(Appeal under Section 16(h) of the National Green Tribunal Act, 2010)

APPEAL NO. 35 OF 2020 (WZ)

IN THE MATTER OF:

Kheti Vikas Seva Trust ... Appellant

Versus

Adani Enterprises Limited and others ... Respondents

INDEX

Sr. No.	Annexure	Particulars	Pg. No.
1.	--	Reply on behalf of the Respondent No.1 – Adani Enterprises Limited in Appeal No.35 of 2020 alongwith affidavit in support of the reply	349 - 418
2.	R1	Copy of the application dated 21.4.2016 and a copy of the Form-1 dated 21.4.2016 submitted by the Respondent No.1	419 - 431
3.	R2	Map showing the three site options	432
4.	R3	Copy of the EIA Report and annexures thereto submitted by the Respondent No.1 in December 2018	433 - 2078

For, Adani Enterprises Limited

350

5.	R4	Copy of the ADS submitted by the Respondent No.1 in June 2019	2674 - 3111
6.	R5	Copy of the minutes of the EAC meeting held during 22nd to 23rd August 2019	3112 - 3121
7.	R6	Copy of the further ADS submitted by the Respondent No.1 on 5.2.2020	3122 - 4695
8.	R7	Map whereupon the coordinates as mentioned in the photographs produced by the Appellant are plotted, and also showing the boundaries of the project site	4696
9.	R8	Copy of the minutes of the meeting of FAC held on 20.9.2018	4697 - 4704

Date: 20/11/2020

BEFORE THE HON'BLE NATIONAL GREEN TRIBUNAL
AT ITS WESTERN ZONE BENCH AT PUNE

(Appeal under Section 16(h) of the National Green Tribunal Act, 2010)

APPEAL NO. 35 OF 2020 (WZ)

IN THE MATTER OF:

Kheti Vikas Seva Trust ... Appellant

Versus

Adani Enterprises Limited and others ... Respondents

AFFIDAVIT IN REPLY ON BEHALF OF THE RESPONDENT NO. 1 – ADANI ENTERPRISES LIMITED

I, Santosh Kumar Singh, son of Shri Bhuwaneshwar Singh, aged about 50 years, Indian inhabitant, having my office at Adani Corporate House, Shantigram, Near Vaishno Devi Circle, S.G. Highway, Khodiyar, Ahmedabad – 382 421, do hereby solemnly affirm and state as under:

1. I am the Authorized Representative of Adani Enterprises Limited – the Respondent No.1 (hereinafter referred to as the 'answering respondent') in the aforesaid Appeal No.35 of 2020 (hereinafter

For, Adani Enterprises Limited

Authorised Signatory

referred to as the 'said appeal'). I have perused the memo of the said appeal, and I am conversant with the facts of the present case. I am duly authorized to file the present affidavit in reply to the said appeal.

2. At the outset, I deny all the statements, averments, contentions and allegations raised/made in the said appeal. My not dealing with any of the statements, averments, contentions or allegations raised/made in the said appeal may not be construed as an admission on my part or on the part of the answering respondent, and I deny the same as if the same are specifically set out herein and traversed in seriatim.

Relevant factual background

3. The Appellant is an alleged trust, which alongwith Mr. Naran Bharubhai Gadhvi, has been actively initiating proceedings against the answering respondent and its group companies, by making unsubstantiated allegations. I crave leave to produce and refer to a list of litigations that have been initiated by the Appellant and/or Mr. Naran Bharubhai Gadhvi against the answering respondent and/or

For, Adani Enterprises Limited

353

its group companies. Such particulars alongwith the submissions in the following paragraphs would demonstrate that the Appellant is not aggrieved by the environmental clearance dated 8.5.2020 (hereinafter referred to as 'said EC') issued by the Ministry of Environment, Forest and Climate Change ('MoEF') to the answering respondent for its Greenfield Copper Refinery Plant (having capacity of 1 Million Ton p.a.) located, inter alia, within the Special Economic Zone ('SEZ') of Adani Ports and Special Economic Zone Limited ('APSEZ') at Mundra (hereinafter referred to as the 'said project'). I would also demonstrate in the following paragraphs that the said appeal is malicious, without merit, and that the same has been filed only with a view to harass the answering respondent. I further state and submit that Mr. Naran Bharubhai Gadhvi claims to be the President of the Appellant Trust and duly authorized to sign the affidavit, however, no supporting document of whatsoever nature corroborating his claim to be President and that he is authorized by the Appellant Trust has been placed on record. As such the said appeal is liable to be dismissed on this ground alone.

For, Adani Enterprises Limited

Authorised Signatory

354

4. I state that APSEZ proposes to encompass 1576.81 ha of forest land (i.e. the forest land in question) within the aforementioned SEZ/Industrial Park at Mundra. I state that APSEZ had applied for diversion of the forest land in question way back on 19.7.2004 (i.e. more than 16 years ago). I state that the MoEF has granted Stage-1 forest clearance in respect of the forest land in question on 16.11.2018 for the development of SEZ/Industrial Park at villages Siracha, Navinal, Dhrub, Mundra, Baroi, Gorasama, Luni, Bhadreshwar, Tehsil Mundra, under Forest Division and District Kutch, Gujarat. I state that the said Stage-1 Forest clearance has not been challenged either by the Appellant or any other person.

5. In the meantime, sometime around the year 2016, the answering respondent was desirous of setting up a greenfield copper refinery plant (i.e. the said project). In the circumstances, on 21.4.2016, the answering respondent made an application to the MoEF for obtaining Terms of Reference ('TOR') as per the Environment Impact Assessment Notification, 2006 (hereinafter referred to as 'EIA Notification'). A copy of the said application dated 21.4.2016

For, Adani Enterprises Limited

Authorised Signatory

355

and a copy of the Form-1 dated 21.4.2016 submitted alongwith the said application is annexed hereto and marked as **Annexure-R1**. I state that the answering respondent had provided 3 sites for the said project and had proposed to set up the plant at Site-2 (hereinafter referred to as the 'project site'), as the same was more suitable environmentally and technically as compared to Site-1 and Site-3. A map showing all the three aforesaid sites is annexed hereto and marked as **Annexure-R2**. The project site, inter alia, comprises of 102.39 ha of forest land and 154.19 ha of notified SEZ land of APSEZ. The said 102.39 ha of forest land is a part of the aforementioned 1576.81 ha forest land, for which APSEZ has already received Stage-I Forest Clearance.

6. I state that the said project was appraised by the Expert Appraisal Committee (Industry) (hereinafter referred to as 'EAC') during its 6th meeting held on 4.5.2016, and it prescribed the TOR to the said project for undertaking detailed Environment Impact Assessment ('EIA') study for obtaining environmental clearance in respect of the said project at the project site suggested by the answering

For, Adani Enterprises Limited

Authorised Signatory

356

respondent. Accordingly, MoEF prescribed TOR to the said project on 21.6.2016. A copy of the TOR dated 21.6.2016 prescribed by the MoEF is already annexed to the said appeal at ANNEXURE A-4.

7. I state that for the purpose of undertaking the aforementioned EIA, the answering respondent engaged a consultant – Vimta Labs Limited, which is accredited by the National Accreditation Board for Education and Training ('NABET') and National Accreditation Board for Testing and Calibration Laboratories ('NABL'). The aforesaid consultant engaged by the answering respondent is also recognized by MoEF.

8. On 29.4.2017, a public hearing was held in accordance with the provisions of the EIA Notification, wherein the draft Environment Impact Assessment Report amongst other documents was placed for perusal of all concerned. It may be pertinent to note that Mr. Naran Bharubhai Gadhvi, who claims to have knowledge of the contents of the said appeal, was present at the aforesaid public hearing, but did not raise the concerns/issues in respect of the alleged grievances as

For, Adani Enterprises Limited

Authorised Signatory

357

raised in the said appeal. I state that the answering respondent answered all the concerns/queries/objections that were raised during the course of the public hearing, and also prepared an action plan in respect of each issue that was discussed during the public hearing. The said details of public hearing, the responses of the answering respondent, as well as the action plan was submitted to the EAC as a part of the final Environment Impact Assessment Report ('EIA Report'). I state that the answering respondent submitted the EIA Report in respect of the said project to the EAC on 6.12.2018. A copy of the EIA Report and annexures thereto is annexed hereto and marked as **Annexure-R3**.

9. In the meantime, the answering respondent also entered into a Memorandum of Understanding with APSEZ on 5.12.2018, thus agreeing for future transfer of leasehold rights in its favour in respect of the project site.

10. I state that the EAC in its meeting held during 9th to 11th January 2019 considered the EIA Report submitted by the answering

For, Adani Enterprises Limited

Authorised Signatory

358

respondent in respect of the said project. The EAC made various observations in respect of the proposal of the answering respondent, sought additional details/clarifications from the answering respondent, and recommended the formation of a sub-committee and a site visit by such sub-committee. The EAC observed that the proposal of the answering respondent would be considered after submission of the Additional Details Sought ('ADS') and after submission of the report by the sub-committee based on the site visit. A copy of the minutes of the said EAC meeting held during 9th to 11th January 2019 has been annexed to the said appeal at ANNEXURE A-14.

11. Sometime in June 2019, the answering respondent submitted the ADS covering 33 observations to the EAC, thereby responding to each and every observation that was made by the EAC in its meeting held during 9th to 11th January 2019. A copy of the ADS submitted by the answering respondent to the EAC in June 2019 is annexed hereto and marked as **Annexure-R4**. Thereafter, the EAC once again discussed the proposal of the answering respondent in respect

NOTARY

For, Adani Enterprises Limited

Authorised Signatory

359

of the said project in its meeting held during 22nd to 23rd August 2019. The EAC requested for clarifications in respect of some of the responses that were given by the answering respondent in the ADS submitted in June 2019, and, inter alia, reiterated that a sub-committee should carry out a site visit as recommended in the earlier meeting. A copy of the minutes of the said EAC meeting held during 22nd to 23rd August 2019 is annexed hereto and marked as **Annexure-R5**.

12. The sub-committee of the EAC made a site visit on 9th and 10th December 2019, and placed a site visit report in the EAC meeting for further deliberations. After detailed deliberations on the aforesaid site visit report and the ADS submitted by the answering respondent, the EAC sought responses in respect of further 19 observations in the form of further ADS for further consideration of the proposal of the answering respondent. A copy of the minutes of the said EAC meeting held during 23rd to 24th December 2019 is annexed to the said appeal at ANNEXURE A-15.

For, Adani Enterprises Limited

Authorised Signatory

360

13. Thereafter, as per the directions of the EAC in its meetings held during 22nd to 23rd August 2019 and 23rd to 24th December 2019, the answering respondent submitted (i) revised version of the ADS submitted in June 2019, and (ii) further ADS in response to other 19 observations of EAC, on 5.2.2020. A copy of the both the aforesaid ADS submitted by the answering respondent on 5.2.2020 is collectively annexed hereto and marked as **Annexure-R6**.

14. The EAC further considered the proposal of the answering respondent in light of the further ADS submitted on 5.2.2020 during the EAC meeting held during 24th to 25th February 2020. After considering all the particulars submitted by the answering respondent over a period of time, (i.e. the EIA Report (including the public hearing details), the ADS reply submitted in June 2019, the further ADS reply submitted on 5.2.2020), the report of site visit of the sub-committee of EAC, and after having comprehensive discussions during 4 EAC meetings as stated above, the EAC recommended the said project for environmental clearance to the MoEF. Copy of the extracts of the minutes of the EAC meeting held

NOTARY

For, Adani Enterprises Limited

Authorised Signatory

during 24th to 25th February 2020 is annexed to the said appeal at ANNEXURE A-16.

5. In view of the positive recommendation of the EAC, the MoEF issued the said EC in favour of the answering respondent for the said project on 8.5.2020. A copy of the said EC has been annexed to the said appeal at ANNEXURE A-1. It is pertinent to note that MoEF granted EC after giving due consideration to the various conditions recommended by EAC as a part of EC recommendation.

16. The Appellant has challenged the said EC by way of the said appeal. I state and submit that the said appeal is untenable, misconceived, and an abuse of process of law, as would be evident from the submissions made in the upcoming paragraphs.

17. Before dealing with the contents of the said appeal, I seek to raise the following preliminary contentions with regard to the maintainability of the said appeal, for the consideration of this

For, Adani Enterprises Limited

Authorised Signatory

362

Hon'ble Tribunal, which are set out without prejudice to one another.

Preliminary Objections

18. The Appellant is not aggrieved by the said EC, but has filed the said appeal only with a view to harass the answering respondent. At the outset, I state that the Appellant has not disclosed as to how it is aggrieved by the said EC. I submit that an application under Section 16 of the National Green Tribunal Act, 2010 ('NGT Act') can be filed only by a person aggrieved by the decision/clearance under challenge. However, the Appellant has failed to demonstrate as to how it is aggrieved by the said EC. The Appellant has not disclosed as to how it has the *locus standi* to file the said appeal. I state and submit that the Appellant and Mr. Naran Bharubhai Gadhvi, have been actively initiating proceedings against the answering respondent and its group companies, by making unsubstantiated allegations. I submit that the Appellant and Mr. Naran Bharubhai Gadhvi both have made a career out of initiating litigations and arm-

For, Adani Enterprises Limited

Authorised Signatory

twisting the answering respondent and its group companies. I state that the Appellant and Mr. Naran Bharubhai Gadhvi specifically keep track of the proposed projects of the answering respondent and its group companies, and challenge the clearances/approvals granted in respect of the such projects without any basis and only with a view to harass and arm-twist the answering respondent and its group companies for the reason best known to them. To the best of my knowledge, neither the Appellant nor Mr. Naran Bharubhai Gadhvi have filed any proceedings against any other company or corporate group, inspite of the presence of various other companies or corporate groups in the Mundra region. In the facts of the present case, it may be pertinent to note as to how the Appellant had taken photographs of areas outside the project site on 7.8.2018 (i.e. almost two years prior to the said EC) and have annexed the same to the said appeal, thereby misleading the Hon'ble Tribunal in attempt to make the plausible case. The same shows as to how the Appellant and its President is in the habit of keeping track of the proposed project specifically of the answering respondent and its group

For, Adani Enterprises Limited

Authorised Signatory

364

companies, and challenging only the clearances granted in favour of the answering respondent and its group companies.

19. The said appeal is an abuse of process of law. As would be evident from my paragraph wise reply to the said appeal, the Appellant has made contradictory submissions at different points in the said appeal, and has taken such contrary stands at its convenience to suit the respective allegations. Further, the Appellant has placed heavy reliance upon the 'Report of the Committee for Inspection of M/s Adani Port & SEZ Ltd. Mundra, Gujarat' of April 2013 (hereinafter referred to as the 'Sunita Narain Committee Report') in its challenge to the said EC. The name of the said report is itself clear that the said report pertains to APSEZ, and has no relevance to the said project. It is obvious that a report of April 2013 would in any case have no bearing on the said project, which was proposed only in 2016. The Appellant is aware that the MoEF has already issued directions to APSEZ pursuant to the recommendations of the Sunita Narain Committee Report. Inspite of the aforesaid, the Appellant has referred to the Sunita Narain Committee Report and other reports in

NOTARY VIJAY C. SHAH

Adani Enterprises Limited

Authorised Signatory

365

respect of APSEZ in the said appeal only with a view to prejudice this Hon'ble Tribunal. In view of the said facts, it becomes clear that the said appeal is an abuse of the process of law.

20. I state and submit that the Appellant has made false statements on oath in the verification clause as well as the affidavit of the said appeal. Mr. Naran Bharubhai Gadhvi has claimed as to how the contents of the said appeal are true and correct, and has signed and affirmed the affidavit on 25.6.2020. However, in the I.A. No.68 of 2020 filed in the said appeal, seeking condonation of delay, it has been stated that the said appeal was ready by 29.7.2020. Further, from the bare perusal of the affidavit as well as Page No.53 of the said appeal, it is apparent that the Appellant had signed the last page of the said appeal and the affidavit, much before the said appeal was finalized. Therefore, it is clear that the Appellant has not only made false statements on oath in the verification clause and affidavit of the said appeal, but it is also evident that someone else is driving the proceedings and the Appellant, who has animosity with the Adani Group, has merely lent his name to institute the said appeal. The said

For, Adani Enterprises Limited

Authorised Signatory

366

appeal is nothing but an abuse of process of law. I submit that the said appeal is required to be rejected on this ground alone as Appellant has not approached the Hon'ble Tribunal with clean hands. Assuming for the sake of argument that the said appeal has been affirmed by Mr. Naran Bharubhai Gadhvi after perusing the said appeal, then there is a complete lack of explanation as to why was the said appeal, which was affirmed on 25.6.2020, filed only on 29.7.2020.

21. I shall now deal with the present application, paragraph-wise.

Paragraph-wise reply

22. The contents of paragraphs I to III of the said appeal are a matter of record, and I deny anything contrary to the record.

23. With reference to paragraph 1 of the said appeal, I reiterate the factual background narrated in the foregoing paragraphs of the

NOTARY SUJAY G. SHAH

For, Adani Enterprises Limited

Authorised Signatory

367

present reply. The contents of the paragraph under reply are a matter of record, and I deny anything contrary to the record.

24. With reference to paragraph 2 of the said appeal, I deny that the said EC suffers from illegalities or infirmities or that the same is liable to be set aside, as alleged or as sought to be alleged or otherwise. I deny that the answering respondent (i.e. the Project Proponent) has concealed facts or misrepresented data, as alleged or as sought to be alleged or otherwise. I deny that the EAC has failed to appraise the project or apply the laws in force, as alleged or otherwise. As would be evident from the submissions in the following paragraphs, the Appellant has miserably failed in proving the allegations made in the paragraph under reply and the said appeal.

25. With reference to paragraphs 3 and 4 of the said appeal, I state and submit that the information presented in Form-1 is not the only information/particulars that are submitted for the purpose of appraisal process under the EIA Notification. I state and submit that various other details, particulars, data, etc., including Form-2, EIA

For, Adani Enterprises Limited

Authorised Signatory

368

Report, etc. are submitted by a project proponent for the purpose of appraisal under the EIA Notification.

26. With reference to paragraph 5 of the said appeal, I deny that the answering respondent has given incorrect information or concealed facts in the Form-1 submitted to the EAC, as alleged or otherwise. I deny that the answering respondent has not provided information as to how many trees have to be cut at the project site, as alleged or otherwise. I deny that the Reserved Forest land forming part of the project site has fully grown trees, as alleged or otherwise. I deny that the document produced by the Appellant as ANNEXURE A-2 is the Form-1 submitted by the answering respondent. It is evident from a bare perusal of the ANNEXURE A-2 to the said appeal, that the said document is the Form-2 filed by the answering respondent, and not Form-1. I deny that the photographs produced by the Appellant as ANNEXURE A-3 are photographs of the trees on the project site, as alleged or otherwise. I state and submit that the photographs produced by the Appellant as ANNEXURE A-3, reflect (i) the coordinates (longitude and latitude) of the location of the said

For, Adani Enterprises Limited

Authorised Signatory

369

photographs, and (ii) the date on which the said photographs have been taken i.e. 7.8.2018. I state and submit that on plotting the aforesaid coordinates on the map, it becomes evident that the said photographs are of locations that are outside the project site. A map whereupon the coordinates as mentioned in the photographs are plotted, and also showing the boundaries of the project site, is annexed hereto and marked as **Annexure-R7**.

27. With reference to paragraph 6 of the said appeal, I state and submit that the judgment referred to in the paragraph under reply has no application to the facts of answering respondent. I submit that the Appellant is placing reliance on the judgment referred to in the paragraph under reply on the unfounded presumption that the answering respondent has concealed information regarding presence of trees on the project site. As demonstrated by way of the map annexed to the present reply at Annexure-R7, the photographs produced by the Appellant at ANNEXURE A-3 to the said appeal are of locations outside of the project site.

For, Adani Enterprises Limited

Authorised Signatory

370

28. With reference to paragraph 7 of the said appeal, I deny that the information provided by the answering respondent is contradicted by the information provided in Table-1.1 of the EIA Report. I deny that the information provided in alleged Form-1 is misleading or incorrect or that impact on all water bodies has not been studied, as alleged or otherwise. I reiterate that the document produced and relied upon by the Appellant at ANNEXURE A-2 is Form-2. I state and submit that information provided by the answering respondent in Form-2 (ANNEXURE A-2 to the said appeal) is in response to the specific particulars sought in the form. On perusal of the aforesaid Form-2, it becomes apparent that the particulars that were sought were: (i) Details of Presence of Water Bodies in Core Area, and (ii) Details of Presence of Water Bodies in Buffer Area. As far as details relating to presence of water bodies in the Core Area is concerned, there is no alleged contradiction in Form-2 and Table-1.1 of the EIA Report. The existence of the water bodies in the vicinity of the project site is mentioned in the Form-1. Further, the fact about the other water bodies within the buffer area is clearly stated in the EIA Report, which is also admitted in the paragraph

For, Adani Enterprises Limited

Authorised Signatory

371

under reply. The EIA Report was submitted to the EAC, and the EAC has granted the said EC after examining the EIA Report, which clearly mentions all the water bodies that are in the buffer area. Therefore, there does not arise any question of misleading the EAC. In fact, the EIA Report in Chapter 4, section 4.2.4 specifically deals with "Impact on Water Resources and Water Quality". The EIA Report, inter alia, clearly states that: (i) The total water requirement for the said project will be sourced from the desalination plant of APSEZ, (ii) No ground water will be abstracted during the operation phase, (iii) Dhaneshwari river (which is a seasonal river) flowing through the project site will not be diverted, but will be suitably trained along the boundary, and (iv) The total wastewater generated would be treated in the effluent treatment plant, and the treated wastewater would be fully utilized within the plant for process, cooling, and other purposes. No wastewater will be discharged outside the plant. Plant will operate on a Zero Liquid Discharge (ZLD) concept. The aforesaid contents of the EIA Report which has been examined by the EAC demonstrates that there would be no impact on the water bodies in the vicinity of the project site because

For, Adani Enterprises Limited

Authorised Signatory

372

of the said project. However, the Appellant has produced only some extracts of the EIA Report at ANNEXURE A-7, thereby conveniently excluding the observations relating to "Impact on Water Resources and Water Quality". I state that the said facts are also recorded in the said EC at paragraphs 16 and 18. Accordingly, while granting the said EC, the MoEF at paragraph 35(III) has set out specific conditions in relation to Water quality monitoring and preservation, including adherence to 'Zero Liquid Discharge'. Further, the MoEF at paragraph 34 (xxvi) of the said EC has acknowledged the fact that flow of water from the Dhaneshwari Nadi shall not be disturbed.

29. With reference to paragraph 8 of the said appeal, I deny that the said EC granted to the answering respondent is liable to be cancelled, as alleged or otherwise. I state and submit that the judgment referred to in the paragraph under reply has no application to the facts of answering respondent. I submit that the Appellant is placing reliance on the judgment referred to in the paragraph under reply on the unfounded presumption that the answering respondent has failed to

NOTARY VIJAY C. SHAH AHMEDABAD

For, Adani Enterprises Limited

Authorised Signatory

373

make mandatory disclosures in the alleged Form-1. As demonstrated in the foregoing paragraph, there has been no failure whatsoever on the part of the answering respondent in making mandatory disclosures before the EAC.

30. With reference to paragraph 9 of the said appeal, I deny that the answering respondent has failed to carry out compliance with the TOR. I submit that the Appellant has made vague averments without any particulars in the paragraph under reply.

31. With reference to paragraphs 10 and 11 of the said appeal, I seek to clarify that the term of reference quoted in paragraph under reply has been claimed to be point no.5(xii). However, the term of reference "*R&R details in respect of land in line with state Government Policy*" is at point no.4(xii) of the Annexure-I – Generic Terms of Reference (TOR) in respect of Industry Sector. The said term is generic, and not specific. I state and submit that generic terms of reference may or may not be applicable to a particular project depending upon the facts and circumstances. The contents of the

For, Adani Enterprises Limited

Authorised Signatory

374

paragraph under reply relate to the alleged impact on the local community in view of the diversion of forest land. I reiterate that the project site is located within the SEZ, being developed by APSEZ. Thus, it is APSEZ that has applied for diversion of forest land. I reiterate that APSEZ has already received Stage-I approval for diversion of 1576.81 ha forest land, including 102.39 ha of forest land forming part of the project site. The alleged grievances raised in the paragraphs under reply pertain to the diversion of forest land, which has been sought by APSEZ in accordance with law. However, it may be noted that the Appellant has not challenged the Stage-1 approval granted to APSEZ for diversion of 1576.81 ha of forest land either in the said appeal or any other proceedings to the best of my knowledge. In the circumstances, there does not arise any question of agitating alleged grievances relating to the diversion of forest land in the said appeal.

32. With reference to paragraph 12 of the said appeal, I seek to clarify that the term of reference quoted in paragraph under reply has been claimed to be point no.5(xii). However, the term of reference

NOTARY VIJAY C. SHAH

For, Adani Enterprises Limited

Authorised Signatory

375

"*Surface water quality of nearby River (60m upstream and downstream) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines*" is at point no.6(iv) of the Annexure-I – Generic Terms of Reference (TOR) in respect of Industry Sector. I state and submit that generic terms of reference may or may not be applicable to a particular project depending upon the facts and circumstances. The alleged grievance raised in the paragraph under reply is that the answering respondent collected samples from only 4 locations for testing the surface water quality instead of 8 locations. I state that identification of a surface water sampling location depends on (i) the density of surface drainage in the study area and (ii) availability of surface water source. In the facts pertaining to the project site, there are no perennial water bodies within the study area of 10 km radius, but for Arabian Sea. In the circumstances, the baseline data was collected by NABET approved EIA consultant during the post-monsoon season in the months of October-December 2016. During this period, there were no other surface water bodies besides the 4 locations in question, that had availability of surface water for sampling. The EAC in its meeting

For, Adani Enterprises Limited

Authorised Signatory

376

held on 9th to 11th January 2019 has also taken note of the fact that surface water samples were analysed from the available 4 locations. The EIA Report describes in detail the locations for the surface water sampling as well as the results. Once again, the Appellant has purposefully excluded the relevant pages of the EIA Report, extracts of which are annexed at ANNEXURE A-7 to the said appeal.

33. With reference to paragraph 13 of the said appeal, I deny that the studies are not as per the Terms of Reference or that the said EC ought to be set aside, as alleged or otherwise. I state and submit that the judgment referred to in the paragraph under reply has no application to the facts of answering respondent. I submit that the Appellant is placing reliance on the judgment referred to in the paragraph under reply on the unfounded presumption that the studies undertaken for EIA of the said project is not as per the Terms of Reference.

34. With reference to paragraph C.a. and paragraphs 14 to 19 of the said appeal, I deny that the answering respondent has submitted a faulty

NOTARY

For, Adani Enterprises Limited

377

EIA to the EAC, as alleged or otherwise. I deny that alternative sites have not been properly studied, as alleged or otherwise. I deny that 'connectivity' is the only reason for choosing the location of the project site, as alleged or as sought to be alleged or otherwise. I deny that the Site-3 is more compatible with an industrial land use, as alleged or otherwise. I deny that the EIA Report makes no mention as to how the project site is advantageous in terms of environmental criteria, as alleged or otherwise. I deny that the project site is in close proximity to mangrove forests, as alleged or otherwise. I deny that multiple natural streams pass through the project site, as alleged or otherwise. I deny that the answering respondent has failed to appreciate the alleged ecological sensitivity of the area or has given weightage to technical feasibility over ecological feasibility, as alleged or as sought to be alleged or otherwise. I deny that Site-3 was environmentally more feasible or that the same should have been chosen, as alleged or as sought to be alleged or otherwise. In the paragraphs under reply, the Appellant has placed reliance upon the Technical Guidance Manual for Metallurgical Industry (hereinafter referred to as the 'Guidance Manual') prepared by

For, Adani Enterprises Limited

Authorised Signatory

378

IL&FS Ecosmart Limited. I submit that the said Guidance Manual neither has any binding authority nor any legal force. Thus, the reliance placed upon the same by Appellant in alleging that the project site is not in accordance with such alleged guidelines, is misconceived. Without prejudice to the said submission, I state that the EIA Report has an exclusive chapter dealing with the analysis of alternative sites. In the EIA Report, a detailed comparative analysis has been undertaken in respect of the alternative sites, and thereafter it has been concluded that Site-2 (i.e. the project site) is substantially advantageous in terms of environmental and technical criteria. The project site is superior to Site-3 in terms of availability and closeness of water and power source, land development, closeness to road and rail, etc. The Appellant's stand in treating the aforesaid factors as only technical and not environmental is misconceived. I submit that greater distances from water source, power source, port, and construction of a fresh approach road, absence of a conveyor belt system for transportation of coal, etc. translate into high environmental impact. Greater distances from port, absence of corridor for utilities, etc. would mean that essential requirements

NOTARY

For, Adani Enterprises Limited

Authorised Signatory

379

would have to be provided for by transportation through vehicles resulting into high vehicular pollution. Greater distance from water source would mean higher power consumption for pumping the water resulting into high environmental impact. On the other hand, it is the Appellant's case that the project site is environmentally ill suited because of (i) the alleged proximity of mangrove forests, and (ii) alleged presence of multiple natural streams in the project site. As mentioned in the EIA Report, there is no presence of mangroves within the project site. The project site is outside the CRZ area, and thus the requirement that metallurgical activity should be carried out outside CRZ area is fulfilled. The mangroves are at a distance of around 200 meters away from the project site of the answering respondent. Therefore, the said project would not have any impact on such mangroves. As submitted in the earlier paragraphs, only Dhaneshwari river is passing through the project site. It is stated that the said Dhaneshwari river is a seasonal river. In any case, as per the conditions of the said EC, the said Dhaneshwari river is not getting diverted and that there will be bridges across the two land parcels for accessibility as mentioned in EC. Thus, in view of the foregoing

For, Adani Enterprises Limited

Authorised Signatory

380

facts, it becomes clear that the project site is environmentally better suited than Site-3.

35. With reference to paragraphs 20 to 22 of the said appeal, I reiterate that the Guidance Manual is not a regulatory document and has no legal force. Thus, the reliance being placed by the Appellant on the Guidance Manual in the paragraphs under reply is misconceived. I deny that the answering respondent has failed to carry out a cumulative impact assessment of the project, as alleged or as sought to be alleged or otherwise. I deny that the EIA Report has not determined impact due to the addition of copper plant or upcoming future projects, as alleged or otherwise. Chapter 4 of the EIA Report comprehensively deals with the cumulative impact of the existing projects, the upcoming projects proposed at the relevant point of time, as well as the said project. I state and submit that while annexing the extracts of the EIA Report with the said appeal, the Appellant has conveniently excluded the relevant figures and pages of the EIA Report demonstrating cumulative impact assessment undertaken for the said project.

For, Adani Enterprises Limited

Authorised Signatory

381

36. With reference to paragraphs 23 and 24 of the said appeal, I state and submit that the judgment referred to in the paragraphs under reply has no application to the facts of answering respondent. I submit that the Appellant is placing reliance on the judgment referred to in the paragraph under reply on the unfounded presumption that cumulative impact assessment has not been done for the said project.

37. The contents of paragraph 25 of the said appeal are denied. I state and submit that the cumulative impact assessment has been carried out in accordance with clause 7(i) of TOR. I reiterate that Chapter 4 of the EIA Report comprehensively deals with the cumulative impact of the existing projects, upcoming projects as proposed at the relevant point of time, and the said project. I state and submit that while annexing the extracts of the EIA Report with the said appeal, the Appellant has conveniently excluded the relevant figures and pages of the EIA Report demonstrating cumulative impact assessment undertaken for the said project. I submit that the said

For, Adani Enterprises Limited

Authorised Signatory

382

project is proposed with Zero Liquid Discharge to mitigate any water pollution and Secured Landfill to mitigate any impact on soil and groundwater. As I am not aware, I do not admit the averments made in the paragraph under reply in respect of other projects and project proponents. I state and submit that the averments made in respect of other projects and project proponents have no bearing on the facts of the answering respondent and the said project.

38. The contents of paragraph 26 of the said appeal pertain to APSEZ, and the same are not germane either to the alleged issues raised in the said appeal or to the said project. Thus, the contents of the paragraph under reply are not required to be considered for the purpose of adjudicating the said appeal.

39. The contents of paragraphs 27 to 30 of the said appeal are denied. I deny that there is a misleading or deficient impact assessment on the fishing community, as alleged or otherwise. I deny that there is no discussion about the probable change in the fishermen community or the fish yield, as alleged or otherwise. I deny that the said project

For, Adani Enterprises Limited

Authorised Signatory

383

will destroy fisheries set up or block access for fishermen or cause conflict, as alleged or as sought to be alleged or otherwise. I state that the project site is located at a distance of 3.9 kms from the Gulf of Kutch, where fishing activities are taking place. In any case, there is no intake or outfall facilities planned in the seafront. The Dhaneshwari river which is passing through the project site is a seasonal river, and no fishing activity takes place therein. I state that there are no fish landing centres within the project site. The existing roads used by the fishermen do not pass through the project site, and the roads used by the fishermen will not be disturbed due to the said project. As stated in the foregoing paragraphs, the total water requirement for the said project will be sourced from the desalination plant of APSEZ, and the plant of the said project will be operated on Zero Liquid Discharge concept. Thus, there will be no impact on the water regime due to the wastewater generated from the plant complex. Further, provision of separate storm water system to collect and store run-off water during rainy season and utilization of the same in the process is proposed. From the foregoing facts, it becomes clear that there will be no damage to the fishing activities

NOTARY

For, Adani Enterprises Limited

Authorised Signatory

384

due to the said project. I state that the EIA Report in Chapters 3 and 4, and Annexure-XII, discuss in detail the status of the fishermen community, the impact on it because of the said project, and the proposed plans of the answering respondent in respect of the fishermen community. I further state that the aforesaid total water requirement of the said project will be fulfilled by sourcing the same from the desalination plant of APSEZ, which would be within the capacity approved by MoEF in the environmental clearance granted to APSEZ, including its intake and outfall. I am not offering any comments in respect of the allegations made against APSEZ in the paragraph under reply. I state and submit that such allegations in respect of APSEZ, have no bearing on the said project of the answering respondent. The said allegations have been made by the Appellant against the group company of the answering respondent only with a view to prejudice this Hon'ble Tribunal against the answering respondent. I state that to the best of my knowledge, the MoEF has already issued directions to APSEZ in respect of fishermen community pursuant to the recommendations of Sunita

For, Adani Enterprises Limited

Authorised Signatory

385

Narain Committee, and that APSEZ has already complied with such directions or is in the process of complying with such directions.

40. With reference to paragraphs 31 to 33 of the said appeal, I deny that there is concealment of the alleged presence of agriculture and pastoral community, as alleged or otherwise. I deny that the EIA Report has disregarded the agricultural and pastoral community, as alleged or otherwise. I deny that 80% of the population surrounding the project site include agriculturalists and pastoralists, as alleged or otherwise. I deny that the project ought to be rejected, as alleged or otherwise. It may be pertinent to note that in paragraph 27 of the said appeal, the Appellant has made a sweeping statement that there is no discussion about the change in fishermen community and in the paragraphs under reply, the Appellant has stated as to how the EIA Report has considered the fishermen community and has allegedly disregarded agricultural and pastoral community. This clearly shows that the Appellant is raising contradictory allegations based on its convenience to support its alleged stands at different points. I state that no agricultural or pastoral community is present in the project

For, Adani Enterprises Limited

Authorised Signatory

386

site. Further, there is no specific record of pastoral community in the Census data 2011. As per the 2011 census data, the study area (i.e. 10 km radius from the project site) consists of 11.76% of agricultural labourers, 77.5% of other workers, 10.45% of cultivators, and 0.64% of household industry workers. I state that the nearest agricultural land is situated 1.7 km to the North of the project site, whereas the maximum ground level concentration envisaged due to the said project is occurring at a distance of 2.2 km to the North-East of the project site. I crave leave to rely upon the figures and particulars forming part of the EIA Report in support of the aforesaid facts. I state and submit that the project site does not encompass any gauchar/grazing land. I reiterate that the reliance being placed by the Appellant on the Sunita Narain Committee Report is misconceived. I state and submit that the Sunita Narain Committee Report is in respect of the entire SEZ of APSEZ, and that APSEZ is already complying with the directions issued by the MoEF pursuant to the recommendations of the Sunita Narain Committee Report.

For, Adani Enterprises Limited

Authorised Signatory

387

41. The contents of paragraphs 34 to 38 of the said appeal are denied. I deny that there is a deficient impact assessment on the marine environment or ecology, as alleged or otherwise. I state and submit that the project site is about 3.9 kms away from the Gulf of Kutch. I deny that the marine environment or the mangroves will be affected, as alleged or as sought to be alleged or otherwise. I deny that there is a lack of studies or that the EIA Report is faulty, as alleged or otherwise. As submitted earlier, the proposed project will be sourcing water from APSEZ through APSEZ's desalination plant, for which necessary environmental clearance has already been granted to APSEZ. I state that there is neither any intake nor any outfall channel for the said project. I state and submit that the project site is outside the CRZ Area. I state and submit that the Appellant has tried to confuse the facts in paragraph 34 of the said appeal by referring to the reverse osmosis plant as "*reverse osmosis (RO) desalination plant*". The reverse osmosis plant proposed within the project site is part of Zero Liquid Discharge scheme for the said project. I state that the inlet to the proposed reverse osmosis plant is for treating water from the Effluent Treatment Plant, and the product

NOTARY
VIJAY C. SHAH

For, Adani Enterprises Limited

Authorised Signatory

388

from the reverse osmosis plant will be reused in the plant operation. The aforesaid desalination plant of APSEZ has otherwise no relation to the reverse osmosis plant proposed in the project site. Thus, the said project has no direct interference with marine environment and ecology. Consequently, there does not arise any question of killing of larval or juvenile fish species from the shore waters. I state and submit that the intake and outfall channels referred to in the response of the answering respondents during the public hearing are those of APSEZ, for which APSEZ has already received the requisite environment clearance. The said environmental clearance of APSEZ is not under challenge. I reiterate that the total water requirement of the said project is going to be fulfilled by the water to be obtained from the desalination plant of APSEZ. I reiterate that there is no discharge of any kind into the sea as a result of the said project. I reiterate that there will be no blockage of water stream as a result of the said project. I state and submit that there is going to be no extraction of ground water for the purpose of the said project. Thus, as far as the said project is concerned, there is going to be no

For, Adani Enterprises Limited

Authorised Signatory

389

interference, much less any impact, with marine environment and ecology.

42. The contents of paragraphs 39 to 42 of the said appeal are denied. I deny that there is a deficient impact assessment in respect of the Dhaneshwari river, as alleged or otherwise. I deny that Figure-2.1 does not show flow of the river, as alleged or otherwise. I deny that the answering respondent is seeking to destroy the Dhaneshwari river, as alleged or in the manner alleged or otherwise. I state and submit that Dhaneshwari river is a seasonal river, which is passing through the project site. I state and submit that Chapters 3 and 4 of the EIA Report clearly state the impact of the project site on Dhaneshwari river, which is well within the limits prescribed by CPCB. I state and submit that the said EC has already laid down conditions with a view to protect the Dhaneshwari river. I state that the said EC has clearly stated that the Dhaneshwari River passing through the project site will be maintained, and has, inter alia, laid down the following condition:

NOTARY VIJAY C. SHAH

For, Adani Enterprises Limited

Authorised Signatory

390

"*xxvi. There will be bridges across the two land parcels for accessibility. Flow of water from the Dhaneshwari Nadi will not be disturbed. A green belt alongwith safety zone (towards riverbank with gabion and gully plugs to avoid erosion of plant if any) 50 meter wide shall be developed along the banks (side) of Dhaneshwari Nadi and 100 meter wide wherever storage of solid waste is proposed. This green belt would be developed by giving protection to the area and planting local species so that a natural ecosystem is created that may promote wilderness.*"

I submit that the judgment referred to in the paragraphs under reply has no application to the facts of the present case. The Appellant is relying upon the said judgment on the unfounded presumption that the answering respondent is illegally changing the course of the Dhaneshwari river.

43. The contents of paragraphs 43 to 46 of the said appeal are denied. I deny that there is concealment or misleading information about the alleged presence of rivers in the project site, as alleged or otherwise. I deny that there is any contradiction in the EIA Report, as alleged or otherwise. I deny that the alleged impact on alleged creeks within the project has been concealed or that no information has been provided of the said project on the creeks and water bodies, as

NOTARY

For, Adani Enterprises Limited

Authorised Signatory

391

alleged or otherwise. I state that the Appellant itself has reproduced selected portion of the EIA Report in the paragraphs under reply, wherein the facts are stated about the presence of Dhaneshwari river in the project site and presence of other water bodies within 10 km radius. I state and submit that in Chapter 4 of the EIA Report, the impact on all such water bodies is clearly discussed and presented for the consideration of the EAC. I reiterate that the reliance placed by the Appellant on the Sunita Narain Committee report in the said appeal is misconceived.

44. The contents of paragraphs 47 to 52 of the said appeal are denied. I deny that misleading or incorrect information about the alleged presence of mangroves within the project site is given, as alleged or otherwise. I deny that the responses given by the answering respondent are misleading, as alleged or otherwise. I deny that there is an absence of impact assessment on mangroves or that there is a deliberate concealment of mangroves or that there will be destruction of mangroves, as alleged or as sought to be alleged or otherwise. I reiterate that the project site is outside the CRZ area and

NOTARY VIJAY C. SHAH

For, Adani Enterprises Limited

Authorised Signatory

392

that there are no mangroves within the project site. It is an admitted fact that the presence of mangroves to the south of the project site has been disclosed in the Form – 1 and the EIA Report. I state and submit that a Wildlife Conservation Plan & Mangrove Conservation Plan for the said project has been prepared, which has been submitted to the Divisional Forest Officer (Kutch-East), and the same has been in turn forwarded to the Chief Conservator of Forests and Chief Wildlife Warden of Gujarat State. I state and submit that a perusal of the EIA Report would reveal that a comprehensive impact assessment has been undertaken by the answering respondent in respect of the entire study area (i.e. 10 km radius from project site), including the mangroves found in the study area. I reiterate that the observations and recommendations in the Sunita Narain Committee Report pertain to the activities of APSEZ, and that the MoEF has already issued directions to APSEZ pursuant to the Sunita Narain Committee Report. To the best of my knowledge, APSEZ is complying with such directions of MoEF. I state and submit that the observations and recommendations of the Sunita Narain Committee Report have no bearing on the said project.

For, Adani Enterprises Limited

Authorised Signatory

393

45. The contents of paragraphs 53 to 57 of the said appeal are denied. I deny that information about the flora/fauna surrounding the project site is concealed, as alleged or otherwise. I deny that the correct faunal distribution of the proposed reserved forest is not complete, as alleged or otherwise. I deny that the presence of the said project will have an impact on the faunal species, as alleged or as sought to be alleged or otherwise. I deny that the presence of the said project will push animals into agricultural areas or impact the produce, as alleged or otherwise. I state that it is APSEZ that has applied for diversion of the said forest area admeasuring 1576.81 ha, and Stage-1 forest clearance has already been granted for such proposed diversion. The proposal for diversion of 1576.81 ha forest land also specifies that land use of 125 ha forest land out of the aforesaid total area would be for copper smelter plant of 1 million tonne capacity. However, the said Stage-1 forest clearance is not under challenge in the said appeal. I state and submit that part of the project site is a part of the aforesaid forest area admeasuring around 102.39 ha (i.e. less than 10% of the total forest land proposed to be diverted). I state that

NOTARY
VIJAY C. SHAH

For, Adani Enterprises Limited

Authorised Signatory

394

the forest area in question is proposed to be diverted, irrespective of whether the said project or some other project is developed on a part of such forest land. The Appellant has not initiated any proceedings challenging the diversion of the aforesaid forest land. I state and submit that the EIA Report submitted by the answering respondent pertains to the said project and the study area. Thus, the predominant focus in the said EIA Report is on the forest land that is a part of the project site. During the appraisal of APSEZ's proposal for diversion of 1576.81 ha forest land, a sub-committee of the Forest Advisory Committee ('FAC') made a site visit on 6-7.9.2018, and made the following observations:

A. *The forest land of 1576.81 ha, as proposed for diversion, consists of eight disjunct land parcels within the approved APSEZ area. Each parcel of forest land is surrounded by non-forest lands most of which form part of the SEZ. The vegetation of the forests is predominantly Prosopis juliflora, in bushy form, with occasional occurrence of Acacia nilotica particularly in the forest patch around Sirocha village. The vegetation is thus typical of semi arid climatic area. The forest density ranges from 0.1 to 0.5.*

NOTARY

For, Adani Enterprises Limited

Authorised Signatory

395

As per the latest report of CWLW, Government of Gujarat, the area is not important from wildlife point of view. During the visit, the Sub-Committee observed that most of the forest area consists of Prosopis juliflora in bushy form. Moreover, as observed by the Sub-Committee, the forest areas are not a continuous patch and after the whole 10000 ha area is developed more like an industrial area, the forest patches will hold still less value as true forests."

(emphasis supplied)

A copy of the minutes of the meeting of FAC held on 20.9.2018 reflecting the aforesaid observations is annexed hereto and marked as **Annexure-R8**. In any case, Chapter 3 of the EIA Report discusses the flora and fauna present in the study area and impact on the same in detail.

46. The contents of paragraphs 58 to 62 of the said appeal are denied. I deny that the project site or the study area is a proposed Biodiversity Heritage Site ('BHS'), as alleged or otherwise. I deny that the project site or the study area is a biodiversity rich area, as alleged or otherwise. I deny that the proposal for the said project requires a

For, Adani Enterprises Limited

Authorised Signatory

396

biodiversity impact assessment, as alleged or otherwise. I state and submit that at present there is no proposal to declare any area within the study area as a BHS. As clearly mentioned in the EIA Report, earlier there was a proposal to declare some area as BHS, but such proposal was shelved by Gujarat State Biodiversity Board. I state that the National Biodiversity Authority, India has issued "Guidelines for Identification, Notification and Management of Biodiversity Heritage Sites", wherein BHS are defined and a comprehensive procedure has been laid down for identification and notification of BHS. I state and submit that no area within the study area has been identified or notified as BHS as per the aforesaid guidelines. The Appellant has failed to point out any evidence to demonstrate as to how the project site or the study area is a biodiversity rich area or that the same has the requirements for being declared as BHS. I submit that a mere proposal in the past to declare an area as BHS does not by itself make the area in question a BHS or a biodiversity rich area.

For, Adani Enterprises Limited

Authorised Signatory

397

47. With reference to paragraph 63 of the said appeal, I state that acid mist is not a parameter under the National Ambient Air Quality Standards 2009. Thus, there does not arise any question of measuring acid mist in the Ambient Air Quality. I state that the said project is a greenfield project, and therefore there is no existing emission of acid mist in the said project. It is to be noted that no source of generation of acid mist exist in the study area during the monitoring period. Consequently, there does not arise any question of collecting baseline data regarding emission of acid mist from the project site. It may be pertinent to note that EAC in its recommendations had specified the limits for acid mist emission from the proposed sulphuric acid plant stack. I state that the answering respondent has proposed to monitor acid mist from the proposed sulphuric acid plant stack on monthly basis during plant operation phase as mentioned in Chapter-6 of the EIA Report.

48. With reference to paragraph 64 of the said appeal, I state and submit that the locations of the eight monitoring stations within the study area were finalized in accordance with the applicable guidelines in

NOTARY VIJAY C. SHAH

For, Adani Enterprises Limited

Authorised Signatory

398

the EIA Manual of MoEF. Further, the justification for choosing each of the aforesaid eight locations for monitoring stations has been explained in the EIA Report at Chapter 3 at Section 3.6.1. I state and submit that the eight monitoring stations, provides the baseline data for the entire study area, one of which is also at the boundary of Danderi Reserve Forest. I deny that the answering respondent has not determined the impact on the reserved forests, as alleged or otherwise. I state and submit that the EIA Report clearly mentions the impact on the reserved forests at Chapter 4.

49. The contents of paragraphs 65 to 68 of the said appeal are denied. In the paragraphs under reply, the Appellant has deliberately compared the data of air quality for 3 separate periods of three to six months in 3 separate years against the limits prescribed for yearly average. As per the National Ambient Air Quality Standards 2009, the yearly average is the annual arithmetic mean of minimum 104 measurements in a year at a particular site taken twice a week, twenty four hourly, at uniform intervals. Therefore, comparison of three-month data of air quality with prescribed limit of yearly

For, Adani Enterprises Limited

Authorised Signatory

399

average is untenable. On perusal of the figures reproduced in the paragraphs under reply, it becomes evident that the three-month of air quality in respect of the said project is well within the limits for 24 hourly standards.

50. With reference to paragraph 69 of the said appeal, I deny that the EIA Report has provided concealed information or has provided misleading data or that there is incorrect determination of the effect on air quality, as alleged or otherwise. I state and submit that the data on Ambient Air Quality mentioned in the EIA Report pertains to the period of October to December 2016. On the other hand, the data relating to the Ambient Air Quality produced in the six monthly EC compliance report by Adani Power Limited and Coastal Gujarat Power Limited are admittedly for the period July-September 2019. Therefore, there cannot be any comparison of both the aforesaid set of data. Therefore, there is no concealment or misrepresentation of data.

For, Adani Enterprises Limited

Authorised Signatory

400

51. With reference to paragraphs 70 to 72 of the said appeal, I state that the air dispersion modelling studies were conducted as per the TOR. Air dispersion modelling was conducted using the air dispersion modelling software (AERMOD version 7.1.0) for predicting of maximum Ground Level Concentrations (GLCs). AERMOD is steady state advanced Gaussian Plume Model that simulates air quality and deposition fields upto 50 km radius. The maximum GLCs due to the point sources was occurring 2.2 km in the NE direction of the said project. This modelling was carried out in line with CPCB modelling guidelines. Following deliberation over the answering respondent's application for environmental clearance, air dispersion modelling studies were repeated using CALPUFF model as per the advice of EAC. As part of ADS reply dated 05.02.2020 (i.e. Additional Details Sought), air dispersion modelling using CALPUFF model was carried out and submitted to EAC. EAC in its minutes of meeting dated 24.02.2020 has acknowledged at paragraph no. 16.11.52 that "*Air Quality Modelling Study was revised using CALPUFF with all site features*.....". As per the said CALPUFF air modelling study, the concentration of PM, SO_2, and

For, Adani Enterprises Limited

Authorised Signatory

NO_2 were found to be 0.3 $\mu g/m^3$, 2.0 $\mu g/m^3$ and 0.0070 $\mu g/m^3$, respectively, at a 25 km distance in south direction of the project site. I state that the Marine National park is located more than 30 km in south direction of proposed copper refinery plant project boundary. Thus, the expected concentration of pollutant will be further lower at the Marine National Park as compared to the concentration at a distance of 25 km from the project site, which are already within permissible limits.

52. The contents of paragraphs 73 to 76 of the said appeal are denied. I state that the studies and the guidelines referred to in the paragraphs under reply are neither binding authorities nor have they been recognized in the provisions of law applicable in India. On the basis of such alleged studies/guidelines, it is the argument of the Appellant in the paragraphs under the reply that the secondary formation of particulate matter takes place when SO_2 and NO_x get converted into sulphates and nitrates, resulting into higher concentration of PM_{10} and $PM_{2.5}$. Without prejudice to the foregoing submission, I state that the said argument of the Appellant is untenable, in as much as,

NOTARY VIJAY C. SHAH AHMEDABAD GUJ. STATE

For, Adani Enterprises Limited

Authorised Signatory

402

the data relied upon by the Appellant is a three-monthly data, whereas the comparison being made by the Appellant of such three-monthly data is with the yearly average prescribed under the National Ambient Air Quality Standards 2009. Moreover, the answering respondent has already undertaken CALPUFF air modelling study, wherein chemical transformations (which include the secondary formation of pollutants) are already taken into consideration. As per the CALPUFF air modelling study undertaken for the said project, the results have been found to be within prescribed limits.

53. The contents of paragraph 77 of the said appeal are denied. I deny that no model was run while predicting the GLC using the stack emission details of both existing power plants i.e. CGPL and Adani Power Limited. I state that the impact due to the nearby existing industries (the aforesaid 2 thermal power plants) has been predicted based on AERMOD model and the results have been presented in Table 4.8 of the EIA Report. I state that, in any case both the aforesaid power plants (i.e. CGPL and Adani Power Limited) were

For, Adani Enterprises Limited

Authorised Signatory

403

operational at the time of collection of baseline data. Thus, the baseline data encompasses the impacts due to operation of the said two power plants as well as other sources within the study area. I state that in the EIA Report, the predicted maximum GLC due to the aforesaid two power plants have been compared with the maximum baseline GLC of Station AAQ-8. However, isopleths shown in Figures-4.7 to 4.9 of the EIA Report clearly show that the maximum impact is at a distance of 4.2 kms in the NE direction on CGPL, which is almost 3 kms east of AAQ-8. The resultant cumulative GLC shown in Table 4.6 is for the worst-case scenario, where the maximum GLC of the study area has been added to the maximum predicted incremental concentration due to the said project and the proposed cement grinding unit. The resultant cumulative GLC is within the prescribed limits stipulated by CPCB.

54. The contents of paragraphs 78 to 85 of the said appeal are denied. I deny that forest land can be used only for non-site specific activities, as alleged or otherwise. I deny that 'connectivity' is the only reason for choosing the location of the project site, as alleged or as sought

For, Adani Enterprises Limited

Authorised Signatory

404

to be alleged or otherwise. I deny that the only criteria taken into consideration while selecting the project site is proximity of the site to existing source of power and water and existing approach road, as alleged or otherwise. I deny that the Site-3 is more compatible with an industrial land use, as alleged or otherwise. I deny that multiple natural streams pass through the project site, as alleged or otherwise. I deny that that there is concealment of information in Form 1 by the answering respondent, as alleged or otherwise. In the paragraphs under reply, the Appellant has placed reliance upon the Technical Guidance Manual for Metallurgical Industry (hereinafter referred to as the 'Guidance Manual') prepared by IL&FS Ecosmart Limited. I reiterate that the said Guidance Manual neither has any binding authority nor any legal force. Thus, the reliance placed upon the same by Appellant in alleging that the project site is not in accordance with such alleged guidelines, is misconceived. Without prejudice to the said submission, I submit that the paragraphs under reply reflect the misconceived notion of the Appellant that the 102.39 ha forest land is sought to be diverted for the said project. I reiterate that the forest land in question admeasuring 1576.81 ha is

For, Adani Enterprises Limited

Authorised Signatory

405

sought be diverted for the purposes of developing SEZ/Industrial Park. The proposal for diversion of 1576.81 ha forest land also specifies that land use of 125 ha forest land out of the aforesaid total area would be for copper smelter plant of 1 million tonne capacity. It may be pertinent to note that the Appellant has not challenged the Stage-1 approval granted to APSEZ for diversion of 1576.81 ha of forest land either in the said appeal or any other proceedings to the best of my knowledge. The aforementioned 102.39 ha forest land is part of 1576.81 ha forest land being diverted for SEZ/Industrial Park. Thus, irrespective of the development of the said project, the 102.39 ha forest land is sought to be diverted. Clearly, the averments of the Appellant that 102.39 ha forest land is being diverted for alleged non-site specific activity are misconceived. In any case the applicable provisions of law do not completely bar location of non-site specific projects on forest land. I reiterate the submissions made in the earlier paragraphs in respect of how the project site is a better compared to Site-3, environmentally and technically, for the said project.

NOTARY
VIJAY C. SHAH

For, Adani Enterprises Limited

Authorised Signatory

406

55. With reference to paragraphs 86 to 90 of the said appeal, I deny that the answering respondent has not made a correct representation to the EAC, as alleged or as sought to be alleged or otherwise. I deny that the social impact assessment in EIA Report does not discuss issues raised during public hearing, as alleged or otherwise. I deny that the EAC has failed to consider the objections or has failed to independently determine whether the said project should have been allowed, as alleged or otherwise. I deny that the answering respondent or the EAC have disregarded the objections raised during the public hearing, as alleged or otherwise. I state and submit that the objections raised during the public hearing and the response of the answering respondent is a matter of record, and I deny anything contrary to the record. I state that all the concerns raised during the public hearing were considered and suitably responded to by the answering respondent. Accordingly, the answering respondent prepared an action plan and proposed a Corporate Environment Responsibility ('CER') budget of Rs.58 crores. Further, the details of the public hearing alongwith the action plan was produced before the EAC in Chapter 7 of the EIA Report. The Appellant has

For, Adani Enterprises Limited

Authorised Signatory

407

conveniently not annexed the said relevant portion of the EIA Report. I state and submit that the EAC has examined the various concerns/ objections raised during the public hearing as well as the written communications received by MoEF, and has also examined the responses and action plan submitted by the answering respondent. After consideration of the aforesaid material, EAC has recommended the said project for environmental clearance with specific conditions to protect the environment and to ensure socio-economic development of the people residing in the study area. I submit that the judgment referred to in the paragraph under reply has no application to the facts of the present matter.

56. With reference to paragraphs 91 to 101 of the said appeal, I state and submit that the facts pertaining to the meetings of EAC for consideration of the application of the answering respondent seeking environmental clearance for the said project is a matter of record, and I deny anything contrary to the record. I reiterate that no mangroves are present within the project site. The said fact has also been recognized by the sub-committee of the EAC during the site

408

visit and is recorded in the minutes of the meeting of EAC held during 23-24.12.2019. I deny that there is a faulty appraisal by the EAC, as alleged or otherwise. I deny that the EAC accepted statements of the answering respondent without verifying ecological sensitivity of the area or without directing for a robust EIA, as alleged or otherwise. I deny that the EAC failed to carry out a detailed scrutiny of the said project or failed to give reasoning, as alleged or otherwise. I deny that there is presence of thousands of trees in the project site, as alleged or otherwise. I deny that objections in the public hearing have not been considered in the EIA Report, as alleged or otherwise. I reiterate the averments made in the foregoing paragraphs narrating as to how the EAC held 4 detailed meetings, and also appointed a sub-committee for inspection of the project site, considered the comprehensive EIA Report, including the details of the public hearing, and granted the said EC only after being satisfied by the responses of the answering respondent to all the concerns/queries raised by the EAC during detailed scrutiny of the said project. I state and submit that the judgment referred to in

For, Adani Enterprises Limited

Authorised Signatory

the paragraphs under reply is not applicable to the facts of the present case.

57. The contents of Ground A of the said appeal are denied. I deny that the said EC has been obtained by fraud or concealment or misrepresentation, as alleged or otherwise. I deny that the answering respondent has carried out a faulty EIA, as alleged or in the manner alleged or otherwise. I state and submit that the Appellant has only made bald allegations without any substantiation. As would be evident from the submissions in the earlier paragraphs, none of the allegations made by the Appellant have merit.

58. With reference to Ground B of the said appeal, I deny that the answering respondent has illegally chosen to use the project site for construction, as alleged or otherwise. I reiterate that the Appellant's averments in the paragraph under reply are made on the basis of a misconceived notion that the 102.39 ha of forest land which is a part of the project site is being diverted for the said project. I reiterate that the 102.39 ha of forest land is part of 1576.81 ha of forest land

NOTARY VIJAY C. SHAH AHMEDABAD GUJARAT STATE

Authorised Signatory

410

which is sought to be diverted by APSEZ for SEZ/Industrial Park. I reiterate that Guidance Manual being relied upon by the Appellant has no legal force and is not a binding authority.

59. With reference to Ground C of the said appeal, I reiterate that the answering respondent has carried out a cumulative impact assessment in respect of the said project, and the same is evident from the EIA Report.

60. With reference to Grounds D and E of the said appeal, I deny that the answering respondent has concealed crucial information in Form-1, as alleged or as sought to be alleged or otherwise. I state and submit that there does not arise any question of invalidating the EC process, as alleged or otherwise. I reiterate the contents of the earlier paragraphs in respect of the submission of Form-1 and other particulars by the answering respondent. I submit that the judgments referred to in the paragraph under reply have no application to the present matter.

61. With reference to Ground F of the said appeal, I deny that the EAC failed to verify the statements made by the answering respondent, or that the EAC simply accepted the statements of the answering respondent and its consultant without application of mind, as alleged or otherwise. I submit that the judgment referred to in the paragraph under reply have no application to the present matter.

62. With reference to Ground G of the said appeal, I deny that the answering respondent has failed to carry out an EIA of the project, as alleged or otherwise. I deny that the baseline parameters for air quality have been incorrectly taken, as alleged or otherwise. I reiterate that the said EC has been recommended by the EAC after examining the comprehensive EIA Report, ADS filed by the answering respondent and EAC Sub-committee's site visit. Once again, the 102.39 ha forest land is not sought to be diverted for the said project, but is sought to be diverted for SEZ/Industrial Park of APSEZ. The said project is being set up, inter alia, in the SEZ of APSEZ, and proposes to include aforesaid 102.39 ha forest land.

63. With reference to Ground H of the said appeal, I deny that the EIA Report is lacking or it is not in compliance of the TORs issued to the answering respondent, as alleged or otherwise. I deny that the said EC is liable to be quashed, as alleged or otherwise. I submit that the judgment referred to in the paragraph under reply have no application to the present matter.

64. With reference to Ground I of the said appeal, I deny that the EAC or MoEF have not considered issues or have not conducted appraisal in accordance with Precautionary Principle or Principle of Sustainable Development, as alleged or otherwise. I deny that EAC has appraised the said project in haste or without scrutinizing the EIA Report or other documents submitted by the answering respondent, as alleged or otherwise. I deny that the said EC is liable to be quashed, as alleged or otherwise. I submit that the judgment referred to in the paragraph under reply have no application to the present matter.

65. With reference to Ground J of the said appeal, I deny that the EAC has failed to carry out appraisal through detailed scrutiny, as alleged or as sought to be alleged or otherwise. I deny that there has been an abject failure of the due process of law, as alleged or otherwise. I deny that the said EC must be invalidated, as alleged or otherwise. I submit that the judgment referred to in the paragraph under reply have no application to the present matter.

66. With reference to the unnumbered paragraph in respect of 'LIMITATION' after Ground J, I deny that the said appeal was made within a period of 60 days from the date of issuance of the said EC. I state that the said EC was issued on 8.5.2020, whereas the said appeal was admittedly filed on 29.7.2020 (i.e. after a period of 82 days). I state that the pandemic is a mere excuse being given by the Appellant for delay in filing of the said appeal. I state that the unlocking process following the lock-down had already started from 1.6.2020 in the State of Gujarat. Further, the documents annexed to the said appeal are available in public domain on the internet and therefore there does not arise any question of collecting the same or

NOTARY VIJAY C. SHAH AHMEDABAD

For, Adani Enterprises Limited

Authorised Signatory

414

sending it to counsel. The President of the Appellant has affirmed the affidavit in the said appeal on 25.6.2020 at Mundra, Gujarat. It may be pertinent to note that the President of the Appellant has also affirmed the affidavit in IA no. 68 of 2020 (seeking condonation of delay) on 25.6.2020, and in the very IA has claimed that the said appeal was ready only by 29.7.2020. I state and submit that the neither the said appeal nor the IA no. 68 of 2020 discloses any sufficient cause for the delay in filing of the said appeal. In the circumstances, the said appeal is required to be dismissed as barred by the limitation prescribed under Section 16 of the NGT Act.

67. In light of the aforesaid submissions, I state and submit that the said appeal is required to be dismissed with costs. I state and submit that the Appellant is not entitled to any reliefs, much less the relief sought in the said appeal.

Kind Attn: Dr. Satish C. Garkoti

Subject: Application in Form-1 to obtain TOR for setting up new Copper Smelter plant at Mundra, District Kutch, Gujarat.

Dear Sir,

I, Santosh Kumar Singh, authorized by resolution dated 1st March 2016 of the Board of Directors of the company "Adani Enterprises Limited (AEL)", hereby apply in Form-1 to obtain the Terms of Reference (TOR) for environmental studies and clearance process for setting up a new Copper Smelter plant at Mundra, District Kutch, Gujarat.

Form-1 with proposed TOR and Project Feasibility Report for the above mentioned project is being submitted online for your kind consideration to grant the TOR please.

Thanking You.

Sincerely,

Oxygen (Industrial) Plant – 90,000 TPM (95% Purity) k. Waste Heat recovery boiler b ha.
11.	New/Expansion/Modernization	New
12.	Category of project i.e. 'A' or 'B'	A
13.	Does it attract the general condition? If yes, please specify	No
15.	Does it attract the specific condition?	No

421

16.	Is there any litigation pending against the project?	No
17.	Nearest railway station along with distance in kms.	Adipur/Gandhidham, 65 km
18.	Nearest airport along with distance in kms	Bhuj, 55 km
19.	Nearest Town/City/District Headquarters along with distance in kms	Mundra , 22 km
20.	Details of alternative sites examined shown on a toposheet	Yes
	Uploaded details	Annexure-Uploaded details
21.	Whether part of interlinked projects?	No
22.	Whether the proposal involves approval/clearance under the Forest (Conservation)Act,1980?	Yes
	Status	Forest Clearance Under Process
	MoEF file number	8-04/2016-FC
	MoEF file number	1576.81ha.
23.	Whether the proposal involves approval/clearance under the wildlife (Protection)Act,1972?	No
24.	Whether the proposal involves approval/clearance under the C.R.Z notification,2011?	No
25.	Whether there is any Government Order/Policy relevent/relating to the site?	No
26.	Whether there is any litigation pending against the project and/or land in which the project is proposed to be set up?	No
27.	Project Cost(in lacs)	1000000

Activity

1 Construction, operation or decommissioning of the Project involving actions, which will cause physical changes in the locality (topography, land use, changes in water bodies, etc.)

S.No	Information/Checklist confirmation	Yes/No	Details there of (with approximate quantities/rates, wherever possible) with source of information data
	Permanent or temporary change in land use, land cover		381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Permanent change in land cover

1.1	or topography including increase in intensity of land use (with respect to local land use plan)	Yes	and topography will occur due to construction of the proposed industry. Further, forest land of 253 acres (102.38 ha) is also involved which will be converted for industrial use. Forest Clearance is under pursuance, file number is 8-04/2016-FC.
1.2	Clearance of existing land, vegetation and buildings?	Yes	Some shrubs / weeds (mainly prosopis juliflora) present at the site shall be cleared.
1.3	Creation of new land uses?	Yes	381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Permanent change in land cover and topography will occur due to construction of the proposed industry. Further, forest land of 253 acres (102.38 ha) is also involved which will be converted for industrial use. Forest Clearance is under pursuance, file number is 8-04/2016-FC.
1.4	Pre-construction investigations e.g. bore houses, soil testing?	Yes	Will be done prior to construction
1.5	Construction works?	Yes	Construction of manufacturing plants and related ancillary facilities will be carried out
1.6	Demolition works?	No	Not envisaged
1.7	Temporary sites used for construction works or housing of construction workers?	Yes	The temporary labour colony will be constructed for construction workers.
1.8	Above ground buildings, structures or earthworks including linear structures,cut and fill or excavations and fill or excavations	Yes	Construction of manufacturing plants and related ancillary facilities will be carried out.
1.9	Underground works including mining or tunneling?	No	Not envisaged
1.10	Reclamation works?	No	Not envisaged
1.11	Dredging?	No	Not envisaged
1.12	Offshore structures?	No	Not envisaged
1.13	Production and manufacturing processes?	Yes	Covered in Pre-feasibility report
1.14	Facilities for storage of goods or materials?	Yes	There will be storage of Copper Concentrate and Rock Phosphate in covered sheds, storage and handling area, other required raw materials & chemical, Furnace Oil, LPG/ NG for process requirement and HSD for DG set as power backup.
1.15	Facilities for treatment or disposal of solid waste or liquid effluents?	Yes	Solid waste management and effluent treatment will be provided and the details are given

			in the Pre-Feasibility Report.
1.16	Facilities for long term housing of operational workers?	No	About 2000 operation workers will be employed. No separate township has been planned for Copper complex. The house for O&M personnel would be provided at APSEZ existing township by augmenting the township, which is around 30 km away from the proposed Copper Complex.
1.17	New road, rail or sea traffic during construction or operation?	Yes	New approach road will be constructed.
1.18	New road, rail, air water borne or other transport infrastructure including new or altered routes and stations, ports, airports etc?	Yes	New approach road will be constructed. In addition, conveyor belt for transfer of Copper Concentrate and Rock Phosphate from existing Adani West Port to the site will be built.
1.19	Closure or diversion of existing transport routes or infrastructure leading to changes in traffic movements?	No	Not anticipated.
1.20	New or diverted transmission lines or pipelines?	Yes	New transmission line shall be constructed for construction and operational power tapping from APSEZ Ltd through M/s. Mundra Utility Pvt Ltd.
1.21	Impoundment, damming, culverting, realignment or other changes to the hydrology of watercourses or aquifers?	No	Not envisaged
1.22	Stream crossings?	Yes	Natural drainage passing through the site will be suitably trained and maintained. There will not be any diversion. Further, conveyer for Copper Concentrate and Rock Phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required.
1.23	Abstraction or transfers of water from ground or surface waters?	No	Desalinated water will be supplied by APSEZ Ltd.
1.24	Changes in water bodies or the land surface affecting drainage or run-off?	No	Not envisaged
1.25	Transport of personnel or materials for construction, operation or decommissioning?	Yes	Existing approach road to site shall be initially used for movement of personal and transport. For permanent and long term movement of personal and transport of material, new approach road construction or strengthening of existing approach road shall be done as submitted above in Sr. No. 1.17. During operational phase, Copper Concentrate and Rock Phosphate supply will be through conveyor belt and transportation of products through Trucks/ Trailers

			and tankers etc.
1.26	Long-term dismantling or decommissioning or restoration works?	No	Not envisaged
1.27	Ongoing activity during decommissioning which could have an impact on the environment?	No	Not envisaged
1.28	Influx of people to an area in either temporarily or permanently?	Yes	Approximately 3000 persons will be employed during construction phase and about 2000 people will be employed during operation phase.
1.29	Introduction of alien species?	No	Not envisaged
1.30	Loss of native species or genetic diversity?	No	Not envisaged
1.31	Any other actions?	No	Not envisaged

2 Use of Natural resources for construction or operation of the Project (such as land, water, materials or energy, especially any resources which are non-renewable or in short supply):

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
2.1	Land especially undeveloped or agricultural land (ha)	Yes	The total land required for Copper project is 634 acres (256.57 ha). Identified land area is not an agricultural land but part of land already designated/recorded as Industrial Land under APSEZ and presently undeveloped. Remaining part of the above land is reserve forest land (253 acres (102.38 ha)), which has been applied for forest clearance.
2.2	Water (expected source & competing users) unit: KLD	Yes	Total 32,800 KLD desalinated water will be sourced from APSEZ Ltd.
2.3	Minerals (MT)	Yes	Total Copper Concentrate consumption for Copper plant is about 32 LTPA and will be imported from Chile/ Brazil/ Canada/ Australia, etc. and also from domestic market as available. Total Rock Phosphate consumption for Phosphoric Acid Plant is about 17.5 LTPA and will be imported from Morocco/ Jordan/ Egypt/ Australia, etc. and also from domestic market as available.
2.4	Construction material – stone, aggregates, sand / soil	Yes	Construction material such as sand, steel, aggregates, etc. will be used. However, the quantification of these materials

	(expected source – MT)		will be done during detailed engineering stage. These materials will be sourced from local areas.
2.5	Forests and timber (source – MT)	No	Not envisaged
2.6	Energy including electricity and fuels (source, competing users) Unit: fuel (MT),energy (MW)	Yes	Construction phase: The construction power need of around 20 MW would be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd. Operational phase: The estimated power demand for the Copper Smelter plant is 300 MW. Out of this, 40 MW will be generated from internal process steam by heat recovery. Whereas, the remaining 260 MW power will be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd.
2.7	Any other natural resources (use appropriate standard units)	Yes	Silica Sand – 320,000 TPA Quartz – 144,000 TPA Limestone – 80,000 TPA

3 Use, storage, transport, handling or production of substances or materials, which could be harmful to human health or the environment or raise concerns about actual or perceived risks to human health

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
3.1	Use of substances or materials, which are hazardous (as per MSIHC rules) to human health or the environment (flora, fauna, and water supplies	Yes	A detailed risk assessment will be done for the hazardous installations as per applicable Acts and Rules and Emergency plan will be drawn up.
3.2	Changes in occurrence of disease or affect disease vectors (e.g. insect or water borne diseases)	No	Not envisaged
3.3	Affect the welfare of people e.g. by changing living conditions?	Yes	Approximately 3000 persons will be employed during construction phase and approx. 2000 people will be employed during operation phase and it would generate employment opportunities for local people and indirect employment also.
3.4	Vulnerable groups of people who could be affected by the project e.g. hospital patients, children, the elderly etc.	No	Not envisaged
3.5	Any other causes	No	Not envisaged

4 Production of solid wastes during construction or operation or decommissioning (MT/month)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
4.1	Spoil, overburden or mine wastes	No	
4.2	Municipal waste (domestic and or commercial wastes)	Yes	Canteen waste will be vermi-composted and used as manure for green belt development. Other municipal waste, if any, will be properly collected and disposed off as per the provision of Municipal Waste Rules.
4.3	Hazardous wastes (as per Hazardous Waste Management Rules)	Yes	The hazardous waste such as spent oil, batteries etc. will be generated which will be disposed as per HW rule. Sludge from ETP will be disposed as per Hazardous waste management rule. Details are mentioned in the PFR Report
4.4	Other industrial process wastes	Yes	Approx. average 5,500 TPD Copper Slag (Iron Silicate/ Ferro Sand) from Copper Smelting Process will be generated. Approx. average 7,000 TPD of Phospho Gypsum from Phosphoric Acid Plant will be generated. The Copper Slag (Iron Silicate/ Ferro Sand) will be utilized in Road/ Embankment Making, Land development, Cement Manufacturing, Shot Blasting, etc. & Phospho Gypsum will be used largely in Cement Manufacturing and as fertilizer.
4.5	Surplus product	Yes	Covered in Pre-feasibility report
4.6	Sewage sludge or other sludge from effluent treatment	Yes	Sewage sludge will be used as manure and Sludge from ETP will be disposed as per Hazardous Waste Management Rules.
4.7	Construction or demolition wastes	Yes	All the construction waste will be re-used for filling up in low lying areas on which soil cover will be given and will be used for as filler materials in landscaped areas.
4.8	Redundant machinery or equipment	Yes	For each equipment there would be always redundant machinery or equipments to cater during the Break-down/Planned maintenance
4.9	Contaminated soils or other materials	No	Not envisaged
4.10	Agricultural wastes	No	Not envisaged
4.11	Other solid wastes	No	Not envisaged

5 Release of pollutants or any hazardous, toxic or noxious substances to air(Kg/hr)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
5.1	Emissions from combustion of fossil fuels from stationary or mobile sources	Yes	Exhaust emissions from vehicles and equipment deployed during the construction and operational phases result in marginal emissions of SO2, NOX and CO.
5.2	Emissions from production processes	Yes	The emissions will be reduced with the latest environmental technology and will be well within the permissive levels, as: Sulphur Dioxide (SO2): Wet Scrubbers and dispersed through adequate stack height. Hydrogen Fluoride (HF): Scrubbing and dispersed through adequate stack height. Particulate Matter: Bag Filters, ESP, Wet Scrubbers and Cyclones.
5.3	Emissions from materials handling including storage or transport	Yes	Copper concentrate and Rock phosphate will be transported through closed conveyor system. Bag filters will be installed as required. Other raw material and chemicals required for the production processes will be transported with covered truck to ensure that no dust is generated during transportation.
5.4	Emissions from construction activities including plant and equipment	Yes	Fugitive dust is envisaged from transportation of sand, soil etc. during construction activity. These will be transported with covered truck to ensure that no dust is generated during transportation.
5.5	Dust or odours from handling of materials including construction materials, sewage and waste	Yes	Please refer S. No. 5.4. There will be no odour generation substances.
5.6	Emissions from incineration of waste	No	Not envisaged
5.7	Emissions from burning of waste in open air (e.g. slash materials, construction debris)	No	Not envisaged
5.8	Emissions from any other sources	No	Not envisaged

6 Generation of Noise and Vibration, and Emissions of Light and Heat:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
6.1	From operation of equipment e.g. engines, ventilation plant, crushers	Yes	All the equipment would be designed on enclosure type so that noise level will be restricted within the permissible limit of exposure.
6.2	From industrial or similar processes	Yes	The other sources of noise will be large rotating machines (e.g., compressors, turbines, pumps, electric motors, air coolers, and fired heaters). But regular maintenance of the equipment will help in reducing these noise levels. Acoustic enclosures & anti-vibration pads will be provided. Necessary PPEs will be provided to employees. The green belt proposed at the periphery of the plant. General recommendations for noise management are provided in the General EHS Guidelines.
6.3	From construction or demolition	Yes	During construction stage, the noise level would be kept within the permissible limit.
6.4	From blasting or piling	Yes	Blasting is not envisaged. Piling work will be carried out for different foundation requirements. Sufficient protection to workers will be provided. Vibrations are expected during initial construction stage.
6.5	From construction or operational traffic	Yes	The noise levels from traffic will be maintained well within norms specified by CPCB / GPCB. Minor noise will be generated during the construction phase.
6.6	From lighting or cooling systems	No	Not envisaged
6.7	From any other sources	No	Not envisaged

7 Risks of contamination of land or water from releases of pollutants into the ground or into sewers, surface waters, groundwater, coastal waters or the sea:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
			Minor spills/leakage of liquids occurs on rare occasions, typically

7.1	From handling, storage, use or spillage of hazardous materials	Yes	during normal maintenance activities. Appropriate system available to route the spills/leakage liquids for treatment. No contamination of land or water because of appropriate flooring.
7.2	From discharge of sewage or other effluents to water or the land (expected mode and place of discharge)	Yes	Treated wastewater from STP and ETP will be reused for Horticulture/Gardening. ETP sludge will be sent to authorized disposal facility.
7.3	By deposition of pollutants emitted to air into the land or into water	No	Not envisaged
7.4	From any other sources	No	Not envisaged
7.5	Is there a risk of long term build up of pollutants in the environment from these sources?	No	Not envisaged

8 Risk of accidents during construction or operation of the Project, which could affect human health or the environment

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
8.1	From explosions, spillages, fires etc from storage, handling, use or production of hazardous substances	Yes	Petroleum Products (e.g. Furnace Oil, Diesel & LPG) and Met Coke & Pet Coke would be stored in plant Battery Limit. Appropriate fire-fighting arrangement would be set up on the site. No other hazardous substances are envisaged to be used including use of explosives in the Copper Smelter Plant projects. Proper approval and design of storage &handling systems as per "Indian Explosive Act" would be taken. Risk assessment study will be carried out.
8.2	From any other causes	No	Not envisaged
8.3	Could the project be affected by natural disasters causing environmental damage (e.g. floods, earthquakes, landslides, cloudburst etc)?	Yes	Earthquakes and floods can occur. Earthquake risks: The project site falls in seismic zone-V as per IS 1893 (Part-I): 2002. The plant facility will be designed as per the BIS requirements for earth quake resistant. Flood risk: Chances of occurrence of flood is minimal due to Evacuation of floodwater through natural drainage and drainage system, as the terrain in the study area is flatter with gentle slope towards SW direction.

9 Factors which should be considered (such as consequential development) which could lead to environmental effects or the potential for cumulative impacts with other existing or planned activities in the locality

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
9.1	Lead to development of supporting.lities, ancillary development or development stimulated by the project which could have impact on the environment e.g.: ◦ Supporting infrastructure (roads, power supply,waste or waste water treatment, etc.) ◦ housing development ◦ extractive industries ◦ supply industries ◦ Other	Yes	The proposed plant will result in considerable growth of service sector, which will lead to supporting and ancillary development in the region. There will be a possibility of extractive and supply industries in the region.
9.2	Lead to after-use of the site, which could have an impact on the environment	No	Not envisaged
9.3	Set a precedent for later developments	Yes	Ancillary industries and extractive industries may develop as a consequence.
9.4	Have cumulative effects due to proximity to other existing or planned projects with similar effects	Yes	Existing Coastal Gujarat Power Ltd. (CGPL) (5x800 MW), Adani Power Limited (4620 MW) and proposed Copper Smelter plant will have cumulative effect. Cumulative impact assessment will be included in the detailed EIA study.

(III) Environmental Sensitivity

S.No	Areas	Name/Identity	Aerial distance (within 15km.) Proposed project location boundary
1	Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or other related value	No	Nil
2	Areas which are important or sensitive for ecological reasons - Wetlands, watercourses or other water bodies, coastal zone, biospheres, mountains, forests	Yes	Reserve Forests: Dandedri RF (within project area) Mundra Mangrove RF (south of project area) Navinal RF (0.5 km, E) Mundra Dhoa RF (0.7 km, SE) Water Bodies Kotri creek (0.5 km, S) Khari Nadi (1.9 km, W) Gulf of Kachchh (3.9 km, S) Nagavanti Nadi (4.7 km, E) Phot Nadi (8.7 km, ENE)

3	Areas used by protected, important or sensitive species of flora or fauna for breeding, nesting, foraging, resting, over wintering, migration	Yes	Mundra Mangrove RF (south of project area)
4	Inland, coastal, marine or underground waters	Yes	Gulf of Kachchh (3.9 km, S) Kotri creek (0.5 km, S)
5	State, National boundaries	No	Nil
6	Routes or facilities used by the public for access to recreation or other tourist, pilgrim areas	No	Nil
7	Defence installations	No	Nil
8	Densely populated or built-up area	Yes	Mundra (22 km)
9	Areas occupied by sensitive man-made land uses (hospitals, schools, places of worship, community facilities)	Yes	Hospitals, schools, places of worship and other general community facilities exist in the study area.
10	Areas containing important, high quality or scarce resources.(ground water resources,surface resources,forestry,agriculture,fisheries,tourism,minerals)	Yes	Kotri creek (0.5 km, S) Khari Nadi (1.9 km, W) Gulf of Kachchh (3.9 km, S) Nagavanti Nadi (4.7 km, E) Phot Nadi (8.7 km, ENE)
11	Areas already subjected to pollution or environmental damage.(those where existing legal environmental standards are exceeded)	No	Nil
12	Areas susceptible to natural hazard which could cause the project to present environmental problems (earthquakes, subsidence, landslides, erosion, flooding or extreme or adverse climatic conditions) similar effects	Yes	The project area falls under seismic zone-V as per IS: 1893 (Part-1): 2002.

(IV) PROPOSED TERMS OF REFERENCE FOR EIA STUDIES

1	**Uploaded Proposed TOR File**	Annexure-TOR file
2	**Uploaded scanned copy of covering letter**	Annexure-scanned copy of covering letter
3	**Uploaded Pre-Feasibility report(PFR)**	Annexure-PFR

(V) Undertaking

The aforesaid application and documents furnished here with are true to my knowledge

V. (i)	**Name of Applicant**	Santosh
	Designation	Head Env and Authorised Signatory for AEL
	Name of Company(Applicant Name should not be given here)	ADANI ENTERPRISES LTD
	Address	Adani House, Near Mithakali Circle, Navrangpura, Ahmedabad 380009, Gujarat

ENVIRONMENTAL IMPACT ASSESSMENT

FOR

THE PROPOSED GREENFIELD COPPER REFINERY PROJECT (1.0 MTPA) AT ADANI PORT SPECIAL ECONOMIC ZONE LAND IN VILLAGES SIRACHA AND NAVINAL, TALUKA MUNDRA, DISTRICT KUTCH, GUJARAT

Volume-I
Final EIA Report

For and on behalf of VIMTA Labs Limited

Approved by : **M. Janardhan**

Signed :

Position : **Head & Vice President (Env)**

Date : 6th December, 2018

The report has been prepared inline with the prescribed TORs issued vide letter No.J-11011/113/2016-IA.II(I) dated 21st June 2016 of Ministry of Environment, Forests and Climate Change, New Delhi.

This report has been prepared by **Vimta Labs Limited** with all reasonable skill, care and diligence within the terms of the contract with the client, incorporating our General Terms and Conditions of Business and taking account of the resources devoted to it by agreement with the client.

435

DECLARATION

Declaration by Experts Contributing to the Proposed Greenfield Copper Refinery Project (1.0 MTPA) at Adani Port Special Economic Zone Land in Villages Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat

I, hereby, certify that I was a part of the EIA team in the following capacity that developed the above EIA.

EIA Coordinator: M. Janardhan

Name: **M. Janardhan**

Signature & Date: 2018/12/06

Period of Involvement: June 2016 to November 2018

Contact Information: 040-27264141/ 9000711309

Functional Area Experts:

Sr. No.	Functional Areas	Name of the Expert/s	Involvement		Signature & Date
			Period	Task	
1	AP	M. Janardhan	Jun 2016 to Nov 2018	Selected AAQ stations based on IMD data. Identified the sources of pollution and suggested mitigation measures and management plan.	2018/12/06
2	WP	Bh. Durga Bhavani	Jun 2016 to Nov 2018	Selecting the water sampling location. Identified the wastewater streams and effective treatment measures are suggested.	06.12.2018
3	SHW	M. Janardhan	Jun 2016 to Nov 2018	Effective solid waste and hazardous management for the entire project is suggested	2018/12/06
4	SE	Ch. Venkatesham	Jun 2016 to Nov 2018	Social changes arising due to the project has been assessed.	06/12/2018
5	EB	Rajashekar Tummala	Jun 2016 to Nov 2018	Conducted primary survey in the study area and identified impacts & suggested	2018/12/6
6	HG	J Rajendra Prasad	Jun 2016 to Nov 2018	Reviewed secondary and primary data and identified impacts & mitigation measures and environment management plan	06/12/2018
7	NV	M. Janardhan	Jun 2016 to Nov 2018	Identified monitoring location suggested suitable mitigation measures for construction and operation phases	2018/12/06
8	AQ	M. Janardhan	Jun 2016 to Nov 2018	Quantified the emissions using AERMOD. Suggested Management Plan.	2018/12/06

436

Sr. No.	Functional Areas	Name of the Expert/s	Involvement		Signature & Date
			Period	Task	
9	LU	J Rajendra Prasad	Jun 2016 to Nov 2018	Present land use pattern as per satellite imagery has been studied and presented. Identified impacts and management plan.	06/12/2018
10	RH	Rajgopal Krishnan	Jun 2016 to Nov 2018	Identified the hazards and recommended the suitable measures	06/12/2018
11	SC	B. S. Lole	Jun 2016 to Nov 2018	Involved in baseline soil sampling. Identified the impacts and suggested suitable mitigation measures.	06/12/2018

Other Team Member involved in EIA Report preparation:

Sr. No	Functional Areas	Name of the Expert/s	Involvement		Signature & Date
			Period	Task	
1	WP	K S Vishnu Teja	Jun 2016 to Nov 2018	Identified the impacts and mitigation measures related to water consumption and treatment process	2018/12/06
2	RH	K S Vishnu Teja	Jun 2016 to Nov 2018	Identified the hazards and data collection	2018/12/06
3	SE	CH Narendra	Jun 2016 to Nov 2018	Prepared the demographics as per 2011 census	2018/12/06
4	HG	K Rajeshwar	Jun 2016 to Nov 2018	Assisted in preparation of report	06/12/2018

437

DECLARATION BY THE HEAD OF THE

ACCREDITED CONSULTANT ORGANIZATION/AUTHORIZED PERSON

I, M. Janardhan, hereby, confirm that the above mentioned experts prepared the **Environmental Impact Assessment for the Proposed Greenfield Copper Refinery Project (1.0 MTPA) at Adani Port Special Economic Zone Land in Villages Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat.**

I also confirm that EIA Coordinator (EC) has gone through the report, and the consultant organization shall be fully accountable for any misleading information.

It is certified that no unethical practices, plagiarism involved in carrying out the work and eternal data/text has not been used without proper acknowledgement while preparing this EIA report.

Signature: 2018/12/06

Name : M. Janardhan

Designation : Head & Vice President

Name of the EIA Consultant Organization: Vimta Labs Limited, Hyderabad

NABET Certificate No. & Issue Date: NABET/EIA/1619/RA0043 Issued date: 22nd March 2017

TOR Compliance

439

439

TOR COMPLIANCES

Sr. No.	Terms of Reference (TOR)	Compliance
A	**Specific TOR**	
i	The Public Hearing for the project should be conducted by Gujarat Pollution Control Board	Public hearing for the proposed project was conducted by Gujarat Pollution Control Board on 29th April, 2017 at Community Premises Centre (Samajwadi), opposite Tunda Primary School, Tunda village, Mundra Taluk, Kutch district in the presence of Resident Additional Collector/Additional District Magistrate.
ii	The issues raised During public hearing and commitment of the project proponent on the same along with time bound action plan to implement the commitment and financial allocation there to should be clearly provided.	The public hearing comments along with time bound action plan and financial allocation is given in Section-7.1 of Chapter-7.
iii	The project proponent should carry out social impact assessment study as per the OM No.J-11013/25/2014-IA.I dated 11-08-2014 issued by the Ministry regarding the guidelines on Environmental Sustainability and CSR related issue. The SIA study so carried out should from part of EIA and EMP report.	The social impact assessment study was conducted and same report is given as Annexure-XII of the EIA Report.
iv	Plan for management of Arsenic bearing sludge should be submitted.	The Arsenic bearing sludge will be recycled within the system and balance of any will be given to authorized recyclers. Hazardous and non-hazardous waste generation, mode of disposal and waste characterisation are given in Section-2.4.3 of Chapter-2. The impacts on waste generation and management details are given in Section-4.2.5 of Chapter-4.
v	Hazardous management plan for handling of all hazardous material including minerals, products and waste, like H_2SO_4 and Arsenic sludge should be prepared by the project proponent and submitted.	
B	**Generic TOR**	
1	**Executive Summary**	The executive summary is enclosed in EIA report
2	**Introduction**	
	i. Details of the EIA Consultant including NABET accreditation	Vimta Labs Limited, a NABET accredited EIA consultant and NABL approved laboratory has been assigned the task for carrying out EIA studies.
	ii. Information about the project proponent	M/s. Adani Enterprises Limited. The details are given in Section-1.2 of Chapter-1.
	iii. Importance and benefits of the project	Details are given in Section-1.3.2 of Chapter-1.
3	**Project Description**	
	i. Cost of project and time of completion.	The total cost for the proposed project is estimated as Rs.10,000 Crores. Implementation schedule for copper project post all relevant approvals and consents will be 36 months.
	ii. Products with capacities for the proposed project	The proposed production details are given in Table-2.2 of Chapter-2.
	iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.	The proposed project is a green field project. Hence, it is not applicable.
	iv. List of raw materials required and their source along with mode of transportation.	The details of raw material requirement and source for the proposed project are given in Table-2.4 of Chapter-2.
	v. Other chemicals and materials	The fuel consumption quantity and source are given

440

TOR COMPLIANCES

Sr. No.	Terms of Reference (TOR)	Compliance
	required with quantities and storage capacities	in Table-2.6 of Chapter-2.
	vi. Details of Emission, effluents, hazardous waste generation and their management.	Details of air emissions, wastewater generation and solid waste generation is given in Section-2.4 of Chapter-2.
	vii. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)	The total water requirement for the project is about 32,800 KLD (32.8 MLD). The total estimated power requirement for proposed project is 300 MW out of which 40 MW would be generated from internal process steam and balance 260 MW power would be sourced from APSEZ Ltd. The water and power will be sourced from APSEZ Limited, through M/s. Mundra Utility Private Limited (MUPL). Water balance diagram for phase-I & II are shown in Figure-2.2(A) & 2.2(B) of Chapter-2. During construction phase, about 2000-3000 persons on average per day are required and during the operation phase about 2000 direct employment and about 5000 indirect employment would be generated.
	viii. Process description along with major equipment's and machineries, process flow sheet (quantitative) from raw material to products to be provided	Process description is given in Section-2.3 of Chapter-2.
	ix. Hazard identification and details of proposed safety systems.	Hazard identification has been carried out for the entire plant. Details are given in Table-7.6 of Chapter-7.
	X. Expansion/modernization proposals: a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Regional Office of the Ministry of Environment and Forests as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental clearances including Amendments shall be provided. In addition, status of compliance of Consent to Operate for the ongoing /existing operation of the project from SPCB shall be attached with the EIA-EMP report. b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and	Proposed project is a green field project. Hence, it is not applicable.

