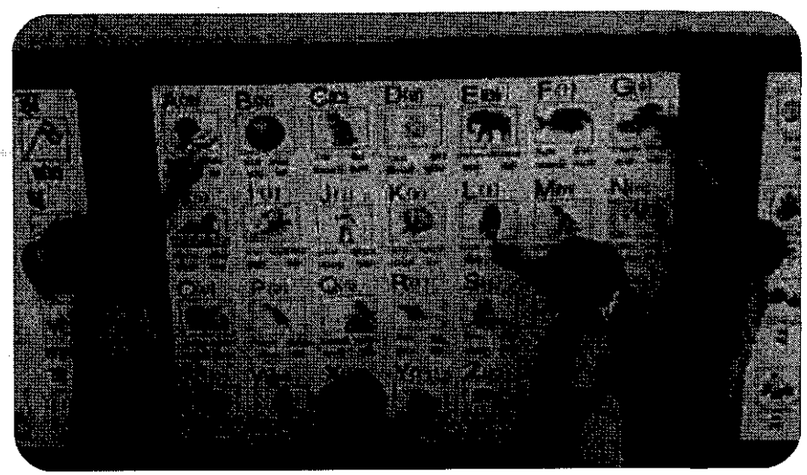
Outcome of "Utthan"

- Students of class 1th to 7th in government schools will take interest in activity based learning.
- Community and teachers will be positive and satisfy from this education project.
- Increase interest of students in school, they develop knowledge and understand importance of library.
- Education friendly environment development in school as well as in community.

2482
2780.

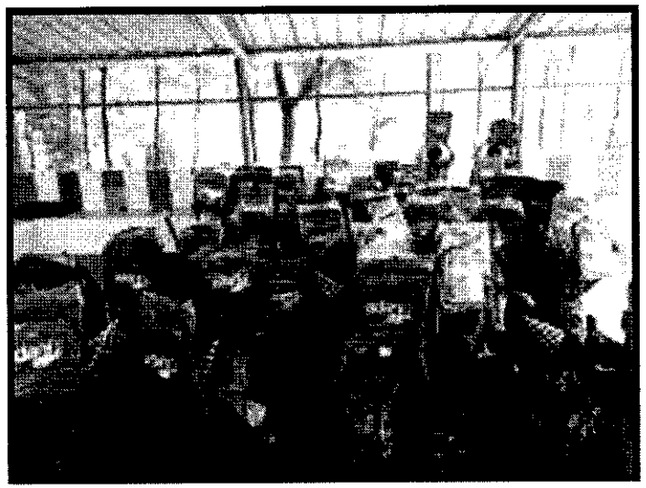
Expected impact of "Utthan"

- Vachan, Ganan and Lekhan strengthening in Priya students
- Education department of Gujarat government will include activity based learning in regular course curriculum.



Implementation Partners of "Utthan"

DPEO/TEPO/BRC will provide guidance for implementation and experts will visit on an interval of 6 months to evaluate the project.



Proposed Activities "Utthan"

- Training of Government School Staff
- Reading, Writing and Maths improvement as per Gunotsav Data
- Development of Teaching Learning Material
- English Language
- Role Model Activity in assembly
- Reading Corner Activities
- Monitoring and Evaluation

Shala Praveshotsav

To motivate children for schooling by providing the welcome kit / education kit and to create conducive children for " joyful learning" Environment for children for Learning during shala Praveshotsav Govt. has wide spread network of 111 Govt. primary schools in total 62 villages of Mundra Taluka, 3 villages of in Anjar taluka, YMC school, AVMB and two villages of Mandvi Taluka (118 Schools) every year on an average 2550 to 2700 children gets enrolled in 1st std in Taluka For 2018-2019 total 2300 children got enrolled & Adani foundation provided the "Enrollment kit" to all new enrollee in Taluka

Mother's Meet

To motivate parents to maintain regularity of school, health hygiene and cleanliness we scheduled 3 mothers meet per week, which is really beneficial for student's overall growth. We arrange quiz completion for mother's to update their general knowledge.

Project UDAAN

Mundra has created a position for itself by creating capacities in Port Handling, Edible Oil Refining and Power Generation. With a vision to familiarize, educate and inspire the future generation to become successful business leader, engineers, managers and other professionals, the Adani Foundation organizes Education Exposure visits to Mundra for High schools and educational institutes in Various parts of Gujrat.

Total 3270 educational institutes has visited and 236032 beneficiaries of the project till date and 33932 beneficiaries during current year.

Adani Vidya Mandir, Bhadreshwar

Class	2012-13	2013-14	2014-15	2015-16	2016-17	2017-18	2018-19
1st	53	40	45	41	38	40	40
2nd	26	68	46	41	39	37	37
3rd	27	40	73	45	37	39	39

Total	106	187	359	387	394	384	387

In Bhadreshwar, Mundra, the Adani Vidyamandir has completely revolutionized the education scenario. Only the children of families with an income of less than 1.5 lakh are admitted to this school. Along with quality education, the school also focuses on providing nutritious food, uniforms and other services to the children for free. Currently, 387 students, from Std. 1 to Std. 10 are studying in the school. Out of these 134 children come from the fisher folk community. Many students are the first generation in their families to attend school.

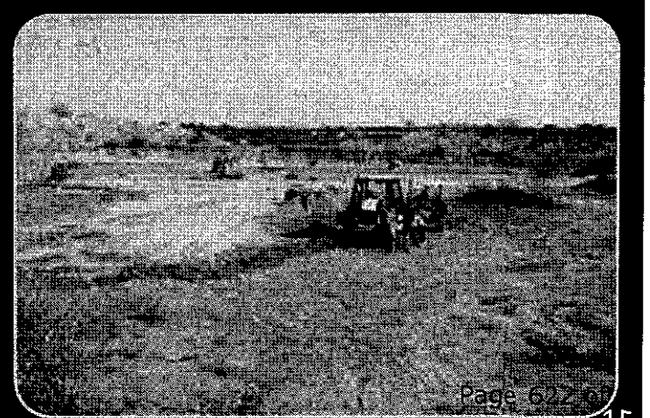
ENVIRONMENT SUSTANABILITY

The Environment Impact Assessment (EIA) Notification, 2006, issued under the Environment (Protection) Act, 1986, as amended from time to time, prescribes the process for granting prior environment clearance (EC) in respect of cevoain development projects/activities listed out in the Schedule to the Notification.

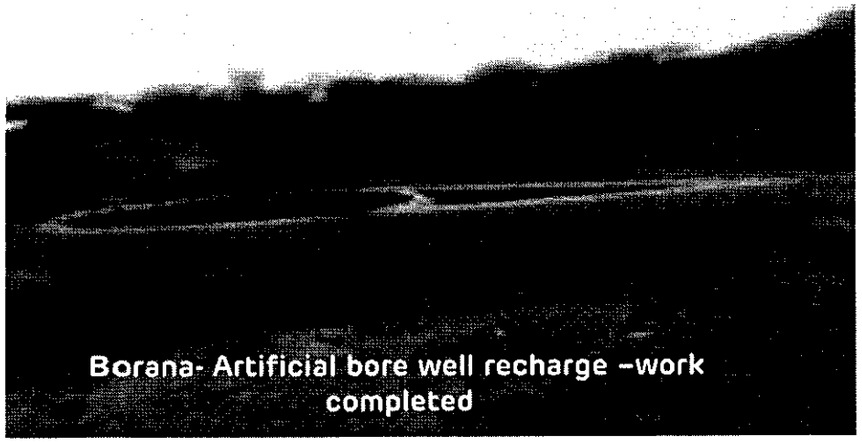
Sustainable development has many important facets/components like social, economic, environmental, etc. these components are closely interrelated and mutually re-enforcing. Under Corporate Environmental responsibility 10 km radious villages from SEZ Boundaries.

To make connections between human actions and the level of biological diversity found within a habitat and/or ecosystem, this year we launch project "Sanrakshan" in coordination with GUIDE. MOU has been signed with Dr. Thivakaran – GUIDE for conservation of five spices of mangroves.

SUJLAM SUFLAM JAL ABHIYAN

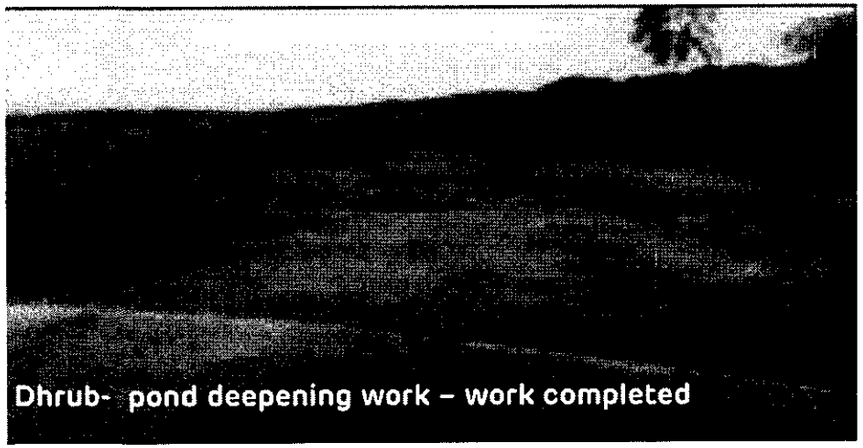


The state government announced its 31-day water conservation drive called 'Sujlam Suflam Jal Abhiyan'. The campaign was launched on "Gujarat Gaurav Din" on May 1, which is the foundation day of Gujarat state. Moreover, the government aims to revive 32 rivers in the state and also to create storage capacity in existing village pond.