441

TOR COMPLIANCES

<table>
<tr><th>Sr. No.</th><th>Terms of Reference (TOR)</th><th>Compliance</th></tr>
<tr><td></td><td>Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.</td><td></td></tr>
<tr><td>4</td><td>Site Details</td><td></td></tr>
<tr><td></td><td>i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.</td><td>The proposed project is located in Siracha and Navinal Villages at APSEZ Mundra Taluka, Kutch District in the state of Gujarat. Analysis of alternative sites is discussed in Chapter-5.</td></tr>
<tr><td></td><td>ii. A topo sheet of the study area of radius of 10 km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)</td><td>Toposheet showing the 10 km radius study area map on 1:50,000 scale is shown in Figure-1.2 of Chapter-1.</td></tr>
<tr><td></td><td>iii. <tr><td></td><td>v. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.</td><td>Overall plant layout is shown in Figure-2.1 of Chapter-2.</td></tr>
<tr><td></td><td>vi. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.</td><td>The proposed site photographs are shown in Figure-1.4 of Chapter-1.</td></tr>
<tr><td></td><td>vii. Land use break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc shall be included. (not required for industrial area)</td><td>The total land required for the proposed project is about 256.58 ha (634 acres), in which 154.18 ha (381 acres) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Further, forest land of 102.38 ha (253 acres) is also involved which will be converted for industrial use. Necessary Forest Clearance (stage-I) has also been obtained vide letter 8-04/2016-FC dated 16th November, 2018.</td></tr>
<tr><td></td><td>viii. A list of major industries with name and type within study area (10 km radius) shall be incorporated. Land use details of the study area</td><td>• Adani Power (Mundra) Limited (Adjacent, W)
• Coastal Gujarat Power Limited (2.0 km, W)
Land use details of study area is given in Scetion-3.3 of Chapter-3.</td></tr>
<tr><td></td><td>ix. Geological features and Geo-hydrological status of the study area shall be included.</td><td>Geological and hydrogeological features are described in Section-3.2 of Chapter-3.</td></tr>
<tr><td></td><td>x. Details of Drainage of the project up to 5 km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based</td><td>No major river exists within 1 km from the project site. However, Dhaneswari river passes through the project site which will be suitably trained.</td></tr>
</table>

442

TOR COMPLIANCES

Sr. No.	Terms of Reference (TOR)	Compliance
	on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)	
	xi. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.	The 381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company). Balance 253 acres is forest land for which Stage-I forest clearance has been obtained vide letter No.8-04/2016-FC dated 16th November,2018.
	xii. R&R details in respect of land in line with state Government policy	There is no Resettlement and Rehabilitation involved in the project.
5	**Forest and wildlife related issues (if applicable)**	
	i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable).	Forest land of 102.38 ha (253 acres) is also involved which will be converted for industrial use. MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. The stage-I Forest Clearance (FC) is enclosed as Annexure-V of EIA Report.
	ii. Land use map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha).	Land use map based on 5 m resolution showing the forest land is shown in Figure-3.3.2 of Chapter-3.
	iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted	MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. The stage-I Forest Clearance (FC) is enclosed as Annexure-V of the EIA Report.
	iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon.	There are no National Parks, Sanctuaries, Biosphere Reserves within 10 km radius study area. Toposheet showing the 10 km radius study area map on 1:50,000 scale is shown in Figure-1.2 of Chapter-1.
	v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area.	As per the primary data collected and also from the secondary data sources, Peacock belongs to Schedule-I as per Wildlife Protection Act, 1972. Conservation plan is provided in Section-3.9.9 of Chapter-3.
	vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife.	Not applicable
6	**Environmental Status**	
	i. Determination of atmospheric inversion level at the project site and site-specific micrometeorological data using	Site specific atmospheric inversion level study has been carried out by using Sodar. The study report is enclosed as Annexure-XI of the EIA Report.

TOR COMPLIANCES

Sr. No.	Terms of Reference (TOR)	Compliance
	temperature, relative humidity, hourly wind speed and direction and rainfall.	The site-specific micro-meteorological data using temperature, relative humidity, wind speed and direction and rainfall details are given Section-3.5 of Chapter-3.
	ii. AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests.	Ambient air quality was monitored during post monsoon and partly winter season of 2016 (October-December, 2016). Details are given in Section-3.6 of Chapter-3.
	iii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min., max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.	Raw data of all AAQ measurement for three months is enclosed as Annexure-IX of the EIA Report.
	iv. Surface water quality of nearby River (60m upstream and downstream) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.	Surface water quality has been analysed and the results are given in Table-3.7.2 of Chapter-3.
	v. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC.	Dhaneshwari river also referred as Danesri Nadi (as per Topo sheet no: F42 J9 & 10). Dhaneshwari, a seasonal river which flows in the western part of the proposed site. The river will not be diverted but suitably trained along the boundary. The flow of the river will be maintained, as shown in the Plant Layout in Figure-2.1 of EIA Report. There are no other rivers nearby the proposed plant site.
	vi. Ground water monitoring at minimum at 8 locations shall be included.	Ground water quality in the study area has been analysed and the results are given in section-3.7 of Chapter-3.
	vii. Noise levels monitoring at 8 locations within the study area.	Noise levels were monitored at 8 locations and the details are given in section-3.8 of Chapter-3.
	viii. Soil Characteristic as per CPCB guidelines.	Soil analysis was carried out at 8 locations and the details along with results are given in section-3.4 of Chapter-3.
	ix. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.	Traffic studies have been conducted to know the prevailing traffic volumes in the area, details are given in Setion-3.11 of Chapter-3. It is estimated that the number of additional trucks due to the proposed project is about 700 trucks per day.
	x. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a	Ecological studies within the study area has been carried out and the details are described in Section-3.9 of Chapter-3.

444

TOR COMPLIANCES

Sr. No.	Terms of Reference (TOR)	Compliance
	Wildlife Conservation Plan shall be prepared and furnished.	
	xi. Socio-economic status of the study area.	Details of socio-economic status of the study area is discussed in Section-3.10 of Chapter-3.
7	**Impact Assessment and Environment Management Plan**	
	i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be well assessed. Details of the model used and the input data used for modeling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.	For prediction of maximum Ground Level Concentrations (GLC's), the air dispersion modelling software (AERMOD version 7.1.0) was used. Details are given in Section-4.2.2 of Chapter-4.
	ii. Water Quality modelling – in case, if the effluent is proposed to be discharged into the local drain, then Water Quality Modelling study should be conducted for the drain water taking into consideration the upstream and downstream quality of water of the drain.	Not applicable as the unit will be operating on zero discharge process.
	iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail cum road transport or conveyor-cum-rail transport shall be examined.	The major raw material i.e. copper concentrate will be received at Adani west port and will be transported to the plant through pipe conveyor. Impact of traffic on air quality is addressed in Section-4.2.3 of Chapter-4.
	iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under EP Rules.	Wastewater generation, treatment and its management are given in section-2.4.2 of Chapter-2.
	v. Details of stack emission and action plan for control of emissions to meet standards.	Details of stack emissions are given in Table-2.6 of Chapter-2.
	vi. Measures for fugitive emission control	Fugitive emission control measures are given in section-4.2.2.1 of Chapter-4.
	vii. Details of hazardous waste generation and their storage, utilization and disposal. Copies of MOU regarding utilization of solid and hazardous waste	Details are given in Section-2.4.3 of Chapter-2.

TOR COMPLIANCES

Sr. No.	Terms of Reference (TOR)	Compliance
	shall also be included. EMP shall include the concept of waste-minimization, recycle/ reuse/ recover techniques, Energy conservation, and natural resource conservation.	
	viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.	Not applicable as there will not be any generation of fly ash due to the proposed plant.
	ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 1,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.	About 85.79 ha (212 acres) is allotted for greenbelt/green cover development. Details are given in Section-4.3 of Chapter-4.
	x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.	Rainwater harvesting structures will be provided to recharge the groundwater resources in the region. Details are given in section-4.2.4.4 of Chapter-4.
	xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.	The total cost for the proposed project is estimated as Rs.10,000 Crores. The total capital cost for environmental protection is about Rs. 1044 Crores. The recurring cost/ annum for environmental protection is about Rs. 5 Crores.
	xii. Action plan for post-project environmental monitoring shall be submitted.	Details are given in Chapter-6.
	xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan	Details are given in Section-7.3 of Chapter-7.
8	**Occupational health**	
	i. Details of existing Occupational & Safety Hazards. What are the exposure levels of above mentioned hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved	Detail are given in Section-7.4 of Chapter-7.
	ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-

	placement and periodical examinations give the details of the same. Details regarding last month analysed data of abovementioned parameters as per age, sex, duration of exposure and department wise.	
	iii. Annual report of health status of workers with special reference to Occupational Health and Safety.	
	iv. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers.	
9	**Corporate Environment Policy**	
	i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.	The Corporate Environment Policy and the list of Board of Directors is enclosed in Annexure-XVI of the EIA Report.
	ii. Does the Environment Policy prescribe for standard operating process /procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.	
	iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.	
	iv. Does the company have system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report	
10	Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.	All infrastructure facilities such as sanitation, fuel, restroom etc. will be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.
11	Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.	Nil
C	**Additional TOR**	
1	Complete process flow diagram describing each unit, its process and operations long with material and energy	Process flow diagram, details of material and energy balance are given in Figure-2.4 to Figure-2.6.

TOR COMPLIANCES

Sr. No.	Terms of Reference (TOR)	Compliance
	inputs & outputs (material and energy balance)	
2	Emission from sulphuric acid plant and sulphur muck management	Details of stack emissions for proposed plant are given in Section-2.4 of Chapter-2.
3	Details on installation of continuous emission monitoring system with recording with proper calibration system	Continuous emission monitoring system with recording with proper calibration system will be provided in the proposed plant. The details of emission monitoring system installation is given in the Table-6.4 of Chapter-6.
4	Details on toxic metals including fluoride emissions	The gas clearing systems is given in Section-2.3.9 of Chpater-2.
5	Details on stack height	Details of stack for proposed plant is given in Table-2.7 of Chapter-2.
6	Details on ash disposal and management	There will be no ash generation in the proposed project.
7	Complete process flow diagram describing process of lead/zinc/copper/aluminium etc.	The process flow diagram is shown in Figure-2.3 of Chapter-2.
8	Details on smelting, thermal refining, melting, slag fuming and Waelz kiln operation	The process description in detail is given in Section-2.3 of Chapter-2.
9	Details on Holding and de-gassing of molten metal and smelting of secondary aluminium, materials pre-treatment, and from melting and smelting of secondary aluminium	The secondary off gas will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO_2 before it is discharged to the atmosphere. The process flow diagram of smelter furnace is shown in Figure-2.8 of Chapter-2.
10	Details on toxic metal content in the waste material and its composition and end use (particular of slag)	The process flow diagram of slag cleaning furnace flow sheet is shown in Figure-2.11 and precious metal recovery plant is shown in Figure-2.18 of Chapter-2. The waste generation, mode of disposal and waste characterisation are given in Section-2.4.3 of Chapter-2. The impacts on waste generation and management details are given in Section-4.2.5 of Chapter-4.
11	Trace metals in waste material especially slag	
12	Plan for trace metal recovery	
13	Trace metals in water

Executive Summary

1.0 INTRODUCTION

M/s. Adani Enterprises Limited (AEL) intends to set up a greenfield copper refinery project at Adani Port Special Economic Zone (APSEZ) land, Mundra taluka, Kutch district, Gujarat state.

The proposed greenfield copper refinery project would require a total land area of 256.58 ha (634 acres) earmarked with state of art environment friendly technology. The estimated cost for the proposed project is about Rs. 10,000 Crores.

1.1 Purpose of the Report

As per Environmental Impact Assessment (EIA) Notification dated 14th September 2006, proposed project falls under category 'A' of project activity 3(a). Hence, construction and operation of copper refinery project requires Environmental Clearance (EC) from Ministry of Environment, Forest and Climate Change (MOEF& CC).

Terms of Reference (TOR) for EIA study for the proposed project was accorded by MoEF&CC vide Letter F.No.J-11011/113/2016-IA.II(I) dated 21st June 2016. In accordance with the TOR conditions, the draft EIA report is prepared by M/s. Vimta Labs Limited, Hyderabad based on three months site specific baseline environmental data monitored during 1st October 2016 to 31st December 2016.

The public hearing for the proposed project was conducted by Gujarat Pollution Control Board (GPCB) on 29th April 2017 at Community Premises Centre (Samajvadi), opposite Tunda primary school, Tunda village, Mundra taluk, Kutch district, Gujarat, in the presence of Resident Additional Collector/Additional District Magistrate as per the EIA Notification dated 14th September, 2006. Based on the proceedings of the public hearing, the draft EIA report is updated and finalized report is submitted for consideration for EC to the MoEF&CC, New Delhi.

2.0 BRIEF DESCRIPTION OF THE PROJECT

2.1 Environmental Setting of the Project Site

The proposed project site is located in Siracha and Navinal villages at APSEZ Mundra taluka, Kutch district in the state of Gujarat. The proposed site is well connected by the existing national/state highways and cargo rail link, which is about 2 km away from the Navinal railway station. The nearest airport is at APSEZ, Mundra located at 17.5 km of the project site and another is at Bhuj located at a distance of 50 km from the proposed project site. The nearest railway station is Adipur/Gandhidham, which is about 64 km from project site and nearest town is Mundra which is about 13.9 km from the proposed project site. The national highway NH-8A is passing at about 5 km away from the site. State highway SH-6 is about 0.3 km from the proposed site. The site is well connected with Ahmedabad city located at about 460 km. The study area map of 10 km radius around the project site is shown in **Figure-1** respectively.

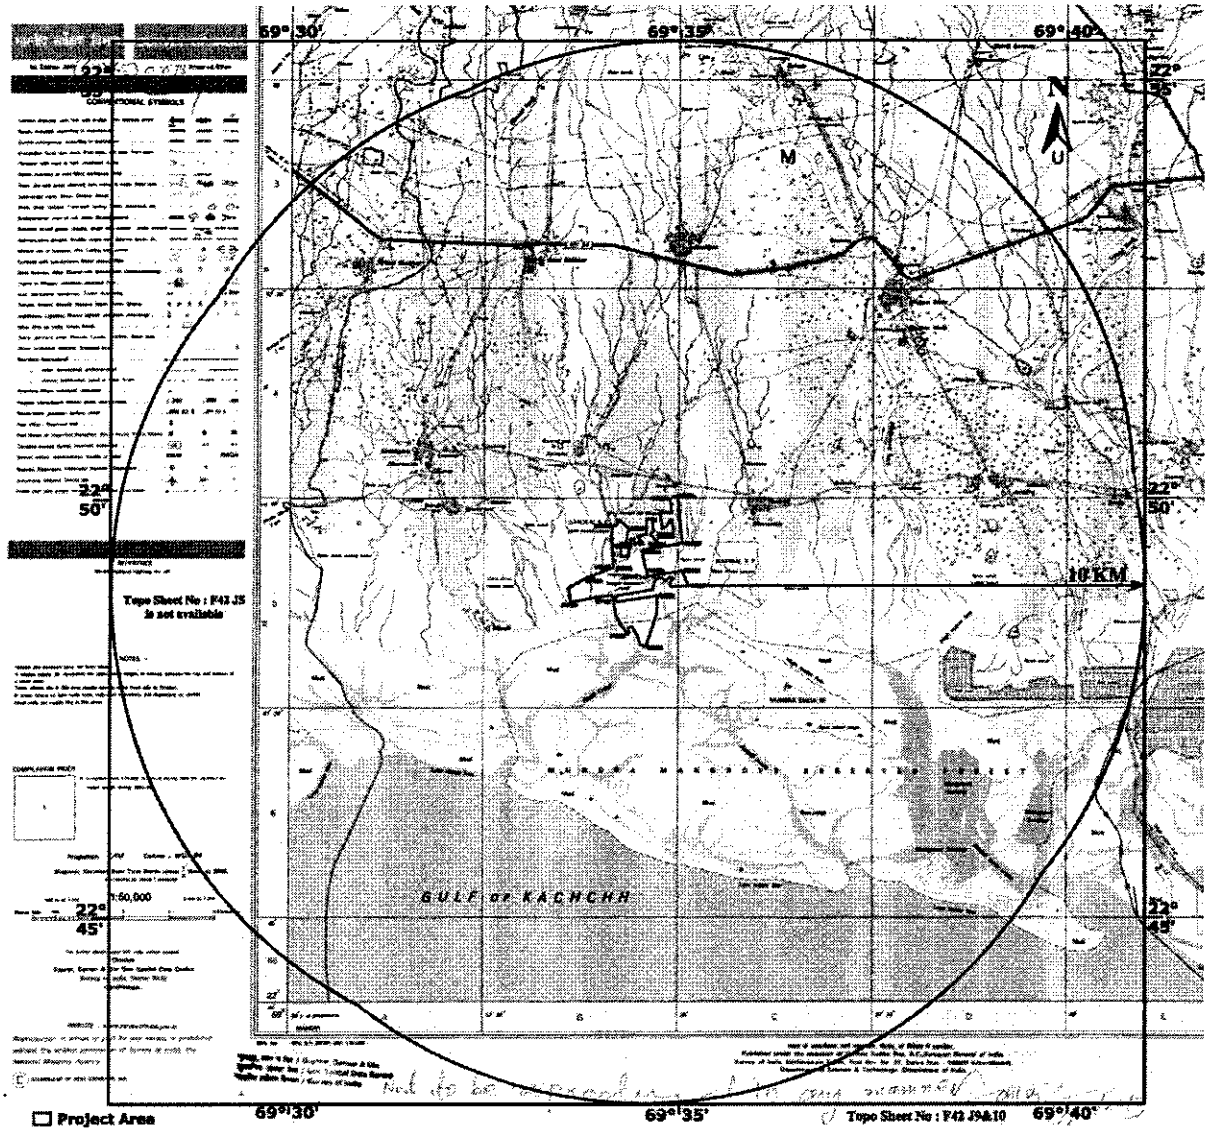

FIGURE-1
STUDY AREA MAP

2.2 Project Features

2.2.1 Land Requirement

The total land required for the proposed project (phase-I & pashe-II) is about 256.58 ha (634 acres), out of which 154.19 ha (381 acres) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Memorandum of Understanding (MoU) is in place between Adani Ports & Special Economic Zone Limited (APSEZL) and Adani Enterprises Ltd (AEL) for 154.19 ha (381 acres). Further, forest land of 102.39 ha (253 acres) is also involved which will be converted for industrial use. MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. There is no resettlement and rehabilitation involved in this project.

2.2.2 Water Source and Requirement

The total water requirement for the project is about 32,800 KLD (32.8 MLD). The total desalinated water requirement for the project would be sourced from APSEZ Ltd.

2.2.3 Power Requirement

The total estimated power requirement for proposed project is 300 MW out of which 40 MW would be generated from internal process steam and balance 260 MW power would be sourced from APSEZ Ltd.

2.2.4 Product Details

The proposed copper refinery project would produce products and by-products with state of art environment friendly technology and the proposed production details are given in **Table-1**.

It is proposed to adopt pyrosmelting technology and electro refining process to produce copper cathode. The sulphur dioxide generated during the smelting of copper concentrate is converted into sulphuric acid by Double Conversion Double Absorption (DCDA) process. A part of this sulphuric acid is captively utilized for production of phosphoric acid.

TABLE-1
DETAILS OF PRODUCTION CAPACITY

Sr. No.	Products	Units	Phase-I	Phase-II	Overall Plant Capacity
I	**Main Products**				
1	Copper Cathode	TPA	5,00,000	5,00,000	**10,00,000**
2	Sulphuric Acid (> 98%)	TPA	15,00,000	15,00,000	**30,00,000**

20	CCR Mill Scale	TPM	25	25	**50**

2.3 Process Description

The principal raw material for the production of copper metal is copper concentrate blend containing about 25-35% copper, 25-34% sulphur, iron 25-35% and 7-10% moisture. Approximately 3 LTPA copper scrap and electronic scrap is also used as input to proposed copper smelting plant and copper scrap melting facility.

The major steps in copper extraction include:

- Blending of different grades of concentrates;
- Smelting of concentrate in smelting furnace to produce an intermediate copper rich product known as "matte" containing 58 - 63% copper;
- Converting of liquid matte to blister copper (98- 99% Cu) in Pierce-smith converter;
- Fire refining of blister copper to produce anode copper (99.5% Cu) in anode furnace and casting of the anodes; and
- Electrolytic refining of anodes to produce copper cathodes (99.99% Cu).

In the process of extraction of copper metal, sulphuric acid is recovered as a byproduct from the off-gases generating from the smelting and converting furnaces. A part of sulphuric acid produced is utilized for phosphoric acid production and rest will be sold in the market based on market requirement. Hydro fluro silicic acid generated from phosphoric acid plant will be partly sold to fluoride based industries and rest will be converted in value added aluminum fluoride. Aluminum fluoride produced will be sold to aluminum manufacturing companies.

The precious metal in the form of anode slime is collected during electrolytic refining of copper will be processed to produce gold, silver and Platinum Group of Metals (PGM) concentrate.
The copper cathode produced from copper refinery will be melted and drawn in the form of copper wire rod on continuous basis from a continuous casting and

rolling machine. Copper rod will be of various sizes as per market requirement such as 8 to 32 mm.

The wastewater generated from copper smelter, sulphuric acid plant and copper refinery will be treated in state of art effluent treatment facility. Treated effluent will be consumed within the plant operations to maximum extent. A secondary RO will be installed at the outlet of treated effluent to reuse water internally and reduce water consumption.

The major technological units envisaged for the copper refinery plant are as given below:

- Raw material handling system;
- Smelting furnace;
- Pierce smith converter;
- Ferro sand cleaning furnace (FSCF);
- Copper scrap melting system;
- Anode furnace & anode casting wheel;
- Off gas handling;
- Sulphuric acid plant;
- Oxygen plant;
- Refinery unit
- Precious metal recovery plant;
- Continuous cast copper wire rod plant;
- Phosphoric acid plant;
- Aluminum fluoride plant; and
- Effluent treatment plant (ETP).

3.0 BASELINE ENVIRONMENTAL STATUS

Baseline environmental status has been established for various environmental attributes within a study area of 10 km radius from the project site. The major environmental disciplines covered in the EIA report includes ambient air quality, water quality, noise, soil, ecology (terrestrial and aquatic), land use, geology, hydrology and demographic & socio-economic conditions.

3.1 Soil Characteristics

The soil samples were collected within the study area during post-monsoon and partly winter season of 2016. It has been observed that the pH of the soil in the study area ranged from 7.7 to 8.4. The electrical conductivity was observed to be in the range of 137 to 6300 µmhos/cm. The nitrogen values range between 4.8 kg/ha to 23.8 kg/ha. The phosphorus values range between 42.2 kg/ha to 154.4 kg/ha. The potassium values range between 178.2 kg/ha to 1125.3 kg/ha. Soluble chlorides in the region varied from 354.4 mg/kg to 12400.9 mg/kg. Organic matter concentrations ranged from 0.05% to 0.22%. Organic carbon concentrations ranged from 0.03% to 0.13%.

3.2 Climatology and Meteorology

The recorded temperature at site during study period ranges between 9.2°C to 40.6°C and relative humidity ranges in between 47% to 98%. Predominant winds from SSW and SW directions were observed during the study period.

3.3 Ambient Air Quality

To establish the baseline status of the ambient air quality in the study area, the air quality was monitored at eight locations during post-monsoon and partly winter season of 2016. The $PM_{2.5}$ and PM_{10} are observed to vary from 19.2 $\mu g/m^3$ to 43.9 $\mu g/m^3$ and 35.2 $\mu g/m^3$ to 84.2 $\mu g/m^3$ respectively. The SO_2 and NO_2 are observed to vary from 14.8 $\mu g/m^3$ to 42.6 $\mu g/m^3$ and 13.1 $\mu g/m^3$ to 32.8 $\mu g/m^3$ respectively. The CO is observed to vary from 262 $\mu g/m^3$ to 412 $\mu g/m^3$ respectively. The remaining parameters as per 16th Nov, 2009 CPCB Notification are observed to be within permissible limits.

3.4 Water Quality

The baseline water quality status in the region is established by collecting water samples in study area.

- *Surface Water Quality*

The analysis results indicate that pH is found to be 7.2 to 8.0, which is well within the specified standard 6.5-8.5. The TDS was observed to be 41,645 to 43,572 mg/l. Dissolved oxygen was observed to be 5.6 to 5.9 mg/l. The chlorides and sulphates were found to be 16,078.9 to 20,915.5 mg/l and 2,139.1 to 2,734.0 mg/l respectively. Bacteriological studies reveal the 5 MPN/100ML. The surface water is observed to be brackish in nature.

- *Ground Water Quality*

The analysis results indicate that the *pH* ranges in between 7.3 to 7.8. Total hardness was observed to be ranging from 125.0 to 392.0 mg/l. Chlorides were found to be in the range of 282.6 mg/l to 978.4 mg/l. Sulphates were found to be in the range of 27.8 mg/l to 115.4 mg/l. The Total Dissolved Solids (TDS) concentrations were found to be ranging between 1372 to 2930 mg/l.

Fluorides were observed to be ranging between 0.9 to 1.5 mg/l and are found to be within the permissible limit. Nitrates are found to be in range of 8.2 to 22.0 mg/l. Bacteriological studies reveal that no coliform bacteria are present in the samples. The heavy metal contents were observed to be well within the limits except few parameters. It can be observed that the ground water quality in influenced by sea water quality possibly due to proximity to the sea.

3.5 Noise Level Survey

The noise monitoring has been conducted in the study area. Day time, night time noise levels were found to be varying from 48.5 dB(A) to 56.6 dB(A) and 42.3

dB(A) to 48.8 dB(A) respectively in the study area. The noise levels in general found within the acceptable levels as per standards prescribed by Central Pollution Control Board (CPCB).

3.6 Ecological Studies

Flora and fauna studies were conducted during the study period to assess the existing floristic and faunal components in study area. Floral species are mainly dominated by *Prosopis juliflora and Acacia Senegal.* Primary survey and Literature survey reveals that there are no wildlife sanctuaries, national parks and biospheres and no migratory paths of birds and animals in 10 km radius study area. The faunal species were categorized as per conservation status of Wildlife Protection Act, 1972 reveals peacock is the only Sch-I species in the study area. Mangroves are predominantly composed of *Avicenna marina*, Species known for its high tolerance of salinity and other environmental stresses.

3.7 Demography and Socio-Economic Profile

The information on socio-economic aspects of the study area has been compiled from secondary sources, which mainly include census data of 2011. The salient features of the demography and socio-economic profile are as follows:

- Total population is 60,525;
- The scheduled castes (SC) are 9.72% and scheduled tribes (ST) are 1.29%;
- Overall literacy rate in the study area according to 2011 census is 67.62%, out of which male literacy is 73.42% while female literacy is 26.58%; and
- The percentage of main workers and marginal workers are 90.57% and 9.43% respectively.

4.0 ANTICIPATED ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES

The summary of anticipated environmental impacts due to the proposed project during operation phase and mitigation measures are given below:

4.1 Air Environment

Sulphur dioxide (SO_2) and particulate matter emissions will be the main pollutants in the copper refinery complex and there will be no major source of NOx emissions. The incremental ground level concentrations due to proposed project have been estimated by dispersion modeling and are observed to be within the National Ambient Air Quality standards (NAAQ's).

- In the present case, air dispersion modeling software (AERMOD version 7.1.0) dispersion model is used to simulate the effect of emissions from point sources on air quality
- Air pollution modelling carried out for proposed Copper Smelter plant shows that resultant concentrations of SO_2 and PM due to the proposed project for the study period will remain well within the National Ambient Air Quality Standards;

- Modelling studies reveal that the maximum incremental short term 24 hourly ground level concentrations (GLC) will be 17.90 $\mu g/m^3$ for SO_2 and 1.26 $\mu g/m^3$ for PM_{10} at a distance of 2.2 km in NE direction. The resultant concentrations are predicted to be well within the standards specified by CPCB.

Following air pollution control schemes and techniques are suggested which shall be used to minimize and control the emission of air pollutants as well as their effective dispersion into the atmosphere:

- Sulphur Dioxide (SO_2): High efficiency collection and scrubbing system with lime and caustic;
- Fluorine (F): High efficiency collection and scrubbing system with water to produce hydro fluro silicic acid, which will be the input to aluminum fluoride plant; and
- Particulate Matter: Wet scrubbers, cyclones, electrostatic precipitators, bag filters, vacuum trucks, road vacuum sweepers, etc.; based on the application.

The final gaseous emissions from the copper refinery complex would be well within the permissible limits as prescribed by GPCB/CPCB/MoEF&CC.

4.2 Water Environment

No ground water is proposed to be extracted for the proposed project. The total water requirement for the project is about 32,800 m^3/day which will be sourced from desalination plant of M/s. APSEZ Ltd.

The total waste water generation from the proposed project will be about 5,432 m^3/day. This will be treated in the effluent treatment plant and the treated waste water will be fully utilized within the plant for process, cooling and other purposes. No wastewater will be discharged outside the plant. Hence, there is no impact on the water regime due to the wastewater generated from the plant complex.

Water Pollution Management and Water Conservation Measures:

- Maximum recycling of treated wastewater into process;
- Provision of appropriate treatment facility to treat domestic sewage from plant;
- Utilization of treated domestic wastewater in greenbelt development and dust suppression;
- Provision of separate storm water system to collect and store run-off water during rainy season and utilization of the same in the process; and
- Treatment of storm water to remove contaminants, if any, before discharging into water streams.

4.3 Solid Waste Management

The main solid waste envisaged from the proposed project are:

- Copper slag from copper smelter plant;
- Phosphogypsum from phosphoric acid plant;
- Hazardous cake produced from effluent treatment plant; and
- Scrubber cake from fugitive gas handling scrubbers.

Hazardous cake, ETP waste sludge, scrubber cake, spent catalyst and spent resins (from DM, RO & refinery) will be stabilized and stored in secured land fill of 13.35 ha as per guidelines of MoEF&CC/ CPCB/ GPCB. Further, an area of 18.62 ha and 20.63 ha are identified for the intermediate/emergency storage of copper slag and phosphogypsum. Provision would be made to reclaim the disposed copper slag and phosphogypsum from gypsum pond at a later stage for various utilization ventures. The used oil, oil sludge, nickel sludge and arsenic bearing sludge (As-Cu precipitate) will be given to authorized recycler.

4.4 Noise Environment

The main noise generating sources from the entire project will be blower, fan, crusher, vibrating screen, pumps, compressors etc. The noise levels at the sources for these units will be in the range of 80-90 dB(A).

The predicted noise levels at the project boundaries are estimated through computer based mathematical model. The predicted noise levels at the boundary due to various activities are found ranging in between 40 to 46 dB(A). It is seen from the simulation results that the incremental noise levels will be well within the CPCB standards.

The following control measures will be implemented for the proposed project:

- High noise generating sources shall be insulated adequately by providing suitable enclosures;
- The air compressor, process air blower, pneumatic valves shall be provided with acoustic enclosure;
- All the design/installation precautions as specified by the manufacturers with respect to noise control shall be strictly adhered to;
- Design and layout of building to minimize transmission of noise, segregation of particular items of plant and to avoid reverberant areas;
- The oxygen plant shall be installed in double wall building and no operator shall be working within the building; and
- Other than the regular maintenance of the various equipment, ear plugs/muffs shall be recommended for the personnel working close to the noise generating units.

4.5 Biological Environment & Greenbelt Development

The main sources of air pollution from the project will be from the process stacks. The pollutants from the plant include sulphur dioxide and particulate matter. The

air dispersion modeling simulations are done to evaluate SO_2 and PM likely to be contributed by the plant. The incremental concentrations were found to be well within the limits as per National Ambient Air Quality Standards. Hence, only marginal impact is envisaged due to copper smelter plant on the terrestrial ecology. Hence, no impact is envisaged on the terrestrial ecology of the area. Further, the unit will be operating on zero discharge process and no perennial nallahs or streams present in the project area, hence no impact on aquatic ecology is envisaged.

Out of the entire area of proposed copper smelter complex, 33% which is around 85.79 ha of land is reserved for greenbelt / green cover development as per prevailing guidelines from GPCB/CPCB/MoEF&CC.

4.6 Socio- Economics

The requirements of skilled/unskilled manpower during operation will be met from nearby villages as far as possible. The project will also help in generation of significant indirect employment. This will be a positive socio-economic development for the region and general upliftment of standard of living in the region.

AEL is strictly committed and is going to implement the proposal to uplift the social infrastructure surroundings the project area. Positive impact is envisaged on the infrastructure of the region.

5.0 ENVIRONMENTAL MONITORING PROGRAM

The environmental monitoring program is important in terms of evaluating the performance of pollution control equipments installed in the project. The sampling and analysis of the environmental attributes will be as per the guidelines of CPCB/GPCB. The frequency of air, noise, surface water and ground water sampling and location of sampling will be as per the directives of pollution control board.

The total project cost for the proposed project is about Rs. 10,000 Crores, which may further escalate depending upon the project execution period. Out of this, about Rs. 1044 Crores will be spent on environmental protection.

6.0 RISK ASSESSMENT AND DISASTER MANAGEMENT PLAN

Risk assessment has been carried out to quantify the extent of damage and suggest recommendations for safety improvement for the proposed copper refinery project. Risk mitigation measures based on maximum Credible Accident Analysis (MCA) and engineering judgments are incorporated in order to improve overall system safety and mitigate the effects of major accidents.

An effective Disaster Management Plan (DMP) to mitigate the risks involved has been prepared. This plan defines the responsibilities and resources available to respond to the different types of emergencies envisaged. Training exercises will

be held to ensure that all personnel are familiar with their responsibilities and that communication links are functioning effectively.

7.0 PROJECT BENEFITS

AEL has undertaken a cost benefit analysis to ascertain the benefits that would accrue to India and Gujarat in particular from its proposed copper smelter project. The study results show that the copper smelter project would create substantial amount of tax revenue for India over 25 years of project life. The copper smelter project venture is expected to employ about 5,000 direct and indirect employees.

The beneficial impact of proposed project on the civic amenities will be substantial after the commencement of project activities. The basic requirement of the community needs will be strengthened by extending healthcare, educational facilities to the community, building/strengthening of existing roads in the area. AEL is already providing the above amenities and would further strengthen the activities either by providing or by improving the facilities in the area, which will help in uplifting the living standards of local communities.

AEL believes that an effective growth policy must also take into account the fulfillment of basic needs of the masses, especially of those living in rural areas. AEL has one of the best social infrastructure proposals which are based on the implementation already done by APSEZ and APL at Mundra, in the core area of health, education, sustainable livelihood options & women empowerment, community infrastructure, youth sport & cultural activities, calamity management. AEL is strictly committed and is going to implement the proposal to uplift the social infrastructure surroundings the copper refinery project area.

8.0 CONCLUSIONS

The proposed copper refinery project of AEL is one of the important projects. AEL believes that the copper refinery project would add significant value to Indian economy. The project will not only help ensuring by becoming self-sufficient in terms of copper, phosphoric acid and sulphuric acid for India but will also drive macroeconomic growth.

The proposed project would have few adverse impacts on the environment. However, with proper and judicious implementation of the mitigation and environment management measures, the impacts can be minimized and can be maintained well within the permissible limits specified by the regulatory authorities.

Thus, it can be concluded that with the strict implementation of the pollution control and mitigation measures, with proper environment management system in place the proposed project will be beneficial to the society and will contribute to the economic development of the state in particular and the country in general.

Chapter-1
Introduction

1.0 INTRODUCTION

M/s. Adani Enterprises Limited (AEL) intends to set up a Greenfield copper refinery project of 1.0 MTPA (10 LTPA) capacity in 256.58 ha (634 acres) of area, which includes facilities like copper smelter, sulphuric acid plant, copper refinery, continuous cast copper wire rod plant, precious metal recovery plant, phosphoric acid plant, aluminum fluoride plant, effluent treatment plant, utilities storage of water and fuel, etc. with the state of the art environment friendly technology, which will be located at Adani Port Special Economic Zone (APSEZ) land in villages Siracha and Navinal, taluka Mundra, district Kutch, Gujarat.

1.1 Purpose of the Report

As per Environmental Impact Assessment (EIA) Notification dated 14th September 2006, proposed project falls under category-'A' of project activity 3(a) and requires prior Environmental Clearance (EC) to be obtained from Ministry of Environment, Forest & Climate Change (MoEF&CC) before the commencement of ground activity.

The application No: IA/GJ/IND/53004/2016 for prior EC (Form-1 and Pre-Feasibility Report) for the proposed project has been submitted to MoEF&CC on 21st April 2016 and same was reviewed by the Expert Appraisal Committee (Industry-I) the meeting held on 4th May 2016 in New Delhi to prescribe Terms of Reference (TORs) for the preparation of EIA/EMP report. TOR has been issued by MoEF&CC vide letter reference F.No.J-11011/113/2016-IA.II(I) dated 21st June 2016. A copy of the ToR letter, along with its compliance is enclosed as **Annexure-I**.

With a view to assess the environmental impacts arising due to the proposed Greenfield copper refinery project, **M/s. Adani Enterprises Limited (AEL)** has retained the services of NABET accredited EIA Consultant **M/s. Vimta Labs Limited (VLL)**, Hyderabad to prepare EIA report for various environmental components including air, noise, water, land and biological components along with parameters of human interest which may be affected and to prepare an Environment Management Plan (EMP) for mitigating possible adverse impacts.

The public hearing for the proposed project was conducted by Gujarat Pollution Control Board (GPCB) on 29th April 2017 at Community Premises Centre (Samajvadi), opposite Tunda primary school, Tunda village, Mundra taluk, Kutch district, Gujarat, in the presence of Resident Additional Collector/Additional District Magistrate as per the Environmental Impact Assessment Notification dated 14th September, 2006. Based on the proceedings of the public hearing, the draft EIA report has been updated and the finalized report is submitted for consideration for environmental clearance to the MoEF&CC, New Delhi.

The proposed project will be completed within 36 months from the start of the construction activity at project site. The project construction start date will be decided after obtaining all the statutory clearances and tie up of the finance for

the project. After receiving Environment Clearance from MOEF&CC, the necessary clearances such as Consent to Establishment (CTE) and Consent to Operate (CTO) from GPCB shall be obtained.

1.2 Identification of Project and Project Proponent

1.2.1 Identification of Project

AEL proposes to set up a greenfield copper refinery project of 1.0 MTPA (10 LTPA) capacity in 256.58 ha (634 acres) of area, which includes facilities like copper smelter, sulphuric acid plant, copper refinery, continuous cast copper wire rod plant, precious metal recovery plant, phosphoric acid plant, aluminum fluoride plant, effluent treatment plant, utilities such as storage of water and fuel, etc. with the state of the art environment friendly technology. The proposed project will be located in Siracha and Navinal villages at APSEZ Mundra taluka, Kutch district, Gujarat.

1.2.2 Project Proponent

The Adani Group is one of India's leading global integrated infrastructure player holding a company of M/s. Adani Enterprises Limited (AEL). It was ranked among the top 50 Asian companies by Forbes Asia in 2009. Adani Enterprises is quoted on the Indian stock exchange, together with its two subsidiary companies - Adani Ports & SEZ and Adani Power. M/s. Adani Enterprises Limited is listed on the Bombay Stock Exchange (BSE) and National Stock Exchange of India (NSE).

1.2.3 Environment Consultant

M/s. Vimta Labs Limited, a NABET accredited EIA consultant (NABET/EIA/1619/RA0043 valid upto 19th May 2019) and NABL approved laboratory (TC-5418 valid upto 30th March 2019) has been assigned the task for carrying out EIA studies and to prepare an EMP to mitigate any adverse impacts.

1.3 Brief Description of the Project

1.3.1 Nature & Size of the Project

The proposed greenfield copper refinery project would produce 10 LTPA (1.0 MTPA) of copper cathode; 30 LTPA of sulphuric acid; 5 LTPA of copper wire rod; 96,000 TPM of oxygen plant; 50 TPA of gold; 500 TPA of silver; 5 LTPA of phosphoric acid (as 100% P_2O_5); 30,000 TPA of aluminum fluoride etc. within the total land area of 256.58 ha (634 acres) earmarked with the state of art environment friendly technology. The estimated cost for the proposed project is about Rs. 10,000 Crores.

1.3.2 Importance to Country & Region

Copper, the world's most widely used metal next to iron and aluminium is an important element in global industrial development. It is considered a barometer

of economic expansion. Although copper is neither a precious metal nor an energy source, it is inarguably one of the most important commodities in today's world.

Entire infrastructures are based on this reddish metal. Plumbing, construction, telecommunication, transportation etc. are dependent on this metal. The increase in copper price and demand supply imbalance are evident from the exponential growth of infrastructures in China & India.

India also provides a very compelling case for copper demand and one only has to look as far as their power needs. According to the International Energy Agency, India's power production needs to rise by 15-20% annually and to meet that, India needs to invest $1.25 trillion by 2030 into energy infrastructure. From this new infrastructure, India's annual copper demand is expected to be more than double.

For the last 3 years the industry production is growing at an average rate of 7% to 8%. The growth rate is expected to remain similar in the future. For improving efficiency in the core industry sector, India needs more reliable electricity at cheaper cost. This will create demand for more energy efficient wires, bus-bars and additional potential in heat exchange products. All this can be achieved with copper.

The current growth rate in appliances market is about 20% per annum and is expected to grow with same pace for the next 5 years. There is a large potential for improvement in the levels of energy efficiency, which would increase the density of copper usage in the sector.

The per capita consumption of copper in India is less than 1 kg as compared to 2.7 kg as the world average. There is, therefore, a great potential for development of copper-based industries in the country. In view of the above, the proposal of setting up copper smelting and refining capacity at Mundra is the most appropriate and a timely decision.

1.3.3 Location of the Project

The proposed project site is located in villages Siracha and Navinal at APSEZ taluka Mundra, district Kutch in the state of Gujarat. The total area earmarked for the proposed project is 256.58 ha (634 acres), in which 154.19 ha (381 acres) of land belongs to APSEZ area and 102.39 ha (253 acres) of land belongs to forest area for promoting industrial development.

- *Connectivity (in areal distances)*

The proposed site is well connected by the existing national/state highways, cargo rail link, which is about 2 km away from the Navinal railway station. The nearest APSEZ airstrip is located around 20 km from the project site and Bhuj airport is located at a distance of 50 km from the proposed project site. The nearest railway station is Adipur/Gandhidham, which is about 64 km NE from project site and nearest town is Mundra, which is about 13.9 ENE km from the

proposed project site. The national highway NH-8A is passing at about 5 km away from the site. The state Highway SH-6 is about 0.3 km from the proposed site. The site is well connected with Ahmedabad city, which is located at about 460 km.

The location map and study area of 10 km radius of the project site is shown in **Figure-1.1** and **Figure-1.2** respectively. Google imagery of the study area and the proposed site photographs are shown in **Figure-1.3** and **Figure-1.4** respectively and the environmental setting of the project site is given in **Table-1.1.**

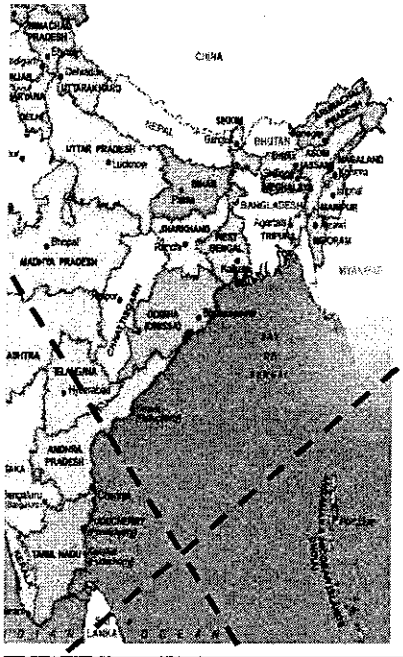

TABLE-1.1

1.4 Scope of the Study

The scope of this study broadly includes:

- Conducting literature review and to collect data relevant to the study area;
- Field sampling of environmental attributes at various representative locations in the study area to establish the baseline environmental status;
- Collate and compile secondary data including socio-economic data from published literature/government publications;
- Identifying various existing pollution loads due to various activities;
- Predicting incremental levels of pollutants in the study area due to the proposed activities;
- Evaluating the predicted impacts on various environmental attributes in the study area by using scientifically developed and widely accepted Environmental Impact Assessment (EIA) methodologies;
- To prepare an Environment Management Plan (EMP), outlining the measures for improving the environmental quality in view of future project for environmentally sustainable development; and
- Identifying critical environmental attributes that are required to be monitored in the post-project scenario.

1.5 Methodology of the Study

The baseline studies have been conducted from 1st October 2016 to 31st December 2016 (post-monsoon and partly winter season) to determine existing conditions of various environmental attributes as outlined in **Table-1.2** and the methodology of sampling and analysis is given in **Annexure-II.**

TABLE-1.2
ENVIRONMENTAL ATTRIBUTES AND FREQUENCY OF MONITORING

Sr. No.	Attributes	Parameters	Frequency	No of Sampling Locations in the Study Area
1	Meteorology	Wind speed, wind direction, temperature, relative humidity, rainfall, and other non-instrumental observations	Continuous for three months with hourly recording at one central location and secondary data collected from nearest IMD	1 location
2	Ambient Air Quality	As per NAAQ's 2009	24 hourly samples twice a week for 13-weeks. CO is monitored for three 8 hourly samples in 24 hours for twice a week for	8 locations

Sr. No.	Attributes	Parameters	Frequency	No of Sampling Locations in the Study Area
			thirteen weeks	
3	Water Quality	Physical, Chemical and Bacteriological parameters	Grab samples were collected from surface water (SW) and ground water (GW) sources. Sampling and analysis is carried out for once during study period	8 locations (GW) + 4 Location (SW)
4	Soil Quality	Soil profile with chemical constituents	Once during study period	8 locations
5	Land use	Trend of land use change for different categories	Based on secondary data and satellite imagery	Study area
6	Ecology	Terrestrial and aquatic flora and fauna in the study area	Primary survey through field studies during study period and supplemented with published data	5 locations
7	Noise levels	L_{day}, L_{night}, L_{eq}	Hourly readings for 24 hours at eight locations, once during study period	8 locations
8	Socio-Economic aspects	Socio-economic characteristics	Based on data published in district census handbooks and field study	Once during study period

1.6 Contents of the Report

The report has been framed in twelve chapters and presented as follows:

Chapter-1.0: Introduction

This chapter provides background information of the project, brief description and objectives of the project, description of the area, scope, methodology and organization of the study.

Chapter-2.0: Project Description

This chapter presents the information on the proposed project activities, technology being adopted, sources of pollution and proposed control measures.

Chapter-3.0: Description of the Environment

This chapter presents the methodology and findings of field studies undertaken to establish the baseline conditions.

Chapter-4.0: Anticipated Environmental Impacts & Mitigation Measures

This chapter details the inferences drawn from the environment impact assessment of the project during development and operational phase. It describes the overall impacts of the project and underscores the areas of concern which need mitigation measures.

Chapter-5.0: Analysis of Alternatives (Technology & Site)

This chapter presents the analysis of alternative sites and technologies considered for the proposed project.

Chapter-6.0: Environmental Monitoring Program

This chapter provides recommendations for Environment Management Plan (EMP) including mitigation measures for minimizing the negative environmental impacts of the project. Environmental monitoring requirements for effective implementation of mitigative measures during operation of the project along with required institutional arrangements for their implementation.

Chapter-7.0: Additional Studies

This chapter covers the details of risk involved in the project, public hearing, Disaster Management Plan (DMP), Occupational Health and Safety (OHS) and summary of other special studies as per TOR conditions.

Chapter-8.0: Project Benefits

This chapter presents the details of proposed Corporate Social Responsibility (CSR) activities and the benefits of the project to the community.

Chapter-9.0: Environmental Cost Benefit Analysis

This chapter has to be carried out if specifically required as per scoping. As this is not specifically mentioned in scoping, further detailed study is not carried out in this project.

Chapter-10.0: Environment Management Plan

This chapter presents the details of institutional arrangements for environment protection and conservation. Organization structure for environment management is also brought out.

Chapter-11.0: Summary & Conclusion

This chapter contains the summary and conclusion of the overall EIA report.

Chapter-12.0: Disclosure of Consultants Engaged

This chapter contains the list of various experts engaged in preparing the EIA report along with brief description of the consultancy services.

484

Chapter-2
Project Description

2.0 PROJECT DESCRIPTION

This chapter addresses the process details of proposed copper refinery project including basic raw material requirement, utilities and services, infrastructural facilities and sources of pollution, their quantity, treatment and disposal of the waste.

2.1 Type of Project

The proposed copper refinery project (phase-I & phase-II) would produce 10 LTPA (1.0 MTPA) of copper cathode; 30 LTPA of sulphuric acid; 5 LTPA of copper wire rod; 11,52,000 TPM of oxygen plant; 50 TPA of gold; 500 TPA of silver; 5 LTPA of phosphoric acid (as 100% P_2O_5); 30,000 TPA of aluminum fluoride etc. with the state of art environment friendly technology. The plant configuration details of proposed copper refinery project are given in **Table-2.1**.

TABLE-2.1
DETAILS OF PLANT CONFIGURATION OF PROPOSED PROJECT

Sr. No.	Plant	Units	Phase-I	Phase-II	Overall Plant Configuration
1	Copper Smelter Plant	TPA	4,50,000	4,50,000	**9,00,000**
2	Copper Refinery Plant	TPA	5,00,000	5,00,000	**10,00,000**
3	Continuous Cast Copper Rod Plant	TPA	2,50,000	2,50,000	**5,00,000**
4	Copper Scrap & E-Scrap Melting Facility	TPA	50,000	50,000	**1,00,000**
5	Sulphuric Acid Plant	TPA	15,00,000	15,00,000	**30,00,000**
6	Phosphoric Acid Plant (100% P2O5)	TPA	2,50,000	2,50,000	**5,00,000**
7	Aluminum Fluoride Plant	TPA	15,000	15,000	**30,000**

Source: Feasibility Report

It is proposed to adopt pyrosmelting technology and electro refining process to produce copper cathode. The sulphur dioxide generated during the smelting of copper concentrate is converted into sulphuric acid by Double Conversion Double Absorption (DCDA) process. A part of this sulphuric acid is captively utilized for production of phosphoric acid. The proposed phase-I & Phase-II production details are given in **Table-2.2.**

TABLE-2.2
DETAILS OF PRODUCTION CAPACITY

Sr. No.	Products	Units	Phase-I	Phase-II	Overall Plant Capacity	Mode of Transportation
I	**Main Products**					
1	Copper Cathode	TPA	5,00,000	5,00,000	**10,00,000**	Road & Sea

Source: Feasibility Report

2.1.1 Need of the Project

Copper application areas cover wide varieties of different disciplines like architectural, electrical, automotive, tube, pipe, fuel gas, industrial, marine and machine products which give a great demand.

Copper is a strategic metal for development of industry in India. It is considered to be the third most important industrial metal next only to iron and aluminium. Combination of its excellent properties such as high electrical and thermal conductivity, high strength, malleability, easy workability, corrosion resistance and its ability to produce alloys with other metals in an attractive range of colours has made copper a strategic metal for the engineering industry. Specific applications of copper include power cables and wires, jelly filled cables, building wires, air conditioning and refrigeration tubing, telecom, power, construction, transportation, handicrafts, engineering, consumer durable, defence etc.

With Indian economy poised for growth, development in infrastructure and power sector will lead to demand of copper. Dedicated focus by Government of India and various state governments under "Make in India" is an additional driver for growth story of Indian manufacturing, which will further propel the requirement of copper within the country. Prior to setting up of the greenfield copper refinery project at Mundra by the Company (M/s. Adani Enterprises Limited), the country

is a net importer of copper. Post setting up of the copper refinery plant by the company, the country will be able to earn valuable foreign exchange and hence improves the Current Account Deficit.

2.1.2 Location of the Project

The proposed project site is located in villages Siracha and Navinal at APSEZ taluka Mundra, district Kutch in the state of Gujarat. The location map and study area of 10 km radius of the project site is shown in **Figure-1.1** and **Figure-1.2** respectively. Google imagery of the study area and the proposed site photographs are shown in **Figure-1.3** and **Figure-1.4** in the **Chapter-1**.

2.1.3 Cost of the Project

The total cost for the proposed project is estimated as Rs.10,000 Crores. The environmental protection cost is about Rs. 1044 Crores.

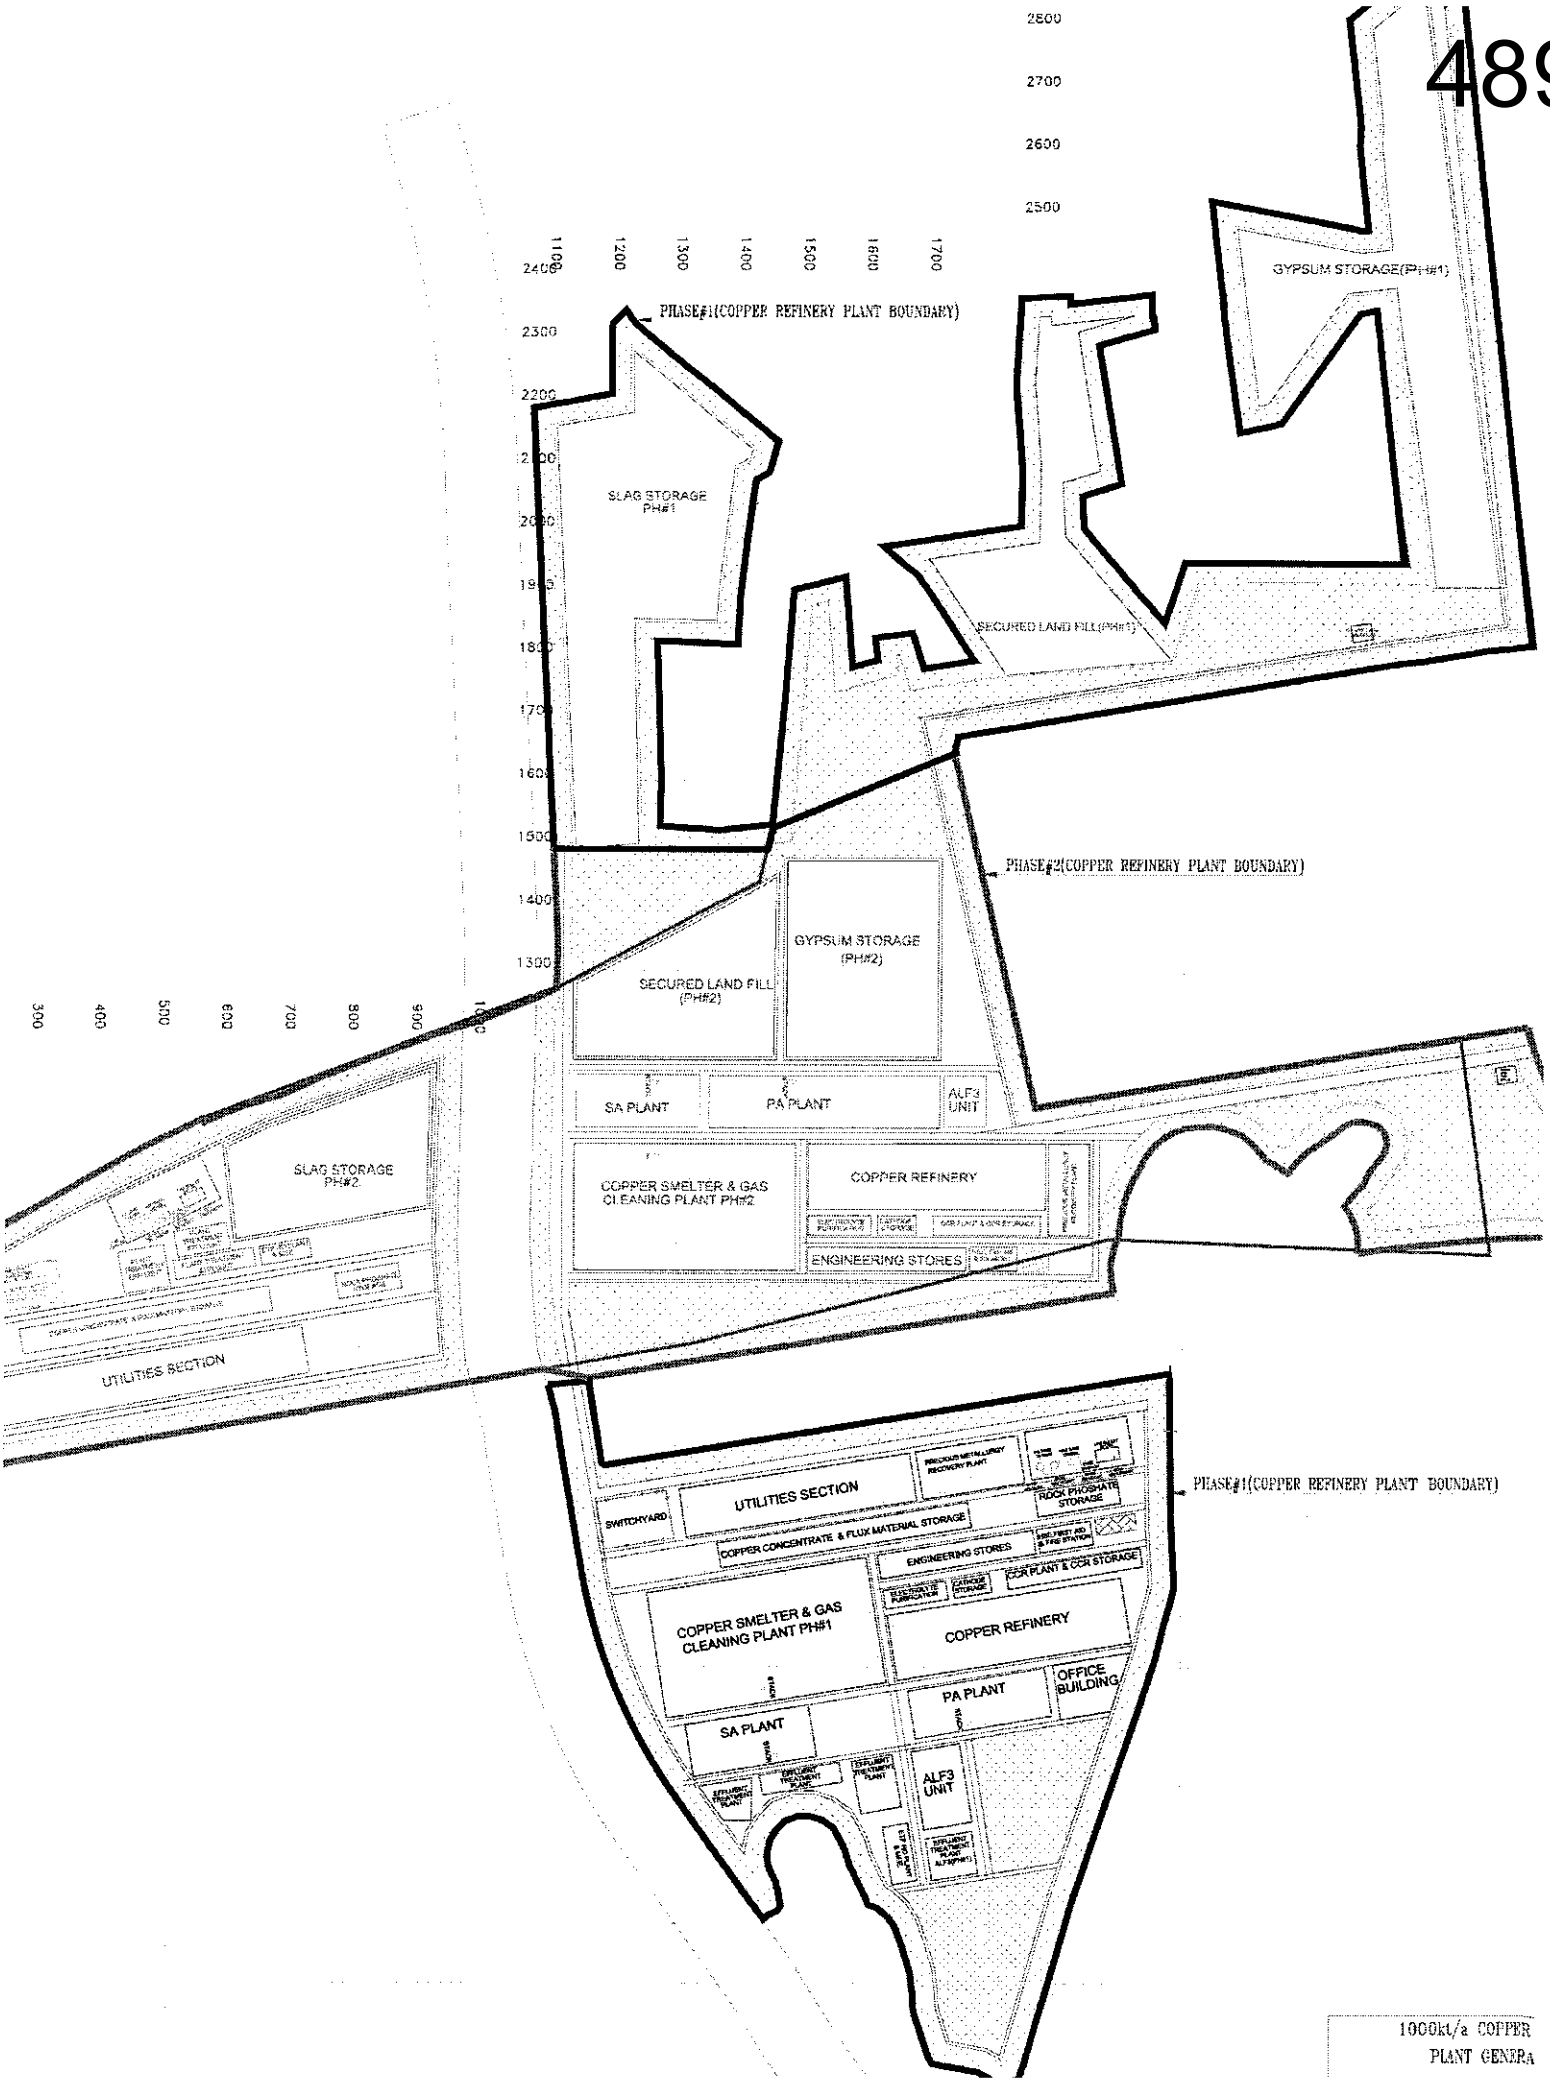
2.1.4 Proposed Schedule for Approval and Implementation

Implementation schedule for copper project after receiving all relevant approvals and consents will be 36 months.

2.2 Resources and Requirements of the Project

2.2.1 Land use of the Proposed Project

The total land required for the proposed project (phase-I & phase-II) is about 256.58 ha (634 acres), out of which 154.19 ha (381 acres) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. The APSEZ notification is enclosed as **Annexure-III**.



Memorandum of Understanding (MoU) is in place between Adani Ports & Special Economic Zone Limited (APSEZL) and Adani Enterprises Ltd (AEL) for 154.19 ha (381 acres). Land allotment letter is enclosed as **Annexure-IV.** Further, forest land of 102.39 ha (253 acres) is also involved which will be converted for industrial use. MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. The stage-I Forest Clearance (FC) is enclosed as **Annexure-V**. There is no resettlement and rehabilitation involved in this project. The land use of the proposed project phase-I and phase-II are given in **Table-2.3.** The overall plant layout showing the location of various units is given in **Figure-2.1.**

Source: Feasibility Report

2.2.3 Water Requirement

The total water requirement for the project (phase-I & phase-II) is about 32,800 KLD (32.8 MLD). The total desalinated water requirement for the project would be sourced from APSEZ Limited and supply through M/s. Mundra Utility Private Limited (MUPL). The water allocation letter is enclosed as **Annexure-VI.**

An integrated water system is proposed. The effluent from the process units is treated and reused to reduce water demand. It is also proposed to install a secondary Reverse Osmosis (RO) plant to further treat water from the effluent plant facility for effective use. Rejects from the reverse osmosis plant will be sent to Multi Effect Evaporator (MEE) for further recovery and solids generated will be sent to Secured Land Fill (SLF).

Water demand is made up of the following:

- Water for product purpose like sulphuric acid and phosphoric acid;
- Make-up losses for copper slag granulation preparation;
- Make-up losses in the cooling towers and heat exchangers/ circuits;
- Steam losses from the steam and power systems; and
- Steam consumed directly in the process, etc.

This water would be utilized to meet the DM water and plant/utility requirement of proposed project. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).

The details of usage of water and water balance for phase-I and Phase-II is presented in **Table-2.5** and shown in **Figure-2.2(A) & 2.2(B).**

TABLE-2.5
WATER REQUIREMENT FOR COPPER REFINERY PLANT

All values are given in KLD

Sr. No.	Purpose	Water Consumption (in KLD)					
		Raw (Fresh) Water			Treated/ Recycled Water

2.2.4 Power Requirement

The total estimated power requirement for the proposed project is 300 MW out of which 40 MW would be generated from internal process steam and balance 260 MW power would be sourced from APSEZ Limited, through M/s. Mundra Utility Private Limited (MUPL). The power allocation letter is enclosed as **Annexure-VII.**

Waste Heat Recovery based Power Plant

With focus on recovery of heat energy, waste heat recovery based power plant with ~50 MW capacity will be installed in the project.

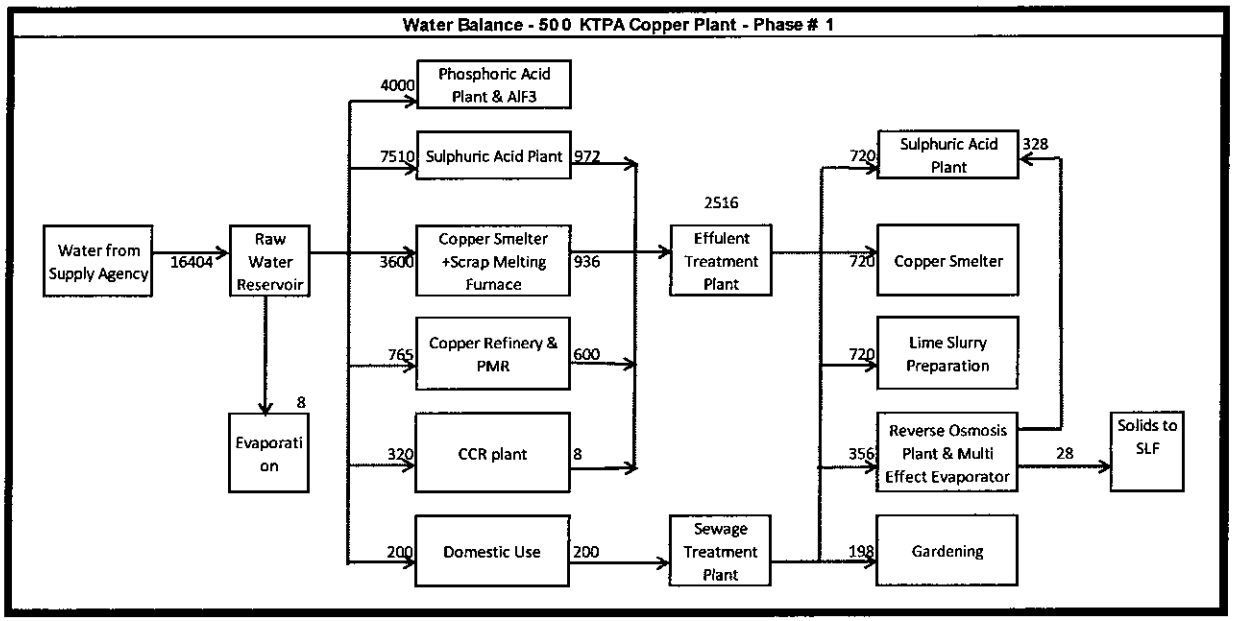

FIGURE-2.2(A)
WATER BALANCE FOR PHASE-I

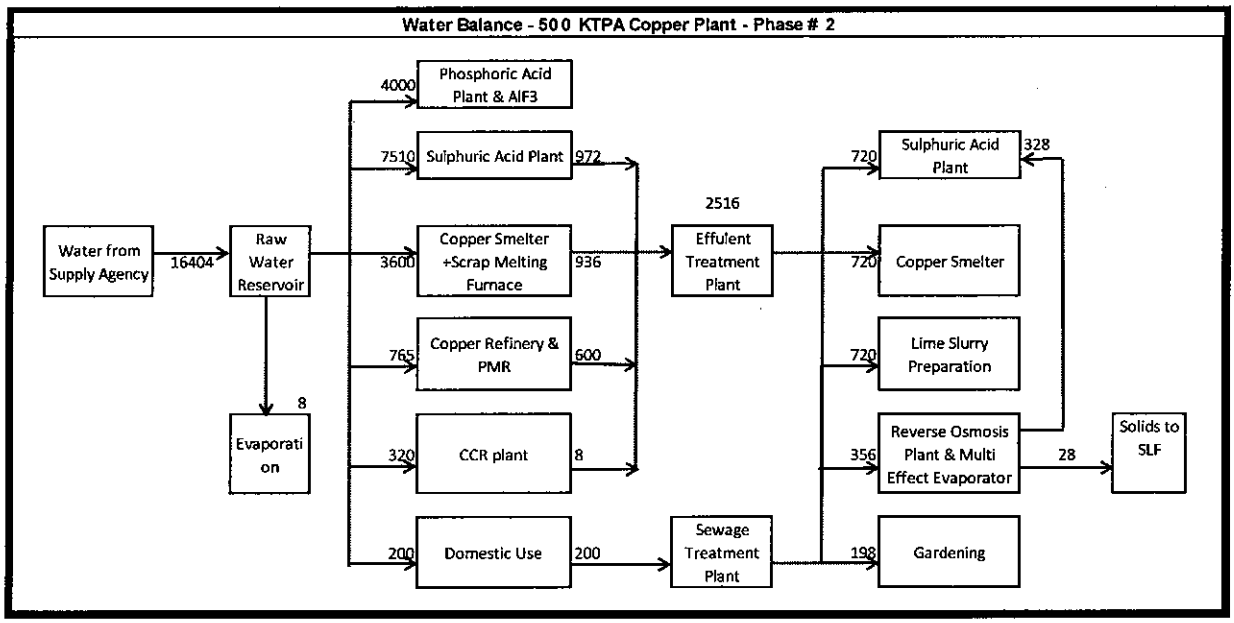

FIGURE-2.2(B)
WATER BALANCE FOR PHASE-II

2.2.5 Fuel Requirement

Fuel oil storage facility will be built as per requirement in accordance with guidelines from Petroleum and Explosives Safety Organization (PESO). Capacity of the system will be based on the design requirement after finalization of the engineering. The fuel consumption quantity and source for phase-I & phase-II are given in **Table-2.6.**

TABLE-2.6
FUEL CONSUMPTION QUANTITY & SOURCE

Sr. No.	Description	Units	Fuel Consumption			Source	Source Distance from the Project Site (km)	Mode of Transport
			Phase-I	Phase-II	Total Quantity			
1	High Speed Diesel (HSD)	KLD	25	25	50	Local	12	Road
2	Furnace Oil (FO)	TPD	150	150	300	Local	60	Road

Source: Feasibility Report

2.2.6 Manpower Requirement

During construction phase, about 2000-3000 persons on average per day will be required and during the operation phase about 2000 direct employment and about 5000 indirect employment would be generated.

2.2.7 Infrastructure Facility

The APSEZ industrial complex is a fully developed industrial estate provided with all types of infrastructure facilities such as road, rail and goods yard, water supply drainage etc. The APSEZ area is well connected by road and rail. Power is readily available through separate sub-stations. Adani west port is located at a distance of 5.1 km on SW direction and south port is located at a distance of 13.9 km on SE direction, which provides additional advantage and facilities for import and export of materials required by the industries in the region. The concentrate, which is the main raw material will be imported from across the world by ship at the port. The unloaded concentrate will be conveyed to the plant ware house in pipe conveyor. As a part of the requirement for the proposed project, the existing roads will be strengthened by widening or upgrading and extended to approach the proposed site.

2.3 Technology and Process Description

The principal raw material for the production of copper metal is copper concentrate blend containing about 25-35% copper, 25-34% sulphur, iron 25-35% and 7-10% moisture. Approximately, 3 LTPA copper scrap and electronic scrap is also used as input to proposed copper smelting plant and copper scrap melting facility. The process flow diagram of copper refinery plant is shown in

Figure-2.3. The material balance for phase-I & phase-II are shown in **Figure-2.4(A) & 2.4(B).** The electrical energy (MW & GJ/hr) balance for phase-I & phase-II are shown in **Figure-2.5(A) to 2.5(B)** and **Figure-2.5(C) to 2.5(D). T**hermal energy balance for phase-I & phase-II are shown in **Figure-2.6(A)** to **2.6(B).**

The major steps in copper extraction are as follows:

- Blending of different grades of concentrates;
- Smelting of concentrate in smelting furnace to produce an intermediate copper rich product known as "matte" containing 58 - 63% copper;
- Converting of liquid matte to blister copper (98 - 99% Cu) in Pierce-Smith converter;
- Fire refining of blister copper to produce anode copper (99.5% Cu) in anode furnace and casting of the anodes; and
- Electrolytic refining of anodes to produce copper cathodes (99.99% Cu).

In the process of extraction of copper metal, sulphuric acid is recovered as a byproduct from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced is utilized for phosphoric acid production and rest will be sold in the market based on market requirement. Hydro fluro silicic acid generated from phosphoric acid plant will be partly sold to fluoride based industries and rest will be converted in value added aluminum fluoride. Aluminum fluoride produced will be sold to aluminum manufacturing companies. The precious metal in the form of anode slime is collected during electrolytic refining of copper will be processed to produce gold, silver and Platinum Group of Metals (PGM) concentrate. The copper cathode produced from copper refinery will be melted and drawn in the form of copper wire rod on continuous basis from a continuous casting and rolling machine. Copper rod will be of various sizes as per market requirement such as 8 to 32 mm.

The wastewater generated from copper smelter, sulphuric acid plant and copper refinery will be treated in state of art effluent treatment facility. Treated effluent will be consumed within the plant operations to maximum extent. A secondary RO plant will be installed at the outlet of treated effluent to reuse water internally and reduce water consumption. The major technological units envisaged for the copper refinery project are as given below:

- Raw material handling system;
- Smelting furnace;
- Pierce smith converter;
- Ferro Sand Cleaning Furnace (FSCF);
- Copper scrap melting system;
- Anode furnace & anode casting wheel;
- Off gas handling;
- Sulphuric acid plant;
- Oxygen plant;
- Refinery unit;
- Precious metal recovery plant;
- Continuous cast copper wire rod plant;
- Phosphoric acid plant;

- Aluminum fluoride plant; and
- Effluent Treatment Plant (ETP).

2.3.1 Raw Material Handling

To have the raw materials handling as the most environment friendly process, the following are planned:

i. Concentrate transportation from port to plant concentrate warehouse by pipe conveyor;
ii. Covered concentrate warehouse;
iii. Internal transportation of the concentrate by covered conveyor to the furnace;
iv. Covered bin building for intermediate storage of concentrate; and
v. Covered storage for other raw material during rainy season.

The concentrate and flux material handling process flow chart is shown in **Figure-2.7.**

2.3.1.1 Concentrate Warehouse

The concentrate will be imported from across the world by ship at port. The unloaded concentrate will be conveyed to plant warehouse in pipe conveyor and stored separately in different heaps based on the quality of the material. Warehouse will be built to store at least 25 days consumption quantity. This will help to take care of the shipping schedule as well as blending requirement as per furnace feed design.

2.3.1.2 Flux Storage Area

The silica sand, lime stone and coal will be required for addition in the concentrate for effective smelting. They will be stored in open space. However, a covered storage will be provided for minimum of 15 days storage, which will be required during rainy season continuous operations.

2.3.1.3 Bin Building

The bin building will have intermediate storage bins to store different quality of the copper concentrate, flux material along with coal and process reverts. These bins will be equipped with weighing system for effective blending and maintaining the metallurgy of the furnace.

2.3.1.4 Paddle Mixer/ Dryer

Based on the type of the smelting process selected (TSL – Top Submerged Lance Technology or Flash Smelting Technology) Paddle mixer or steam based dryer is used either for adding moisture in the concentrate mix or drying of the concentrate mix. This is a online mixing system to mix effectively different ratio of concentrate with flux material and will have provision to add moisture or dry the feed mix to get required mix material, suitable for furnace feed.

FIGURE-2.7
CONCENTRATE AND FLUX MATERIAL HANDLING PROCESS FLOW CHART

2.3.2 Smelting Furnace

The proposed smelting furnace is for production of 9,00,000 TPA of copper anode production. The copper concentrate blend mixed with flux material is fed to the smelting furnace, where enriched air added with oxygen is fed to furnace. The smelting reaction takes place at furnace temperature around 1200^0C. Furnace produces copper matte (~60% Cu); copper slag (~1% Cu) and sulphur di-oxide gas (SO_2). Both copper matte (~60% Cu) and copper slag (~1% Cu) is tapped to settling furnace and sulphur di-oxide gas (SO_2) is transferred to sulphuric acid plant through a closed pipeline. The smelting furnace will be provided with a waste heat recovery boiler to recover the heat from the off gas of the process.

$$CuFeS_2 + O_2 + SiO_2 \longrightarrow \underset{\text{Matte}}{Cu\text{-}Fe\text{-}S} + \underset{\text{Slag}}{FeO.SiO_2} + \underset{\text{Gas}}{SO_2}$$

The purpose is to utilise heat of the gases within the process and also conservation of water. The furnace will be attached with a state of the art, electrostatic precipitator and a high capacity induced draft fan to transfer the gases to sulphuric acid plant. The secondary off gas will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO_2 before it is discharged to the atmosphere. The process flow diagram of smelter furnace is shown in **Figure-2.8.**

2.3.2.1 Settling Furnace

Settling furnace will be provided for matte and ferro sand (copper slag also called as iron silicate) separation.

The copper matte & ferro sand from smelting furnace will be periodically tapped from the tap hole which will be provided with water cooled copper block in the smelting furnace. The tap hole will be opened with a tap gunning machine. The ferro sand/ matte together will flow by gravity to the settling furnace for ferro sand and matte settling and separation. Separation will take place on the basis of the density difference. The temperature around 1250°C will be maintained. The off-gases from the furnace operation will be taken smelting furnace scrubbing system.

Ferro sand settled in the settling furnace will be granulated and will be collected in the collection pond. Ferro sand granulation clear water will overflow into a clear water pond and it is pumped to spray pond for cooling and then recycled back.

The granulated ferro sand from settling pond will be collected and discharged in a steel bunker. From the steel bunkers ferro sand will be transported to the designed ferro sand dump area and further sale/disposal. The process flow diagram of settling furnace is shown in **Figure-2.9.**

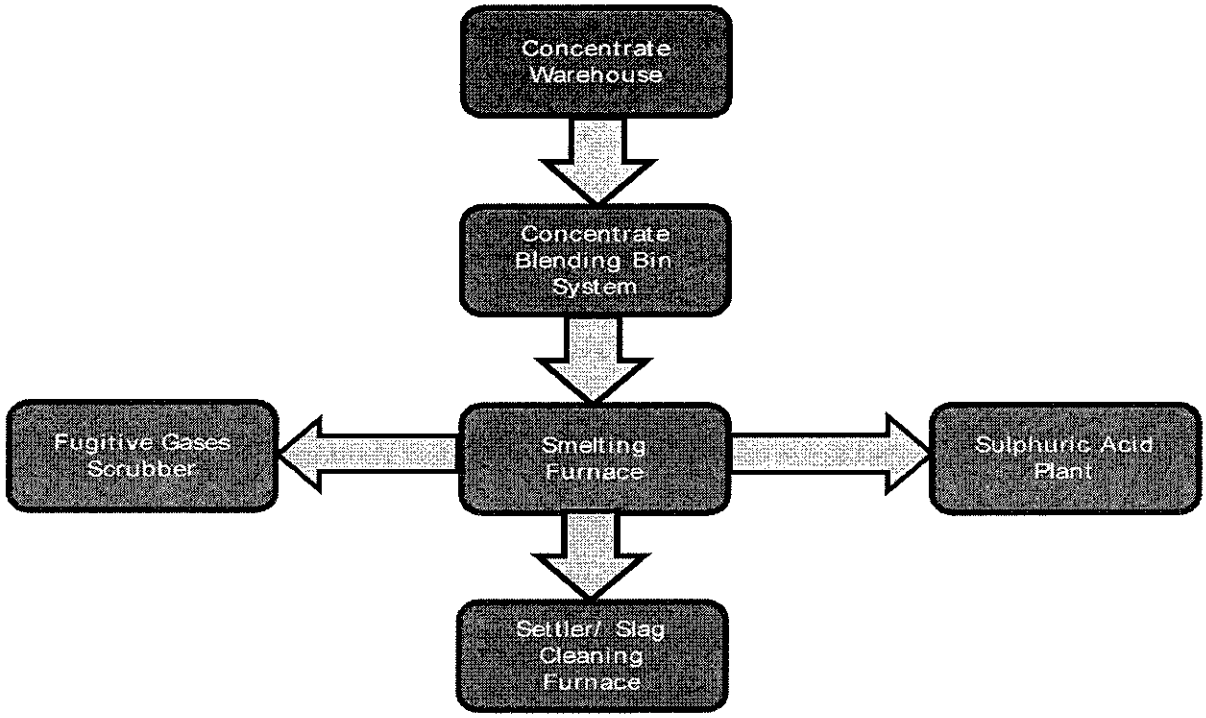

FIGURE-2.8
PROCESS FLOW DIAGRAM OF SMELTER FURNACE

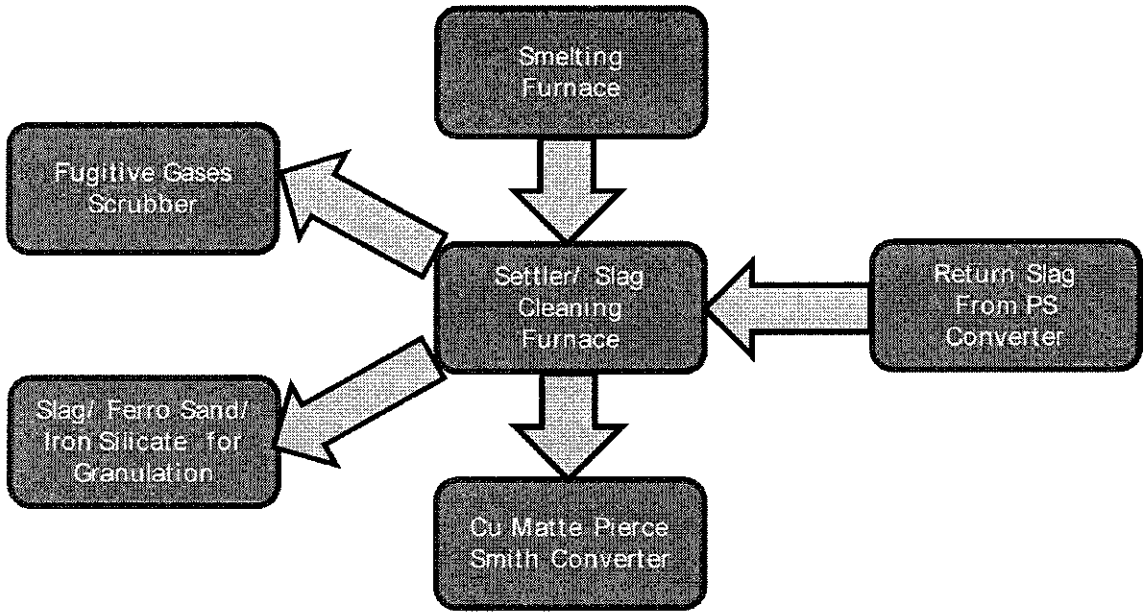

FIGURE-2.9
PROCESS FLOW DIAGRAM OF SETTLING FURNACE

2.3.3 Pierce Smith Converter

Pierce Smith Converters (PSC) will be used to convert copper matte to blister copper (~98% Cu). Converting is oxidation of molten Cu-Fe-S matte to form molten 'blister' copper (~ 98 % Cu). It entails oxidizing Fe and S from the matte with oxygen-enriched air or air 'blast'. It is mostly done in the Peirce Smith converter, which blows the blast into molten matte through submerged tuyeres.

The main raw material for converting is molten Cu-Fe-S matte from smelting. Other raw materials include silica flux, air and industrial oxygen. Several Cu bearing materials are recycled to the converter mainly solidified Cu-bearing reverts and copper scrap.

The products of converting are:

(a) Molten blister copper which is sent to fire- and electrorefining;
(b) Molten iron-silicate slag which is sent to Cu recovery, then discard; and
(c) SO_2-bearing off gas which is sent to cooling, dust removal and & H_2SO_4 manufacture.

The heat for converting is supplied entirely by Fe and S oxidation; i.e. the process is auto thermal. The overall converting process may be described by the schematic reaction:

Cu-Fe-S	+ O_2	+ SiO_2	⟶	Cu^0_l +	{2FeO:SiO_2 :Fe_3O_4}	+ SO_2
Molten matte	in air oxygen	and in flux			molten slag with some solid Fe_3O_4	Gas

Primary gases from these furnaces will be routed to sulphuric acid plant. The furnace will be attached with a state of the art, electrostatic precipitator and a high capacity induced draft fan to transfer the gases to sulphuric acid plant. Proper water cooled double hood arrangement and gas cooling system, etc. will be installed to collect the secondary fugitive emission. The secondary off gases will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO_2. This will enable continuous operation of three converters with one converter on periodical maintenance. The process flow diagram of pierce smith converter is shown in **Figure-2.10.**

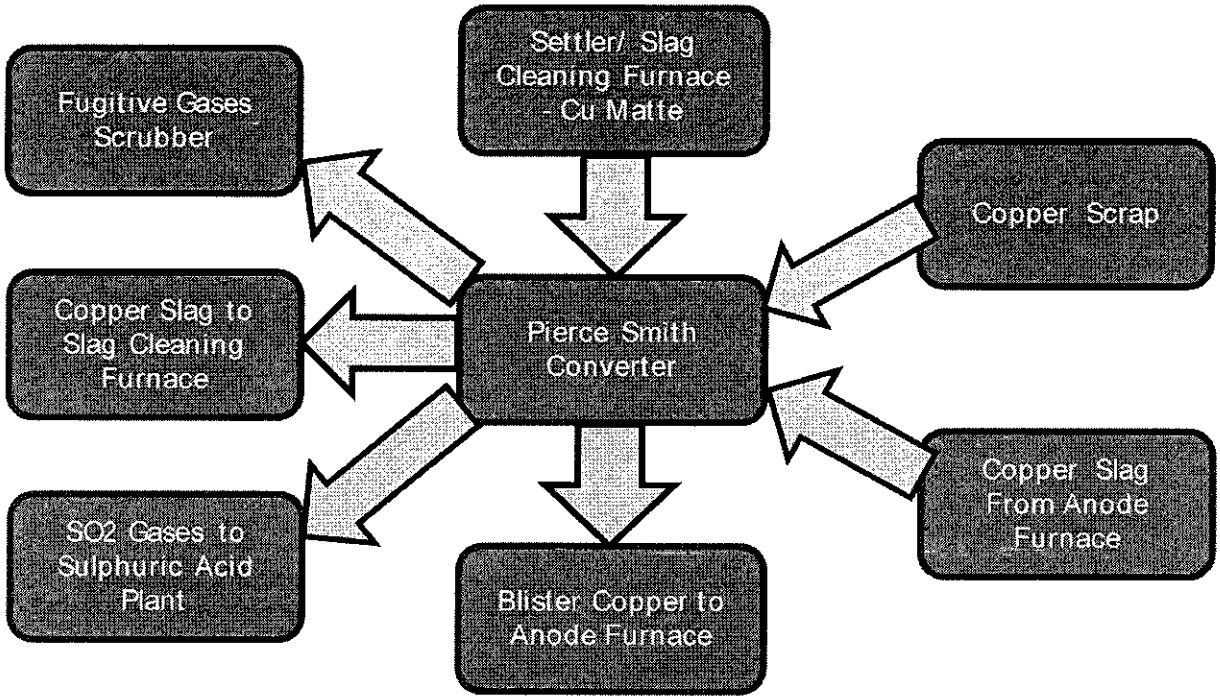

FIGURE-2.10
PROCESS FLOW DIAGRAM OF PIERCE SMITH CONVERTER

2.3.4 Ferro Sand Cleaning Furnace (FSCF)

The ferro sand (copper slag) from converter will be processed in the ferro sand cleaning furnace. Slag-cleaning furnaces process of smelting furnace slag as well as slag from Pierce Smith Converters. A reducing agent is often required to reduce Cu oxide in the slag to Cu metal or Cu sulfide. Coal or metallurgical coke is often added for this reduction.

$$C + Cu_2O \longrightarrow CO + 2Cu^0$$

Carbon additions also reduce solid magnetite in the slag to liquid FeO:

$$C + Fe_3O_4(s) \longrightarrow CO + 3FeO$$

This decreases slag viscosity and improves settling rates.