Inauguration by GOG Hon'ble Minister, MLA and DM Kutch and other guest day on 1st may at Gundala village taluka Mundra by Adani foundation, Mundra

During 1st may to 31st may AF Mundra had completed deepening work in 26 pond works as per given target by District Collector Kutch in 19 villages . Total excavation done 51723 Cum. Total storage capacity created 51.72 million liters. These works done as per government guidelines.



Borana- Artificial bore well recharge –work completed

Mangara- Artificial bore well recharge – work completed

Dhrub- pond deepening work – work completed

PARTICIPATORY GROUND WATER MANAGEMENT

At the turn of millennium, the state watched with growing alarm the steady depletion of its ground water and launched massive drive to achieve water security in Mundra region. As a part of pre monsoon activities with ACT (Arid Communities and Technologies – NGO) we have carried out following work. But, due to negligible rainfall we are not able to find out outcome of this project.

2490 2788

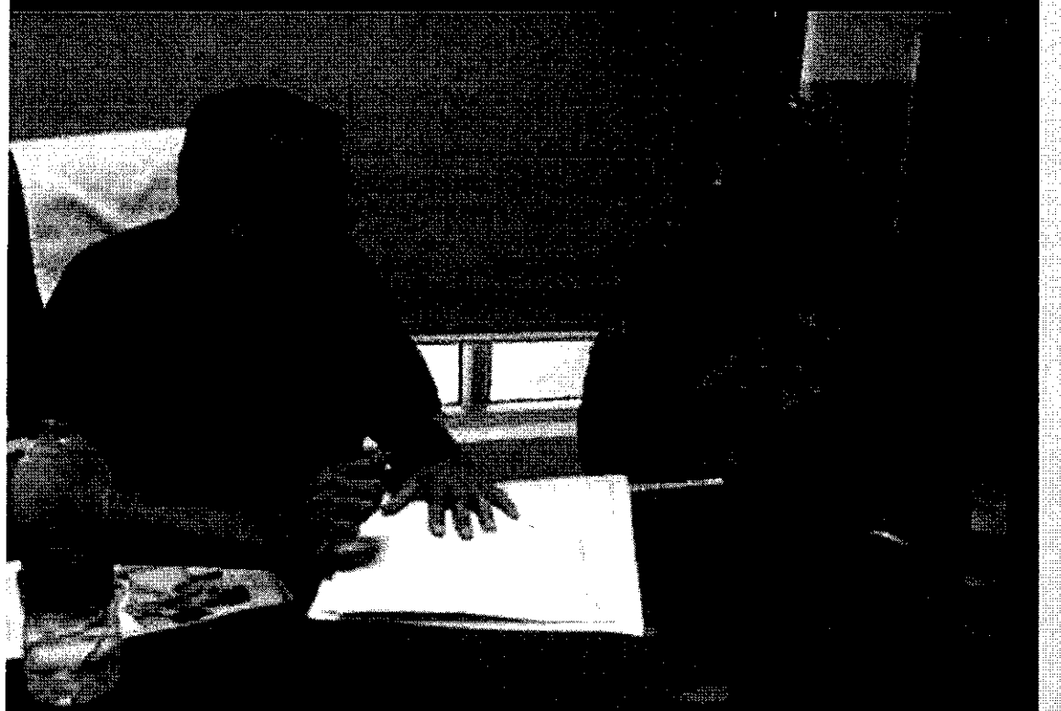
PROJECT "SANRAKSHAN" - BIODIVERSITY

The mangrove biodiversity enrichment project in and around Adani ports special economic zone limited (APSEZL) aims to introduce select true mangrove species on a pilot scale in suitable coastal belts and assess their survival. Because this project is the first of its kind, the expected survival rate is between 20-30%.

The project is currently in its initial stages of establishing nurseries and sowing seeds of several different species brought in from multiple locations in and outside of Gujarat state. These nurseries have been developed in tidal flats near the village of Luni, Kutchh, Gujarat.

The mangrove seeds/propagules) for the establishment of the nursery were brought in from various locations in India, namely, Machilipatnam (Andhra Pradesh), Pondicherry (Tamil Nadu), Parangipettai (Pichavaram Mangroves, Tamil Nadu), Kandla (Gujarat) and Jamnagar (Gujarat).

In most of these locations, there is adequate fresh water supply available due to high/substantial rainfall and/or presence of major rivers (also important river confluences and deltas that give rise to a thriving estuarine environment). Consequently, the mangrove species that successfully grow in those regions are adapted to a low-salinity environment (where salinity is approximately 20 ppt) against that of 37-44 ppt prevailing in Kutchh coastal waters. Furthermore, the species selected to establish the biodiversity enrichment project also belong to this group of mangrove species. This subsequently creates a challenge for the team heading this project because the Kachchh region does not provide adequate salinity ranges for survival of most of these species. In fact, it provides an extremely harsh saline environment (salinity can range up to as high as 44 ppt during summer).



Considering the above-mentioned scenario, the site selection criteria, need for species of high salinity tolerance and studying their natural occurrence in Kutchh becomes critical in ensuring a substantial survival rate of the mangrove species selected to potentially successfully establish a diverse and resilient mangrove community in the Kutchh region.

Furthermore, a highly diverse set of mangrove species will ensure resilience in the face of changing climate and could probably provide as a thriving gene pool and seed bank in the future for the Kutchh region.

Table 1: NURSERY STATUS AS OF SEPTEMBER 2018

Sr. No.	SPECIES	LOCATION (FROM)	SITE	DATE OF ARRIVAL IN BHUJ	DATE OF SOWING	NO. OF SEED-BAGS ESTABLISHED	NO. OF SEEDS IN EACH BAG	TOTAL NO. OF SEEDS SOWN	APPROX. SURVIVAL RATE TILL DATE

Total beneficiaries : 75556

Healthy mind remain in healthy body which create healthy community to make healthy Nation.

Adani Foundation relentlessly working for community in health core area through various kind of activities i.e. Mobile Dispensaries, Rural Clinics, Special Innovative Projects - Health Card to Senior Citizens, "SuPoshan"- Fighting to Mal nourishment in Mundra and support to dialysis patients projects. Adani Foundation also organizes special medical camps during disease outbreak.

2494
2792

Mobile Dispensaries & Rural Clinics

The population of Mundra block is spread over various villages. Due to inadequate transportation facilities, the villagers have to face many hardships even for reaching to the doctor in case of common diseases.
The medical expenses and zero earning per day add surplus to their hardships.
To help them in the above mentioned health related problems, the service of mobile medical van has been started by the Adani Foundation in Mundra block. In big villages, rural dispensaries have been started considering their population and area.
The Adani Foundation runs mobile health care units. Main objective of Mobile Van is to reduce travel time, hardships and expenses. Mobile health care units cover 34 villages and 05 fishermen settlements. Around 109 types of general and life saving medicines are available in these units. It has turned out to be a boon for women and children as the service is availed at their door - step.

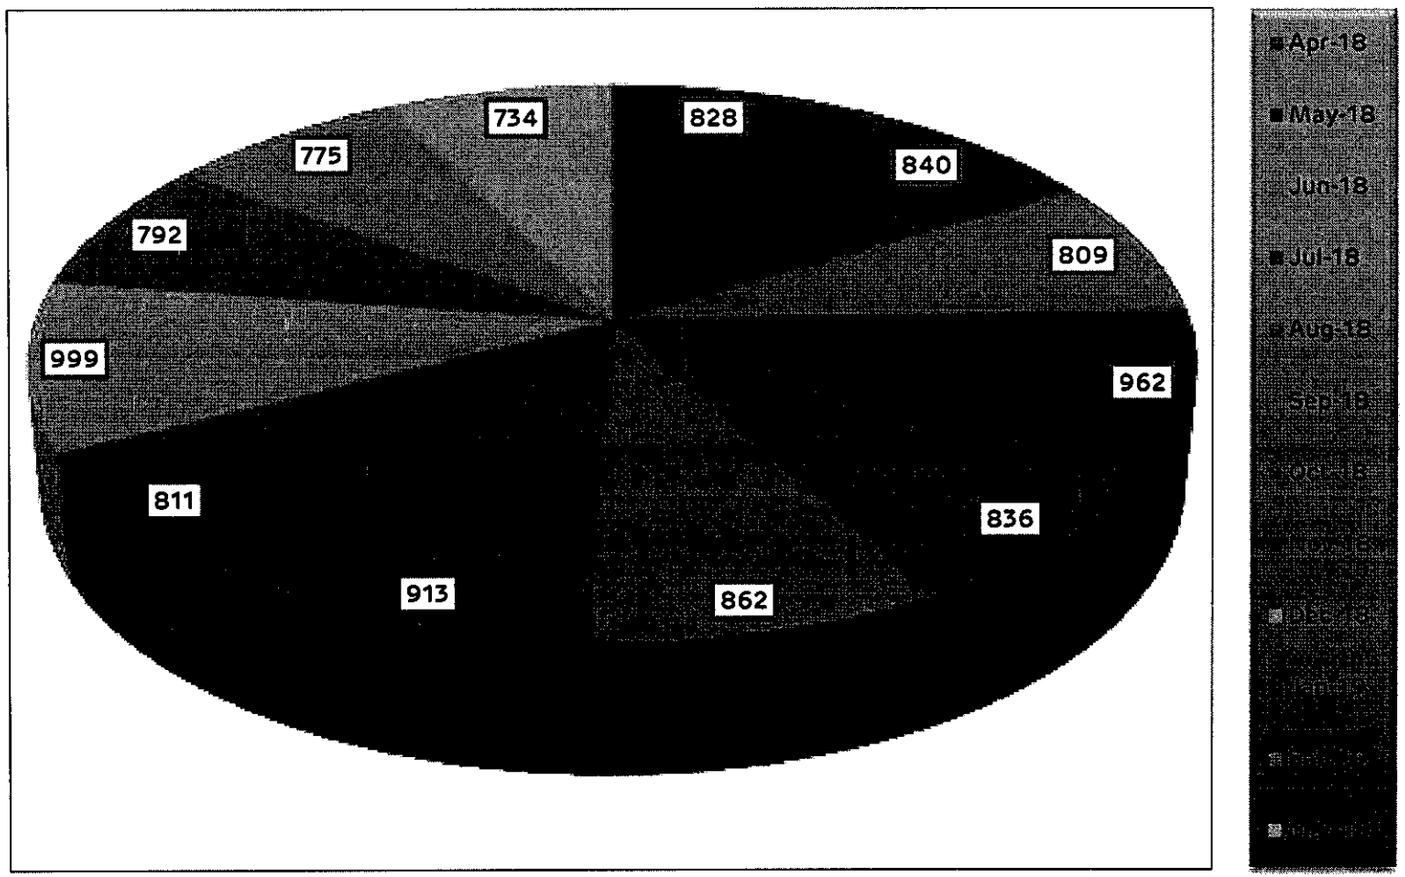
Health Cards to Senior Citizens

The major junctures of human life are - childhood, adulthood and old age. The first phase is well looked after by the parents and second phase is of self-reliant but the last phase is a dependent one. The needs of old people are less looked after. When people become old, they start living a life of aloofness and solitude. Therefore, the Adani Foundation has started the Adani Health Programme for the aged to look after their health. To address the health care issues related to ageing, AF launched a 3 year long pilot project – 'Adani Vadil Swasthya Yojna' on 20th February 2011 at Mundra and further extended the same for the next three years i.e. up to 2017. Under this Programme, the individuals aged 60 years and above are benefitted. Health Cards are issued to them with the purpose of providing adequate and timely treatment. The families consisting of aged ones with a yearly income of Rs. 2 lacs or more get a Blue Card. The Blue Card holders can avail diagnosis facility and treatment at a subsidized rate in the Adani hospitals, Mundra. The families with a yearly income of less than Rs. 2 lacs are issued a Green Card. Green Card holder aged people get treatment for illness in Adani hospitals, Mundra with an aid up to the limit of Rs. 50,000/- within a period of 3 years.



During the year 2018-19, total 10161 transactions were done by 8599 card holders of 66 villages of Mundra Taluka. They received cash less medical services under this project

Scheme is continue since eight years The third phase of this scheme was started in last year. The limit for the beneficiary was set to 30000/- within a period of 3 years. the senior citizens get emergency medical care at Adani Hospital, Mundra and they are referred to GAIMS

Suposhan

Suposhan Project endeavors to address the issue of vicious cycle of Malnutrition and Anemia with a life cycle approach that includes community based management. The project is more focused on preventive measures.

Objective of the Project is to reduce occurrence of malnutrition and anemia. For successful implementation of the project, "Sangini – Village Health Volunteer" plays major role in the Project.

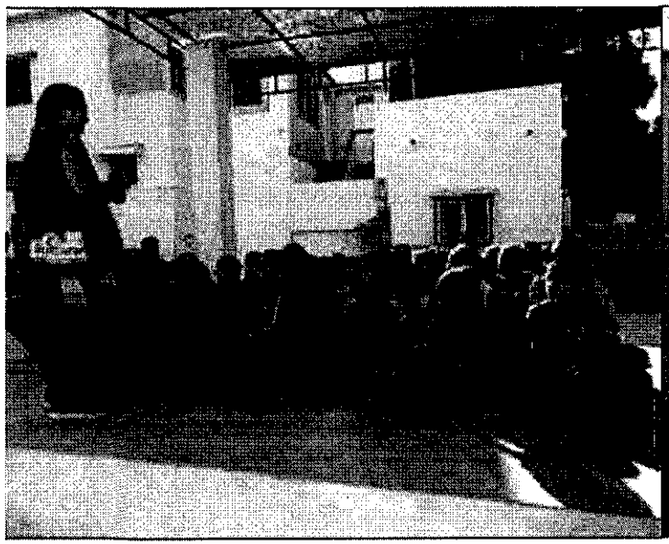
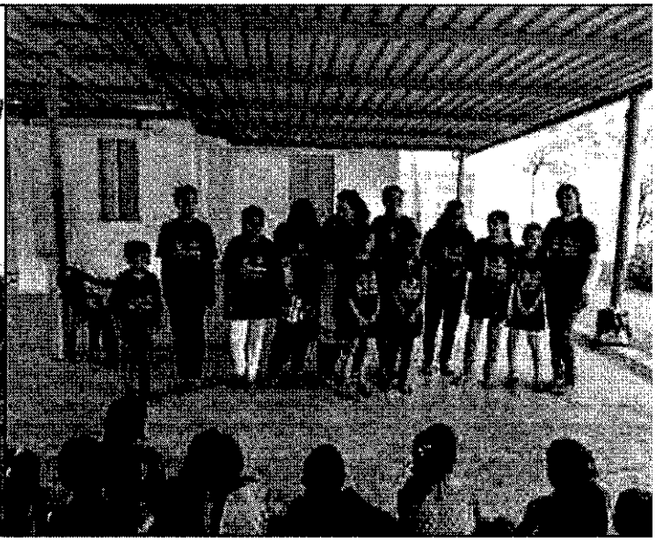
2500 2798

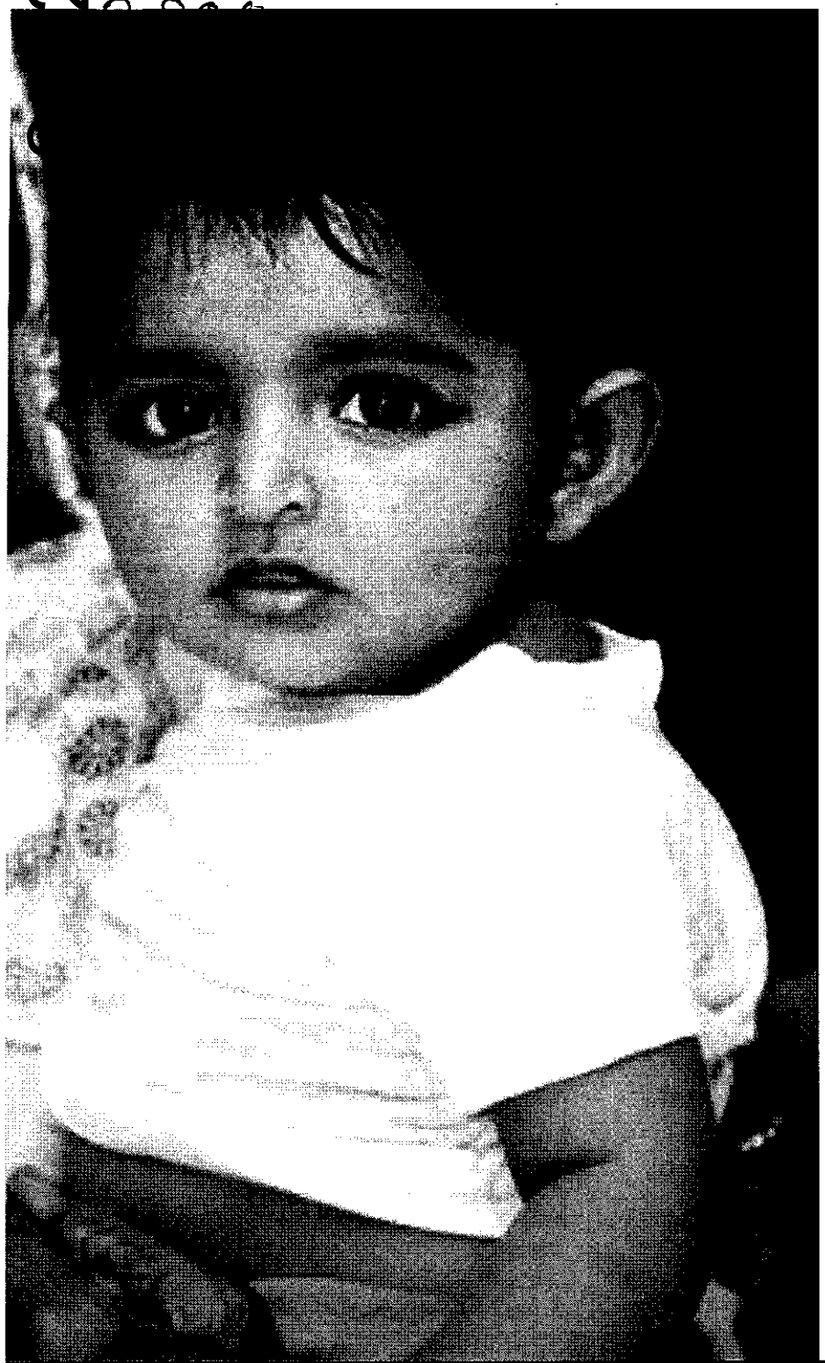


A child's entire life is determined in large measures by the food given to him/her during his/her first five years because childhood is the period of rapid growth and development. Nutrition is one of the most influencing factors in this period. Malnutrition substantially raises the risk of infant and child deaths, and increases the vulnerability to a variety of diseases in later life.

Project Suposhan is initiated with the Motive ....