The copper slag is also called as iron silicate as well as ferro sand. Ferro sand from cleaning furnace will be granulated and will be collected in the collection pond. Ferro sand granulation clear water will overflow into a clear water pond and it is pumped to spray pond for cooling and then recycled back. The granulated ferro sand from settling pond will be collected and discharged in a steel bunker. From the steel bunkers ferro sand will be transported to the designed ferro sand dump area and further sale/disposal. The process flow diagram of slag cleaning furnace flow sheet is shown in **Figure-2.11.**

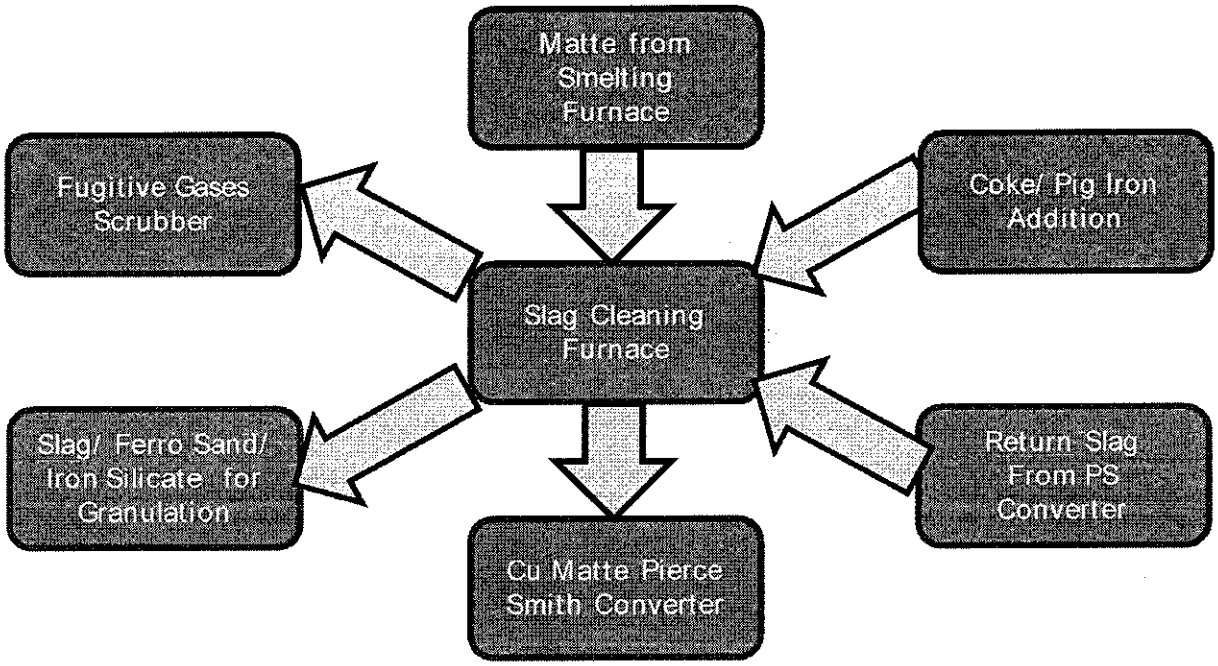

FIGURE-2.11
PROCESS FLOW DIAGRAM OF SLAG CLEANING FURNACE

2.3.5 Copper Scrap Melting System

Considering the availability of the copper scrap & electronic scrap getting generated within the country as well as in house (applicable for copper scrap) getting generated within the country as well as in house; a dedicated copper scrap melting system will be designed to have a sustainable solution for the country. This will help the various copper scrap producer a sustainable outlet to treat the copper scrap and produce LME Grade 'A' copper cathode. System is also designed to handle utilization of the imported copper scrap as feed stock as well. A state of art technology will be used for the same. Such facilities are available in various developed countries. The process flow diagram of copper scrap melting furnace flow sheet is shown in **Figure-2.12**.

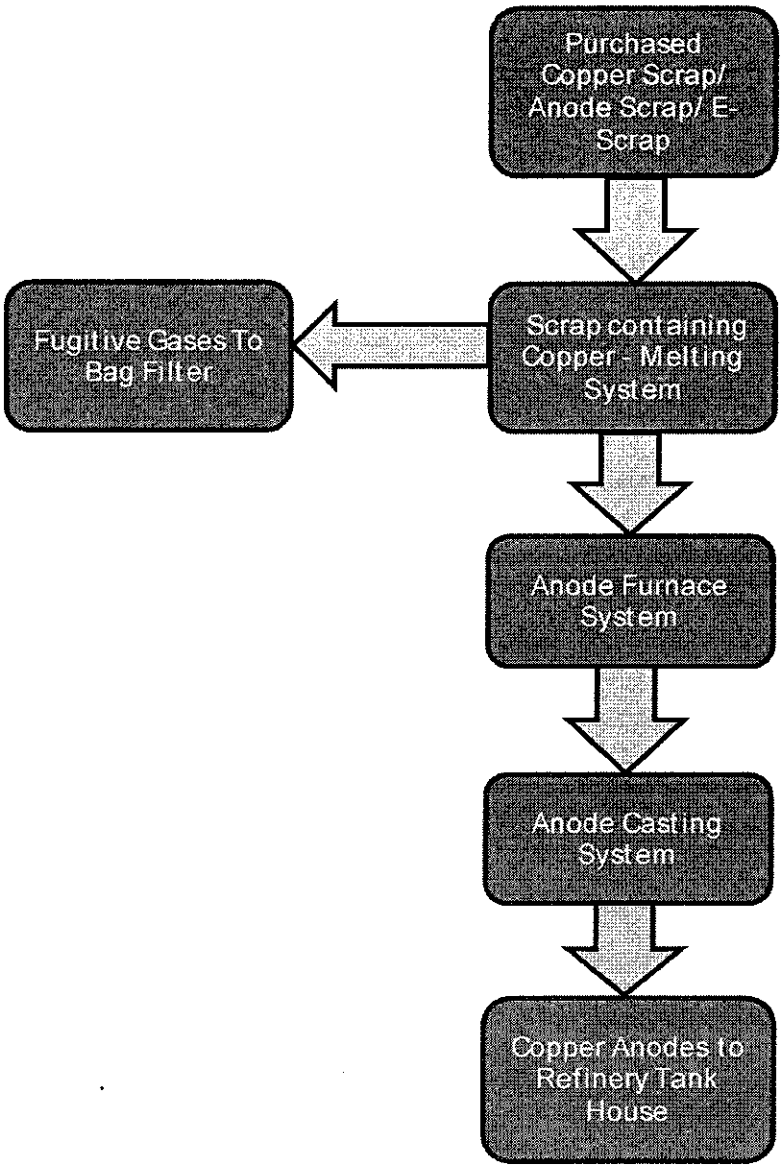

FIGURE-2.12
PROCESS FLOW DIAGRAM OF COPPER SCRAP MELTING FURNACE

2.3.6 Anode Furnace & Anode Casting Wheel

Anode furnaces will be used to make anode copper (~99.5% Cu) from blister received from Pierce Smith Converters. The molten blister copper from Peirce-Smith converting contains -0.01% S and -0.5% O_2. At these levels, the dissolved sulfur and oxygen would combine during solidification to form bubbles ('blisters') of SO_2 in newly cast anodes – making them weak and bumpy.

Fire refining removes sulfur and oxygen from liquid blister copper by:

a) Air-oxidation removal of sulfur as SO_2 to -0.002% S then; and
b) Hydrocarbon-reduction removal of oxygen as CO and H_2O (g) to -0.15% liquefied petroleum gas or natural gas is used for doing fire refining.

The secondary off gases will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO_2. The final product of fire refining is molten copper, -0.002% S, 0.15% O, 1180- 1200^{0}C, ready for casting as anodes. Most copper anodes are cast in open anode-shaped impressions on the top of flat copper moulds. Newly developed latest designed double casting wheel system will be installed with casting rate of ~100 TPH. The newly poured anodes are cooled by spraying water on the tops and bottoms of the moulds while the wheel rotates. They are stripped from their moulds (usually by an automatic raising pin and lifting machine) after a half rotation. The empty moulds are then sprayed with a barite-water wash to prevent sticking of the next anode. The most important aspect of anode casting, besides flat surfaces, is uniformity of thickness. This uniformity ensures that all the anodes in an electro refining cell reach the end of their useful life at the same time. Automatic control of the mass of each pour of copper (Le. the mass and thickness of each anode) will be used. Anode mass is normally 375-425 kg. Anode-to-anode mass variation in a smelter or refinery is +2 to 5 kg with automatic weight control.

Recent anode designs have incorporated:

(i) Knife-edged lugs which make the anode hang vertically in the electrolytic cell; and
(ii) Thin tops where the anode is not submerged (i.e. where it isn't dissolved during refining).

The latter feature decreases the amount of un-dissolved 'anode scrap' which must be recycled at the end of an anode's life. Suitable capacity twin casting wheel arrangement will be provided to produce copper anode. The copper anode will be transferred to copper refinery for further processing. The process flow diagram of copper anode furnace & anode casting wheel flow sheet is shown in **Figure-2.13.**

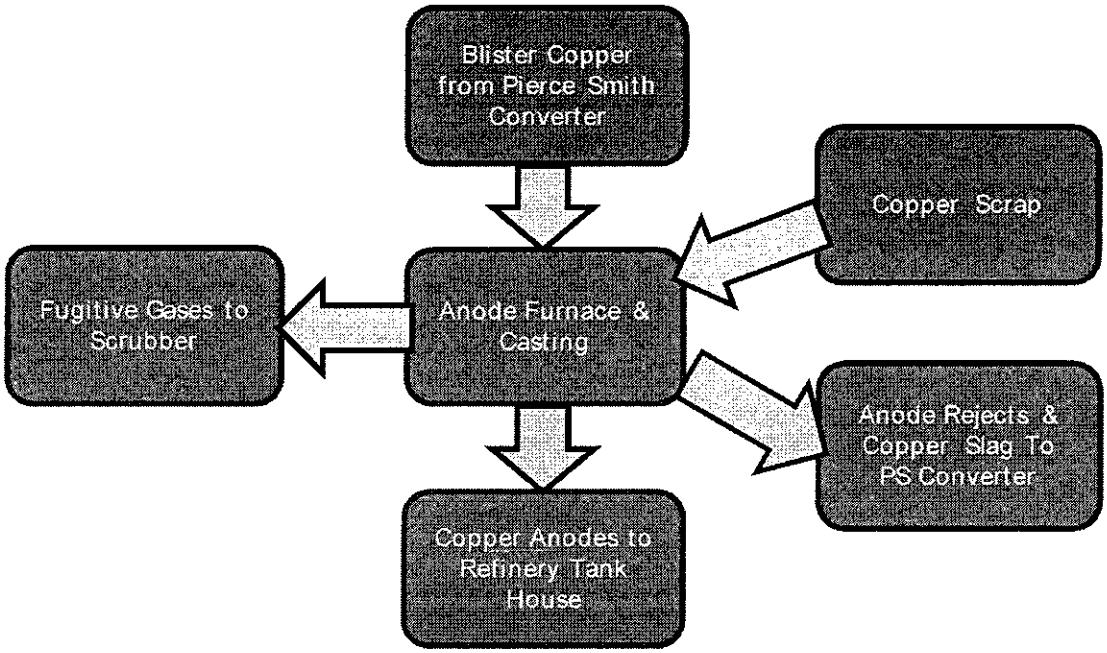

FIGURE-2.13
PROCESS FLOW DIAGRAM OF COPPER ANODE FURNACE & ANODE CASTING WHEEL

2.3.7 Off Gas Handling

a. It is proposed to install a Waste Heat Recovery Boiler (WHRB) to recover the entire off gas heat from the smelting furnace before reaching to sulphuric acid plant for production of sulphuric acid through suitable ESP, ID fan, ducting and a gas-mixing chamber;
b. A suitable dust conveying system for WHRB & ESP will be installed and will be consumed within the process;
c. The secondary collection system with scrubbing system will be ensured to have sufficient capacity to handle all the secondary gas; and
d. Gases will be discharged through required size stack to atmosphere after scrubbing and meeting standards prescribed authorities.

2.3.8 Sulphuric Acid Plant (SAP)

Sulphuric Acid Plant (SAP) having capacity of 30 LTPA will be provided to handle the gases from copper smelter with required capacity of gas cleaning plant to treat the incoming gases. State of art environment friendly technology of double contact double absorption will be used for sulfuric acid plant. Effluent generated from sulphuric acid plant will be treated in state of the art effluent treatment facility.

The sulphurous gases generated during the sulphidic copper concentrate smelting and matte converting operation in a copper smelter plant are treated in sulphuric acid plant for the production of monohydrate sulphuric acid as a by-product.

The process of production of sulphuric acid consists of three principal steps, namely:

i. Cleaning of the sulphur dioxide gas from the smelting furnace and PS converters.
ii. Catalytic conversion of the sulphur dioxide (SO_2) gas to sulphur trioxide (SO_3) gas according to the chemical reaction:

$$SO_2 + ½\ O_2 = SO_3$$

iii. Absorption of the sulphur trioxide (SO_3) gas by combining with water (H_2O) to form a solution of sulphuric acid (H_2SO_4) according to the chemical reaction:

$$SO_3 + H_2O = H_2SO_4$$

The conversion of SO_2 to SO_3 is an exothermic, reversible and adiabatic reaction and with increase in temperature the equilibrium constants become more unfavourable with respect to SO_3 formations. The other factors, which favour equilibrium conversions, are increase in oxygen concentration in the gases or high pressures but the relative gains are rather small. In contrast to the unfavourable effect of high temperature on equilibrium it is found that the rate of reaction increases rapidly with rising temperature. Consequently optimum performance requires a balance between the opposing effects of reaction rate and equilibrium. Thus the gases entering the V_2O_5 catalyst normally are maintained between 400 - 450°C. Therefore, in order to achieve over-all high conversion efficiencies between 99.8% - 99.9%, it is imperative that the converter gases need to be cooled between stages to the above temperature range and also removing the partially converted sulphur trioxide formed normally after 2nd/3rd beds, before returning them to subsequent stages. This process is commonly known as Double Conversion and Double Absorption (DCDA).

2.3.9 Gas Cleaning Systems

Waste gases from the metallurgical process must be treated to reduce the sulphur dioxide emissions to the atmosphere. To achieve this the sulphur dioxide in the gas is converted to sulphur trioxide for the production of sulphuric acid in the sulphuric acid plant. The metallurgical off-gases must be cleaned prior to entering the contact section of the acid plant to enable the plant to produce a product acid of acceptable quality for use and sale.

As well, clean gas is required to prevent plugging of catalyst beds and other detrimental effects on equipment such as corrosion and erosion.

2.3.9.1 Gas Cleaning Systems

There are four main duties to be performed by the gas cleaning system of a metallurgical sulphuric acid plant:

1. Saturation of the gases and elimination of the coarse and fine particulate matter;
2. Cooling of the gases, condensation of the metallic fumes and reduction of the moisture content;

3. Removal of the very fine particulate matter as well as the bulk of the acid mist by electrostatic precipitation to produce an optically clear gas which is fed to the acid plant downstream; and

4. Specialty processes for removal of specific impurities in the gas (i.e. mercury removal, halogens).

- **Saturation –** Adiabatic cooling and saturation of the gas is done in an open spray tower, low or high pressure drop venturi. Some removal of course particulate is achieved.

- **Elimination** – The nature (type, concentration, size) of the impurity/dust determines the type of cleaning device required. Typically, high pressure drop venturi (fixed or variable throat), reverse jet scrubber (DynaWave), radial flow scrubber, etc. is required if dust loadings are high or particle size is small.

- **Cooling and Condensation** – Removal of water from the gas is required to achieve the plant water balance. Direct contact devices (packed towers, tray scrubbers) or indirect cooling (star coolers, shell and tube condensers) are used to cool the gas and provide some removal of gaseous impurities.

- **Electrostatic Precipitation** – Usually the last stage of gas cleaning before the drying tower. Removes the finest dust particles and acid mist.

- **Special Process** – These include mercury removal (Boliden-Norzink), fluoride scrubbers, sodium silicate systems, etc.

a. Mercury Removal

Three primary technologies which have since been further developed over the years:

- Mercury Removal Process – utilizes a chloride scrubber;
- Mercury Removal Process – utilizes a selenium filter; and
- Mercury Removal Process – utilizes sodium thiosulfate.

Chloride scrubber process has essentially become industry standard process providing these benefits:

- Insensitivity to high incoming values of mercury;
- Cost-effectiveness; moderate investment costs and low operating costs, which are practically independent of the mercury level;
- Applicability to almost any gases including ones containing SO_2;
- Proven technology: approx. 40 reference plants; and

- Option for an additional step involving a specially designed electro-winning cell, in which the calomel produced can be converted to high purity metallic mercury.

➢ **Process Equipment**

- Reactor tower and other special vessels;
- Chlorination system;
- Electrowinning cell for metallic mercury production from calomel; and
- Process control.

b) Fluoride Removal Process

Hydrogen fluoride in the SO_2 gas can cause damage to the sulfuric acid plant and therefore requires removal from the gas. This can be achieved by adding sodium silicate solution to the packed gas cooling tower. The hydrogen fluoride is absorbed in the gas cooling tower, reacts with the sodium silicate forming a reaction product with low vapor pressure and is finally bled to the wastewater treatment plant.

c) Arsenic Removal Process

To avoid contamination to the sulfuric acid, it is necessary to remove as much arsenic in the SO_2 gas as possible. Particulate arsenic has already been removed during the hot gas cleaning process. High-efficiency scrubbers with a variable throat for efficient continuous scrubbing for removing most of the arsenic content to wet electrostatic precipitators for the final cleaning of the gas will be used. Gaseous arsenic condenses in the quench section where the SO_2 gas is cooled down to the saturation temperature. Solid arsenic forms here and is ready to be scrubbed out of the gas in the wet gas cleaning plant. The solved arsenic is then transferred to the wastewater treatment plant with the weak acid bleed, where the arsenic has to be separated from the bleed.

Alternatively, some of the arsenic can be precipitated out of the weak acid as early as in the wet gas cleaning plant assuming the acid concentration in the quench liquid is high enough. This will allow for the solid arsenic to be separated from the weak acid before it is transferred to the wastewater treatment plant.

The process flow diagram of gas cleaning plant flow sheet is shown in **Figure-2.14**.

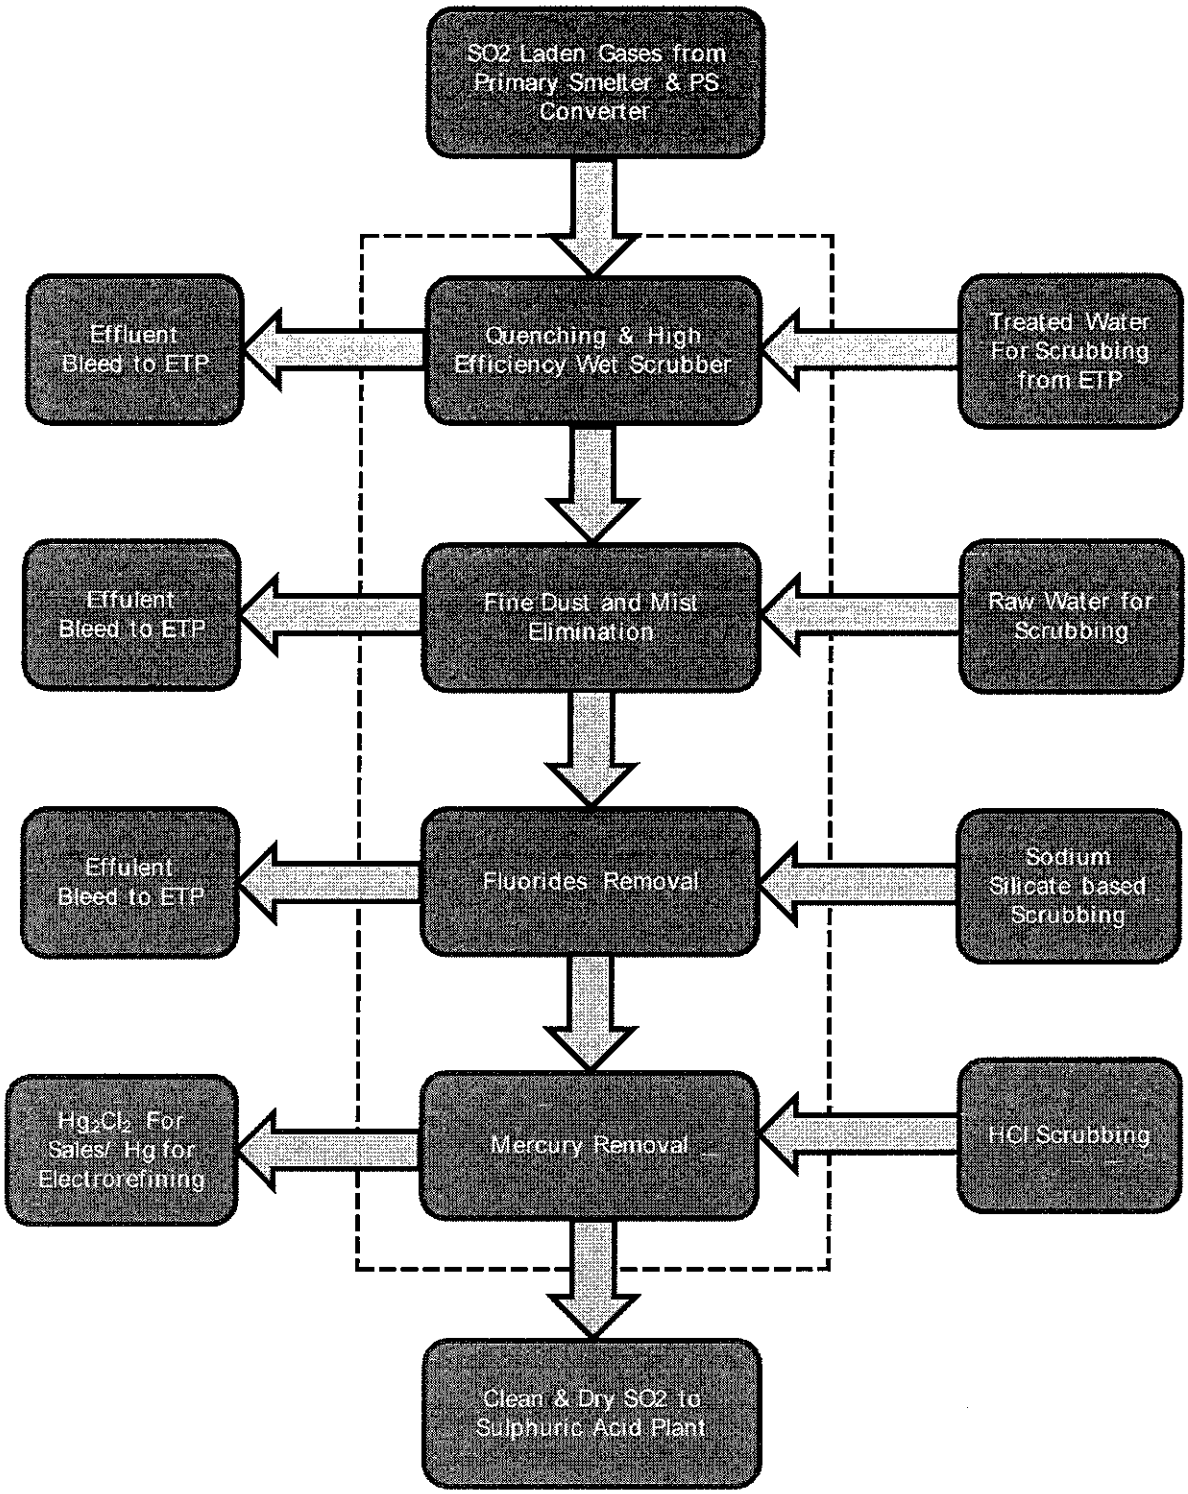

FIGURE-2.14
PROCESS FLOW DIAGRAM OF GAS CLEANING PLANT

2.3.9.2 Conversion of SO_2 to SO_3

Double Absorption

- Also known as Double Contact/Double Absorption; and
- Characterized by two SO_3 absorption towers.

Double Absorption Plant Arrangements

- **2/1 Arrangement** - 2 catalyst beds before intermediate absorber followed by 1 catalyst bed. Will not meet current emission regulations.

- **2/2 Arrangement** - 2 catalyst beds before intermediate absorber followed by 2 catalyst beds. Used by Lurgi in many plants around the world.

- **3/1 Arrangement** - 3 catalyst beds before intermediate absorber followed by 1 catalyst bed. Standard arrangement for the modern contact sulphuric acid plant for obtaining SO_2 emissions of 4 lb/ST (2 kg/MT) or 99.7% conversion.

- **3/2 Arrangement** - 3 catalyst beds before intermediate absorber followed by 2 catalyst beds. Used when high overall conversions (>99.9%)/low SO_2 emissions are required.

Plants with 3/2 arrangements are required to ensure low SO_2 emissions and are considered Best Available Technology (BAT).

The optically cleaned SO_2 rich gases along with dilution air to the extent required for maintaining the requisite O_2 / SO_2 ratio are dried in a drying tower with 96% concentrated sulphuric acid in counter current circulation. The dried gases after heating to 400 - 450 ^oC passed through converter with cesium promoted vanadium pent oxide catalyst. The converted SO_3 gases are absorbed in two absorption towers where 98% concentrated sulphuric acid is circulated to produce 98.5% strength sulphuric acid product. During the start-up and other abnormal operations such as when SO_2 content is less than auto thermal point, gases are heated before conversion in converter which helps in low SO_2 content in vent gases. The process flow diagram of double absorption plant is shown in **Figure-2.15.**

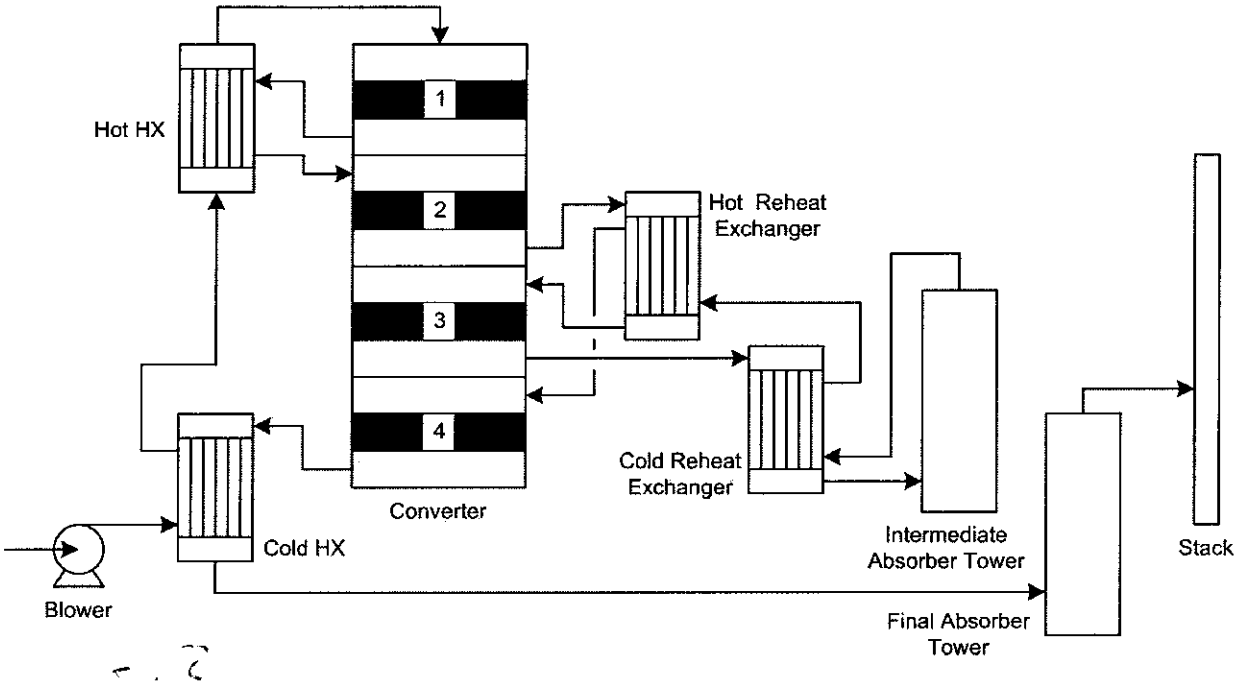

FIGURE-2.15
PROCESS FLOW DIAGRAM OF DOUBLE ABSORPTION PLANT

2.3.9.3 Acid Section

Acid produced during the absorption process is given bleed at >98%. This acid is at a high temperature and need to be brought to the room temperature level say ~< 40 Deg C. Acid coolers are used for the same. Acid coolers are either plate heat exchangers or shell & tube heat changer with anodic protection to protect the cooler. Cooling of the acid is down either by using water or air or combination of both depending upon the application. Cooled product acid is stored in the storage tanks and supplied for further use in the market as well as in house consumption to produce phosphoric acid. The process flow diagram of sulphuric acid plant is shown in **Figure-2.16.**

2.3.10 Oxygen Plant

Oxygen plant with capacity of 96,000 TPM with purity ranging from 95% - 99.6% will be provided for copper smelter plant requirement, Totaling 3,200 TPD production of oxygen will be set up. Exact configuration will be frozen after detailed engineering is completed.

2.3.11 Refinery Unit

The anodes produced from the smelter will be refined through electrolysis process to remove the impurities present. A refinery unit capable of handling the smelter capacity will be built. State of art electro refining technology will be used to produce copper cathode of LME Grade 'A' from copper anodes produced in the copper smelter. Refinery will have state of art technology to produce value added products from the impurities include Bi, Te, Ni, etc. Copper anode slime generated during copper electro refining process will have precious metals such as Au, Ag, Pt, Pd, etc. Effluent generated from copper refinery will be treated in state of art effluent treatment facility. The process flow diagram of copper anode furnace & casting is shown in **Figure-2.17.**

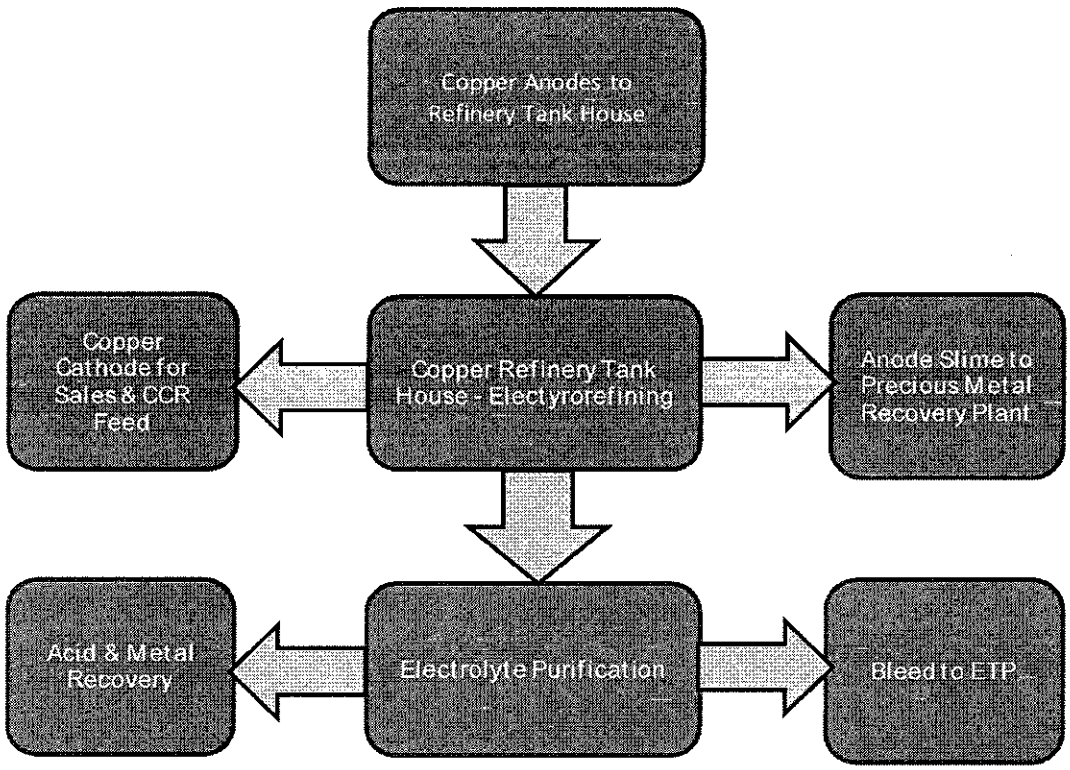

FIGURE-2.17
PROCESS FLOW DIAGRAM OF COPPER REFINERY TANKHOUSE

- *Electrorefining Entails:*

a. Electrochemically dissolving copper from impure copper anodes into $CuSO_4 - H_2SO_4 - H_2O$ Electrolyte; and
b. Selectively electroplating pure copper from this electrolyte *without the anode impurities.*

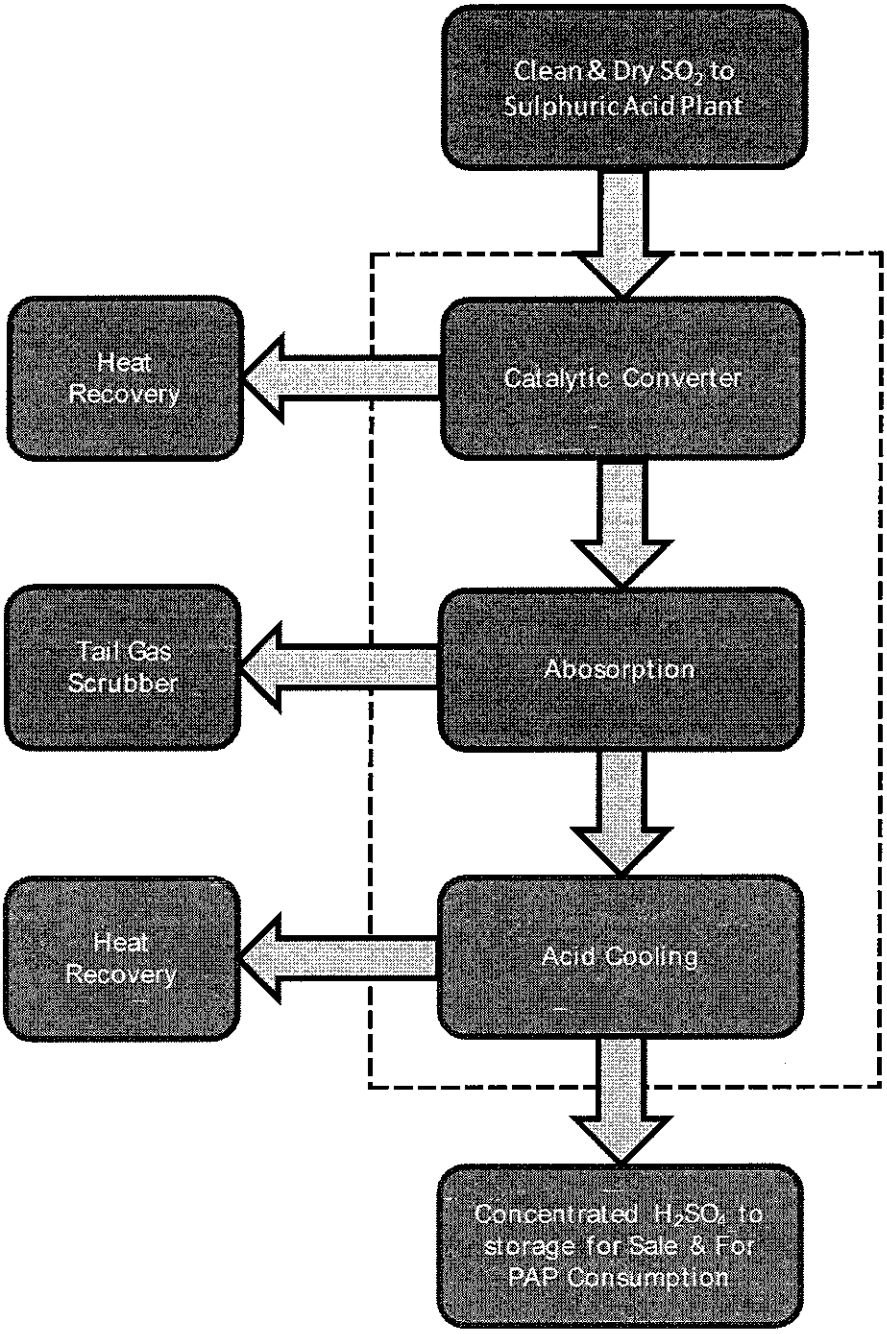

FIGURE-2.16
PROCESS FLOW DIAGRAM OF SULPHURIC ACID PLANT

It serves two purposes:

a. It produces copper essentially free of harmful impurities; and
b. It separates valuable impurities (e.g. gold and silver) from copper for recovery as by-products.

Application of an electrical potential between a copper anode and a metal cathode in $CuSO_4$ –H_2SO_4 – H_2O Electrolyte causes the following:

a. Copper is electrochemically dissolved from the anode into the electrolyte producing copper cations plus electrons:

$$Cu^0_{anode} \longrightarrow Cu^{++} + 2e^-$$

b. The electrons produced by above reaction are conducted towards the cathode through the external circuit and power supply.
c. The Cu^{++} cations in the electrolyte migrate to the cathode by convection and diffusion.
d. The electrons and Cu^{++} ions recombine at the cathode surface to form copper metal (without the anode impurities), i.e.:

$$Cu^{++} + 2e^- \; Cu^0_{Cathode} \longrightarrow$$

Overall copper electrorefining is the sum of Reactions

$$Cu^0_{impure} \; Cu^0_{pure} \longrightarrow$$

2.3.12 Precious Metal Recovery Plant (PMRP)- A typical process

Copper anode slime generated in copper electro refining process undergo smelting process in Kaldo Furnace to recover Precious Metals and selenium. The process flow diagram of precious metal recovery plant is shown in **Figure-2.18.**

2.3.12.1 Kaldo Furnace Treatment

The leached anode slime will be dried, mixed with fluxes and charged to the Kaldo furnace together with other recycled materials. After heating, smelting and slag reduction the smelt slag is tapped. This is recycled to the copper smelter.

During converting, high velocity air is blown on the bullion surface through a water cooled steel lance and elements like Pb, Te, Bi, Sb, and Se will be oxidized and separated from the metal phase. The Kaldo furnace is rotating during all operations. After final refining the Doré metal is casted into anodes and sent to the silver refinery.

2.3.12.2 Gas Cleaning and Selenium Recovery

The horizontal venturi scrubber has three stages, a quencher stage (cooling stage), venturi stage and a cyclone stage. In the first stage, the gas is cooled to saturation temperature by vaporization of water in a vertical quencher. Water is introduced tangentially ahead of the throat, which gives a so-called "wet approach" (no nozzles are needed). This design prevents a wet-dry line.

The high gas velocity in the throat atomizes the water into fine water droplets, which are evaporated. The excess water together with the collected material is continuously drained from the quencher to a circulation tank. Slurry in the bottom part of the gas turning chamber is collected and emptied after every kaldo cycle. The pressure drop across the quencher is monitored.

The gases proceeds, via a gas duct, to the second stage, the venturi, where the gas is further cleaned from particulates. The venturi is a horizontal "gas duct" in which water is introduced from one side, then distributed out into the gas by nozzles. The gas is accelerated into a very high velocity by the inner adjustable throttle. The high gas velocity atomizes the water into very fine droplets. The dust particles collide and impact with the liquid droplets. In the diverging section behind the venturi throat, part of the static pressure is regained as the velocity of the gas stream is reduced. The pressure drop across the venturi is monitored.

After the venturi the gas passes horizontally through a gas duct before it reaches the cyclone stage (droplet separator). The gas enters the droplet separator tangentially at the bottom of the cylindrical portion. This creates a centrifugal force, which together with gravity, separates the droplets from the gas. The clean gas continues upward in the separator while the liquid with entrapped particulates drains to the cone bottom of the cyclone and is continuously drained to circulation tanks. The cleaning efficiency of the horizontal venturi scrubber is in excess of 90% and can reach up to 99%.

The process gas is transported using two-stage venturi scrubber fans. The two fans are needed to maintain the high pressure drop across the scrubber. Process water is fed to the scrubber using centrifugal pumps.

Copper anode slime generated in copper electro refining process undergo roasting process to recover Selenium. Selenium is of a commercial grade with purity of 99.5%.

2.3.12.3 Silver Electrolysis Tankhouse

Dore anode is consisting of Ag, Au, Pt, Pd, etc. Dore anode further undergoes electrolysis process to recover the precious metals. The heart of the silver refining plant process is the silver electrolysis tankhouse, which consists of electro-refining cells, circulation tanks and pumps, sieve tanks, a cooling system, and a pH control and adjustment system. A sophisticated control system monitors and controls the process, making it both easy to operate and highly efficient. With HCD (High Current Density) silver electro-refining cells, current densities exceeding 1000 A/m^2 are possible, depending on the composition of the silver Dore anodes being processed.

The electro-refining process is continuous except when new silver Dore anodes are loaded in the cells and silver anode slime and anode scrap is discharged from the cells at the end of the electrolysis cycle. The anodes continuously dissolve, depositing refined silver on the cathodes. The cell is equipped with an automatic scraper system that removes the deposits – the silver crystals scraped off the cathodes are collected at the bottom of the cells. At the end of the electrolysis

cycle, a slurry containing crystals of cathode silver and electrolyte is discharged into a sieve tank. The quality of the silver crystals produced in the electrolytic refining process is ensured by electrolyte circulation.

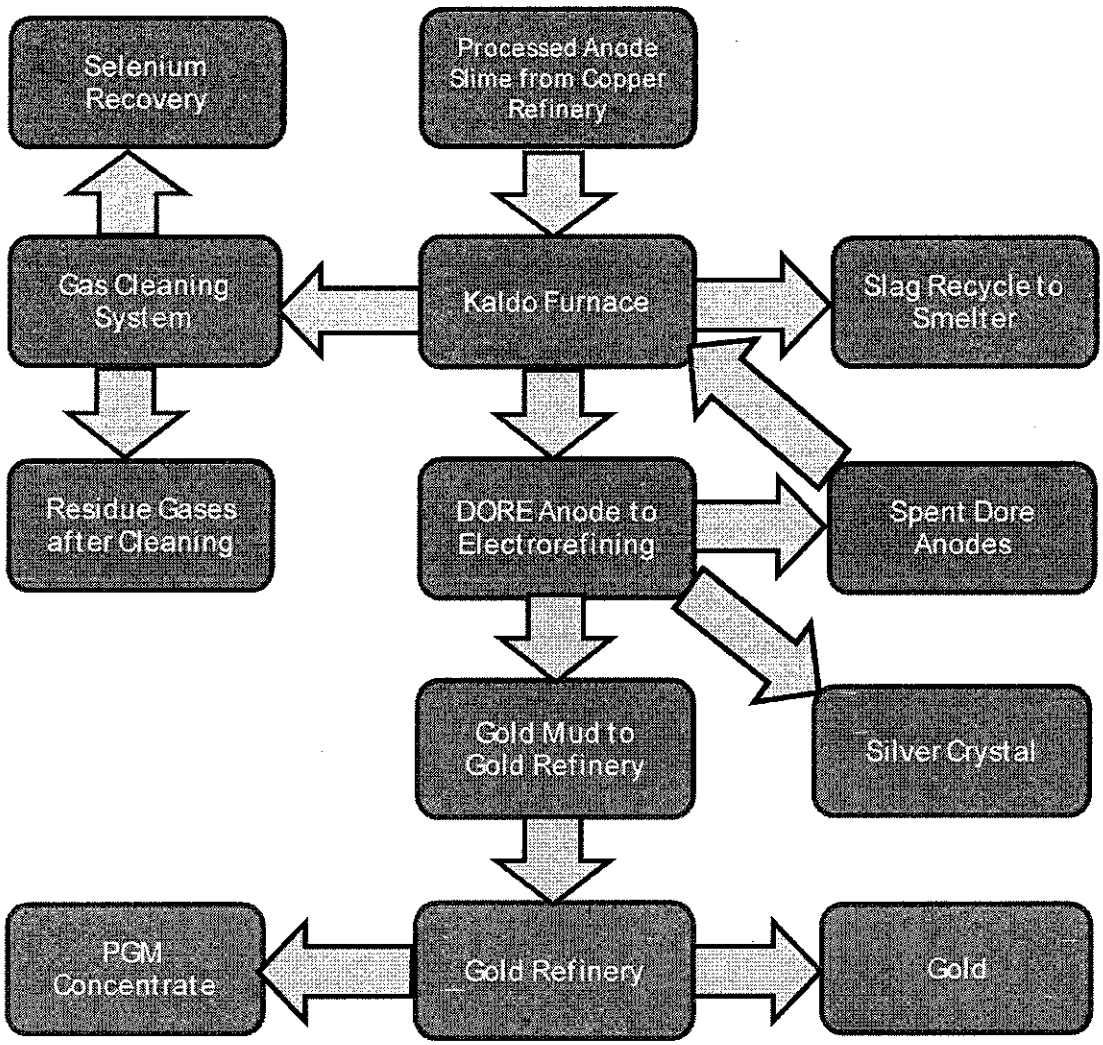

FIGURE-2.18
PRECIOUS METAL RECOVERY PLANT

All this helps increase the efficiency of the process, decrease manual work, and increase the amount of silver recovered. The modular design makes it easy to scale the solution for your desired capacity. Silver anode slime containing valuable impurities such as gold and platinum-group metals (PGMs) is also formed during the electrolysis process. The slime is collected inside anode bags surrounding silver Doré anodes and can be further processed using the Gold Refining process for recovery of gold and PGMs.

The non-dissolved anodes remaining after electrolysis are recycled for smelting and casting of new silver Doré anodes. Spent electrolyte withdrawn from circulation is replaced with fresh silver nitrate electrolyte in order to keep the silver content at a constant level.

Some of the silver crystals produced in the silver electrorefining cell are processed in the silver electrolyte preparation system, where they are dissolved to produce pure silver nitrate solution. The process and equipment design avoids the formation of toxic NOx gases, which improves the safety of the working environment. The system is also available as standalone equipment with its own control system.

Drying of Silver Crystals

The final product can be either silver bars or silver granules. In both cases the silver crystals are dried using the fully automated Silver Dryer, which consists of a fan, a heater, and a sieve tank for the silver crystals. The dried silver crystals are then melted using an induction furnace.

Casting and Bar Processing

Casting of silver bars is performed using a silver bar casting wheel for 1000 troy ounce (approximately 31 kg) ingots. The bars are then cooled in a water bath. Further operations, such as polishing, weighing, marking, and stacking can be performed by the Silver PWMS Robot. The equipment produces silver bars that meet the requirements of the London Bullion Market Association's Good Delivery standards.

Granulation and Packing

Silver granulation equipment consists of an induction furnace, granulation equipment and a receiving tank. Granules are dried in the silver dryer and packed using a material-handling system that produces ready-to-ship bags that are sealed and marked.

2.3.12.4 Gold Leaching & Recovery

A new environmentally friendly developed chloride leaching process for gold ores and concentrates. The new process combines effective gold leaching with a new type of gold solvent extraction process. Process flow chart for gold recovery is shown in **Figure-2.19.**

Highly oxidizing power in gold leaching provides very fast leaching kinetics and excellent gold recovery. Gold can be extracted from pregnant leach solutions using a patented solvent extractant. Pure gold product is precipitated directly from the stripping solution. Solvent extraction technology enables also direct silver recovery.

Effluent generated during the process is treated in state of art effluent treatment facility.

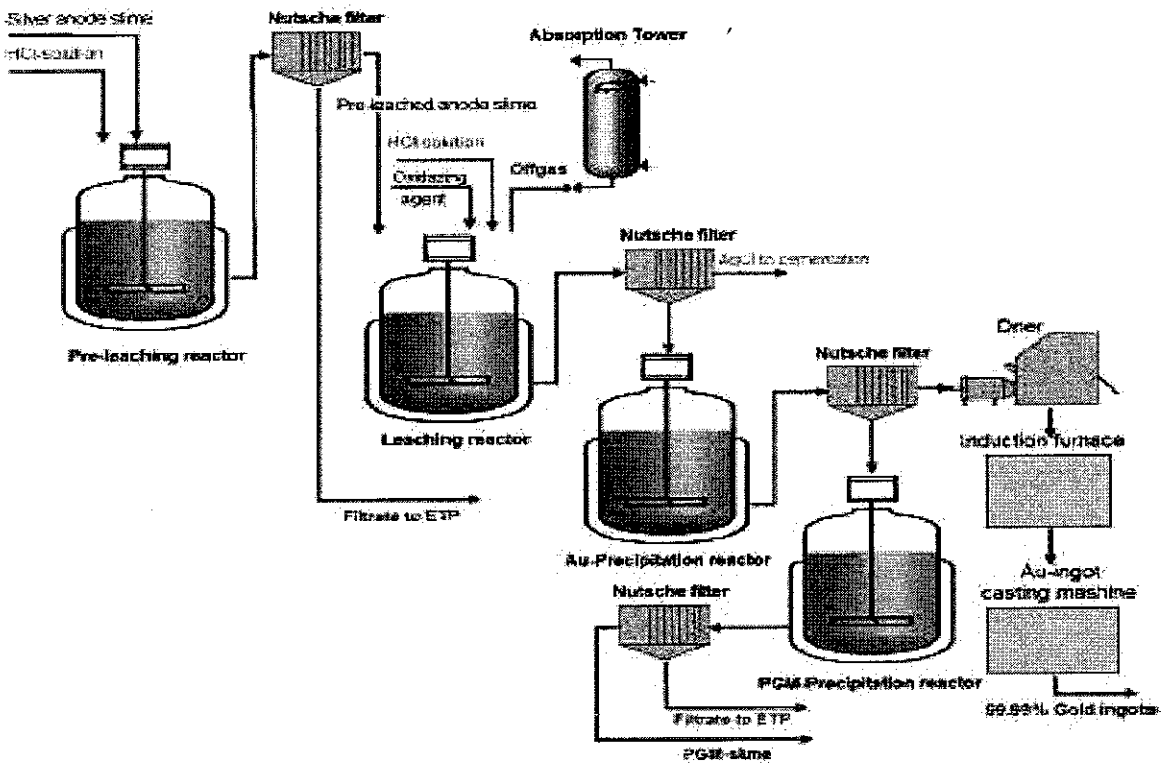

FIGURE-2.19
GOLD RECOVERY PLANT

2.3.13 Continuous Cast Copper Wire Rod Plant (CCR)

Copper cathode produced from copper refinery will be melted in a vertical shaft furnace with the help of gaseous fuel like LNG/LPG/ etc. and drawn in the form of Copper wire rod on continuous basis from a continuous casting and rolling machine. Rod will be of various sizes as per market requirement such as 8 mm to 25 mm.

The copper rod is manufactured by the modern continuous casting and rolling technology CONTIROD/ South Wire/ Properzi using the machinery supplied by Asarco (USA) – shaft furnace, Hazelett (USA) – twin belt caster/ South wire/

Continuous Properzi Caster, SMS-MEER (Germany)/ Morgan (USA)/ Continuous Properzi (Italy) – rolling mill.

The process of copper rod manufacturing consists of the following main stages:

1. Charging copper cathodes into the shaft furnace by the skip hoist and melting of the metal with gaseous fuel;
2. Preparation of metal for casting in the holding furnace;
3. Continuous casting rectangular/ Trapezoidal shape copper bar on the caster;
4. Rolling of continuously cast in the rolling mill;
5. Cooling and brightening of copper rod;
6. Coating the copper rod with anti-corrosion wax layer;
7. Coiling of the copper rod into coils; and
8. Weighing, packing, warehousing, and shipping of the finished product.

The process flow diagram of continuous cast copper wire rod plant is shown in **Figure-2.20.**

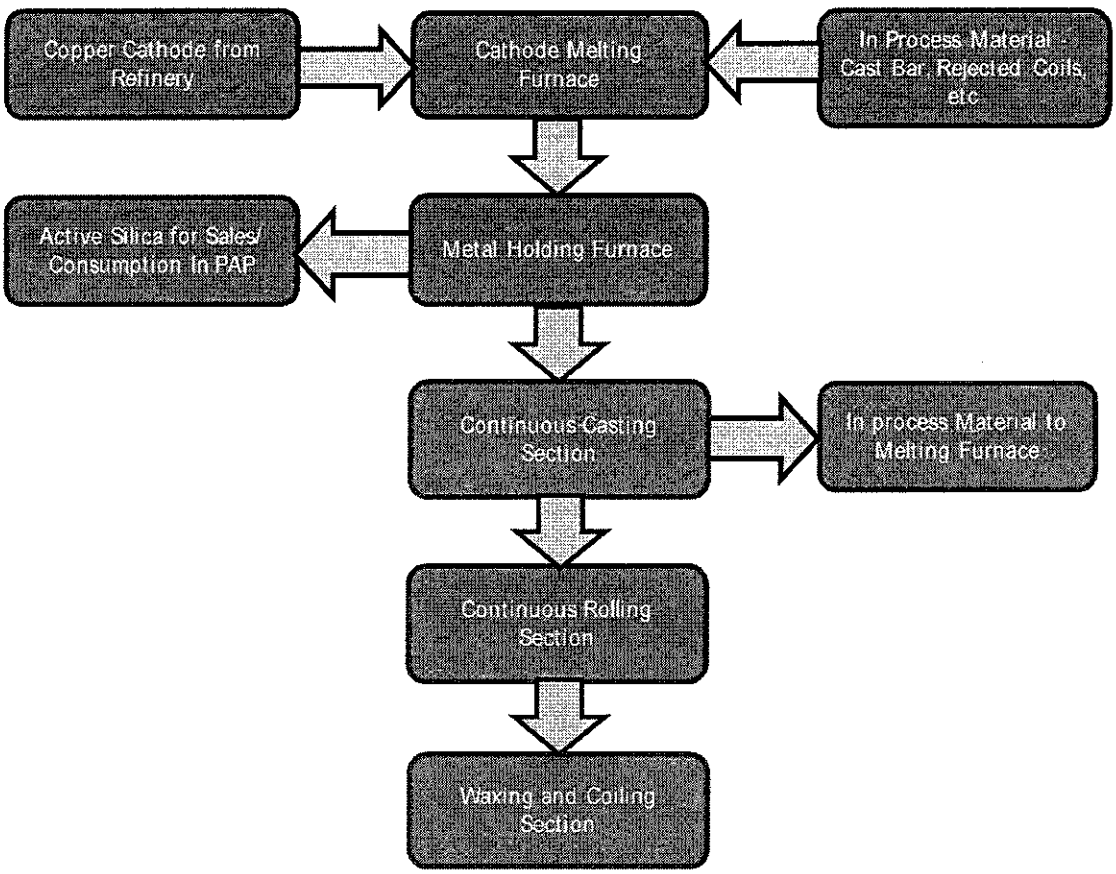

FIGURE-2.20
CONTINUOUS CAST COPPER WIRE ROD PLANT

2.3.14 Phosphoric Acid Plant

Phosphoric acid plant of 5 LTPA capacity (100% P_2O_5) will be set up. This will be value addition to proposed copper smelter project as well as Indian Fertilizer industries. This will be sold to fertilizer companies. Phosphogypsum produced during the process will be sold to cement industries as well as fertilizer and rest will be stock piled. Hydro fluro silicic acid generated as a byproduct will be converted as aluminum fluoride as well as sold in the market.

The rock phosphate received by pipe conveying system from port and stored in rock phosphate storage area. The rock phosphate will be taken to reactor (R1) by conveyor and hopper where it is mixed with recycled slurry, which contains mainly P_2O_5, CaO, SO_3 and H_2O received from reactor (R2). Slurry prepared in the reactor (R1) series will be sent to flash column to cool the slurry and maintain the required temperature in the reactor compartment. The slurry separated out from flash column will be fed to reactor (R2) to react with sulphuric acid and form the slurry which will be sent to filter. Phosphoric acid of 26-27% to 42-43% (Weak Phosphoric Acid) will be recovered based on the process of phosphoric acid is selected. A series of washes has been introduced to recover the P_2O_5 from the filtered cake, before it is sent gypsum pond. The process flow diagram of phosphoric acid plant is shown in **Figure-2.21.**

Filtered acid is then sent to clarification section to trap the solids passed through the filter cloth. Clarified acid is then fed through evaporation section to enhance the concentration to 48-54% P_2O_5 (strong phosphoric acid) suitable for fertilizer manufacturer.

During evaporation of the weak acid to strong phosphoric acid, Hydro fluro silicic acid of 18 -20% concentration is generated. This acid is then partially consumed in house for aluminum fluoride manufacturing and rest is sold in the market.

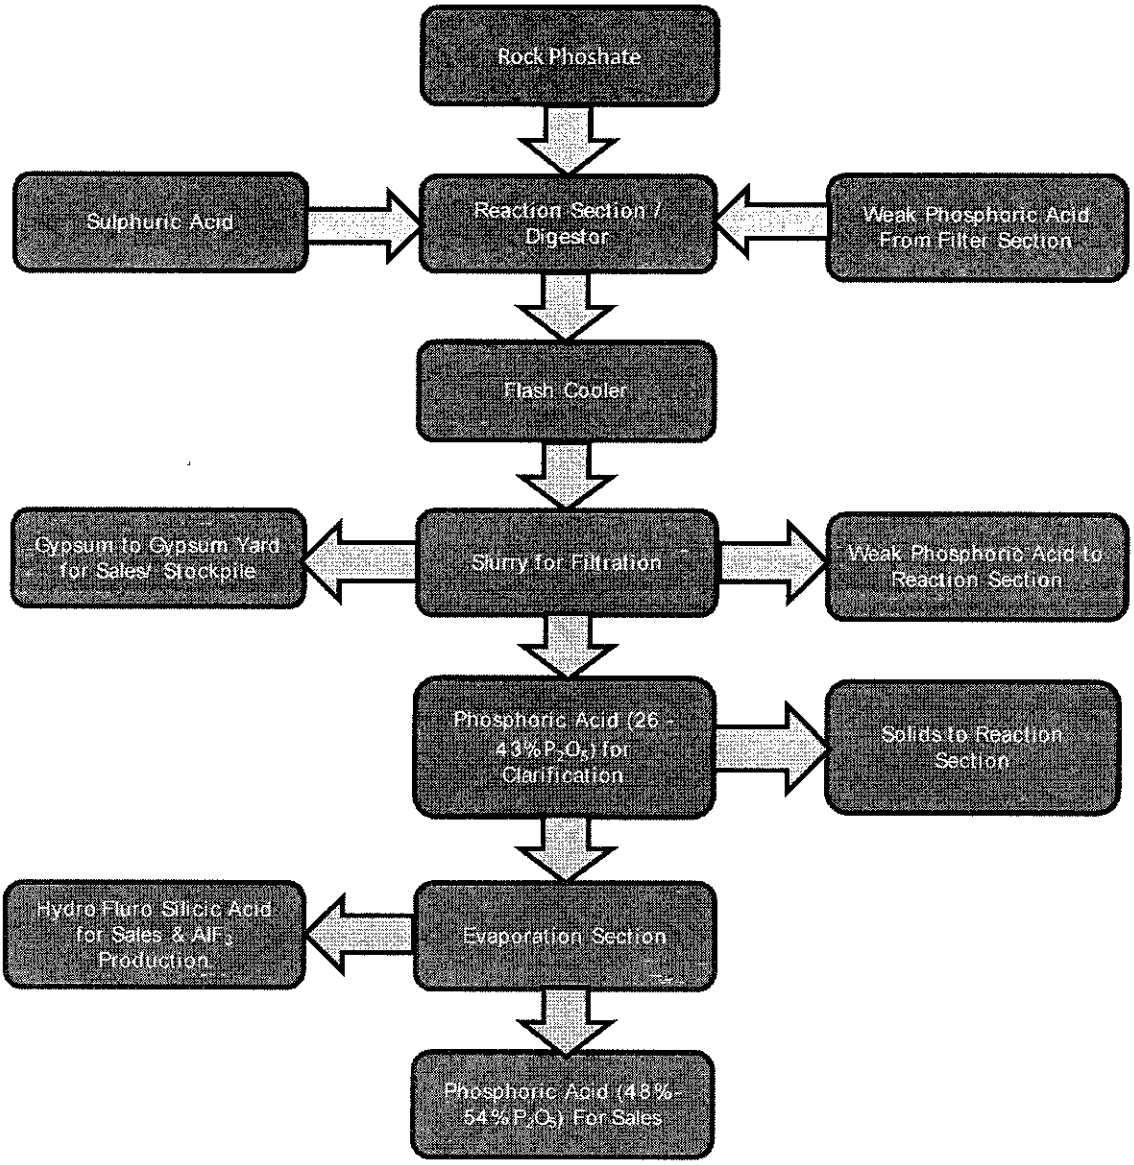

FIGURE-2.21
PHOSPHORIC ACID PLANT

2.3.15 Aluminum Fluoride Plant

Hydro fluro silicic acid generated from phosphoric acid plant will be converted in value added aluminum fluoride. Aluminum fluoride plant of 30,000 TPA capacity will be set up. Aluminum fluoride produced will be sold to aluminum manufacturing companies.

Aluminum hydrate will be sourced from local market. Aluminum hydrate will be digested with hydro fluro silicic acid to make aluminum fluoride in liquid form and silica part will be separated by filtration. Liquid aluminum fluoride will then

undergo crystallization process and then aluminum fluoride will be filtered and dried with gaseous fuel before sending it to packaging section. Cyclonic separator and bag filters will be installed to recover the aluminum fluoride, which may get escaped during the drying process. The process flow diagram of aluminum fluoride plant is shown in **Figure-2.22.**

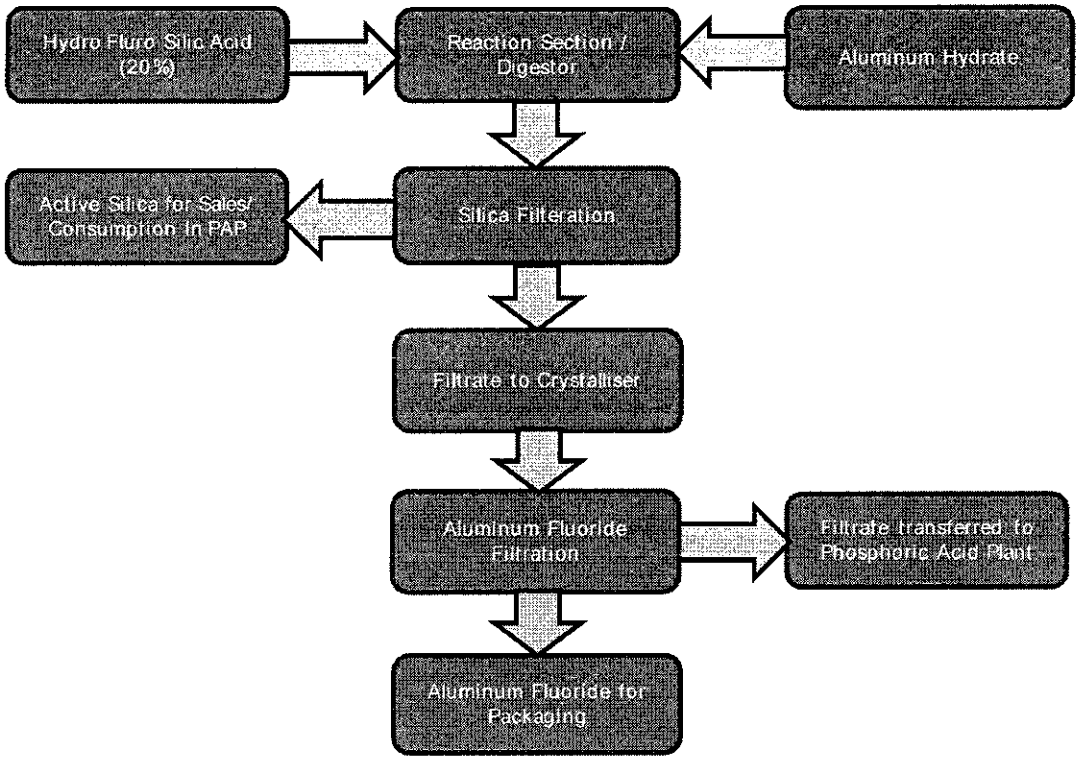

FIGURE-2.22
ALUMINUM FLUORIDE PLANT

2.4 Sources of Pollution and Mitigation Measures

The various types of pollution from the proposed project are categorized under the following types:

- Air pollution;
- Water pollution;
- Pollution emanating due to solid waste; and
- Noise pollution.

2.4.1 Air Emissions

The main pollutants discharged from the units will be particulate matter and sulphur dioxide emissions. Gas cleaning plant, ESP and scrubber will be installed to reduce dust emissions. The anticipated stack emission details are given in **Table-2.7.**

TABLE-2.7

2.4.2 Wastewater Generation and its Management

The total fresh water requirement for the entire project (phase-I & phase-II) will be about 32,800 KLD. About 5,432 KLD of wastewater will be generated from various facilities which will be treated and recycled into the process. The total water requirement and wastewater generation details are given in **Table-2.8.**

TABLE-2.8
WATER REQUIREMENT AND WASTEWATER GENERATION

All values are given in KLD

Sr. No.	Purpose	Raw (Fresh) Water	Wastewater Generation	Treated/ Recycled Water
1	Phosphoric Acid Plant	8,000	-	-
2	Sulphuric Acid Plant	15,020	1944	1440

Source: Feasibility Report

The liquid wastewater generated from SAP, refinery section and precious metal recovery plant will contain mainly inorganic contaminants viz., heavy metals, sulphate, etc., which needs to be reduced to within the acceptable levels for reuse in the plant.

The other wastewater generated from phosphoric acid plant, continuous copper rod plant, cooling towers, boiler blow down and WWTP raw water will not require any treatment for re-use/recycle. Similarly, the scrubbers bleed off, which will be in slurry form and to be filtered for solids only.

Effluent Treatment Plant (ETP)

Wastewater generated from copper smelter, sulphuric acid plant and copper refinery will be treated in state of art effluent treatment facility.

The ferric arsenate process is a solution for managing toxic arsenic in process and effluent streams. The process consists of a ferric arsenate precipitation stage followed by neutralization using lime milk. The process is based on easy, robust and understandable precipitation. The treatment of toxic arsenic requires a high level process reliability. This can be guaranteed using the cost-effective ferric arsenate process.

After the ferric arsenate process the treated water has a low arsenic concentration, typically containing 1-3 mg/l arsenic. A polishing step with enhanced arsenic removal will be included. The process comprises the neutralization of acidic streams and the advanced removal of metal impurities. The final product of the ferric arsenate treatment process are ferric arsenate cake and treated water. Ferric arsenate cake will be stored in environment friendly secured land fill, which will be designed as per Central Pollution Control Board (CPCB) guidelines. The selection of the arsenic treatment process is governed by residual stability. The residue of the ferric arsenate process is a stable solid precipitate.

Treated effluent will be recycled back for process use as well as sent to Reverse Osmosis (RO) plant for efficient and effective use. Rejects from RO plant will be sent to Multi Effect Evaporator (MEE). Solids generated from Multi Effect Evaporator (MEE) will be sent to Secured Land Fill (SLF).

Schematic flow diagram of ETP is given in in **Figure-2.23.**

Source: Feasibility Report

Secured Land Fill (SLF) is proposed over 13.35 ha within the project premises for disposal of ETP waste sludge and spent catalyst. Other Hazardous waste will be disposed through the approved recyclers.

2.4.4 Noise Levels

All equipment in the proposed project is designed for 90-95 dB(A) at 1 m from the equipment. Oxygen plant will be provided with double wall building and compressor will be provided with acoustic enclosures to attenuate noise levels. The operators will be provided with protective devices. The major noise generating sources from different the facilities are listed in **Table-2.12.**

TABLE-2.12
NOISE LEVELS FROM THE PROPOSED PLANT

Sr. No.	Sources	Noise Levels in dB(A)
1	Converter process air blower	90-95
2	Oxygen plant air compressor	85-90
3	Air compressor	90-95
4	Sulphuric acid plant suction blower	90-95
5	Waste heat recovery steam turbine generator	90-95
6	Pump House Operation	85-90
7	Blower	90-95

Chapter-3
Description of the Environment

3.0 DESCRIPTION OF THE ENVIRONMENT

3.1 Introduction

Baseline data generation forms a part of the Environmental Impact Assessment study, which helps to evaluate the predicted impacts on the various environmental attributes in the study area by using scientifically developed and widely accepted environmental impact assessment methodologies. This further helps in preparing an Environment Management Plan (EMP) outlining the measures for improving the environmental quality and scope for future improvements for environmentally sustainable development. The baseline environmental study also helps to identify the critical environmental attributes, which are required to be monitored after implementation of the project.

This chapter illustrates the description of the existing environmental status of the study area with reference to the prominent environmental attributes. The existing environmental setting is considered to adjudge the baseline conditions which are described with respect to climate, hydro-geological aspects, atmospheric conditions, water quality, soil quality, vegetation pattern, ecology, socio-economic profile, landuse, places of archaeological importance etc.

The primary baseline monitoring data includes meteorology, ambient air quality, noise levels, water quality, soil quality and ecology (aquatic and terrestrial). Land use, geology, hydrogeology, demography are based on the secondary & previous data collected from various Government and Semi-Government organizations. This EIA report incorporates the baseline data generated for post-monsoon and part winter season (October to December) of 2016. The monitoring stations and sampling photographs are enclosed in **Annexure-VIII**.

3.2 Physiography, Drainage, Geology & Hydrogeology

3.2.1 Physiography

Physiographically, the Kutch district can be divided into four parts, namely:

a) Central High land and the Upland in the Rann Area;
b) Central Plain in the southern part;
c) Little and Great Rann areas; and
d) Banni plains.

The mainland of Kutch is an undulating country with rugged broken ground and broad plains and is marked by hill ranges and isolated peaks. There are three hill ranges in the main land namely Dhinodhar, Jura and Vavar, which rise to 387 m and 274 m above mean sea level (amsl). The other uplands in the main land area are in Wagad area in the east forming part of Bhachau and Rapar Talukas. The Pachham, Khadir and Bela islands in the Great Rann in the north also form highlands with maximum elevation of 458 m amsl. All the hill ranges follow a general east-west trend.

Kutch district has about 350 km long coastline and its coastal plain is about 35-45 km wide and attains the elevation up to 80 m amsl. The coast is generally flat and broken by small and big creeks, viz., Kori, Boacha and Godia.

The Rann forms a unique and conspicuous landform and has been divided into the Great Rann in the north and Little Rann in the east. The Rann mainly comprises marshy land, salt/mud flats and is devoid of vegetation and habitation and has a very hostile environment. The total area of Rann is about 25000 sq.km.

The extensive low lying area south west of Pachchham Island resembles Rann except for some patches of scanty vegetation. It is known as Banni plain and covers an area of about 2000 sq. km. About 777 sq. km of Banni plain is reported to be superior grassland.

Drainage pattern of the Kutch district is mainly by Bharud, Kali, Suri, Khari, Mithi, Rukmavati and BhukhiLuni, Rupen, Kankawati and Malwan rivers and its tributaries.

Physiographycally, the study area is fairly flat with growth of prosopis juliflora. Due to gentle gradient towards the sea (Gulf of Kutch) most of the water flows in the sea within short span of time.

3.2.2 Drainage

Drainage pattern of the study area and project site are drained by several rivers and small tributaries, which are of dendritic pattern which remains dry in almost all the season. The Dhaneswari river (Danesri Nadi) a seasonal river (rain fed) flows in the western part of the project site. The water bodies flows through study area are Kotri creek (0.5 km, S), Khari Nadi (1.9 km, W), Gulf of Kutch (3.9 km, S), Nagavanti Nadi (4.7 km, E) and Phot Nadi (8.7 km, ENE) from the project site.

Natural drainage passing through the site will be suitably trained and maintained. There will not be any diversion. Further, conveyer for copper concentrate and rock phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required.

3.2.3 Geology

The Pre-Cambrian granite and Aravalli rocks are reported to be exposed in a tiny hillock i.e. "Meruda Takkar" in the northern part of great Rann.

The sedimentary rocks of marine and non-marine origin formed under different environmental conditions during middle Jurassic to Recent period occur in the district besides volcanic and intrusive rocks (Deccan Trap) of middle Cretaceous to lower Eocene.

Geologically, the study area and the project site are underlain by Quaternary sediments consisting of a succession of clay, silty clay, sand and sand mixed with gravel.

3.2.4 Hydrogeology

The hydrogeological studies to understand the local geology, geomorphic features, drainage network, aquifer characteristics and yield of water. Accordingly, various components controlling the hydrogeological regime.

- Occurrence of Ground Water

The formations forming aquifer or hydrogeological units can be grouped as:

a) Mesozoic formations;
b) Deccan trap (hard rock) as aquifer;
c) Tertiary formations; and
d) Quaternary sediments.

The ground water conditions, its occurrence and movement, hydraulic characteristics and chemical quality aspects vary in each hydrogeologic group. The pre-cambrian granite and Aravalli rocks are reported to be exposed in a tiny hillock i.e. "Meruda Takkar" in the northern part of great Rann.

➢ *Mesozoic Formations*

The sediments belonging to Mesozoic period include both marine and non-marine sedimentary formation and occupy almost 60% of the district. Patcham, Chari and Katrol series belong to Jurassic period where as Umia or Bhuj represent lower Cretaceous.

➢ *Patcham Series*

The rocks of this series consist of yellow and greyish coloured sandstone, shale, and fossiliferous. Limestone represent marine sedimentary sequence. It occupies largely the island belt of Patcham, Khadir and Bela and small area in northern part in main land of Kutch. The ground water occurs under water table and confined conditions in the sandstone/shale sequence belonging to this group. The semi-consolidated sandstone exposed in the lower reaches forms phreatic aquifer and is being developed locally for domestic and irrigation purposes. The dug wells tapping this aquifer ranges in depth from 10 m to 24 m below ground level (bgl), whereas the depth to water level during summer varies from 15 m to 20 m. Their yield varies from 50 to 175 m^3/day. The quality of ground water is potable to slightly brackish and near Rann and lower reaches while the deeper ground water is saline. In Khadir Island, the springs have been observed at Hadibadang and Kakindiya bet. They had about ½ lps discharges and quality of ground water was fresh at Hadibadang and saline at Kakindiya. Exploratory borehole in this formation indicated presence of alternating layers of shale and sandstone with minor bands of limestone down to 150 m depth. Ground water at deeper levels is under confined conditions and quality is saline, Electrical Coductivity up to 9000 µs/cm. Only, shallow aquifer down to 30-35 m constituted by feldspathic sandstone exposed in the mid-reaches hold some promise for potable ground water in this formation.

➢ *Chari Series*

The formations belonging to this series are hard oolitic limestone, sand stone and shale representing marine facie. This formation occurs mostly as inlier in the core of anticlines and constitutes hilly topography. There is no ground water development in formations belonging to Chari series because of marine nature of sediments and its physiographic settings. Not much information is available about occurrence and movement of ground water.

➢ *Katrol Series*

The rocks belonging to this series occupy the Wagad up land and northern and central parts of main land. It is represented by shale and sand stone sequence with minor bands of limestone. The sandstone is generally made up of hard indurated blocks, except in Wagad area where it is feldspathic and soft/friable at places. Ground water development in these formations is confined to only the Wagad area falling in parts of Bhachau and Rapar Talukas.

Exploratory drilling in Wagad area has revealed presence of alternate bands of sandstone and shale. The sandstone at shallow depth is generally soft and friable and forms aquifer locally. The ground water in this formation occurs under phreatic to confined conditions. The ground water development is generally through dug wells which, range in depth from less than 10 m to about 25 m. At places, the dug-cum-bored wells are also observed with depth of bores ranging between 25 m and 60 m. Depth to water level ranges from 10 m to 30 m bgl. Yield of dug wells and dug-cum-bored wells range from 60 m to 660 m^3/day. Though, the formation is hard and compact at deeper levels, at places the ground water may occur in fractures in localized areas. Few tube wells, ranging in depth from 40 m to 140 m are observed in Wagad area tapping the fractured part of the aquifer. The discharge of such tube wells range from 400 lpm to 1000 lpm at drawdowns ranging from 3 m to 9 m.

In rest of the district, the formations belonging to Katrol Series do not from aquifer due to hard and compact nature and geomorphological setting.

➢ *Bhuj Series*

The formations belonging to the Bhuj (Umia) series form the most prolific aquifer system in the district. This aquifer is extensively developed in central part of the district in a belt that extends from Gadhuli-Dayapar-Lakhpat area in the west to Bhachau in the east. Lithologically, the Bhuj sandstone comprises of fine to coarse grained sandstone interbedded with siltstone and shale. The sandstone, which mainly forms the aquifer is soft, friable and highly porous/permeable.

The quality of ground water in general is fresh with EC <3000 µS/cm, excepting in the western Kutch where it is mostly saline with EC >5000 µS/cm. Besides this, the quality of the formation water is known to deteriorate with depth in underlying lower Bhuj formations.

Ground water occurs both under phreatic and confined conditions. The unconfined of the phreatic aquifers system in this formation extends down to a depth ranging

from 20 m to about 100 m depending on the presence of aquitards/ confining layers. The ground water in central parts occur mainly in unconfined to semi-confined conditions whereas in the western part, the deeper horizons within this system are under confined conditions and free flow/auto flow conditions are also observed at places. The ground water in phreatic system is generally developed through dug wells, dug-cum-bored wells and shallow tube wells. However, due to excessive development and deepening of water levels, most of the dug wells have gone dry, particularly in Bhachu-Dudhai, Anjar-Khedoi-Vidi, Kera-Sisagadh and Deshalpur-Nakhatrana-Netra areas. In these areas, the ground water is mainly developed through deep and medium depth tube wells ranging in depth from 80 to 250 m. These tube wells tap aquifer zones in the depth range of 40 to 220 m with aggregate thickness of granular zones ranging from 30 to 100 m. The discharge of tube wells range between 40 and 360 m^3/hr for drawdowns ranging between 3 and 12 m. The piezometeric levels/water levels in Bhuj Sandstone ranges from 30 to 70 m bgl.

- *Deccan Trap*

Deccan trap occurs as almost one continuous belt from Anjar to Lakhpat Taluka with a lateral dislocation near the injunctions of Nakhatrana, Abdasa & Mandvi talukas. It mainly comprises of light to dark grey basalt & dolerite as moderately extensive flows.

In the areas underlain by Deccan trap, ground water occurs in the weathered mantle and along the interflow zones, joints and fissures. In this formation, very limited groundwater development is observed due to poor water bearing characteristics and highly saline ground water particularly in the central and western part. At places this formation has limited thickness and acts only as a capping to underlying formations.

Ground water development is meagre in Deccan traps. It occurs in the weathered portions & joints. Dug wells are 11 to 15 m deep with depth to water 5 to 9 m below ground level (bgl).

- *Tertiary Formations*

The tertiary sediments belonging to Eocene to Miocene period are of marine origin & are largely argillaceous and calcareous in nature and do not contain arenaceous members and thus mostly have inferior quality of formation water. However, the grey and mottled sandstone and calcareous grits of the Manchhar series (Pliocene) form moderate aquifer in the coastal areas between Mandvi-Mundra and parts of Abdasa talukas, where ground water quality is moderate. However, occurrence of fluoride more than permissible limits in the coastal tracts of Abdasa taluka in general is indicative of non-acceptable quality of ground water. The recent alluvium in the district in the coastal areas contain variable quality of ground water.

Formations of Ranikot Series occur in parts of Mandvi taluka, fringing the southern margin of the Deccan traps. They comprise of soft argillaceous, aluminous and variegated shale, laterite and bauxite. There is very little ground water development in this formation.

Supra Trappeans occur as about 9 m thick ferruginous laterite (iron cap) and aluminous ferruginous laterite derived in situ from Deccan Trap flows in Anjar-Khedoi Region. They locally yield very meager supplies of brackish to saline water to wells. However, generally this formation occurs above the zone of saturation.

In Bhachau region they are as much as 76 m thick at places and locally yields small supplies of brackish water to shallow wells.

Supra Trappeans comprising laterite, aluminous shale and lateritic clays also occur as narrow belts overlying Bhuj Series in central parts of district. There is no ground water development in the areas underlain by this formation.

- *Laki Series (Eocene)*

Laki Series occurs in parts of Abdasa & Lakhpat Talukas. The formations comprise of up to 160 m thick red & mottled clays gypsiferous, pyritiferous & carbonaceous shale with thin seams of lignite & pockets of unconsolidated fine grained sand beds at the bottom of the series.

The formations of this series yield very little quantities of brackish to saline water to dug wells. Ground water occurs in confined conditions also. The confined aquifer is capable of yielding large quantities of highly saline water.

- *Kirthar Series (Eocene)*

Formations of Kirthar Series occur in parts of Abdasa & Lakhpat Talukas. They comprise about 325 m thick mainly composed of Nummulitic limestone with occasional thin beds of calcareous shale.

These formations yield very little quantities of poor quality water in wells located in low grounds.

- *Nari & Gaj Series (Miocene-Oligocene)*

The formations of these series occur in parts of Abdasa & Lakhpat Talukas. They comprise of up to 640 m thick, mostly argillaceous formations composed of mottled clays and variegated shale with thin beds of fine grained clayey sandstone and Shelly limestone.

These formations yield very little quantities of brackish to saline water to wells. Quality is potable in wells located near the stream courses or in the vicinity of surface water bodies.

The sediments of Gaj Series unconformabily overlie the Bhuj Series and comprise of grey and yellowish gypseous shale inter-bedded with fossiliferous marls. Due to poor permeability, only limited ground water development has been possible.

- *Manchhar Series (Pliocene)*

This formation occurs in about 259 sq.km area lying between Faradi and Bhadreshwar, overlying the Bhuj Series unconformably and comprises of buff light grey, yellowish clay, mottled sandstone and sandy clays with gypsum.

The mottled sandstone forms productive aquifer at places. Wells range from 7 m to 24 m in depth with depth to water 3 m to 15 m bgl.

In Mundra taluka, some scope of ground water development exists. In Eastern Kutch, (Wagad Area), there is no ground water development in this formation.

In parts of Bhachau taluka, this formation occurs as up to 60 m thick undifferentiated massive reddish brown gypseous clay, shale, some laminated silt stone, lenses of laterite & trap gravel, mottled sandstone and occasionally some limestone. This formation yields meagre supplies of brackish to salty water to wells.

In Anjar-Khedoi area, the sediments of Manchar Series occur as 185 m or more thick semi-consolidated clayey sandstone and conglomeratic sandstone. Fossiliferous sandstone with silt stone & conglomerate. Clay shale, lime cemented conglomerate. They yield meagre to small supplies of brackish water to wells. Locally, the water is saline.

In parts of Abdasa and Lakhpat talukas, up to 550 m thick, semi-consolidated fine to medium grained current bedded sandstone, conglomerate, mottled clay, pink & yellow limestone occur. They yield moderate to large quantities of potable to brackish water. Water is highly brackish/saline near the coast.

In parts of Mandvi & Abdasa talukas, these sediments are generally extensive and have permitted moderate of ground water development by means of dug and dug-cum-bored wells. Ground water occurs under water table conditions down to 25 m and under confined conditions further below down to 180 m.

Chemically, the ground water has fluoride content exceeding the permissible limits of ICMR standards at many places, i.e., around Naliya. DTW ranges from 2 m to 29 m bgl with depth of wells ranging from 8 m to 90 m.

Tube wells yield about 1.5 m^3/minute for drawdowns of 12 m to 21 m. Trasmisivity ranges from 14 m^2/day to 173 m^2/day. Sp. Capacity ranges between 30 lpm/day & 110 lpm/day.

- *Quaternary Sediments*

Milliolite limestone, which is white to dull grey, medium-grained limestone comprising Milliolite Foraminifer, occurs along hill slopes and faulted plains, e.g., near Sukhpur on the northern slopes of Khatrod range west of Adhoi, near Ler, etc. There is no ground water development in this formation.

Alluvium occurs in channels of large ephemeral streams, & coastal tracts spread over almost whole district. The alluvium comprises of brown loamy, kankary, silt, clays, sand, gravel, loam & kankar with a thickness of about 6 m most of the district. However, in southern parts of the district, i.e., in Mandvi & Mundra as well as Bhachau & Anjar talukas, the thickness may be considerable.

The alluvium yields small quantities of brackish water to shallow wells in Bhachau taluka. Coarse facies may yield small to moderate supplies of brackish water to

wells in Anjar-Khedoi region. In parts of Abdasa and Lakhpat talukas, the water table is generally below the formation. In Mandvi & Mundra talukas, the ground water development is extensive.

There is no possibility of further ground water development east and southeast of Lakadiya by means of deep tube wells because exploratory boreholes drilled at Lakadiya & Kumbhariya down to 450 m and 305 m bgl respectively have not met with any promising granular zones. Between Bidada and Bhadreshwar in about 450 sq.km area dug wells are 4 m to 22 m deep with depth to water 3 m to 16 m bgl. The tube wells tap aquifers down to 129 m depth. The value of T is 27.327 m^2/day.

Between Hand and Kanmer in about 500 sq.km area, dug wells are 7 m to 22 m deep with depth to water ranging front 3 m to 15 m bgl. They yield 48 m^3/day to 75 m^3/day.

- Depth to Water Levels

As per the Central Ground Water Board report (2013) of Kutch district, the depth to water levels during pre-monsoon (May-2012) lies within a range of 5 m to 10 m below ground level (bgl), where as in some part of central and south east the water level is within a range of 2 m to 5 m bgl. In north west, and some isolated patches water level is between 10 m to 20 m bgl and 20 m to 40 m bgl. The depth to water level map of pre-monsoon-2012 of the Kutch district is given in **Figure-3.2.1.**

The depth to water levels during post monsoon (November-2012) is less than 20 m bgl in most of the district, however the water level is more than 20 m bgl in north east part of the district. The depth to water level map of post-monsoon-2012 of the Kutch district is given in **Figure-3.2.2.**

In major part of district, there is fall in water level after rainfall but in South West part there is rise in water level.

From **Figure-3.2.1** and **Figure-3.2.2** the depth to water levels at Mundra taluka, where the project site is located ranges from <2 m to 10 m bgl and also 10 m to 20 m bgl in pre-monsoon season-2012 and the depth to water levels in post monsoon-2012 ranges from <2 m to 20 m bgl.

3.2.6 Ground Water Resources

- *Ground Water Recharge*

The main source of ground water recharge is by the rainfall by direct percolation to the zone of saturation. A significant part of the rainfall is lost as runoff from area while a limited percentage of rainfall therefore reaches zone of saturation and becomes the part of ground water storage after meeting the evaporation and evapo-transpiration losses. There is also ground water recharge from the return flow of irrigation water from dug wells and tube wells operated by the cultivators and from canals.

The dynamic groundwater resources of Kutch district has been estimated jointly by CGWB and SWID, Govt of Gujarat, following the norms laid down by GEC-1997 methodology and projected as on 31.03.2011. The ground water resources of the Kutch district are given in **Table-3.2.1** and the dynamic ground water resources of Mundra taluka as on 31.03.2011 is given in **Table-3.2.2.**

TABLE-3.2.1
THE DYNAMIC GROUNDWATER RESOURCES OF KUTCH DISTRICT AS ON 31.03.2011

Sr. No	Particulars	Quantity (HAM)
1	Total Annual Replenishable Ground Water Resources	83811
2	Natural Discharge during Non-Monsoon Period	4191
3	Net Annual Ground Water Availability	79621
4	Total Annual Ground Water Draft	63170
5	Projected demand for Domestic and Industrial uses upto 2025	5694
6	Net Ground Water Availability for Future Irrigation use	15855
7	Stage of Ground Water Development (%)	79 **("Semi-Critical")**

3.3 Land Use Studies

Studies on land use aspects of eco-system play an important role for identifying sensitive issues, if any, and taking appropriate actions for maintaining the ecological balance in the development of the region.

3.3.1 Objectives

The objectives of land use studies are:

- To determine the present land use pattern;
- To analyze the impacts on land use due to plant activities in the study area; and
- To give recommendations for optimizing the future land use pattern vis-a-vis growth of plant activities in the study area and its associated impacts.

3.3.2 Methodology

For the study of land use, literature review of various secondary sources such as district census handbooks, regional maps regarding topography, zoning settlement, industry, forest etc., were taken. The data was collected from various sources like district census handbook, revenue records, state and central government offices and survey of india (SOI) topo sheets and also through primary field surveys.

3.3.3 Land use Pattern Based on Remote Sensing Data

Remote sensing satellite imageries were collected and interpreted for the 10 km radius study area for analyzing the land use pattern of the study area. Based on the satellite data, land use/land cover maps have been prepared.

The land use pattern of the study area (10 km radius around the proposed project site) has been estimated by interpreting the recent IRS Resourcesat-2 of 5 m resolution (L4FMX) for the year 2016.

3.3.3.1 Land use/Land Cover Classification System

The present land use / land cover maps were prepared based on the classification system of national standards. For explanation for each of the land use category the details as given in **Table-3.3.1** were considered.

TABLE-3.3.1
LAND USE/LAND COVER CLASSIFICATION SYSTEM

Sr. No.	Level I	Level II
1	**Built-up Land**	Settlements
		Industry/Institutional Land
		New Development/Layout
2	**Forest**	Deciduous/Tropical Forest
		Degraded Scrub
		Forest Blank

Sr. No.	Level I	Level II
		Forest Plantation - In/Outside Forest
3	**Agricultural Land**	Plantation
		Double Crop/Irrigated Land
		Other Agriculture Land
		Fallow Land
4	**Waste Land**	Land with Scrub
		Land without Scrub
		Rocky/Stony/Barren Land
		Quarry/Mining Land/Dumps
5	**Water Body**	Stream/River/Tank/Reservoir/Pond/Lake
		Creek
		Bay (Gulf of Kuchchh)
6	**Wetland**	Mudflat/tidal flat
		Mangrove
7	**Others**	Reclaimed/Level Raised Land
		Salt Pans
		Salt Pans (Abandoned)
		Sandy Area

3.3.3.2 Data Requirements

IRS Resourcesat-2 of 5 m resolution (L4FMX) multispectral satellite data of 21st January/14th February 2016 was used for the mapping and interpretation. Besides, other collateral data as available in the form of maps, charts, census records, other reports and especially topographical survey of India maps are used. In addition to this, ground truth survey was also conducted to verify and confirm the ground features.

3.3.3.3 Methodology

The methodology adopted for preparation of landuse/land cover thematic maps is as follows:

- Digital interpretation of IRS Resourcesat-2 L4FMX Digital Data using ERDAS software programme; and
- Field observations.