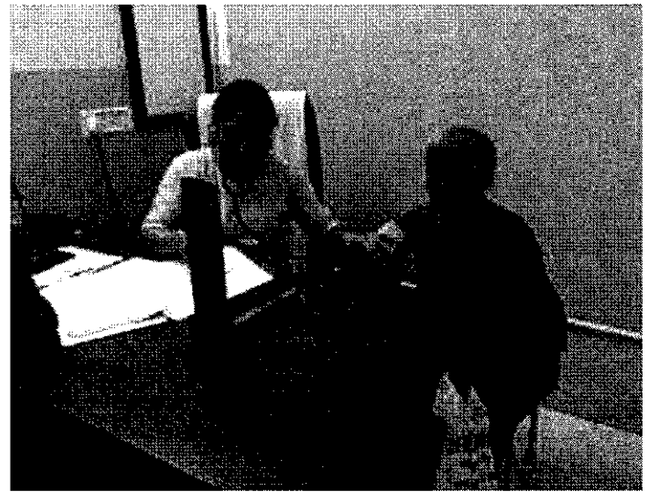
Curb malnutrition amongst Children, Adolescent girls and Women in our CSR villages.



- **To reduce malnutrition and anaemia amongst Children 95 % & adolescent girls and pregnant & lactating women by 70 % in three years**
- **Reduction IMR and MMR**
- **Support Awareness & Cover 100 % Vaccination taken by Child & women.**
- **<u>Interventions with ICDS and Taluka health Office</u>**
  - CMTC Center started again after our written request to DDO Office
  - Distribution of EDF(Energy Dense Food) by THO to 23 Children who are in SAM Category

Community Engagement Activity

Suposhan Saptah



The birth of a healthy newborn child is determined by the health of the mother Mother's health, in turn, has its basis on her health status during adolescence. The health of a society, as a whole, thus depends on the health of the women, in all stages of their lives. Adani Foundation acknowledges this field of health and aims to address women's health, through their entire life cycle. These efforts have culminated in Project Suposhan, Adani Foundation Health initiative. Project aims to generate awareness in communities and facilitate the strengthening of the health systems and healthcare delivery platforms, with a specific focus on the mother and child. Project focuses on increasing health literacy in communities for mothers, child and adolescent health services through trained community health workers (Sangini), creating effective referral linkages to higher services. SuPoshan "Food Guidance Week" celebration systematized in all 61 villages in Mundra Taluka from 13th Nov – 20th Nov. Suposhan Food competition was organized in coordination with ICDS block and Supervisors Sarpanch, ASHA workers and women leaders. The reason behind celebrating "Suposhan Food Guidance Week" is to make people aware about the importance of nourishment so that everyone is able to live healthy life. It involves community by · The importance of Nutrition and Balanced Diet · Importance of locally available food. · Preparing own variety nutritious dishes, · Folk songs on nutritious, · Slogans with actions, · Spreading awareness on different schemes, · Vaccination · Kitchen garden and · Exclusive Beast Feeding

Urinary stone – Dialysis Treatment

Drinking water of Mundra contains high Fluoride (amount of salt). Hence, the proportion of patients with urinary stone and kidney failure is more . A project for patients who need dialysis is thus initiated so that the poor patients can receive the treatment at subsidized rates in the nearby, well-equipped hospitals. The main objective of providing dialysis treatment is to help the extremely needy patients to live a healthy life.

Total 5 Patients were being supported for regular dialysis (twice in a week) by participatory approach.

Gujarat Adani Institute of Medical Sciences

Gujarat Adani Institute of Medical Science is the first Medical College of Kutch region. It started in partnership with Adani Group and Government of Gujrat in the year 2009. This college was affiliated by the Medical council of India in the year 2014 for the MBBS with 150 seats per year. Gujarat Adani Institute of Medical Science is affiliate with the first digital university "Krantiguru Shyamji Krishna Verma Kutch University". In GAIMS, currently 750 students are studying, The GAIMS Medical College is situated in heart of Bhuj city on a large plot of 27 acres.

A teaching hospital (G K General Hospital) with 700 beds is established with GAIMS in which patients of Kutch are getting subsidized medical facilities. The Hostel facility is also available for the students in the campus only. The accommodation facility is given to the staff of GAIMS.

- Adani Foundation Team has initiated coordination with GKGH hospital since 2014 and established a reception area for the smooth patient coordination and preparation for the social networking program.
- Adani Foundation organized **48 General Health Camps and Speciality Camps in various interior villages of Kutch in coordination with GKGH which created magical impact and benefitted 25000 patients.** Adani Foundation Bhuj Health team has also organized more than Eleven awareness camps and village level meetings at 293 villages of Kutch regarding services of GKGH.
- Dead body medical van – Dignity to death is one of the noble initiatives taken up by the Adani Foundation. If any death occurs in GKGH, dead bodies are shifted to the native village of the concerned in the Kutch District free of cost. Total 543 dead bodies privileged till now to different locations in Kutch.

SUSTAINABLE LIVELIHOOD DEVELOPMENT PROGRAM

Empowering lives and broadening their scope for economic opportunities, Adani Foundation's initiatives introduced under 'Sustainable Livelihood Development Program', have been founded on community based approaches. In the villages at Mundra Taluka, several communities are economically side-lined and weaker that depend on a sole income source or are unemployed. Sustainable livelihood projects have been launched to cater financial independence through building local partnerships, providing diverse livelihood avenues, inculcate the attitude to establish savings, equipping to earn and updating local skills by making use of existing resources to encourage self-reliant lifestyles. Participation is encouraged by launching specific projects for fishermen communities, farmers and cattle owners, youth and women.

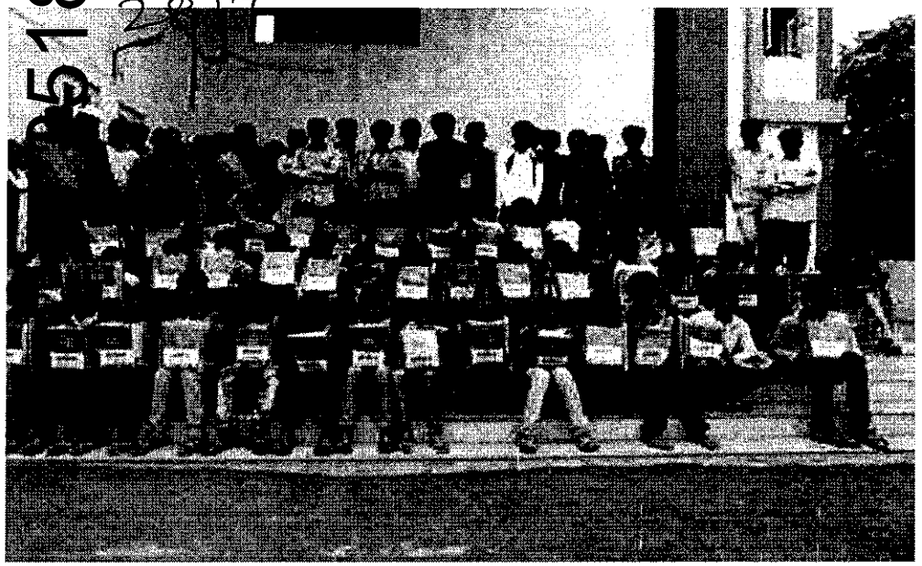
Education

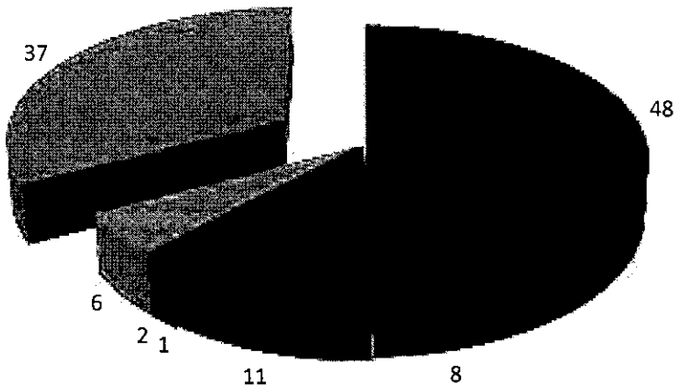
Education is one of the most important stepping stones to bring about a unified development in any community. The Adani Foundation, through its rigorous surveys and assessments, could understand that it was education which should be taken up to bring about a real change in the status of the fisher folk communities. Following are some of the major education initiatives taken up by the foundation:



Balvadi		
Sr.	Village & Bandar	Children
1	Juna bandar	55
2	Luni	25
3	Zapara-Chhacha	27
4	Bavadi bandar	30
	Total	137

Vidya Deep Yojana

A great amount of efforts were put in developing school preparedness programmes by empowering 'Balwadis' at Fisher folk settlements. Under the Machhimar Vidya Deep Yojana, Adani Foundation constructed four Balwadis for kids between the age group of 2.5 years to 5 years at different settlements. The programme is inclusive of nutritious food, awareness on health, hygiene, cleanliness, discipline, regularity and development of basic age appropriate concepts.

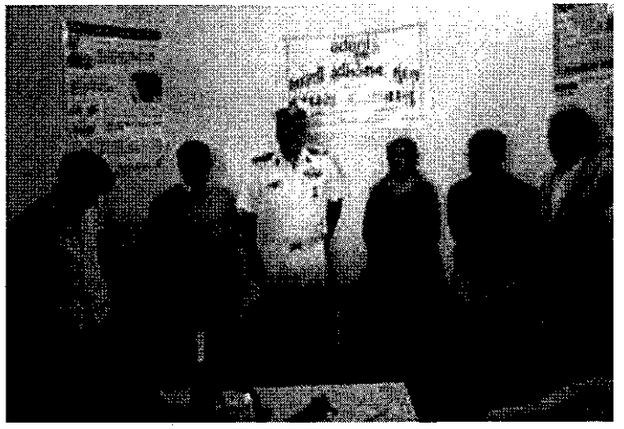


Vidya Sahay Yojana- Scholarship Support

Participatory scholarship support for fisherman children studying in SMJ high school Luni and to above 12th standards Students . 80 percentage support given by Adani foundation and 20 percentage support by parents! They willingly agree for the same.. We also encourage them for technical education for good job opportunities.. Total 66 students has been benefitted.