The methodology adopted for preparation of land use/ land cover thematic map is monoscopic visual interpretation of geocoded scenes of IRS-Resourcesat-2 satellite and field observations are taken. The various steps involved in the study are preparatory field work, field survey and post field work.

3.3.3.4 Pre-field Interpretation of Satellite Data

The False Color Composite (FCC) of IRS-Resourcesat-2; satellite data is used for pre-field interpretation work. Taking the help of topo-sheets, geology, geo-morphology and by using the image elements the features are identified and delineated the boundaries roughly. Each feature is identified on image by their image elements like tone, texture, colour, shape, size, pattern and association. A tentative legend in terms of land cover and land use, physiography and erosion was formulated. The sample areas for field check were selected covering all the

physiography landuse/land cover features cum image characteristics to ascertain the ambiguous features.

- ***Ground Truth Collection***

Both toposheets and imagery were taken for field verification and a transverse plan using existing road network was made to cover as many representative sample areas as possible to observe the broad land use features and to adjust the sample areas according to field conditions. Detailed field observations and investigations were carried out and noted the land use features on the imagery.

- ***Post Field Work***

The base maps of the study area were prepared, with the help of Survey of India topo-sheets. Preliminary interpreted land use and the land cover features boundaries from IRS-Resourcesat-2 false colour composite were modified in light of field information and the final thematic details were transferred onto the base maps. The final interpreted and classified thematic map was catrographed. The cartographic map was colored with standard colour coding and detailed description of feature with standard symbols. All the classes noted and marked by the standard legend on the map.

3.3.3.5 Final Output

The final output would be the land use/land cover map numerals were given different colour code for each category as shown in map. Area estimation of all features of land use/land cover categories was noted. The following are the main interpreted land use/land cover classes of the study area and their respective areas are given in hectares in **Table-3.3.2** for the year 2016**.** The thematic map of study area and land use pattern within 10 km radius based on IRS Resourcesat-2 for the year 2016 are shown in **Figure-3.3.1** and **Figure-3.3.2** respectively. Layout map superimposed on CRZ map is shown in **Figure-3.3.3.**

TABLE-3.3.2
LANDUSE BREAKUP DETAILS IN 10 KM RADIUS

3.3.3.6 Observations

The land use pattern of the study area indicates that 37.41 % of the study area is under agricultural land followed by water bodies of about 22.63 %. Percentage of Built-up area and forest land is about 5.08 % and 2.02 % respectively. Waste lands and wetlands in about 13.58 % and 10.80 % of the study area. Reclaimed land, salt pans and sandy area is about 8.48 % of study area.

3.4 Soil Characteristics

It is essential to determine the potentials of soil in the area to identify the current status of soil quality and also to predict the impacts that may arise due to the project. Accordingly, a study for assessment of the baseline soil quality has been carried out in the region.

3.4.1 Data Generation

Eight locations in and around the proposed project boundary were selected for soil sampling. At each location, soil samples were collected from surface 0 to 90 cm depth and are homogenized and collected after quartering. This is in line with IS: 2720 and Methods of Soil Analysis, Part-1, 2nd edition, 1986 of (American Society for Agronomy and Soil Science Society of America). The homogenized samples were analyzed for physical and chemical characteristics. The soil samples were collected during post-monsoon season.

The samples have been analyzed as per the established scientific methods for physico-chemical parameters. The methodology adopted for each parameter is described in **Table-3.4.1**.

TABLE-3.4.1
ANALYTICAL TECHNIQUES FOR SOIL ANALYSIS

Parameter	Method (ASTM Number)
Grain size distribution	Sieve analysis (D 422 – 63)
Textural classification	Chart developed by Public Roads Administration
Bulk density	Sand replacement, core cutter
Sodium absorption ratio	Flame photometric (D 1428-82)
pH	pH meter (D 1293-84)
Electrical conductivity	Conductivity meter (D 1125-82)
Nitrogen	Kjeldahl distillation (D 3590-84)
Phosphorus	Molybdenum blue, colourimetric (D 515-82)
Potassium	Flame photometric (D 1428-82)
Iron	AAS (D 1068-84)
Zinc	AAS (D 1691-84)
Boron	Surcumin, colourimetric (D 3082-79)
Chlorides	Argentometric (D 512-81 Rev 85)

3.4.2 Soil Sampling and Analysis

A total of eight samples within 10 km radius of the project site were collected for the assessment of soil quality. The details of sampling locations are given in **Table-3.4.2** and are shown in **Figure-3.4.1.** The samples were collected by ramming an auger into the soil up to a depth of 90-cm. The homogenized samples were analyzed as per standard methods in laboratory. The standard classification of soil is given in **Table-3.4.3.**

3.4.2.1 Description and Justification of Sampling Locations

The soil samples were collected from surface 0 to 90 cm depth at eight sampling location to know the classification and any contamination of soil. A brief description and justification for selecting the sampling locations are presented hereunder:

Project Site (S1): The soil sample was collected in barren land (though in classified under industrial land use category), which is located in latitude 22°48'53.1"N and longitude 69°35'19.0"E within the proposed project area. The main objective to select this location is to assess the classification and any contamination of soil within proposed project site premises.

Navinal Village (S2): The soil sample was collected in agriculture land, which is located in latitude 22°50'41.0"N and longitude 69°35'46.2"E at a distance of about 1.7 km in ENE direction of the proposed project site. The objective for selection of this location is to assess the classification and any contamination of soil.

Bhujpor Mota Village (S3): The soil sample was collected near settlement area, which is located in latitude 22°52'52.8"N and longitude 69°38'54.3"E at a distance of about 6.2 km in NE direction of the proposed project site. The objective for selection of this location is to assess the classification and any contamination of soil.

Jarpara Village (S4): The soil sample was collected in agriculture land, which is located in latitude 22°50'13.2"N and longitude 69°39'32.3"E at a distance of about 6.8 km in ENE (cross wind) direction of the proposed project site. The objective for selection of this location is to assess the classification and any contamination of soil.

Wandh Village (S5): The soil sample was collected in barren land and close to the shore (sandy soil), which is located in latitude 22°48'19.4"N and longitude 69°32'35.0"E at a distance of about 1.8 km in SW direction of the proposed project site. The objective for selection of this location is to assess the classification and any contamination of soil.

Kandagara Village (S6): The soil sample was collected in agriculture land, which is located in latitude 22°51'29.7"N and longitude 69°32'12.6"E at a distance of about 4.4 km in NW direction of the proposed project site. The objective for selection of this location is to assess the classification and any contamination of soil.

Siracha Village (S7): The soil sample was collected in agriculture land, which is located in latitude 22°51'04.8"N and longitude 69°34'10.5"E at a distance of about 1.7 km in NNW direction of the proposed project site. The objective for selection of this location is to assess the classification and any contamination of soil.

Moti Khakhar Village (S8): The soil sample was collected in dry agriculture land, which is located in latitude 22°53'33.2"N and longitude 69°33'17.7"E at a distance of 5.9 km NNW direction of the proposed project site. The objective for selecting this location is to assess the classification and any contamination of soil.

3.4.2.2 Baseline Soil Status

The results of soil samples collected at all locations within the study area are given in **Table-3.4.4** and are compared with the standard classification of soil (**Table-3.4.3**).

3.4.3 Inference

The evaluation of initial soil quality based on the above characters is done and presented as below:

3.4.3.1 Physical Characters

The physical characters include bulk density, grain size distribution (textural analysis).

Grain Size Distribution: Texture indicates relative proportion of various sizes of primary soil particles such as sand, silt and clay present in the soil. Based on their quantities present in the soil sample and using the textural classification diagram.

The textural classes of eight soil samples are sandy clay loam to clay loam (mod fine texture).

Bulk Density: In case of bulk density total soil space (space occupied by solid and pore spaces combined) are taken in to consideration. Thus bulk density is defined as the mass (weight) of a unit volume of a dry soil. This volume would, off course include both solids and pores. Soil texture, soil structure and organic matter content are the factors influencing the bulk density of a soil. Bulk density, besides being an interesting and significant physical characteristic, is very important as a basis for certain computations. The bulk density of the eight soil sample under consideration ranges between 1.0 to 1.2 gm/cc, and confirms the mod fine texture of the soils of the area under study.

Porosity: The pore space of a soil is the space occupied by air and water and is expressed as percent pore space. The amount of this pore space is determined by structural conditions, that is by inter- related influence of texture, compactness and aggregation. Porosity is also related to aeration and retention and movement of water in the soil. The porosity of eight soil samples was inferred from textural analysis and is moderate in accordance to the texture of soil, and considered good for air and water movement in the soil for crops.

Permeability: Permeability is the entry of fluid from one medium to another. In soil – water relationship, it means entry of water from air in to soil. Permeability rate is defined as maximum rate at which a soil in a given condition can absorb rain or irrigation water as it comes at soil surface, permeability rate is the rate of water entry in to the soil when flow is non-divergent. It is a surface and subsurface character and is expressed as mm/sec or cm/hr. Permeability of eight samples under study was inferred from textural analysis and classified as moderately slow to slow for agriculture and conservation, indicating good availability of moisture to after rain or irrigation.

Water Holding Capacity (WHC): Water holding capacity of soil is the maximum amount of moisture, a dry soil is capable of holding, under given standard condition. If the moisture content is increased further percolation result WHC is of great value to practical agriculture, since it provides a simple means to determine moisture content. WHC required for good crop growth is 35 to 70%. The WHC of

the eight soil samples was inferred from textural analysis and is moderate indicating somewhat frequent water application for growing crops.

3.4.3.2 Chemical Characters

The parameters considered for chemical analysis are: soil reaction (pH), electrical conductivity (EC), cation exchange capacity (CEC) cations, like calcium, magnesium, sodium and potassium, water soluble sulphates and chlorides, sodium adsorption ratio (SAR). Macro nutrients like available nitrogen, total organic carbon, organic matter available phosphorus, available potassium micro nutrients like iron zinc, manganese and boron. Heavy metals like, chromium (Cr), lead (Pb), nickel (Ni), arsenic (As), mercury (Hg) and cadmium (Cd).

Soil Reaction (pH): The nutritional importance of pH is illustrated, thus hydrogen ion concentration has influence not only on, solubility of nutrients, but also upon facility with which these nutrients are absorbed by plants, even already in soil solution for e.g. Fe, Mn and Zn become less available as pH rises from 4.5 to 7.0. At pH 6.5 to 7.0 utilization of nitrate and ammonia nitrogen becomes more available. In case of phosphorus it becomes less available to plant as pH increases above 8.5, due to its fixation in exchange complex of soil. For the eight soil sample under consideration the pH ranges between 7.7 to 8.4 indicating soils are slight to moderately alkaline.

Electrical Conductivity (EC): The salt content of the soils are estimated by EC measurements, and is useful to designate soils as normal or sodic (saline). Electrical conductivity is expressed as µmhos/cm at 25◦C, µsmhos/ cm or mmhos /cm or sm/cm. The EC of eight soil samples is between 137 to 582 µs/cm and are below the limits to be called as saline and hence the soils are normal for crop growth. In samples S5 (6300 micro mhos) and 1508 micro mhos in S6 and strongly saline.

Organic Carbon / Organic Matter (%): Although accounting for only a small part of the total soil mass in mineral soils, organic matter influences physical, chemical, and biological activities in the soil. Organic matter in the soil is plant and animal residue which serves as a reserve for many essential nutrients, especially nitrogen. Determination of organic matter helps to estimate the nitrogen which will be released by bacterial activity for the next season depending on the conditions, soil aeration, pH, type of organic material, and other factors. The eight soil samples under consideration contain 0.05 to 0.22% organic matter, OM is calculated from organic carbon estimation. As per crop requirements the soils are very less to less in organic matter content. Requires addition of organic matter, by way of compost application.

Available Nitrogen (N) Nitrogen is a part of all living cells and is a necessary part of all proteins, enzymes and metabolic processes involved in the synthesis and transfer of energy. Nitrogen is a part of chlorophyll, the green pigment of the plant that is responsible for photosynthesis. Helps plants with rapid growth, increasing seed and fruit production and improving the quality of leaf and forage crops. The available nitrogen in the eight samples in question, as per analysis ranges between 4.8 to 23.8 kg/ha showing very low to good nitrogen content for crop growth.

Available Phosphorus (P): Like nitrogen, phosphorus (P) is an essential part of the process of photosynthesis. Involved in the formation of all oils, sugars, starches, etc, helps with the transformation of solar energy into chemical energy; proper plant maturation; withstanding stress, effects rapid growth, encourages blooming and root growth. The phosphorus content of soil of eight samples ranges between 42.2 to 154.4 kg/ha and falls under low medium, good to more than sufficient category for crop growth.

Available Potassium (K): Potassium is absorbed by plants in larger amounts than any other mineral element except nitrogen and, in some cases, calcium. Helps in the building of protein, photosynthesis, fruit quality and reduction of diseases. The potassium content of eight soil samples ranges between 178.2 to 1125.3 kg/ha and is very less to more than sufficient for crop growth.

Cation Exchange Capacity (CEC): The total amount of exchangeable cations that a soil can retain is designated as cation exchange capacity (CEC) and usually expressed as me/100gm of soil. Determination of amount of cations present in soil is useful, because CEC influences the availability of adsorbed cations to both higher plants and soil microorganisms. Thus CEC is directly related to fertility of soils. The CEC of the eight samples ranges between 29.8 to 73.2 meq/ 100 gm soil except in sample S5 where it is unusually high may be estimation error. A soil with low CEC indicates low fertility and soils with high CEC indicates high fertility. Eight soil samples are moderately fine textured having high percentage of clay, showing medium to high CEC, in turn fertility is also moderate to high.

Exchangeable Calcium (Ca++): Calcium, an essential part of plant cell wall structure, provides for normal transport and retention of other elements as well as strength in the plant. It is also thought to counteract the effect of alkali salts and organic acids within a plant and soil acidity. The exchangeable calcium content of eight soil samples ranges between 15.5 to 51.0 meq/100 gm soil, and having moderate to high base saturation percentage. (ranging from 52% to 67%). For normal crop growth a base saturation percent of soils more than 50% is required.

Exchangeable Magnesium (Mg++): Magnesium is part of the chlorophyll in all green plants and essential for photosynthesis. It also helps activate many plant enzymes needed for growth. The magnesium content of the eight soil samples ranges between 8.09 to 61.72 m e /100 gm soil, which is further adding to base saturation.

Exchangeable Sodium (Na+): Though sodium is not an essential plant nutrient, but it has some role in potassium nutrition. Sodium also has a role in affecting the pH of soils; Sodium present above a certain limit makes soil alkaline which affect soil physical condition, and fixing of available phosphorus. Out of the eight samples sodium ranges between 0.55 to 0.99 meq/100gm soil, which is below the content (i.e. ESP is below 15%) at which soil show, saline alkali or alkaline properties, hence no adverse effect on soils. But in samples S1 ,S3, S5 & S6 ,ESP values are more than 15%,EC is more than 2 mmhos /cm and pH is above 8.2 and according to criteria of salt affected soils these samples are saline –alkali to alkaline.

Sodium Adsorption Ratio (SAR): Sodium adsorption ratio is ratio of Na+ to under root of Ca++, Mg++ by 2. SAR values of soil solution along with EC and pH helps in diagnosing soils as normal, saline, saline-alkali or alkali. The eight soil samples show SAR values between 0.18 to 4.52 and indicate that samples S1, S3, S5 & S6 are salt affected and remaining samples are normal.

Iron (Fe): Iron is essential for crop and other plants for chlorophyll formation Iron deficiency likely occurs in soils with high pH, poor aeration, excessive phosphorus, or low organic matter. It may be produced also by an imbalance of Mo, Cu, and Mn. In plants, the deficiency shows up as a pale green leaf color (chlorosis) with sharp distinction between green veins and yellow inter-venial tissues. The iron content of eight samples ranges between 1.10 to 2.17% and is very low. Thus may cause problem of iron deficiency.

Aluminum (Al): Exchangeable Aluminum (Al) is not present in a plant available form in soils with a pH above 5.5 and therefore tests for extractable aluminum need only be done on distinctly acid soils. In soils with a pH range of 4.5 - 5.5 are those most likely to be affected by aluminum toxicity. In the eight samples the total aluminum ranges between 0.29 to 1.18 % which is very low.

Manganese (Mn): Is an important plant micro nutrient and is required by plants in second greater quantity compared to iron, like any other element, it can have limiting factor on plant growth, if it is deficient or toxic in plant tissue.

Manganese is used in plants as major contribution to various biological systems, including photo synthesis, respiration and nitrogen assimilation. Mn content in the eight samples ranges between 215.7 to 412.3 mg/kg and is very high and may cause toxicity to plants.

Zinc (Zn): Zn deficiency most often is present in sandy soils with neutral or alkaline pH, or with low organic matter. Total zinc may be high but the availability depends on other factors. In the present eight samples Zinc content ranges between 17.4 to 41.6 mg/kg or ppm and are high, considered sufficient for crop growth.

Boron (B): There is a very narrow range between deficiency and toxicity in boron. Deficiencies are more often when organic matter is low and dry weather slows the decomposition. Uptake of boron is reduced at pH level higher than 7.0 plant toxicity symptoms manifest as leaf tip and marginal chlorosis. Boron toxicity occurs in dry areas and is generally associated with irrigation water. In the eight samples of the project the boron content ranges between 16.4 to 36.7 mg/kg and is low in some samples may cause deficiency to some crops. In other samples content is normal.

Water-Soluble Sulphates as SO_4: This test measures readily available sulphur in the form of dissolved plus absorbed sulphate. Sulphur testing is important where low sulphur or sulphur-free fertilizers are used, such as high analysis NPK fertilizers. Retention of sulphate sulphur by the soil is related to its phosphate retention, with high leaching losses of sulphate being associated with low phosphate retention soils. This should also be taken into account when

considering sulphur fertilizer options. In the eight samples the water soluble sulphate as SO4 ranges between 196.7 to 1644 mg/kg and very high.

Water Soluble Chlorides as Cl: The Cl^-anion does not form complexes readily, and shows little affinity (or specificity) in its adsorption to soil components. Thus, Cl^- movement within the soil is largely determined by water flows. Chlorine is an essential micronutrient for higher plants. It is present mainly as Cl^-. Chloride is a major osmotically active solute in the vacuole and is involved in both turgor- and osmo regulation. In the cytoplasm it may regulate the activities of key enzymes. In addition, Cl^-also acts as a counter anion and Cl^- fluxes are implicated in the stabilization of membrane potential, regulation of intracellular pH gradients and electrical excitability. In the eight samples the water soluble chloride ranges between 354.4 to 12400.9 mg/kg and is high. Particularly in samples S1, S3, S5 & S6 they are very high due to proximity to Gulf of Kutch.

3.4.3.3 Heavy Metals

Soils may become contaminated by the accumulation of heavy metals and metalloids through emissions from the rapidly expanding industrial areas, disposal of high metal wastes, leaded gasoline and paints, land application of fertilizers, animal manures, sewage sludge, pesticides, wastewater irrigation, coal combustion residues, spillage of petrochemicals, and atmospheric deposition. Heavy metals constitute an ill-defined group of inorganic chemical hazards, and those most commonly found at contaminated sites are lead (Pb), chromium (Cr), arsenic (As), zinc (Zn), cadmium (Cd)), mercury (Hg) and nickel (Ni). Soils are the major sink for heavy metals released into the environment by aforementioned anthropogenic activities and unlike organic contaminants which are oxidized to carbon (IV) oxide by microbial action, most metals do not undergo microbial or chemical degradation and their total concentration in soils persists for a long time after their introduction changes in their chemical forms (speciation) and bioavailability are, however, possible.

The presence of toxic metals in soil can severely inhibit the biodegradation of organic contaminants [heavy metal contamination of soil may pose risks and hazards to humans and the ecosystem through: direct ingestion or contact with contaminated soil, the food chain (soil-plant-human or soil-plant-animal-human), drinking of contaminated ground water, reduction in food quality (safety and marketability) via phyto-toxicity, reduction in land usability for agricultural production causing food insecurity, and land tenure problems. Standards for metals and heavy metals in soil are still evolving. United States Environmental Protection Agency (US EPA) has set limits for concentration of metals in soil called soil screening levels (SSL), when values exceed these concentrations, the site needs cleanup efforts. New York State Department of Environmental Conservation (NYS DEC) has also set limits for metal concentration in soil with an objective of removing risks on human health. (Ref:https://webcache.googleusercontent.com/search?q=cache:AgJTpGB_n4wJ:https://www.researchgate.net/file.PostFileLoader.html%3Fid%3D575ee11e217e2079c875d156%26assetKey%3DAS%253A372556528930816%2540146583580608 7+&cd=1&hl=en&ct=clnk&gl=in).

Chromium (Cr): Chromium mobility depends on sorption characteristics of the soil, including clay content, iron oxide content, and the amount of organic matter present. Chromium can be transported by surface runoff to surface waters in its soluble or precipitated form. Soluble and un-adsorbed chromium complexes can leach from soil into groundwater. The leachability of Cr (VI) increases as soil pH increases. Most of Cr released into natural waters is particle associated, however, and is ultimately deposited into the sediment. In the eight samples the chromium ranges between 9.8 to 13.5 mg/kg. As per New York State Department of Environmental Conservation (NYS DEC), the safety limit for Chromium (VI) concentration in soil is 22 mg/kg and as per the US EPA standard for concentration of Chromium (VI) in soil for initiating cleanup efforts is 230 mg/kg as research paper referred above.

Lead (Pb): Typical mean Pb concentration for surface soils worldwide averages 32 $mg\,kg^{-1}$ and ranges from 10 to 67 $mg\,kg^{-1}$. The most serious source of exposure to soil lead is through direct ingestion of contaminated soil or dust. In general, plants do not absorb or accumulate lead. However, in soils testing high in lead, it is possible for some lead to be taken up. Studies have shown that lead does not readily accumulate in the fruiting parts of vegetable and fruit crops (e.g., corn, beans, squash, tomatoes, strawberries, and apples).

Higher concentrations are more likely to be found in leafy vegetables (e.g., lettuce) and on the surface of root crops (e.g., carrots). Since plants do not take up large quantities of soil lead, the lead levels in soil considered safe for plants will be much higher than soil lead levels where eating of soil is a concern (pica). In the eight samples the Lead ranges between 2.1 to 8.9 mg/kg. In the research paper on "Potentially toxic metal contamination and enzyme activities in soil around chromite mines at Sukinda Ultramafic Complex" authored by Pattnaik et.al published in the Journal of Geochemical exploration, the safety range for lead content in soil is given as 250-500 mg/kg (Ref: https://www.sciencedirect.com/science/article/pii/S037567421630139X). The US EPA standard for concentration of lead in soil for initiating cleanup efforts is 400 mg/kg.

Nickel (Ni): Nickel is an element that occurs in the environment only at very low levels and is essential in small doses, but it can be dangerous when the maximum tolerable amounts are exceeded. It usually takes a long time for nickel to be removed from air. The larger part of all Ni compounds that are released to the environment will adsorb to sediment or soil particles and become immobile as a result. In acidic soils, however, Ni becomes more mobile and often leaches down to the adjacent groundwater. In the eight soil samples, the nickel content is ranging from 1.9 to 7.3 mg/kg In the research paper on "Potentially toxic metal contamination and enzyme activities in soil around chromite mines at Sukinda Ultramafic Complex" authored by Pattnaik et.al published in the Journal of Geochemical exploration, the safety limit for Nickel content in soil is given as 75-150 mg/kgas research paper referred aboveAs per the US EPA standard for concentration of Nickel in soil for initiating cleanup efforts is 1600 mg/kg as per the research paper referred above.

Arsenic (As): Arsenate can adsorb or co precipitates with metal sulfides and has a high affinity for other sulfur compounds. Elemental arsenic and arsine, AsH_3,

may be present under extreme reducing conditions. Biotransformation (via methylation) of arsenic creates methylated derivatives of arsine. As compounds adsorb strongly to soils and are therefore transported only over short distances in groundwater and surface water. In the eight samples the arsenic values are <0.1 mg/kg. As per the US EPA standard for concentration of Arsenic in soil for initiating cleanup efforts is 0.4 mg/kg as per the research paper referred above.

Mercury (Hg): Sorption to soils, sediments, and humic materials is an important mechanism for the removal of Hg from solution. Sorption is pH dependent and increases as pH increases. Mercury may also be removed from solution by co-precipitation with sulphides. Under anaerobic conditions, both organic and inorganic forms of Hg may be converted to alkylated forms by microbial activity, such as by sulfur-reducing bacteria. Elemental mercury may also be formed under anaerobic conditions by demethylation of methyl mercury, or by reduction of Hg (II). Acidic conditions (pH < 4) also favor the formation of methyl mercury, whereas higher pH values favor precipitation of HgS(s). In the eight samples the mercury content is < 0.1 mg/kg.

Cadmium (Cd): The application of agricultural inputs such as fertilizers, pesticides, and biosolids (sewage sludge), the disposal of industrial wastes or the deposition of atmospheric contaminants increases the total concentration of Cd in soils, and the bioavailability of this Cd determines whether plant Cd uptake occurs to a significant degree. Cadmium is very bio -persistent but has few toxicological properties and, once absorbed by an organism, remains resident for many years. The eight samples contain cadmium between 1.1 to 2.1 mg/kg. As per the US EPA standard for concentration of Cadmium in soil for initiating cleanup efforts is 70 mg/kg as per the research paper referred above

3.4.3.4 Conclusions

From the interpretation of field data, physical and chemical data it can be concluded that:

As per the physical data soils are moderately fine texture, having low bulk density, imperatively moderately water holding capacity, and moderately slow permeability. As per physical characters, soils are rated as poor to moderate for agriculture.

As per chemical characters, soil reaction (pH) soils are slight to moderately alkaline and electrical conductivity (EC) is non saline (normal) to saline. Organic matter is very less to less. Macro nutrient like nitrogen is very low and phosphorus is medium, to more than sufficient, potassium is sufficient, calcium, magnesium are medium to good and base saturation is moderate to good Sodium is below the limit to make soil saline or sodic or alkali, except in samples S1, S2, S5 & S6.

Micro-nutrients, Mn (very high may cause toxicity), Zn (normal) and B (Normal), Fe (very low), Al (low to very low), SO_4 and Cl are high to very high.

Cation Exchange capacity is high indicating moderate to good fertility. Exchangeable Ca is medium to good with medium to good base saturation, Ex K

is low, Ex Na is also low in four samples not indicating any alkalinity, and in samples S1, S3, S5 & S6 they are saline alkali to alkaline. Sodium adsorption ratio indicates the soils are normal.

For 4 samples and salt affected for above mentioned samples as observed during field visit of 10 km buffer area from boundary of proposed project.

The 10 km buffer from geomorphologic point of view, the area consists of slightly undulating plain topography with elevation ranging from 3 to7 m AMSL. The main geomorphic units are: Central high land and upland in Rann area, part of little Ran.

The thickness of the soil cover is more than 2 m. In general, area is characterized by slightly undulating and flat terrain. Thus as per analysis of soils data and field observation the land represented by samples by S2, S4, S7 & S8 can be classified as class III land i.e. moderate soils on plain to gentle slopes subject to water erosion, as per land capability classification (USDA) i.e. moderate land for sustained agriculture. Land represented by sample S1, S3, S5 & S6 are class IV land with limitation of soil and are not suitable for agriculture but may be used for pasture and afforestation.

3.5 Meteorology

The meteorological data recorded during the study period is very useful for proper interpretation of the baseline information as well as for input to air quality impact prediction model. Historical data on meteorological parameters will also play an important role in identifying the general meteorological regime of the region.

The year may broadly be divided into four seasons:

- Winter season : December to February
- Pre-monsoon season : March to May
- Monsoon season : June to September
- Post-monsoon season : October to November

3.5.1 Methodology

The methodology adopted for monitoring surface observations is as per the standard norms laid down by Bureau of Indian Standards (IS : 8829) and India Meteorological Department (IMD). On-site monitoring was undertaken for various meteorological variables in order to generate the site-specific data.

3.5.1.1Methodology of Data Generation

The Central Monitoring Station (CMS) equipped with continuous weather monitoring equipment was installed on top of a building near to the project site at a height of 10 m above ground level to record wind speed, direction, relative humidity and temperature. The meteorological monitoring station was located in such a way that it is free from any obstructions and cloud cover was recorded by visual observation. Rainfall was monitored by rain gauge.

3.5.1.2 Sources of Information

Secondary information on meteorological conditions has been collected from the nearest IMD station at new Kandla. The available meteorological data of IMD, new Kandla has been collected for the period 1971-2000 and analysed. The monthly maximum, minimum and average values are collected for all the parameters except wind speed and direction. All these parameters are recorded twice a day viz at 0830 and 1730 hours. The climatological data from IMD, new Kandla is shown in **Table-3.5.1.**

TABLE-3.5.1
CLIMATOLOGICAL DATA-STATION: IMD NEW KANDLA
YEAR (1971-2000)

Month	Atmospheric Pressure (mb)		Temperature (°C)		Relative Humidity (%)		Rainfall (mm)
	0830	1730	Mean Max	Mean Min	0830	1730	
January	1015.5	1012.6	29.2	10.6	60	40	0.8
February	1013.8	1010.8	32.6	12.4	62	36	2.1

3.5.2 Observations of Secondary Data

The data are presented in **Table-3.5.1** and are described below for IMD station, new Kandla. Wind direction and speed are presented in **Figure-3.5.1.**

- ***Temperature***

During winter season, mean maximum temperature is observed at 32.6°C in the month of February and the mean minimum temperature at 10.6°C is observed in the month of January. Both the day and night temperatures increase rapidly during the onset of summer season from March to May. During pre-monsoon the mean maximum temperature is observed at 39.8°C (May) with the mean minimum temperature at 16.0°C (March). The mean maximum temperature during monsoon season is observed in the month of June at 38.4°C and mean minimum temperature is observed in the month of September at 23.7°C. The mean maximum temperature during post-monsoon season is observed in the month of October at 37.6°C and mean minimum temperature is observed in the month of November at 16.2°C. The monthly mean values are presented in **Table-3.5.1.**

- ***Relative Humidity***

The relative humidity values at 0830-hr and 1730-hr are ranging from 36%-83%. The monthly mean values are presented in **Table-3.5.1**.

- ***Atmospheric Pressure***

It can be seen from the data that is slight variations are observed in the average atmospheric pressure levels. The pressure levels during the range from 997.5 - 1015.7 (mb). The monthly mean values are presented in **Table-3.5.1**.

- ***Rainfall***

The annual mean rainfall observed based on the 30 years IMD data is 397.4 mm. Mostly in the monsoon rains are also observed in the region. The monthly mean values are presented in **Table-3.5.1**.

- ***Wind Speed/Direction***

The seasonal and annual wind rose pattern (predominant wind direction and speed) as per the IMD new Kandla data is presented in **Table-3.5.2**.

TABLE-3.5.2
PREDOMINANT WIND PATTERN

Sr. No.	8.30 hrs		17.30 hrs	
	Wind Direction	Wind Speed Frequency (%)	Wind Direction	Wind Speed Frequency (%)

3.5.2.1 Observations On Primary Data - October to December, 2016

The site specific data is presented in **Table-3.5.3** and is discussed below:

TABLE-3.5.3
SUMMARY OF THE METEOROLOGICAL DATA GENERATED AT SITE

Month	Temperature (°C)		Relative Humidity (%)		Total Rainfall (mm)
	Min	Max	Min	Max	
October, 2016	17.9	40.6	47	96	0.0
November, 2016	13.1	37.1	53	98	0.0
December, 2016	9.2	36.3	50	94	0.0
Range	**9.2 – 40.6**		**47 - 98**		**0.0**

1) Temperature

The maximum temperature was observed to be 40.6°C during October 2016 and minimum temperature was observed to be 9.2°C during December 2016.

2) Relative Humidity

The relative humidity was observed to be a maximum of 98% for the month of November 2016 and a minimum of 47% for the month of October 2016.

3) Rainfall

There was no rainfall recorded during the study period.

4) Wind Speed/Direction

The predominant winds along with wind speeds during the study period are represented as windrose in **Figure-3.5.2** and are discussed below. A review of the wind rose diagram shows that predominant winds are mostly from SSW followed by SW.

3.6 Ambient Air Quality

The ambient air quality with respect to the study zone of 10 km distance around the proposed project boundary forms the baseline information. The prime objective of the baseline air quality study was to assess the existing air quality of the area. This will also be useful for assessing the conformity to standards of the ambient air quality during the project operations.

This section describes the selection of sampling locations, methodology adopted for sampling, analytical techniques and frequency of sampling. The ambient air quality was monitored at locations in and around the proposed project site. The air quality monitoring was conducted as per revised NAAQ standards 2009.

3.6.1 Methodology adopted for Air Quality Survey

The baseline status of the ambient air quality has been assessed through a scientifically designed ambient air quality monitoring network. The design of monitoring network in the air quality surveillance program has been based on the following considerations:

- Meteorological conditions on synoptic scale;
- The methodology for conducting the baseline environmental survey and selection of sampling locations considered the guidelines given in the EIA manual of the MoEF&CC;
- Topography of the study area;
- Representatives of regional background air quality for obtaining baseline status; and
- Representatives of likely impact areas.

3.6.2 Sampling and Analytical Techniques

The air samples were analyzed as per standard methods specified by Central Pollution Control Board (CPCB), IS:5184 and American Public Health Association (APHA).

3.6.2.1 Frequency and Parameters for Sampling

Ambient air quality monitoring was carried out at a frequency of two days per week at each location during the study period. The baseline data of air environment was generated for the following parameters:

- Particulate Matter (PM_{10});
- Particulate Matter ($PM_{2.5}$);
- Sulphur dioxide (SO_2);
- Nitrogen dioxide (NO_2);
- Carbon Monoxide (CO);
- Ozone (O_3);
- Ammonia (NH_3);
- Nickel (Ni);
- Benzene(C_6H_6);
- Arsenic (As);
- Lead (Pb); and
- Benzo Pyrene (BAP).

3.6.2.2 Duration of Sampling

The sampling duration for PM_{10}, $PM_{2.5}$, SO_2, NO_2, NH_3, C_6H_6, BaP, Pb, As, Ni and as was twenty-four hourly continuous samples per day and CO and O_3 was sampled for 8 hrs continuous thrice a day. This is to allow a comparison with the present revised standards mentioned in the latest Gazette notification of the Central Pollution Control Board (CPCB) (November 16, 2009).

Ambient air quality monitoring (AAQM) stations were set up at eight locations with due consideration to the above mentioned points. **Table-3.6.1** gives the details of environmental setting around each monitoring station and shown in **Figure-3.6.1**.

TABLE-3.6.1
DETAILS OF AMBIENT AIR QUALITY MONITORING LOCATIONS

Station Code	Location	Distance from Centre of Project Site (km)	Direction w.r.t. Centre of Project Site
AAQ1	Project Site	-	-
AAQ2	Navinal	1.7	ENE
AAQ3	Bhujpar Mota	6.2	NE
AAQ4	Jarpara	6.8	ENE
AAQ5	Wandh	1.8	SW
AAQ6	Kandagara	4.4	NW
AAQ7	Siracha	1.7	NNW
AAQ8	Moti Khakhar	5.9	NNW

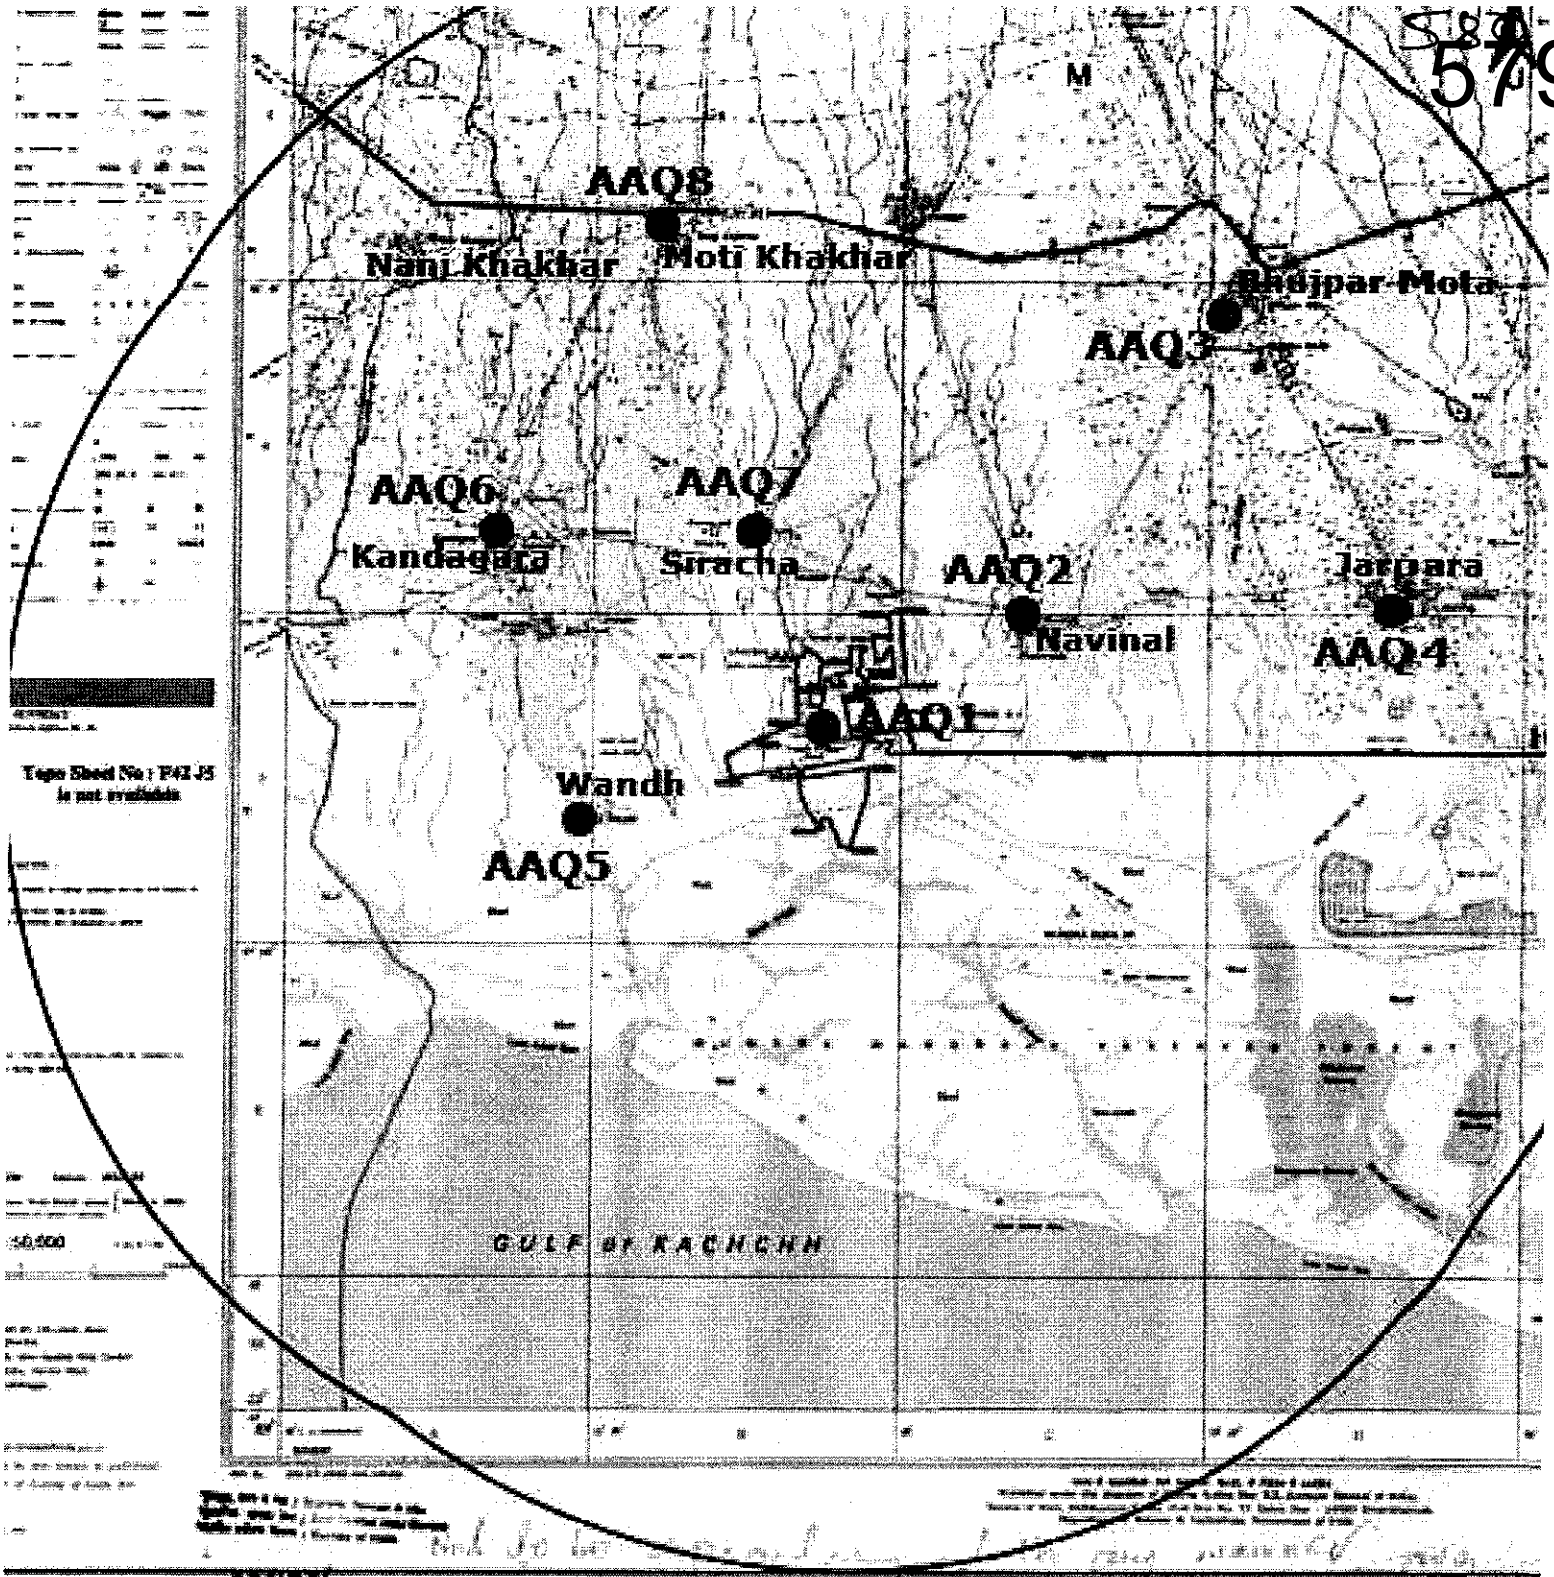
3.6.2.3 Description and Justification of Sampling Locations

A brief description and justification for selecting the sampling locations are presented hereunder:

Project Site (AAQ1): This sampling station was placed in this location of latitude 22°48'49.8"N and longitude 69°34'28.7" E, located within the project site. The main objective for selecting this location is to assess the concentration of pollutants within proposed project site premises. This will also be useful for assessing the conformity to standards of the ambient air quality during the proposed project operation. The site is barren and falls under industrial land use category.

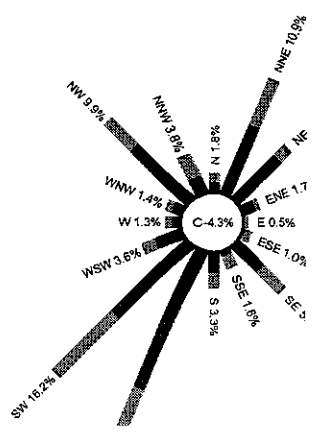
Navinal Village (AAQ2): This sampling station was placed in this location of latitude 22°50'0.17"N and longitude 69°35'51.2"E at a distance of about 1.7 km in ENE direction of the project site. The objective for selection of this location is to assess the concentration of pollutants in downwind direction of the proposed project site, which is in the rural residential area.

Bhujpor Mota Village (AAQ3): This sampling station was placed in this location of latitude 22°52'33.4"N and longitude 69°37'58.9"E at a distance of about 6.2 km in NE direction of the proposed project site. The objective for selection of this location is to assess the concentration of pollutants in downwind direction of the proposed project site, which is in the populated and commercial area.



Jarpara Village (AAQ4): This sampling station was placed in this location of latitude 22°50'09.1"N and longitude 69°37'30.7"E at a distance of about 6.8 km in ENE (cross wind) direction of the proposed project site. The objective for selection of this location is to assess the concentration of pollutants in crosswind direction of the proposed project site, which is in the densely populated residential area.

Wandh Village (AAQ5): This sampling station was placed in this location of latitude 22°48'37.6"N and longitude 69°32'23.5"E at a distance of about 1.8 km in SW direction of the proposed project site. The objective for selection of this location is to assess the concentration of pollutants in upwind direction of the proposed project site, which is nearest village from the proposed project site and other existing plants like Tata Power Plant of 4000 MW capacity-(1.3 km, NW) & Adani Power Plant of 4620 MW–(1.8 km, NE) are located close to this sampling location.



Kandagara Village (AAQ6): This sampling station was placed in this location of latitude 22°50'34.7"N and longitude 69°31'47.5"E at a distance of about 4.4 km in NW direction of the proposed project site. The objective for selection of this location is to assess the concentration of pollutants in crosswind direction, which is located in the commercial area and nearby SH-6 (0.3 km, East direction of the sampling location). This location is also close to the Tata Power Plant.

Siracha Village (AAQ7): This sampling station was placed in this location of latitude 22°50'36.5"N and longitude 69°33'47.8"E at a distance of about 1.7 km in NNW direction of the proposed project site. The objective for selection of this location is to assess the concentration of pollutants in crosswind direction, which is located in the rural residential area.

Moti Khakhar Village (AAQ8): This sampling station was placed in this location of latitude 22°52'43.2"N and longitude 69°33'07.5"E at a distance of 5.9 km NNW direction of the proposed project site. The objective for selecting this location is to assess the concentration of pollutants in crosswind direction, which is located in the commercial area and nearby NH-8A (0.5 km, North direction of the sampling location).

● Ambient Air Quality Monitoring Locations

3.6.3 Presentation of Primary Data - Baseline Air Quality

The 98th percentile, average, maximum and minimum values have been computed from the observed raw data for all the AAQ monitoring stations. The summary of these results for each location during the Study period (October to December, 2016) are presented in **Table-3.6.2**. The detail AAQ monitoring results are presented in **Annexure-IX.**

- **Summary of Observations**

The results of the monitored data indicate that the ambient air quality of the region in general is in conformity with respect to industrial, commercial and rural/residential norms of the National Ambient Air Quality Standards of CPCB, with present level of activities.

$PM_{2.5}$: The minimum value for $PM_{2.5}$ is observed at Bhujpar Mota (AAQ3), as 19.2 $\mu g/m^3$ with the maximum value observed at Moti Khakhar (AAQ8), as 43.9 $\mu g/m^3$ during the study period.

PM_{10}: The minimum value for PM_{10} is observed at Japara (AAQ4), as 35.2 $\mu g/m^3$ with the maximum value observed at Moti Khakhar (AAQ8), as 84.2 $\mu g/m^3$ during the study period.

SO_2: The minimum value for SO_2 is observed at Japara (AAQ4), 14.8 $\mu g/m^3$ as with the maximum value observed at Moti Khakhar (AAQ8), as 42.6 $\mu g/m^3$ respectively during the study period.

NO_2: The minimum value for NO_2 is observed at Project Site (AAQ1), as 13.1 $\mu g/m^3$ with the maximum value observed at Moti Khakhar (AAQ8), as 32.8 $\mu g/m^3$ during the study period.

CO: The minimum value for CO is observed at Bhujpar Mota (AAQ3), as 262 $\mu g/m^3$ with the maximum value observed at Wandh (AAQ5), as 412 $\mu g/m^3$ $\mu g/m^3$ during the study period.

O_3: The minimum value for O_3 is observed at Moti Khakhar (AAQ8), as 2.4 $\mu g/m^3$ with the maximum value observed at Wandh (AAQ5), as 6.9 $\mu g/m^3$ during the study period.

Ammonia (NH_3): Ammonia concentration observed in all the locations is <20.0 $\mu g/m^3$.

Benzo(a) Pyrene (BaP): BaP values observed in all the locations are <1.0 ng/m^3.

Benzene (C_6H_6): Benzene concentration was observed in all the locations are <1.0 ng/m^3.

Heavy Metals: All heavy metals were observed to be below detectable limits.

- **Conclusion:**

From the above analysis of the data, it infers that the baseline concentrations in the study area are within the permissible limits. However, the high concentrations can be attributed to the presence of the two major power plants and dusty open terrain and industrial traffic in the study area.

3.7 Water Quality

Selected water quality parameters of surface and ground water resources within 10 km radius of the study area has been studied for assessing the water environment and evaluate anticipated impact of the project. Understanding the water quality is essential in preparation of environmental impact assessment and to identify critical issues with a view to suggest appropriate mitigation measures for implementation.

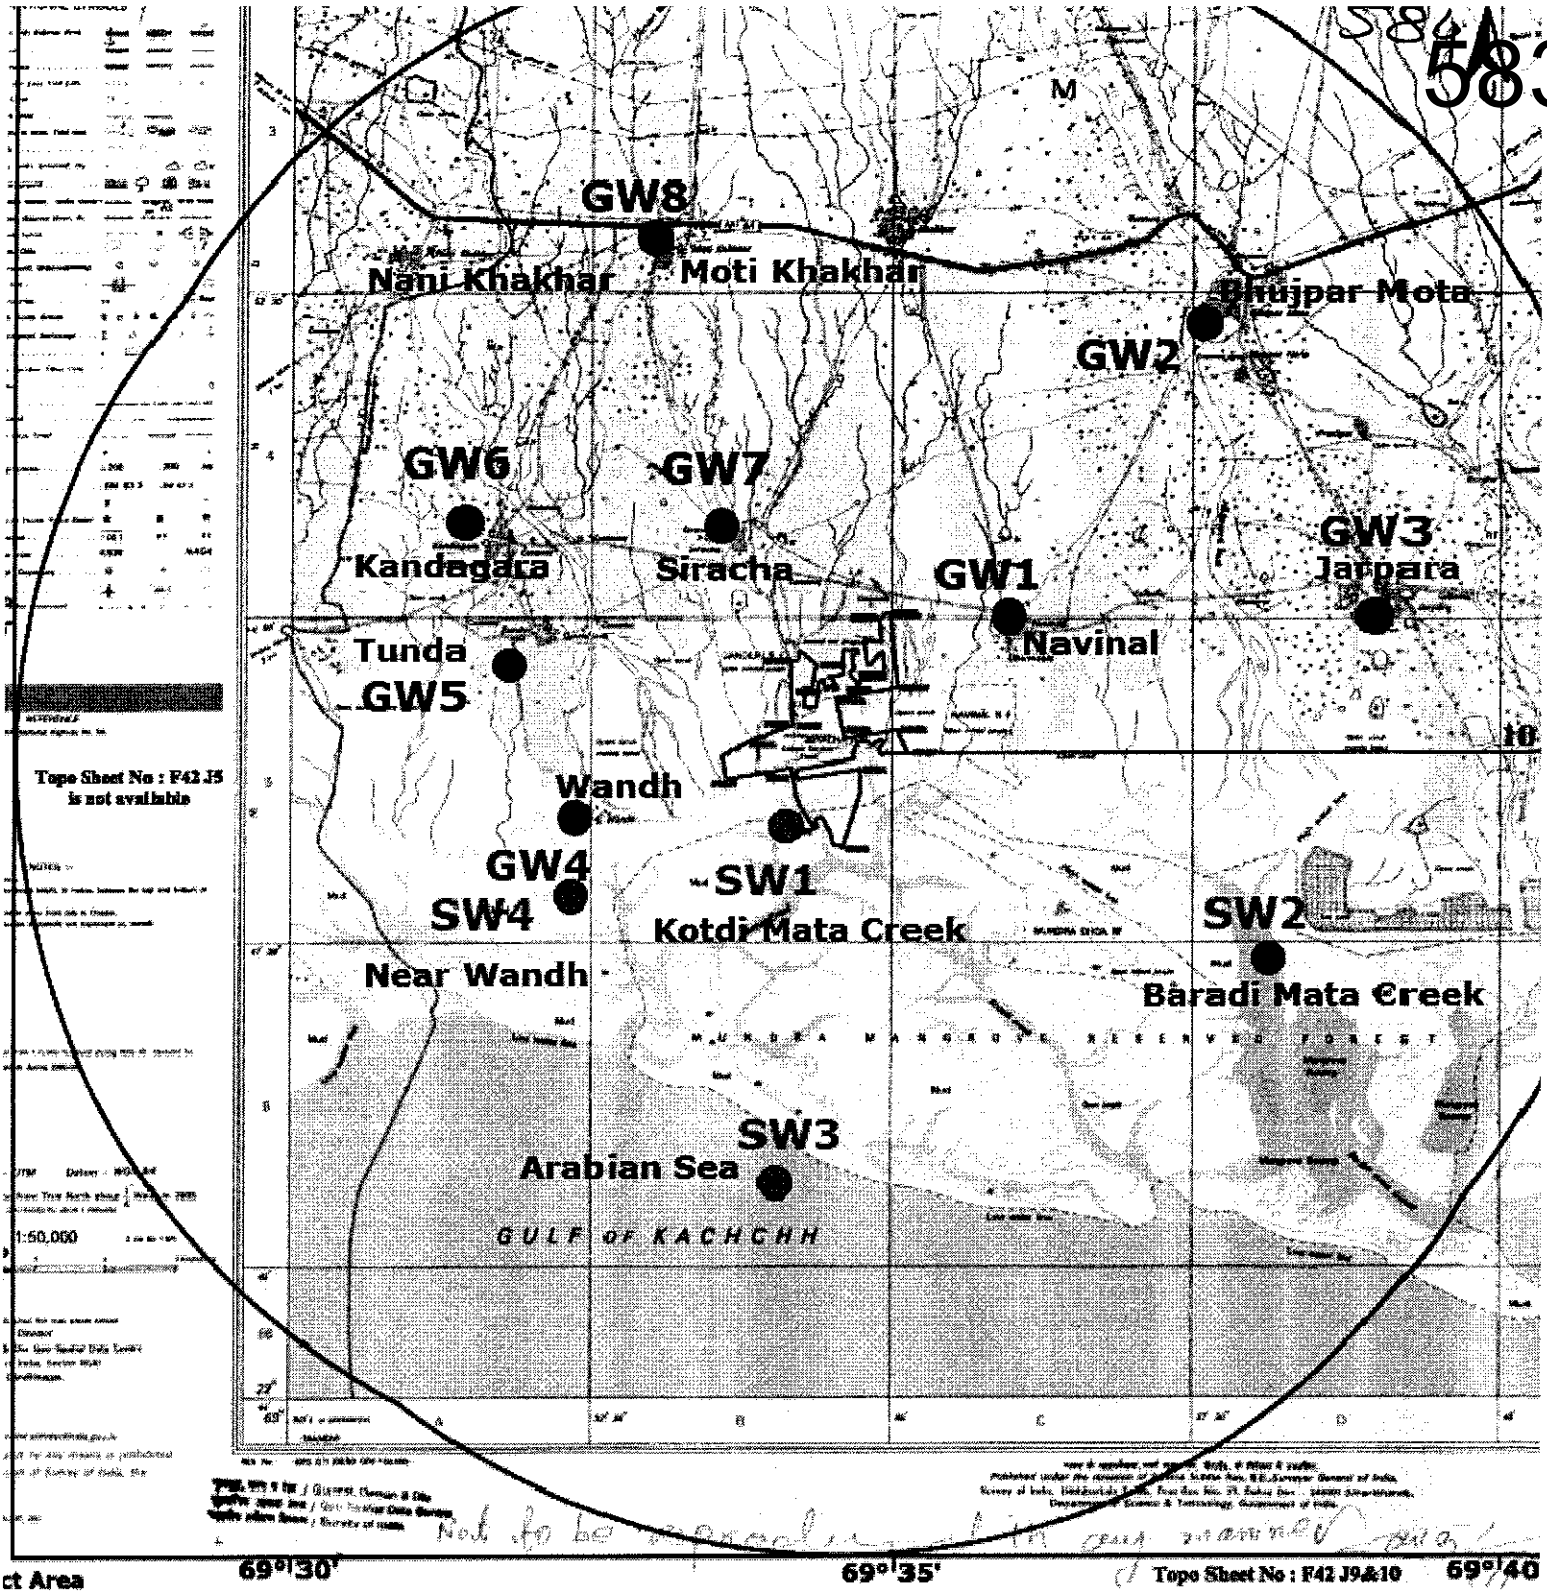
The purpose of this study is to:

- Assess the water quality characteristics for critical parameters;
- Evaluate the impacts on agricultural productivity, habitat conditions, recreational resources and aesthetics in the vicinity; and
- Predict impact on water quality by this project and related activities.

The information required has been collected through primary surveys and secondary sources.

3.7.1 Methodology

Reconnaissance survey was undertaken and monitoring locations were finalized based on:



- Drainage pattern and surface water bodies;
- Location of residential areas representing different activities/likely impact areas; and
- Likely areas, which can represent baseline conditions.

The ground water and surface water sources covering 10 km radial distance were examined for physico-chemical, heavy metals and bacteriological parameters in order to assess the effect of industrial and other activities on surface and ground water. The samples were analyzed as per the procedures specified in 'Standard Methods for the Examination of Water and Wastewater' published by American Public Health Association (APHA).

Samples for chemical analysis were collected in polyethylene carboys. Samples collected for metal content were acidified with 1 ml HNO_3. Samples for bacteriological analysis were collected in sterilized glass bottles. Selected physico-chemical and bacteriological parameters have been analyzed for projecting the existing water quality status in the study area.

3.7.2 Water Sampling Locations

Eight ground water samples and four surface water sample was collected from the study area during the monitoring period. These samples were taken as grab samples and were analyzed for various parameters to compare with the standards for drinking water as per IS: 10500 "Specifications for Drinking Water". The water sampling locations are identified in **Table-3.7.1** and shown in **Figure-3.7.1.**

ct Area

● Ground Water Sampling Locations

● Surface Water Sampling Locations

3.7.2.1 Description and Justification of Sampling Locations

Four surface water and eight ground water samples were collected at sampling locations to know the water quality and any contamination of water. A brief description and justification of selecting the sampling locations is presented hereunder:

- **Ground Water Sampling Locations**

Navinal Village (GW1): The ground water sample was collected in location of latitude 22^{0}49'51.3"N and longitude 69^{0}35'54.0"E at a distance of about 1.7 km in ENE direction of the project site. The objective for selection of this location is to assess the water quality and any contamination of water in rural residential area.

Bhujpor Mota Village (GW2): The ground water sample was collected in location of latitude 22^{0}53'00.9"N and longitude 69^{0}37'36.5"E at a distance of about 6.2 km in NE direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in the densely populated and commercial area.

Jarpara Village (GW3): The ground water sample was collected in location of latitude 22^{0}50'09.1"N and longitude 69^{0}37'30.7"E at a distance of about 6.8 km in ENE (cross wind) direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in the populated residential area.

Wandh Village (GW4): The ground water sample was collected in location of latitude 22^{0}48'34.7"N and longitude 69^{0}32'34.1"E at a distance of about 1.8 km in SW direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in the nearest Wandh village located to the project site and other existing plants (Coastal Gujarat Power

Limited-1.3 km in NW direction and Adani Power Limited -1.8 km NE direction) of sampling location.

Tunda Village (GW5): The ground water sample was collected in location latitude 22°49'54.1"N and longitude 69°32'28.7" E at a distance of about 3.4 km in NW direction of the proposed project site. The main objective to select this location is to assess the water quality and any contamination of water in the residential area.

Kandagara Village (GW6): The ground water sample was collected in location of latitude 22°50'34.7"N and longitude 69°31'47.5"E at a distance of about 4.4 km in NW direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in the commercial area and nearby SH-6 (0.3 km, East direction of the sampling location).

Siracha Village (GW7): The ground water sample was collected in location of latitude 22°50'36.5"N and longitude 69°33'47.8"E at a distance of about 1.7 km in NNW direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in the rural residential area.

Moti Khakhar Village (GW8): The ground water sample was collected in location of latitude 22°52'46.2"N and longitude 69°33'15.3"E at a distance of 5.9 km NNW direction of the proposed project site. The objective for selecting this location is to assess the water quality and any contamination of water in the commercial area and nearby NH-8A (0.5 km, North direction of the sampling location).

- **Surface Water Sampling Locations**

Kodit Creek (SW1): The surface water sample was collected in location of latitude 22°48'18.6"N and longitude 69°34'18.4"E at a distance of about 4.5 km in SSW direction of the project site. The objective for selection of this location is to assess the water quality and any contamination of water in creak due to nearby industries.

Baradi Mata Creek (SW2): The surface water sample was collected in location of latitude 22°46'38.3"N and longitude 69°38'06.4"E at a distance of about 6.4 km in ESE direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in creak due to nearby industries.

Arabian Sea Water intake (SW3): The surface water sample was collected in location of latitude 22°43'18.4"N and longitude 69°33'55.2"E at a distance of about 5.0 km in S (cross wind) direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in sea due to nearby industries.

Creek at Wandh Village (SW4): The surface water sample was collected in location of latitude 22°48'14.7"N and longitude 69°32'36.9"E at a distance of about 2.0 km in SW direction of the proposed project site. The objective for selection of this location is to assess the water quality and any contamination of water in creek due to nearby industries.

3.7.3 Presentation of Results

The results of the water quality monitored during the study period are given in **Table-3.7.2** and **Table-3.7.3**.

3.7.3.1 Surface Water Quality

The analysis results indicate that pH is found to be 7.2 to 8.0, which is well within the specified standard 6.5-8.5. The TDS was observed to be 41645 to 43572 mg/l. Dissolved oxygen was observed to be 5.6 to 5.9 mg/l. The chlorides and sulphates were found to be 16078.9 to 20915.5 mg/l and 2139.1 to 2734.0 mg/l respectively. Bacteriological studies reveal the 5 MPN/100ML. The surface water is observed to be brackish in nature. This can be attributed due to presence of Arabian sea inclose proximity.

3.7.3.2 Ground Water Quality

The analysis results indicate that the pH ranges in between 7.3 to 7.8, which is well within the specified standard of 6.5 to 8.5. Total hardness was observed to be ranging from 125 to 392 mg/l.

Chlorides at all the locations were ranging in between 282.6 to 978.4 mg/l. Fluorides were observed to be ranging in between 0.9 to 1.5 mg/l and are found to be within the permissible limit. Nitrates are found to be in range of 8.2 to 22.0 mg/l. Bacteriological studies reveal that no coliform bacteria are present in the samples. The heavy metal contents were observed to be in well within the limits except few parameters. It can be observed that the ground water quality is influenced by sea water quality possibly due to sea water ingression.

3.8 Noise Level Survey

The main objective of noise monitoring in the study area is to establish the baseline noise levels and assess the impact of the total noise expected to be generated by the construction and operation of the proposed project.

3.8.1 Identification of Sampling Locations

A preliminary reconnaissance survey has been undertaken to identify the major noise generating sources in the area. Noise at different noise generating sources has been identified based on the residential, commercial and industrial activities in the area. The monitoring locations are given in **Table-3.8.1** and shown in **Figure-3.8.1.**

TABLE-3.8.1
DETAILS OF NOISE MONITORING LOCATIONS

Location code	Locations	Distance w.r.t. Project Site (km)	Direction w.r.t. Project Site
N1	Project Site	-	-
N2	Navinal	1.7	ENE
N3	Bhujpar Mota	6.2	NE
N4	Jarpara	6.8	ENE
N5	Wandh	1.8	SW
N6	Kandagara	4.4	NW
N7	Siracha	1.7	NNW
N8	Moti Khakhar	5.9	NNW

3.8.1.1 Description and Justification of Sampling Locations

The integrated sound meter was used to measure the nosie levels at eight sampling locations to monitor the noise level. A brief description and justification for selecting the sampling locations is presented hereunder:

Project Site (N1): The noise levels are recorded in location latitude 22^{0}48'49.8"N and longitude 69^{0}34'28.7" E within the proposed project area. The main objective for selecting this location is to assess the noise levels within proposed project site premises.

Navinal Village (N2): The noise levels are recorded in location of latitude 22^{0}52'43.2"N and longitude 69^{0}33'07.5"E at a distance of about 1.7 km in ENE direction of the project site. The objective for selection of this location is to assess the noise levels in rural residential area.

Bhujpor Mota Village (N3): The noise levels are recorded in location of latitude 22^{0}52'33.4"N and longitude 69^{0}37'58.9"E at a distance of about 6.2 km in NE direction of the proposed project site. The objective for selection of this location is to assess the noise levels of the densely populated and commercial zone.

Jarpara Village (N4): The noise levels are recorded in location of latitude 22°50'09.1"N and longitude 69°37'30.7"E at a distance of about 6.8 km in ENE (cross wind) direction of the proposed project site. The objective for selection of this location is to assess the noise levels of the densely populated residential area.

Wandh Village (N5): The noise levels are recorded in location of latitude 22°48'37.6"N and longitude 69°32'23.5"E at a distance of about 1.8 km in SW direction of the proposed project site. The objective for selection of this location is to assess the noise levels of the nearest village located to the project site and other existing plants (Tata Power Plant -1.3 km in NW direction and Adani Power Plant – 1.8 km NE direction) of sampling location.

Kandagara Village (N6): The noise levels are recorded in location of latitude 22°50'34.7"N and longitude 69°31'47.5"E at a distance of about 4.4 km in NW direction of the proposed project site. The objective for selection of this location is to assess the noise levels of the commercial area and nearby SH-6 (0.3 km, East direction of the sampling location).

Siracha Village (N7): The noise levels are recorded in location of latitude 22°50'36.5"N and longitude 69°33'47.8"E at a distance of about 1.7 km in NNW direction of the proposed project site. The objective for selection of this location is to assess the noise levels of the rural residential area.

Moti Khakhar Village (N8): The noise levels are recorded in location of latitude 22°52'43.2"N and longitude 69°33'07.5"E at a distance of 5.9 km NNW direction of the proposed project site. The objective for selecting this location is to assess the noise levels of the commercial area and nearby NH-8A (0.5 km, North direction of the sampling location).

3.8.2 Methodology of Data Generation

Sound Pressure Level (SPL) measurements were measured at all locations. The readings were taken for every hour for 24 hours. The day noise levels have been monitored during 6 am to 10 pm and night levels during 10 pm to 6 am.

Noise levels were measured using integrated sound level meter manufactured by Quest Technologies, USA (Model No.2900). The integrating sound level meter is an integrating/ logging type with Octave filter attachment (model OB-100) with frequency range of 31.5 to 16000 Hz. This instrument is capable of measuring the Sound Pressure Level (SPL), L_{eq} and octave band frequency analysis.

The noise levels were monitored on working days only and Saturdays, Sundays and public holidays were not monitored. During each hour L_{eq} was directly computed by the instrument based on the sound pressure levels.

Lday (Ld), Lnight (Ln) and Ldn values were computed using corresponding hourly Leq of day and night respectively. Monitoring was carried out at 'A' response and fast mode.

- ***Parameters Measured During Monitoring***

For noise levels measured over a given period of time interval, it is possible to describe important features of noise using statistical quantities. This is calculated using the percent of the time certain noise levels exceeds the time interval. The notation for the statistical quantities of noise levels is described below:

L_{10} is the noise level exceeded 10 percent of the time;
L_{50} is the noise level exceeded 50 percent of the time; and
L_{90} is the noise level exceeded 90 percent of the time.

The ambient noise standards levels as per CPCB guidelines are given in **Table-3.8.2**.

TABLE-3.8.2
AMBIENT NOISE STANDARDS

Area Code	Ambient Noise Standards		
	Category of Area	Noise Levels (dB (A) Leq (Limits)	
		Day time	Night time
A	Industrial Area	75	70
B	Commercial Area	65	55
C	Residential Area	55	45
D	Silence Zone	50	40

Source : Ambient Noise Standards of CPCB

3.8.3 Presentation of Results

The statistical analysis is done for measured noise levels at eight locations. The parameters are analyzed for L_{10}, L_{50}, L_{90}, L_{eq}, L_{day}, L_{night}, and L_{dn}. The statistical analysis results monitored during the study period (i.e. October to December, 2016) are given in **Table-3.8.3**.

3.8.4 Observations

Day time Noise Levels (L_{day})

The day time noise levels were ranged in between 48.5 dB (A) to 56.6 dB (A). The maximum value 56.6 dB (A) was recorded at Siracha (N7), and the minimum value 48.5 dB (A) was recorded at Moti Khakhar (N8).

Night time Noise Levels (L_{night})

The night time noise levels were ranged in between 42.3 dB (A) to 48.8 dB (A). The maximum value 48.8 dB (A) was recorded at Siracha (N7), and the minimum value 42.3 dB (A) was recorded at Moti Khakhar (N8).

3.9 Ecology and Biodiversity

3.9.1 Habitats in the Study Area

Ecological evaluation aims at developing and applying methodologies to assess the relevance of an area for nature conservation. As such, it is to support the assessment of the impact of a proposed development by providing guidance on how to describe the ecological features within the area affected, how to value them, and how to predict the value losses caused by the development. The evaluation of the ecological significance of an area can be undertaken from different perspectives and consequently with different objectives. One of such perspectives focuses on the conservation of the biological diversity or biodiversity.

Most of the background data needs to be acquired from the governmental agencies or the scientific literature. This information is typically complemented by field visit, site surveys and sample collection. The description of the actual ecological assessment provided by the ecological baseline study serves to set a reference for the subsequent impact analysis. Moreover, it helps decision makers and EIA reviewers to become familiar with the environmental features and the needs of the study area (10 km radius).

3.9.2 Objectives of the Study

The present study was undertaken with the following objectives to assess both terrestrial and aquatic habitats of the study area:

- To assess the nature and distribution of vegetation in and around the project site;
- To assess the flora and fauna of the study area;
- To understand the ecology of the marine habitat;
- To ascertain the migratory routes of fauna, presence of breeding grounds and sensitive habitats in the study area, if any;
- To assess the presence of protected areas in the study area;
- To review the information from secondary sources and discuss the issues of concern with the relevant authority and stakeholders; and

- Impact prediction based on primary and secondary data sources to formulate mitigation measures.

3.9.3 Methodology

To achieve the above objectives, a detailed study of the area was undertaken with the project site as its center. The different techniques used for the survey are given below:

- Generation of primary data by undertaking systematic ecological studies in the study area;
- Primary data collection for flora through random sampling method for trees, shrubs and herbs from the selected locations to know the vegetation cover qualitatively;
- To spot the fauna in the study area and also to identify the fauna by secondary indicators such as pugmarks, scats, fecal pallets, calls and other signs;
- For ecological information, the secondary sources such as local officials, villagers and other stakeholders were interviewed; and
- Sourcing secondary data with respect to the study area from published literature.

The list of terrestrial and aquatic sampling locations in the study area is presented in **Table-3.9.1** and shown in **Figure-3.9.1.**

TABLE-3.9.1

3.9.4 Terrestrial Ecology- Analysis of the Primary Survey and the Secondary Data

The biological environment described includes the description of forests areas and protected areas from secondary sources like working plan and management plans. Apart from this floral and faunal composition present in the open areas (for each taluka) as information collected through primary data collection described.

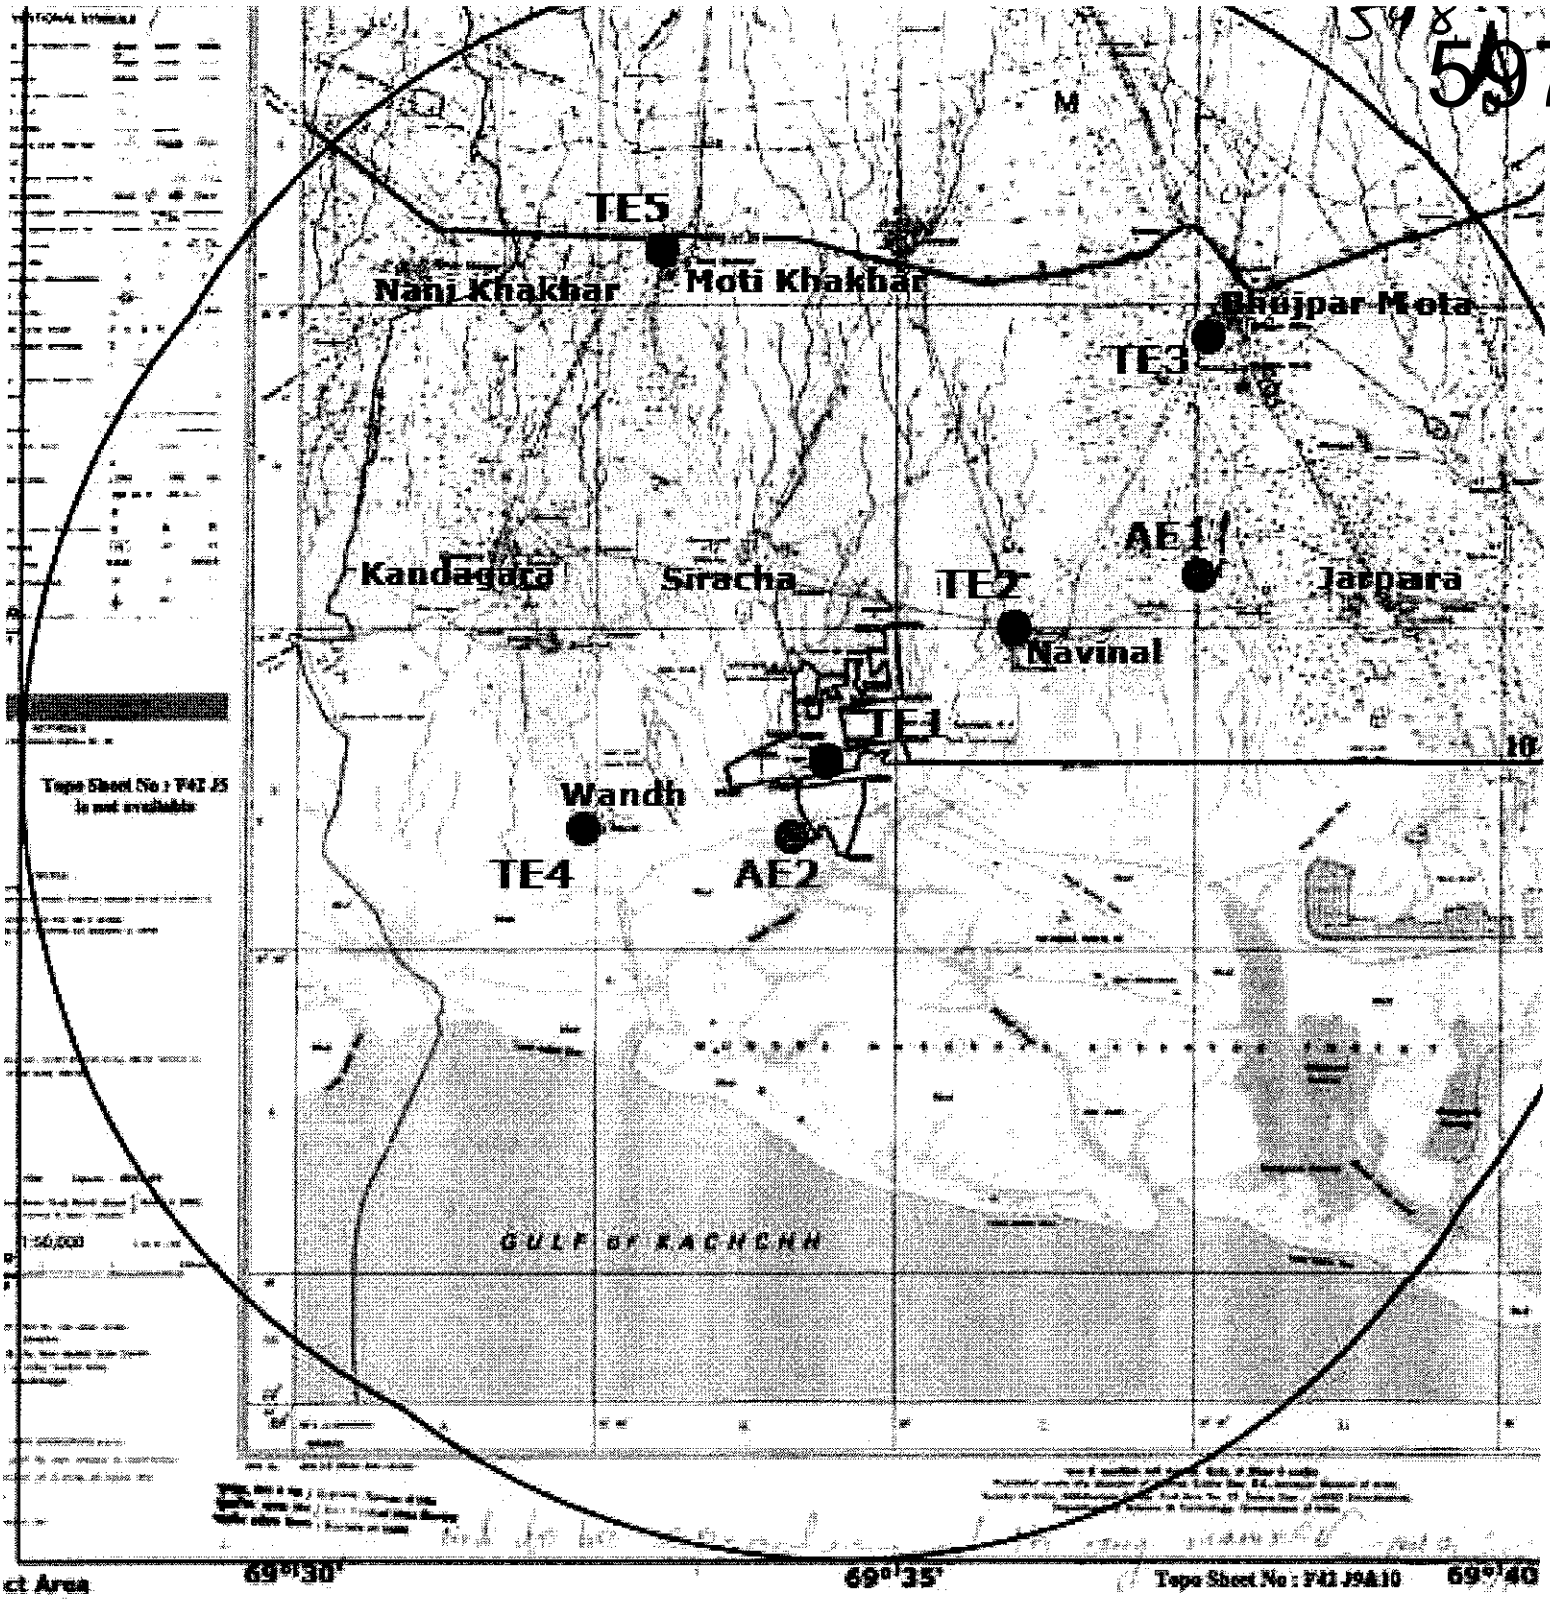
Entire coastal zone of the Gulf of Kutch falls in semi-arid zone (Biotic province-4B: Gujarat-Rajwada). Over a dozen vegetation communities are found in the coastal zone of the gulf. The major vegetation communities or the forest subtypes, as per the Champion and Seth Classification 1968, and natural ecosystems occurring in the coastal talukas of the Gulf of Kutch are as follows:

- 4B – Tidalor swamp forests-mangroves;
- 5/E8– Saline/alkaline scrub Savannah;
- 5/E3 – Babool (*Acacia nilotica*) forests;
- 6B/C1 – Desert thorn forests;
- 6B/DSI – Zizyphus scrub;
- 6B/DS2 – Tropical *Euphorbia;*
- 6E1–*Euphorbia*scrubs;
- 6E2 – *Acacia senegal* forests;
- 6E4 – *Salvadora* scrubs;
- 6/DS1 – Cassia *auriculata;*
- *Prosopis* scrubs- a major vegetation type developed during the last four to five decades; and
- *Sueda* sp. covered saline lands.

The main dominant tree and woody species in the coast of the gulf are-*Acacia nilotica* (deshibabool), *A. Senegal* (gorad), *A. leucophloea* (hermo), *Zizyphus* sp.(bordi), *Salvadora persica* (kharapiloo), *Salvadora oleonoides* (mithapiloo), *Commiphora wightii* (gugal), *Balanite aegyptiaca* (ingoriyo), *Capparis* sp, (kerdo), *Euphorbia* sp. and *Prosopis chilensis, Azadirachta indica* -Neem, *Cocos nucifera-, Mangifera indica*-Mango, (*Terminalia catappa*),Badam, *Ficus bengalensis* (Vad), Pipado- (*Ficus religiosa*) are normally grown in the villages.

Source: *GES, FES, MIR- Ecological Profile of Coastal Talukas of Kacchh September -2014* & Botanical Survey of India publication, dated 1997.

3.9.4.1 Core Zone – Flora and Fauna



The core area is very arid and vegetation is represented by the presence of *Prosposis juliflora* (Vilayati babul). The following of the species are listed in the **Table-3.9.2**.

TABLE-3.9.2
FLORA OF CORE ZONE (PROJECT SITE)

Sr. No	Scientific Name	Common Name	Family
Trees			
1	*Prosopis juliflora*	Vilayati Babul	Mimosaceae
Shurbs			
1	*Cassia auriculata*	Tanner's Cassia	Caesalpinaceae
2	*Lantana camara*	Lantana	Verbanaceae
Grasses			
1	*Cyonodon dactylon*	Nut Grass, Dharbha	Poaceae
2	*Heteropogon contortus*	Khad Grass	Poaceae

3.9.4.2Fauna of the Core Area (Project Site)

The species observed in the core zone were of common occurrence, mostly common birds such as common crow, common sparrow and egrets. The commonly observed mammals were mongoose, and squirrels. The list of animal species recorded in core area is presented in **Table-3.9.3**.

● Terrestrial Ecological Sampling Locations
● Aquatic Ecological Sampling Locations

3.9.4.3 Buffer Area

The fertility of the coastal soil is affected by salinity. The vegetation is characterized by arid–semi-arid and mainly consist of trees, shrubs under shrubs and climbers with stunted growth with admixture of xerophytes & thorny species the dominant floral species are *prosopis juliflora*, *Phoenix sylvestris*, *Acacia Senegal*, and *Acacia nilotica*. The list of plant species recorded is presented in the **Table-3.9.4.**

TABLE-3.9.4

3	*Ceriops tagal*	Spurred Mangrove	Rhizophoraceae
4	*Bruguiera gymnorhiza*	Large Leafed Orange Mangrove	Rhizophoraceae

3.9.5 Mangroves

Mangroves are situated about 4.5 km near Kotri creek area/ SSW direction, distributed along the networks of creek system. Mangroves are predominantly composed of *Avicenna marina*, Species known for its high tolerance of salinity and other environmental stresses.

3.9.6 Endemic Flora Species and Threatened Flora of Navinal Area

Important threatened plant species reported from the region are *Dipcadi erythraeum, Helichrysum cutchicum, Heliotropium rariflorum, Pavonia ceratocarpa, Convolvulus stocksii, Commiphora wightii.*

Gujarat State Biodiversity Board earlier proposed to declare the area as biodiversity heritage site. However the proposed development of the "Biodiversity Park at Navinal village, Mundra Taluk" has been shelved by Gujarat State Biodiversity Board, though initially proposed. Hence, it is given to understand that the earlier proposed biodiversity park will not be further developed in the study area.

3.9.7 Reserve Forests

The following reserve forests are found in the 10 km radius areas which are Mundra Dhoa reserve forest, Dhanderi reserve forest, Navinal Reserve forest, Mundra mangrove reserve forest, Japava reserve forests in the study area. Part of the project site falls in Dhanderi reserve forest area, for which stage-I clearance has been obtained.

There are no wildlife sanctuaries, notified wetlands or national parks within the study area. Avifauna reported in the study area is listed in the following **Table-3.9.5.**

TABLE-3.9.5

2	*Hoplobatrachus tigerinus*	Indian bullfrog	Sch-IV

3.9.8 Species Richness and Diversity indices

Species diversity is calculated for the communities using the formula

Shannon-Wiener Index is defined and given by the following function:

$H=\sum [(pi)\times ln(pi)]$

Where –

- *pi*= proportion of total sample represented by species *i*
- Divide no. of individuals of species i by total number of samples.
- *S* = number of species, = species richness
- *Hmax=ln(S)*

  = Maximum diversity possible

E= Evenness = *H Hmax*

Name of the Species	Number of Individuals	*pi*	*ln(pi)*	*pi×ln(pi*
Prosopis juliflora	60	0.60	-0.51	0.31
Acacia senegal	10	0.10	-2.30	-0.23
Salvadora persica	25	0.25	-1.39	-0.35
Commiphora wightii	1	0.01	- 4.61	-0.05
Prosopis cineraria	4	0.04	-3.22	-0.13
S=5	100			Sum=-1.07

S = 5 Sum = 100 Sum = -1.07

H=1.07*Hmax=ln(S)* =*ln* (5) =1.61*E*=1.071.61=0.66*Shannon diversity index* (*H*) =1.07 *Evenness*=0.66

3.9.8.1 Phytoplankton

List of Phytoplankton observed in sampling locations is presented in **Table-3.9.6.** Samples were collected from Nagavanti river and Kotri creek. 11 species were collected at the sampling locations.

3.9.9 Conservation Plan

Conservation Plan for the Indian Peafowl which is found in the buffer zone of the Adani copper refinery project at Mundra is discussed below:

3.9.9.1 Peafowl –Conservation (Peacock)

INDIAN PEAFOWL

3.9.9.2 Description

The Indian Peafowl is the largest pheasant occurring in the subcontinent. The species was first named and described by Linnaeus in 1758 and the name *Pavo cristatus* is still in use now. The male peacock is predominantly blue with a fan-like crest of spatula-tipped wire-like feathers and is best known for the long train made up of elongated upper-tail covert feathers which bear colorful eye spots. These stiff and elongated feathers are raised into a fan and quivered in a display during courtship. The female lacks the train, has a greenish lower neck and a duller brown plumage. The Indian Peafowl is found mainly on the ground in open forest or on land under cultivation where they forage for berries, grains but will also prey on snakes, lizards and small rodents. The scientific classification of this species is given below with its distribution in India.

3.9.9.3 Identification Features of Indian Peafowl

Peafowl has a splendid glossy green long tail feathers that may be more than 60 percent of the birds total body length. These features have blue, golden green and copper coloured ocelli (eyes). The long tail feathers are used for courtship displays. The feathers are arched into magnificent fan shaped form across the back of the bird and almost touching the ground on both sides. Females do have graceful tail feathers. They have fan like crest with whitish face and throat, chestnut brown crown and hind neck, metallic green upper breast and mantle, white belly and brown back rump and tail. Their primaries feathers are dark brown.

3.9.9.4 Importance of the Species

The peafowl is prominent in the mythology and folklore of the Indian people. The Hindus consider the bird to be sacred because of its association with Lord Krishna who used to wear its feather as crown (*Mor Mokut*). It is also associated with the God *Kartikeya*, son of the Lord *Shiva* and *Parvati* and brother of Lord *Ganesha*. It is the *Vaahan"* (transport) of Lord *Kartikeya*. This long and close association with humans has proven the peafowl's adaptability to human altered landscapes. In villages where it is protected it becomes quite tame, but is very shy and secretive where hunted. In the buffer area of mine site peacock is generally protected by the local people.

3.9.9.5 Ecology and Behavior

Peafowl forages on the ground in small groups, known as musters that usually have a cock and 3 to 5 hens. After the breeding season, the flock tends to be made up only of females and young. They are found in the open early in the mornings and tend to stay in cover during the heat of the day. They are fond of dust-bathing and at dusk, groups walk in single file to a waterhole to drink. When disturbed, they usually escape by running and rarely take to flight.

Peafowl produces loud calls, especially in the breeding season. They may call at night when alarmed and neighboring birds may call in a relay like series. Nearly seven different call variants have been identified in the peacocks apart from six alarm calls that are commonly produced by both sexes. Peafowl roosts in groups during the night on tall trees but sometimes make use of rocks, buildings or pylons. Birds arrive at dusk and call frequently taking their position on the roost

trees. Due to this habit of congregating at the roost, many population studies are made at these sites.

3.9.9.6 Threats

The peafowl is under threat from various quarters that include the demand for feathers and wild meat, conflict with farmers during cropping season, increased use of chemical fertilizers and pesticides coupled with habitat degradation. An adult peacock has about 200 tail feathers, which it sheds from August onwards; fully developed new feathers appear in February. The fallen feathers are collected and sold in local markets and the birds are also reportedly killed to increase the revenue returns. Other threats include habitat loss due to encroachment for agriculture, developmental activities, poisoning for countering crop damage, egg consumption and fat usage for medicinal purpose and direct killing for meat.

3.9.9.7 Conservation and Present Status

The Indian Peafowl is listed as least concern species in the red list of the International Union for Conservation of Nature (IUCN), as assessed by the Bird Life International in the year 2012, owing to its widespread distribution, occurrence of locally abundant populations and protection from the people on religious grounds.

In India, it is given highest protection by including it in the Schedule-I of the Wildlife (Protection) Act, 1972. Although the train feathers of the Indian Peafowl are traded for various reasons, it is not included on any Appendix of the Convention on International Trade of Endangered Species perhaps on the claim that their feathers are naturally fallen ones during annual molt of the males.

3.9.9.8 Objectives of the Peacock Conservation Plan (PCP)

- Develop dense tree plantation of highly branching canopy that provide roosting habitat for the peacocks; Captive shelter belts and water holes with appropriate check dams to conserve moisture during blistering heat of summer climes when temperature will be around 40°C.

- Providing the floral habitat that is conducive for foraging species of Peafowl like insects and reptiles which Peafowl feed on; ample grass land habitat should be promoted as "Peafowl "mostly forages on insects, apart from fruits.

- Reduce the habitat loss, promoting captive shelter belt of green belt especially will provide ample roosting space for the birds and shade, apart from forage;

- Also restricting the use of pesticides and fertilizers in the buffer zone will be helpful for the conservation of peafowl; promoting organic means of agricultural practices in the buffer zone will be beneficial for the "Peafowl" which will be much safe devoid of chemical fertilizers and pesticides.

- Sufficient water troughs and large saucer like pans are ideal for water conservation measures in summer months.