This year 68 students were given book support and 8 students were given cycle support for higher secondary study.

Education Analysis



Rather than learn their children, fishermen joined them in their traditional business due to lack of awareness. But Since Adani foundation has started various kind of education initiative like Balwadi , Scholarship support, Cycle support, Book support, free education in AVMB, Transportation support, skill development training ,we bring them in the Ocean of education. By the job placement and motivation we can transform 37 fishermen youth life who have good job and others one continue their further study as below.

Machhimar Arogya Yojana

A healthy person can work well and earn for his family. Hence it is necessary to provide medical facilities to cure and prevent them and to provide then the treatment of diseases prevailing among the people specially women; children and elderly person, especially due the lack of balanced nutritious diet.

Mobile Health Care Unit - the mobile dispensaries have been run by the Adani Foundation since 2009. The mobile dispensary is available not only in the Vasahats/Settlements but also near the coast where the fishermen, can avail the facilities as and when needed. **Total average 560 fishermen were benefitted by Mobile Dispensary during last half year.**

1. Apart from this, a number of subsidiary initiatives such as health awareness camps, medical check-ups, etc. are conducted by the Adani Foundation at frequent intervals, to provide the fisher folk community with the much needed and required information and assistance.
2. Medical Financial Support –Adani Foundation has extended financial assistance to more than **114 financially challenged patients** from the Fisher Folk Community in case of medical urgency during this year.
3. Health Card for Senior Citizen Project – This is one of the major and prominent and the most innovative project of the Adani Foundation. Under this scheme Health Cards were given to the to Senior Poverty Stricken Citizens to provide them financial support to combat with their health related needs. The project for the senior citizens is popularly known as **Vadil Swasthya Yojana and till date 350 senior citizens** from fisher folk community are enrolled in the scheme. Most of them keep these cards in their wallets with other important documents and cards.

2520 2819

Machhimar Shudhh Jal Yojana

This scheme of providing potable water has helped in reducing the drudgery of women and contributed largely towards general wellbeing.
Water tank platforms have been constructed and tanks have been set up in order to provide clean potable drinking water to the community. Daily 1,18,000 Litres of water is supplied at different settlements.

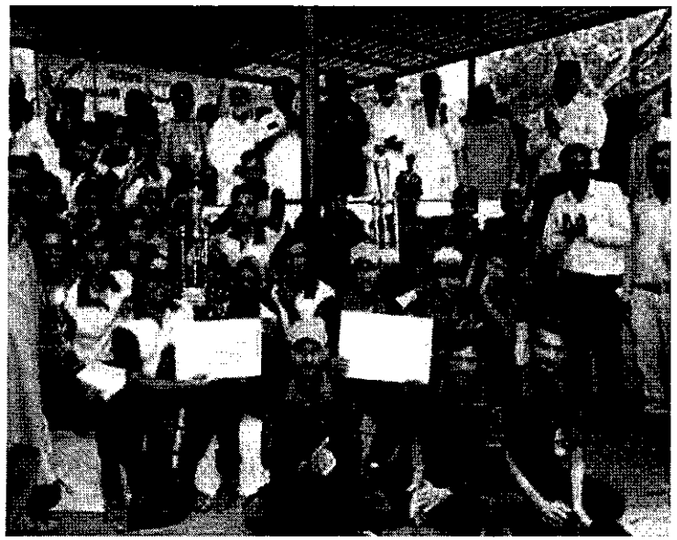
Machhimar Ajivika Uparjan Yojana

The 'Ajivika Uparjan Yojana' was implemented to promote and support alternative livelihoods among the Fisher folk communities during the non-fishing months. The Foundation introduced 'Mangrove Nursery Development and Plantation' in the area as an alternate income generating activity for the people of the region. Both men and women received training on Mangrove plantation, moss cleaning, etc. as per requirements. The Foundation provided them with employment equivalent to 6261 man-days. In addition to this, employment worth of 35787 man-days has been provided till date. The Foundation has also supported Pagadiya fishermen as painting laborers by providing them with employment and job in various field.



Innovative Project : Solar Tent Dryer

CIFT (Central Institute of Fisheries Technology) has been conducting a prototype study on Solar tent dryers with improved technology at their head quarters in Kochi, which is expected to be completed within a span of another three months. They may be able to upscale or replicate the technology once the study is completed. In all probability, they will provide the designs for the solar tent dryer for drying Bombay duck and / or Acetus Indicus with financial estimate by the first quarter of next year. Meanwhile the team from the HQ and Veravel centre can visit Mundra region for initial site visit and feasibility studies. CIFT requested our team to visit CIFT HQ at Kochi during coming months to assess the prototype model and understand more on other CIFT developed hybrid dryers

- **1364 Direct Beneficiaries**

Drive for Technology to use in agriculture

Adani Foundation puts efforts in Mundra block for consistent betterment in livelihood sector. The organization has carried out remarkable activities in the agricultural and animal husbandry sectors.

- We have initiated Programme for Awareness of Farmers in collaboration with KVK. The outreach is approximate 80 farmers of 5 villages
- The purpose of this project is to initiate village wise integrated agricultural & allied development for sustaining agriculture and socio economic situation of farming community of Mundra block.