- Promoting awareness among Adani copper refinery plant group employees and adjoining villages, populace about the 'Peacock Conservation' in the area, will aid in improving the conservation initiatives.
- Conducting *Vanyaprani Saptah*- week celebrations to promote awareness about "Peafowl" conservation in the study area in Mundra and near Navinal.
- The glaring lights should be avoided in during the night in the vicinity of the "Peafowl"
- Appropriate "Captive Shelterbelt reduces impacts on habitat loss; especially loss of the roosting habitat and also provides foraging habit and habitat for the "Peafowl".
- To envisage to reduce the mortality of the birds and loss of eggs and chicks to direct and in-direct impacts; and
- The nesting and roosting sites should be protected from feral animals like dogs, cats which prey on the birds and eggs and the juvenile chicks as the gestation of the Indian Peafowl varies from 28 days to 30 days.
- Promotion of the organic farming is beneficial for Indian Peafowl conservation
- Indian Peafowl is protected across pan India as it is listed in Schedule-I of the Wildlife (Protection) Act, 1972.

3.9.9.9 Tentative Budget

The tentative budget for peacock conservation is given in **Table-3.9.9.**

TABLE-3.9.9
TENTATIVE BUDGET FOR PEACOCK CONSERVATION

Sr. No.	Item	Estimated Expenditure (Rs.in Lakhs)
Conservation of Soil and Water		
1	Watershed improvement & Improvement of existing water resources	5.00
Improvement of Pasture Development		
2	Pasture development	5.00
3	Control of grazing	5.00
4	Weed control	5.00
5	Creation of conservation awareness	5.00
6	Planting of trees for Indian Peafowl Roosting	5.00
7	Fire protection and mitigation and control of forest fires in Mundra creek and Navinal Area	5.00
8	Improvement of Watch Towers	5.00
Grand Total		**40.00**

Conclusion

Flora and fauna studies were conducted during the study period to assess the existing floristic and faunal components in study area. Floral species are mainly dominated by *Prosopis juliflora and Acacia Senegal.* Primary survey and literature survey reveals that there are no wildlife sanctuaries, national parks and biospheres and no migratory paths of birds and animals in 10 km radius study area. The faunal species were categorized as per conservation status of Wildlife Protection Act, 1972 reveals peacock is the only Sch-I species in the study area. However, as per International Union for Conservation of Nature IUCN, Peacock falls under Least Concern Category. Mangroves are predominantly composed of *Avicenna marina*, Species known for its high tolerance of salinity and other environmental stresses.

3.10 Demography and Socio-Economics

In this section, the prevailing socio-economic aspects of people in the study area around the proposed project boundary, which would form the basis for the making the planning efforts for the social-economic development people in the study area have been described.

3.10.1 Methodology Adopted for the Study

The methodology adopted for the study mainly includes review of published secondary data; the district Census Statistics of 2011, parameters of demography, occupational structure of the local people within the study area of 10 km radial distance from the boundary of the proposed greenfield copper refinery project at Siracha and Navinal villages of Mundra block Kutch district of Gujarat state.

3.10.2 Review of Demographic and Socio-Economic Profile-2011

The village wise demographic data for the census year 2011 is given in **Annexure-X.** The salient feature of the demographic and socio-economic details are described in the following sections.

3.10.3 Demography

All the villages in the study area are experiencing rapid growth of population, which may be due to the process of urbanization and industrialization in connection with globalization.

- **Distribution of Population**

As per 2011 census of India the study area (10 km radius) consisted to the tune of 60,525 person's inhabited, out of the total population male constitute 65.16% (39,438) and the total population of females constitute 34.84% (21,087) and the child community from 0 to 6 years constitute 11.50% (6,959) of the total

population within the 10 km radius. The distribution of population in the study area is shown in **Table-3.10.1**.

TABLE-3.10.1
DISTRIBUTION OF POPULATION

Sr. No.	Particulars	0-3 km	3-7 km	7-10 km	0-10 km
1	Total no of Households	4,165	3,640	5,388	13,193
2	Total Male Population	14,838	9,158	15,442	39,438
3	Total Female Population	2,612	7,776	10,699	21,087
4	Total Population	17,450	16,934	26,141	60,525
5	Male Population from 0 to 6 Years	469	1,285	1,790	3,544
6	Female Population from 0 to 6 years	434	1,280	1,701	3,415
7	0 to 6 Years Total Population	903	2,565	3,491	6,959
8	% of 0 to 6 Years Population in Project area	5.17	63.34	13.35	11.50
9	Average Household Size in Project Area	4.19	19.02	4.85	4.59
10	% of Males to the Total Population	85.03	54.08	59.07	65.16
11	% of Females to the Total Population	14.97	45.92	40.93	34.84
12	Sex Ratio (No of Females per 1000 Males)	176.03	849.09	692.85	534.69
13	Density per Kilometer	5,816.67	4,233.50	8,713.67	6,052.50

Source: Census of India 2011

- **Average Household Size:** The study area has a family size of 4.59 persons as per Census of India 2011.

- **Population and its Density:** The density of the population reveals that, the study area has an overall density of 6,052.50 per Sqkm (Population per Square Kilometer) as per Census of India 2011.

  The males and females constitute to 51.37% and 48.63% respectively of the study area population.

- **Sex Ratio:** The configuration of male and female indicates that, the males constitute to about 65.16% and the females to 34.84% of the total population as per the Census of India 2011 records. The sex ratio i.e. the number of females 535 per every 1000 males. The project area villages of Shiracha and Navinal female population is 1,402 and male population is 3,577. The study area female population is 21,087 and male population is 39,438. The main reason for low sex ratio in the study area is due to industrial area, more male migrants have reached in this area for employment. Infant mortality among female children, single person family structure, a resultant of migration of industrial workers from other parts of the country. As it is an industrial belt, male migration from outside area is also the major factor for this in sex ratio.

3.10.4 Social Structure

In the study area, as per 2011 India Census, 9.72% of the population belongs to Schedule Castes (SC's) and 1.29% of the population belongs to Schedule Tribes (ST's). Both SC's and ST's put together constitute 11.01% of the total population in the study area. The detailed distribution of population by social structure is shown in **Table-3.10.2.**

TABLE-3.10.2
DISTRIBUTION OF POPULATION BY SOCIAL STRUCTURE

Sr. No.	Particulars	0-3 km	3-7 km	7-10 km	0-10 km
1	SC Population	693	2,245	2,945	5,883
2	% of SC's to the Total Population	3.97	13.26	11.27	9.72
3	ST Population	18	342	419	779
4	% of ST's to the Total Population	0.10	2.02	1.60	1.29
5	Total SC & ST's Population	711	2,587	3,364	6,662
6	% of SC's & ST's to the Total Population	4.07	15.28	12.87	11.01
7	Total Population	17,450	16,934	26,141	60,525

Source: District Census Hand Book -2011

3.10.5 Literacy Levels

The study area experiences a literacy rate of 67.62% as per 2011 Census of India, which is +7.77% better than the total literacy rate of the Kutch district i.e. 59.85% and +4.55% better than the national average literacy 63.07%. It is a good indicator that, the study area literacy rate is more than the India's literacy rate. However, the study area literacy rate is little -0.37 (67.99%) lesser than the Gujarat state literacy rate.

The distribution of literate and literacy rate in the study area given in **Table-3.10.3**. The male literacy rate is higher than the Kutch district, Gujarat state and the national male literacy rate respectively by 14.39%, 16.29%, 16.49%. However, the female literacy rate is much lesser than the Kutch district, Gujarat state and the national female literacy rate respectively by -14.39%, -16.29%, -16.49% and the comparison details given in **Table-3.10.3.**

TABLE-3.10.3
DISTRIBUTION OF LITERATE AND LITERACY RATES

Sr. No.	Particulars	0-3 km	3-7 km	7-10 km	0-10 km
1	Male Population	14,838	9,158	15,442	39,438
2	Female Population	2,612	7,776	10,699	21,087
3	Total Population	17,450	16,934	26,141	60,525
4	Male :Population 0 to 6 years	469	1,285	1,790	3,544
5	Female Population 0 to 6 years	434	1,280	1,701	3,415
6	Total Population 0 to 6 years	903	2,565	3,491	6,959
7	Male literates	12,532	6,722	10,794	30,048

Source: District Census Hand Book –2011

3.10.6 Occupational Structure

The occupational structure of the residents of work participation (rate) in the project area has been studied with reference to main workers, marginal workers and non-workers. The main workers include 10 categories of workers defined by the Census of department consisting of:

1. Cultivators;
2. Agricultural laborers;
3. Persons engaged in live-stock;
4. Forestry;
5. Fishing;
6. Mining;
7. Quarrying: manufacturing and process;
8. Persons engaged in repairs in household industry;
9. Other than household industry such as construction, trade and commerce; and
10. Transport, communication, and other services.

The marginal workers are those workers engaged in some work for a period of less than six months during the reference year prior to the census survey. The non-workers include those engaged in unpaid household duties, students, retired persons, dependents, beggars and vagrants, institutional inmates or all other non-workers who do not fall under the above categories.
The total work participation in the project study areas is 56.36% as against the Kutch district work participation rate 37.10% which is +19.26% higher than the district work participation rate. Gujarat State overall work participation rate is 40.98%, which is +15.38% higher than the state work participation rate. The overall India's work participation rate is 39.79%, which is +16.57% higher than the countries work participation rate. With this statistics, it is evident that there is atmosphere for the employment promotion in Mundra and surrounding areas. In addition, with the establishment of Adani greenfield copper refinery project at Shiracha and Navinal villages of Mundra block, there will be a boost to generate more employment to needy people.

The non-workers constitute 43.64% of the total population in study area. The distribution of workers by occupation indicates that the non-workers are the marginal population than the working population.

The Kutch district non-workers rate is 62.90%, Gujarat state level workers participation rate 59.02% and the countries workers participation rate 60.21%. However, the study areas non-workers rate is lesser than those are the dist, state and national as -19.26%, -15.38% and -16.57% respectively. It is evident that the study areas non-workers are much lesser than the District, State and National non-workers rate to the total population. It is a positive indicator that, the non-workers are gradually coming down in the study area and the new copper refinery positively contributes to increase the workers participation rate.

The main workers to the total workers of the study area are 90.57%, Kutch district main workers to the total workers are 88.50%, Gujarat state's main workers to the total workers are 82.23% and countries main workers to the total workers are 75.24%. However, the study areas percentage of main workers to the total workers are higher than those are the dist, state and national main workers rate by +2.07%, +8.34% and +15.33% respectively.

The percentage of marginal workers of the study area constitute to 9.43% and the Kutch district percentage of marginal workers are 11.50%, Gujarat state's percentage of marginal workers are 17.77% and the National percentage of marginal workers are 24.76%. However, the study areas percentage of marginal workers is better than that of District, State and National by -2.07%, -8.34% and -15.33% respectively. The occupational structure of the study area shown in **Table-3.10.4**.

TABLE-3.10.4
OCCUPATIONAL STRUCTURE

Sr. No.	Particulars	0-3 km	3-7 km	7-10 km	0-10 km
1	Total Population	17,450	16,934	26,141	60,525
2	Total Workers	14,094	6,790	13,228	34,112
3	Work Participation Rate (%)	80.77	40.10	50.60	56.36
4	Total Main Workers	13,173	6,228	11,494	30,895
5	% of Main Workers to Total Workers	93.47	91.72	86.89	90.57
6	Marginal Workers	921	562	1734	3,217
7	% of Marginal Workers to Total Workers	6.53	8.28	13.11	9.43
8	Non-Workers	3,356	10,144	12,913	26,413
9	% of Non-Workers to Total Population	19.23	59.90	49.40	43.64

3.10.6.1 Occupational Issues

Fishing operations in Mundra: Wagher's, belonging to Muslim community are the fishing communities in coast of Mundra, who are associated with deep sea fishing activity. The Kohlis, Mundra bander, Pagadiya communities are also associated with fishing in Mundra taluka.

The following are the exclusive study findings by Gujarat Ecology Society. Name of the Study: Ecological Profile for Coastal Talukas of Gulf of Kutch, sponsored by Gujarat Ecological commission Government of Gujarat. September 2014.

The fishing families, total fishermen population and active fishermen details in Mundra taluka are given in **Table-3.10.5**.

TABLE-3.10.5
FISHING FAMILIES, TOTAL FISHERMEN POPULATION AND ACTIVE FISHERMEN

Taluka	Families			Total Population			Active Population		
	1997	2003	2007	1997	2003	2007	1997	2003	2007
Mundra	501	705	930	3079	3979	4725	1423	2411	2392

Source: Gujarat Ecology Society (Ecological Profile for Coastal Talukas of Gulf of Kutch, sponsored by Gujarat Ecological commission September 2014)

The study also suggested the conservation plan to safeguard the fishermen community and coastal development as well and presented in **Table-3.10.6** Hence, the conservation plan may be taken forward in the study area and promote the fishermen community.

TABLE-3.10.6
ISSUES AND CONSERVATION PLAN

Issues	Conservation Plan
1. Ground Water Salinity in some villages. 2. Decline in open fallow land (by 100 ha) and increase in grazing pressure(Grazing land per livestock reduced from 0.12 ha (1997) to 0.08 ha (2007)) 3. Increase in salt pans (doubled since 1997) 4. Decline in mangrove area 5. No significant growth in fishery 6. Increased port activity (11 Million MT in 2005 to 100 Million MT in 2014) 7. Alteration in coastal morphology	1. Conservation and management of wetlands/water bodies for effective ground water recharge 2. Promotion of Stall feeding 3. Developing skills of the fishermen in sector of office maintenance through training 4. Coastal development be expanded and reviewed periodically (every 3 years) for changes taking place in the coastal ecology and morphology 5. Disaster management cell should be given priority

3.11 Traffic Density Survey

Traffic studies have been conducted to know the prevailing traffic volumes on the roads in the study area. It is essential to consider these details for assessing the anticipated future traffic volumes as a part of overall impact assessment for the project.

The variations of traffic densities depend upon the working days and time as there would be variations in day and night times. In order to assess the prevailing traffic volumes on the roads, the survey was conducted during normal working days of the week by avoiding local holidays or abnormal situations to reflect the true picture of the traffic densities.

3.11.1 Methodology

3.11.1.1 Vehicular Count

The vehicles plying in both the directions were counted continuously for 24 hours at entrance of APSEZ. The vehicles were counted every hour and recorded under respective category. The maximum traffic count in an hour is termed as peak hour traffic. The vehicles were categorized under various heads like bikes, four-wheelers, buses/trucks and heavy vehicles.

3.11.1.2 Categorization of Traffic

The engine driven vehicles were categorized into various heads viz. as two wheelers (scooters, motor cycles etc.), three wheelers (auto rickshaws, 3-wheel tempo etc.), Light motor vehicles (cars, jeeps), Buses/trucks; Heavy Motor Vehicles such as tractors, dumpers etc.

3.11.2 Results and Discussion

The summary of daily traffic count for the location was monitored during the study period is summarized in **Table-3.11.1.**

The present level of traffic has been converted to Passenger Car Units (PCU) at the locations as per the conversion factors stipulated by Indian Road Congress (IRC). The Passenger Car Unit (PCU) recorded at the selected traffic location is 1026 PCU. It was observed that the four-wheelers and trucks/buses form the major volume of the traffic. The total traffic PCU of this road is minimal.

TABLE-3.11.1
TRAFFIC DENSITY (VEHICLES/DAY)

Code	Location	2/3 wheelers	LMV	Bus/ Trucks	HMV	Total Vehicles	Total PCUs
T1	West port to SEZ Mundra	12	80	139	16	247	551
	SEZ to Westport	10	71	124	9	214	475

Note: PCU rating: (2/3 wheelers: 0.5, Car/Jeep: 1.0, Tractor: 3.0, Buses: 3.0, Trucks/HMV: 3.0)

Chapter-4

Anticipated Environmental Impacts & Mitigation Measures

4.0 ANTICIPATED ENVIRONMENTAL IMPACTS & MITIGATION MEASURES

This chapter presents identification and appraisal of various impacts from the proposed project. The environmental impacts can be categorized as either primary or secondary. Primary impacts are those, which are attributed directly to the project and secondary impacts are those, which are indirectly induced and typically include the associated changed pattern of social and economic activities of surrounding community.

The proposed project would create impact on the environment in two distinct phases:

- During the construction phase which may be regarded as temporary or short term; and
- During the operation phase which would have long term effects.

The construction and operation phases of the proposed project comprises of various activities, each of which will have some impact on one or more environmental parameters. Various impacts during the functional phase of the project have been studied to estimate the impact on the environment and are discussed briefly in the subsequent sections.

4.1 Impacts during Construction Phase

This includes the activities related to leveling of site, construction of additional units, other related structures and installation of equipment.

4.1.1 Impact on Land Use

The area earmarked for proposed copper refinery project is about 256.58 ha (634 acres). Out of which, 158.19 ha (381 acres) belongs to the APSEZ (Adani Group Company) and is already designated for industrial purpose as per the local land use plan. MoU for this land has been signed between AEL and APSEZ for the development of project. The remaining 102.39 ha (253 acres) is a terrestrial forest land which will be converted for industrial use. The project site is located outside the CRZ area, there is no reclaimed land, mudflats, mangroves and sand dunes in the project site.

There is no significant vegetation in the project site. However, some shrubs/ weeds (mainly prosopis juliflora) present at the site shall be cleared. Permanent change in land cover and topography will occur due to construction of the proposed industry. There will not be any diversion of nallahs. However, existing nallahs, which passes through the project site will be suitably trained. There will also be positive development with implementation of 33% of greenbelt and green cover.

4.1.2 Impact on Soil

During construction phase, there shall be import of construction material like bricks, cement, murrum, sand etc. Use of these materials will change the

characteristics of the soil in the plant construction area. Further, usage of diesel oil and lubricating oils for vehicles and equipments, municipal wastes due to construction workers, domestic sewage and sullage from construction labour canteen and office at project site etc., may have certain impact on soil, if not handled properly.

Various mitigation measures proposed are:

- Top soil at construction site shall be stored separately, conserved and shall be used for greenbelt/ green cover development at later stage;
- The construction material & diesel/oil to be used for various construction activities shall be stored in designated storage yards to reduce the spills into unwarranted areas. Segregation, collection, storage and disposal of waste material generated during construction phase to minimise its impact on soil quality; and
- Use an identified area for undertaking any repair and maintenance of vehicles/equipment.

4.1.3 Impact on Air Quality

During construction phase, particulate matter will be the main pollutant, which would be generated from the site development activities and vehicular movement on the road. Further, concentration of NO_x and CO may also slightly increase due to increased vehicular traffic movement. However, the increase in ambient concentrations of air quality will be negligible. The increment in concentration can be expected to be about 2-3% and this will be local in nature and will be contained to construction site only. As most of the construction equipment will be mobile, the emissions are likely to be fugitive. The dust generated will also be fugitive in nature, which can be controlled by suitable mitigation measures like sprinkling of water and development of green cover.

The impacts will be localized in nature and the areas outside the proposed project site premises are not likely to have any major adverse impact with respect to ambient air quality.

Following mitigation measures are proposed to reduce the impacts:

- Enforce deployment of good condition vehicles with speed restrictions inside the project boundary;
- Deploy mobile water tankers to moist the vehicle movement paths to suppress dust; and
- Enforce no use of firewood for cooking and also no open air burning of any kind of wastes.

4.1.4 Impact on Water Resources and Quality

APSEZ Ltd has considered the project requirement and assured for supplying 2,000 m^3/day of water required during the construction phase. No ground water will be abstracted for construction purpose.

The wastewater generation during the construction period will be from the sanitary units provided for the construction workers. This wastewater will be treated in septic tanks and discharged into soak pits. Wastewater from vehicle maintenance & labour working areas may have certain impacts.

Following mitigation measures are proposed to reduce such impacts:

- A dedicated area for repair and maintenance of construction equipment with adequate spill prevention systems;
- Proper sanitation facility for construction workers during work at site;
- Proper storm water drainage system to the construction site; and
- The existing natural will not be disturbed during construction activities and the proper required maintaince will be adopted.

The overall impact on water environment during construction phase due to proposed project is likely to be short term, local and insignificant.

4.1.5 Impact on Noise Levels

The major sources of noise during the construction phase are vehicular traffic, construction equipment like dozers, scrapers, concrete mixers, cranes, pumps, compressors, pneumatic tools, saws and vibrators etc. The operation of these equipments will generate noise ranging between 85-95dB(A) near the source. These noise levels will be contained within the project boundary and will be transient in nature.

Following mitigation measures are proposed to reduce the noise impacts:

- All noise generating equipments shall be provided with noise attenuation arrangements like silencers, mufflers, insulators etc., to reduce the noise levels below 85 dB(A) as far as technically feasible;
- All machineries and moving equipments will be periodically tested for their physical stability to ensure minimum noise during operation;
- Awareness will be imparted to labours employed in the project and shall be encouraged to commute through mass/public transport to reduce traffic and minimum use of horns while travel; and
- All the construction labour will be made to wear the personal protection equipment such as helmets, ear muffs etc.

4.1.6 Impact on Ecology

Ecological studies reveal that there is no presence of significant flora and fauna in the project site. Though forest land is involved in the proposed project, entire forest is dominated by *Prosopis juliflora,* bushes and shrubs. This clearance of

vegetation will create loss of habitat for Nilgai (commonly found fauna in the study area) within the project site and would migrate to nearby areas.

Further, the constructional activities lead to inward migration of labour force in the area and thus there would be pressure on trees in the area due to increase in fuel demand. Care shall be taken that the labours do not cut small trees or branches as fuel wood, for their requirement in cooking and other purposes.

4.1.7 Demography and Socio-Economics

As per the 2011 census data, non-workers constitute about 43.64% of the total population in 10 km radius study area. Some of them will be available for employment in the proposed project during construction activities. As the labours are generally un-skilled, the locals would get opportunities for employment during construction activities. The peak labour force required during the construction period is estimated to be about 2000 - 3000 persons per day and preference will be given to locals based on skill set & eglibility requirement as per the job and the vacancies available.

In addition to the opportunity of getting employment as construction labours, the local population would also have employment opportunities in related service activities like petty commercial establishments, small contracts/sub-contracts and supply of construction materials for buildings and ancillary infrastructures etc. Consequently, this will contribute to economic up-liftment of the area.

There will be no damage to fishing activities and fisherman due to the proposed project. The roads used by fisherman will not be disturbed due to the proposed project.

4.2 Impacts during Operational Phase

For the purpose of impact assessment during the operational phase, the following components have been separately considered:

- Soil quality;
- Air quality;
- Traffic density;
- Water resources and quality;
- Noise levels;
- Terrestrial and aquatic ecology;
- Demography and socio-economics; and
- Infrastructural facilities.

4.2.1 Impact on Soil Quality

The main sources of pollution that are likely to cause impact on soil quality are:

- Particulate matter emission from the stacks provided to the process equipment;
- Fugitive emissions from handling of material and vehicular movement during transportation; and

- Leaks and spills from the plant including process effluents, used and waste oils, contaminated rainwater runoff.

Following mitigation measures are proposed to reduce the impact on soil during operation phase:

- All stack emission sources will be provided with appropriate high efficiency air pollution control equipment like bag filter, scrubber etc.;
- Dust suppression arrangement at raw material storage yard;
- Closed container collection, storage and transportation of all hazardous wastes within the plant and outside;
- Regular road sweeping for recovery of dust from the spilled areas within the plant boundary; and
- The top soil will be suitably collected, stacked separetly and used for greenbelt/green cover during subsequent stages.

With the proposed mitigation measures, the impact on soil quality outside the project boundary will be mitigated.

4.2.2 Impact on Air Quality

Sulphur dioxide (SO_2) and particulate matter (PM) emissions are the main pollutants in the copper refinery plant and there will be no major source of NOx emissions. The incremental ground level concentrations due to proposed project have been predicted by dispersion modeling is given in **Table-4.4**

Incremental ground level concentration (GLC) for the copper project along with cement grinding plant proposed by other company within 10 km radius has also been predicted is given in **Table-4.5**. By the time of completion of this EIA, there was no other industry proposal found with projected emission load within 10 km area of proposed copper project.

➢ ***Details of Mathematical Modelling***

For prediction of maximum Ground Level Concentrations (GLC's), the air dispersion modeling software (AERMOD version 7.1.0) was used. AERMOD is steady state advanced Gaussian plume model that simulates air quality and deposition fields upto 50 km radius. AERMOD is approved by USEPA and is widely used software. It is an advanced version of Industrial Source Complex (ISCST3) model, utilizes similar input and output structure to ISCST3 sharing many of the same features, as well as offering additional features. The model is applicable to rural and urban areas, flat and complex terrain, surface and elevated releases and multiple sources including point, area, flare, line and volume sources. Dispersion modeling using AERMOD requires hourly meteorological data. Site specific data recorded at site is used for executing modeling studies. The site specific meteorological data is processed using AERMET processor.

➢ ***Model Set-up***

The model set-up details are presented in **Table-4.1** below:

TABLE-4.1
MODEL SET-UP

Sr. No.	Parameter	Details
1	Model Name	AERMOD (Version 7.1.0)
2	Model Type	Steady state Gaussian Plume Air Dispersion model
3	Topography	Rural, Flat
4	Averaging Time	24 hours
5	Source Type	Point Source
6	Boundary Limits	10 km X 10 km
7	Co-ordinate System	Uniform Polar Grid
8	Receptor Height	0
9	Anemometer	10 m
10	Surface meteorological data	Site Specific data processed by AERMET
11	Upper air Data	Upper air Estimator using AERMET processor

- **Atmospheric Inversion Level and Mixing Height Study**

The atmospheric inversion studies have been carried out at the project site for estimating the site specific mixing height based on variable weather conditions. Same has been used in modeling. Detailed report of upper air study is enclosed as **Annexure-XI.**

- ***Model Input Data***

The details of stack emissions of proposed Adani copper refinery project and proposed project of other company are given in **Table-4.2** and **Table-4.3.**

TABLE-4.2

4	Internal Dia of Stack (m)	1	1
5	Velocity of Flue gas (M/sec)	15	15
6	PM Emission(g/s)	0.65	0.65
7	Co-ordinates	22^0 49' 30" N 69^0 32'35" E	22^0 49' 30" N 69^0 32'40" E

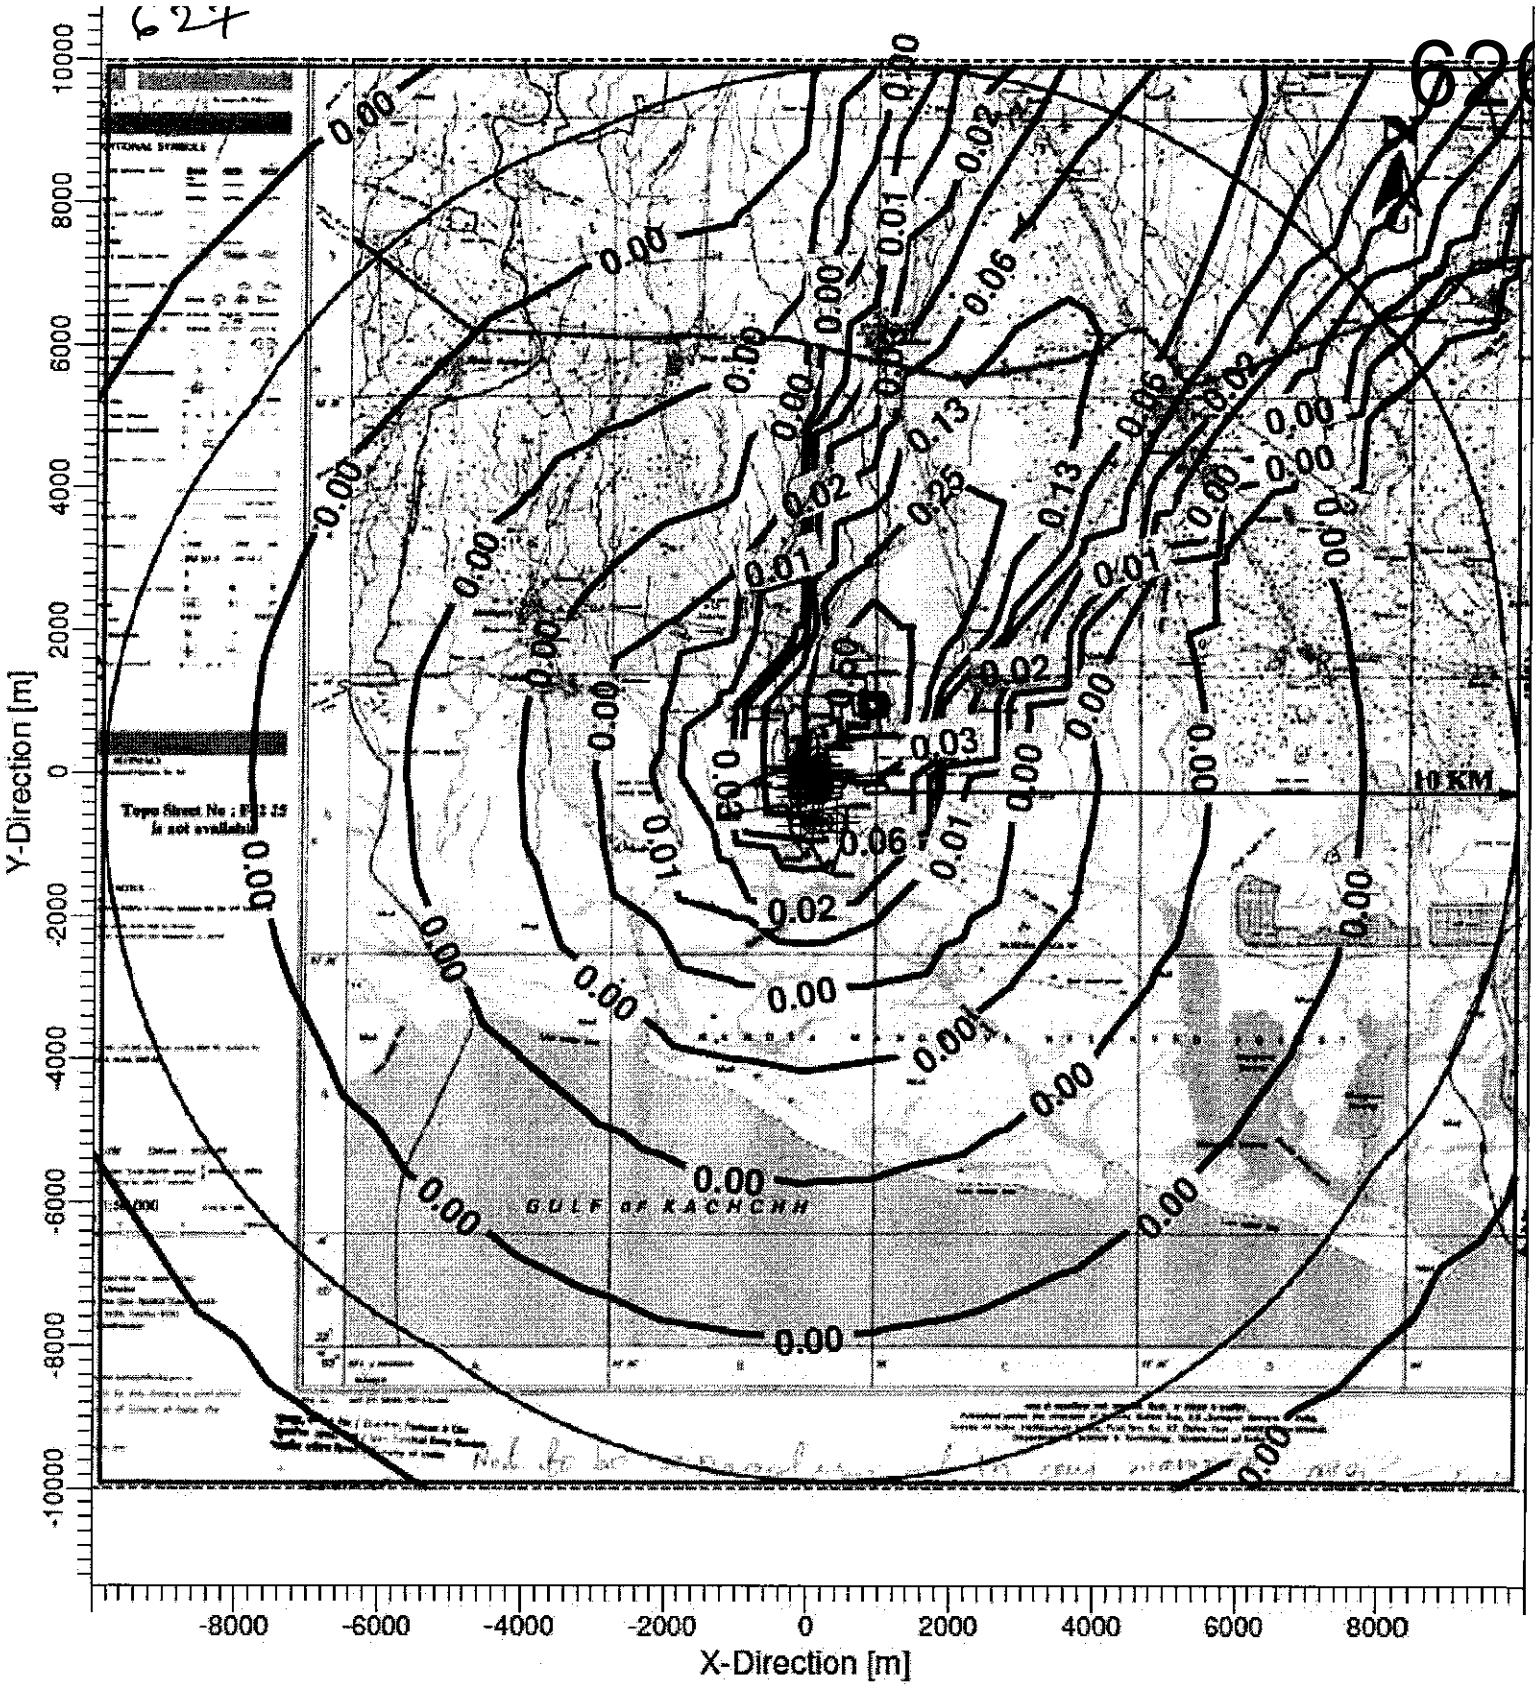
The simulations have been carried out to evaluate PM, SO_2 and even for NO_2 likely to be contributed by the proposed project. For the short-term simulations, the concentrations were estimated to obtain an optimum description of variations in concentrations over the site in 10 km radius covering 16 directions. The predicted results for PM_{10}, $PM_{2.5}$, SO_2, NO_2 are presented in **Table-4.4 & Table-4.5** and isopleths showing the incremental concentrations are shown in **Figure-4.1** to **Figure-4.6** respectively.

TABLE-4.4
PREDICTED SHORT-TERM MODELLING RESULTS (24 HOURLY) FOR COPPER PROJECT

Pollutants	Maximum Incremental Levels (µg/m³)	Distance (km)	Direction
Particulate Matter (PM_{10})	1.27	2.2	NE
Particulate Matter ($PM_{2.5}$)	0.52	2.2	NE
Sulphur dioxide	10.37	2.2	NE
Nitrogen dioxide	0.23	2.2	NE
Hydrogen floride	0.06	2.2	NE

TABLE-4.5
PREDICTED SHORT-TERM MODELLING RESULTS (24 HOURLY) FOR COPPER AND CEMENT GRINDING PROJECT

Pollutants	Maximum Incremental Levels (µg/m³)	Distance (km)	Direction
Particulate Matter (PM_{10})	1.32	2.2	NE
Particulate Matter ($PM_{2.5}$)	0.54	2.2	NE
Sulphur dioxide	10.37	2.2	NE
Nitrogen dioxide	0.23	2.2	NE
Hydrogen floride	0.06	2.2	NE



- ***Resultant Concentrations after Implementation of Project***

The resultant concentrations after the implementation of the proposed project are given in **Table-4.6**.

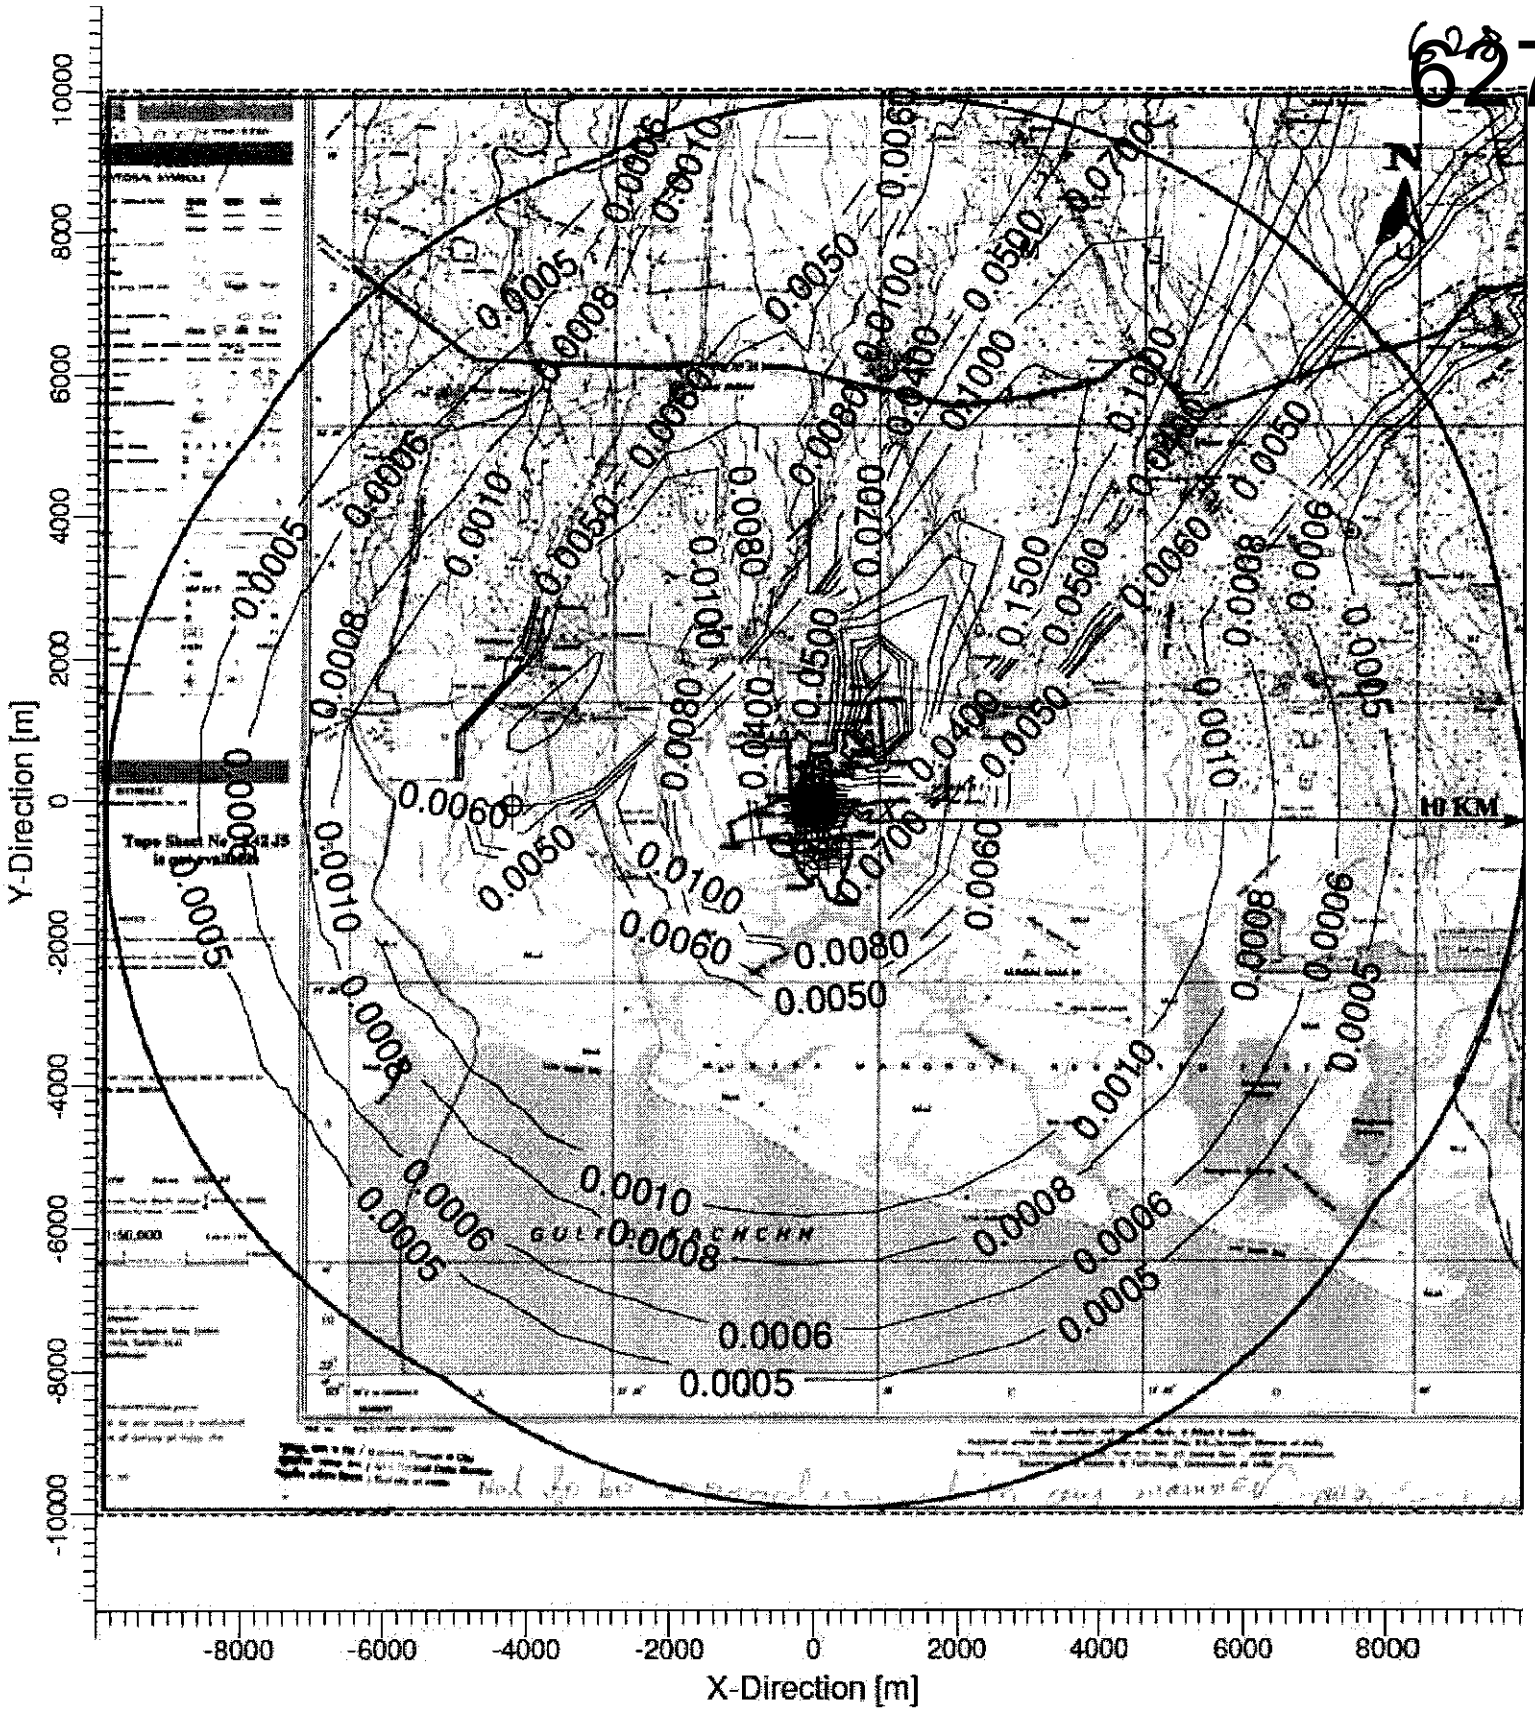


TABLE-4.6
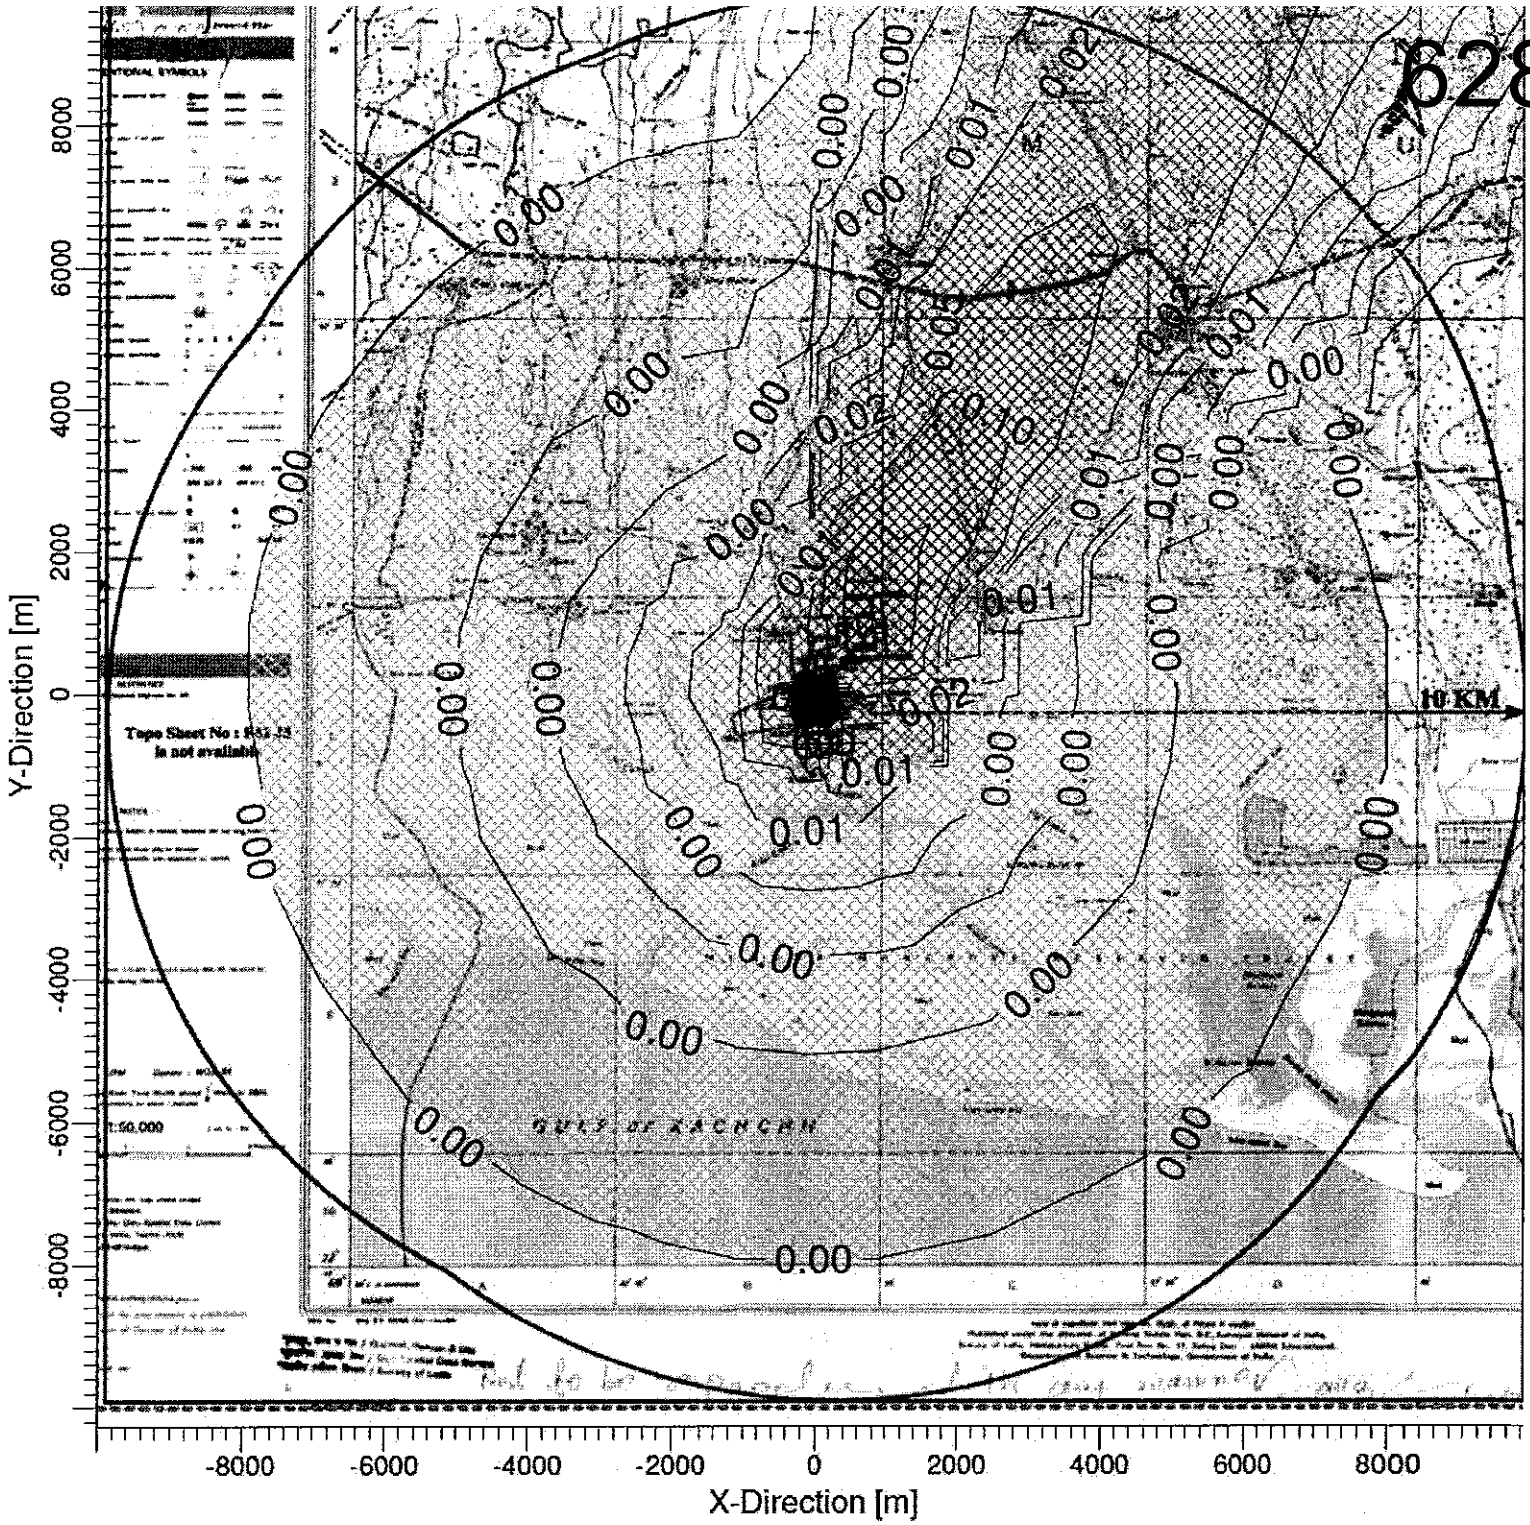
RESULTANT CUMULATIVE GROUND LEVEL CONCENTRATIONS (24 HOURLY)

Pollutant	Concentrations (µg/m³)			
	Baseline	Incremental Concentration due to Copper and Cement Grinding	Resultant Cumulative Concentration	NAAQS Limits
Coper Project + Cement Grinding Unit				
PM_{10}	84.2	1.32	85.52	100
$PM_{2.5}$	43.9	0.54	44.44	60
SO_2	42.6	10.37	52.97	80
NO_2	32.8	0.23	33.03	80



The incremental concentrations when superimposed over the existing baseline concentrations, the resultant concentrations are observed to be within the permissible levels for residential/rural conditions.

➢ ***Contribution of Existing Industries in Baseline Concentrations***

Within 10 km radius study area, Adani Power Plant (Adjacent) and Tata Mundra Power Plant (2.0 km) are located in western direction from the proposed project.

The stack emissions from the existing power plants are given in **Table-4.7**.

TABLE-4.7
STACK EMISSIONS FROM EXISTING POWER PLANT

Parameters	Units	Adani Power Limited				Tata Power (CGPL)	
Total Capacity	MW	4620				4000

Flow rate from Stack	Nm^3/sec	700	700	1200	1800	2301.2	3451.8
SOx Emission Concentration at Limit	Mg/Nm^3	200	200	200	200	200	200
SOx Emission Rate from Stack	g/s	140	140	240	360	460.24	690.36
NOx Emission Concentration at Limit	Mg/Nm^3	300	300	300	300	300	300
NOx Emission Rate from Stack	g/s	210	210	360	540	690.36	1035.54
PM Emission Concentration at Limit	Mg/Nm^3	50	50	50	50	50	50
PM Emission Rate from Stack	g/s	35	35	60	90	115.06	172.60

The concentrations from the existing industries has already been captured in the baseline ambient air quality. Hence, it can be concluded that during operation phase of the proposed project, the resultant ground level concentrations after the proposed project, with adequate control measures will be within the permissible limits as given in **Table-4.6**.

To see the contribution due to existing operating industries in ambient air quality baseline, modeling has also been done using AERMOD. The modeling results are tabulated below in **Table-4.8** and the isopleths showing the concentrations are given in **Figure-4.7, Figure-4.8** and **Figure-4.9**.

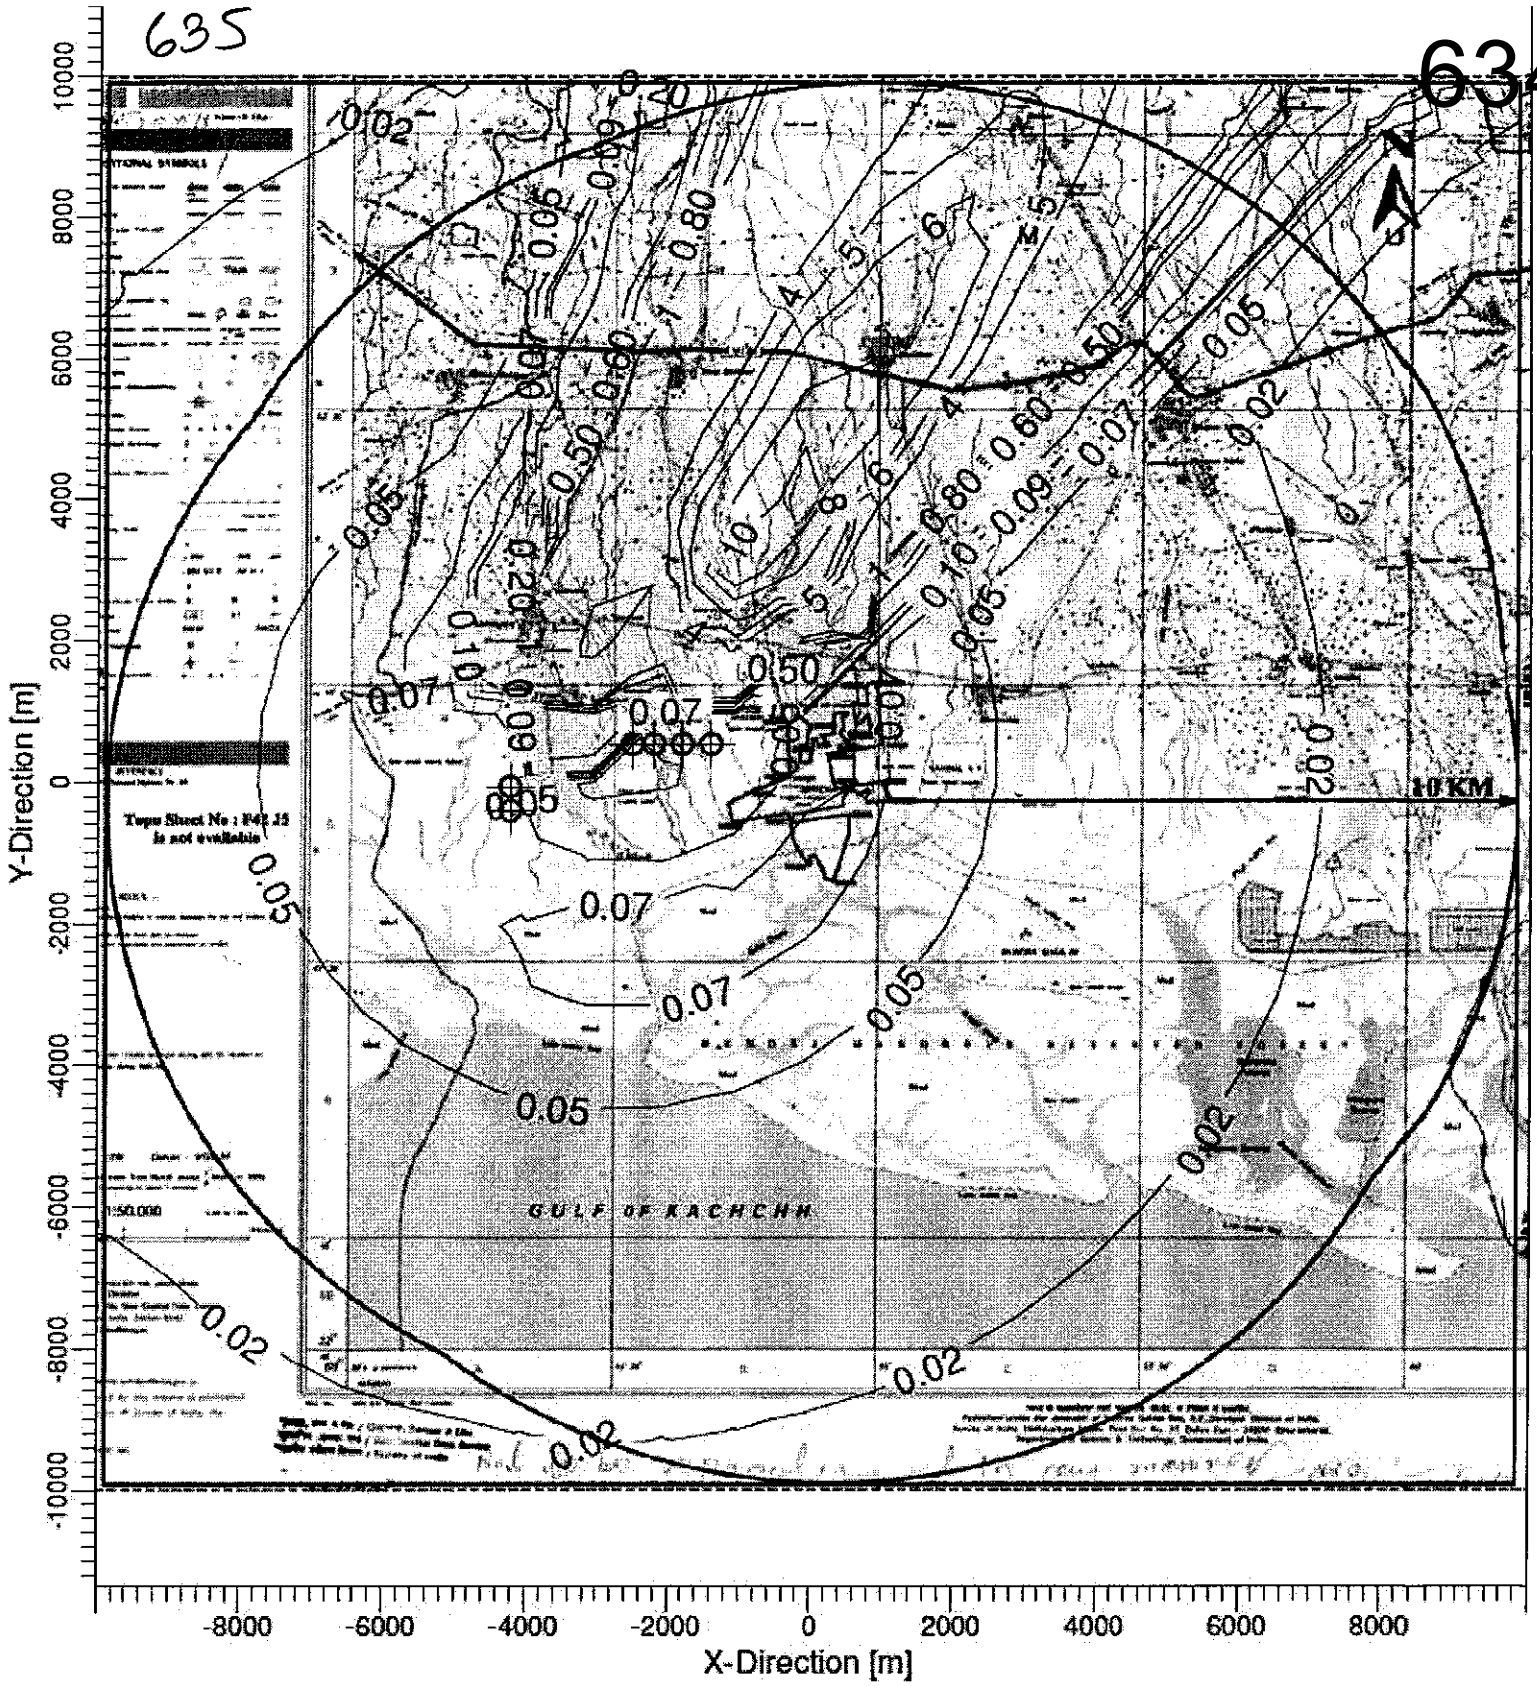

TABLE-4.8
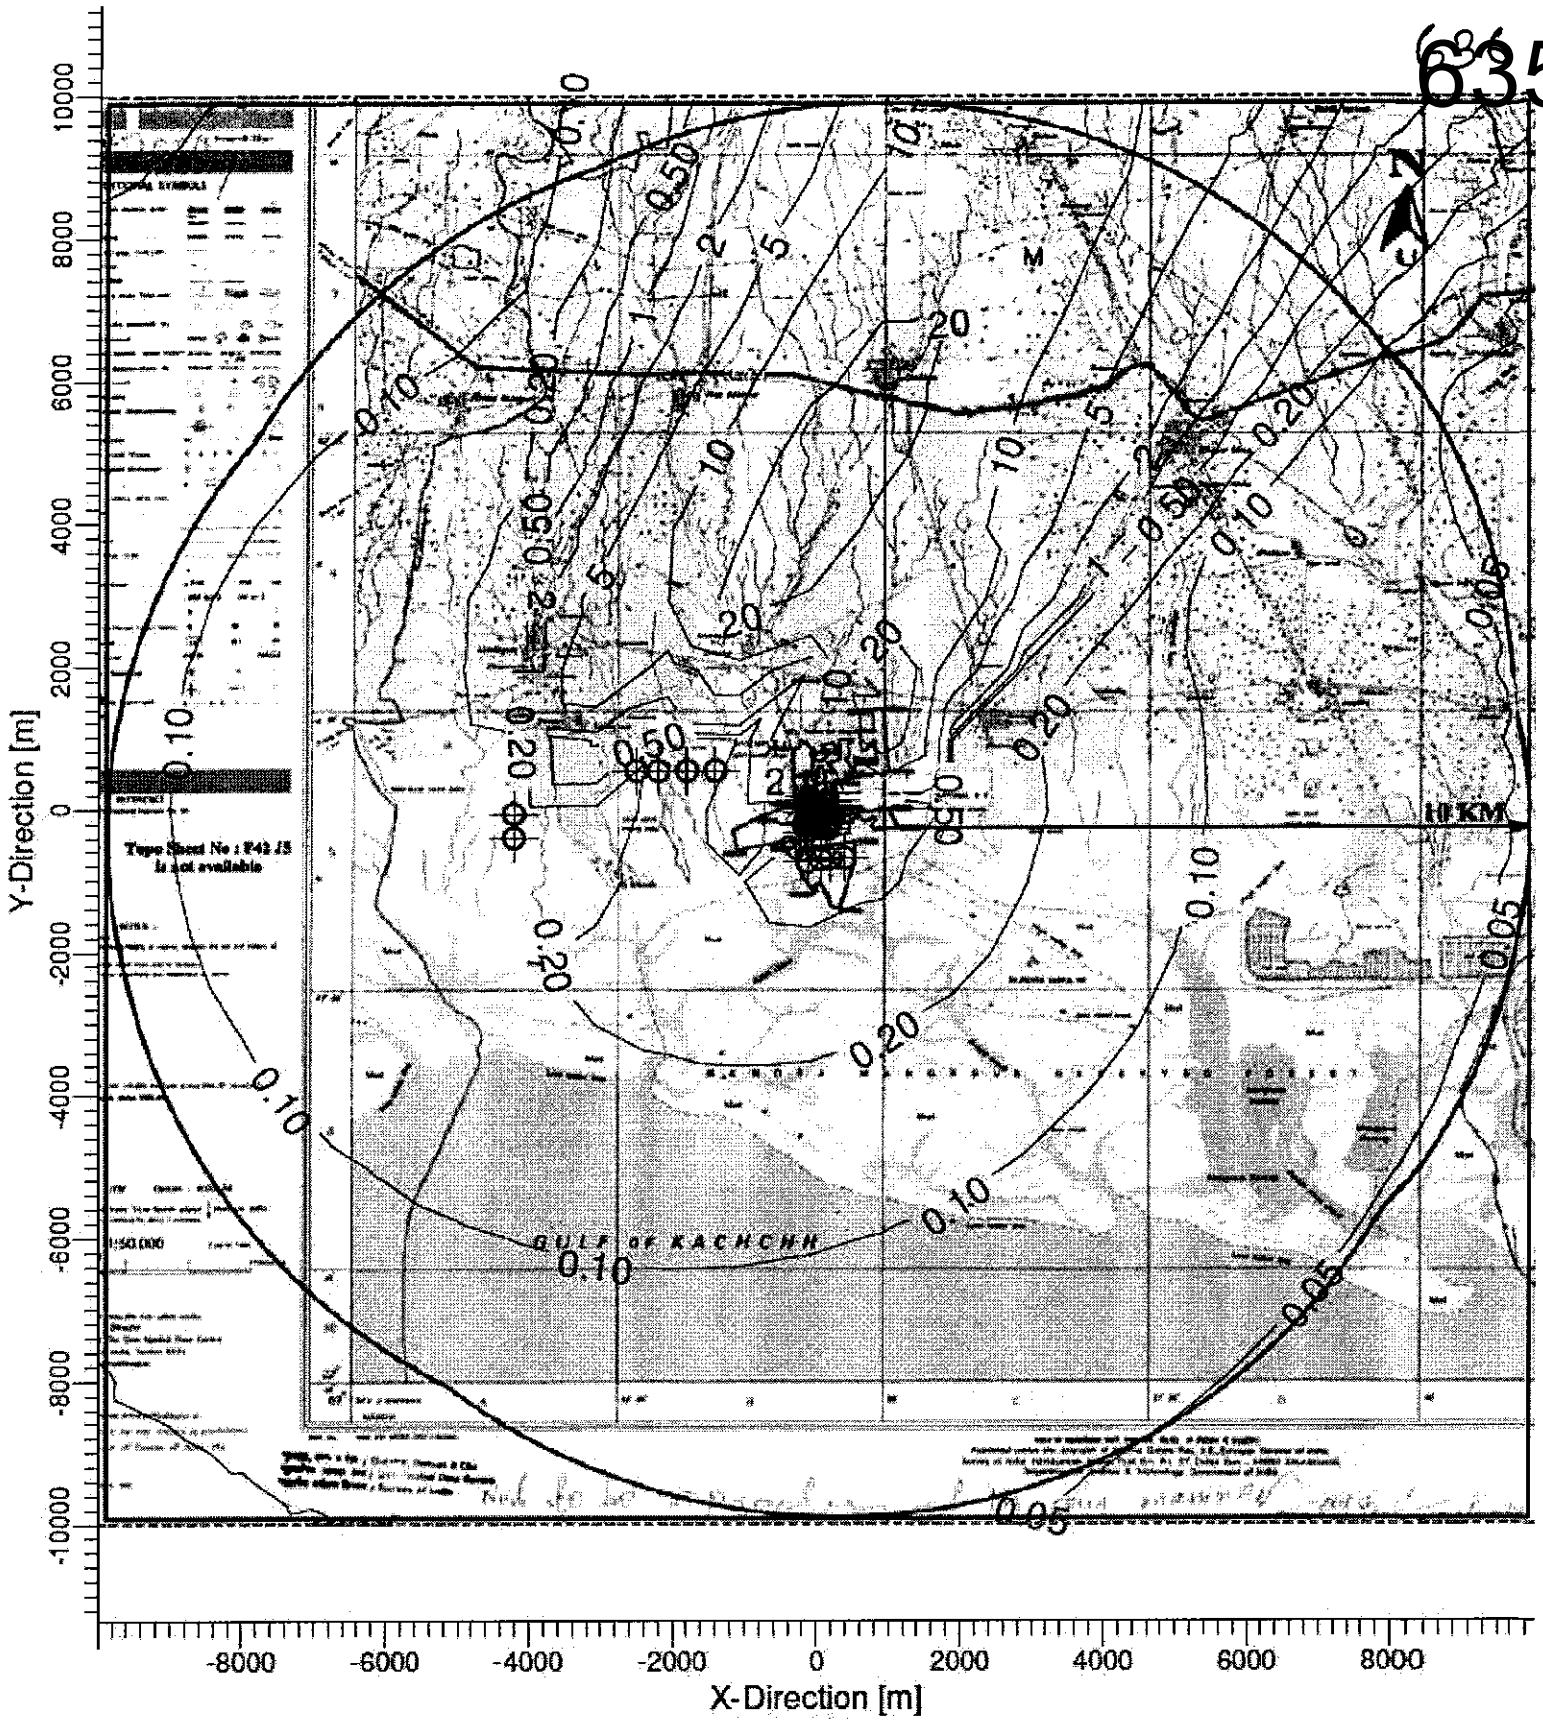
CONTRIBUTION BY NEARBY EXISTING INDUSTRIES (APL 4620 MW TTP and CGPL 4000 MW TPP) IN BASELINE (24 HOURLY CONCENTRATION)

Pollutant	Concentration (µg/m^3)	Distance (km)	Direction
PM_{10}	11.67	4.2	NE
SO_2	36.92	4.2	NE
NO_2	28.74	4.2	NE



A perusal of the above table clearly reveals that the cumulative contribution due to the existing and proposed industries are well within the prescribed limits specified by CPCB.

4.2.2.1 Fugitive Emissions

The fugitive emissions will be generated from raw material handling area, matte and ferro sand tapping area from smelting furnace, settling furnace, slag cleaning furnace and matte transfer points. The fugitive emissions cannot be quantifiable and will be controlled by the following measures:

- Tube and closed conveyor will be provided at raw material handling area;
- Hygiene ventilation system with bag filter, scrubber and stack arrangement to handle smelting furnace/SF/converter/anode furnace secondary gas emissions; and
- Hood system at converter to capture secondary gases while transferring.

4.2.2.2 Air Pollution Control Schemes

Following air pollution control schemes and techniques are suggested which shall be used to minimize and control the emission of air pollutants as well as their effective dispersion into the atmosphere.

- ***Abatement Technologies***

➢ Sulphur Dioxide (SO_2): High efficiency collection and scrubbing system with lime and caustic;

➢ Fluorine (F): High efficiency collection and scrubbing system with water to produce hydro fluro silicic acid, which will be input to aluminum fluoride plant;

➢ Particulate Matter: Wet scrubbers, cyclones, electrostatic precipitators, bag filters, vacuum trucks, road vacuum sweepers, etc.; based on the application; and

➢ The final gaseous emissions from the copper refinery project would be well within the permissible limits as prescribed by GPCB/CPCB/MoEF&CC.

- ***Control Measures at the Design Stage***

➢ Hygiene ventilation system with scrubber and stack arrangement will be provided for treating secondary sulphur dioxide off gases generated from smelting furnace, settling furnace, slag cleaning furnance, converter furnace and anode furnace;

➢ Sulphur dioxide laden gases released during the primary smelting operations from smelting furnace will be sent to electrostatic precipitators for dust removal;

➢ The fugitive emissions from and tapping port of smelting furnace will be connected to the smelting furnace stack via scrubber;

- In the converter/anode furnace, scrubber will be provided with venturi scrubbers and fugitive emission will be scrubbed in the secondary gas handling system (SGHS) before vented through stack;

- Online SO_2 analyzer for stack emission and adequate stack height of 100 m will be provided;

- Tail gas scrubber will be provided with adequate stack height of 100 m for sulfuric acid plant; and

- In the phosphoric acid plant, five stage scrubber will be provided with adequate stack height of 90 m.

Apart from above measures, the following measures will be taken to improve the air quality within the plant premises:

- Improved scrubber performance by online cleaning & mist eliminator;
- To monitor the work environment by online automatic SO_2 electro chemical sensors;
- Provision of trips and interlocks for all processes with online analyzers for all process stacks to meet the emission of SO_2 to less than 1 Kg/tonne of H_2SO_4 produced;
- Good housekeeping shall be maintained in the plant premises; road sweeping machine shall be used to clean road;
- The trucks and other vehicles shall be maintained and serviced regularly to reduce air emissions; and
- Usage of respiratory protective equipment by all employees shall be ensured.

4.2.2.3 Details of Episodal SO_2 Stack Emissions

Copper Smelter Plant:

- The SO_2 gas from the primary gas handling system (containing 14% to 18% SO_2) will be processed in sulphuric acid plant (SAP) to produce sulphuric acid; and

- The lean SO_2 gases (fugitive gases) generated from various furnaces will be conveyed to hygiene ventilation system/ secondary gas scrubber for scrubbing of SO_2 before vented through stack.

Sulphuric Acid Plant:

- Sulphuric acid plant (SAP) has been installed with highly efficient (Double Conversion Double Absorption) DCDA process to control the SO_2 emission to less than 1 kg/t of sulphuic acid produced; and

- Tail gas scrubber (TGS) also provided to treat the gases and mists before venting to the atmosphere through the stack even during plant start-up and other emergency operations.

In addition, the following monitoring and controlling mechanism has also been provided to make a fool-proof system:

- Provision of online SO_2 analyzer with process trip & interlock system for all the process stacks;
- Periodic online calibration of SO_2 stack analyser will be carried out at 90 % of the analyzer range with prior intimation to state pollution control board; and
- Online stack SO_2 analysers will be connected with state pollution control board for real time monitoring of SO_2 emission.

Further, SO_2 generation is a continuous process during smelting activity. Primary gas stream will be routed to SAP plant and the secondary gas stream will be routed through scrubber. Futher, there is no provision in the plant/process for storage of SO_2 gases and will be processed immediately to produce sulphuric acid.

In view of aforesaid, there is no likelihood of any episodal SO_2 stack emission from the plant operations.

4.2.3 Impact of Traffic on Air Quality

After implementation of proposed project, there will be an increase in traffic flow due to movement of trucks carrying raw material and finished products. The extent of these impacts, at any given time, depends upon (i) the rate of vehicular emission within a given stretch of the road and (ii) the prevailing meteorological conditions. The impacts have strong temporal dependence as both of these factors vary with time. The temporal dependence would have diurnal, seasonal as well as long term components.

The air quality predictions have been carried out by using the air quality model CALINE-4 developed by California Department of Transportation. The model is based on Gaussian diffusion equation and uses a mixing zone concept to characterize pollutant dispersion over the roadway. The model has been extensively tested for its predictive capability for traffic related air quality impacts. Given the source strength, meteorology, site geometry and site characteristics, the model can reliably predict pollutant concentrations for receptors located within 150 m of the roadway, the most important region for estimating the impacts due to the low elevation emissions.

The traffic due to the project mainly includes trucks, which are used to transport products. Hence, only heavy traffic is considered in assessing the impact of traffic. It is estimated that the number of additional trucks due to the proposed project is about 700 trucks per day.

4.2.3.1 Emission Factors

The emission standards for Indian vehicles as proposed by the Indian Institute of Petroleum (IIP) have been used to provide the emission factors for the different

vehicle types. Emission factors after accounting for the vehicle speeds are as specified in **Table-4.9.**

TABLE-4.9
EMISSION FACTORS FOR TRUCKS

*All values are in gm/km/vehicle**

Pollutant	CO	NOx
Emission Factor	10.67	18.97

*Note: *: To be multiplied by 1.6 for converting into gm/mile for use in CALINE4.*

4.2.3.2 Results and Discussions for Traffic Impact

The estimated concentrations of CO and NOx for the additional traffic are presented in **Table-4.10**.

TABLE-4.10
PEAK HOURLY PREDICTION RESULTS

Distance from the edge of the Road (m)	Incremental Concentrations for CO (µg/m³)	Incremental concentrations for NOx (µg/m³)
20	21.0	17.2
40	12.3	9.8
60	4.9	3.3
80	1.3	0.9

The general observation from above table reveals that the maximum concentration occurs at 20 m from the edge of the road, and the concentration is about 21.0 µg/m³ for CO and 17.2 µg/m³ for NOx, which are well within the permissible limit.

4.2.3.3 Adequacy of the Existing Road Network

The estimated traffic for the proposed project is calculated by superimposing traffic of the project with baseline traffic data. The traffic details have been converted to Passenger Car Units (PCU) at all the locations as per the conversion factors stipulated by Indian Road Congress (IRC). Existing and additional traffic is given in **Table-4.11.**

TABLE-4.11
EXISTING AND ADDITIONAL TRAFFIC

Traffic	No. of Vehicles per Day	PCU per Day
Existing Traffic	461	1026
Traffic due to Proposed Project		
Trucks & Heavy Motor Vehicles	700	2100
Total	**1161**	**3126**

(PCU Factors: Cars/Light Duty Vehicles=1.0, Trucks/Buses/Tractors=3.0, 2/3 Wheelers=0.5)

The increase in traffic due to the proposed project, adequacy of road/highway during operational phase has been estimated by comparing with the

recommendations stipulated by Indian Road Congress (IRC) for highways. The IRC recommendations on traffic capacity are presented in **Table-4.12.**

TABLE-4.12
RECOMMENDATIONS ON TRAFFIC CAPACITY - IRC

Sr. No.	Category of Road	Maximum PCU/day
1	Two lane roads (7 m) with earthen shoulders	15,000
2	4-lane highway with earthen shoulders	35,000

The existing highway has a width of 7 m carriage way. On comparison with the above standards, as the existing road is two lane road, it can take a maximum load of 15000 PCU/day. Whereas, the projected traffic load is only 3126 PCU per day. Hence, the existing road is adequate to take the additional traffic generated by the project. Futher, the road will be widened and strenghtned suitably to take the additional load.

4.2.4 Impact on Water Resources and Water Quality

4.2.4.1 Impact on Water Resources

The total water requirement for the project is about 32,800 m^3/day which will be sourced from desalination plant of APSEZ Ltd. No ground water will be abstracted during the operation phase, thus there is no impact envisaged on groundwater resources. There will not be any adverse impact on the fresh water sources as the primary water source for this project is sea water after desalination.

Dhaneshwari river is a seasonal river, which flows in the western part of the proposed site. The river will not be diverted but suitably trained along the boundary.

4.2.4.2 Impact on Water Quality

The water balance and wastewater streams along with the details of wastewater treatment plant have been described in *Chapter-2*. The total wastewater generation from the proposed plant will be about 5,432 m^3/day. This will be treated in the effluent treatment plant and the treated wastewater will be fully utilized within the plant for process, cooling and other purposes. No wastewater will be discharged outside the plant. Hence, there will be no impact on the water regime due to the wastewater generated from the plant complex. The proposed project will operate on zero liquid discharge concept.

4.2.4.3 Water Pollution Management and Water Conservation

- Maximum recycling of treated wastewater into process;
- Provision of appropriate treatment facility to treat domestic sewage from plant;
- Utilization of treated domestic wastewater in greenbelt development and dust suppression;

- Provision of separate storm water system to collect and store run-off water during rainy season and utilization of the same in the process;
- Treatment of storm water to remove contaminants, if any before discharging into water streams;
- The existing natural drainage will not be disturbed during operation stage of project and the proper required maintaince will be adopted;
- No ground water shall be used in this project;
- The waste that comes out of the project shall be recycled;
- The liquid type waste shall be treated in side the plant and reused/disposed as per standars;
- The chemicals that damage the environment and the waste which is hazardous to the environment shall be disposed off in such a manner that there will be no resion effect on the environment; and
- There will be no discharge of any effuents, chemical, wastes (solid & liquid) and hazardous waste into the back waters and marine water.

Treated sewage will conform to the standards for land application. Regular monitoring of ground water and surface water as part of the post-project monitoring shall be carried out.

4.2.4.4 Rainwater Harvesting System

Rainwater harvesting structures will be provided to recharge the groundwater resources in the region. The run-off water from the roof of the structures and paved areas shall be collected through storm water drainage system and led to rain water harvesting structure. The typical rainwater harvesting structure is shown in **Figure-4.10**.

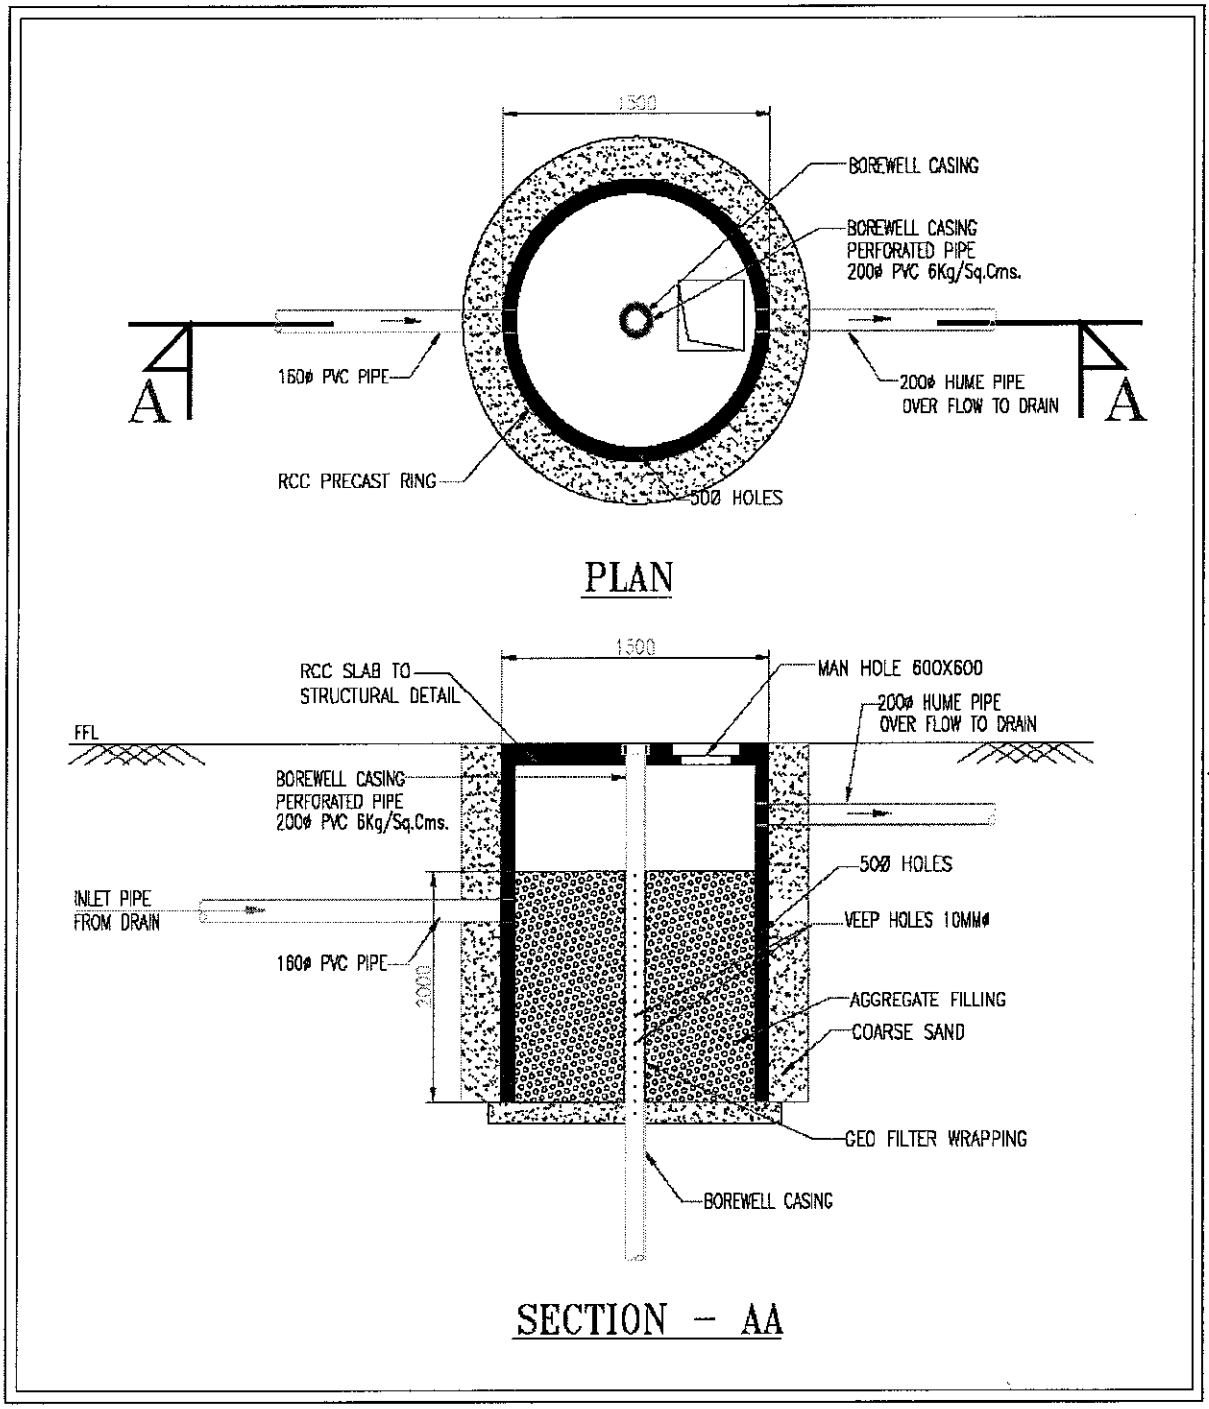

FIGURE-4.10
TYPICAL PLAN AND SECTION OF DEEP WELL RECHARGE PITS

4.2.5 Impact of Solid Wastes

The details of hazardous and non-hazardous waste generation with waste quantities and composition are given in *Chapter-2*. The main solid waste generated from the proposed plant are:

- Copper slag from copper smelter plant;
- Phosphogypsum from phosphoric acid plant;
- Hazardous cake produced from effluent treatment plant; and
- Scrubber cake from fugitive gas handling scrubbers.

Options would be explored to maximize the utilization of copper slag in the following areas:

- Road/ embankment making;
- Sea shore embankment;
- Land development;
- Shot blasting; and
- Cement manufacturing.

Options would be explored to maximize the utilization of phosphogypsum in the following areas:

- Cement manufacturing;
- Soil rectification; and
- Land development.

Hazardous cake and scrubber cake will be stabilized and stored in secured land fill as per guidelines of MoEF&CC/ CPCB/ GPCB. An area of around 13.35 ha is identified and allocated. For the initial years of copper refinery plant operation till sustained utilization/management of copper slag and phosphogypsum; in the above application areas are developed, as well as for emergency purpose, copper slag storage area and gypsum pond of around 39.25 ha would be identified and made available for intermediate/emergency storage of the same. Provision would be made to reclaim the disposed copper slag and phosphogypsum from gypsum pond at a later stage for various utilization ventures.

4.2.5.1 Solid Waste Management

Hazardous Wastes Generation, Handling and Management Plan

ETP Waste and Scrubber Waste

- **Source and Quantity**

ETP cake is the solid waste generated from the Gas Cleaning Plant (GCP) of sulphuric acid plant, wastewater treatment process. It is mainly made up of $CaSO_4$ and hazardous in nature as per Schedule-1 of Hazardous Waste Rules-2008. Hence, ETP cake will be stored in secured land fill designed as per CPCB guidelines.

The scrubber cake is a solid waste generated during the scrubbing of the secondary gases / tail gases before dispatching into the stack.

The generation of ETP waste sludge and scrubber waste will be about 18,000 TPM.

- **Handling, Storage & Management Plan**

The ETP cake, because of its hazardous nature, will be stored in a secured landfill. The secured landfill will be constructed as per CPCB guidelines. The secured land fill will have impervious layers of clay liner and HDPE liner. This will ensure that the ground water will not be impacted by the storage of the ETP cake. The SLF facility will be provided with monitoring piezometric bore wells around it and the samples will be collected periodically to have a check on the sub soil water quality.

Spent Catalyst

- **Source and Quantity**

V_2O_5 will be used as a catalyst in the catalytic converter of the sulphuric acid plant to convert SO_2 to SO_3. To maintain the conversion efficiency, the catalysts will be replaced during major turn-around shutdown. About 400 KL/yr of spent catalyst will be generated. These spent catalysts will be hazardous in nature and hence will be disposed in secured land fill facility.

- **Handling, Storage & Management Plan**

The spent catalyst will be collected in HDPE bags and stuffed in transportation drums, which will be sent back to the supplier for regeneration (or) the entire quantity will be dumped in secured landfill facility.

Used Oil and Oil Sludge

- **Source and Quantity**

The lubricating oil used during the maintenance processes generate used oil / spent oil. These are all categorized as hazardous waste and will be given to the authorized recyclers.

The oil sludge generated from oil storage facilities Viz. furnace oil storage tanks will be collected from the storage tank during cleaning operation.

- **Handling, Storage & Management Plan**

The spent oil will be collected in the drums and stored in concrete area as oil waste at scrap yard. This will be sold to the authorized recyclers as and when generated.

Spent Resins from DM and RO Plant

Hazardous waste will be generated from the DM and RO plant to the tune of about 20 KL/year.

- **Handling, Storage & Management Plan**

Spent resins DM and RO plant will be stored in secured land fill. RO plant rejects will be sent to multi effect evaporator (MEE) and solids generated from MEE will be stored in secured land fill.

Nickel and Arsenic bearing Sludge

The nickel sludge and arsenic bearing sludge (As-Cu precipitate) will be given to authorized recycler.

4.2.6 Impact on Noise Levels

The main noise generating sources in the plant will be blowers and compressors of acid plant, utility air, converters and furnace; waste heat recovery boiler and pump house. The noise levels at the source for these units will be in the range of 85-90 dB(A). The major noise generating sources from the proposed plant are listed in **Table-4.13.**

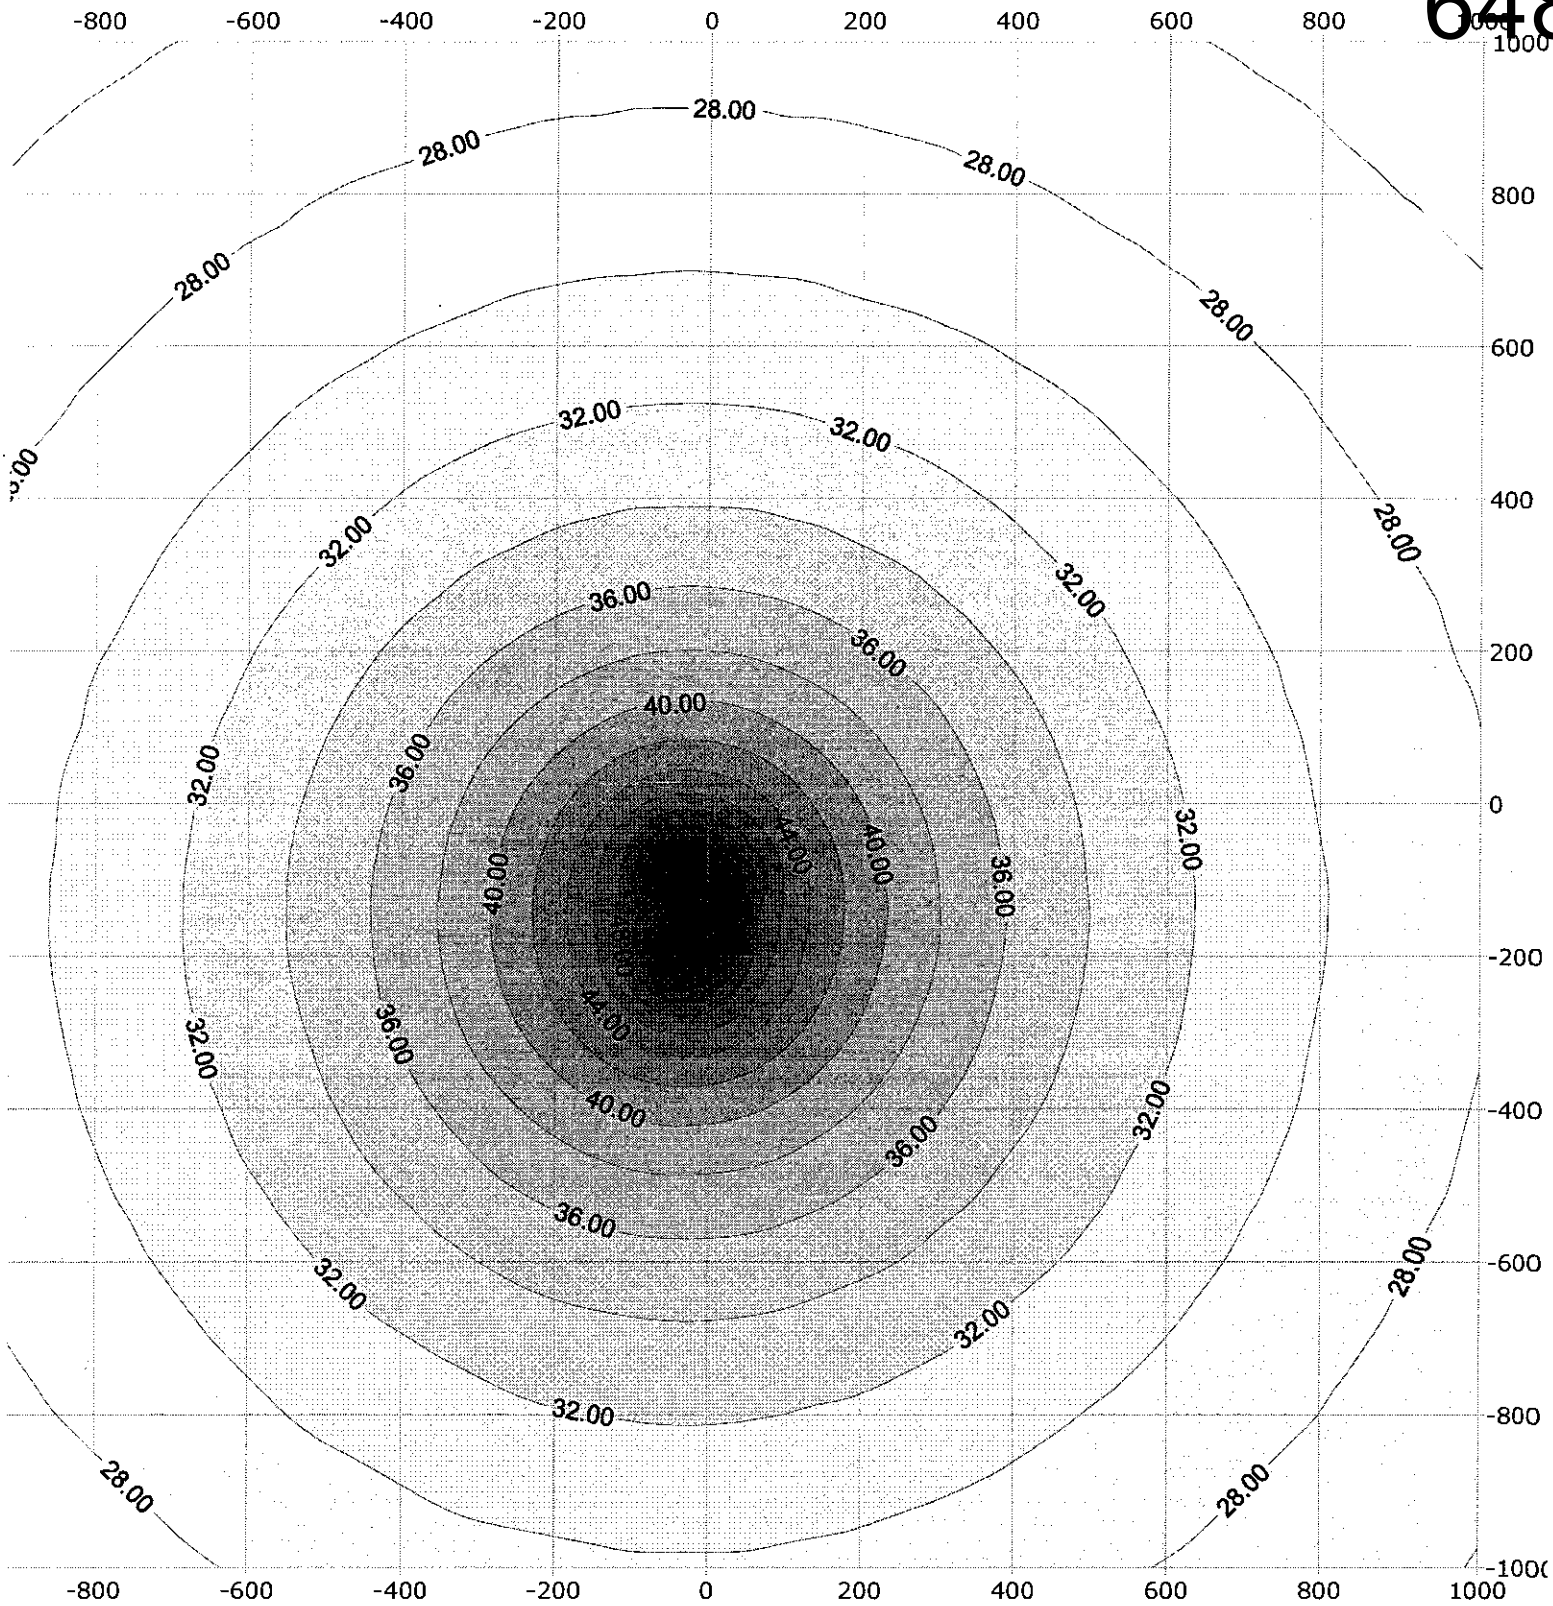
TABLE-4.13
NOISE LEVELS FROM THE PROPOSED PLANT

Sr. No.	Sources	Typical Noise Levels dB(A)
1	Air Compressor	90 - 95
2	Converter Blowers	85 - 90
3	Sulphuric Acid Plant Blower	90 - 95
4	Waste Heat Recovery Turbine Generator	90 - 95
5	Pump House Area	80 - 85
6	ISA Blower	85- 90
7	Proposed Air Compressors	90 - 95
8	Proposed Converter Blowers	85 - 90
9	Proposed Sulphuric Acid Plant Blowers	90 - 95
10	ISA Blowers of the Proposed Project	85 - 90

The predicted noise levels at the plant boundaries are estimated through computer based mathematical model. The predicted noise levels at the boundary due to various activities are found ranging in between 40 to 46 dB(A). It is seen from the simulation results that the incremental noise levels will be well within the CPCB standards. The incremental noise levels due to plant operation are shown in **Figure-4.11**.

➢ ***Impact on Work Zone***

The impacts on the working personnel are not expected to be significant on account of the high level of automation of these noisy equipments, which means



that workers will be exposed for short duration only that too intermittently. In addition to that, wearing earplugs will be made compulsory for all employees and visitors entering smelter premises near noisy equipments.

4.2.6.1Noise Attenuation Measures

The following control measures will be implemented for the proposed project:

- High noise generating sources shall be insulated adequately by providing suitable enclosures;
- The air compressor, process air blower, pneumatic valves shall be provided with acoustic enclosure;
- All the design/installation precautions as specified by the manufacturers with respect to noise control shall be strictly adhered to;
- Design and layout of building to minimize transmission of noise, segregation of particular items of plant and to avoid reverberant areas;
- Use of lagging with attenuation properties on plant components / installation of sound attenuation panels around the equipment;
- The noise control system shall be designed to form an integral part of the plant;
- Other than the regular maintenance of the various equipment, ear plugs/muffs shall be recommended for the personnel working close to the noise generating units;
- The oxygen plant shall be installed in double wall building and no operator shall be working within the building;
- All the openings like covers, partitions shall be designed properly; and
- Inlet and outlet mufflers shall be provided which are easy to design and construct.

4.2.7 Impact on Ecology

4.2.7.1 Impacts on Terrestrial Ecology

There are no records of any fauna of significance in the area. The fauna which is present is of very common species and available near almost all human settlements. There are no other endangered species of fauna reported or observed in the vicinity of the proposed project, except for Peacock which is a Schedule-I bird which is known to live close to human settlements and agricultural lands in Semi-arid climates of Gujarat.

The main sources of air pollution from the plant will be from the process stacks. The pollutants from the plant include sulphur dioxide and particulate matter. The air dispersion modeling simulations are done to evaluate SO_2, PM and NOx likely to be contributed by the plant. The incremental concentrations were found to well within the limits as per National Ambient Air Quality Standards. Hence, only marginal impact is envisaged due to copper refinery plant on the terrestrial ecology.

4.2.7.2 Impact on Aquatic Ecology

The unit will be operating on zero discharge process. Further, there is no proposal to divert the nallah. The existing nallah will be suitably trained. In addition, 15 m width of buffer on either side of the nalah will be left unworked. Hence, no major adverse impact is envisaged.

4.2.7.3 Conservation Measures for Protection of Peacock

As per the primary data collected and also from the secondary data sources, Peacock belongs to Sch-I as per Wildlife Protection Act, 1972. It has been assessed as Least Concern bird as per the International Union for Conservation of Nature (IUCN).

Following measures are proposed for the conservation of peacock:

a. Develop dense tree plantation of highly branching trees that can provide shelter and habitat for the peacocks. Protect and maintain the naturally occurring species of plants prominent in the area;
b. Providing plant species that are conducive to breeding of insects and reptiles on which the peacocks feed;
c. Provide at least 2 water holes/ponds of adequate size with perennial water source for the peacocks and other fauna species;
d. Increase awareness among the employees and also the local population on the importance and methods of conservation of peacock;
e. Protection against any poaching – through community patrolling parties;
f. Ensuring fire protection – to save its food i.e. seeds, insects and small reptiles, and also save eggs and young ones of Peacock itself; and
g. Educating the community against actions that harm peacocks and providing a corpus fund for compensating the community against loss to crop due to peacocks, if any.

4.2.8 Prediction of Impacts on Socio-Economics

4.2.8.1 Impacts on Employment Generation

The requirements of skilled/unskilled manpower during operation will be met from nearby villages as far as possible based on skill set & eligilibility requirement as per the job and the vacancies available. The project will also help in generation of significant indirect employment. This will be a positive socio-economic development for the region and general upliftment of standard of living in the region.

4.2.8.2 Impacts on Infrastructure Development

The area is well developed with the entire basic infrastructure. AEL is strictly committed and is going to implement the proposal to uplift the social infrastructure surrounding the copper refinery plant area. Positive impact is envisaged on the infrastructure of the region.

There will be no damage to fisherman due to the proposed project. The roads used by fisherman will not be disturbed due to the proposed project.

The Social Imapct Assessment report is enclosed as **Annexure-XII.**

4.3 Greenbelt / Green Cover Development

4.3.1 Objective

The main objective of the greenbelt is to provide a barrier between the plant and the surrounding areas. The greenbelt helps to capture the fugitive emissions and to attenuate the noise generated in the plant apart from improving the aesthetics of the plant site. In order to control the industrial pollutants, dense tree plantations are necessary.

As the sedimentation pattern of the pollutants, ambient and ground level concentration of pollutants are usually determined by the direction and speed of prevailing wind and vertical and horizontal thermal gradients prevailing in the area, the belt of plantations will be designed accordingly. The width of the tree belt depends on the gaseous emissions, availability of land and site characteristics etc.

Geometry of planting of tree is more important in order to have effective wind break by the plantation. For an effective green belt, a mixture of tree species is necessary and some shrubs and grasses will be inter-cropped. As far as possible, there will be no gaps in the green belt. Where opening is imperative, alignments to roads will be such that open gaps are prevented to overcome funneling action of wind.

The trees will be planted in several rows with a tree density of 2000-2500 trees/ha with adequate width around the plant boundary and maintained as per CPCB guidelines. The inter-spaces will be planted with grasses, bushes and

hedges. Greenbelt is thus a set of rows of trees planted in such a way that they form an effective barrier between the plant and the surroundings.

4.3.2 Design of Greenbelt

Green areas will be developed in about 85.79 ha which is earmarked as per GPCB norms.

- Shrubs and trees will be planted in encircling rows around the project site;
- The short trees (<10-m height) will be planted in the first rows (towards plant side) of the green belt. The tall trees (>10 m height) will be planted in the outer rows (away from plant side);
- Planting of trees in each row will be in staggered orientation (triangular form); and
- The spacing between the trees will be maintained slightly less than the normal spaces, so that the trees may grow vertically and slightly increase the effective height of the green belt.

4.3.3 Plant Species for Greenbelt

While selecting the plant species for the proposed greenbelt, the following points will be taken into consideration:

- Should be a fast growing type;
- Should have a thick canopy cover;
- Should be perennially green;
- Should be preferably of native origin;
- Should have a large leaf area index; and
- No fruit bearing trees should be grown in the vicinity of the copper refinery plant premises.

4.3.4 Recommended species in the Greenbelt Area

The recommended species for the greenbelt development are given in **Table-4.14.**

TABLE-4.14
LIST OF SPECIES SHOWING HIGH AIR POLLUTION TOLERANCE INDEX (APTI)

Sr. No	Scientific Name	Common Name	Family	Air Pollution Tolerance Index levels
1	*Azadirachta indica*	Neem	Meliaceae	For controlling Suspended Particulate Matter (SPM), SO_2, NOx and Noise
2	*Dalbergia sissoo*	Sisoo, Shisham	Fabaceae	For controlling Suspended Particulate Matter (SPM), SO_2, NOx and Noise
3	*Tamarindus indica*	Imli	Caesalpinaceae	For controlling Suspended Particulate Matter (SPM), SO_2, NOx and Noise

Sr. No	Scientific Name	Common Name	Family	Air Pollution Tolerance Index levels
4	*Pongamia pinnata*	Karanj	Fabaceae	For controlling Suspended Particulate Matter (SPM), SO_2, NOx and Noise
5	*Acacia nilotica*	Babul	Mimosaceae	For controlling Suspended Particulate Matter (SPM), SO_2, NOx and Noise
6	*Salvadora persica*	Piloo	Salvadoraceae	For controlling Suspended Particulate Matter (SPM), SO_2, NOx and Noise

All the above mentioned species are ideally suited for the arid ecological habitat of Kutch region, and they are all fast growing species, ideal for undertaking greenbelt plantations. The choosing of the species should be ratified by the horticulturist of the project site and local forest department.

Their planting should be interspersed with each other to create mixed canopy of the plants and the ideal stance for planting all trees.

Chapter-5
Analysis of Alternatives (Technology & Site)

vi. Port

Receipt of copper concentrate will be through pipe conveyor from west port at Mundra which is about 5.1 km from site.

5.1.3 Site-III (Near Mundra Village)

i. Location

The proposed site is located at a distance of 7.5 km from south of Mundra village. The sea is adjoining the proposed site via creek at south east of the proposed site.

ii. Land & Terrain

The total identified land is notified SEZ land and available for the proposed project. The terrain is flat and average elevation of the site is +7.5 m CD. Due to closeness of sea majority of area approx. 65% of land area fall under CRZ area.

iii. Road

The proposed site is accessible through existing state highway at west, which further connects Mundra and is about 7.5 km from the site. The existing NH-8A connecting Mundra to Mandvi is about 18 km from the site.

iv. Water

The requirement of desalinated water for the plant has been estimated as 32,000 KLD, which will be sourced from desalination plant of APSEZ Ltd M/s. MUPL will be supplying the total water requirement for the project.

v. Power

The requirement of power will be about 300 MW. To meet the above requirement the power will be made available from 400 kv switch yard of Adani Power Plant. Development of bay and HT line of about 20 km from bay to site will be developed as infrastructure facilities.

vi. Port

Receipt of copper concentrate will be through pipe conveyor from west port/south port at Mundra which futher transfer by road is about 30 km from site.

5.1.4 Comparison of Salient Features of Alternative Sites

The salient features of alternative sites are presented in following **Table-5.1** and is shown in **Figure-5.1.**

TABLE-5.1
SALIENT FEATURES OF ALTERNATIVE SITES

Sr. No	Description	Site-1	Site-II	Site-III
1	Location	24 km east of Mundra, Gujarat	13.9 km west of Mundra, Gujarat	7.5 km south of Mundra, Gujarat
2	Latitude – Longitude (Average Center of Plot)	22°54'53.63"N 69°47'46.81"E	22°48'55.78"N 69°34'32.02"E	22°46'43.82"N 69°42'56.42"E
3	Terrain	Flat	Flat and sloping south east to north west	Flat
4	Average elevation from MSL	8.5 – 9.5 above MSL	7 - 10 m above MSL	7.5-8.5 m above MSL
5	Land Availability	323.76 ha (outside SEZ) Mostly agricultural land	256.58 ha (154.19 Ha within SEZ)	485.63 ha (outside SEZ)
6	Land development requirement	Bushes/jungle clearance	Bushes/jungle clearance required	Flat vacant land No land development
7	Distance from nearest National Highway no. 8A	adjoining at north	5 km	18 km
8	Distance from nearest State Highway No. 6/ nearest APSEZ road	8 km	Close to site	Adjoining at west
9	Approach Road requirement	Road is existing	Road is existing	Shall require new approach
10	Distance from Power Source	Mokha Sun Station about 5 km	APL Switch Yard at about 0.5 km from site	APL Switch Yard at about 20 km from site
11	Distance from Water Source	Water will be supplied by APSEZ, 35 km	Water will be supplied by APSEZ, 5 km	Water will be supplied by APSEZ, 25 km
12	Distance from West Port	40 km	10 km	30 km
13	River/ Streams/ Nallahs	Various Streams passing between the site	Natural Steam passing through the site	Nil
14	Mangroves	Nil	Nil	Nil
15	Fish Landing Centres	Nil	Nil	Nil
16	Forest	Nil	About 253 acres of land is reserved forest land, proposed for diversion. State Govt. has recommended for FC.	Nil
17	Erosion Prone areas	No	No	Yes
18	Social and R&R Issues	Nil	Nil	Nil
19	Recommendations	Less Suitable	Suitable	Less Suitable

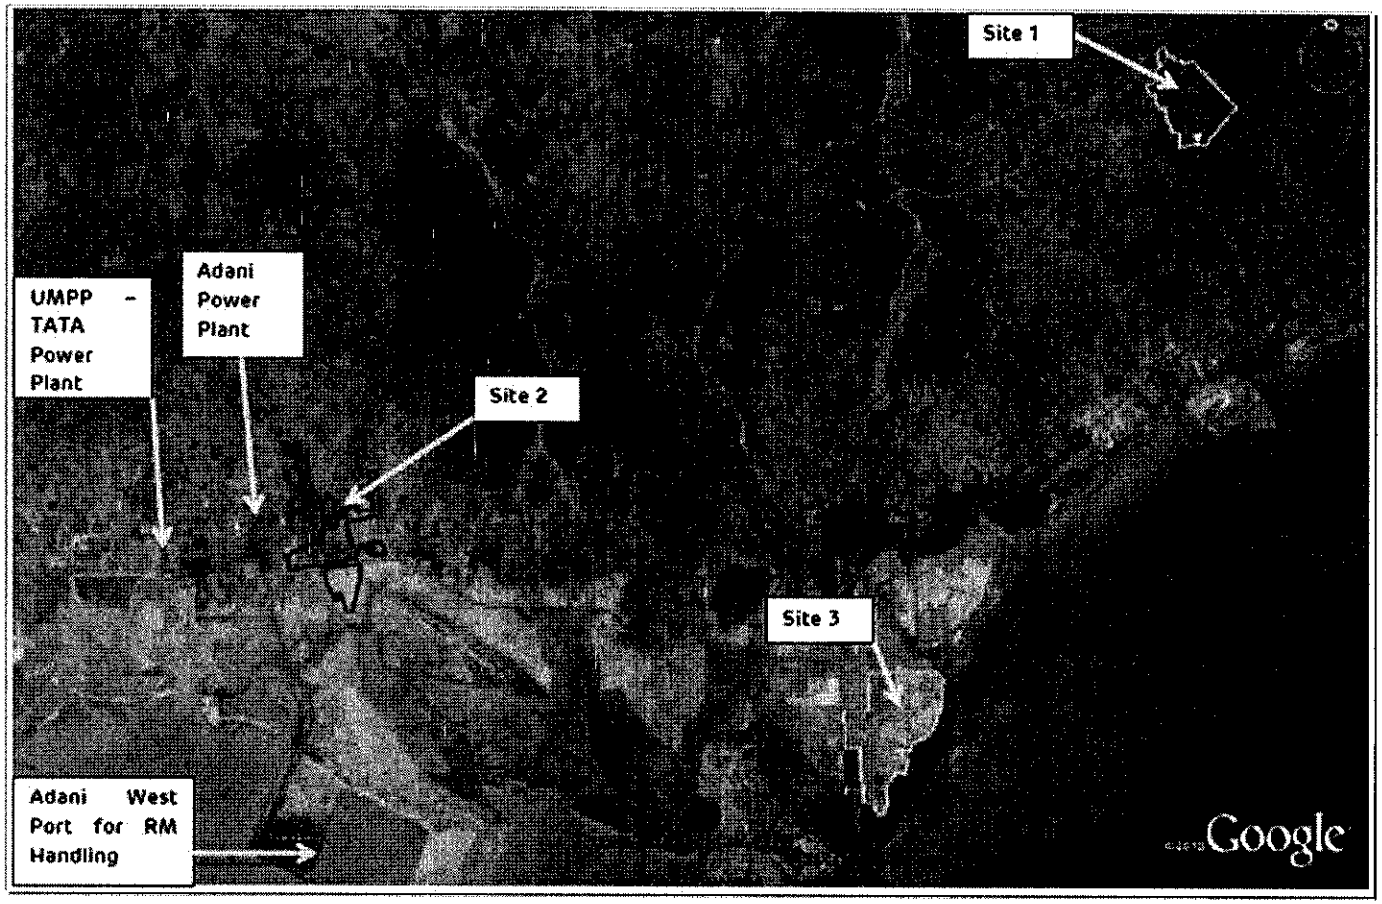

FIGURE-5.1

5.1.5 Conclusion/Recommendation

The details presented in preceding paragraphs mandate that Site-II in Siracha & Navinal village adjacent to existing APL emerges as technically superior site such as availability & closeness of water and power source, land development, closeness to road and rail, etc. It is substantially advantageous in terms of environmental and technical criteria.

5.2 Technology Selection

Various processes available for pyrometallurgical extraction of copper are presented following **Table-5.2.**

TABLE-5.2
TECHNOLOGY SELECTION

S.No.	Technology	Remarks
1	Reverberatory smelting	Obsolete technology
2	Electric smelting	Not suitable for large scale plant
3	Outokumpu Flash smelting (Currently Outotec)	Widely accepted as proven technology
4	Furukawa Flash smelting	Not widely accepted
5	INCO Flash smelting	Not widely accepted
6	Noranda process	Not widely accepted
7	Mitsubishi process	Not suitable for large scale plant
8	Contop process	Less popular and accepted process
9	Ausmelt Process	Not suitable for large scale plant
10	ISA smelt process	Accepted as proven technology
11	Vanukov process	Information for a substantiated Judgement is not available. No Definite analysis available
12	SKS Process	Potential for further development, New Emerging Technology

The above mentioned technologies available for copper smelting were evaluated against factors like technical proneness investment and operating costs, commercial acceptability, environment considerations, technical considerations like copper recovery, sulphur recovery, flexibility in operation etc.

1. Outotec flash smelting; and
2. ISAsmelt process.

Flash Smelting Technology developed by M/s. Outokumpu (Currently known as Outotec) is one of the proven and well reconginsed technology for manufacturing of copper by Pyrometallurgical route. Plants based on this technology are installed all around the world including in developed countries in Europe, North and Latin America, Australia, Asia as well as in emerging countries from Africa. More than 32 million tonnes of copper containing materials are smelted each year with Flash Smelting technology.

ISASMELT™ is installed in major copper smelting and converting operations around the world, including Australia, USA, Belgium, Germany, Great Britain,

India, Malaysia, China and Zambia. More than nine million tonnes of copper containing materials are smelted each year with ISASMELT™ technology.

The proposed technology either Flash Smelting or ISASMELT™ are having the following features:

- Ensures high copper recovery;
- High energy recovery;
- Technology conserves water and other natural resources;
- High end automation; and
- Interlocking with pollution control equipment.

Smelting technology of the plant will be designed based on one of the two technologies mentioned above.

Chapter-6
Environmental Monitoring Program

6.0 ENVIRONMENTAL MONITORING PROGRAM

This chapter presents the details of environmental monitoring, schedule, institutional arrangements for pollution control and cost for environmental protection measures for the proposed project.

6.1 Environmental Monitoring

The environmental monitoring is important in terms of evaluating the performance of pollution control equipment installed in the project. The sampling and analysis of the environmental attributes will be as per the guidelines of Central Pollution Control Board (CPCB)/ Gujarat Pollution Control Board (GPCB). The frequency of sampling and location of sampling will be as per the directives of CPCB/GPCB.

Environmental monitoring will be conducted on regular basis by AEL to assess the pollution level in the surrounding area. Usually, as in the case of the study, an impact assessment study is carried out over a short period of time and the data cannot bring out all the variations induced by the natural or human activities. Therefore, regular monitoring program of the environmental parameters is essential to take into account the changes in the environment.

The objective of environmental monitoring is:

- To verify the result of the impact assessment study in particular with regard to new developments;
- To follow the trend of parameters which have been identified as critical;
- To check or assess the efficacy of the controlling measures;
- To ensure that new parameters, other than those identified in the impact assessment study, do not become critical through the commissioning of new installations;
- To check assumptions made with regard to the development and to detect deviations in order to initiate necessary measures; and
- To establish a database for future impact assessment studies for new projects.

The attributes, which require regular monitoring, are specified underneath:

i Air quality;
ii Water and wastewater quality;
iii Noise levels;
iv Soil quality; and
v Ecological preservation and afforestation.

The post project monitoring to be carried out at the industry level is discussed below.

6.2 Monitoring Schedule

A monitoring schedule is very important in order to ensure that effluent and emissions conform to the standard for which control measures have been

designed. As it is required that installation and operation of water pollution control facilities should limit concentration and quantum of pollutants released to the environment properly, regular continuous monitoring of flow and pollutants should be done. A comprehensive monitoring program for construction phase and operation phase is suggested in **Table-6.1** and **Table-6.2** respectively.

The environmental attributes shall be monitored as given below:

➢ **Ambient Air Quality and Meteorology**

- The ambient air quality shall be monitored as per National Ambient Air Quality Emission Standards issued by the MoEF&CC vide GSR No.826 (E) dated 16th November, 2009;
- The ambient air quality shall be monitored twice in a month in line with the guidelines of Central Pollution Control Board at about 3-4 locations in and around the plant as per the parameters specified by CPCB;
- Further, the particulate matter shall be analyzed for the metals such as iron, copper, manganese, lead, zinc and cadmium etc.;
- The fugitive emission in and around of the individual unit should also be measured for particulate matter regularly and as per the latest CPCB guidelines; and
- Automatic weather monitoring station shall be provided to monitor wind speed, wind direction, temperature, relative humidity, atmospheric pressure, rainfall, evaporation rate, solar radiation and cloud cover. The parameters will be recorded at one hour frequency. The same data will be used for the improvement of environment.

➢ **Stack Emissions**

- Regular stack emission monitoring shall be carried out at all stacks for particulate matter, HF, SO_2 and NOx for checking the compliance to emission standards by respective plant; and
- The programme of stack monitoring should be prepared in such a way that the concerned appropriate parameters are included.

➢ **Water Quality**

The wells in the surrounding villages and downstream of solid waste dumping yards (especially copper slag storage area, gypsum pond and secured land fill) shall be identified based on the ground level contours. Ground water quality shall be monitored on quarterly basis.

➢ **Wastewater Quality**

Unit wise monitoring at effluent treatment plant would help in keeping a check over the operation of treatment unit and to take measures to correct

malfunctioning of the units. The main parameters for the effluent monitoring are pH, oil & grease, suspended solids and heavy metals.

- **Noise Levels**

Noise levels in the work zone environment such as plant area, truck parking area, administration block and all other work zone shop floors shall be monitored. The frequency shall be once in a month in the work zone. Similarly, ambient noise levels at about four locations (preferably nearby settlements) shall be monitored on a seasonal basis.

TABLE-6.1
ENVIRONMENTAL MONITORING DURING PROJECT CONSTRUCTION PHASE

Sr. No.	Potential Impact	Action to be Followed	Parameters for Monitoring	Frequency of Monitoring
1	Air Emissions	All equipments are operated within specified design parameters	Random checks of equipment logs/ manuals	Periodic
		Vehicle trips to be optimized to the extent possible	Vehicle logs	Periodic during site clearance & construction activities
		Maintenance of DG set emissions to meet stipulated standards	Gaseous emissions (SO_2, HC, CO, NOx)	Periodic emission monitoring
		Ambient air quality within the premises of the proposed unit to be monitored	The ambient air quality shall conform to the standards for PM_{10}, $PM_{2.5}$, SO_2, NO_x, and CO	As per CPCB / GPCB requirement or on monthly basis whichever is earlier
2	Noise	List of all noise generating machinery onsite along with age to be prepared. Equipment to be maintained in good working order.	Equipment logs, noise reading	Regular during construction activities
		Night working is to be minimized.	Working hour records	Daily records
		Generation of vehicular noise.	Maintenance of records of vehicles	Daily records
		Noise to be monitored in ambient air within the plant premises.	Spot noise recording	As per CPCB/ GPCB requirement or on quarterly basis whichever is earlier.
3	Wastewater Discharge	No untreated discharge to be made to surface water, groundwater or soil.	No discharge hoses shall be in vicinity of watercourses.	Periodic during construction activities
4	Soil Erosion	Protect topsoil stockpile where possible at edge of site.	Effective cover in place.	Periodic during construction activities
5	Drainage and	Ensure drainage system	Visual inspection of	Periodic during

Sr. No.	Potential Impact	Action to be Followed	Parameters for Monitoring	Frequency of Monitoring
	wastewater Management	and specific design measures are working effectively. The design to incorporate existing drainage pattern and avoid disturbing the same.	drainage and records thereof	construction activities
6	Waste Management	Implement waste management plan that identifies and characterizes every waste arising associated with proposed activities and which identifies the procedures for collection, handling & disposal of each waste arising.	Comprehensive Waste Management Plan should be in place and available for inspection on-site. Compliance with MSW Rules, 2016 and Hazardous Wastes (Management, Handling and Transboundary Movement) Rules, 2016	Periodic check during construction activities
7	Health	Employees and migrant labour health check ups	All relevant parameters including HIV	Regular check ups
8	Loss of flora and fauna	Re-vegetation as per Forest guidelines	No. of plants, species	During site clearance

TABLE-6.2
ENVIRONMENTAL MONITORING DURING PROJECT OPERATION PHASE

Sr. No.	Particulars		Monitoring Frequency	Method of Sampling	Important Monitoring Parameters
I	**Air Pollution & Meteorology**				
	A	**Stack Monitoring**			
	1	Acid Plant Stack	Continuous	On-line	SO_2, PM
			Every month	Manual procedure	PM, SO_2 and acid mist
	2	Smelting Furnace/ Settling & Slag Cleaning Furnace / Converter / Anode Furnace stack	Continuous	On-line	PM, SO_2
			Every month	Manual procedure	PM, SO_2
	3	Precious metal recovery plant stack	Continuous	On-line	PM, SO_2
	4	Phosphoric Acid Plant Stack (Dust Monitoring)	Continuous	On-line	PM
			Every month	Manual procedure	PM
	5	Work zone monitoring	Twice in a month	Low volume sampler	SO_2, PM
	B	**Ambient Air Quality Monitoring**			
	1	3 - 4 No. of AAQ locations	Twice in a week	24 hr.	As per NAAQs 2009

Sr. No.	Particulars	Monitoring Frequency	Method of Sampling	Important Monitoring Parameters
	2 **Dustfall** At ambient air quality locations	One month in every season	24 hr.	Dust, Copper, Arsenic, Lead, Zinc and Cadmium in dust.
	C Meteorology			
	1 Wind speed, direction, temperature, relative humidity, atmospheric pressure, rainfall etc shall be monitored at plant.			
II	**Water and Wastewater Quality**			
	A Domestic			
	1 Sanitary wastewaters from STP outlet	Once in a month	24 hr composite	As per CTO conditions
	B Industrial Wastewaters			
	1 Outlet of the ETP	Once in a Day	24 hr composite	As per CTO conditions
	C Water quality			
	1 **Ground Water** 1) Wells in the downstream of plant area 2) Wells in the upstream of plant area	Once in a season	Grab	Parameters specified under IS:2295 (Class C) and IS:10500,
III	**Industrial Noise Levels**			
	1 Near administrative office	Once in 5 months	8 hr continuous with 1 hr interval	Noise levels in dB(A)
	2 Process areas	Once in 5 months	8 hr continuous with 1 hr interval	Noise levels in dB(A)
	3 Air Compressor	Once in 5 months	8 hr continuous with 1 hr interval	Noise levels in dB(A)
	4 Blower and compressor of Oxygen plant	Once in 5 months	8 hr continuous with 1 hr interval	Noise levels in dB(A)
	5 Turbine Generator of WHRB	Once in 5 months	8 hr continuous with 1 hr interval	Noise levels in dB(A)
	Ambient Noise Levels			
	1 Four locations	Once in three months for the industry Once in each season for ambient noise levels	24 hr continuous with one hr interval	Noise levels in dB(A)
IV	**Soil Quality**			
	1) Near Copper slag storage area 2) Near Gypsum pond 3) Near Secured Land Fill 4) Nearby village	Pre-Monsoon and Post Monsoon season	Grab	Physio-chemical parameters and metals covering Zn, Pb, Cd, As and Cu.

6.3 Implementation Schedule of Mitigation Measures

The mitigation measures suggested in *Chapter-4* will be implemented so as to reduce the impact on environment due to the operations of the proposed project. In order to facilitate easy implementation of mitigation measures, the priority of implementation is given in **Table-6.3.**

TABLE-6.3
IMPLEMENTATION SCHEDULE

Sr. No.	Recommendations	Time Requirement (Months)	Immediate	Progressive
1	Air pollution control Measures	Before commissioning of respective units	*	-
2	Water Pollution Control Measures	Before commissioning of the plant	*	-
3	Noise Control Measures	Along with the commissioning of the plant	*	-
4	Ecological Preservation and Up gradation	Stage-wise implementation	*	*

Note (*) indicates implementation of recommendations

6.4 Infrastructure for Environmental Protection

6.4.1 Monitoring Equipment and Consumables

A well-equipped environmental laboratory will be set up within the plant premises. Proper periodic training will be given to EMD employees to carry out necessary environmental monitoring and analysis.

The production of copper can cause the following environmental problems:

(i) Emission to air;
(ii) Water pollution;
(iii) Solid wastes; and
(v) Hazardous wastes.

The major environmental issues for the copper production are the potential emission to air of dust and metals/metal compounds and of sulphur dioxide from roasting and smelting sulphide concentrates or using sulphur-containing fuels or other materials. The pyro metallurgical processes are potential sources of dust and metals from furnaces, reactors and the transfer of molten metal. The details of emission monitoring system installation is given in **Table-6.4**.

TABLE-6.4
DETAILS OF EMISSION MONITORING SYSTEM INSTALLATION

Particulars	Off-Line Monitoring	On-Line Monitoring Parameters	Monitoring System and Method as per NAAQS.
A. Stack Monitoring			
Acid Plant Stack	As per CPCB standard & Consent to Operate	SO_2, PM As per CPCB Standard	UV Fluorescence, UV Gravimetric technique, Beta Attenuation
Smelting Furnace/ Settling and Slag Cleaning Furnace	As per CPCB standard & Consent to Operate	SO_2, PM As per CPCB Standard	UV Fluorescence, UV Gravimetric technique, Beta Attenuation
Precious metal recovery plant stack	As per CPCB standard &	SO_2, PM As per CPCB	UV Fluorescence, UV Gravimetric technique,

Particulars	Off-Line Monitoring	On-Line Monitoring Parameters	Monitoring System and Method as per NAAQS.
	Consent to Operate	Standard	Beta Attenuation
Phosphoric Acid Plant Stack (Dust Monitoring)	As per CPCB standard & Consent to Operate	PM As per CPCB Standard	Gravimetric Technique, Beta Attenuation
B. Industrial Wastewaters			
Outlet of the ETP	As per CPCB standard & Consent to Operate	PH, BOD, COD, TSS, conductivity Residual Cl, DO.	Optical/ Ultra Sonic device/ Titrimetric method, electrochemical, Spectrophotometry

UV Fluorescence

The SO_2 analysis is based on the principle of the characteristic fluorescence released by the sulphur dioxide molecule when it is radiated by ultraviolet light of 190-230 nm. SO_2 absorbs light in this region of the spectrum without any quenching by air or most other molecules found in polluted air. The operating range for this method is 0-0.5 ppm or 0-0.1 ppm.

Gravimetric Technique

Gravimetric analysis is a technique through which the amount of an analyte (the ion being analysed) can be determined through the measurement of mass. Gravimetric analyses depend on comparing the masses of two compounds containing the analyte. The principle behind gravimetric analysis is that the mass of an ion in a pure compound can be determined and then used to find the mass percent of the same ion in a known quantity of an impure compound.

Beta Attenuation

Beta attenuation monitoring (BAM) is a widely used air monitoring technique employing the absorption of beta radiation by solid particles extracted from air flow. This technique allows for the detection of PM_{10} and $PM_{2.5}$, which are monitored as standards by most air pollution regulatory agencies. The amount by which the flow of beta radiation is attenuated by a solid matter is exponentially dependent on its mass and not on any other feature (such as density, chemical composition or some optical or electric properties) of this matter.

Ultra-Sonic Device

Ultrasound can be used for measuring wind speed and direction (anemometer), tank or channel fluid level, and speed through air or water. For measuring speed or direction, a device uses multiple detectors and calculates the speed from the relative distances to particulates in the air or water. The technology is limited by the shapes of surfaces and the density or consistency of the material.

Titrimetric Method

Titrations are performed manually point by point, or automatically, where the titrant is introduced continuously (monotonically or dynamically). In modern analytical chemistry automation is of increasing importance. Automation of a point-by-point titration is seldom trivial. Kinetic factors concerning the chemical reaction and the response of the indicating system are of paramount importance. Cell configuration, stirring, positioning of end-point detector and of input of titrant are to be considered for ensuring high accuracy.

Spectrophotometry

Spectrophotometry is a measurement of how much a chemical substance absorbs or transmits. A spectrophotometer is an instrument that measures the amount of photons (the intensity of light) absorbed after it passes through sample solution.

6.4.2 Environmental Budget

The total project cost for the proposed project is about Rs. 10,000 Crores, which may further escalate depending upon the project execution period. Out of this, about Rs. 1044 Crores will be spent on environmental protection. The break-up of the investment is given in **Table-6.5.**

TABLE-6.5
COST PROVISION FOR ENVIRONMENTAL MEASURES

Sr. No.	Description of Item	Capital Cost (Rs. in Crores)	Recurring Cost (Rs. in Crores)
1	Air pollution control system	639	2.5
2	Water pollution control system	360	1.5
3	Environmental management system: • Solid waste management system • Greenbelt development and others • Post project monitoring • Gas collection hood and energy conservation	45	1
Total		**1044**	**5**

Chapter-7
Additional Studies

7.0 ADDITIONAL STUDIES

This chapter describes the public consultation, risk assessment, disaster management plan and other additional studies carried out for the proposed project.

7.1 Public Consultation

The public hearing for the proposed project was conducted under the Chairmanship of Shri D R Patel (GAS) Additional District Magistrate and Resident Additional Collector on 29th April 2017 at 11.00 AM at Community Premises Centre (Samajvadi), Opposite Tunda Primary School, Tunda village, Mundra taluk, Kutch district, Gujarat.

The press notification indicating dates and venues of the public hearing was published in the national English daily of "The Times of India" and in the of Gujarati daily "Kutch Mitra" on 26th March, 2017 inviting suggestions, views and objections relating to environmental aspects of the proposed project.

The copies of environment impact assessment report along with executive summary in both English and Hindi language were kept in the following places:

1. The District Collocter, Bhuj, Kutch district;
2. District Development Office, Bhuj, Kutch district;
3. District Industry Centre, Bhuj, Kutch district;
4. Taluka Development Office, Mundra, Kutch district;
5. Taluka Development Office, Mandvi, Kutch district;
6. The Chief Conservation of Forest, MoEF&CC GoI, Regional Office (west zone), Kendriya Paryavaran Bhavan, E-5, Arera Colony, Link Road-3, Ravishankar Nagar, Bhopal 462016; and
7. Regional office, Kutch (east), Gujarat Pollution Control Board (GPCB), room No. 215-216, second floor, Kandla Port Trust, Admin building, Sector-08, Gandhidham, Kutch.

Shri K.B. Chaudhari, Regional Officer, Kutch (East), GPCB briefed the public about the purpose of organizing the public hearing. The representative of proposed project, gave an audio visual presentation in Gujarati and specific reference to the impacts on environment and management and the representative of Vimta Labs Limited, Hyderabad has briefed the Environment Impact Assessment report (Draft EIA report).

Public hearing notification is shown in **Figure-7.1**. The photographs of the public hearing are shown in **Figure-7.2**. The issues raised by the public during the public hearing and reply by the project proponent along with the action plan are given in **Table-7.1** and the public hearing proceedings are given in **Annexure-XIII.**

Gujarat Pollution Control Board

Paryavaran Bhavan, Sector 10 A, Gandhinagar 382 010
Tel: 079-23232152 Fax: 079-23222784, www.gpcb.gov.in

PUBLIC NOTICE

It is hereby informed that as per the Ministry of Environment, Forests & Climate Change, Government of India, New Delhi vide its Notification no. S.O. 1533 dated September 14, 2006, Public Hearing of **M/s. Adani Enterprises Limited, for Proposed Greenfield Copper Refinery Plant-1 MTPA, At Adani Port Special Economic Zone Land in Village(S) Siracha and Navinal, Taluka: Mundra, District: Kutch,** covered under **Category "A"** as mentioned in their request application.

All local affected persons of the project are requested to remain present in the public hearing or send their response in writing to Member Secretary, Gujarat Pollution Control Board before the hearing date.

Other concerned persons having a plausible stake in the environment aspects of the project or activity can submit their responses to Member Secretary, GPCB in writing before the hearing date.

It may be noted that, draft Environmental Impact Assessment report and the Executive Summary of Environment Impact Assessment Report of the project has been sent to the following authorities or offices to make it available for inspection to the public during normal office hours, till the Public Hearing is over.

1. The District Collector Office, **Kutch**
2. District Development Office, **Kutch**
3. District Industry Centre, **Kutch**
4. Taluka Development Office, **Ta. Mundra, Gandhidham, Dist. Kutch.**
5. Additional Principal Chief Conservator of Forests (C), Ministry of Environment, Forests & Climate Change, GoI, Regional Office (West Zone), Kendriya Paryavaran Bhavan, E- 5, Arera Colony, Link Road 3, Ravisankar Nagar, Bhopal 462 016
6. **Regional Office, (Kutch-East), Gujarat Pollution Control Board, Room No. 215-216, Second Floor, Kandla Port Trust, Administrative Building, Sector 08, Gandhidham, Kutch - 370 201.**

The District Magistrate / District Collector / Deputy Commissioner or his / her representative not below the rank of an Additional District Magistrate shall supervise and preside over the entire public hearing process.

The Public Hearing is scheduled to be held on **29/04/2017 at 11:00 hrs, at Community Premises (Samajvadi) Centre, Opposite Tunda Primary School, Village: Tunda, Ta: Mundra, District: Kutch, Gujarat.**

Place: Gandhinagar

PUBLIC HEARING PHOTOGRAPHS

TABLE-7.1(A)
PUBLIC HEARING PROCEEDINGS AND RESPONSE ALONG WITH THE ACTION PLAN

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
1	Shri Punshibhai Gadhavi Member of Taluka Panchayat, Mandvi Village: Mota Bhadiya Taluka: Mandvi	He represented that: • How many villages of the Mandvi and Mundra taluka are affected in this project? Provide the details about distance. I was a Sarpanch for a period of ten years and I made submissions during that time also but the company did not provide a proper reply. • At the time of making this report, how many numbers of villages have been visited by the company and were the local people present at that relevant point of time? • How does police behave with ladies of our village? The people of Nana Bhadiya, Mota Bhadiya and Kandagra village are sent back.	The representative of project proponent informed about his designation and qualification and then replied that: • The area of this project includes Siracha and Navinal villages. As per the guidelines under EIA Notification of Ministry of Environment, Forests and Climate Change, Government of India 16 villages within the 10 km radius are included. Out of this, the monitoring is done in 8 villages.	• The proposed project is located at Adani Port Special Economic Zone (APSEZ) land in villages Siracha and Navinal, taluka Mundra, district Kutch, Gujarat. • The environmental baseline monitoring location have been decided based on the predominant upwind and down wind direction and other environmental sensitive locations and based on EIA guidelines. • The study area of 10 km radial distance from the boundary of the proposed project consists of 16 villages. The list of Number and locations of monitoring stations (as per CPCB guidelines) are decided based on the nature of project, meteorological conditions, Topography, selected pollution pockets in the area and likely impact areas. • The list of villages with demographic details are enclosed as Annexure-X in the EIA report.
2	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra Shri Rambhai Kanani Village: Zarpara, Taluka: Mundra	He represented that: • All our questions shall be replied to in Gujarati language. The project representative does not reply in Gujarati language and therefore this means that the local public will not receive employment. The project officer should provide his qualification and identification before giving reply in Gujarati. • How many villages are affected? What is the	The regional officer asked the project representative to translate the replies from Hindi to Gujarati language. Representation of project Proponent replied that: • As per the guidelines under EIA Notification of Ministry of Environment, Forests and Climate Change, Government of India, 16 villages within 10 km radius are included.	• The baseline ambient air quality, noise and soil monitoring was carried out at 8 location. The monitoring locations were selected based on the nature of project, meteorological conditions, topography, land use conditions, existing pollution pockets in the area and the likely impact areas. • The study area of 10 km radial distance from the boundary of the proposed project consists of 16 villages. The list of villages

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		radius of affected area? How many people were met? How many villages were visited? • At the time of presentation the list of only 8 villages is shown. Why other villages are not included? Why is monitoring done in only 8 villages? Show us the list of 16 villages. Give the proof of 08 villages visited.	Names of villages where monitoring is carried out are mentioned in the EIA report. All the villages falling within the 10 km radius are covered as per the EIA notification. The date of lab testing report is also provided in the EIA report. The company has prepared the EIA report as per the guidelines. The EIA report was made available at five places.	with demographic details are enclosed as Annexure-X in the EIA report. • Monitoring photographs along with the respective sampling locations are given Annexure-VIII in the EIA report.
		• The laboratory reports should be provided. How old are these reports? At which five places were the sampling done? Which organization has conducted the study? We should be provided with the analysis report of the company. Which laboratory has conducted the monitoring? Provide certificate of the same. • At which five places were the EIA reports placed? We have objection to the hearing and proposed project. We have objection as there will be impacts on environment.	• With the due permission of chairman the regional officer informed that the person is asking for monitoring reports and requested the representative of the project proponent to provide the same. Representation of project Proponent replied that: • The Chapter-3 (page no. 43) of the EIA report provides the entire information as to the analysis of air at 8 (eight) places. The monitoring was carried out by Government of India, NABET Accredited M/s. VIMTA Labs Ltd., Hyderabad. The certificate is provided in the report. • As per the EIA notification of the Government of India, the draft EIA report is made available at following offices: 1. District Collector office, Kutch-Bhuj 2. Office of District Development officer, Kutch-Bhuj 3. District Industrial Center, Bhuj-Kutch, 4. Office of the Taluka Development officer, Mundra 5. Office of the Taluka Development officer, Mandvi	• **M/s. Adani Enterprises Limited (AEL)** has retained the services of NABET accredited EIA Consultant **M/s. Vimta Labs Limited (VLL)**, Hyderabad to prepare EIA report for various environmental components including air, noise, water, land and biological components along with parameters of human interest which may be affected and to prepare an Environment Management Plan (EMP) for mitigating possible adverse impacts. • The Consultant details (like certification and list of team member involved in the proposed project) are given as Chapter-11. The QCI issued certificate no. NABET/EIA/1619/RA0043, Valid upto 19th May 2019. • The analysis results are already included in the EIA Report (Chapter-3).

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
			• The executive summary of EIA report is provided in 14 gram panchayats. The monitoring is done in 8 villages. The monitoring has been carried out as per the EIA guidelines. We have come here to provide the replies to the objections related to the information provided under the EIA report. You will be heard and a proper reply will be provided. This will be included as part of public hearing proceedings and the final EIA report will be submitted to MoEF. • Analysis report will be provided after public hearing is completed.	
3	Shri Punsibhai Gadhavi, Taluka Panchayat Member – Mandvi Village: Mota Bhadiya Taluka: Mandvi	He represented that, when was the report submitted to Mandvi Taluka Panchayat? Is the report provided to community leaders? We oppose this public hearing.	The regional officer has informed that the copy of report and CD is provided to Mandvi Taluka Panchayat office on 27.03.2017.	-
4	Shri Vishrambhai Gadhavi, Village: Zarpara Taluka: Mundra	He represented that, • The photographs of place and equipment used shall be shown from where the samples were collected. • You are showing the photographs of your proposed project, show the photographs of the monitoring carried out.	The representative of the project proponent replied that, we have photographs of 8 locations and these will be provided.	• The photographs of monitoring had been shown during the public hearing. • Monitoring photographs along with the respective sampling locations are given Annexure-VIII in the EIA report.
5	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that the person providing the reply on behalf of the company must provide the company photo ID card, only then he will be allowed to reply. Our boys are not permitted to enter the company without an ID-card.	The representative of the project proponent showed the photo ID-card on LED screen.	-
6	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra	He represented that, • Give the information about how much carbon dioxide is emitted from the thermal power plant at Mundra? Provide the figure of carbon dioxide that is emitted in 24 hours.	The representative of the project proponent replied that: • The amount of carbon dioxide is 870 gram/kilowatt hour. 67,525 tonnes of CO_2 equivalent is emitted per day.	This question is not directly connected to the proposed project. However, in the proposed project employment about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		• At the time when I went to Mr. Mukesh Saxena for job, he stated that the recruitment of job is done from Ahmedabad. I was kept as apprentice, after a period of 4 months, for duration of 12 months. Thereafter I was given the job as supervisor at the PowerMech Company. I have not been taken on roll in the company. I was shown my social category. The people coming from outside are given direct jobs while I was not kept on permanent job at any place. Therefore I left the job after 6 months and at present I run a shop. • I did not get the job as per my studies and thus provide job. Will I be given job at the new plant? • What is the duty time and salary of on roll employees?	• The representative of the project proponent replied that, you came directly to me and there was no recommendation for you. We kept you on training for a period of 12 months on apprentice. For this you were given a stipend of Rs. 12000 per month. During the apprentice required training is provided. The company provides you further training when you become an employee from apprentice. You were in a list wherein there were 60 persons and out of which 15 were engineers. We gave you job on contract after the apprentice. You will be provided the list of the resident of Zarpara who have been given employment. • One should not expect that he shall get a job as per his wish. Intention of learning is important for any job. • The employee on contract has a service of 8 hours but the employee has to stay for longer hours when there is additional work load. No discrimination is done in the company. • The local hearing video copy may be provided by presiding officer.	will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
7	Shri Dayabhai Viram Gadhavi, Village: Mota Kandagara, Taluka: Mundra	• He represented that; provide video copy of local hearing.	The local hearing video copy may be provided by presiding officer.	-
8	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that a person becomes an engineer by spending lacs of rupees and you give such replies to him!	-	Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
9	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra	He represented that, • Adani Power has obtained the permission for	The regional officer stated that, • This public hearing is for the Copper Refinery project and therefore the questions	The anticipated potential impacts analysis, cumulative impacts due to increase of pollutant and its mitigation measure are provided in

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		Phase IV. Why have you installed FGD? The pollution load had increased in Mundra. • At Mundra one tonne Carbon Dioxide is produced per Megawatt. Adani Power and TATA Power emit CO_2 that is much more than the capacity of Mundra. Then, why do you wish to bring this new plant?	related to that issue only shall be asked. Your representations shall be noted down. Your representations and objections will be included as part of the proceedings. The CD will be submitted along with the proceedings to Ministry of Environment, Forests and Climate change of Govt. of India. • The representative of the project proponent replied that, 0.87 Ton carbon dioxide is produced for 1 Mega Watt. The FGD system is installed as per the clearance provided by Ministry of Environment, Forests and Climate change. This is installed for sulphur dioxide scrubbing. There is no statutory limit for carbon dioxide emissions.	Section-4.2.2 of Chapter-4 in the EIA report. The cumulative impacts of exiting power pla of Adani and Tata power have been consider and incorporated in the Section-4.2.2 of E Report.
10	Shri Dayabhai Gadhavi Village: Mota Kadagra Taluka: Mundra	He represented that, why are you not listening to us? Why don't you reply? Are the questions raised by us relevant or not?	-	-
11	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that the company conducted the public hearing for power plant also in this manner. The promises that were made at that time have not been fulfilled and now you wish to establish a new project.		-
12	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra	He represented that we have been informed to ask questions related to environment only. Should we not be provided with the platform to make representations on other questions?	-	-
13	Shri Gajendrasinh Jadeja Sarpanch Navinal Village: Navinal Taluka: Mundra	He represented that, • You were complained through email for cancellation of the public hearing on 11.04.2017 and a meeting was held with Mr. D R Patel. But no reply was given for the same. The project proponent has not complied with the terms of reference as per my complaint. How can the public hearing	The representative of the project proponent replied that: • As per the circular of MoEF&CC dated 31.03.2011, if the forest land cannot be avoided, the application shall be filed by project proponent to obtain forest clearance. After this stage-I application, the project proponent can apply for TOR.	MoEF&CC (forest conservation division) l granted Stage-1 approval for diversion 1576.81 ha of reserved forest land in favou Adani Ports & Special Economic Zone Limi (APSEZL) vide letter F.No.8-04/2016-FC da 16th November 2018. Stage-I FC has b obtained as given in Annexure-V in the l report.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		be conducted for this project when the process of forest clearance is still going on? • The project proponent has concealed the information in Form-1. As per the S.No. 16 and 26 of Basic Information of Form-1, with reference to the Gochar land, PIL no. 17/2011 judgment, the project proponent has mentioned that there is no pending PIL for this land. This information is not mentioned in Form-1. • In the S.No. 2 and 10 of Form-1, it is not mentioned that the Daneshwari river passes through the forest land.	• The TOR application is filed after the Stage-I application for forest clearance is applied. Thereafter the MOEF&CC provides the TOR to project proponent. Afterwards EIA can be made. After the entire process of EIA, the MOEF&CC checks the status of the application for forest clearance and the project is approved on that basis. • We have not concealed any information. The PIL has been disposed. The judgment is under review. The application is filed for the acquisition of forest land. Under the Form-1, it is stated that the non-forest land is of APSEZ and the application for forest land is under process. • In the EIA report. maps are provided and Daneshwari river is shown in it.	The PFR submitted along with the For application clearly shows the water stre passing through proposed project site. same is available in the Annexure-VII of PFR submitted along with the Form-I. Dhaneshwari river also refered as Danesri N (as per Topo sheet no: F42 J9 & 10) stre passing within site (west side). Dhaneshwari, a seasonal river which flows the western part of the proposed site. The ri will not be diverted but suitably trained al the boundary. The flow of the river will maintained, as shown in the plant layout Figure-2.1 of EIA report.
14	Shri Pravinsinh Bhurubha Chauhan Village: Siracha Taluka: Mundra	He represented that, • As per the EIA report, you state that no perennial river is present within the project land. There is no perennial river in whole of Kutch. From the 2011, 2013 and the present Satellite image, it is clear that you have diverted the river. • Your hospital is also constructed on the river. It is clear from the Satellite image of year 1991. Show the CD of Satellite image to all. • I wish to show Figure No. 1 from the EIA report. The river is tampered with in the Figure.	-	Dhaneshwari, a seasonal river flows in western part of the proposed site. The flow the river will be maintained, as shown in plant layout on Figure-2.1 of Chapter-1 in EIA report.
15	Shri Punshi Gadhavi Taluka Panchayat member, Mandvi, Village: Mota Bhadiya	He represented that: • What will Adani do for the education, health and fodder for cattle? A written submission is	The representative of the project proponent replied that Adani Foundation is already carrying out development works in areas of education, health and other social sectors on	A budget of Rs. 8 crores per each year been allotted for enterprise so responsibility/CSR activities for five years. The CSR details (like CSR policy, initiative

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
	Taluka: Mandvi	also done for this. • You have not given the reply to the previously asked question of Punshibhai Gadhavi. Provide reply to it.	the basis of the written representation of Punshi bhai. This will also be done for this project. A budget of 8 crores rupees per year is allotted for CSR activities. Particular focus shall be given to the villages that are affected.	activities, CSR budget expenditure data fo 2010 to 2016, Proposed CSR budget plan next 5 years and CSR implement photographs) is given in Section-8.5 Chapter-8 of EIA report.
16	Shri Asariya Lakha Gilwa Village: Zarpara Taluka: Mundra	He represented that the company officers should make submissions in the local Gujarati language.	It is noted down and replied in Guajarati language only	-
17	Shri Bharat Kalyan Sheda Village: Zarpara Taluka: Mundra	He represented that the people residing here want clean environment and we don't need any project. Why do you want to establish this project here?	-	For establishment of this project, thr alternative sites have been studied. The three sites include: Site-I: near Gundala & Mokha villages; Site-II: near east side of Adani power plan and Site-III: near near Mundra village. Among three above sites, the site-II near ea side of the Adani Power Plant has been chos based on the comparative merits and demer of the three sites. The comparison of salient features alternative sites done and details a presented in Table-5.1 and shown in Figu 5.1 of the EIA report.
18	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that; • A total 12 crore ton of CO_2 is generated daily. Why is the FGD for phase-IV installed? • This plant will emit 30 lakh tons of Sulphuric acid so why do you want to establish this plant?	The representative of the project proponent replied that: • Adani Power produces 25 million ton of CO_2 per year and around 25 million ton is produced by TATA Power. In this manner the total CO2 produced is around 50 million ton. • In the Adani Power Phase-IV, MoEF had stipulated a condition based on which the FGD system is fixed. • Sulphur Dioxide will be produced from Copper Smelter. In the sulphuric acid	• The SO_2 generation is a continuous proce during smelting activity. Primary g stream will be routed to sulphuric a plant (SAP) plant and the fugitive g stream will be routed through scrubb Further, there is no provision in t plant/process for storage of SO_2 gases a will be processed immediately to produ sulphuric acid. • Sulphuric acid plant (SAP) will be install with highly efficient (Double Conversi

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
			plant, the sulphur dioxide will be absorbed and sulphuric acid will be produced. The residual amount of sulphur dioxide from the proposed project will be within the limits stipulated by CPCB, Government of India.	Double Absorption) DCDA process control the SO_2 emission to less than kg/t of sulphuric acid produced. • The residual amount of sulphur dioxi from the proposed project will be witl the limits stipulated by CPCB, Governme of India. • The process of extraction of copper met sulphuric acid is recovered as a by-prodi from the off-gases generated from t smelting and converting furnaces. A part sulphuric acid produced is utilized phosphoric acid production and rest will sold in the market based on mark requirement. • About Rs. 1700 crores will be invested install sulphuric acid plant.
19	Shri Gopalbhai Gilwa Village: Zarpara Taluka: Mundra	He represented that, in one day, a total of 1,25,988 ton of CO_2 is emitted in the atmosphere. The average temperature of emitted CO_2 is 150 degree Celsius. Why should the new plant be approved even thereafter?	The representative of the project proponent replied that: • The average temperature is 120 to 130 degree Celsius. World level efforts are made to stop global warming. The power plant is based on super critical technology and produces lesser amount of CO_2 in the atmosphere. Till date it is not found that the level of CO_2 would have decreased on world level. The government of India has targeted to reduce CO_2 emissions by 30 to 35% in comparison with the year 2005. The power plant that is based on old technology produces 1 to 1.5 Ton CO_2 per Megawatts hour, while the plant based on new Super Critical technology produces a total of 0.8 ton CO_2 per	• The emissions of carbon dioxide from t proposed copper refinery project will 4 tonnes per day. Further, the project v have 85.79 ha (33% of the project area) greenbelt/green cover to absorb a gaseous emissions in the proposed proje • Further, regular post project monitori will be carried out for the gasec emissions and the test reports will submitted to GPCB and MoEF&CC. Regu monitoring will help to keep a check on t gaseous emissions.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
			Megawatt hour.	
20	Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	He represented that, • Our agriculture is adversely impacted. The characteristics of the Male Date Seeds seem to be transforming to that of Female Date Seeds. • We do not want this project. EIA report states that there is no living organism and only wild plants are present. No information is provided about river, vegetation and other living organisms. No ground reality is provided. 80% people of this area are dependent on agriculture. We do not want this project.	-	The proposed project will implement all t control measures at the source level, which a incorporated in the Draft and Final EIA repor Further, it will comply with all the conditio stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent environmental pollution control measures this project.
21	Shri Vishrambhai Gadhavi, Village: Zarpara Taluka: Mundra Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	He represented that, • Our agriculture is adversely impacted. The characteristics of the Male Date Seeds seem to be transforming to that of Female Date Seeds. • We do not want this project. EIA report states that there is no living organism and only wild plants are present. No information is provided about river, vegetation and other living organisms. No ground reality is provided. 80% people of this area are dependent on agriculture. We do not want this project.	-	The proposed project will implement all control measures at the source level, which incorporated in the Draft and Final EIA repor Further, it will comply with all the conditio stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent environmental pollution control measures this project.
22	Shri Vishrambhai Gadhavi, Village: Zarpara Taluka: Mundra	He represented that; • Why is the chimney of Adani Power tilted? What is the height of Chimney?	The representative of the project proponent replied that: • The height of chimney of power plant of Adani Power having a capacity of more than 500 megawatts is 275 m. The height of chimney is kept for the dispersion of gases in the air. There are no norms on limit of carbon dioxide emissions.	The proposed project is a greenfield cop refinery project. The proposed project will implement all control measures at the source level to k the emissions under permissible levels. Further, it will comply with all the conditi stipulated by GPCB and MoEF&CC.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		• It rains less due to this. A large amount of difference in rain is seen in Bhadiya and Zarpara village due to this. • Crores of tons of CO_2 is emitted daily. Is there any limit to it?	• The pollution is diluted around 2000 times due to the height of chimney. There is no study done which suggests that due to power plant it would have rained less at any place. Rain is almost found same in both villages. • The estimate of CO_2 in atmosphere at world level is around 350 to 400 ppm. There is no statutory limit for this. As per the NAAQ standard for sulphur dioxide, the 24 hour average limit is 80 microgram/m^3.	About Rs.1044 crores will be spent environmental pollution control measu under this project.
23	Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	• He represented that the wind direction is shown wrong.	• The representative of the project proponent replied that the wind direction is shown as per the winter season data. It is shown from South South West (SSW) to North North East (NNE).	The wind directions given in the wind ro indicate from direction. During the st period (October-December, 2016), predominant wind direction is from SSW NNE. This is generally in agreement with nearest IMD data at Kandla and repres coastal conditions.
24	Shri Bharat Kalyan Seda Village: Zarpara Taluka: Mundra	• He represented that It is submitted that the reply be given in Gujarati	Point noted and agreed.	-
25	Shri Nanji Mithubhai Maheshwari Village: Mota Kandagra Taluka: Mundra	He represented that; • Show on LED screen the letter with signatures and stamp of Sarpanch and Talati for the 8 affected villages that have been surveyed. • How will employment be provided in this plant?	-	It may be noted that the project area falls two villages namely Siracha and Navinal. The proposed project will provide employm to about 2000-3000 persons on average day during construction phase and dur operation phase, about 2000 dir employment and 5000 indirect employm will be provided. Locals will be given preference to employm based on skill set & eligibility requirement per the job and the vacancies available. A budget of Rs. 8 crores per each year been allotted for CSR activities for five years
26	Shri Bahrat Kalyan Seda	He represented that; Thousands of people are	-	The monitoring photographs and name

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
	Village: Zarpara Taluka: Mundra	objecting. Show us the photographs of your visit in 16 villages.		sampling locations are enclosed as Annexure-VIII in the EIA report.
27	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that; • In the executive summary of page no. 2.1 the nearest village is shown as Mundra. Provide the list of all the affected 16 villages. Why is village Mundra included in affected villages? • What would be the time limit of this public hearing?	The representative of the project proponent replied that: • Through this public hearing, all your representations will be provided to the MoEF. The company will work in a transparent way. Mundra is the closest town to the Project area. The land of Siracha and Navinal villages are covered in this project. • In the EIA report, the Annexure-X contains demographic report. It contains list of 16 villages. This includes Siracha, Tunda, Mota Kandagra, Moti Khakhar, Nani Khakhar, Moti Bhujpur, Nani Bhujpur, Desalpar, Bharora, Zarpara, Pratapur, Mota Bhadiya, Dhrub, Tragadi, Nana Bhadiya and Navinal. • In chapter-3 of the EIA report, details of all the villages are provided. The EIA report is made as per the MOEF guideline. • The presentation contains the details of the impacts on environment. Moreover these details are also included in the EIA report. EIA covers study of all the aspects and its management plan is also shown. • The regional officer stated that, the public hearing will be completed after all the representations are heard.	Mundra is the closest town (22 km – road distance) to the project area. The land of Siracha and Navinal villages are only covered in this project. The demographic details of the entire study area is given in Section-3.10 of Chapter-3 in the EIA report.
28	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that when any company comes, it is required that 33% green belt shall be provided and as part of the same when Sunita Narayan committee visited, the plants were grown on both sides of the road. These plants	The representative of the project proponent replied that Respectable Sunita Narayan came in the year 2013. The green belt at present is much more than what was at the time of her visit. Even further plantation will be done.	About 85.79 ha of the proposed copper refinery complex (33%) will be reserved for greenbelt / green cover development as per prevailing guidelines from GPCB/CPCB/MoEF&CC. Native species with rich

888

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		do not exist at present.		canopy will be planted. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report.
29	Shri Gadhavi Kalyan Asariya Village: Zarpara Taluka: Mundra	He represented that in the past, I came for training in Adani Foundation on behalf of the KSKV University. At that time in the river and other places, around 60 thousand trees were planted but these are not found at present.	The representative of the project proponent replied that you both have asked different questions. One relates to village and the other relates to APSEZ.	About 85.79 ha of the proposed copper smelter complex (33%) will be reserved for greenbelt / green cover development as per prevailing guidelines from GPCB/CPCB/MoEF&CC. Native species with rich canopy will be planted. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report.
30	Shri Gajendrasinh Jadeja, Sarpanch Navinal Gram Panchayat Village: Navinal Taluka: Mundra	He represented that; • The sr. no. 10 on page C1-4 of the draft EIA report states that, there is no archaeological place at this site. However, at a distance of around 500 to 1000 meters from the proposed project site, the site of Navinal Archaeological site is present. I have the report of the MS University which states that it relates to the Harappa civilization. • The fisheries harbour is not developed at Bhadreshwar. The access roads for the fishermen were closed and are not opened again.	The representative of the project proponent replied that: • There is no mention of such a site on the Archaeological Survey of India Website. You shall be provided the list of notified site. • There was no permission to go to the Randh bunder (Bhadreshwar) at the time of Sunita Narayan committee visit. At present Foundation provides various facilities like water, electricity, etc. at that place. • After the visit of Sunita Narayan committee, the fishermen access roads were developed which are open even as on date.	There is no notified archaeological site within 10 km from the proposed project site.
31	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that: • The road to Bharadi Mata has been opened after a lot of troubles. You did not spare any effort to close down the road.	The representative of the project proponent replied that the road leading to Bharadi Mata has been kept open. As on date, not just one but two approach roads are available.	-
32	Shri Valji Bhai Tapariya Village: Zarpara Taluka: Mundra	He represented that; • In the production of copper plant, Sulphur is to be used and this will have acidic processes. • Environment will be impacted due to this. The effect of this sulphuric acid is shown in radius of around 10 km. This is around 20 to 25 km as per the opinion of experts.	The representative of the project proponent replied that: • No addition in the capacity of the copper smelter is envisaged for the refinery after the project approval. • The copper concentrate is processed in the copper smelter. Sulphur dioxide is generated from it. It is captured and	The process of extraction of copper metal, sulphuric acid will be recovered as a by-product from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced will be utilized for phosphoric acid production and rest will be sold in the market based on market requirement.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		• At a humanitarian level, the GPCB should also take interest in this considering its personal responsibility for longer terms. No one is against development. The effect of copper refinery is even more than power plant. The plant should be taken away from human population if its place can be moved. In the past, electricity was generated with atoms and this eradicated the entire lineage of people. The fishermen should also not be affected. The government should take proper care and consider that no negative effect is found.	sulphuric acid is produced. This sulphuric acid is converted into phosphoric acid. • The sulphuric acid will be converted to phosphoric acid in the phosphoric acid plant. It will used in fertilizer plants. • Other than this, a by-product, fluoro-silicic acid will be made which will be used in the making of toothpaste.	The impacts and mitigation measures are given in Section-4.2.2.3 of Chapter-4. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
33	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that; • Will you make a residential place near the plant and reside at that place? If that is the situation, we do not object. We reside in the farms outside. • Is there any power plant, at any other place, with such big capacity?	The representative of the project proponent replied that: • Many a times our high ranking officers reside at the guest house of power plant. Many copper plants in the entire world are present beside cities. We will also make guest house in our copper plant. • Yes, there are power plants of total 20 thousand Megawatt capacities at Singroli. Angul, Andhra Pradesh has 16 thousand Megawatts capacity power plants. Tuticorin at Tamilnadu has 12 thousand Megawatt capacity of power plants. These all are coal based power plants. Now the government of India approves all big power plants with FGD only.	The employees of the proposed copper plant will be staying in the existing township of Adani at Mundra. The copper plant will have guest houses in its premises.
34	Shri Naran Gadhavi Village: Zarpara Taluka: Mundra	He represented that • The highest officer of the district was addressed and a letter was written on 27/4/17 and it was mentioned that the land on which the copper plant is proposed is subjudice matter. The collector has not	The representative of the project proponent replied that: • I give an elaborate reply to your question. With respect to the PIL no 12/2011, the committee visited APSEZ and its report was kept on record of the Honourable High	The proposed project area is not under the disputed land as claimed. All the show cause notices have been disposed. This proposed copper refinery project does not have any connection with this case pending before the Honourable Gujarat High court.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		taken any decision till date. • It is mentioned under it that after the Honorable sitting principal judge and Sunita Narayan committee, two other committees also visited. First of all the committee of the Honorable sitting judge visited. The visit report was submitted to the high court. The report of this committee is subjudice. The second report (dated 05.11.2015 and 01.04.2016) one expert was called from Goa and another from Calcutta on the basis of the order passed by the Honourable Gujarat High Court. • The committee recommended that the 6 thousand acres of land should be returned to the government. No decision till date has been taken in this regard. • As for this the contempt of court proceedings shall be held against the competent officer. The map is also shown in the EIA report. Why is the public hearing been done, even if the matter is subjudice? • GPCB is also a party in this matter. On the basis of our complaint, the Sunita Narayan committee provided a report on 17.09.2015 to MoEF&CC, government of India. • Two maps have been submitted to the Gujarat High Court committee. These are on the record of the high court. You submitted the map with topo sheet. These were for entire land. This includes your	Court. The matter was disposed by the Honourable Gujarat High Court on 17.04.2015. • As per previous proceedings the contempt petition (no. 9124) dated 12.07.2011 was filed. Thereafter on 15.10.2015, the order was passed. The matter with reference to the Sunita Narayan committee report, was disposed of in the year 2015. As per the order passed by the Honourable Gujarat High Court there is no contempt order. The report was submitted by the committee including expert from Goa and Calcutta on 08.06.2016. That particular matter is pending before the Honourable High Court of Gujarat. The committee recommended that 100 ha or more mangroves plantation should be undertaken. The project area is not part of the disputed land. All the show cause notices have been disposed. The recommendation is done in the survey by the committee. It is not an order. The company will accept the final order passed by the Honourable High Court. The land of the proposed project does not have any relation with this matter. The land under notified SEZ shall be used for this land. The MOEF will consider the matter that is pending before the High Court. The proposed project does not have any connection with this matter. • The MOEF has provided the direction to the company and the company is working on it. The report for this is submitted to the MOEF every 6 months. The matter	

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		project. • As mentioned by you, the forest area is to come under the project. The High court committee has stated that, the land should be taken away from Adani and provided to the government. The 5,333 ha of forest area should be restored. • This matter is under consideration at the Gujarat High Court. Why is this case not mentioned in your EIA report?	you have stated is about the survey of the report of the committee. It is a recommendation and not a decision. The Gujarat High Court will consider the submissions of the company along with the committee report and the company will comply to the guidelines provided by the court thereafter. • The government of India will decide further course of action on your matter and our reply. • The representative of the project proponent replied that this proposed project does not have any connection with this case pending before the Honourable Gujarat High court. This is our submission.	
35	Shri Bharubhai Ranshibhai Shankra Secretary, Kehti Vikas Seva Trust, Village: Zarpara Taluka: Mundra	• He represented that: Do thing that would be favourable for the people. Do not leave after taking money. I do not have any objection for the company to either come or not. Do all that is in the interest of people.	-	A budget of Rs.8 crores per each year has been allotted for enterprise social responsibility/CSR activities for five years. The CSR details (like CSR policy, initiatives & activities, CSR budget expenditure data from 2010 to 2016, Proposed CSR budget plan for next 5 years and CSR implemented photographs) is given in Section-8.5 of Chapter-8 in the EIA Report.
36	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka: Mundra	He represented that, we will not let the permission be granted for a new plant. The regulations laid down by the GPCB, CPCB, MOEF&CC are violated by the company and the officers present at this place should inspect the matter. We do not want a new project.	-	There is no violation with respective to GPCB, CPCB, MOEF&CC by the proposed project. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
				About Rs.1044 crores will be spent for environmental pollution control measures in this project.
37	Shri Bharat Kalyan Shetha Village: Zarpara Taluka: Mundra	He represented that, the people here do not want this project to come. The people here want clean environment. The people do not want this progress; the people do not want the long term destruction, Kindly take note of this.	-	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
38	Shri Anwarbhai Ibrahimbhai Vagher, Village: Navinal Taluka: Mundra	He represented that, no damage has been done to the fishermen access roads or any other things. Our access roads are not closed. The people from Patel community and our villagers do not have any objection for the plant to be established.	-	There will be no damage to fisherman due to the proposed project. The total budget of Rs.40 crores will be spent on CSR activities in which fishermen welfare will also be included.
39	Shri Kadar Ismail Village: Navinal Taluka: Mundra	He represented that our roads are open and we do not have any objection.	-	-
40	Shri Gajendrasinh Jadeja Sarpanch, Navinal Gram panchayat Village: Navinal Taluka: Mundra	He represented that, • The fishermen of my village do not have proper knowledge. I can show the maps of forest department and other maps to confirm which access roads are closed down. The access road which is shown in the map belongs to forest dept. The fishermen access road to the sea passes through the project site. • This is government road. It is not owned by you. I am talking about the road that has been made by the government for the fishermen.	-	There will be no damage to fisherman due to the proposed project. The roads used by fishermen will not be disturbed due to the proposed copper smelter project. Further, a total budget of Rs.40 crores will be spent on CSR activities in which fishermen welfare will also be included.
41	Shri Anwarbhai Ibrahimbhai	He represented that our roads are open. Kotdi	-	-

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
	Vagher/ Shri Kadar Ismail, Village: Navinal Taluka: Mundra	Bandar and Sodawadi Creek are open. We do not have any kind of objection.		
42	Shri Pravinsinh Bhurubha Chauhan Village: Siracha Taluka: Mundra	He represented that information be provided if the road from Navinal to Daneshwar, which existed, is closed down or not?	-	
43	Shri Asariya Lakha, Village: Zarpara Taluka: Mundra	He represented that, it is the responsibility of the chairman to ascertain that no one comes for the purpose of praising someone. The proceeding should be as per instruction from chair. The purpose of this public hearing is to hear the representations of the affected people.	-	-
44	Shri Gandrasinh Jadeja Sarpanch, Navinal Gram Panchayat, Village: Navinal Taluka: Mundra	He represented that first of all compliance of existing environmental clearance for power and SEZ should be met and then this project should come.	-	The proposed project is an independent greenfield copper refinery plant. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
45	Shri Rambhai Kanani Village: Zarpara Taluka: Mundra	He represented that the company has a strategy to bring some hired people after two hours of hearing and these people will take the entire hearing out of track.	-	-
46	Shri Gandrasinh Jadeja Sarpanch, Navinal Gram Panchayat, Village: Navinal Taluka: Mundra	He represented that • 102 ha of land of the forest department will be used in this project. Adani had in the year 2004 made a demand of 1576.81 ha of land but the forest department has not approved it till date. Navinal and Shiracha, both villages have claimed their rights under the Forests Rules. The people of	The representative of the project proponent replied that: • You know very well what is the land use of the 102 ha of forest land and as per the report of the forest department, no major displacement would be required. The 33% green belt will be developed at	The total land required for the proposed project is about 256.58 Ha (634 acres), out of which 154.19 ha (381 acres) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Memorandum of Understanding (MoU) is in place between Adani Ports & Special

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		Navinal and Shiracha graze their cattle and obtain livelihood. If this forest is given, where will the wild animals and grazing domestic animals go? And lastly when the remaining forest land, government land and Gochar land is given, where will the people, animals and birds go? • This is the last reserve forest of this area. Bharadi Mata is sand dunes. This is coastal and mangrove forest. This area is under the CRZ-1 area. There is no provision for approval of such land.	the time when plant comes. As per the report of the forest department, no major displacement would be required. The land of this area will be used by the company for the development of green belt and specific care will be taken for the animals and birds. The animals shall be provided fodder through CSR activities. • The forest department will take all these aspects into consideration while providing clearance. • Other than this, the Bharadi Mata reserve and coastal forest is situated near the project site. The animals obtain fodder from that place. The project will utilize 111 ha of Navinal land. While 102 ha of land of Shiracha will be used for development of green belt.	Economic Zone Limited (APSEZL) and Adani Enterprises Ltd (AEL) for 154.19 ha (381 acres). MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. Stage-I FC has been obtained as given in Annexure-V in the EIA report. The conditions stipulated in the Forest Clearance and Environmental Clearance will be strictly adhered to and complied with. It is also committed that the fodder to cattle in the nearby villages such Siracha and Navinal will be provided through CSR initiatives. About 85.79 ha of the proposed copper refinery complex (33%) will be reserved for greenbelt/green cover development as per prevailing guidelines from GPCB/CPCB & MoEF&CC. Native species with rich canopy will be planted. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report. Further, the proposed project is outside the CRZ area, the approved CRZ map with proposed project is shown in Figure-1.5 of Chapter-1 in the EIA report.
47	Shri Pravinsinh Bhurubha Chauhan, Village: Siracha Taluka: Mundra	He represented that, • The Dates, Deshi Babool, etc. trees present on the forest department land and located adjacent to the power plant have dried out due to smoke from stack and cooling	The representative of the project proponent replied that: • Even at present the land is under the forest department and the plants that you	The plants are existing in the study area. The proposed green belt/green cover will also have native plants. The proposed plant area does not have the presence of Nilgai, Jackal.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		tower. • Where will the animals like Nilgai, Jackal, fox and others go? They will come at our farms.	state are alive. No such thing has occurred. • This is not true and the forest department would have informed us if such a thing would have occurred.	However, they are present in the buffer area and all the precautions will be implemented as suggested under Forest Clearance and Environmental Clearance.
48	Shri Rambhai Kanani, Village: Zarpara Taluka: Mundra	He represented that there is a difference between the EIA report and the presentation. The details mentioned in the Gujarati report are not actually true. There is difference in the description of environment. Under the project area, only Babool and peacock are shown. But the actual situation is different. There are medicinal plants also at this place. The description of the nature is given but it is not ground reality.	The representative of the project proponent replied that, the summary of the EIA report is shown as part of the presentation. The entire EIA report is not to be shown in the public hearing. In case if you have found any discrepancy in the EIA report, you may draw attention as to the same in writing and this will be included under the public hearing proceedings and it will also be submitted to MoEF&CC, Government of India. Moreover EIA report is prepared based on the information obtained at that relevant point of time.	As per primary ecology and biodiversity survey the details are given Section-3.9 of Chapter-3 in the EIA report. The faunal species were categorized as per conservation status of Wildlife Protection Act, 1972 and reveals that peacock is the only Sch-I species in the study area. However, it has been assessed as Least Concern bird as per the International Union for Conservation of Nature (IUCN). Further, the conservation plan and measures for Peacock are recommended in Section-3.9.9 of Chapter-3 in the EIA Report.
49	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that the company has shown its video during the hearing. All good things are being projected. No information is provided about the side effects, risk, etc. from the project. The video of the person submitting representation shall be shown.	The chairman stated that, • Please submit your CD we will be include the same in proceedings. Note: It was tried to show the video of representation by mobile on LED screen however it could not be run due to any reasons.	-
50	Shri Pravinsinh Bhurubha Chauhan Village: Siracha Taluka: Mundra	He represented that, I wish to show the CD related to the scams committed by the Adani Power and SEZ. It is mentioned under the Form-1 that there is no mangrove at this site but as per my view there are mangroves presents.	-	There is no mangrove planation within the proposed project site.
51	Shri Rambhai Kanani Village: Zarpara Taluka: Mundra	He represented that the people are facing problems from your existing plants and therefore people do not welcome your project.	-	-
52	Shri Usman Gani H Sheraseeya Village: Vakaner	He represented that • How much water will be obtained for this project and from which place will it be	The representative of the project proponent replied that, 32800 cubic meters of water will be required for this project which will be used	The total water requirement for the project is about 32,800 m^3/day which will be sourced from desalination plant of APSEZ Ltd, through

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
	Taluka: Morbi	taken? • Will you discharge salty water after desalination in the sea?	after desalination of the sea water by APSEZ.	M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD). The water requirement details are given in Section-2.2.3 of Chapter-2 of the EIA Report.
53	Shri Devendrasinh Jadeja Village: Mota Kardagra Taluka: Mundra	He represented that we are in favour for the company to establish this plant. But what is the percentage of local public that will get employment? Provide in writing.	The representative of the project proponent replied that the company will require around 3000 persons at the time of construction. We will try that maximum unskilled labour is employed from local people.	The proposed project will employment about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
54	Shri Lakhubhai Rabari Village: Tunda Wandh Taluka: Mundra	He represented that: • The officer present at the time of construction of the project are transferred after the starting of operation of the project and therefore proper solution to our problems are not provided. • What kind of employment will be given to the unskilled people?	The representative of the project proponent replied that: • The feeling of the local public will be considered and problems will be properly solved. Efforts will be made to ensure that local public is provided employment to an extent possible. • Efforts will be made to ensure that unskilled people also get employment.	The proposed project will employment about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
55	Shri Vishrambhai Gadhavi Village: Zarpara Taluka: Mundra	He represented that the company wishes to bring project at this place for its own benefit not for the development of the local public.	The representative of the project proponent replied that the company can establish industry at other place also but the decision to establish project at this place is for the development of Mundra.	A budget of Rs.8 crores per each year has been allotted for CSR activities for five years. The CSR details (like CSR policy, initiatives & activities, CSR budget expenditure data from 2010 to 2016, Proposed CSR budget plan for next 5 years and CSR implemented photographs) is given in Section-8.5 of Chapter-8 in the EIA Report. Further, Locals will be given preference to

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
				employment based on skill set & eligibility requirement as per the job and the vacancies available.
56	Shri Valjibhai Tapariya Village: Zarpara Taluka: Mundra	He represented that in the forthcoming projects and the existing projects, Adani and other voluntarily organizations should make an exchange centre, the record of qualified persons should be prepared and the people should be taken on service as per the requirement of the company and their qualifications.	The representative of the project proponent replied that, we are in process of making Adani Skill development centre. Efforts will be made in future to create employment opportunities. Moreover linkages will be established with the employment exchange and the registered persons having appropriate qualification shall be given priority.	As promised, Adani skill development centre will be developed at the project site. Necessary budgetary allocation will be done.
57	Shri Hussain Vasu Luhar Village: Tunda Taluka: Mundra	He represented that how many people of Tunda village serve at Adani? I was also provided employment but was terminated without providing any reason.	The representative of the project proponent replied that more than 100 persons of the Tunda village serve at Adani company. In the year 2012, a total of 35 persons were given employment on the basis of the representation of the Gram Panchayat. You were given much better salary increments as you were the resident of village. You are not terminated from service as on date.	Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
58	Shri Gulabsinh Babubha Jadeja Village – Mota Kandagara Taluka: Mundra	He represented that we do not have any objection towards this project. Due to company we have progressed.	-	-
59	Shri Viram Naran Shekhara On behalf of Bharatiya Kisan Sangh Village: Zarpara Taluka: Mundra	He represented that • A large number of objections are represented during public hearing. If the company comes and if there are any chances of environmental degradation, then the government authority should consider it seriously. The work should not remain only on paper. • It should be considered that the local public are not receiving employment. • If the NGT can issue notice to even Shri Ravishankar, then no one is over and above the environment.	The representative of the project proponent replied that: We undertake all kinds of work in a transparent manner. We are making efforts so that at least ten persons from each village receive employment. The suggestion of tissue culture laboratory for the development of agriculture is welcome and the relevant process will be considered for the same. We are ready to consider the requirements of the farmers through meeting with their committee, we shall do work on required issues, a 5 year plan will be undertaken with you and such opportunities will be undertaken	Pollution Control: The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		• Even in the past, before the establishment of the solar plant, the number of jobs were promised but the same is not observed. • The company should work for developing new sources of water. • By ignoring agriculture and developing industries, how many days will we survive? Agriculture development should also take place. • Moreover development of education is also necessary. Also, the Adani Company should establish a laboratory at Mundra for Tissue culture development of date farming. So farmers concerns can be addressed.	that the employment opportunities are created through employment exchange. The company will work towards satisfaction of local people. Efforts will be made to provide the Drip Irrigation system for Date farming. As part of CSR activities, provision of eight crores rupees every year has been done separately for this project.	CSR Initiatives: A budget of Rs.8 crores per each year has been allotted for CSR activities for five years. The Tissue Culture Laboratory development will be considered. Further, drip irrigation system for date farming will be included in the CSR initiatives.
50	Shri Dayabhai Gadhavi Village: Mota Kandagara Taluka: Mundra	He represented that • As per the page no. 8 of the EIA report, the impact of sulphur dioxide on environment is negligible. How is it possible? • Why do you not operate the ESP at night in the Adani Power?	The representative of the project proponent replied that, • In order to avoid harmful impacts to environment, concentration of sulphur dioxide emissions is regulated by stipulated norms. The emissions of sulphur dioxide will be within the prescribed limits after the erection of copper plant. • At the Adani Power, the ESP is always in operation when the plant is in operation.	The SO_2 generation is a continuous process during smelting activity. Primary gas stream will be routed to sulphuric acid plant (SAP) plant and the fugitive gas stream will be routed through scrubber. Further, there is no provision in the plant/process for storage of SO_2 gases and will be processed immediately to produce sulphuric acid. Sulphuric acid plant (SAP) will be installed with highly efficient (Double Conversion Double Absorption) DCDA process to control the SO_2 emission to less than 1 kg/t of sulphuric acid produced. About Rs. 1700 crores will be invested to