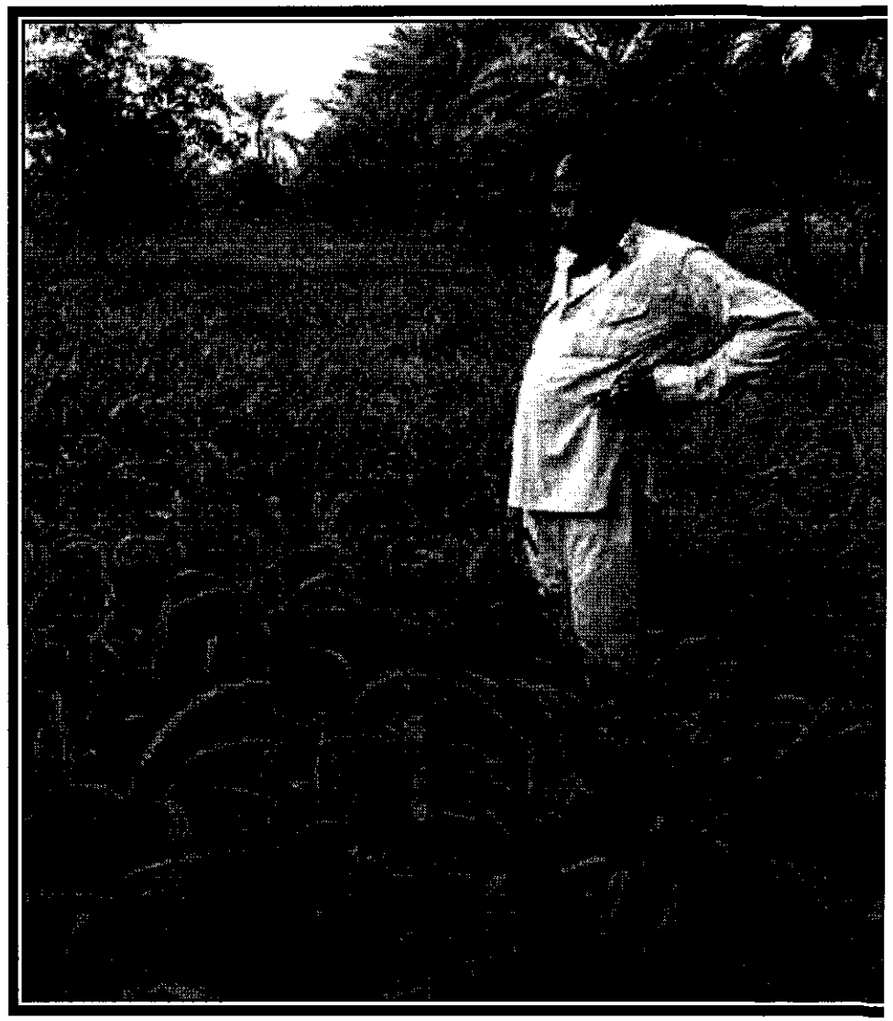
Fodder Cultivation

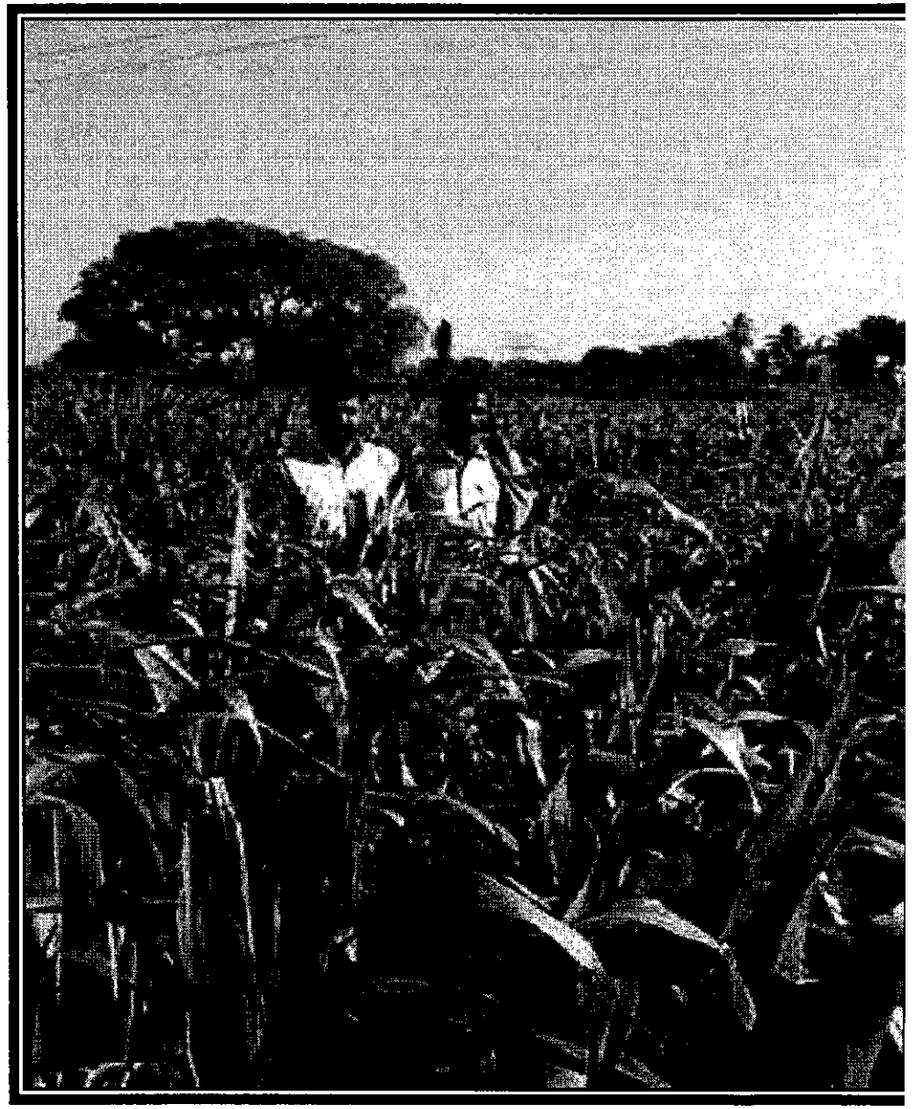
The organization provides fodder during the time of scarcity and the last 3 months of summer every year. During this period, fodder is regularly sent to every village with the help of the local people. This has given stability to the families who earn their livelihood through animal husbandry.



In order to meet the demand of fodder, the Adani Foundation purchases it from the regional farmers. This gives them fair rates in return.

This year we have given 1,78,000 man fodder worth Rs. 402.00 Lacs approximately at Mundra, Lakhpat, Anjar, Abdasa and Rapar Taluka

But, For this Critical Condition some Sustainable Solution is required to find out



Fodder is the main issue as rainfall is very less in this region. Adani Foundation is working intensively in direction of fodder sustainability in three ways

1. Individual Fodder Cultivation Support – NB21 demonstration – Supported 140 Farmers of Dhrub and Zarpara
2. Drip Irrigation support Linkages with Fodder – First phase we will support drip irrigation in 22 villages and this linkages will help to convince them for NB21 at least in one acre land

3. Village Level Fodder Cultivation : Participatory Approach
   (a) Winter crop Cultivation – Support to 180 Individual (Supported for seeds of Makai for 180 acre land)
   (b) Winter Crop Cultivation – Support to Group of Farmers (200 acre of land with 32 farmers)

We are also planning for grassland development at Village Zarpara and Siracha in Gauchar with mutual understanding with Gram Panchayat.

Win win situation of this project

- Cost saving initiative: Financial saving by Rs. 7.23 lac in three months. (15%)
- Assured of green fodder and supply
- Empowerment of farmers by providing livelihood
- Increase of Green fodder cover
- Milk productivity enhancement
- Fulfilment of double the farmer income concept of Govt. of India
- Crop rotation increases the soil fertility

2528
2827

PROJECT "DRIP IRRIGATION"

- **Basis of Requirements of Drip Irrigation**

The main source of livelihood being agriculture, the cultivators tend to use more and more underground water for irrigation. Underground waters have gone very highly saline. The use of such water for irrigation has made the soil also saline and the crop yields have dwindled.

- **Process of Drip Support**

Farmer have to applied in the prescribed form of Adani foundation with photograph.

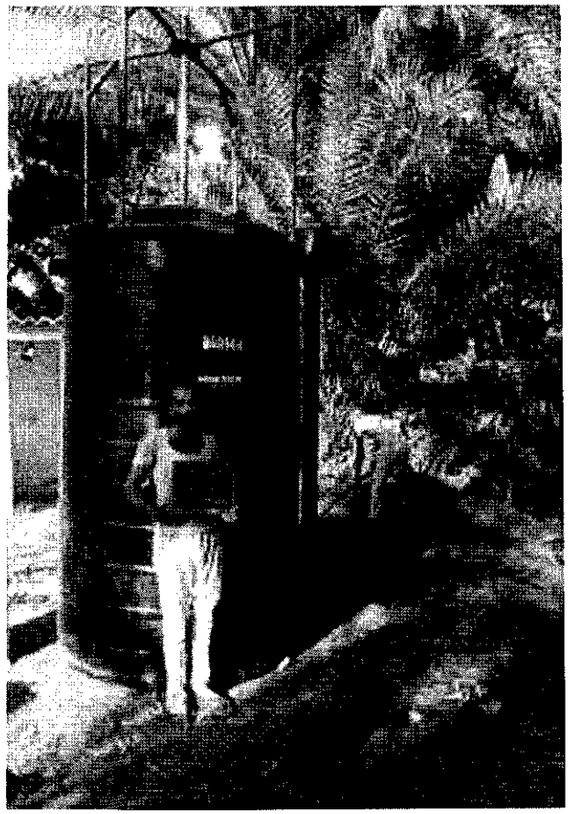
Inspection and verification will be by AF representative.

Ration card, work order of G.G.R.C, 7/12 certificate and all bills must be attached.

Farmer will be informed by telephonic to have form query.

Primary information about farmer land will be received by telephone.

Farm visit within 10 days of after received of application and verified the installation of system as per map and material as per bill will be checked and get farmer feed back.



Verification report submitted to account office.

Payment within 20 days if all document is complete through net banking.

Farmer economic study after our support.

- **Villages of Drip Support**

Keeping in view the situation and request comes from community, once again **Drip irrigation support is planned in three phase. As a part of first phase, we are considering 22 potential villages. We have covered 164 farmers and 755 acre drip irrigation area.**

Biogas

Biogas is a clean, non-polluting and low cost fuel. It contains about 55 to 75 percent methane, which is inflammable. Bio gas can be produced from cattle dung, human waste and other organic matter by a process called "Anaerobic digestion" which takes place in a biogas plant. The digested effluent, which comes out of the plant, is enriched manure.

The Multiple benefits of the biogas have changed many lives in rural areas. During this year 21 plants have been constructed. We are providing support addition to Government support to the beneficiary. (Under bio-gas scheme of government, the total cost is Rs.33, 500 out of which Rs.15, 000 will be granted by the government and out of the pending amount of Rs.18, 500 sum of Rs.10, 000 will be contributed by the Adani Foundation. The beneficiary will have to pay only Rs. 8, 500). Beneficiary women use the time, saved from cooking and fuelwood collection, to take up an additional economic activities.

Representation of Adani Foundation was invited as Guest of honor by Krishi Vigyan Kendra in 'Scientific Advisory Committee Meeting" . Main Objective of meeting was to study about present agricultural Scenario of Kutchh and new CROP Patter. Representative from ICAR ,GOG and Various NGO were present. We made presentation of our activities for sustainable agriculture in this forum.

Agriculture Fair

Adani Foundation has Participated in District Level Agriculture Fair for three days in first week of January. We had show case various activities of Adani Foundation in field of Fodder Sustainability, Bio Gas Support, Cattle care, water conservation and Biodiversity.

Adani Foundation was felicitated award for " To Develop Unique Model for Fodder Sustainability in Kutchh".

State Minister Mr. Vasanbhai Ahir has inaugurated this event. By this platform we could able to connect with approximately 12000 farmers of Kutchh District by providing guidance for NB21 and Maize Cultivation. We have also given information about Saheli Mahila Gruh Udyog and could also our products i.e. Eco Friendly bags, Banana Wafers and Washing powder.

Tissue Culture

Date is the Amrut Fal of Kutchh and Mainly best quality available in some villages in Mundra Taluka. To maintain quality uniformity Adani Foundation is planning for cultivate 4000 tissue cultured plants of elite varieties to the farmers of project area. For this, we will select best offshoots of elite plants from farmers fields in coordination with farmers groups. The selected planting materials will be given to identify tissue culture laboratory for developing tissue culture plants in 3 years. Hence, whole program is coordinating farmers participation basis having four party i.e. Tissue culture laboratory, Adani Foundation, KVK and farmers committee of project area. Major functions of all parties are as under;

• TC Lab: Develop TC plantlets of elite varieties • Adani foundation: Financial support • KVK : Technical support to the program

Farmers committee : Provide best planting materials for developing TC plants & contribution in distribution & provide nominal cost of plants. Hence, the farmers contribution in the program is 10 Lakh.