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
				install sulphuric acid plant.
				The details of episodal SO_2 stack emissions are addressed in Section-4.2.2.3 of Chapter-4 of the EIA Report. The process of extraction of copper metal, sulphuric acid is recovered as a by-product from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced is utilized for phosphoric acid production and rest will be sold in the market based on market requirement.
61	Shri Ranjitsinh Jadeja President, Taluka Panchayat Mundra Taluka: Mundra	He represented that, I hereby submit as a political leader that due to the establishment of the company, employment opportunities will be increased and the local people, taluka, state and entire country will develop.	-	The employment of local people in primary and secondary sectors of project shall upgrade the prosperity of the region. This in-turn will improve the socio-economic and infrastructure conditions of the area. Further, a total budget of Rs.40 crores will be spent on CSR activities in the five year period, which will help the socio-economic development of the region.
62	Mrs. Devalben Gadhavi Village: Shekhadiya Taluka: Mundra	She represented that, it is submitted that by way of this project, care should be taken that the local ladies and other local public is given employment.	The representative of the project proponent replied that, as for the employment of ladies, arrangement has been made so that 120 ladies will get employment. Moreover, we will sign an MOU with Welspun Company in order to provide proper training and employment to ladies so that their condition will improve.	Locals will be given preference in employment in the proposed copper refinery project. As promised, about 120 ladies will get employment. Further, proper training will be imparted to the ladies so that their employability will increase.
63	Shri Ibrahim Turk Village: Dhurb Taluka: Mundra	He represented that you are portraying this project as a green field project. But around 103 ha of land of forest department is taken in this project. How can this project be termed as green field project?	The representative of the project proponent replied that, any new project is stated to be green field project. There is no relation of word 'green field' with vegetation. It is only an English word.	About 85.79 ha of project area (33% of the project area) will be developed with greenbelt / green cover as per prevailing guidelines from GPCB/CPCB/MoEF&CC. The proposed greenbelt is already earmarked in the Layout given in Figure-2.1 of the EIA report.
64	Shri Hirabhai Patariya Sarpanch, Deshalpar Kanthi	He represented that this project is only 5 km away from our village. Therefore it is submitted	The representative of the project proponent replied that, as discussed earlier, attempts will	As promised by the project proponent, about 10 persons from each village in the study area

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
	Gram Panchayat, Village: Deshalpar Kanthi Taluka: Mundra	that our village should also be given priority in the manner that Navinal and Shiracha are given priority.	be made to employ 10 persons from each village.	will be employed. Necessary skills will be developed through the Skill Development Centre as proposed.
65	Shri Ibrahim Turk Village: Dhurb, Taluka – Mundra	He represented that • You are to take sea water for this project and therefore what would be the impacts of this activity on the marine ecology? Have you conducted any study in this regard? • What will be the impact of salinity ingress on agriculture? • There is increase in salinity and loss to agriculture in the Tunda, Kandagra and other such areas due to cutting of mangroves.	The representative of the project proponent replied that: • The NIO organization has conducted study for the Intake and Outfall channels per the rules and regulations of MoEF&CC. The 11 km long outfall channel will meet the sea near West port and will dilute the quality of outfall. Moreover it is always ensured that the water temperature does not exceed more than 5 degree higher than the sea water ambient temperature and the salinity does not exceed 57 PPT. • We had undertaken a study through M/s Gujarat Institute of Desert Ecology (GUIDE) for assessment salinity of underground water. The salinity in the underground water has increased not only in the project surrounding area but also in the entire Kutch area. This is due to lack of rain and over-drawl of ground water. • The industries of this area are not dependable on ground water.	The total water requirement for the project is about 32,800 m3/day which will be sourced from desalination plant of APSEZ Ltd, through M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).
66	Shri Natubha Jadeja Village: Shiracha, Taluka: Mundra	He represented that 100 people of my village were employed by Adani Power Company. Hence, my village has received employment. Thus it is our submission that this plant should be established so that the employment is increased and the problem of unemployment of rest of our villagers is resolved.	-	As promised by the project proponent, about 10 persons from each village in the study area will be employed. Thus local people will be given preference. Necessary skills will be developed through the Skill Development Centre as proposed. The employment of local people in primary and

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
				secondary sectors of project shall upgrade the prosperity of the region. This in-turn will improve the socio-economic and infrastructure conditions of the area.
57	Shri Bharat Kalyan Seda Village: Zarpara Taluka: Mundra	He represented that • The water to be sourced from sea will be through pipeline of open canal? In case if you dig a canal, the farmers will be impacted. • He represented that a charge of Rs. 200 is levied on trucks at entry gate by Adani Company.	The representative of the project proponent replied that • The water to be used in this project will be obtained from existing intake channel. Thereafter, the desalinated water from APSEZ will be transferred through pipeline to proposed project. • The contractor that works in the area of the company or APSEZ are provided with zero amount gate pass for their trucks and therefore no charge is levied from them.	The total water requirement for the project is about 32,800 KLD (32.8 MLD). The total desalinated water requirement for the project would be sourced from APSEZ Ltd, through M/s. Mundra Utility Pvt Ltd (MUPL). The desalinated water from the APSEZ will be transferred through the pipeline only. There will not be any open channel flow. Further, an integrated water system is proposed, the effluent from the process units is treated and reused to reduce water demand. It is also proposed to install a secondary Reverse Osmosis (RO) plant to further treat water from the effluent plant facility for effective use. Rejects from the reverse osmosis plant will be sent to Multi Effect Evaporator (MEF) for further recovery and solids generated will be sent to Secured Land Fill (SLF). This water would be utilized to meet the DM water and plant/utility water requirement of proposed project. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).
58	Shri Valji Sumar Gadhavi Village: Zarpara Taluka: Mundra	He represented that, I have been working with the Adani Company since the last 15 years. My 50 trucks are working for this company. Rs. 200 charge is not charged for my trucks.	-	-
59	Shri Kirtibhai Gor Village: Tunda, Taluka: Mundra	He represented that there was no such public hearing conducted for the solar project. Certain boys have received employment in this project. Around 50% of people from the bio-data sent by me have received employment. The persons that have completed B.E. should receive	The representative of the project proponent replied that for the protection of the environment, latest technology and equipment will be installed and operated in this project. Treatment plants for air and water both will be installed. The entire process will be as per the	Pollution Control: The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		employment after the completion of apprenticeship and thus what are the plans of the company to employ such persons? Such projects are welcome. We are 100% in favour of the development but not at the cost of environment. I had written to the GPCB officer that large amount of emission is emitted from the chimney. If the emission that is emitted today comes out regularly, then it is acceptable. The letter is written to GPCB for emission. Also received reply from GPCB. The development should be such that no one suffers due to impacts on environment.	rules and regulations stipulated by the government so that environment will not be damaged due to this. .	The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project. CSR Initiatives: A budget of Rs.8 crores per each year has been allotted for CSR activities for five years.
70	Shri Dayabhai Gadhavi Village: Mota Kandagra, Taluka: Mundra	He represented that the project is entirely chemical based, which will be spread in water, air, noise, land, etc. and it will affect the agricultural land. I feel that such kind of project should be around 20 to 25 km away from the residential area. What are the measures for protection from such kind of project?	The representative of the project proponent replied that as part of this project, manufacturing of copper from copper concentrate will be through smelting and electrochemical process, the polluted water that comes out from this project will be sent to the RO plant after treatment in ETP. Therefore, no polluted water will be released outside. Thereafter, this water will be used again in the process. The rejects will be treated through multi effect evaporation and thus the water will be removed from it. Flue gases released from the process will be captured and converted to intermediate products through chemical process. It shall be ensured that no storage leakage is possible by performing the risk analysis and hazard identification. Thus, there will be minimal chances of water and air pollution.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.
71	Shri Lakhdirbhai Gilwa Village: Zarpara, Taluka: Mundra	He represented that the farming of Chickoo and Dates have suffered a lot due to existing projects. The ground water levels have gone	The representative of the project proponent replied that: Adani Port and Adani Power do not use ground water. The new project will also	There is no ground water withdrawal (consumption/ utilization) for proposed project and project operates on zero discharge

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		down after establishment of these projects. It has impacted production of Chickoo and Dates and thus the farmers have strong objection against this project.	not use ground water. Both these projects use sea water.	concept. Hence, due to proposed project there is no scope of ground water levels reduction and contamination.
72	Shri Khengar Gilva Village: Zarpara, Taluka: Mundra	He represented that the plantation from Bhadreshwar to Tunda Vandh was removed after establishment of projects. Due to this reason, the wild animals like pigs and Nilgai enter our farms. Therefore, it is our submission that please do something for the protection of the crops.	The representative of the project proponent replied that prior to this also, support for drip irrigation is provided to the farmers from many villages since last three years. Special attention will be given to provide support for drip irrigation as and when required.	As part of the CSR program, drip irrigation facilities will be provided in the nearby villages. The total budget of Rs.40 crores will be spent on CSR activities in five year period.
73	Ms. Shital Rajgor Village: Mota Kandagra, Taluka: Mundra	She represented that we do not have any objection for the establishment of company. Ladies like us get employment. We are in favour of the company.	-	-
74	Shri Dayabhai Gadhavi Village: Mota Kandagra, Taluka: Mundra	He represented that • What would be the concentration of Sulphur Dioxide and at what height it will be released? • How sludge will be disposed? • How much quantity of Sulphur Dioxide will	The representative of the project proponent replied that: • Sulphur dioxide will enter the sulphuric acid plant directly from the copper smelter. Acid will be made in this plant. After making acid, it will be scrubbed in tail gas scrubber and after that the gas will be released in air which will mainly contain oxygen and nitrogen. Concentration of sulphur dioxide will be below the prescribed limits by the Government of India. • Gypsum will be manufactured from gas scrubber using lime. This will be used in the cement industry. The flue gases will be released in atmosphere at a height of 100 m. • As per CPCB norms, 1 kilogram sulphur	• The SO_2 generation is a continuous process during smelting activity. Primary gas stream will be routed to sulphuric acid plant (SAP) plant and the fugitive gas stream will be routed through scrubber. Further, there is no provision in the plant/process for storage of SO_2 gases and will be processed immediately to produce sulphuric acid. • Sulphuric acid plant (SAP) will be installed with highly efficient (Double Conversion Double Absorption) DCDA process to control the SO_2 emission to less than 1 kg/t of sulphuric acid produced. About Rs. 1700 crores will be invested to install sulphuric acid plant. The process of extraction of copper metal, sulphuric acid is recovered as a by-product from the off-gases generated from the smelting and converting furnaces. A part of sulphuric acid produced is utilized for

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		be released in air? What will be the density of Sulphur Dioxide?	dioxide will be released per ton of sulphuric acid produced. The density of the flue gas will be same as the air. It will contain very less amount of sulphur dioxide. The same will be around 150 to 200 ppm. We will establish a plant that would be one of the best plants in the world.	phosphoric acid production and rest will be sold in the market based on market requirement. • Secured Land Fill (SLF) is proposed over 30 acres within the project premises for disposal of ETP waste sludge and spent catalyst. Other hazardous waste will be disposed through the approved recyclers.
75	Shri Ashariya Lakha Gilwa, Village: Zarpara, Taluka: Mundra	He represented that the average temperate keeps on increasing every year. In copper project 300 Megawatt power will be required and you will generate steam that would be capable to produce 40 Megawatt of electricity and thus will this increase the temperate?	The representative of the project proponent replied that there will be no increase in temperature due to this project. It would be preferable to use steam for production of electricity instead of releasing it in air. Fuel consumption can be reduced. The electricity will be produced using steam as per rules and regulations. Thus the temperature outside the plant will not increase.	The electricity will be produced using steam as per rules and regulations. Thus the temperature outside the plant will not increase. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project
76	Shri Naran Gadhavi, Village: Zarpara, Taluka: Mundra	He represented that the objection is done because the effect of pollution will be same for all. We are talking about the impacts that are found on the environment, ground water, human health, mangroves, fishermen, cattle rearers, Dates crop, children, etc. should be discussed. We do not object to the development. We would welcome the development if proper environmental measures are taken care of. The objection is only against pollution and randomly placed electric lines. CRZ rules have been violated. Water has turned saline and its TDS has become more than 4500.	The representative of the project proponent replied that • Proper attention will be given to your representations. You have raised important points as an NGO and we have undertaken the appropriate actions as well. One should always talk as a responsible citizen. • We will undertake all kinds of development by following the rules and regulations and we hereby give assurance for the same. The guidelines will be considered while development of new plant.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. The budget allotted for environmental protection will be about Rs. 1044 Crores, out of which for air pollution control systems is Rs. 639 Crores, water pollution control system is Rs. 360 Crores and other environmental management systems (like solid waste, greenbelt, post project monitoring, gas collection and energy conservation) is Rs. 45 crores.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
				Further, a total budget of Rs.40 crores will be spent on CSR activities in five year period.
77	Shri Paresh Rajgour Village: Tunda, Taluka: Mundra	He represented that it is our expectation that the plant will be established by considering the rules framed by the Government of Gujarat and Central Government as well as considering the public interest.	The representative of the project proponent replied that the company is responsible for maintaining public interest and environment. The company will operate the plant by considering the public interest and environment.	The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC.
78	Shri Pravinsinh Bhurubha Chauhan Village: Siracha, Taluka: Mundra	He represented that TATA Power plant took Gochar land. They have entered into agreement to provide either green or dry fodder. Why you do not enter into such kind of written agreement?	The representative of the project proponent replied that: • In your case the Gujarat High Court has ordered to provide fodder for a particular duration and this duration is even now in effect. Thus, there is no question of entering into any kind of agreement or contract as the order is passed by the High Court. • We are providing the dry and wet fodder to the villages having requirement on the basis of the order passed by the Honourable High Court. We are also providing fodder voluntarily to the villages from which the people have not gone to the courts.	A budget of Rs.8 crores per each year has been allotted for CSR activities for five years. The provision of fodder to the needy villages will be covered under CSR initiatives.
79	Shri Viram Naran Sankhra (Member of Kishan Sangh) Village: Zarpara, Taluka: Mundra	He represented that the issue is not limited to fodder, it is a request to maintain positive attitude from your side on permanent basis. So that such a public hearing would not even be required in the years to come. Such kind of submission is done.	-	-
80	Shri Vishram Gadhavi, Village: Zarpara, Taluka: Mundra	He represented that, I am worried about my existence, the existence of my village, the existence of agriculture and therefore I have come to object. It is expected that you undertake your role in an unbiased manner.	-	-
81	Shri Naran Gadhavi,	He represented that	The representative of the project proponent	The proposed project will be designed as per

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
	Village: Zarpara, Taluka: Mundra	• Three reports have been found for the production of copper plant. Out of this 1) Regional Institute of technology, Jamshedpur, 2) Energy Laboratory and department of biology science Cambridge University, London and 3) Public Health report. Which reports contains the details of serious side effects of production of copper. Therefore provide the information that what diseases are possible due to the dust of copper? • As per the report, hair falls, stomach ache, cancer and other inhalation related diseases, etc. occur due to dust. How you will control the dust? How many teams will you have? How many doctors will be available? • The second question is that, how will you control the air emissions that will be released in the atmosphere? What is the facility that is done by you as for this? • The sulphur dioxide that is released in air will damage health and so what steps have been taken by the company?	replied that: • The reports that you are mentioning are related to plants that are very old. The plants with latest technology are even present in developed countries. The dust from the plant is collected and used in furnace. Moreover, the dust on the road is also collected by vacuum truck. At the places where the workers are required to work in dusty area, they will be provided personal protective equipment (PPE). • Copper concentrate material contains 8 to 10% moisture and therefore there is very less chance of dust emissions. Even thereafter, if this dust goes into breathing, the material is inert and therefore there would not be any specific effect. The effect is just like the diseases that are caused by normal dust. • The sulphur dioxide will be used as intermediate product, its chemical process will be undertaken and sulphuric acid will be made from it. Therefore, there is no question of the toxic gases releasing in the atmosphere. • The chemical process of these gases will be done and intermediate product will be developed. It shall be ascertained that no leakage is possible by performing the risk analysis and hazard identification. Thus, there will be minimal chances of air pollution. • After making sulphuric acid, it will be	the latest technology with all in built pollution control measures. The proposed project will implement all the control measures at the source level to keep the emissions under permissible levels. The plant will be operated on zero liquid discharge principle. Further, it will comply with all the conditions stipulated by GPCB and MoEF&CC. About Rs.1044 crores will be spent for environmental pollution control measures in this project.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
			scrubbed in tail gas scrubber and the gas will be released in air. The lime will be used during the gas scrubbing process and gypsum will be made. This will be used in cement industry.	
82	Shri Dayabhai Gadhavi, Village: Mota Kandgara, Taluka: Mundra	He represented that what kind of storage would be done by the company for raw material and how raw material will be transferred?	The representative of the project proponent replied that the company's copper concentrate storage will be entirely covered. The pipe conveyor will be used to transfer material from port to plant.	-
83	Shri Valjibhai Tapariya, Village: Zarpara, Taluka: Mundra	He represented that with bottom of their hearts, everyone wishes that industries should come. Industries should take corrective actions when there are objections. Industries are welcome with the conservation of environment.	The representative of the project proponent replied that all points that are represented here will be taken care of. We will also consider the benefits of common public on behalf of the company. We are 100% responsible for the common public as a developer. We will consider that properly.	-
84	Shri Mayur Aatu Maheswari Village: Tunda, Taluka: Mundra	He represented that • What is number of the employment opportunities provided to the local public by the existing industries? Why are the local people sacked from their jobs? A committee should be constituted so that the local public gets employment and an open discussion / meeting should be held between the company officers and committee for the purpose of providing employment to local public. This discussion should be done openly not behind closed doors. As per the rules of the government, the local public should receive 85% of employment. • Provide the list showing how many local persons have received employment / work in the existing industries.	The representative of the project proponent replied that the list of the local persons working in the company will be provided. We undertake the process of employing the local people in consultation with the Sarpanch and Gram panchayat. Even this process will be made further transparent. The main reason for termination of job is that the workers are irregular.	The proposed project will give employment to about 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
85	Shri Mithu Jakhu Maheshwari Village: Mota Kandagara, Taluka: Mundra	He represented that • The preservation of water and environment should be made for farming. Farming gets	The representative of the project proponent replied that Considering your representation, without any pressure, the work will be done	The total water requirement for the project is about 32,800 m^3/day which will be sourced from desalination plant of APSEZ Ltd, through

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		affected due to sea water, Dates do not grow up. Water is not fit for drinking within the radius of 3 KM. Therefore the company should think about this loss. • The work for 3 storage area for Cowsheds is stopped in Kandagara. The representation has been made to restart the construction work of storage area. • The representation has been made for fair work.	and efforts will be made to finish incomplete works.	M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).
86	Shri Salu Kumbhar, Village: Tunda, Taluka: Mundra	He represented that three Fishermen access roads towards sea have been closed, due to which we have to take 5 km long route, we do not have vehicles, therefore, the demand has been made to open three routes.	The representative of the project proponent replied that we will fully cooperate with fishermen and will make sure that no hindrance is made in the route of fishermen, if there is any obstacle, they can approach us any time.	As committed, the fishermen routes will not be disturbed during the construction and operation of the proposed green field copper plant.
87	Shri Kirtibhai Gor, Village: Tunda, Taluka: Mundra	He represented that which water will be used in the upcoming plant?	The representative of the project proponent replied that in the proposed plant, seawater will be used after removing salt (desalination).	The total water requirement for the project is about 32,800 KLD (32.8 MLD). The total desalinated water requirement for the project would be sourced from APSEZ Ltd, through M/s. Mundra Utility Pvt Ltd (MUPL).
88	Shri Dayabhai Gadhavi Village: Mota Kandagara, Taluka: Mundra	He represented that • As per the notification of Government of Gujarat / Government of India, 85% of people shall be employed from local areas, how many have you employed? • What steps have been taken to develop the unskilled people to give them the right opportunity?	The representative of the project proponent replied that we are trying to provide employment to the local people to a great extent, but in the initial stage, due to the lack of requisite qualification, the company was facing problem to provide the employment. After the ITI has started and after the training of RTG is provided, the proportion of local employment has increased and will continue to increase.	The proposed project will give employment about to 2000-3000 persons on average per day during construction phase and during operation phase, about 2000 direct employment and 5000 indirect employment will be provided. Locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available.
89	Shri Hamir Rabari Village: Wandh, Taluka: Mundra	He represented that one of my two handicapped children who cannot hear and the other one cannot speak. The representation had been made for their job.	The representative of the project proponent replied that we had employed their children, but they said that one of their boys is working in the Tata Company; and they do not want to join here now.	-

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
90	Shri Dosabhai Gadhavi Bhurubha Chauhan, Village: Siracha Taluka: Mundra	He represented that if the industry comes then damage will be done. We are not against the plant. You will fill the vacancy on contract basis. But, what will you do for farmers like us and our children? TDS analysis been carried out by me in the 2007 and 2012, the TDS was reached up to 2200, which is not fit for drinking. We used to get drinking water from bore well, now we have to buy water bottle. In the last 5 years 800 to 900 TDS has been increased. In fact, nothing has been done for the farmers; we demand that something is done for the farmer and farming. The fruits from our farm are not worth eating.	The representative of the project proponent replied that, we will work towards solving problems of farmers. Efforts will be made to open the Kishan School for the children of the farmers. The planning as to how the ground water level can be increased, has been made by Adani Foundation, along with Mr. Yogesh Jadeja to improve the water supply in 10 villages and for the purpose of employment, the children of farmer will be given priority for this purpose.	The issues raised will be covered under CSR development program. Under this project a total budget of Rs.40 crores will be spent on CSR activities in five year period.
91	Shri Pravin Singh Bhurubha Chauhan, Village: Siracha Taluka: Mundra	He represented that the power plant's intake channel, the outfall channel, and the water reservoir are *Kuchcha* or *Pucca*?	The representative of the project proponent replied that, Outfall channel is Stone Masonry Lined, while the Reservoir is Clay Lined and Sheet Piling is done. This question is not about the proposed project.	-
92	Shri Khimraj Gadhavi Village: Zarpara Taluka: Mundra	He represented that the people from village used to drink the water with high TDS and the company uses Narmada water for sprinkling on coal piles.	-	The total water requirement for the project is about 32,800 m3/day which will be sourced from desalination plant of APSEZ Ltd, through M/s Mundra Utility Pvt Ltd (MUPL). No ground water will be abstracted during the operation phase. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD).
93	Shri Pravin Singh Bhurubha Chauhan Village: Siracha, Taluka: Mundra	He represented that • What does High water line, Low water line in the figure No. 1 in the E.I.A. report indicate? • Different CRZ maps are submitted in the Public Hearing for the years 1991, 2008, 2010 and 2017, which is the correct map out of those? If one map is correct out of four then this shows that the other three	The representative of the project proponent replied that • CRZ maps are prepared by the institution recognized by the Government of India. Project proponent has no authority over it. Projects are approved on the basis of maps prepared by the authorized institution.	As informed, the proposed project is outside the CRZ boundary. The map of proposed project is superimposed on CRZ map of the area prepared in 2011 by Centre for Earth Science Studies (CESS) Thiruvanantapuram, an institution recognized by Government of India. The proposed project site is outside CRZ and doesn't attract CRZ clearance.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		are false which indicates the Company has violated the rules of CRZ. • The tidal waters were reaching at a place in Siracha, now waters are not reaching there which shows that the company has violated the CRZ Act. • There is no clarification in the report about from where the Conveyor belt, Road, Railway line will pass and how they will be used in the plant. • Three sites in total were selected for the project, site number 2 is selected from that. What is your purpose behind it? • When you already own the site No. 1, why you have selected site No. 2? You have selected site No. 2 to get forest land.	• The map of proposed project is superimposed on CRZ map of the area prepared by an institution recognized by Government of India in 2011. • CZMP plans are prepared by the Government of India which are not public domain. When any approval is required for CRZ by any project then the CRZ map is submitted to compare with CZMP and on that basis only approval is accorded. We do not agree with your opinion in this matter. • The project is proposed in notified SEZ area and part of the forest land. So the Roads, Railway line falling under APSEZ will be used. Conveyer belt will pass through the existing conveyor corridor; this matter is mentioned on Page No. C 2/6 Point No. 2.2.7 of EIA report. • Detailed information regarding this matter is mentioned in Chapter-5. • For analysis of three alternative sites for project, about 18 factors were examined. The site No. 2 was found to be more suitable, so it is selected. • We have submitted our reasons in EIA report. We do not agree with your view.	The approved CRZ layout is shown in Figure-1.5 of Chapter-1 in the EIA report.
94	Shri Dayabhai Gadhavi Village - Mota Kandagara Taluka: Mundra	He represented that we have received report of VIMTA. This VIMTA is a Private organization which is favouring the company. We don't accept VIMTA's report.	The representative of the project proponent replied that VIMTA is a NABET accredited agency.	M/s. Vimta Labs Limited (VLL), Hyderabad is a QCI/NABET accredited and MoEF&CC recognized and NABL accredited Laboratory. The credentials of M/s. Vimta Labs Limited are given in Chapter-11 of the EIA Report.
95	Shri Vajjibhai Taparya	He represented that what area of land will be	The representative of the project proponent	

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
	Village – Zarpara Taluka: Mundra	affected during Acidic Process in the plant? Where the Acidic Water and Chemicals will be released?	replied that the process of this copper plant is not acidic, but along with production of copper, sulphur dioxide will also be produced which will be used for making sulphuric acid. And, it will be transported through pipeline of suitable material and there is no possibility of leakage. The tail gas will be scrubbed in the scrubber by lime stone.	-
96	Shri Dayabhai Gadhavi Village - Mota Kandagara Taluka: Mundra	He represented that • Will waste material be generated from the plant? • What is the arrangement for waste material? • Is there any chance of any kind of blast? • In what manner will the finished product be taken out?	The representative of the project proponent replied that: • Lime will be used in the scrubber process and Gypsum will be made. This will be used in the cement industry. • Certain part of the waste material coming out of the plant will be sent to the CPCB authorized processor and other non-recyclable hazardous waste will stored in secured land field constructed as per guidelines of CPCB. • The finished goods in the form of copper plate will be transported in truck or container. Sulphuric acid will be transported in tanker. Chances of blast are not possible.	The details of solid waste generation and their disposal is addressed in Section-2.4.3 of the EIA Report. A total budget of Rs.1044 crores will be spent for environment pollution control and management.
97	Shri Pravinsinh Bhurubha Chauhan, Village: Shiracha, Taluka: Mundra	He represented that • You have mentioned that you will make road from the waste. So what will do for making road from this waste? • What would be the constituents in raw material that would be stored? • Which chemicals will be contained in the	The representative of the project proponent replied that: • We will not make roads from waste. • The waste material coming out of the plant will contain calcium, silica and arsenic. This waste material will be stored in secure land fill sites. • Mercury product is made from the waste	Secured Land Fill (SLF) is proposed over 13.35 ha within the project premises for disposal of ETP waste sludge and spent catalyst. Other hazardous waste will be disposed through the approved recyclers.

Sr. No.	Name and Address of the Representative	Point Represented	Chronological Reply given by Representative of Project Proponent	Action Plan
		waste that comes out from the plant and will mercury come out from this waste?	material that contains mercury and material named calomel is produced. This material will be exported. No process for mercury will be done in this plant.	
98	Shri Naran Gadhavi Village: Zarpara, Taluka: Mundra	He represented that • What steps have been taken for reducing emissions and water conservation as per the gazette notification dated 07.12.2015 of MoEF&CC, Government of India? • What effect will this project produce on sea creatures that have direct connection with fishermen?	The representative of the project proponent replied that: • This question does not relate to this project. • No liquid will be discharged from this plant. • A total of 32,800 m^3/d of water will be used in the plant and out of that 6,448 m^3/d of polluted water will be produced. This will be treated in ETP, the water will be purified by process in RO plant and it will be again used in the plant. The rejects will be treated through the multi effect evaporation process. Therefore there is no question of discharge of any kind of liquid from this project	A total of 32,800 m^3/d of water will be used in the plant and out of that 5,432 m^3/d of polluted water will be produced. This will be treated in ETP, the water will be purified by process in RO plant and it will be again used in the plant. The rejects will be treated through the multi effect evaporation process. Therefore there is no question of discharge of any kind of liquid from this project. The water system, is highly integrated and is designed for Zero Liquid Discharge (ZLD). About Rs. 360 crores will be spent for ETP design and wastewater management

TABLE-7.1(B)
PUBLIC HEARING REPRESENTATIONS AND REPLY ALONG WITH THE ACTION PLAN

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
1	Ravilal K Maheshwari (Advocate & Notary, B.A., L.L.B.), 15, Ground Floor, Adarsh Tower, Mundra-Kutch	1. My clients are the residence of the village on which the project shall be made and the villages around the project.	1. We heartily congratulate the villages related to the project and the villages around it as they are the important participants of the project.	1. -
		2. This project will use hazardous substances and material that will be for the human health/animals/vegetation and water flow as per the rules of the MSIAC and this shall cause a serious effect to environment. What steps will be taken by the company for this and what are the solutions as for this with the company?	2. Non Saline water shall be used in this project. The ground water shall not be used. The waste that comes out of the project shall be recycled. No liquid type waste shall come out from this project. The chemicals that damage the environment and the waste hazardous for the environment shall be disposed off in such a manner that no serious effect is found on the environment.	2. No ground water will be abstracted durir the operation phase. The water system, highly integrated and is designed for Ze Liquid Discharge (ZLD). Secured Land F (SLF) is proposed over 13.35 ha within th project premises for disposal of ETP was sludge and spent catalyst. SLF will b designed as per CPCB guidelines. Oth Hazardous waste will be disposed throug the approved recyclers.
		3. A serious damage shall occur to the health of humans and animals along with environment of the village around the project as there shall be emission from the plant, there shall be emission or dust from the related construction activities and other such places. What steps shall be taken as per legal in case if any damage occurs. Provide in detail the corrective step with the company so that the protection can be done.	3. In this project the chemicals like SO_2 and NOx shall be released. Sulphuric Acid shall be manufactured with the use of SO_2. In order to lessen the production of PM and NOx, scrubber shall be used. The chemical coming out at the time of the operation stage shall be restricted and NAAQ maintenance shall be undertaken ambient air quality. Therefore no long term effect shall be found.	3. The proposed project will implement all th control measures at the source level, whic are incorporated in Draft and Final E report. Further, it will comply with all th conditions stipulated by GPCB ar MoEF&CC. About Rs.1044 crores will b spent for environmental pollution contr measures in this project.
		4. What are the provisions laid down by the company for protection from blast, liquification, fire, etc. during the production? Provide the details that the company shall take. This is because (prior to this a boiler had blasted in a project of this very company and many humans/workmen had suffered serious injuries). This company has violated the rules for	4. Steps under statutory provisions shall be taken at the time of transport of hazardous chemicals. As for this the disaster management plant and risk analysis plan shall also be prepared. This has been included under the Chapter-7 of the EIA. The accident of blowing of boiler, that is point out, is an unfortunate incident that has occurred even after proper	4. The necessary safety measures will b provided in storage facilities and safe equipments & PPE's for staff and workme in the proposed plant. The hazar identification, risk assessment and disast management plan (onsite & offsite) deta are given in Chapter-7 of the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		protection prior to this also.	protective facilities.	
		5. The project is planned on the land and out of this the sanction is sought from the government of India and the same is pending before the government by file no. 8-04/2016 for land totaling of 1576.81 heacter and located at the Siracha-Navinal village. This file is returned by the central government to the Gujarat government for the purpose of opinion. It is specifically mentioned in it that this company has been provided with forest land prior to this also. Therefore additional land cannot be given. In this manner the forest land can be given in rare cases and in very serious requirement, as per the forest laws. In this manner the land of the company is not approved and the representative of the common public named Mahesh Mohanlal Desai has submitted objections before the Central government and Gujarat government and it is submitted that the land should not be approved. In short, the forest land is not provided to the company yet the work for project has been started. The company should provide explanation to all points in a detailed manner.	5. The construction in the forest for this project shall only be done after obtaining final approval. The application for conversion of this land is pending before the government of India. The company shall comply by the decision taken by the government of India.	5. MoEF&CC (forest conservation division) h granted Stage-1 approval for diversion 1576.81 ha of reserved forest land in favo of Adani Ports & Special Economic Zo Limited (APSEZL) vide letter F.No. 04/2016-FC dated 16th November 201 Stage-I FC has been obtained as given Annexure-V. The construction will start or after getting all required statutory clearan from concern department.
		6. Prior to this, the environment department had issued show cause notices to other project of this company and on the basis of the report submitted by Sunita Narayan team, the company was asked to pay penalty of Rs. Two hundred crores i.e. 1% amount of project, for breach of environmental condition. Thus, what is the assurance that this company shall not violate the conditions for environment laid down by the environmental law? Moreover the company has also not paid the amount of penalty. In this	6. This case relates to APSEZ. The show cause notice was disposed off on the basis of certain instructions. These are to be followed by the company. In this notice it is not mentioned that the environmental approval is not provided	6. This is outside the scope of EIA report f the proposed project. About Rs.1044 crores will be spent f environmental pollution control measures the proposed greenfield copper project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		manner the company has openly breached the conditions for environment. As for this the environment related approval should not be given. Further the company should give a detailed explanation as for this issue.		
		7. As for the other revenue land of the project, the amount of stamp duty is pending as per the land approval orders. Meanwhile the company states that, they have exemption. But the fact is that as per the section 21 of the Gujarat Special Economic Zone Act 2004, the exemption on stamp duty is on transaction that is carried out, between the developer and unit owner for lease, after the development of SEZ. This has been wrongly interpreted by the company and thereby the amount of stamp duty payable based on the land approval orders, for the land on which the project is brought, has not been paid. The company should provide a detailed explanation as to this. It should provide explanation as per the provision of law.	7. This project is under notified SEZ and the forest land is not forested and therefore the submission was made to convert the same. The point raised here relates to land revenue. It does not connect with environment in any manner.	7. The total land required for the propose project is about 256.58 ha (634 acres), ou of which 154.18 ha (381 acres) of identifie land for this project belongs to the APSE (an Adani Group Company) and is alread designated for industrial purpose as per th local land use plan.
		8. As for the other revenue land of the project, as per the section 67(a) of the Revenue act, when the land is transferred for other purpose i.e. to non-agricultural purpose, the conversion tax at Rs. 6 lacs is to be paid per meter. The company has not paid the crores of rupees of conversation tax payable on the basis of the approvals provided for the land by the collector and taluka development officer. As for this the audit has also been conducted by the CAG being the audit department of government. The collector issues number of notices to the company for paying the above mentioned amount but the company has not paid this revenue amount. The amount of	8. This project is under notified SEZ and the forest land is not forested and therefore the submission was made to convert the same. The revenue amount, taxes, etc. shall be paid on time.	8. Memorandum of Understanding (MoU) is i place between Adani Ports & Special Economi Zone Limited (APSEZL) and Adani Enterprise Ltd (AEL) for 154.18 ha (381 acres). Th APSEZ notification and land allotment to AE is enclosed as Annexure-III and Annexure-IV AEL will pay all relevant taxes to stat government and central government on time.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		revenue is outstanding for this land and therefore project cannot be initiated. The company should provide a detailed explanation as to this.		
		9. What arrangement will have the company undertake for the hazardous waste (as per Hazardous and Other Wastes Rules) coming from the project?	9. The administration of the hazardous waste management shall be done as per the management and movement rules.	9. Hazardous cake and scrubber cake will b stabilized and stored in secured land fill a per guidelines of MoEFCC/ CPCB/ GPCB. A area of around 13.35 ha is identified an allocated. For the initial years of coppe refinery plant operation till sustaine utilization/management of copper slag an phosphogypsum; in the above applicatio areas are developed, as well as fc emergency purpose, copper slag storag area and gypsum pond of around 105 acre would be identified and made available fc intermediate/emergency storage of th same. Provision would be made to reclair the disposed copper slag an phosphogypsum from gypsum pond at later stage for various utilization ventures.
		10. What taxes would be paid during the duration of Copper Smelter Project scheme? What would be the approximate annual tax amount?	10. The company shall pay all the taxes that are payable for the duration of project. These taxes shall be paid on time, as per the rules of the government of India.	10. AEL will pay all relevant taxes to stat government and central government o time.
		11. What kind of five thousand jobs shall be created due to Copper Smelter project? How many local persons shall be employed in these services?	11. The local public shall be given opportunities for service as per their capabilities and potential. In order to increase the potential of the local public, such workshops shall be organized.	11. The proposed project will employment abou 2000-3000 persons on average per da during construction phase and durin operation phase, about 2000 direc employment and 5000 indirect employmer will be provided. Locals will be give preference to employment based on skill se & eligibility requirement as per the job an the vacancies available.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		12. What arrangement has the company made for the primary requirement of the community such as health services, educational facilities, roads facilities, etc? What is the preparation of the company for improvement in the social structure of the affected individuals/villages?	12. The company has kept a provision of eight crores for the proceedings of CSR. This includes education, health, cleanliness, etc.	12. A budget of Rs.8 crores per each year ha been allotted for Enterprise Socia Responsibility / Corporate Socia Responsibility (CSR) activities for five years The CSR details (like CSR policy, initiative & activities, CSR Budget expenditure dat form 2010 to 2016, Proposed CSR budge plan for next 5 years and CSR implemente photographs) is given in Section-8.5 c Chapter-8 in the EIA Report.
		13. How much fund would the company allot for environmental conservation and in what manner will it be used?	13. The budget of 1044 crores of rupees is for the environmental protection. The detailed information as for this is provided under the table no. 6.4 of EIA for water population control system, waste management system, green belt management, etc.	13. The budget allotted for environmenta protection will be about Rs. 1044 Crores out of which for Air pollution control system is Rs. 639 Crores, Water pollution contro system is Rs. 360 Crores and othe environmental management systems (lik solid waste, greenbelt, post projec monitoring, gas collection and energ conservation) is Rs. 45 crores.
		14. Even prior to this, the company had for another project clearly violated the conditions laid down under the environment clearance and costal regulations zone and thereby had violated the condition of not cutting mangroves and filling creek. The company has been issued show cause notices by the environmental department and penalty has also been paid. Thus even the environmental conditions laid down for this project shall also not be complied with, serious problems as to environment shall emerged around the project area and therefore our clients want that the Examination-in-Chief and NOC along with other approvals should not be provided to the company. Thus my clients have clear objections against this project.	14. No activity related to the project has been done prior to this at Mundra. The show cause issue of APSEZ has been disposed by MOFECC.	14. The construction will start after getting a required statutory clearance from concer department.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
2	Shri P.C Gahavi, Ex. President, Taluka Panchayat, Lakhpat	Refer to the newspaper notification published by your department on the EC allocated by AEL, to establish 1 unit of Greenfield Copper Refinery Plant at Mundra in Kachchh district. Refer to this, a public hearing meeting on environment is schedule on 29-04-2017 regarding EIA report of the proposed plant. Herewith we request to arrange to take note of our objections and presentations, described point wise as under, and to respond in written.	We thank you for raising the concerns and providing us valuable suggestions for the development of the project and the area. With reference to your letter, we would like to submit point wise response as desired by you.	
		1. Project is cost of the proposed project is estimated to Rs. 10000 crores and Rs. 900 Crores is allocated towards environment maintenance? And it is very important that the proposed should be asked to allocated more amount towards Environment maintenance if the above allocation of Rs. 900 Crores (9% of the project cost) is less than the regulatory provisions.	1. Rs. 1044 crores has been allocated as capital expenditure for environment management measures for the proposed project which is more than 10% of the total project cost. We assure that world class and efficient process equipment shall be installed along with pollution control devices in all facilities of the project.	1. The budget allotted for environment protection will be about Rs. 1044 Crores, ou of which for Air pollution control systems Rs. 639 Crores, Water pollution control syste is Rs. 360 Crores and other environment management systems (like solid waste greenbelt, post project monitoring, ga collection and energy conservation) is Rs. 4 crores.
		2. The land where the project is proposed is owned by APSEZ and APSEZ acquired the land from the government for industrial use long back. President of APSEZ allocated this land to AEL, without any kind of Consideration, lease contract or sub-lease. As per the order of the honourable High Court of Gujarat, the ownership should be considered changed when any company transfers the land to other company OR its sister concern to use and stamp duty @ 1% of the market price of the land should be deposited with the superintendent of stamps office. So here (1) Has company obtained the land by taking due regulatory approvals and (2) Has it paid the stamp duty as per the norms? What actions would be taken if the company defaults in these two matters?	2. Commitment letter has been obtained by Adani Enterprises Limited (AEL) from the APSEZ for allotment of land for the proposed project. Allotment of the land and ownership transfer shall be implemented only after compliance with all regulatory requirements including statutory payments and due fee for transfer.	2. The total land required for the propose project is about 256.58 ha (634 acres), out which 154.18 ha (381 acres) of identified lan for this project belongs to the APSEZ (a Adani Group Company) and is alread designated for industrial purpose as per th local land use plan. MoEF&CC (fores conservation division) has granted Stage- approval for diversion of 1576.81 ha reserved forest land in favour of Adani Ports Special Economic Zone Limited (APSEZL) vid letter F.No.8-04/2016-FC dated 16t November 2018. The APSEZ notification an land allotment to AEL is enclosed a Annexure-III and Annexure-IV.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		3. Some portion of the selected land of proposed project falls under forests. And is a residence of list of Peacock, which are declared protected wide the regulations of the Indian Forest Act and is our national bird too. They get feed from nearby agricultural areas in daytime and come back in this sand portion in the night time as feel unsecured in nearby areas. Note of these peacocks have also been taken in EIA report of this proposed project and steps to be taken to protect peacock are also mentioned. But these steps are not much clear and need to be discussed in detail we request to clarify on these preventive steps.	3. Application for diversion of forest land has been already filed as also mentioned in TOR in MoEFCC. All compliance shall be ensured as per procedure, Forest Diversion is recommended by State Government and Approved by Central Government after ensuring all compliance by the user agency.	3. Conservation Measures for Protection o Peacock are given in Section-4.2.7.3 o Chapter-4 in the EIA report.
		4. It is also mentioned that the daily water requirement of 32.8 MLD for the proposed plant will be supplied from the desalination plant established in APSEZ. So any desalination plant exists in APSEZ? And, if yes, what is the capacity and where this water is being used also need to be clarified.	4. APSEZ has approval for desalination plant. APSEZ has in principally agreed for augmentation of needful infrastructure and provide desalinated water for this project as clearly mentioned in the water allotment letter in Annexure-VI of EIA report.	4. The total water requirement for the projec is about 32,800 KLD (32.8 MLD). The tota desalinated water requirement for the project would be sourced from APSEZ Ltd through M/s. Mundra Utility Pvt Ltd (MUPL) The water requirement and breakup detail are provided in Section-2.2.3 of Chapter-2.
		5. It is mentioned that the polluted water generated by proposed plant will be treated and be used to grow trees and to develop green belt, but we have doubts that hazardous chemicals mixes in treated sea water while use in plant and to using such water to grow trees and develop Greenbelt, where proposed greenbelt land is also bit saline, needs some more clarification.	5. We assure that wastewater will be treated in state of the art effluent treatment facilities to make suitable before being used for greenbelt.	5. An integrated water system is proposed, the effluent from the process units is treate and reused to reduce water demand. It i also proposed to install a secondary Revers Osmosis (RO) plant to further treat wate from the effluent plant facility for effectiv use. Rejects from the reverse osmosis plan will be sent to Multi Effect Evaporator (MEF for further recovery and solids generate will be sent to Secured Land Fill (SLF). Thi water would be utilized to meet the DM water and plant/utility water requirement c proposed project. The water system, i

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
				highly integrated and is designed for Zer Liquid Discharge (ZLD).
		6. We request to provide us the map of all the lands of the proposed project and of 209 acres land kept reserved to develop greenbelt. Because we doubt that many natural springs exist in these lands and as per norms land can't be level by hurdling these natural springs Greenbelt plantation is not possible in many out of this 209 acres land which is kept reserved for greenbelt plantation where trees really can be grown and greenbelt GPCB, in consultation with Forest Dept., should choose the lands for greenbelt plantation where really can be grown and greenbelt can be developed and the proposer should be asked to provide decrescent land to develop greenbelt. Because it seems that the company is allocating only those non-usable lands instead of good fertile land to develop greenbelt, like it provides land where trees cant be grown OR where land is non usable due to natural river/spring flow passes OR where old ponds, lakes located. Thus company tries to save its good land and allocating only bad land towards very important & vital issue of Environment.	6. Plant layout showing the green belt is provided in the EIA report in Figure-2.1. Forest department will be consulted for choice of species for plantation.	6. About 85.79 ha of the proposed coppe refinery complex (33%) will be reserved fc greenbelt / green cover development as pe prevailing guidelines fror GPCB/CPCB/MoEF&CC. Native species wit rich canopy will be planted.
		7. It is also mention that Disaster Management system will be set up in the proposed project and high standard risk emission equipment's will be used. This point also should be dealt in detail as the oxygen plant to be established in the proposed project will also be operated automatically and possibility is that may create risk for local community resides surrounding. So, clarification is also important that as per norms	7. Risk Identification and Risk Assessment (HIRA) study has been conducted for this project, including Oxygen plant, through functional area expert and former faculty of Regional Labour Institute (RLI). All regulatory permissions, as applicable will be obtained. Risk assessment and disaster management plan has been incorporated Section 7.2 of the EIA.	7. The necessary safety measures will b provided for storage facilities and PPE's fc staff and workers in the proposed plan. Th hazard identification, risk assessment an disaster management plan (onsite & offsite detail are in Chapter-7 of the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		how far such plant should be located from the community AND what type of safe guarantee is given by the company if any accident occurs in future AND whether the company obtained all necessary regulatory permissions to establish such plant?		
		8. It is mentioned that the total 256.58 hectors land is required and be used to establish the proposed project. Currently 154.18 hector land is available with APSEZ and rest 102.38 hectors land is of forest department, will be used. For this whether the company obtained necessary permissions? Whether local regulatory offices granted NOC? Whether the permission is obtained to use forest land for industrial purpose from the authorised regulatory? And if the forest land is yet not allotted to the company, how this environment public hearing for environmental clearance is called before allocation of land?	8. Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure-I, page AI-14 of EIA report) that "Forest land of 102.38 ha is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central Government through File No. 8-04/2016-FC". The requirement of Office Memorandum of MoEFCC dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance...". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR. We submit that there is no deviation from EIA Notification 2006 and we understand that Public Hearing can be organised by State Pollution Control Board after TOR is obtained by the project proponent.	8. The required land of 256.58 ha (634 acres will be acquired from Adani Port Specia Economic Zone Limited (APSEZL). Adar Enterprises Ltd (AEL) for 154.18 ha (38 acres) and Forest land of 102.38 ha (25 acres) is also involved which will b converted for industrial use. The APSE notification and land allotment to AEL i enclosed as Annexure-III and Annexure-IV MoEF&CC (forest conservation division) ha granted Stage-1 approval for diversion c 1576.81 ha of reserved forest land in favou of Adani Ports & Special Economic Zon Limited (APSEZL) vide letter F.No.8 04/2016-FC dated 16th November 2018 Stage-I FC has been obtained as given i Annexure-V. The construction will start onl after getting all required statutory clearanc from concern department.
		9. If the company demanded 102.18 hectors forest land, weather the forests department demanded for alternate lands for alternate forestation against allocated of above said lands and whether revenue department clearly intended to provide alternate land for alternate forestation?. If forest department has not demanded alternate land or Revenue Department has not yet responded positively on alternate forestation land	9. We would like to submit that compensatory afforestation is integral part of the forest diversion and we understand that Forest Clearance shall be granted by the Central Government only after compliance of all conditions by the user agency and compliance of all conditions of Stage-1 and Stage-2 forest clearance.	9. MoEF&CC (forest conservation division) ha granted Stage-1 approval for diversion c 1576.81 ha of reserved forest land in favou of Adani Ports & Special Economic Zon Limited (APSEZL) vide letter F.No.8 04/2016-FC dated 16th November 2018 Stage-I FC has been obtained as given i Annexure-V in the EIA report. Th construction will start only after getting a

922

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		demand, how Forest Department can be sinked with proposed project?. So, land portion based on anticipation of due forest land permission should be removed from the total land requirement detailed matter of the proposed project.		required statutory clearance from concer department.
		10. APSEZ president allocated the portion of 154.18 hector of land by written statement for the proposed project. but no details of land demand proposal for the proposed project, by the proponent, is mentioned. So details of land demand proposal should be made public and also inform that why permission is not obtained from the Development Commissioner appointed by the central government for all administration purpose at APSEZ?	10. Commitment letter has been obtained from the APSEZ for allotment of land for the proposed project. Ownership of the land shall be transferred only after compliance with all regulatory requirements including statutory payments and due fee for transfer.	10. The total land required for the propose project is about 256.58 ha (634 acres), o of which 154.18 ha (381 acres) of identifie land for this project belongs to the APSE (an Adani Group Company) and is alreac designated for industrial purpose as per th local land use plan. The APSEZ notificatic and land allotment to AEL is enclosed a Annexure-III and Annexure-IV. The lar ownership will be obtained to AEL after th getting all required NOC from concer department and statutory payment due fe for transfer.
		11. Details of local road development are also mentioned in the EIA report of the proposed project. Internal & external roads for the use of company are developed by APSEZ. Tollbooth is established on the state owned highway and toll is being collected from the vehicles entering into APSEZ form this toll booth near Mokha chokdi. Its seems that nothing is being done for maintenance of internal rural, panchayat or state roads by the company. Many of these internal rural, panchayat, state roads falling under proposed project area are in very poor condition and need maintenance. It is also important to make clear that among these roads which roads company intend to maintain and what new facilities company intend to develop?	11. Project proponent, Adani Enterprises Limited (AEL), is not collecting any toll near MokhaChokdi. CSR budget of Rs 8 crore per annum has been proposed by M/s AEL for proposed copper refinery project, which is over and above the existing budget of Adani Foundation for CSR activities in the area. We also assures local community members that proposed CSR budget will be utilised in consultation with local community members in the areas of development of rural infrastructure, health care, education and livelihood as desired.	11. A budget of Rs. 8 crores per each year ha been allotted for Enterprise Soci Responsibility/ Corporate Soci Responsibility (CSR) activities for five years The CSR details (like CSR policy, initiative & activities, CSR Budget expenditure dat form 2010 to 2016, Proposed CSR budg plan for next 5 years and CSR implemente photographs) is given in Section-8.5 Chapter-8 in the EIA Report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		12. Heath service provided by APSEZ in last 10 years by adopting hospitals, health sub centres, FSW centres in local Mundra, Mandvi are, if any, should also be provided as details of providing health services in local area also dealt in the proposed project. Company also should clarify on health service facilities provided in these two talukas or anywhere in Kutch if any.	12. Presently, Adani Foundation runs Mobile Health Care Units, Rural Clinics, Special Innovative Projects i.e Health Card to Senior Citizens and Kidney Stone Project and Variety of Health Related Camps. To increase availability of quality health care services to the remote villages, foundation runs mobile health care unit. These mobile units cover 36 Villages and 4 Fisherman settlements. There are 8 rural clinics in Luni, Vadala, Bhadreshwar, TundaWandh, Tunda, Siracha, Navinal and Nana Kapaya. As Rs 8 crores per annum has been proposed for CSR budget for the proposed project in addition to the existing CSR budget of the Adani Foundation, existing healthcare activities shall be augmented in the area and new activities shall be launched as per the needs of the area and consultation with local communities.	12. Prefer the above point no.-11.
		13. It is informed that 5000 direct new and many indirect employment chances will be generated by the proposed project. Then separately how many skilled, semi-skilled and unskilled jobs will be created and clarify also necessary on how many unemployed will be employed from the affected local area. Weather local youths will be trained and employed permanently in the company is also important because lots of localities work in APSEZ on contract basis or through private work contracts on daily wages.	13. People from local area will be given priority based on the skill sets available. Efforts also will be made to train the local youths. Priority will be given to local youths based on the skill sets and vacancy available.	13. The proposed project will give employmer to about 2000-3000 persons on averag per day basis during construction phase During operation phase, about 2000 direc employment and 5000 indirect employmer will be generated. Local people will be give preference to employment based on th skill set & eligibility requirement as per an vacancies available.
		14. Proposed project is intended to be completed within 30 months. Please clarify that from when	14. Proposed project completion is of 30-36 months from the start of the construction	14. The proposed greenfield copper project wi be implementation after receiving statutor

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		these 30 months will be counted, 30 months after this environment public hearing OR 30 months after obtaining all neceassry regulatory approvals?	activity at project site. Start date of the project will be decided after obtaining all the statutory clearances and tie up of the finance for the project.	clearance from concern authority. Th schedule for completion will be 30-3 months from the start of the constructic activity at project site.
		15. Industrial density in the area of proposed project is very high. Many large/small industries already exist in this and the nearby area. This territory traces heavy traffic of vehicles due to developed part activity and industrial pollution is high in this area due to industries and transportation water & air pollution is high is expected to be very high due to addition of this proposed mega project Agricultures in the nearby territory would be also badly effect due to increase in air & water pollution by new proposed project. Chances of deterioration of public health in nearby areas cannot be overseen due to ground water pollution by this propose project. So detailed clarification is required as this proposed project carries a threat or adverse effect on environment and community of the industry.	15. The baseline data on environmental parameters was collected for all the ongoing activities during post monsoon season of 2016. An assessment has been done for the incremental load due to this project. It has been found that the environmental parameters will be within the statutory limits after operation of the project	15. The primary baseline monitoring data which includes meteorology for pos monsoon and part winter season (Octobe to December) of 2016. The ambient a quality analysis results is given in Sectior 3.6 of Chapter-3. The incremental an Cumulative Incremental concentration given in Section-4.2.2 of Chapter-4 in th EIA report.
		Herewith you are requested to arrange to probe on this presentation and to reply in writing, please also include out all above points in the minutes of the environment public hearing meeting.		
3	Shri Mahesh Pandya, Paryavaran Mitra, Ahmedabad	We have studied the draft EIA report of the above mentioned project. Following are our observation/comments /questions regarding project and draft EIA report.		
		1. What was the previous land use of the land for proposed project? Has industry obtained NA permission for the land? Please provide the document.	1. The previous land use of the proposed project has been converted to Industrial by APSEZ and APSEZ has consented to allot this land to AEL. Present land use of the land for proposed project is 154.18 ha (381 acres) of APSEZ land	1. The total land required for the propose project is about 256.58 ha (634 acres), ou of which 154.18 ha (381 acres) of identifie land for this project belongs to the APSE (an Adani Group Company) and is alreac

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			(Land allotment letter is enclosed as Annexure-III in EIA Report) and 102.38 ha (253 acres) of Forest land (Stage-I Forest clearance in process) which is State Govt. has recommended for Forest Clearance (FC) and is at Central Government [File number is 8-04/2016-FC].	designated for industrial purpose as per th local land use plan. The APSEZ notificatio and land allotment to AEL is enclosed a Annexure-III and Annexure-IV. MoEF&C (forest conservation division) has grante Stage-1 approval for diversion of 1576.8 ha of reserved forest land in favour of Adar Ports & Special Economic Zone Limite (APSEZL) vide letter F.No.8-04/2016-F dated 16th November 2018. Stage-I FC ha been obtained as given in Annexure-V.
		2. How the required land for the project is acquired? Was it a government or private land?	2. Reply is as per point no. 1 above.	2. Please refer the above point no.-1
		3. When was environmental clearance for this project in Form I applied?	3. The online application for prior EC (application No: IA/GJ/IND/53004/2016: Form-1 and Pre-Feasibility Report) for the proposed project has been submitted to MoEF&CC on 21st April, 2016 and same was reviewed by the Expert Appraisal Committee (Industry I) held during 4th May 2016 in New Delhi to prescribe Terms of Reference (TORs) for the preparation of EIA/EMP report. The Environmental Clearance is under process.	3. The Form-I application (Nc IA/GJ/IND/53004/2016) for prior EC on 21 April 2016 was submitted to MoEF&CC.
		4. What is the status of NOC application to GPCB for this project?	4. After receiving Environment Clearance from MOEF&CC. The necessary NOC (Consent to Establishment (CTE) or Consent to Operate (CTO) form GPCB shall be applied, as applicable.	4. After obtaining Environment Clearance fror MOEF&CC, the necessary clearances such a Consent to Establishment (CTE) and Conser to Operate (CTO) from GPCB shall b obtained.
		5. What is the status of Forest & CRZ clearance for this project? Please provide a copy of both of these clearances.	5. The Forest Clearance is still under process. The details are available on the website of MoEF&CC (File No. 8-04/2016-FC). Based on the survey which was carried out by Centre for Earth Science Studies (CESS, Thiruvanantpuram),	5. The prosed project is a Greenfield project an which is outside of the CRZ. The CRZ map shown in Figure-1.5 of Chapter-1 in the EI report. MoEF&CC (forest conservatio

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			which is an authorized agency by MoEF&CC, the proposed project site is outside CRZ and doesn't attract CRZ clearance.	division) has granted Stage-1 approval fo diversion of 1576.81 ha of reserved fores land in favour of Adani Ports & Speci Economic Zone Limited (APSEZL) vide lette F.No.8-04/2016-FC dated 16th Novembe 2018. Stage-I FC has been obtained as give in Annexure-V.
		6. How many mangrove trees will be uprooted due to this project? What is exact restoration plan for mangrove trees which would be displaced due to this project?	6. Proposed project area is devoid of mangroves. There is no question of mangrove destruction.	6. There is no mangroves identified in th project site at the time of baseline studies.
		7. What are the precautionary measures are to be taken to avoid negative impact of construction activities on marine environment, water quality, inter tidal and sub tidal habitat and sediment quality?	7. The anticipated impacts and mitigation measures during construction and operation phase is given in Chapter-4 of EIA report.	7. The will no impact on the marin environment. APSEZ Ltd, through M/s MPSEZ Utility Pvt. Limited (MUPL) ha considered the project requirement an assured for supplying 2,000 m^3/day of wate required during the construction phase. N ground water will be abstracted fo construction purpose. The wastewater generation during th construction period will be from the sanitar units provided for the construction workers. This wastewater will be treated i septic tanks and discharged into soak pits.
		8. Please give exact dates of ambient air quality, surface water, ground water, noise monitoring and soil quality monitoring.	8. The monitoring is conducted during 1st October, 2016 to 31st December 2016, is the study period for the Environmental Baseline data collection. The location and Ambient Air Quality and levels are given in Annexure-VI of EIA Report. All the environmental attributes such as sampling of air quality, water sampling (ground and surface), noise levels, and soil quality were carried out during the study period.	8. The baseline monitoring was conducte during 1st October 2016 to 31st Decembe 2016 of post-monsoon and partly winte The ambient air quality results with dates enclosed as Annexure-IX. The monitorin (sample collection) photographs are given i Annexure-VIII.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		9. How will the project proponent plan to get coal—pet coke, met coke as a fuel in regular basis? Please provide any agreement made with the supplier.	9. The coal will be sourced from the local market and transported through trucks. Around 3000 tonnes of coal will be stored. Further details of fuel consumption quantity and source are given in Table-2.5 of Chapter-2 (Project Description).	9. The 100 TPD coal will be required fc proposed project, which will be source from the local market and transporte through trucks. Around 3000 tonnes of coi will be stored.
		10. What is the regular monitoring plan that shall be carried out for odour control by the project proponent?	10. The question is not relevant and therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to the permissions granted.	10. The comprehensive environmenta monitoring program for construction phas and operation phase is suggested in Table 6.1 & 6.2 of Chapter-6 in the EIA report.
		11. Please justify domestic water requirement.	11. Maximum domestic and service water requirement for the proposed project is 1000 KLD. The final requirement will be re-assessed during detail engineering.	11. The domestic water requirement fc proposed project is 400 KLD. The wate breakup details are given in Table-2.5 c Chapter-2.
		12. Please provide complete details of each ETP units.	12. The process details and schematic flow diagram of ETP is given in Figure-2.20 of Chapter-2.	12. Wastewater generated from copper smelte sulphuric acid plant and copper refinery w be treated in state of art effluent treatmer facility. The process details and schemat flow diagram of ETP is given in Sectior 2.4.2 and Figure-2.23 of Chapter-2 in th EIA report.
		13. Is there any cost benefit analysis carried out for proposed project benefits vs loss of eco system including flora, fauna and vegetation?	13. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.	13. The baseline flora and fauna study wa conducted and detail are given in Sectior 3.9 of Chapter-3 in the EIA report. Th peacock is identified, which is a schedule bird species as per Wildlife Protection Ac 1972. It has been assessed as Leas Concern bird as per the International Unio for Conservation of Nature (IUCN). Th conservation paln is given in Section-3.9. of Chapter-3 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		14. Please give the name of registered recycler to whom nickel sludge, arsenic bearing sludge, used oil and oil sludge will be sent for disposal.	14. The solid waste generation (quantity and mode of disposal) and waste characteristic is presented in Chapter-2 of the EIA report. The Secured Land Fill (SLF) is proposed over 30 acres within the project premises for disposal of ETP waste sludge and spent catalyst. Other Hazardous waste will be disposed through the approved recyclers.	14. The Secured Land Fill (SLF) is proposed ov 13.35 ha within the project premises f disposal of ETP waste sludge and spe catalyst. Other Hazardous waste will b disposed through the approved recycler The recycler agency names will b announced during operation phase.
		15. How many local people will get employment through this project?	15. Details on potential employment are mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.	15. The proposed project will give employme to about 2000-3000 persons on average p day basis during construction phase. Durir operation phase, about 2000 dire employment and 5000 indirect employme will be generated. Local people will be give preference to employment based on the sk set & eligibility requirement as per ar vacancies available.
		16. What will be the action plan for socioeconomic of an area by project proponent?	16. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.	16. A budget of Rs.8 crores per each year ha been allotted for Enterprise Soci Responsibility / Corporate Soci Responsibility (CSR) activities for five year The CSR details (like CSR policy, initiative & activities, CSR Budget expenditure da form 2010 to 2016, Proposed CSR budg plan for next 5 years and CSR implemente photographs) is given in Section-8.5 Chapter-8 in the EIA Report.
		17. What activities industry will take up as a part of CSR and what will be the budget for it?	17. Reply is as per point no. 16 above.	17. Reply is as per point no. 16 above.
		18. Please give the detail list of people who will be responsible for implementation of EMP?	18. Environment management cell structure has been provided in Chapter-9 of the EIA Report who will be responsible for implementation of EMP.	18. The organization structure of environment management is shown in Figure-10.1 Chapter-10 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		19. We request you to consider inspection report of the committee handed by Ms. Sunita Narain that was constituted by MoEF for M/s. Adani Port and SEZ Ltd, Mundra which submitted its report in April 2013 before granting environmental clearance. 20. We also request you to consider all the Supreme Courts pending and disposed cases that are filed against Adani Group of companies.	19. In the matter of Sunita Narain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015. 20. This is outside the scope of the EIA report for the proposed project. We assure you that all the environmental safeguards will be provided during implementation and operation of the project.	19. The proposed project is belongs to AEL an APSEZ allotted a land to AEL for propose project. 20. This is outside the scope of the EIA repo for the proposed project
4	Shri Gajendrasinh Jadeja (Sarpanch), Navinal Village, Mundra Taluka, Kutch District, Gujarat	This is with reference to public hearing or above mentioned copper refinery project scheduled for 29.04.2017 in Mundra taluka, Kutch [Attached as Annexure-1]. We would like to present to you certain facts and request you to immediately cancel the public hearing and reject on clear legal grounds. ***Non-compliance of ToR and violation of MoEFCC circular dated 31.11.2011*** • Section 5(i) of the Terms of Reference (ToR) issued for the project on 21st June 2016, clearly indicates that the project proponent has to provide a copy of the "Permission and approval for the use of forest land (forest clearance), if any and recommendations of the State Forest Department. (if applicable). "[Attached as Annexure-2]. • Further as per EDS by MoEF uploaded on the website at http://environment clearance.nic.in/auth/FORMAPDF.asx?catid=IA/I	With reference to the subject matter and your email, we submit that all requirements for obtaining the TOR from MoEFCC were fulfilled. After obtaining TOR, Environment Impact Assessment has been completed and all conditions of TOR has been complied with by project proponent for the purpose of public hearing. • Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure-1, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC". The file status is also available online at MoEFCC Forest Clearance. • As the project is proposed by M/s. Adani Enterprises Limited in APSEZ land, Forest Clearance has already been applied for this	MoEF&CC (forest conservation division) ha granted Stage-1 approval for diversion 1576.81 ha of reserved forest land in favour Adani Ports & Special Economic Zone Limite (APSEZL) vide letter F.No.8-04/2016-FC date 16th November 2018. Stage-I FC has bee obtained as given in Annexure-V. Th construction will start only after getting a required statutory clearance from concer department.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		ND/53004/2016&pi=New and accessed on 8.4.2017, it is clearly indicated that "Forest Clearance under Process". The file is under process in file number 8-04/2016-FC. A copy of this web page is attached with this letter. [Attached as Annexure 3]. • In the EIA report on Page No. AI-14, it has also been stated that the forest clearance is pending at level of the central government [Attached as Annexure 4] This clearly indicates the project proponent is yet to obtain forest clearance and has not complied with ToR, making the EIA report liable for rejection. In this regards we would also like to bring your attention to (attached) to an Office Memorandum of the **MoEFCC dated 31.11.2011** which clearly emphasizes the need for forest clearance prior to either appraising or granting environmental clearance. In the case of greenfield projects like the copper refinery **Section III (iii) of this circular** [Attached as Annexure 5] clearly states that: *"In case of any green field project, which involves diversion of forest land, the project proponent are advised to re-examine the requirement of forestland and submit the proposal without forestland for consideration of the EAC. Otherwise the proponent should submit the proposal for ToRs under the EIA Notification, 2006 only after applying the stage-1 forest clearance for the forestland involved in the project."* As you are aware Section **8(vi) of the EIA notification, 2006 clearly states:** *"Deliberate concealment and/or submission of false or misleading information or data which is material to screening or*	land by APSEZ (erstwhile Mundra SEZ Ltd.). The requirement of OM dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR. • At no stage there is any concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application by the project proponent. There is no deviation from the Section 8 (vi) of EIA Notification 2006 also. Hence, we submit that required process for TOR has been fulfilled by now and requirements shall also be fulfilled for EC application. We also assure that all applicable environmental legal requirements shall be complied with.	

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		scoping or appraisal or decision on the application shall make the application liable for rejection, and cancellation of prior environmental clearance granted on that basis.." *We therefore request you to take immediate by:* *1. Canclling the public hearing schedule for 29.04.207 in Mundra* *2. Reject the application attracting the Section 8(vi) of the EIA notification.*		
5	Shri Sanjay S. Bapat, Adarsh Tower, Mundra, taluka, Mundra, Kutch district, Gujarat	A study about the Greenfield Copper Refinery Plant of Adani Enterprise Limited was done only for the three months from October 2016 to December 2016 by M/s. Vimta Lab Limited, Hyderabad, and on the basis of it the E.I.A. has been prepared. There are mainly three seasons in a year and in every season the effect of the industrial activity on the environment, water level, and geography are different. But here the E.I.A. was prepared after the three months study only. Thus, this study of the environmental effects is incomplete/insufficient and faulty. There are already many industrial projects in this region. Moreover, these projects are close to the coastline so there are possibilities that they can have effects on the coastal environment also. There are mangroves, mudflat, rivers, Navinal Reserve Forest and Siracha forest area in this region. Thus, when a new project is coming up in such an environmentally sensitive region, this three-month study is insufficient. It seems that by completing the study on the future effects of this project, they have tried to hide the facts of the future effects. In the point no.1 of the official report it has been	We are herewith responding para wise to the issues raised by you: EIA studies have been carried based on TOR granted by MoEF&CC. Project will be implemented after obtaining required permissions and compliance will be done based on permissions granted. The proposed project area is outside CRZ and therefore no presence of mangroves and mudflats. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in Chapter–3 of the EIA report. Site selection is based on suitability criteria as studied and provided in the EIA report. Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure 1, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC." The file status is	As per MoEF&CC and CPCB guideline (monitoring data three months except monsoo season) monitoring is conducted, the EI studies have been carried for post-monsoon an partly winter (1st October 2016 to 31 December 2016) based on TOR granted b MoEF&CC. Project will be implemented afte obtaining required permissions and complianc will be done based on permissions granted. The baseline environmental studies is give Chapter-3 in the EIA report. The Environmental settings around the 10 kr radius from the proposed plant site boundary i given in Table-1.1 of Chapter-1in the EI report. The incremental and Cumulative Incrementa concentration is given in Section-4.2.2 c Chapter-4 in the EIA report. The total land required for the proposed projec is about 256.58 ha (634 acres), out of whic 154.18 ha (381 acres) of identified land for thi project belongs to the APSEZ (an Adani Grou Company) and is already designated fo

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		mentioned that 256.8 ha land is required for this project. Out of which 154.18 ha of the land is owned by the APSEZ (Adani Group) and remaining 102.38 ha is forest land. In the point no. 2.2 of the EIA report, it has been mentioned that the state government has recommended for the forest land, but this land has not been allotted to the company therefore it is clear that the procedure for obtaining the environmental clearance for this land is being done with incomplete information. Taking the above mentioned matters in consideration, you are requested that unless and until the requirements are fulfilled, this E.I.A. should be considered incomplete and faulty and the public hearing to be held on 29/04/2017 should be cancelled. "The development that destroys the environment is the sign of the destruction not the development."	also available online at MoEF&CC Forest Clearance. The land allocation is being granted to AEL by APSEZ, the correspondence is given in EIA report as annexure-III. We assure you that all the environmental safeguards will be provided during implementation and operation of the project.	industrial purpose as per the local land use plar The APSEZ notification and land allotment t AEL is enclosed as Annexure-III and Annexure IV. MoEF&CC (forest conservation division) ha granted Stage-1 approval for diversion c 1576.81 ha of reserved forest land in favour c Adani Ports & Special Economic Zone Limite (APSEZL) vide letter F.No.8-04/2016-FC date 16th November 2018. Stage-I FC has bee obtained as given in Annexure-V. Th construction will start only after getting a required statutory clearance from concer department.
6	Shri Naran B. Gaghavi, (President) Keti Vikas Seva Trust.	Jaybharat, with reference to the above with due respect it is to state that M/S Adani Enterprises Ltd. (A.E.L) is going to establish Greenfield Copper Refinery in the 634.12 Acre land of villages Siracha and Navinal of Mundra Taluka. A public hearing is being held at village Tunda on next 29th April for Environmental Clearance of the proposed project. The EIA report prepared for the proposed Refinery Project of Adani and site shown in the EIA report for the proposed project are very much disputed and the whole area is covered under CRZ and no permission is obtained from the Government of India for CRZ for the same. Therefore the public hearing for the copper project should be cancelled. Honourable Sir, With reference to the reference cited	With respect to the above stated subject matter, please note that reply to the representation made for the proposed ship recycling project is as follows: **About High court cases:** ➢ Kheti Vikas Trust had filed alleged public interest litigation, being Writ Petition (PIL) No.12 of 2011, before Hon'ble Gujarat High Court. In the main petition, the Applicant had made various allegations against APSEZ and Adani Power Limited. One such allegation made in the main petition was in respect of the alleged "deforestation of mangrove forests which forms the main part of mangrove forest of western region".	

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		at 1 above it is to inform you that we have filed a Public Interest Litigation in the year 2011 bearing No. WPPIL -12/2011 in the Hon. High Court Of Gujarat in protest against the violations of Environmental laws by Adani Port and Adani Power in the Sea area and this areas of Mundra Taluka. And it was requested there in to prevent violations of rules of Environment and Human rights by Adani Company and Hon. High Court was pleased to direct Adani to stop destruction of Mangrow forest situated in the sea region of Mundra Taluka , thereafter also Adani continuously violated this order , for that a new application bearing No. CAN -9124/2011 was filed for contempt of the court order in which Hon. Court issued various orders against Adani and formed three committees and all these issues were investigated and Hon. Court has formed Expert Committee on the basis of orders 05.11.2015 and 01.04.2016 on our application No. CA 9124/2011. Dr. Kalod Alvaris, Environment Expert of Goa and Dr. Subroto Maiti of Calcuttaa were included in the committee. And TOR of the committee was finalized by the High Court of Gujarat itself. In which it was directed to submit the detailed report of violations of environment by Adani after observation of the site of whole ADANI SEZ. This committee had visited this area prepared its report and submitted detailed report before Hon. Gujarat High Court on 8.06.2015. Committee has proved in its report that Adani has violated the rules of environment on the sea areas of Mundra and it is informed to Adani to grow Mangrow in about area of 200 hector and that 6000 acre land allotted to the company may be taken back by Gujarat Government . And there are rampant violations of rule in allotting this land. So it is recommended that all these lands to be taken back	➢ PIL alleging destruction of mangrove, filling up of creeks and violation of Environmental Laws & inaction of the State Authorities against the activities of APSEZ. It also alleged that due to construction of open intake channel, the salinity of ground water has increased and is damaging the fertility of the agricultural land. A prayer was made to appoint a committee. ➢ Subsequently, the Applicant filed the captioned Civil Application No.9124 of 2011 purportedly under the provisions of Article 215 of the Constitution of India, against APSEZ and APL, for alleged 'wilful and deliberate contempt' of the authority of Hon'ble Gujarat High Court. It is the case of the Applicant in the present civil application that APSEZ and APL had allegedly continued their operation of cutting/destruction of thick cover of Mangrove forest existing in Mundra Taluka of Kutchch District in violation of the aforesaid order dated 12.7.2011 passed by this Hon'ble Gujarat High Court. Kheti Vikas Trust has made no other allegations in present civil application, besides the allegation of destruction of mangroves of certain area in breach of the order dated 12.7.2011. ➢ APSEZ filed its reply and refuted the allegations. It was the case of APSEZ that the activities carried out by it at Mundra is permitted by various clearances granted by the concerned authorities from time to time. The petitioner failed to prove that any of the	

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		vesting in the government and returned to the Forest Department. (Report is enclosed herewith). Hon. Collector sahib, the committee has submitted its report to the Hon. High court. The committee has recommended to vacate the land but in the same land Adani Company is going to establish its Copper Refinery Project as shown in EIA. As all the recommendations and this report being under consideration of the court (subjudice) the public hearing is illegal and interference in the working of High Court of Gujarat. Therefore, these all procedures should stop immediately and the public hearing 29.4.2017 for environmental clearance should be cancelled. In spite of that if the public hearing is held on the pecified date and time these whole matter would be considered contempt of court of Hon. Gujarat High court, it should be seriously noted that. We bring this to your kind notice with request. Honourable Sir, With reference to the reference cited at 2 above it is to inform you that in the year 2011 for violations of Environmental laws by Adani Port and Adani Power in the Sea area and this areas of Mundra Taluka, Hon.Gujarat High Court has directed on dated 09.07.2015 to the Hon. Principal District Judge to carry out videography and photography of whole Adani Port and SEZ and to submit factual report to the Hon. High Court, and Hon. Principal District Judge has submitted CD of their report and videography/photography in the sealed cover on dated 24.07.2015 to the Hon. High Court. And in the report of Hon. Principal Judge it is proved that there are rampant violations of rules by Adani and also on the land on which Adani is going to establish its Copper Refinery Plant, is informed by Hon. Principal District Judge along with videography and	activities of APSEZ is not permissible. ➢ During the pendency of the petition, MoEF&CC appointed a committee headed by Ms. SunitaNarain which visited the site and submitted its report to MoEF&CC on 18.4.2013. MoEF&CC thereafter issued a Show Cause Notice dated 30.9.2013 to APSEZ which was pending for adjudication. ➢ Subject PIL was dismissed on 17.4.2015. The Gujarat High Court dismissed the petition on the premise that the prayer to appoint the committee is already granted by virtue of appointment of committee by MoEF&CC. MoEF&CC has already taken action and issued the show cause notice. It is for MoEF&CC to consider the report and take appropriate action and the petition does not survive any further. ➢ MoEF&CC has given final directions to APSEZ to comply with certain conditions vide their order dated 18.09.2015 thereby disposed off the pending show cause. With this, all allegations including that of destruction of mangrove are appropriately dealt with by MoEF&CC. The statutory authority has taken a considered view which has become final as the time limit to challenge the said order of MoEF&CC had expired way back. ➢ Appeal filed in Supreme Court by the petitioners against Gujarat High Court order dated 17.4.2015 which was dismissed on 18.3.2016. Upon dismissal of the matter by the Hon'ble Supreme Court, Kheti Vikas Seva	

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Photography that, is disputed land. And the whole report is pending with (subjudice) Hon. High Court. When overall report of whole the matter is pending with Gujarat High Court all these matters are concealed by the Adani Company. These facts are informed neither to MOEF&CC nor to EAC which is a very serious matter. Therefore you being the Chairman of the Public hearing and the District Magistrate of the district on the basis of these designations it is our prayer that the public hearing may please be cancelled on immediate basis, and we are informing you with all these facts. As such as these facts are under consideration of High Court of Gujarat and if the public hearing for refinery takes place on the same land it is a very serious matter it would not only be against law but would be interference in the working of Hon. Gujarat High Court. Therefore it is our humble request that the public hearing may please be cancelled. With reference to the reference cited at 3 above it is to inform you that we have filed an application in the department of environment and forest of Government of India in the year 2011 in protest against the violations of Environmental laws by Adani Port and Adani Power in the Sea area and this areas of Mundra Taluka and in which the permission is granted with detailed conditions to AdaniPort and Adani Power to carry out industrial activities in the areas of Mundra but as Adani is violating environmental conditions in large scale we have submitted our representation to the Government of India and has requested to prevent the damages occurring due to the project of Adani. There after a committee of five environment experts was formed by Government of India under the leadership of well-known environmentalist Sunita Narayan to	Trust cannot be heard to say that there is any merit in their case against APSEZ. ➢ Thereafter, in its order dated 15.10.2015 in Civil Application No.9124 of 2011, the Gujarat High Court recorded that it would not be able to frame charges against APSEZ and APL for alleged contempt for breach of the order dated 12.7.2011. ➢ Hon'ble Gujarat High Court by its order dated 5.11.2015 proposed certain measures to be undertaken by APSEZ and appointed a committee of experts to survey the area in and around the Port/SEZ developed by the APSEZ, with a special focus on the question of mangroves in the area. Said committee of experts has already filed its report before this Hon'ble Court on 8.6.2016 and APSEZ has also filed its response to the said report on 18.07.2016. The said report and the response of the APSEZ are pending before this Hon'ble Court. ➢ Unfortunately however, the Committee has travelled much beyond the scope of the terms of reference delineated by this Hon'ble Court in its order dated 5.11.2015, which is demonstrated through our affidavit dated 18.07.2016 which clarifies that the contents of the report submitted by the Committee further reflects that the Committee has in fact proceeded with mala fides and with a view to pin down APSEZ and APL. In fact, one of the committee members was party to the earlier clearances granted to APSEZ and is therefore, barred from raising any objection or giving	

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		investigate Adani and this committee has submitted its report to Government of India on 18 April2013 and have reported and informed in the report that large scale violence's of rules and conditions are done by Adani and various detailed recommendations are made including to cancel the Environmental license of North Port and to impose penalty of 200 crores and before giving any permission to any project in Mundra it is very necessary that study of carrying capacity of this area is undertaken and no project should be sanctioned without this study. But here public hearing for Copper Refinery is held without any such study. Therefore it is our humble request that the Public Hearing may please be cancelled. It is very necessary looking to the Public Interest at large that this public hearing may be cancelled. Hon. Sir, with reference to the reference No. 4 it is to inform that Environment and Forest Ministry of Government of India has issued instructions vide Office Memorandum No. J-11013/25/2014-IAI Government of India Ministry of Environment and Forest Dated 11th August, 2014 to ministry for EIA and according to Company's Act 2013 it is essential to have detailed report in EIA regarding management of expenses and fund of Corporate Social Responsibility. But Adani has not given any such information in its EIA report which is violation of The Company's Act and circular dated 11th August 2014 of Government of India. And EIA notification and Section 135 of The Company's Act 2013 deal with the corporate social responsibility and Schedule –VII of the Act lists out activities which may be included by companies in their CSR policies. And this is also violation of Corporate Social Responsibility Policy Rules, 2014. As such Adani has concealed the facts in	any finding contrary to his own recommendations. ➢ In view of the aforesaid it becomes evident that the only issue pending before this Hon'ble Court in Civil Application No.9124 of 2011 is as to the extent of the measures (the extent and the place where mangroves can be planted by way of compensatory plantation) to be undertaken by APSEZ. The matter pending before the Hon'ble Gujarat High Court is limited to plantation of 100 ha of mangroves or more as may be directed by the Hon'ble Court at the location identified by the Committee. No other area is subject matter of this matter. **About CRZ area:** ➢ The project will be developed using notified SEZ area and forest land. The proposed layout superimposed on authorized CRZ map is presented in the EIA report as Figure 2.1 on page C2-3. From the said figure, it is clear that the entire project area is outside CRZ. **About compliance:** ➢ APSEZ as well as APL have obtained requisite clearances from time to time from respective authorities and have been submitting their compliance reports twice in a year to all concerned government authorities. ➢ MoEF&CC has dealt with the SunitaNarain Committee report and subsequent submissions of APSEZ as well as APL and has finally issued an order with certain directions.	➢ The map of proposed project superimposed on CRZ map of the are prepared in 2011 by Centre for Ear Science Studies (CESS) Thiruvanantapuran an institution recognized by Government India. The proposed project site is outsic CRZ and doesn't attract CRZ clearance. Th prosed project and CSZ area as shown Figure-1.5 of chapter-1 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		their report which are essential to be mentioned as per Law. Adani Company was knowing all these facts in spite of that has concealed all these facts. As such Adani has openly violated the law of India, therefore it is very essential that this public hearing shall be cancelled and it is very essential that facts of law are reinstated. Hon. Sir, for the copper refinery project of Adani, requirement of land is as under. Total 256.58 Hector (634 Acre) of land is necessary for the project proposed. Out of that land of 154.18 Hector (381 Acre) demarked land is in ownership of APSEZ (of Adani Group Company) and it has been allotted before in the scheme of local land use scheme for industrial purpose. Moreover, 102.38 Hector (253 Acre) forest land is also included which will be converted in to industrial use and state government has proposed for the forest land conversion (EC) and it is lying in the Central Government. (Its file No. are 8.04/2016-FC). There is no process involved for migration or rehabilitation for this scheme. In fact the public hearing is to be held on the place of proposed project, the land from forest department is not allotted to the company till now. And the land of 253 Acre of forest department which Adani has requested is not granted to them. And this land was occupied by the forest department after 1980 the object was to create green belt growing trees over there and to develop the forest and to prevent the progress of the desert and to decrease salinity by such types of activities, make available protection , shelter and grazing to the wild animals. And this whole forest is full of various herbal medicines and inland Acacia (deshi bawal) and this forest is playing	One of which is to carry out Cumulative Impact Assessment study for Mundra region. APSEZ has obtained ToR from GCZMA and started studies through NABET accredited consultant. Progress has been submitted to MoEF&CC from time to time. Study is in progress and on completion final report will be submitted to concerned authorities. **About CSR activities:** ➢ Adani Foundation is the CSR wing of Adani group. Adani Foundation works in four main areas for social upliftment of communities around all project locations of the Adani Group. They are Education, Community health, Social Livelihood and Rural Infrastructure development. With reference to the mentioned Office Memorandum of MoEF&CC and companies act with respect to the Corporate Social Responsibility, details about the activities carried out and planned by Adani Foundation in and around Mundra are mentioned in chapter 8 of the EIA report. **About Forest clearance:** ➢ As per procedures of EIA notification 2006, its subsequent amendments and other related notifications / circulars / office memorandums of MoEF&CC, it is clear that Environmental Clearance procedure can be carried out once application has been made for forest land diversion and environment clearance can be granted to any project activities involving forest land by reviewing the status of forest clearance at respective time. Proper	➢ A budget of Rs.8 crores per each year ha been allotted for Enterprise Socia Responsibility / Corporate Socia Responsibility (CSR) activities for five years The CSR details (like CSR policy, initiative & activities, CSR Budget expenditure dat form 2010 to 2016, Proposed CSR budge plan for next 5 years and CSR implemente photographs) is given in Section-8.5 c Chapter-8 in the EIA Report. ➢ The total land required for the propose project is about 256.58 ha (634 acres), ou of which 154.18 ha (381 acres) of identifie land for this project belongs to the APSE (an Adani Group Company) and is alread designated for industrial purpose as per th local land use plan. Memorandum c Understanding (MoU) is in place betwee Adani Ports & Special Economic Zon Limited (APSEZL) and Adani Enterprises Lt (AEL) for 154.18 ha (381 acres). The APSE

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		an important role in keeping the Environment clean. And as such Government of Gujarat and Adani Company have violated The Forest Rights Act 2006. In the Forest Rights Act it is established that the approval of Gram Sabha is essential in spite of that approval of Gram Sabha is not taken by the company. It is violation of Forest Rights Act 2006 and also the judgment of Hon. Supreme Court delivered in Vedant Copper Project of Orissa. So, establishing very much polluting copper refinery destroying such useful forest area is very much detrimental to local people and grabbing rights of local people. Government of Gujarat has already allotted pasture land of 14 villages to Adani so the people of these areas are suffering difficulties from lack of pasture land and these cattle breeders are getting their livelihood grazing their cattle in these areas of forest. While Adani is willing to give fatal blow on cattle breeders grabbing lands from these areas. These people are indigenous people of these areas and protection must be given to the rights of indigenous people and Government of India has signed charter of UN regarding protection of rights of indigenous people and is one of the country ratifying the charter of indigenous people of United Nations. So rights of these indigenous people must be protected. It is very necessary. Therefore, it is humbly requested that, the public hearing of Copper Refinery of Adani must be cancelled. Hon. Sir, it is further submitted that the land selected for Copper Refinery Project of Adani is land included in the CRZ. And no clearance is obtained from the ministry of Environment and Forest of Government of India, and according to CRZ notification 2011 this project is coming under CRZ area. So sanction of CRZ is necessary but company has done nothing for that	procedures are being followed for proposed project with respect to obtaining environment clearance as well as forest clearance. In view of the above clarifications, it is clear that the required procedures are being followed for obtaining prior environmental clearance for the proposed project activity and Public Hearing is part of the process.	notification and land allotment to AEL enclosed as Annexure-III and Annexure-IV The land use details of the proposed projec is given in Section-2.2.1 of Chapter-2 in th EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		and directly asked for Environmental clearance. It is against the rules. Therefore, it is humbly requested that, the public hearing of Copper Refinery of Adani must be cancelled. Considering all the above facts, the public hearing of Greenfield Copper Refinery Project of Adani declared to be held on the next date 29.04.2017 at village Tunda is against Law. And the matter is subjudice in the High Court of Gujarat and hearing is to be held in that area, therefore, it is humbly requested that, the public hearing of Copper Refinery of Adani must be cancelled.		
7	Shri Debi Goenka, (Executive Trustee). Conservation Action Trust (West) Mumbai	1. Please furnish full details of the existing land use of the site proposed for the project. 2. Please furnish the detailed land use of the	1. Out of total area proposed for the project 256.58 ha area is notified SEZ and 102.38 ha is forest land for which forest clearance application is in process. 2. The layout has been marked on the CRZ map	1. The total land required for the propose project is about 256.58 ha (634 acres), ou of which 154.18 ha (381 acres) of identifie land for this project belongs to the APSE (an Adani Group Company) and is alread designated for industrial purpose as per th local land use plan. The APSEZ notificatio and land allotment to AEL is enclosed a Annexure-III and Annexure-IV. The land us details of the proposed project is given i Section-2.2.1 of Chapter-2 in the EI report. Remaining forest land 102.39 ha (25 acres), MoEF&CC (forest conservatio division) has granted Stage-1 approval fc diversion of 1576.81 ha of reserved fores land in favour of Adani Ports & Speci Economic Zone Limited (APSEZL) vide lette F.No.8-04/2016-FC dated 16th Novembe 2018. Stage-I FC has been obtained a given in Annexure-V. 2. The map of proposed project

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		proposed site as per the approved CZMP.	given in Figure-1.5 of Chapter-1 in the EIA report. The proposed project area is outside CRZ.	superimposed on CRZ map of the are prepared in 2011 by Centre for Ear Science Studies (CESS) Thiruvanantapuran an institution recognized by Government India. The proposed project site is outsic CRZ and doesn't attract CRZ clearance. Th proposed project area is outside CRZ. Th proposed project layout map superimpose on CRZ map is shown in Figure-1.5 Chapter-1 in the EIA report. There is r presence of mangroves and mudflats in th project site.
		3. Please furnish a copy of the CZMP of this area approved by MoEF.	3. GCZMA is the custodian of approved CZMP for the proposed project area. However project layout is superimposed on CRZ map prepared by authorized agency of MOEF&CC as per CRZ notification 2011 and same is provided in figure-1.5 of Chapter-1 of EIA report.	3. Refer the above point no.-2.
		4. Has the project proponent carried out mapping of the CRZ area and the HTL – LTL line, buffer area, as well as mud flats, sand dunes, and corals on 1:4000 scale on the CZMP approved by MoEF? If yes, kindly furnish a colour copy.	4. The proposed project layout has been marked on the authorized CRZ map given in Figure-1.5 of Chapter-1 in the EIA report. Same is in colour.	4. Refer the above point no.-2.
		5. Please furnish a satellite imagery of 1991 of the proposed project area.	5. The latest satellite imagery of the 21 Jan 2016/14 Feb 2016 is given in Figure-3.3.1 of Chapter 3 of EIA report	5. The latest IRS-Resourcesat-2 satellit imagery of the 21st an 2016/14 Feb 2016 given in Figure-3.3.1 of Chapter 3 of EI report
		6. Please give full land use details and categories of the proposed project area. Please mention how much area is under CRZ I - A, CRZ I, CRZ II, CRZ III and CRZ IV.	6. The land use details of the study area are given in Figure-3.3.2 of Chapter-3 of EIA report	6. Refer the above point no.-2.
		7. Does the proposed project area falls under	7. The proposed project area is outside CRZ.	7. Refer the above point no.-2.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		ecologically sensitive and or geomorphologically important area, as per the CRZ Notification 2011?		
		8. Please specify what are the ecologically sensitive areas and or geomorphologically important areas observed at the proposed site and in the study area, along with the area details (in has).	8. There are no ecologically sensitive areas in the proposed project area. However mangroves are present outside the project area but within the study area. The land use break-up details as per satellite image classification for the study area is given in chapter-3 of EIA report.	8. There is no ecologically sensitive area withi the study area of proposed project. Ther are Dandedri RF (within project area), Mundr Mangrove RF (south of project area), Navina RF (0.5 km, E), Mundra Dhoa RF (0.7 km SE). The environmental settings 10 km radiu around the project site is given in Table-1.1 c Chapter-1. The land use details of study are is given in Section-3.3 of Chapter-3 in the EI report.
		9. Please furnish information on whether mangroves and mud flats are present at the site and the area (in has) covered by mangroves and mud flats.	9. The proposed project area is outside CRZ area therefore no presence of mangroves and mudflats.	9. There is no mangroves/ mudflats identifie in the project site at the time of baselin studies
		10. Please furnish information at the distance which mangroves and mud flats are observed from the proposed project site.	10. Mangroves are present at 100 m away in the southern side of the project area.	10. The study area consists of 7.78% mudflats tidal flats and 3.02% mangroves. Th Mundra mangroves are present at the sout of the project area.
		11. Please furnish details of salt pans and aquaculture ponds within the study area, and their distances from the project site.	11. Salt pans are located at a distance of around 5 KM in WSW direction from the project area.	11. The study area consists of 0.64% salt pans The environmental setting of 10 km radiu is given in Table-1.1 of Chapter-1 in the EI report.
		12. Please furnish details regarding the fishermen residing and/or fishing in the study area.	12. The fish species in the study area have been listed in Chapter-3 of the EIA report. Details on existing fisherman will be included in the Final EIA report.	12. The fishermen details are given in Section 3.10.6 of Chapter-3 in the EIA report.
		13. As per the study area map, the project area not only covers mudflats, it is also falls within the Mundra mangrove reserve forests. It is also in	13. Proposed Project area is outside CRZ and there are no mudflats and mangroves in the project area. Alternative site analysis is done for the	13. Three alternate sites were identified for th proposed refinery plant based on sitin criteria.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		proximity of the Danderi reserve forests, Navinal reserve forest and the Mundra Dhoa reserve forest. Please explain why such an ecologically important area has been selected for this project.	project and site is selected based on its suitability. Project area includes forest land for which APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance.	The details of these three sites are a follows: Site-I: near Gundala & Mokha villages; Site-II: near east side of Adani power plant; and Site-III: near near Mundra village. The comparison salient features c alternative sites done and details ar presented in following Table-5.1 and shown in Figure-5.1 of Chapter-5 in the EI report.
		14. As per the information submitted for "Site Alternatives" in the Form I, Site I has no forest area, whereas the proposed Site 2 has 253 acres of forest land that the project proponent has proposed for diversion. Please explain the rationale behind selecting the site which has forest area and explain why the site that does not have forests has not been selected.	14. The alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter–5 of the EIA report. Site is selected on the basis of suitability from number of factors.	14. The Site-II in Siracha &' Navinal Villag adjacent to existing APL emerges a technically superior site such as availability closeness of water and power source, lan development, closeness to road and rail, et It is substantially advantageous in terms c environmental and technical criteria.
		15. It is also stated in Form I that mangroves are not present on the site. However, a bare perusal of the google earth images shows that the mangroves exist along the southern boundary of the proposed project. Also, the proposed conveyor belt from the port to the proposed site passes through the mangroves. This can also be observed from the "FIGURE 3.3.2 Landuse/Land Cover Map Based on Satellite Data" of the draft EIA report. Why has this been not mentioned in the Form-I? Please explain.	15. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1.	15. Mundra Mangrove RF (south of project area which is mentioned in Section-9 sub-claus (III) Environmental Sensitivity of form-1.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		16. The proposed area has been illegally reclaimed by the APSEZ. Entire land use and land cover has been changed due to this. Please give information on the land use and cover as was during 1991 and also before the SEZ clearances were granted. Please also furnish a copy of the permissions issued by the State and Central Government agencies permitting the reclamation and destruction of mangroves.	16. The proposed project is planned over notified SEZ and Forest land that applied for diversion. No reclamation is proposed as part of proposed project activity. Details on present land use are provided in Chapter-3 of the EIA report.	16. The proposed project is planned ove notified SEZ and Forest land that applie for diversion. No reclamation land involve as part of proposed project activity. Detail on present land use are provided i Section-3.3 of Chapter-3 in the EIA report.
		17. Is the project proponent going to destroy the remaining mangroves of this area as well?	17. Proposed project area is devoid of mangroves. There is no question of mangrove destruction.	17. There no existing mangroves plantations i proposed site at the time of baseline study.
		18. Please explain on what basis the alternative site-1 is rejected.	18. The alternate site analysis was carried out. The site selection criteria and the study of alternate sites is detailed in chapter-5 of the EIA report.	18. Refer the above point no.-13 & 14.
		19. The Table-3.3.2 – "Land use breakup details in 10 km radius" clearly mentions presence of mudflats, mangroves and the reclaimed area in the study area. As per this table only 5.27% of the land in the study area is built-up, whereas 11% of the study area is wetland. Why is the site being selected for this proposal?	19. The proposed project area is outside CRZ and therefore no presence of mangroves and mudflats. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in Chapter – 3 of the EIA report. Site selection is based on suitability criteria as studied and provided in the EIA report.	19. The proposed project doesn't fall unde mudfalts/wetlands and mangroves as pe the landuse/ land cover map based on th satellite image is shown in Figure-3.3.2 c Chapter-3 in the EIA report.
		20. Please explain why the land with scrub vegetation has been categorised as wasteland.	20. Land use as per the utilization has been categorized based on classification systems of National standards of National Remote Sensing Center (NRSC) and details has been provided in Section-3.3 of Chapter – 3 in the EIA report.	20. The landuse/ land cover map based on th satellite image is shown in Figure-3.3.2 c Chapter-3 in the EIA report.
		21. Item 21 of Form I under Basic Information states that the proposal involves	21. The forest related information as asked in point no. 22 is replied properly.	21. Item 21 of Form-I related to interlin project and reply is no interlink. In item 2

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		approval/clearance under the Forest (Conservation) Act, 1980. However, under point 23 "Whether any Forest Land Involved? Area of Forest land Involved (has)" it is stated as "N/A". The Draft EIA report has mentioned at many instances the presence of 3 reserved forests and the Mundra mangrove forests. Please explain why such misleading information has been provided in Form-1.		of Form-I mentioned the forest clearanc required and file no.8-04/2016-FC mentioned. The item 23 of Form represents wildlife clearance, the propose project doesn't attract any wildli clearance.
		22. In form 1, the query under point 24 is "Whether there is any litigation pending against the project and/or land in which the project is proposed to be set up?" The project proponent has replied has "No". It is important to point out here that at-least two court cases are going on the APSEZ land – SLP 28788 of 2016 in the Supreme Court and WP (PIL) 12 of 2011 in the High Court of Gujarat. Please explain why this was not disclosed in the Form 1.	22. There is no case pending against the proposed project.	22. There no court case or any legal issue regarding proposed project against AEL.
		23. What action has been taken by the APSEZ as per the recommendations of the Claude Alvares led "Committee on Mangroves" in the Civil Application 9124 of 2011 under the PIL 12 of 2011? Please furnish the details of the actions taken by the project proponent.	23. The question is not related to proposed project.	23. This is outside the scope of the EIA repo for the proposed project.
		24. The Form 1, under "II Activity" states that no reclamation is envisaged. It is a well-known fact that the entire area has been reclaimed by the Adani group. This has been also stated in the Sunita Narain report. What measures have been taken to restore the area to its original state? How much mangrove plantation has been undertaken? Please furnish with the location details, along with coordinates and site	24. The question is not related to proposed project. No reclamation is proposed in the project under discussion.	24. This is outside the scope of the EIA repo for the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		photographs.		
		25. The Form 1 also mentions "construction of new approach road". However, the document on Alternative sites state that "Widening of existing Road" would be required for this site. Why is there such discrepancy in the information being provided?	25. As a part of the requirement for the proposed project the existing roads will be strengthened by widening or upgrading and extended to approach the proposed site.	25. The existing roads will be strengthened b widening or upgrading and extended t approach the proposed site.
		26. Where would this proposed new approach road and / or the widening of the existing road come? Please furnish details along with the map showing the proposed new approach road and or widening of the road.	26. The raw material transportation is proposed to be received from the approach road within notified SEZ which will be strengthened. The overall layout of the proposed plant is given in Figure-2.1 of EIA report.	26. The existing roads will be strengthened b widening or upgrading and extended t approach the proposed site and th proposed project layout is given in Figure 2.1 of Chapter-2 in the EIA report.
		27. Please furnish details on the impacts and mitigation measures of proposed new approach road and/or widening of the road.	27. The widening of existing road is within the notified SEZ and it is considered as part of the overall impact assessment of the proposed project. However, impact will be insignificant.	27. Refer the above point no-26. The existin roads will be strengthened durin construction stage of the project. Th impacts related to road developmer activities is temporary and insignificant. Th anticipated impacts during constructio phase is given in Section-4.1 of Chapter- in the EIA report.
		28. The Form 1 also mentions construction of new transmission lines. Please show location of the new transmission lines on coloured map. Has the area required for this mentioned in the Draft EIA report? Please mention the impact of the transmission lines and the mitigation measures for same. How much forest land is involved? Are these transmission lines passing through CRZ areas? Why can't the existing transmission lines be upgraded?	28. Power will be sourced from existing transmission lines by extending it to the proposed project site by using existing area of APSEZ. Same will be outside CRZ.	28. The total estimated power requirement fc proposed project is 300 MW out of which 4 MW would be generated from interna process steam and balance 260 MW powe would be sourced from APSEZ Ltd, throug M/s. Mundra Utility Pvt Ltd (MUPL). Th power allocation letter is enclosed a Annexure-V.
		29. For stream crossings, the Form-1 mentions that "Natural drainage passing through the site will	29. Natural drainage will not be disturbed due to the proposed project. The natural topography	29. Dhaneshwari river is a seasonal river whic flows in the western part of the project site

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		be suitably trained and maintained. There will not be any diversion. Further, conveyer for Copper Concentrate and Rock Phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required." The Adani group has already reclaimed large swathes of mudflats, mangroves and creeks in this area. Now the APSEZ wants to further "suitably train and maintain" the natural drainage. Please furnish details on the impacts of this and mitigation measures of same. Please also explain how this can be permitted in view of the fact that the reclamation has been carried out illegally without valid Environmental, CRZ and Forest Clearances. Please furnish copies of these clearances, if any.	will be maintained. The proposed project location is notified SEZ and forest land for which necessary clearance is under progress.	The river will not be diverted but suitabl trained along the boundary. The flow of th river will be maintained as shown in th plant layout on Figure-2.1 of Chapter-2 i the EIA report. Anticipated impacts and mitigatio measures during construction and operatio phase of project is given in Chapter-4 in th EIA report. No reclamation land involved as part proposed project activity. The propose project is outside the CRZ are as shown i Figure-1.5 of Chapter-1. MoEF&CC (fores conservation division) has granted Stage- approval for diversion of 1576.81 ha reserved forest land in favour of Adani Port & Special Economic Zone Limited (APSEZI vide letter F.No.8-04/2016-FC dated 16t November 2018. Stage-I FC has bee obtained as given in Annexure-V in the EI report.
		30. Further, there is already pollution in the area due to the coal dust and fly-ash and emissions of the power plant. There have been numerous complaints regarding this from the villagers of this area. Additional conveyor for Copper Concentrate and Rock Phosphate will further deteriorate the environment. Please give details on the impact of and mitigation measures of the conveyor for Copper Concentrate and Rock Phosphate, along with the impacts of the existing power plants.	30. The copper concentrate and rock phosphate will be transported through state of art pipe conveying method. The required EMP measures will be implemented as mentioned in Chapter-6. Project will be implemented after obtaining required clearances from concerned statutory authorities and complied with.	30. The copper concentrate and rock phosphat will be transported through state of art pip conveying method. The anticipated impact and mitigation measures are given Chapter-4 in the EIA report.
		31. It is mentioned in Form 1 that "Approximately	31. The locals will be given preference as per the	31. The proposed project will give employmer

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		3000 persons will be employed during construction phase and about 2000 people will be employed during operation phase". Also, please mention if the employment will be given to the locals or to outsiders.	eligibility. The skill development program will be implemented as a part of CSR program to improve employability.	to about 2000-3000 persons on averag per day basis during construction phase During operation phase, about 2000 direc employment and 5000 indirect employmer will be generated. Local people will be give preference to employment based on th skill set & eligibility requirement as per an vacancies available.
		32. What kind of residential and cooking facilities will be provided for the construction workers?	32. During construction phase, workers will be sourced through contractors and it will be ensured that workers get required facilities.	32. The workers from nearby will be employe through contractors in contract basics. Th details will be provided in detail engineerin stage.
		33. What sanitation facilities will be provided for them during the construction phase?	33. All the facilities including sanitation and others will be provided.	33. All required facilities (like drinking wate domestic toilets and shelters sheds) will b provided.
		34. How many locals have been employed so far by the APSEZ? Please furnish details. Please furnish how many are temporary and how many with permanent jobs.	34. This is outside the scope of the EIA report for the proposed project. However, local employment will be provided for the proposed project based on eligibility.	34. This proposed project is belongs AEL. Refe the above point no.-31 for employmer details.
		35. Under the "Environment Sensitivity", the Form-1 states that "Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or other related value" are not present within 15 kms. However, mangroves are about 167 meters away from the boundary of the proposed project. Moreover, there are 3 reserved forest and the Mundra mangrove forest in the proposed project area. Mangroves are protected as per the Indian legislation. Please explain why this was not mentioned in the Form-1.	35. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1.	35. The Section-9 sub-clause (III) Environmenta Sensitivity of form-1.
		36. Moreover, the 15 kms area covers the villages	36. There is no notified/ declared turtle nesting	36. As per primary baseline survey, there is n

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Tragadi. As per some of the reports Tragadi is turtle nesting sites. Why this has not been mentioned in the Form 1? Please explain. Have the impacts of the proposed project and related activities been studied for the turtle nesting? What are the mitigation measures for same? Please furnish full details of same.	site present within 15 KM of the proposed project area.	notified/ declared turtle nesting site prese within 15 KM of the proposed project area.
		37. Please give details on the pagadiya fishing along the APSEZ area. How many fishermen are engaged in this? How many have been impacted due to the APSEZ? Please furnish full details.	37. The details of pagadiya fishermen will be included in the final EIA report. No fishermen will be impacted due to the proposed project.	37. The fishermen details are given in Sectio 3.10 and Annexure-XII of Chapter-3 in th EIA report.
		38. What compensation has been provided to fishermen who earlier used to fish by this technique, but had to stop due to the APSEZ? Please furnish full details.	38. This is outside the scope of the EIA report for the proposed project.	38. The proposed project belongs to AEL. A part of CSR activities the will b help/support to fishermen communities.
		39. How many fishing boats are present in the area? Please furnish full details.	39. The proposed project area is outside CRZ. We do not have any information on fishing boats in the surrounding area. However, proposed project activity will have no impact on fisheries.	39. This is outside the scope of the EIA repo for the proposed project.
		40. From where would the sand be obtained for the proposed construction?	40. The sand for the proposed construction will be sourced from local available markets.	40. The required construction materials will b sourced from nearby local market.
		41. The proposed TOR document mentions under Land Use that - "The existing land use pattern in the study area of 10 km radius around the project will be established through the literature review of published Census records and latest available satellite imagery. Based on this review, the land use pattern is categorized into the following five categories: a. Forest;	41. The land use pattern of the study area covering 10 km radius is given in Figure-3.3.2, Chapter-3 of the EIA report. Same is in colour. Mudflats and mangroves are mentioned in Table-3.3.2, Chapter-3 of EIA report.	41. The land use pattern legends with colo identification of the study area covering 1 km radius is given in Figure-3.3.2 ar landuse pattern area (in ha.) is given Table-3.3.2, Chapter-3 of EIA report.

		b. Irrigated and agricultural Land; c. Un-irrigated agricultural land; d. Culturable wasteland; and e. Land not available for cultivation, which includes built-up areas." Why are the mudflat areas and the mangroves not mentioned? Also, please demarcate the culturable wasteland and share a coloured map of the same.		
		42. The brief summary as well as the pre-feasibility report mentions that "There is no significant vegetation or habitation in the project site. The nearest significant features from the project site are 4620 MW Adani Power Plant and Tata Power (Western side of project area), and West Port of APSEZL (South – west direction from project)." Kindly explain why the mangrove vegetation or the three reserve forest areas and mangrove forest areas not significant.	42. Project area is notified SEZ and forest land for which diversion is under process. Mangroves and other RF are mentioned as part of Form-1 and EIA report. Mangroves are not present within the proposed project area.	42. Mangroves are not present within th proposed project area. Mundra Mangrove R (south of project area, which is mentioned i Section–9 sub-clause (III) Environment Sensitivity of From-1.
		43. The pre-feasibility report also mentions that "Land for different corridors (Power/ Road/ Raw Material Conveyor) would be additional." Please furnish full details of the land required and the existing land use for these corridors. Please furnish the existing land use, whether any eco-sensitive areas, forest lands, mangroves, beaches, etc. exist in these corridors. Please also furnish a coloured map of the proposed corridor area.	43. All the utility corridors will be part of notified SEZ. However, they will be finalized as part of detail engineering and only after obtaining required clearance for the proposed project.	43. The resource and requirement details ar given in Section-2.2 of Chapter-2 in the EI report. The total land required for th proposed project is about 256.58 ha (63 acres), out of which 154.18 ha (381 acres of APSEZ and 102.39 ha (253 acres) forest land (Stage-I FC is obtained). Th water and power sourced from APSEZ Ltd through M/s. Mundra Utility Pvt Ltd (MUPL)
		44. Why has information on the above-mentioned corridors not provided in the Draft EIA? Please explain.	44. Reply is as per point no. 43.	44. Refer the above point no.-43.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		45. The pre-feasibility report mentions that "From South West to North East majority of area is of APSEZL where west port is also located. The land is having undulations and minor grading will be required." Kindly provide details on how the grading would be carried. What material would be used for this? From where would it be sourced? Please furnish full details.	45. Leveling of the land profile will be done as part of detailed engineering for the proposed project.	45. The land profile will be done as part detailed engineering for the propose project.
		46. How many creeks are present in the study area? Please furnish a coloured map and a satellite image showing the creeks.	46. Map showing the creek in the satellite imagery and land use map are provided in Chapter-3 of the EIA report.	46. The study area map is shown in Figure-1 of Chapter-3 in the EIA report.
		47. The pre-feasibility report states that "Since the entire land is vacant, hence no displacement and rehabilitation of local population is envisaged". What about the fishermen? How many of fishermen are engaged in fishing in this area? Please furnish full details.	47. Proposed project area is devoid of any human habitation. The fishermen in the surrounding areas will not be disturbed due the proposed project.	47. The fishermen details are given in Sectio 3.10 and Annexure-XII of Chapter-3 in t EIA report.
		48. How many fisher-folk/local people will be given permanent jobs in the proposed project?	48. Details on potential employment are mentioned in Chapter 2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth.	48. Refer the above point no.-31 & 47.
		49. What kind of jobs will be given?	49. Based on the eligibility and available vacancies, jobs will be provided.	49. Reply is as per point no.-31.
		50. Will they be imparted appropriate training?	50. Training will be integral part of all the employees. The skill development program will be implemented as a part of CSR program to improve employability.	50. The Training is a part of CSR activities a given in Section-8.5 of Chapter-8 in the E report.
		51. Would the job be permanent or temporary?	51. Based on the eligibility and available	51. Reply is as per point no.-31.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			vacancies, jobs will be provided.	
		52. How many salt pans exist in the study area. Please furnish full details.	52. Salt pans are present in the south west direction of the project area at a distance of around 5KM.	52. The study area consists of 0.64% salt pans The environmental setting of 10 km radiu is given in Table-1.1 of Chapter-1 in the EI report.
		53. From where will be the coal sourced for "addition in the concentrate for effective smelting"? What will be the ash content, Sulphur content mercury content and radioactivity of the coal proposed to be used? How will it be transported? What is the quantity of the coal envisaged to be stored? What are the ash utilization plan? Please furnish a detailed report on same. What are the mitigation measures for the SOx, particulate matter, arsenic, heavy metals, mercury, radionuclides emissions?	53. The coal will be sourced from the local market and transported through trucks. Around 3000 tonnes of coal will be stored. Coal is taking part in the smelting process and hence there is no ash generation. The details about mitigation measures have been covered as a part of EMP in the EIA report.	53. The raw material requirement and source i given in Section-2.2.2 of Chapter-2. Th impacts and mitigations for constructio and operation phase are given in Chapter- of EIA report.
		54. Are there any studies conducted on the long-term radioactivity of the ash? Kindly furnish the same if any. What are the mitigation measures proposed for the same?	54. There is no generation of ash in the process.	54. There is no generation of ash in the proces copper project.
		55. Please share details of the water circulation system proposed as mentioned in the Pre-feasibility report. Please show the layout on map of this proposed water circulation system. Please also share details of the land cover of this proposed area. Why has this not been mentioned in the Draft EIA?	55. The requested details are part of detail engineering. Preliminary water balance diagram is given in Figure-2.2 of the EIA report.	55. The water requirement and breakup detail are given in Section-2.2.3 and Preliminar water balance diagram is given in Figure 2.2 of Chapter-2 in the EIA report.
		56. The very first criterion for site selection is "Away from environmentally sensitive areas". However, this project falls under the reserve forest and mangrove areas. Please explain.	56. Environmental sensitivity analysis is done for 15 km area from the project boundary and same is provided in Form-1. The alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms	56. The comparison salient features alternative sites done and details ar presented in following Table-5.1 and shown in Figure-5.1 of Chapter-5 in the EI report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter-5 of the EIA report. Site is selected on the basis of suitability from number of factors.	The Site-II in Siracha & Navinal Villag adjacent to existing APL emerges a technically superior site such as availability closeness of water and power source, lar development, closeness to road and rail, et It is substantially advantageous in terms environmental and technical criteria.
		57. Under section 6.4.2 "Merits & demerits" of the pre-feasibility report why the presence of reserve forests and mangrove forest not mentioned under "Site-II (East of APL)"	57. Details on alternative site analysis are provided in the Chapter-5 of the EIA report. Site is selected on the basis of suitability from number of factors.	57. Refer above point no.-56.
		58. How much green belt plantation has been undertaken by APSEZ so far? Please provide with the total area, the co-ordinates and the photographs of same.	58. This is outside the scope of the EIA report for the proposed project.	58. This is outside the scope of the EIA repo for the proposed project. AEL propose 85.79 ha for greenbelt development for th proposed project.
		59. What plant species have been planted in the green-belt in the APSEZ?	59. This is outside the scope of the EIA report for the proposed project.	59. This is outside the scope of the EIA repo for the proposed project.
		60. Are all the species proposed to be planted for the current proposal indigenous?	60. Yes, the present proposal will include the indigenous species.	60. The recommended species for greenbe development are given in Table-4.12 Chapter-4.
		61. Where is the sewage treatment plant proposed? Please show the location on the map.	61. STP will be part of ETP and same is shown in the layout map provided in the EIA report.	61. The generated domestic wastewater will b treated in STP will be part of ETP. Th process details and schematic flow diagra of ETP is given in Section-2.4.2 and Figur 2.23 of Chapter-2.
		62. Where would the sludge from the sewage treatment plant be disposed of?	62. The sewage sludge will be utilized as manure for the greenbelt.	62. The generated sludge will be utilized a manure for the greenbelt.
		63. Is there any facility proposed for the recycling and reuse of the sludge on site? Kindly provide	63. The sewage sludge will be used within the plant itself and the particulars will be available	63. The detasils will be provide in deta engineering.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		the details along with the location on the map for the same if any.	post detail engineering.	
		64. The pre-feasibility report states that the "rejects from the secondary RO plant will be discharged into sea through the outfall channel of APSEZ's desalination plant." Please explain the impacts and mitigation measures of same.	64. The plant will be designed for Zero Liquid Discharge. The rejects from the RO plant will be sent to multi-effect evaporator. There is no discharge of any treated water into sea. Preliminary water balance diagram is given in Figure-2.2 of the EIA report.	64. An integrated water system is proposed the effluent from the process units i treated and reused to reduce wate demand. It is also proposed to install secondary Reverse Osmosis (RO) plant t further treat water from the effluent plar facility for effective use. Rejects from th reverse osmosis plant will be sent to Mul Effect Evaporator (MEF) for further recover and solids generated will be sent to Secure Land Fill (SLF).
		65. What will be the composition of the rejects from the secondary RO plant? Kindly provide the detailed analysis report for the same with the concentration of each constituent.	65. Reject from secondary stage RO containing higher TDS will be sent to multi-effect evaporator where water will be separated and re-used and salts (mainly calcium) will be stored in the SLF within the project area.	65. Refer above point no.-64.
		66. What are the "latest environment technologies" that would be used to treat the gaseous emissions before they are discharged in to the atmosphere?	66. Tail gas scrubbers will be installed to scrub residual gases from Sulphuric Acid Plant to produce Gypsum used in cement industries and high efficiency gas scrubbers will be installed in Phosphoric Acid Plant to produce Hydro Fluro Silicic acid which is used in manufacturing of Aluminum Fluoride.	66. The process description is given in Section 2.3 of Chapter-2.
		67. Please furnish a copy of the guidelines on "utilization of Copper Slag".	67. Copper slag can be used as a building material (added in concrete as well as in ready mix), road construction and shot blasting. The same is covered in EIA report. As per MoEF&CC notification dated 4th April 2016, copper slag does not fall under hazardous waste category and separate guidelines on the management of copper slag will be issued by CPCB separately	67. The impacts and mitigation on solid wast management is given in Section-4.2.5 c Chapter-4 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			and same is awaited.	
		68. Please furnish a copy of the guidelines on "utilization of Phosphogypsum".	68. Phosphogypsum is used for cement manufacturing, gypsum board manufacturing and fertilizer. The same is covered in EIA report. The "Guidelines for Management, Handling, Utilisation and Disposal of Phosphogypsum Generated from Phosphoric Acid Plants" published by CPCB is available online at: http://cpcb.nic.in/wast/hazardouswast/GuidelineforM,H,Utili&%20DisposalofPhosphogypsumfromPAPlants.pdf	68. Refer the above point no.-67.
		69. Please give full details of the location of the land fill sites for storage of Hazardous Cake and Scrubber Cake as well as a Map showing their locations.	69. An area of 30 acres has been demarcated for the SLF and shown in the plant layout in Chapter-2 of the EIA report, which takes care of the generated ETP cake and scrubber cake.	69. Secured Land Fill (SLF) is proposed ove 13.35 ha within the project premises fo disposal of ETP waste sludge and spei catalyst. Other Hazardous waste will b disposed through the approved recyclers.
		70. Please furnish area details and location map of ETP cake land fill.	70. Reply is as per point no. 69 above.	70. Reply is as per point no. 69 above.
		71. As per the draft EIA report almost 40% of the forest area is proposed to be converted to industrial use. Why is forest land required for this project?	71. Total area required for the plant is 256.58 ha. Three alternative sites were proposed. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. The site selection criteria and the study of alternate sites are detailed in chapter-5 of EIA report.	71. MoEF&CC (forest conservation division) ha granted Stage-1 approval for diversion o 1576.81 ha of reserved forest land i favour of Adani Ports & Special Econom Zone Limited (APSEZL) vide letter F.No.8 04/2016-FC dated 16th November 201 Stage-I FC has been obtained as given i Annexure-V.
		72. As per the Draft EIA section-3.9.6 - "Endemic	72. Project area includes forest land for which	72. Refer the above point no. 13, 14 & 71.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Flora Species and Threatened Flora of Navinal Area - Important threatened plant species reported from the region are Dipcadi erythraeum, Helichrysum cutchicum, Heliotropium rariflorum, Pavonia ceratocarpa, Convolvulus stocksii, Commiphora wightii. Gujarat State Biodiversity Board proposes to declare the area as Biodiversity heritage site and as the site is close to Mundra SEZ, it deserves more protection." Despite this, please explain why this site is being selected for this project?	APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. The proposed project site is away from biodiversity heritage site as proposed by Gujarat State Biodiversity Board. However, project will be implemented by taking all environmental safeguards.	
		73. Isn't it ironical that the project proponent proposes to build the proposed copper refinery with environment friendly technology while destroying 102.38 has of forests only for this particular project? The project proponent may please explain the logic behind doing this.	73. Total area required for the plant is 256.58 ha. Three alternative sites were proposed. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. The site selection criteria and the study of alternate sites are detailed in chapter-5 of EIA report.	73. Refer the above point no. 13, 14 & 71.
		74. The area identified for securing the hazardous cake and scrubber cake has not been specified. Neither has the area identified for intermediate/emergency storage of copper slag and phosphogypsum. As mentioned in the Draft EIA, area of 30 acres and 105 acres respectively has been mentioned for the said activities. Please give the location for these. Please also give the land use category of this areas. Have the clearances for this land been obtained? Please share the Forest, CRZ and environment clearances of same.	74. ETP cake and scrubber cake will be stored in the secured land fill (SLF). An area of 30 acres has been demarcated for the SLF and shown in the plant layout in Chapter-2 of the EIA report. Storage of copper slag, phosphogypsum and SLF is proposed within the project boundary. The proposed project site is outside CRZ. Forest clearance for the forest land in the proposed project has been applied. Environment clearance is under progress.	74. The solid waste generation an management details are given in Section 2.4.3 of Chapter-2 in the EIA report.
		75. What will be the composition of the hazardous cake? Kindly provide the detailed analysis report	75. The preliminary composition of the waste generated such as scrubber cake and ETP cake	75. The generated waste such as scrubber cak and ETP cake compostion details are give

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		for the same with the concentration of each constituent.	is provided in Chapter-2 of EIA report.	in Table-2.10 & 2.11 of Chapter-2 in th EIA report.
		76. As per the Table-2.9, ETP Cake contains heavy metals. What will be the impact of its disposal on the ground water table? What are the mitigation measures for the same?	76. ETP cake will be stored in SLF. Secured land fill is proposed to be developed over an area of 30 acres within the proposed project area. SLF will be constructed and operated as per the CPCB guidelines for treatment, storage and disposal facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and landscaping will be done. Monitoring of environmental parameters will also be carried out. Therefore, there are no possibilities of contamination of ground water.	76. ETP cake will be stored in SLF. Refer th above point 74.
		77. Also, the project proponent is proposing to do away with 253 acres of forest area and then develop 209 acres of greenbelt/green cover. Kindly explain this.	77. Total area required for the plant is 256.58 ha. Forest land requirement is part of the total land estimated for the project. Greenbelt requirement on 33% of the area is proposed and shall be complied as per EC conditions. For the compensatory afforestation for the forest land shall also done as per established procedure.	77. As per guidelines and ToR point 33% lan should be allotted for greenbe development. AEL proposing 85.79 h (33%) land for greenbelt development.
		78. The draft EIA report states that "The proposed copper refinery project of AEL is a one of the important projects. AEL believes that the copper refinery project would add significant value to Indian economy. The project will not only help ensuring by becoming self-sufficient in terms of copper, phosphoric acid and sulphuric acid for India but will also drive macroeconomic growth." This growth driven approach of Adani has been detrimental to the environment of Mundra. Moreover, the project would be detrimental as it will lead to air pollution and will impact the health of people residing in the vicinity.	78. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Based on studies under EIA, ambient air quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.	78. The proposed project is with the state of a environment friendly technology. Th Anticipated impacts during construction an operation phase is provided for propose project. There will not be any significar adverse impact on the health of the peopl The proposed project will be implemente with all environmental safeguards. EMP i provided in Chapter-10 of the EIA repor Rs 1044 Crores has been budgeted toward the pollution control systems.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		79. The draft EIA report mentions that "The proposed project would have few adverse impacts on the environment. However, with proper and judicious implementation of the mitigation and environment management measures, the impacts can be minimized and can be maintained well within the permissible limits specified by the regulatory authorities." The approach of Adani group and the indifference towards protection and conservation of environment has been reported time and again. The proposed project will not only lead to further reclamation of mangroves and mudflats, it will also be detrimental to the mangroves and the reserve forests in this area.	79. Proposed project is outside CRZ area, therefore there is no question of reclamation of mudflats and mangroves. Project will be implemented with all environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems.	79. As primary survey of EIA studies, th project outside the CRZ area, there is n reclamation of mudflats and mangrove Refer the above point no.-78.
		80. The draft EIA report mentions that the "Mangroves are situated about 4.5 km near Kotri creek area/ SSW direction, distributed along the networks of creek system." The Google earth imagery dated 19.11.2015 clearly shows that mangroves exist at mere 167 metres from the proposed project. Why has this not been mentioned in the Draft EIA report? Please explain. Moreover, the project also falls under the Mundra mangrove forests. This too has been not mentioned here. Please explain.	80. Map showing the study area with satellite imagery and land use map are shown in in the Chapter-3 of the EIA report. Authorized CRZ map is also provided in figure-1.5 of Chapter-1 of EIA report. Mangroves are present at 100 m away in the southern side of the project area.	80. Map showing the study area with satellit imagery and land use map are shown in i the Chapter-3 of the EIA report. Authorize CRZ map is also provided in Figure-1.5 Chapter-1 in the EIA report. Mangroves ar present at the southern side of the proje area.
		81. Please furnish with the details of the APSEZ. How much area has been acquired under the APSEZ at Mundra and how much was permitted under the clearances?	81. This is outside the scope of the EIA report for the proposed project.	81. This is outside the scope of the EIA repo for the proposed project.
		82. Please furnish with all the CRZ, EC, Forest and wildlife clearances of the APSEZ, Mundra.	82. The proposed project site is outside CRZ. Forest clearance for the forest land in the proposed project has been applied.	82. This is outside the scope of the EIA repo for the proposed project. The propose project is outside the CRZ area. The Stage

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			Environment clearance is under progress. Wild life clearance is not applicable for the proposed project.	FC is obtained and there is no wildli clearance for proposed project. The EI report after public hearing will be submitte for EC.
		83. Has the APSEZ undertaken any mangrove plantation? Kindly furnish details of each location wherein the mangrove plantation has been undertaken, along with the area under plantation so far, locations' latitude-longitude, site photographs prior to plantation and post plantation, agency implementing the plantation and the compliance so far. Also furnish with the pre and post plantation satellite images of all the locations.	83. This is outside the scope of the EIA report for the proposed project.	83. This is outside the scope of the EIA repo for the proposed project.
		84. Please mention the area details for mangroves that have been destroyed so far for the APSEZ. Please furnish a 1991 and current satellite data.	84. This is outside the scope of the EIA report for the proposed project.	84. This is outside the scope of the EIA repo for the proposed project.
		85. Please furnish with the details of much of mudflats, sand dunes, creek, salt pans have been reclaimed so far.	85. Proposed project is outside CRZ. Project is developed on notified SEZ area and forest land for which clearance is under progress. No reclamation is proposed in the proposed project activity.	85. The proposed project is outside the CR area. Forest Stage-I clearance is ontaine There is no mudflats, sand dunes, cree salt pan identified in proposed project site.
		86. Please furnish with the complaints received for the existing projects, specifically regarding to the destruction of mangroves and violation of the CRZ Notification in the APSEZ area.	86. This is outside the scope of the EIA report for the proposed project.	86. This is outside the scope of the EIA repo for the proposed project.
		87. What action has been taken and what is the status and / or compliance of the show cause notices issued by the MoEF and the GPCB regarding the violation of the environmental clearances and the pollution in the APSEZ? Kindly furnish with the details and relevant documents.	87. This is outside the scope of the EIA report for the proposed project.	87. This is outside the scope of the EIA repo for the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		88. Has Cumulative impact analysis been conducted for the proposal on local livelihood? What are the findings of this study? Which all companies/projects have been undertaken under this study?	88. The impact analysis has been carried out for the proposed project as per TOR granted by MoEF&CC in which baseline conditions are monitored and prediction of impacts has been carried out with respect to proposed project activity. The details have been provided in Chapter-4 of the EIA report.	88. The anticipated potential impacts analysis cumulative impacts due to increase c pollutant and its mitigation measure ar provided in Chapter-4 in the EIA report.
		89. What is the carrying capacity of this area to undertake the proposed project with respect to already existing projects? Has any carrying capacity study been conducted? Details thereof may please be furnished.	89. EIA studies have been carried based on TOR granted by MoEF&CC. Project will be implemented after obtaining required permissions and compliance will be done based on permissions granted.	89. With the all related guidelines an standards the EIA studies has carried ou After obtaining all necessary NOC th proposed project construction will take place.
		90. Have there been any complaints/grievances from the fishing community? Kindly furnish with same.	90. Representations received from fishing community were addressed during public hearing as well as in written responses. There are no complaints or grievances from the fishing community for the proposed project activity.	90. The fisherman and community details ar given in Section-3.10.6 and Annexure-XI of Chapter-3 in the EIA report.
		91. Please furnish full details of the environmental clearance and the CRZ clearance, Environmental clearances, Forest clearances and the Wildlife clearances received for the existing APSEZ, Mundra.	91. Project is located in notified SEZ area. APSEZ has obtained EC and CRZ clearances from MoEF&CC vide their letter dated 15th July, 2014 for multi-product SEZ at Mundra. Project area also includes forest land for which APSEZ is in the process of obtaining forest clearance. Wild life clearance is not applicable.	91. The proposed project is located in notifie SEZ are and it is outside the CRZ area Forest Stage-I clearance is under process There is no wildlife clearance is required fc the proposed project.
		92. Please furnish details of the CRZ clearance, Environmental clearances, Forest clearances and the Wildlife clearances received for all the facilities existing in the APSEZ.	92. Reply is as per point no. 91 above.	92. Refer the above point no. 91.
		93. How much land was reclaimed for the existing APSEZ after 20th February 1991?	93. This is outside the scope of the EIA report for the proposed project.	93. This is outside the scope of the EIA repo for the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		94. How has the APSEZ impacted the livelihoods of local fisher folk communities?	94. This is outside the scope of the EIA report for the proposed project.	94. This is outside the scope of the EIA repo for the proposed project.
		95. What will be the impact of the additional transport of raw materials and the finished products on the road, rail and the SEZ infrastructure? Please furnish with details of same.	95. The impacts due the additional traffic of the proposed project have been considered while calculating the cumulative impact and the details are available in Chapter 4 of the EIA report. There will not be any significant impact due to increase of traffic due to proposed project.	95. The traffic density study have been carrie out and detail are given in Section-3.11 Chapter-3. The cumulative impacts detai are given in Section-4.2.2 of Chapter-4 the EIA report.
		96. Please furnish details of the transportation – road, railway lines, as well sea borne, impacts and mitigations studies conducted for the proposal.	96. The impacts due the additional traffic of the proposed project have been considered while calculating the cumulative impact and the details are available in Chapter 4 of the EIA report. Existing railway lines will be used based on requirement. Existing port facility available at west port and south port of APSEZ will be utilized for transportation of materials.	96. Existing railway lines will be used based c requirement. Existing port facility availabl at west port and south port of APSEZ w be utilized for transportation of material Refer the above point no.-95.
		97. The proposed area falls under Seismic Zone V. What are the mitigations measures to handle the situation due to earthquake?	97. The plant design will be done considering seismic zone-V as per IS 1893 (part-I)-latest edition. Disaster management plan has been prepared and available in Chapter-7 of the EIA report.	97. The plant will be design by considering th latest technology and safety measur guideline for seismic zone. The DMP fc onsite and offsite is given in Section-7.3 Chapter-7 in the EIA report. The details w be given in detail engineering report.
		98. Please furnish full details of the field visits conducted to undertake the ecological study including copies of the field notes. Please mention full details of the team members, their qualifications, and the number of man days spent on the ecological data collection.	98. Ecological study has been carried out during the study period by an EIA agency approved by QCI-NABET. The NABET certificate and personnel involved in the ecological study is available in Chapter-11 of the EIA report.	98. **M/s. Adani Enterprises Limited (AEL** has retained the services of NABE accredited EIA Consultant **M/s. Vimt Labs Limited (VLL)**, Hyderabad t prepare EIA report for variou environmental components including ai noise, water, land and biologic components along with parameters human interest which may be affected an

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
				to prepare an Environment Managemer Plan (EMP) for mitigating possible advers impacts. The consultant details and list c experts involved in the EIA report i provided in Chapter-12.
		99. Has the project proponent carried out Social impact assessment report? If yes please furnish if any.	99. EIA studies have been carried based on TOR granted by MoEF&CC. Socio economic study has been carried out as part of EIA and same is available in Chapter-3 of the EIA report.	99. The Social Impact Assessment report i enclosed as Annexure-XII.
		100. Please furnish the latitude-longitude coordinates of the corners/boundaries of the entire APSEZ, Mundra.	100. This is outside the scope of the EIA report for the proposed project. However, coordinates of the proposed project boundary are provided in Chapter-1 of the EIA report.	100. This is outside the scope of the EIA repo for the proposed project.
		101. What are the existing facilities for the parking, washing, repairs and maintenance of trucks and other heavy equipment?	101. All the infrastructural facilities like parking, washing, repairs and maintenance etc will be part of detail engineering and same will be carried out after obtaining required clearances.	101. All the required infrastructure facilitie detail will be given in detail engineerin stage and same will be carried out afte obtaining required clearances.
		102. What facilities are provided for the drivers and cleaners?	102. Separate truck parking and rest rooms will be provided to the drivers and cleaners involved in the transportation of the raw material and end products.	102. Facilities like truck parking, truck cleanin facilities, rest rooms and canteen will b provided for drivers and cleaners.
		103. What will be the impact of the water/sewage discharged into the creeks and gulf of Kachchh on the overall salinity of the water? Has any such report been conducted?	103. The proposed plant will operate on Zero discharge concept. There is no discharge of any treated water into creeks or Gulf of Kachchh.	103. The proposed plant will operate on Zer discharge concept. There is no discharge c any treated water into creeks or Gulf c Kachchh.
		104. Please furnish No Objection Certificates, Consents, from the State Pollution Control Board for the projects involving discharge of effluents, solid wastes, and sewage waste under Environmental Protection Act 1986.	104. This is outside the scope of the EIA report for the proposed project.	104. After receiving Environment Clearanc from MOEF&CC. The necessary NOC c Consent to Establishment (CTE) c Consent to Operate (CTO) form GPCB sha be applied.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		105. Has the project proponent carried out mangrove conservation plan? If yes then furnish full details with photographs and maps showing the mangrove conservation areas, along with details of the cost of mangrove conservation.	105. The proposed project is outside CRZ area and no mangroves are present at the proposed project site.	105. The proposed project is outside CRZ are and no mangroves are present at th proposed project site.
		106. What is the original plot level? What is the proposed plot level? How this will affect the land terrain? Has the proponent conducted any analysis on its impact on the environment? Please furnish details.	106. The proposed project will be implemented in notified SEZ and forest land. The land terrain is gently sloping and no major cutting and filling for leveling of land will be involved. Impact on land environment is carried out and details are in chapter-4 of the EIA report.	106. Impacts on Land use during constructic and operation phase is provided Chapter-4 in the EIA report.
		107. Please furnish the status of NABET accreditation for all EIA consultants hired with their experience in details as of the period the Draft EIA studies were conducted and published.	107. The NABET certificate of the EIA consultant (NABET/EIA/1619/RA0043 Valid upto 19 May 2019) is provided in Chapter-11 of EIA report.	107. Refer above point no.-98.
		108. Have all the ToRs been followed for the preparation of the documents?	108. TOR granted by MoEF&CC vide their letter dated 21st June, 2016 has been followed for preparation of draft EIA report.	108. The entire EIA study is carried out c basics of the issued TOR by MoEF&CC vic their letter dated 21st June, 2016.
		109. Has authenticated English translation of all material in Regional languages been provided, as stated in the EAC minutes dated 3th – 4th May 2016?	109. All documents have been provided in English. The representations received in local language will be translated into English and same will be authenticated.	109. Complied and incorporated.
		110. It has been reported that the coastal areas of Mundra harbour mangroves and have mudflats, sand dunes, creek network etc. ecologically important areas. Despite this, projects are being allowed to set-up in this area. Why does Adani group always have to either reclaim the mangroves and mudflats or use a site which they have already reclaimed without proper clearance?	110. This is outside the scope of the EIA report for the proposed project. We assure you that all the environmental safeguards will be provided during implementation and operation of the project.	110. Refer the above point no.-56.

26	Shri Dahyabhai Gadhvi, Kandagara,	It is cordially informed that I, Gadhvi Dahyabhai Virambhai Gadhvi, resi. Mota Kandagara, Wadi Area,	We acknowledge the receipt of your representation and have noted your concerns. We assure you that	All anticipated impacts are identified ar mitigation measure for the proposed project

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
	Kutch	Mundra Kutch. I hereby expect your favor that the projects established and yet to be established do not take any care of the people from health as well as economic point of view. I hereby oppose the hearing for the plant held here today and aver that this project should not come here at any cost. The health and agriculture whatsoever left in this area will be ruined totally. The agriculture and cattle rearing are affected seriously by dust and polluted air due to establishment of coal based industries. The agriculture production and milk production are reduced to a great extent due it. The air will be polluted due to such industries, The poisonous chemicals such as sulphur dioxide, Hydrogen fluoride, will be mixed in the air and will pollute the air heavily. There is high probability of spreading of disease such as cancer, asthma, T.B., and other disease of lungs and skin, blindness and many other diseases due to air pollution. So, this project endangering health and livelihood should not be established here. There will be water pollution. Lead, chromium, sulphuric acid will be leached to ground water and will come out through irrigation. The cattle rearing and agriculturist class will be affected heavily due to polluted water. It is not possible to use such water for farming. The cultivable land will be affected due to such chemical rich water and consequently cattle rearing will be reduced resulting into reduction in economic activity based on food products based on milk, buttermilk and ghee. So, this project shall not come here. Such projects should be established in the area	all the environmental safeguards will be put into place before operation of the project. There are many such projects in the world, including the developed countries. The apprehensions mentioned by you have never happened at any of the plants. We are confident of operating this plant with all the safeguards to mitigate the pollution. We will also be adopting the latest technology for pollution control. We are herewith responding para wise to the issues raised by you: 1. All measures for mitigating the air & water pollution will be adopted. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. 2. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing. High efficiency gas scrubbers will be installed in Phosphoric Acid plant to scrub Hydrogen Fluoride to produce Hydro Fluro Silicic Acid before releasing the residual gases through the stack. The emissions leaving the various stacks/ vents proposed as part of this	presented in Chapter-4. The EMP budget of R 1044 Crores is proposed. As part of improvir employability within local youth, there is a pla to set up a Skill Development Centre throug Adani Foundation. A Budget of Rs. 8.0 Crore per each year has been provided unde Corporate Social Responsibility for developmer of the local community through Ada Foundation. The areas of intervention will b education, health & sanitation, sustainab livelihood and rural infrastructure. The CSR details (like CSR policy, initiatives activities, CSR Budget expenditure data for 2010 to 2016, Proposed CSR budget plan f next 5 years and CSR implemente photographs) is given in Section-8.5 of Chapte 8 in the EIA Report. The water system, is highly integrated and designed for Zero Liquid Discharge (ZLD). Th water requirement details is given in Sectio 2.2.3 of Chapter-2. Secured Land Fill (SLF) proposed over 13.35 ha within the proje premises for disposal of ETP waste sludge ar spent catalyst. Other Hazardous waste will b disposed through the approved recyclers. Th environmental monitoring will be conducte construction and operation phase is given Chapter-6.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		having no population in surrounding of 50 kilometer. This is residential area within 2-3 kilometer only where thousands of people are living. It is to be specifically noted that the industries established here earlier have not at all taken care of the health and employment of the economic scarce local people. The business opportunities are given to only 4-5 selected persons only based on commission. So, we oppose this project.	project will be meeting the prescribed norms of Central Pollution Control Board (CPCB). Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report. 3. The project will be implemented with Zero Liquid Discharge. Waste produced from the proposed plant will be stored in Secured Land Fill (SLF) which will be developed over the area of 30 Acres within the proposed project area. SLF will be constructed and operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and landscaping will be done. Monitoring of environmental parameters will also be carried out. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. 4. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social

			Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.	
27	Shri Ashariya Lakha Gelva, Kapuriya Wadi, Village: Zarpara, Mundra Kutch	1. It is cordially informed that there are flowing streams of water falling within the project area of Greenfield copper refinery project area, which will be closed. So, it is requested not to give permission to this project.	1. Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. No streams will be closed or blocked by the project.	1. The Dhaneshwari river will not be diverte but suitably trained along the boundary. Th flow of the river will be maintained, a shown in the Plant Layout on Figure-2.1 EIA Report
		2. There is environment area in surrounding of this project. There is a Bharadima dune on the south of this project. There are various types of vegetation in it. It is a stay for animals and birds. There is Siracha forest on the west of the project site. There are birds and animals in it. It is requested not to give permission to this project as the project will adversely impact the environment heavily.	2. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.	2. The baseline ecological study conducted ar details are given in Section-3.9 of Chapte 3. The ecological anticipated impacts a identified and mitigation measure for th proposed project is presented in Sectio 4.1.6 (construction phase) & 4.2 (operation phase) of Chapter-4 in the E report.
		3. The agriculture in surrounding of the project will be affected. There are already existing industries like power plants. Horticulture is heavily impacted due to that. The fertile agriculture such as dates, chickoo, pomegranate, coconut is damaged. The damage will be increased due to this project. So, it is requested not to give permission to this project.	3. All measures for mitigating the air & water pollution will be adopted. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem.	3. The EMP budget of Rs. 1044 Crores proposed. The water system, is high integrated and is designed for Zero Liqu Discharge (ZLD). The water requireme details is given in Section-2.2.3 of Chapte 2. Secured Land Fill (SLF) is proposed ov 13.35 ha within the project premises f disposal of ETP waste sludge and spe catalyst. Other Hazardous waste will b disposed through the approved recycler The anticipated impacts on air quality ar mitigation measure to control pollutic during construction and operation phase a provided in Section-4.1.3 and 4.2.2 Chapter-4 in the
		4. There will be increase in temperature due to	4. The project is estimated to emit 0.53 Million	4. Refer the above point no.-3.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		copper refinery and it will cause damage to the livestock and environment. The temperature increases every year and temperature will increase further due to this project. So, it is requested not to give permission to this project.	Tons of CO2 equivalent of GHG per year from proposed project which is insignificant in the context of Local or Global Warming. Heat available from the plant process will be converted to produce power with the waste heat recovery boiler as well as hot water for plant process requirements.	
		5. There are villages such as Shiracha, Navinal, Kandagara, Zarpara, Dhrub etc. in surrounding of this project. So, the mankind in the area will be terribly impacted due to pollution. So, it is requested not to give permission to this project.	5. All measures for mitigating the air & water pollution will be adopted. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem.	5. The environmental monitoring will b conducted during construction and operatic phase is given in Chapter-6. The baseli monitoring was conducted in 8 locations a part of EIA studies. The monitorir conducted in different location (lik industrial, commercial and residential area within the 10 km of study area. Refer th above point no.-3.
28	Shri Girish D. Nagda (C.E.O), Bhagwan Mahavir Pashu Raksha Kendra, Pragpur Road Junction, Tal. Mundra 370415, Kutch, Gujarat	The Indian ARYA public is spending their lives on the life cycle of DHARMA – ARTHA – KARM - MOKSHA but development is necessary according to time. In Mundra Taluka of Kachchh District the local public has got a golden opportunity for earning income after entry of Adani Group. The people are witness to the improved facilities in the employment, education, health etc. like routine life necessities due to fine arrangements done by Adani Group. We must accept where there is development; we must support the promoters. One Greenfield copper Refinery Project is proposed in A.P.S.E.Z. by Adani Group, the above mentioned organization does many inspirational work of humanity and environmental preservation. When this organization is doing the project work as per rules it is most welcome and we will support the same.	We acknowledge the receipt of your representation and have noted your appreciation to the efforts of Adani Group for development of the area. We assure you that we will continue to comply with environmental standards set by state pollution control board/ central pollution control board for proposed copper refinery project. As part of improving employability within local youth, there is a plan to set up a Skill Development Centre through Adani Foundation. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibilityfor development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.	-

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			We thank you for your support and would like to continue our engagement with the community for development of the area.	
29	Shri Naran B. Gaghavi, (President), Keti Vikas Seva Trust, Village Zarpara, Tal: Mundra, Dist- Kutch.	Mundra taluka was rich in its unique environment and biodiversity. Fishermen, farmers and cattel herders would run their business and occupation here. But the adani company has ruined huge paches of mangroves forest that existed here. The mangroves forest was a kind of blessing for the people of the surrounding area as in times of famine. Cattle and camels would survive on mangroves during advers times. Fishermen and local community used mangroves wood to build their small houses, ships and other implements. Fish breeding would take place in mangrove trunks. Mangroves would save the surrounding area from being flooded, tsunami or earthquake, and acted as a natural protecting wall. Such useful mangroves forest has been destroyed in order to build Mudra Port and SEZ. The surrounding area has been severely affected. In case the M/s. Adani Enterprise Limited has the proposed Greenfild Copper Refinery Project if allowed, even the remaining patches of mangroves forest will be dangerously Impacted. The company has deliberately not mentioned anything about the mangroves forest and the probable impact on it in its Environmental Impact Assessment Report (EIA Report) prepared for the Greenfild Copper Refinery Project. The EIA Notification 2006 has been violated. The marine and ecology of the area have not been studied. **Filling up of Creeks:** The creeks of mundra were filled by up by MPSEZ in	1. Information related to mangroves is given in sub-clause of environmental sensitivity which is part of Form-1. Proposed project area is devoid of mangroves. There is no question of mangrove destruction. 2. Impact Assessment has been carried out covering 10 km area surrounding the project site and it includes water bodies (if any), local residents and villages. There is no proposal of closing any creeks. 3. There are no sand dunes in the proposed project site. Hence, there is no question of demolition of sand dunes. 4. No fishermen will be impacted due to proposed project and will have no impact on fisheries. Project will be implemented with all the environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems. 5. Project will be implemented with all the environmental safeguards. There is no proposal of using groundwater for the proposed project. Water requirement for the proposed project will be supplied through desalination plant of APSEZ. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts	As primary survey of EIA studies, the prose project site outside the CRZ area, there is n reclamation of mudflats and mangroves. Ther is no sand dunes in the project site. The proposed project is with the state of ai environment friendly technology. Th Anticipated impacts during construction an operation phase is provided for propose project. There will not be any significant advers impact on the health of the people. Th proposed project will be implemented with a environmental safeguards. EMP is provided i Chapter-9 of the EIA report. Rs 1044 Crores ha been budgeted towards the pollution contr systems. The proposed project is with the stat of art environment friendly technology. The CSR details (like CSR policy, initiatives activities, CSR Budget expenditure data forr 2010 to 2016, Proposed CSR budget plan fc next 5 years and CSR implemente photographs) is given in Section-8.5 of Chapte 8 in the EIA Report. During construction phase of the project, th project will provide temporary employment t many unskilled and semi-skilled laborers i nearby villages. During operational phas considerable number of people will be benefite by provision of various services, such a transportation, technical services, skilled

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		order to reclaim land. Which has been cited in the report of the Sunita Narain Committee of Ministry of Environment forest and climate change (MOEF&CC) Government of India. It has brought harmful impact of the surrounding area. The Adani SEZ has filled uo Koyla vadi creek, Navinal Creek, Dhaja vadi creek, Bhradimata creek, Sonaper vadi creek, the creek near old port, kotadi creek land kotadi creek. These were all natural creeks and the fishermen of the surrounding 15 villages used thses creeks as a path to enter into the sea, Va liable fish catches were available in these creeks. The area was full of mangroves. The EIA has not mentioned what would be the impact on these creeks due to Copper Refinery Project? **Demolition of Sand Dunes:** In the coastal area of Mundra there were sand dunes as high as 40 to 60 meters. High quality frss would grow on thes sand dunes. Cattel herders of the area used to graze their cattel in this grass land for six to eight months. The land on which the company wants to build the Copper Refinery contained high grass land and forestry land. These have been demolished by the Adani Company. Such sand dunes would help against natural calamities. The Copper Refinery project may lead to further destruction of sand dunes, accelerating the danger of natural calamity, severely damaging the environment as also human and animal population of the area. Nothing has been mentioned in the EAI report about this. **Impact on fishermen community:** The Importance of Mundra taluka for fishing community and their village is next only to the	after operation of the project are found to be within the prescribed standards for Air and Water and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report. 6. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure. 7. Proposed project will directly source the copper concentrate from outside which will be transported through state of art pipe conveying method. Thus, the process in this plant will directly start from smelting and will not involve mining, commination operation, floatation, etc. Project will be implemented with all environmental safeguards. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems. The proposed project is based on Zero liquid discharge system and hence there will be no discharge of any effluent outside the proposed project boundary. We assure you that all the environmental safeguards will be provided during implementation and operation of the project.	semi-skilled services and indirectly it w flourish various business activities. The fishermen details are given in Sectio 3.10.6.1 and Annexure-XII of Chapter-3 in th EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		jakhau fisheries Port. The sea shore along the taluka was used by fishermen from Mandvi and Gandhidham for fishing. Fishermen would get huge quantity of fish here, but due to the activities of the Adani Port &SEZ and Adani Power, the fisheries business has been severely affected. The fisheries production has decreased considerably. Due to this, major challenges have risen in front of the fishing community regarding their livelihood and economy of the area. With the Adani Copper Refinery Project, the area will be further adversely affected. Fishery activity will come to an end due to chemicals and poisonous, materials released from the Copper Refinery. This will create crisis for human being. **Impact on Agriculture and Horticulture:** The land between Mundra and Mandviis rich in horticultural crops and green farms. The stretch is known as its greenbelt, including rich green farms. Water of this area is sweeter than any other part of kutch. The crop of dry dates is found only here in the entire India. This area has remained a green field due to dry date crop. But after 2005, due to the activities of Adani Port &SEZ and Adani Power, the dry date crop has been affected. The ash form the Adani Power Plant spreads over farms of dry dates which spoil fruits, and the raw fruits fall without becoming ripe. More, the dry dates are not as sweet as they used to be earlier. This has adversely affected the livelihood of those who lived on agriculture. The saline water of the ocean now invades the land, contamination sweet water, adversely affecting ground water. Agriculture cannot be done in saline water. Thus, the area is already facing problems, and if the Copper Refinery Is built here, the entire area		

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		will be further impacted. The rich farms and agriculture will be destroyed, and this will trouble the farmer's community. **Impact on Animal Husbandry:** In the whole of India, only kutch is the only district where animal population is more than human population. Mundra taluka has been a leader in animal husbandry and related business. Sweet water, vast gaucher land, forest,etc. which are requirement for animal husbandry, are found here. The business of milk and items made from milk flourished in this area. But as the Adani Group has acquired most of the gauchar land and government waste land, no land is left for cattle breeders and animal husbandry, Milk amd milk production has decreased. Cattle breeders have lost their economy. Above and above this Adani Port &SEZ and Adani Power has acquired gauchar land of 10 village from the government of Gujarat. The details have been given In the table below: **Sources of Pollution in Copper Industry:** Copper industries is a mineral based industry. Copper bearing materials in the form of oxides or sulphides occur below the earth surface. The copper mineral is axtracted by various methods of mining. During mining large quantity of waste materials are generated. After the ore is taken out, it is crushed and milled. In crushing and grinding enormous amounts of dusts are generated. The ground ore is subjected to flotation for separation of copper rich mineral known as concentrate is then smelted in smelter to produce blister copper. The copper so		

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		produced is impure and is called anode copper. Copper production all of them contribute as sources of pollution in the copper industry. Thus the main sources of pollution in copper industries are (I) mining (2) comminution operation, (3) flotation, (4) roasting and smelting, (5) fire refining and electro refining stages, (6) sulphuric acid plant and (7) water treatment plants etc. So we are request to you and MoEF&CC New Delhi government of India cancelation of Adanis TOR and not given environment clearance.		
30	Shri Mahesh Pandya, Paryavaran Mitra, 502, Raj Avenue, Bhaikaka Nagar Road, Nr. Thaltej Cross Road, Thaltej, Ahmedabad	Refer Sr.no 3	Refer Sr.no 3	Refer Sr.no 3
31	Shri Ibrahim Abdulkar Turk, Jamadarwadi, Post Dhrab Ta Mundra Dist, Kutch	As local journalist I welcome the project of the proposed copper refinery project would produce 10 LTPA of copper cathode; 5 LTPA of copper rod; 30 LTPA of sulphuric acid; 5 LTPA of phosphoric acid (as 100% P205); 30.000 TPA of aluminum fluoride, 288 TPA of selenium, 50 TPA of gold; 500 TPA of silver etc with the state of art environment friendly technology in Kutch district. The huge development will be based on sustainable development principal and not with devastation of ecology and environment. The precautionary principle applies to the project and on this principal I would like to prevent possible huge pollution. I humbly request MOEFCC and Project proponent Adani Enterprise Ltd to kindly consider the below discussed queries for the abatement of pollution. There is need to modify some of the points/subject matter shown in draft Environmental Impact Assessment report and respective changes should be there in the EMP to achieve the aims and objective of		

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		the sustainable development of the region along with business interest. Suggestions 1.....The EIA report says *1.2.4 ... Location of the Project " The proposed project site is located in Siracha and Navinal villages at APSEZ Mundra taluka, Kutch district in the state of Gujarat. The total area earmarked for the proposed project is 256.58 ha (634 acres), in which 381 acres (154.18 ha) of land belongs to APSEZ area and 102,38 ha (253 acres) of land belongs to forest area for promoting industrial development.* The question arises here is that when the proposed forest land which is yet not cleared by the MOEFCC stage I or Stage II and pending for consideration how proponent can ask EC over the land??? Es MOEFCC not obeying the own OM? We demand that, the forest land must not be converted as the SEZ has more land available for this project. Why the Adani Enterprise Ltd is asking the Reserve Forest??? We demand detail investigation of the balance land available in SEZ or private land availability in the vicinity. The RF should not be disturbed at all. We demand from proponent that they must have sustainable solution for land availability than the diversion of Reserve forest of 102.38 hector. The entire coastline is going to be industrialised in next few years and there will be no green cover in the semi arid zone. The present forest has the trees and shrubs so it must not be disturbed when the project is going to increase the Sox and other air pollutants in larger quantity. I suggest the project authorities to shift the project if possible at deep in northern side of coast line where the unfertilized land available in huge quantity. *The image on EIA Page C3-16 is showing the project site is in the Shiracha Reserve Forest and Danderi*	1. Alternate site analysis was carried out. The alternate sites have been discussed in detail during the Terms of reference meeting and shortlisted site for the proposed project has been accepted by the Honorable EAC committee of MoEF&CC, New Delhi. Details on alternative site analysis are provided in the Chapter – 5 of the EIA report. Site is selected on the basis of suitability from number of factors. Project area includes forest land also for which APSEZ has applied for Forest clearance and same is under process. As a process, State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. As per OM of MoEF&CC, after making an application for forest land project proponent can apply for obtaining ToR for the proposed project and proceed with the procedures as per EIA notification 2006 and subsequent amendments. Same is complied fully.	1. The comparison of salient features c alternative sites done and details ar presented in Table-5.1 and is shown in Figure 5.1 of Chapter-5 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Reserve Forest. So the project site should be out of this two RE. The Annexure-4 land allotment letter is meaningless if the SEZ president is not clear about the land to be given to this project. The letter is not showing clear piece of land with area and its possession with the SEZ authority it is talking about planning. This issue should be addressed by the AEL authority before taking EC. If The land belong to the government and SEZ does not own it at present than how it can assure the land transfer to AEL.		
		2.The diversion of forest land wide file number is 8-04/2016-FC has taken valid consent from gram or not? Under Forest Right Act 2006 settlement of rights of local grazers and people are settled or not? I suggest not to divert the forest land but in any circumstances 5 times more land should be developed as forest in 25 kms of the project site with state forest department. MOEFCC should force the company to develop forest in this 25 kms radius only to balance the forest cover.	2. As a process, State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. Compliance will be done as per forest clearance and Compensatory afforestation for the forest land will be done as per established procedure.	2. MoEF&CC (forest conservation division) ha granted Stage-1 approval for diversion c 1576.81 ha of reserved forest land in favou of Adani Ports & Special Economic Zon Limited (APSEZL) vide letter F.No.8 04/2016-FC dated 16th November 2018 Stage-I FC has been obtained as given i Annexure-V. The construction will start onl after getting all required statutory clearanc from concern department.
		3.Provide the date of the issuance of the CRZ map by NI() to AEL.	3. Proposed project layout is superimposed on CRZ map of the area prepared by authorized agency of MOEF&CC as per CRZ notification 2011 and same is provided in Chapter-1 of the EIA report. CRZ map is prepared by NCESS in June 2011.	3. The prosed project is a Greenfield projec and which is outside of the CRZ. The CR map is shown in Figure-1.5 of Chapter-1 i the EIA report.
		4.Provide the factual details on the distance of various streams/rivers/coast/creek. The EIA report has shown the point 14 in Form 1 (which shown below). The distances of the natural river/creek/estuary/water body needs to be corrected. As per my knowledge the information is given by mistake and I request to verify the same and introduce the fact in Final EIA report also	4. The details provided with respect to distance of various streams/rivers/coasts/creeks in Form-1 and EIA report are factual in nature. We will again verify the details and same will be reported in the final EIA report.	4. There is no change in data and all dat which is provided in EIA report is relevant.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		provide the copy to me. • Streams/Rivers Kotri creek (0.5 km, 5) • Khari Nadi (1.9 km, W) • Gulf of Kachchh (3.9 km, S) • Nagavanti Nadi (4.7 km, E) • Phot Nadi (8.7 km, ENE) 5. Please provide the details of TSDF as described in the project for Hazardous waste disposal. There is no design shown in EIA report for TSDF site. i. No technical details regarding the TSDF site shown. ii. No Cell details and its capacity defined and no closer plan shown, iii. No details regarding the waste characterisation shown. iv. No details regarding heavy metal encapsulation shown which is to be disposed off in to TSDF, v. The compliance of the Hazardous and Other Waste (Management and Trans boundary Movement) rules 2016 for the smelter base waste not shown. vi. This project component must be shown differently in the said area of 12.14 Hectors. SLF cell is shown just adjacent to the public road which is not suitable. vii. The criteria for site selection is not studied and followed as defined by MOEFCC/CPCB. viii. The ground water geology, hydrology and contour maps of the area are not studied. ix. The flow pattern of ground water is not studied. x. The ground water table is not studied. (only 2-5 meter as shown on page C3-10) How TSDF is possible in such type of ground water area.	5. SLF will be constructed and operated as per the CPCB guidelines for treatment, storage and disposal facility (TSDF). All required approvals will be taken from concerned authorities. The SLF, once filled to its capacity will be capped on top and soil cover will be spread and landscaping will be done. This was disclosed in Form-1; Aspects related to ground water has been studied and relevant information has been provided. Regular monitoring will be carried out as per Environment monitoring programme. Further detailing is part of detail engineering. The proposed project is outside CRZ area.	5. Hazardous cake and scrubber cake will b stabilized and stored in secured land fill a per guidelines of MoEFCC/ CPCB/ GPCB. A area of around 13.35 ha is identified an allocated. For the initial years of coppe refinery plant operation till sustaine utilization/management of copper slag an phosphogypsum; in the above applicatio areas are developed, as well as fc emergency purpose, copper slag storag area and gypsum pond of around 105 acre would be identified and made available fc intermediate/emergency storage of th same. Provision would be made to reclair the disposed copper slag an phosphogypsum from gypsum pond at later stage for various utilization venture: The solid waste generation, wast characterisation and mode of disposal given in Section-2.4.3 of Chapter-2

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		So this component is illegally inserted in the Draft EIA report as per my belief. The Form I do not have such details and the TOR also, The site specific TOR should be given for such kind of huge 12 hector secure land fill site for disposal of the highly toxic heavy metal baring waste which needs stabilization first. In absence of the waste characterisation the secured LF/TSDF for the hazardous heavy metal baring waste could not be the part of this copper smelter. This component should be taken EC separately along with the phosphogypsum and copper slag storage yard. This plant is very near to coastal area also. Keeping in mind the coastal hazard this site should be out of the coastal zone. I demand the MOEFCC EAC to look in to the matter and ask the proponent to obtain fresh EC as separate project with proper EMP and EIA report or dispose the toxic metal baring waste of Cr, Cd, Ni, As, Pb, and some types of active radioactive metals in common TSDF available. The MOEFCC and CPCB always ask for common disposal of Hazardous waste in country. Gujarat has more than 20 Captive TSDF sites and there are problems started in it. Such kind of captive landfill site will not be sustainable for future. 6. The copper slag and phosphogypsurn reuse plan is not shown in the EIA report. There will be mountains of the two type of waste if not disposed or used properly. There are problems of this waste having some hazardous characteristics due to traces of heavy metals. The haphazard disposal of these two waste can be hazardous for the environment if disposed without assessing the toxic nature of metals. As	6. Details on production quantity of copper slag and phosphogypsum are provided in the EIA report. The uses of copper slag and phosphogypsum are also mentioned in the EIA report. Both the materials will be handled with all precautions as they are valuable raw materials for several applications.	6. Refer the above point.no-5.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		all over India all the copper smelter are facing critical problems of disposal. I request the AEL to make a plan for Zero Dump of these two types of waste at site. There should be detailed utilization plan from day 1st and according to plan it should be immediately used. MOEFCC should not permit the proposed dumping in open to avoid the mountains of these two types of waste near the Kutch coast.		
		7. The premise of this project has the gypsum pond. Please provide the details on gypsum pond and its liner system to avoid leaching in to ground water and coastal sandy soil of the project site. The site is reclaimed with soil where the gypsum pond is proposed and it is located near the CRZ area. This pond can lead ground water pollution. Detailed engineering of the pond should be given to MOEFCC in final EIA report along with its handling mechanism, We demand to shift the gypsum pond to northern portion of the project where the soil is stable and having some more load baring capacity than the sandy part.	7. Gypsum storage area will be constructed as per the "Guidelines for Management, Handling, Utilisation and Disposal of Phosphogypsum Generated from Phosphoric Acid Plants" published by CPCB and which is available online at: http://cpcb.nic.in/wast/hazardouswast/GuidelineforM,H,Utili&%20DisposalofPhosphogypsumfromPAPlants.pdf. Compliance will be done as per permissions granted from statutory authorities. There will not be any impact on soil and ground water due to operation of gypsum storage area.	7. The process description is given in Section 2.3 of Chapter-2. The impacts an mitigation on solid waste management given in Section-4.2.5 of Chapter-4 in th EIA report.
		8. The project will have the water from Mundra Utility Pvt Ltd (MUPL). The water allocation letter is enclosed as Annexure-VII. What will be balance capacity of MUPL after allocating the 32.8 MLD. What will be source of water of MUPL.	8. MUPL will be supplying water for the proposed project from its approved desalination plant capacity. Approved capacity is 300 MLD.	8. The water requirement for proposed proje meet from approved 300 MLD capacit desalination plant of MUPL.
		9. The ETP will have 1.2 MLD of water but where will be the treated water go? Please provide the justification of the water balance diagram shown on page C2-5.	9. The proposed project is based on Zero Liquid Discharge (ZLD) system. Preliminary water balance diagram is given in figure-2.2 of the EIA report. The treated water from ETP will be further treated into the RO plant. The purified water	9. The treated water will be reuse in process an for horticulture. The detail water balance fo proposed project is shown in Figure-2.2 Chapter-2 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			from the RO plant will be reused in the proposed project and rejects will be sent to multi-effect evaporator to achieve zero discharge. There is no discharge of any treated water into the sea.	
		10. Approximately 3 LTPA copper scrap and electronic scrap is also used as input to proposed copper smelting plant and copper scrap melting facility. Will all the 3 LPTA copper waste imported by AEL? Is such e-waste import or scrap permitted to refine in India? Provide the details from where such huge copper waste will be procured for this proposed plant.	10. Copper scrap and E-scrap will be sourced domestically as well as from import market based on availability. All the applicable rules and regulations will be complied with.	10. The detail will be provide in deta engineering.
		11. Is the technology selection process based on the environmental friendly technology with special consideration of semiarid atmosphere? The EIA has shown the Outotec Mercury Removal Process with selection of chloride scrubber Please provide the technological justification of the selection of technology with considering the temperature and humidity of the Kutch region. Will this project manufacture high purity metallic mercury at the site?	11. Environment friendly technology will be selected and pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. EMP is provided in Chapter-9 of the EIA report. Rs 1044 Crores has been budgeted towards the pollution control systems. The list of products manufactured from the proposed project facility is mentioned in Chapter-1 of the EIA report.	11. The project description details is given Section-2.3 of Chapter-2 in the EIA report.
		12. What will be level of radioactivity in the copper slag and other metal waste? EIA does not have touched up the issue. Please provide the details with proper justification.	12. EIA has been conducted as per the TOR granted by MoEF&CC and all conditions of the same have been complied with. Project will be implemented in line with the permissions granted and all the conditions will be complied as per permissions.	12. The detail will be provide in deta engineering.
		13. What will be the pollution load of water/ electrolyte / hazardous waste from the Kaldo Furnace and PMR Plant? There are no word written on it and no details are given in EMP.	13. Effluent from PMR plant will be treated in the state of art ETP as shown in Chapter-2 of the EIA report. The waste generated from Kaldo furnace will be recycled in the proposed plant.	13. The preliminary composition of the was generated such as scrubber cake and E cake details are given in Table-2.10 & 2.1 of Chapter-2 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Please provide the information. What will be done of the solvent used in it will it be recycled or disposed off.		
		14. Table 2.6 exhibit the emission of the all vents from the whole smelter and allied plants. The SO_2 will be from H_2SO_4 Plant will be 3 Lac NM^3/Hr which will be 1 Kg/Ton H_2SO_4 produced. Is it not the huge quantity of SO_2? Is the coastal region have that much capacity to take the load of SO_2 in 25-30 kms area in ambient environmental situation? Can the AEL reduce the emission of SO_2 below 0.75 kg or more less / ton of H_2SO_4? I sincerely request the AEL management to reduce SO_2 emission from the H_2SO_4 plant. This is the critical gas which can deteriorate the health of people and animals and affect the environment seriously. I suggest MOEFCC to give the condition of 0.75 kg emission/ton of H2S0$_4$ produced. The SO_2 Level in ambient air is ranging between 20-35 micro-gram/m^3. After the proposed smelter it may cross the ambient air quality limit. So I am suggesting for decrease of SO_2 emission at the time of planning,	14. The SO_2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.	14. The sources of pollution from the propose project activities is given in Section-2.4 Chapter-2 and Impacts & its mitigatic measures are given in Chapter-4 in the E report.
		15. I suggest assessing the cumulative emission from all stakes shown in the EIA report for SO_2. The dispersion modelling should be carried out on the cumulative emission study. I believe that the cumulative study will show shocking result and the stake height can go above 150 -180 meters. The MOEFCC should increase the height of stake of Main Stack Secondary Gas Scrubber-18z II (Bi flue) Sr. no 10 and of H_2SO_4	15. The impact analysis has been carried out for the proposed project as per TOR granted by MoEF&CC in which baseline conditions are monitored and prediction of impacts has been carried out with respect to proposed project activity. The details have been provided in Chapter-4 of the EIA report. Proposed project is outside CRZ area and there will not be any impact on marine ecology.	15. The air quality modelling with increment and cumulative is given in Section-4.2.2 Chapter-4 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		no 12. The southern portion of the project site shows the presence of mangrove and it is inter tidal zone falling under CRZ 1A as per the CRZ map attached in EIA report. The southern portion is reclaimed land with sand. So I suggest that AEL should restore the mangrove in 1000 hector in Gujarat coastline to protect the coastal environment and balance the nature.		
		16. The air quality sampling point is carried out at 5 points between 0-5 kips of project site. There are only 3 location selected between 5 to 10 krns why? To complete the air quality monitoring as per procedure I suggest to carryout air quality analysis at new 5 points between 5 to 10 lams radius of study area and the data should be submitted in final EIA. Necessary changes in air modelling should also be done to minimise the impact of air pollution.	16. Air quality monitoring is done based on ToR granted and is as per CPCB and MoEF&CC guidelines. Details are provided in the EIA report.	16. Refer the above point no.-15.
		17. Please provide the air pollutants dispersion modelling based on sensitive receptors like habitat, village etc which is not done in draft HA report and is asked under TOR 10 (i) point	17. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.	17. Refer the above point no.-15.
		18. I suggest online stake monitoring system for all major stakes emitting SO_2, with showing cumulative emission data online at main gate. There should be display board showing the	18. Standards laid down by CPCB and SPCB will be complied.	18. AEL will complied

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		parameters with permissible limits.		
		19. Figure-9.1 page C9-6 EIA report has shown the organisational structure of Environment Management Cell. Excluding 5 safety engineer there are only 8 person staff shown which i feel highly inadequate to handle the most important pollution control system and manage the environment. I suggest there should be more Environmental Scientist, Chemist and Engineer needed for the pollution control components of such kind of big smelter. The environmental cell should have employee strength of 25 or more.	19. Proposed Environment management cell is as per requirements. Apart from the employees in environment management cell, line managers in Operations & Maintenance will also be well trained for environment protection.	19. The budget allotted for environment protection will be about Rs. 1044 Crore out of which for Air pollution control system is Rs. 639 Crores, Water pollution contr system is Rs. 360 Crores and othe environmental management systems (lik solid waste, greenbelt, post proje monitoring, gas collection and energ conservation) is Rs. 45 crores. The EM budget is given in Table-6.4 of Chapter-6.
		20. Adani group is working in the region having ports, power plants and SEZ from 2008. The female literacy rate in the study area of 10 KMS is only 23.58% which is highly unacceptable. I suggest the company should share and increase its CSR budget towards female literacy in the area.	20. Budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility for development of the local community through Adani Foundation. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure.	20. The CSR details (like CSR policy, initiative & activities, CSR Budget expenditure dat form 2010 to 2016, Proposed CSR budge plan for next 5 years and CSR implemente photographs) is given in Section-8.5 Chapter-8 in the EIA Report.
		21. I also suggest the utilization of 3% of the project cost not the profit share for the benefits of the local people and their health from the date of the start of project. MOEFCC has in past given these conditions to various high pollution potential projects.	21. Reply is as per point no. 20 above	21. Refer the above point no.20.
		22. As per TOR point IV no plan regarding Arsenic baring sludge is submitted in draft EIA report. Please provide the report for arsenic and mercury baring sludge. I suggest to provide a detailed plan of haz waste disposal in proper way with detailed information,	22. Arsenic bearing sludge will be stabilized and stored in the secured land fill (SLF). Mercury will be recovered as Calomel as well as mercury metal and will be sold in the market. SLF will be constructed and operated as per the CPCB guidelines for treatment, storage and disposal facility (TSDF). The SLF, once filled to	22. Refer the above point no.5.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			its capacity will be capped on top and soil cover will be spread and landscaping will be done.	
		23. As per Model TOR the point no x is not complied with. There are no data shown for the flood and river discharge near by the Greenfield project. I request to provide the same from governmental department in final EIA report along with mitigation measures if any.	23. Profile of the area has been provided in the EIA report. Suitable information will be obtained from Government authorities and if available same will be incorporated in the final EIA report.	23. Dhaneshwari, a seasonal river flows in th western part of the proposed site. The flo of the river will be maintained, as shown the Plant Layout is shown in Figure-2.1. Th river steam will not be disturbed.
		24. How the zero discharge status will be achieved by this plant is not shown in water table diagram and in draft EIA report. Please furnish details of all the components of ETP and stage wise pollution reduction to achieve the zero discharge status in final EIA.	24. Reply is as per point no. 9 above.	24. Refer the above point no.9
		25. I suggest during construction phase a 2 Nos of high capacity truck mounted dust collector should be used round o clock for controlling dusting in the construction area and introduction of coal tar temporary roads in the whole construction area.	25. Good housekeeping will be maintained in the plant premises; road sweeping machine will be used to clean roads.	25. Anticipated impacts and mitigations durir operation phase is given in Section-4.1 4.2 of Chaper-4 in the EIA report.
		26. As per the map submitted in draft EIA there is no 33% area left for the plantation. So from where the land will be taken for this 33 % plantation area? Please provide the breakup of the land.	26. The break-up of land has been provided in the PFR. However, the same will be included as a part of final EIA report. 33% of the project area is proposed for green belt.	26. The greenbelt development design ar recommended species details are provide in Section-4.3 of Chapter-4 in the EI report.
		27. On Model Tor point 9- CEP..,Point No -- iii- iv no answer is given in ETA report. I suggest that any violation or any environmental issue the highest authorities should be informed and they should address the problem/grievance/violation with spirit. These grievance redressal mechanism and details must be shared with public also in any such issue and publish on web site.	27. Project will be implemented in line with the permissions granted and same will be complied fully.	27. The construction will starts after getting a required statutory clearance from concer department.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		28. If share holders and board of directors are not aware about the issues/problems of pollution then the management will not work effectively. I suggest that the environmental issues/problems should be addressed in the grievance redressal mechanism and it should be online in local language on web site of proponent.	28. Our reply same as per point 27 above.	28. AEL will compile
		29. I suggest online complaint redressal mechanism for greater transparency and accountability of pollution control facilities in such huge industry like this. I demand that company should initiate the online complaint redressal mechanism and display all the respective answers of company to avoid misunderstanding and confusion among the citizens/environmental groups/media. The *MOEFCC should give the condition in Environmental Clearance for this demand.* This move will lead smooth industrial development of the area avoiding litigations in court and public protest.	29. Our reply same as per point 27 above. We assure you that all the environmental safeguards will be provided during implementation and operation of the project.	29. AEL will compile
32	Shri Debi Goenka, (Executive Trustee), Conservation Action Trust, 5 Sahakar Bhavan, 1st Floor Lbs Marg, Narayan Nagar, Ghatkopar (West) Mumbai	Refer Sr.No 7	Refer Sr.No 7	Refer Sr.No 7
33	Shri Chauhan Pravinsinh Bhurubha, Village: Siraya, Tal. Mundra, Dis. Kutch	1. What kind of forest area is 102.38 has?	1. Forest land involved in the project is a terrestrial forest as mentioned in Chapter-4 of the EIA report. As mentioned in Chapter-2 of EIA report, State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC".	1. Forest land involved in the project is terrestrial forest
		2. The site is located in the seismic zone-V, what is	2. The plant design will be done considering seismic	2. The plant design by considering sesm

		the vulnerability of the site due to its seismic sensitivity	zone-V as per IS 1893 (part-I)- latest edition. Disaster management plan has been prepared and available in Chapter-7 of the EIA report.	zone-V and details will be given in deta engineering report.
		3. Figure-1.2 is illegible. Please provide a better of the same map	3. Study area map on a larger size paper will be provided in final EIA report.	3. Noted and will be incorporated in final EI report.
		4. Please provide list of all the raw a materials that are required for the purpose of proposed project	4. Raw materials requirement and sources has been provided in Chapter-2 of the EIA report.	4. The raw material and source details ar presented in Section-2.2.2 and th proposed project layout is given in Figure 2.1 of Chapter-2 in the EIA report
		5. Please provide name of the sources, along with distance from the plant, from which raw material would be brought to the project site?	5. Reply is as per point no. 4 above.	5. Refer the above point no.-4.
		6. What are all the different air pollution which will be added to the Ambient Air Quality (AQQ) because of the transportation of raw material to the project site?	6. The copper concentrate and rock phosphate will be transported through state of art pipe conveying method. The required EMP measures will be implemented as mentioned in Chapter-6. Project will be implemented after obtaining required clearances from concerned statutory authorities and complied with.	6. The anticipated impacts on air quality an mitigation measure to control pollutio during construction and operation phase ar provided in Section-4.1.3 and 4.2.2 c Chapter-4 in the EIA report. Th comprehensive environmental monitorin program for construction phase an operation phase is suggested in Table-6.1 6.2 of Chapter-6 in the EIA report.
		7. What is the incremental concentration (in µg/m3) of each of air pollution which will be added to the AAQ because of the transportation of the raw material to the project site?	7. Reply is as per point no. 6 above.	7. Refer the above point no.-6.
		8. Give us a fully list of all the industries within APSEZ area, along with there production capacities.	8. As per TOR, the study area is 10 km around the proposed site and major industries and ports within 10KM radius study area of the proposed project have been given in chapter-1 of the EIA report. Full list of industries in study area, as desired, will be given in final EIA report.	8. As per TOR, the environmental settings 1 km radius around the project site is given i Table-1.1 of Chapter-1 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		9. Give us a full list of the all the industries within 15 kilometers radius of APSEZ area, along with their production capacities.	9. As per TOR, details of 10KM radius study area are covered.	9. Refer the above point no.-8.
		10. Give us a full list of all Air Pollutants which are discharged by each and every industry within APSEZ area, along with the quantum of discharge per hour.	10. The impact analysis has been carried out for the proposed project as per TOR granted by MoEF&CC in which baseline conditions, which reflect emissions from existing industries, are monitored and prediction of impacts has been carried out with respect to proposed project activity. The details have been provided in Chapter- 4 of the EIA report.	10. Refer the above point no.-6.
		11. Give us a full list of all Air Pollutants which are discharged by each and every industry within 15 kilometers of the APSEZ area, along with the quantum of discharge per hour.	11. As per TOR, details of 10 KM radius study area are covered. Environmental sensitivity is identified for 15KM radius area as per TOR.	11. Refer the above point no.-6 & 8.
		12. What is the maximum baseline concentration of $PM_{2.5}$ within 15 kilometers radius of the project site?	12. The maximum baseline concentration of $PM_{2.5}$ in ambient air, in the study area, is given in Chapter-3 of the EIA report.	12. The baseline AAQ monitoring location an results are given in Section-3.6 of Chapter- in the EIA report.
		13. What is the incremental $PM_{2.5}$ pollution which will be added by the project?	13. Incremental concentrations for PM_{10}, SO_2, and NO_2 have been given in Chapter-4 of the EIA report.	13. The Air modeling and incrementi concentrations for PM_{10}, SO_2 and NO_2 given in Chapter-4 in the EIA report.
		14. What is the impact of water withdrawal from the Sea on marine ecology?	14. There is no separate desalination plant proposed for the project. APSEZ will be supplying water for the proposed project from its approved desalination plant capacity. Therefore there will not be additional impact due to proposed project.	14. The impacts and mitigation measures o water quality is given in Section-4.2.4 Chapter-4 in the EIA report.
		15. The EIA Report is completely silent on feasibility of Zero Liquid Discharge (ZLD). The typical style of Vimta Labs, which is the consultant for the EIA	15. Besides the water balance diagram, technical scheme to achieve Zero Liquid Discharge (ZLD) is also given in Chapter-2 of the EIA report. The	15. The treated water will be reused in proces operation. The water requirement an breakup details are provided in Sectior

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Report, is that they provide Water balance diagram in the EIA Reports and say that it is there is no waste water discharge from the plant. Is water balance diagram sufficient to evaluate the feasibility of ZLD? Therefore, give us scientific explanation about the feasibility of ZLD for the proposed project.	rejects from the RO plant will be sent to multi-effect evaporator to achieve zero discharge and salts (mainly calcium) will be stored in the SLF within the project area. There is no discharge of any treated water into the sea.	2.2.3 of Chapter-2.
		16. Have you obtained prior Forest Clearance for the project?	16. Project area includes forest land for which APSEZ has applied for Forest clearance and same is under process. As a process State Government gives recommendation for diversion of forest land after completing all procedures and central government is granting the clearance. As per procedure, EC shall be obtained from MoEF&CC after compliance of applicable requirements.	16. MoEF&CC (forest conservation division) ha granted Stage-1 approval for diversion 1576.81 ha of reserved forest land in favo of Adani Ports & Special Economic Zor Limited (APSEZL) vide letter F.No.8 04/2016-FC dated 16th November 201 Stage-I FC has been obtained as given Annexure-V. The construction will start on after getting all required statutory clearanc from concern department.
		17. What is the total amount of Forest which has been diverted/cleared so far for the purposes of different project within APSEZ area?	17. As per TOR, forest land involved for the proposed project has been mentioned in Chapter-1 and in Land Use for the proposed project is given in Chapter-2 of the EIA report.	17. Refer the above point no.16. The land us breakup is given in Table-2.2 of Chaper-2 the EIA report.
		18. What has been the environmental damage which has happened as result of the Forest diversion so far?	18. As per TOR, baseline environment of the study area and environmental impacts of the proposed project have already been studied and provided in EIA report.	18. The baseline studies, impacts & mitigatic measures and EMP for proposed project hav already been studied and provided in EI report.
		19. How much money does the company owe to different banks?	19. This is outside the scope of the EIA report for the proposed project.	19. This is outside the scope of the EIA report f the proposed project.
		20. How much money does the company owed to public sector banks?	20. This is outside the scope of the EIA report for the proposed project.	20. This is outside the scope of the EIA report f the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			proposed project.	the proposed project.
		22. Why should we have a project promoted by a company which is deeply into debt?	22. This is outside the scope of the EIA report for the proposed project.	22. This is outside the scope of the EIA report f the proposed project.
		23. Have you paid the 2000 crores money imposed as fine/penalty for damaging the Environment?	23. This is outside the scope of the EIA report for the proposed project.	23. This is outside the scope of the EIA report f the proposed project.
		24. If not, when will the company pay penalty imported?	24. This is outside the scope of the EIA report for the proposed project.	24. This is outside the scope of the EIA report f the proposed project.
		25. The environmental damage which has already been caused by your company is punishable under Section 15 of the Environmental (Protection) Act, 1986 and you are liable to be imprisoned for the same. Why has the criminal action not been taken against you?	25. Adani Enterprises Limited has not violated any provision of Environment (Protection) Act, 1986. We assure you that all the environmental safeguards will be provided during implementation and operation of the project.	25. There is no court cases, litigations ar violation take place on the proposed project
34	Shri Chauhan Pravinsinh Bhurubha, Village: Siraya, Tal. Mundra, Dis. Kutch	1. **Non compliance of Terms of Reference and Breach of Circular dt. 31-03-2011 of the Government of India (Encl.: 1)** a) A T.O.R. (Terms of Reference) was issued for this project of dt. 21st June, 2016, in which it was clearly stated in Section 5(I) that clearance for forest land of 102 ha should be submitted. i) It is declared in Form No.1 (MoEF&CC uploaded by them on their website) to obtain Environment Clearance by Adani Enterprise that forest clearance is under the process. ii) It is declared on draft E.I.A. report on page no. AI 14 that (T.O.R. is not compliance by Adani) but forest clearance is pending. Thus, considering the abovementioned issued it is clear that T.O.R. is not compliance by Adani	1. We submit that all requirements for obtaining the TOR from MoEF&CC were fulfilled. After obtaining TOR, Environment Impact Assessment has been completed and all conditions of TOR has been complied with by project proponent for the purpose of public hearing. Regarding the Status of Forest Land, this is clearly disclosed in Form-1 for TOR and further in TOR compliance (Annexure-I, page AI-14 of EIA report) that "Forest land of 253 Acres is also involved which will be converted for industrial use. State Government has recommended for the forest clearance and it is now at Central government through File No. 8-04/2016-FC". The file status is also available online at MoEFCC Forest Clearance. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report.	1. As per TOR obtained from MoEF&CC and poi are addressed in the EIA report along wi TOR compliance. MoEF&CC (forest conservation division) hi granted Stage-1 approval for diversion 1576.81 ha of reserved forest land in favo of Adani Ports & Special Economic Zor Limited (APSEZL) vide letter F.No.8-04/201 FC dated 16th November 2018. Stage-I has been obtained as given in Annexure- The construction will start only after gettir all required statutory clearance from conce department. There is no litigations and court case relate to the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Enterprise. So, Environmental Public Hearing is not valid until the T.O.R. compliance is not made. b) According to Circular dt. 31-03-2011 of MoEFCC (Encl:4) that forest clearance should be obtained first for any new project, in which the land of forest department is to be utilized and the environmental clearance process should be made thereafter. The land of 102 Ha is of Forest in this project of Adani