Ground work for this project is completed during current financial year i.e. Registration of 200 farmers, series of meeting with KVK and Anand University

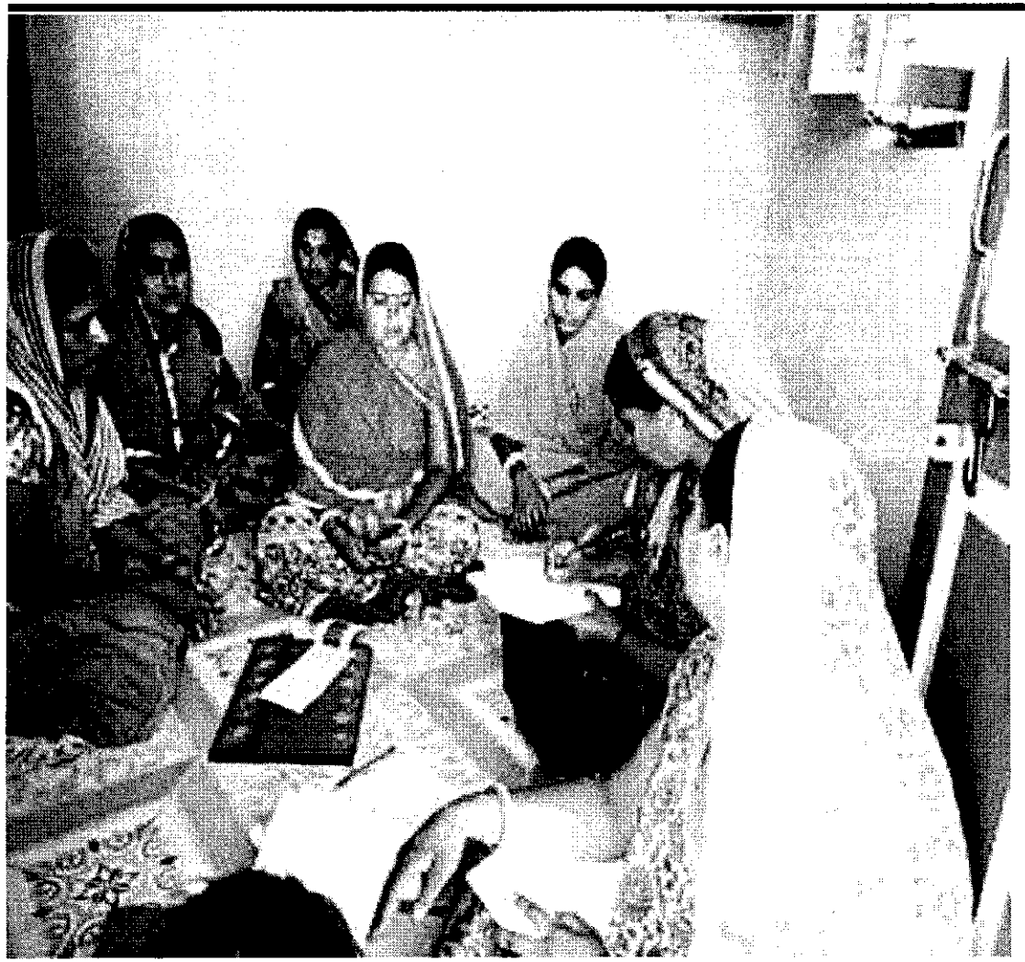
Project Swavlamban

Project Swavlamban Launched with blessings of differently abled people of MUNDRA TALUKA.

Our objective is



- To increase awareness about Government schemes for Divyang people, widows and senior citizens and coordinate them with Social Welfare Department, GoG
- After getting income generation equipment support - Proper training provision to make them self-reliant in true sense!!
- Adani Foundation is playing the role of facilitator in case of tie up with Government Scheme for Widows, Senior Citizens and Handicapped people. The identity cards are issued for the handicapped in coordination with Bhuj Samaj Suraksha Khata which is beneficial for them to get specific kit for their disability type. This year 154 beneficiaries linked up with pension scheme.
- The financial benefit of the senior citizen Yojana is Rs. 500 per month and the widow scheme is of Rs. 1250 per month. Jilla Samaj Suraksha Officer and team remain present every time.

No	Type	Beneficiaries	Financial benefit
1	Disabled	409	10,00,000
2	Widow	92	3,25,000
3	Senior Citizen	32	1,75,000
	Total	533	15,00,000

Women Empowerment Projects

- In Kutch, the situation of women is miserable. Women are totally dependent on male members of family for their needs. Consumption of liquor is one of the main culprits in Kutch. Due to this evil prevalent among men many women are suffering.
- Considering this situation, We have started our training program with two major women's group of Villages near Adani Power and Adani Ports. Both the groups of women **(132 women in total)** successfully completed their training for preparing washing powder, phenyl, liquid for cleaning utensils and hand wash etc.
- We have selected 12 women groups having 132 members total, as per their ability for different work i.e. accounting, banking, leadership, marketing, administration etc.
- As a further step to bring sustainability, we thought to start a shop "Saheli Mahila Gruh Udyog" at Shantivan Colony.
- Main Perishable/ Non perishable items by Saheli are

1. Washing Powder
2. Phynayle
3. Dish wash liquid
4. Pickle of Bijora
5. Suf handicraft
6. Ahir Handicraft

एक प्रारम्भ

aaarambh

Adani Foundation launched programme AAARAMBH to revive the dying art form of Suf in a ceremony in Mundra, Kutch. Under this project, Adani Foundation will facilitate the training of about 30 women in the handicraft and also help them with market linkages to ensure sustained livelihood for them. On the occasion, Adani Foundation also launched a website made by the women themselves to market their products.

Suf handicraft was practiced in Kutchh District, Gujarat. Due to lack of patrons this handicraft has been dwindling. Suf handicraft is painstaking embroidery based on the shape of a triangle. Suf is counted on the wrap and weft of the cloth in a surface satin stitch worked from the back. Each artisan imagines her design and then counts it out in reverse.

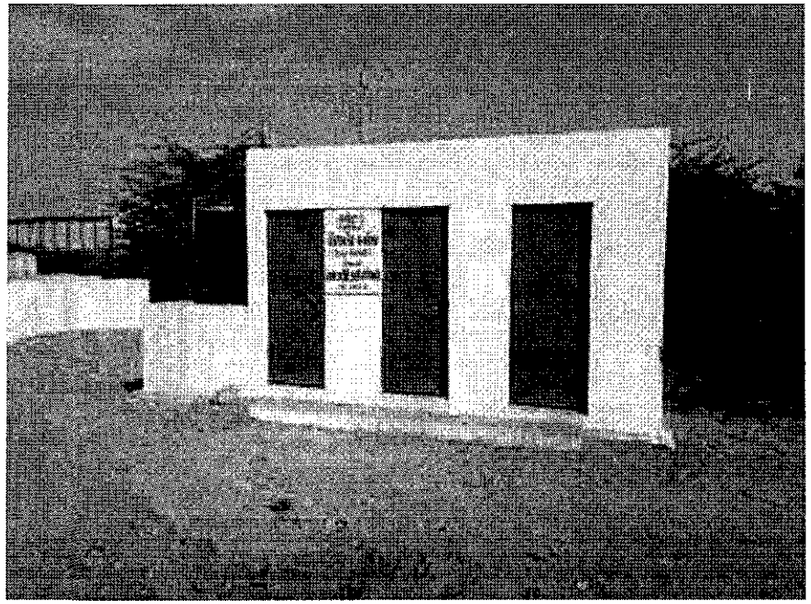
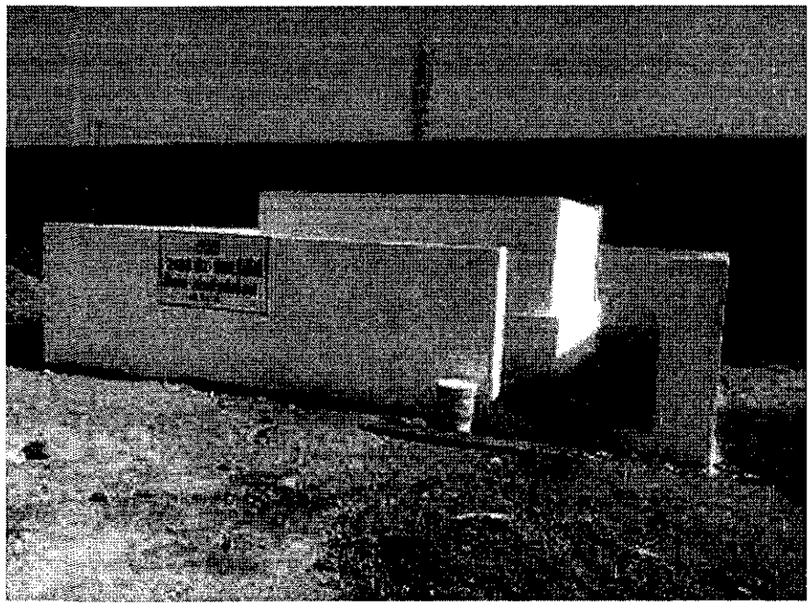
Awareness for Breast and cervical cancer, and health - hygiene. Total 230 women are benefitted in this awareness session. Also discussed about various psychological issues during menopause age and its solution.

RURAL INFRASTRUCTURE DEVELOPMENT



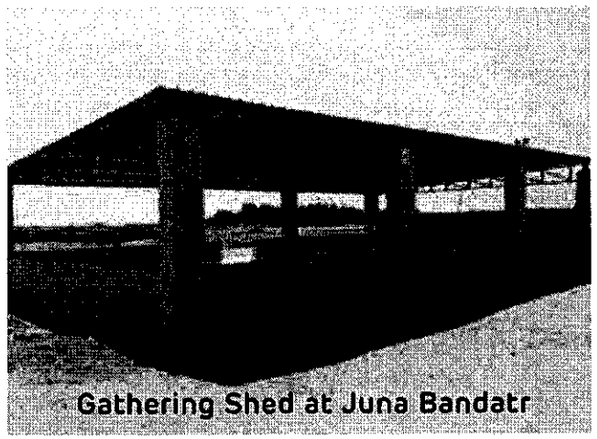


Building a strong community relationship is the key to progress of Adani Foundation. The programs such as Education, Health and Sustainable livelihood development play a very important role in building this strong relationship with the community. These three programs are incomplete without the inclusion of the Rural Infrastructure Development program.

This year on path of sustainability, we have taken some steps as follows...

Under Dignity of Drivers Project, Adani Foundation has constructed Resting Shed for Drivers entering in SEZ Premises. Total 50 beds are constructed, drinking water and sanitation plus recreational – TV Facilities and will be charged minimum. Adani Foundation has handed over the project to ASSET Department – SEZ as a revenue generation model.

In this ceremony Mr. Avinash Rai (CEO- APSEZ), Mr. Rakshit Shah(Executive Director – APSEZ), Mr. Pritpal Sinh (Head – SEZ Operation) and other transporters remained present.



RID – Dignity of Workforce

Present condition of migrated labour community of Adani port, power and Willmar is really matter of concern. They are living in pathetic condition. It is true that we cannot achieve our goal of development until we support to up bring lives of this community. Basic needs of this labour force needs to be address. In labour Vasahats they are not getting facility of pure drinking water, proper living condition, sanitation or proper living atmosphere. To build up trust and transparency in labour community, union labours and Smooth business operations and to create more efficiency by providing better living conditions Adani Foundation has constructed 45 Toilet block and proper bathing place for labours.

Swachhagraha

Adani Foundation has launched project "Swachhagraha" Swachhata ka Satyagraha in the year 2015, to support the 'Swachh Bharat Abhiyan'. Falling in line with our Honorable Prime Minister's call for a Clean India, we launched this mass movement towards making our Nation litter free.

The programme draws inspiration from one of the largest mass movements - Satyagraha, which catalyzed action by winning over people's hearts through tremendous patience and resolve, instilling dignity and self-respect among our people. Swachhagraha aims to engage people and bring about a behavior change, where people get involved 'to create a culture of cleanliness'. Swachhagraha is inculcating behavior change education in cleanliness, sanitation, personal hygiene and civic consciousness amongst young minds.

Presently the Swachhagraha project is being implemented in 3000+ schools across 17 States. So far 3500+ teachers have been trained in behavior change education in schools, ranging from elite private schools to government municipal schools. The programme has directly involved over 57000+ students who have further reached out to their peers, parents and community through a variety of planned action projects and campaigns.

Mundra site- Adani Foundation launched Swachhagraha in 4 Blocks of Kutch District (Mundra, Anjar, Gandhidham, Bhuj). The Swachhagraha programme was launched in Bhujwith participation of over 450 Schools in Swachhagraha Prerak's Training Workshop with support of District Education Department, Kutch District. The programme was launched by Mrs. Shilin R. Adani, Trustee (Adani Foundation); Mr. Prabhav Joshi(DDO, Kutch), Mr. V.S.Gadhavi, (Director, Adani Foundation); Mrs. Sushama Oza, (Director, Adani Foundation); Mrs. Ami Rakshit Shah (Adani Public School); Mr. (Rakesh Vyas – DEO, Kutch); Mr. Sanjay Parmar (DPEO, Kutch) on 1st October 2018.

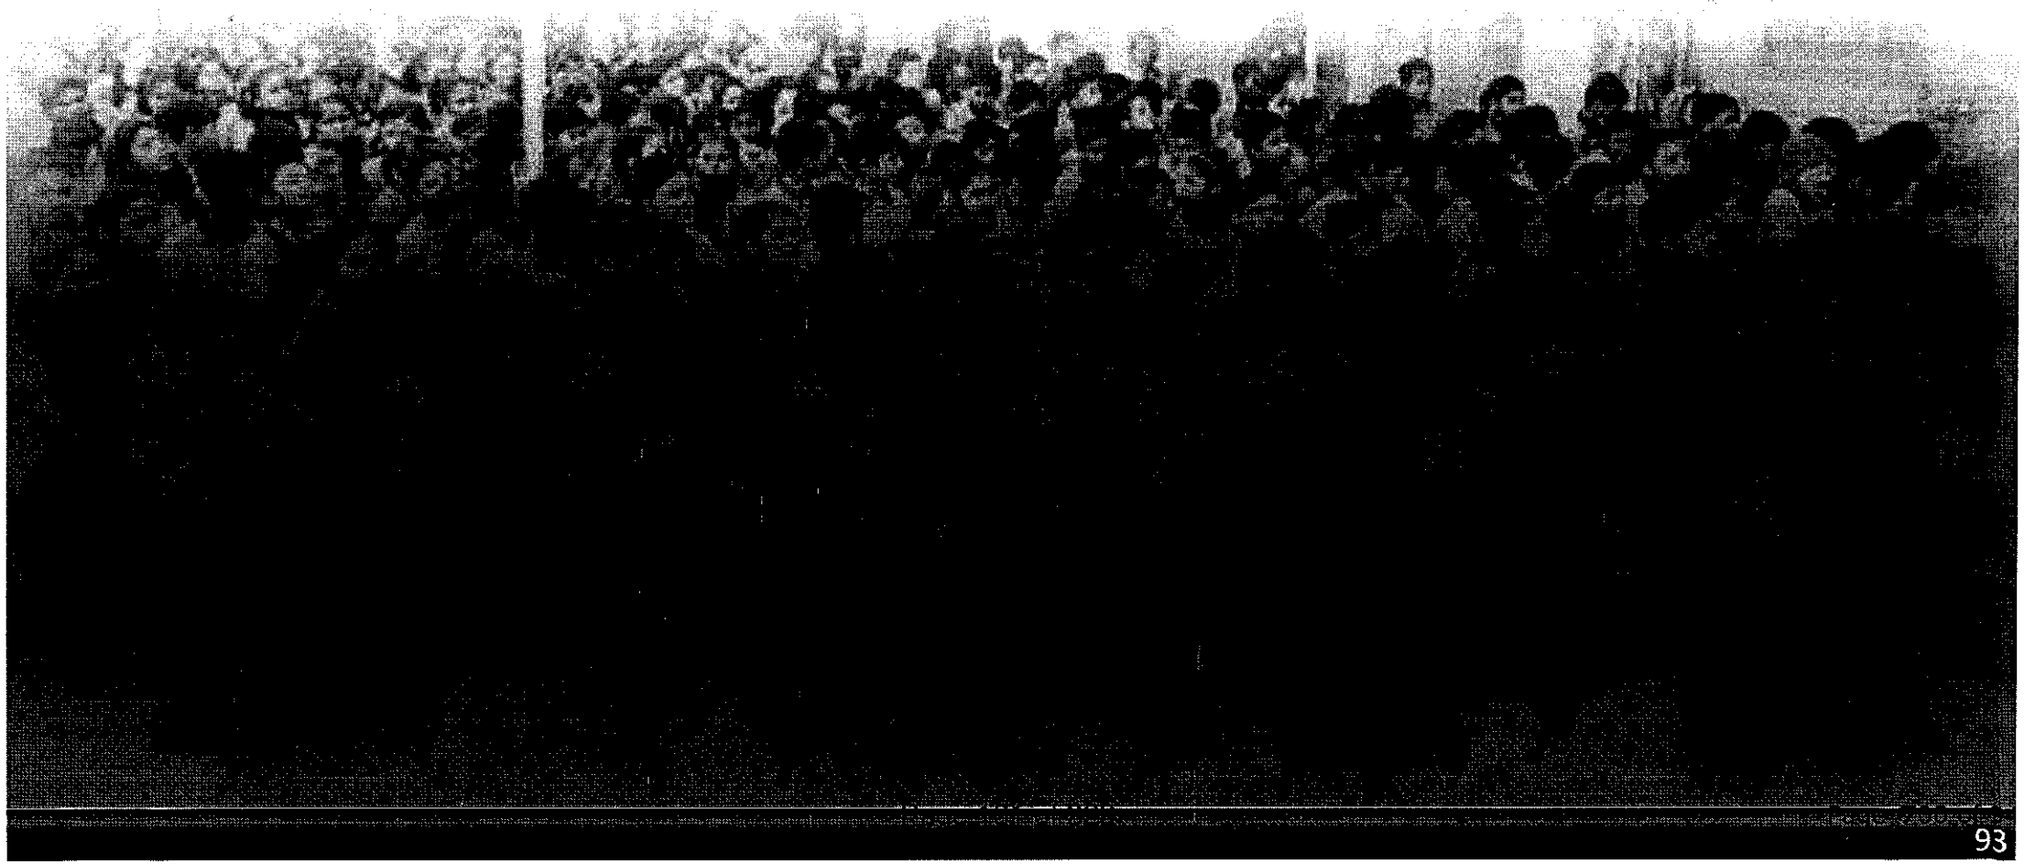
Divine feeling towards Mata no Madh!!

Mata no Madh is a village in Lakhpat Taluka of Kutch district, Gujarat, India. The village lies surrounded by hills on both banks of a small stream and has a temple dedicated to Ashapura Mata, the household deity of former Jadeja rulers of Cutch State. She is also considered patron deity of Kutch. Many people are used to reach this Ashapura temple by feet from different parts of India. G K General hospital has organized health facility through at 10 locations on way of Mata Na Madh during Navaratri 5th to 11th oct.. In addition to medical facility, This health shibir will provide awareness of swachhagraha, swine flu and Beti bachavo as well The concept given by Shri Gadhvi Sir and implementation will be taken care by Dr. Chintan and Adani foundation health team.

Employee Volunteering Programme

In a move first of its kind employees of the Adani Group have adopted all the students of the Vallabh Vidyalaya school in Mundra in their Employee Volunteering Programme (EVP). All the 704 children in the school are from families of migrant labourers working in various industries in and around Mundra. Children from migrant labourer families in addition to resource constraints at home also bear the disadvantage of unfamiliarity with local language and culture inhibiting participation in school.

Vallabh Vidyalaya by passes the language barrier as the medium of instruction is in Hindi and mostly the kids are from Hindi speaking families. "Thanks to Adani EVP financial resource constraint will be substantially relieved", Dharmendra Bhai who created the school from one shed institution gratefully acknowledged.



Energised by the inspiring leadership of Adani Foundation's Chairperson Dr. Priti Adani the Group employees handed over a collective cheque in an impressive function at the school premises. One student of Std. VII joyfully expressed, "Your benevolence will have indelible imprints and impact on our lives. Will remember you ever."
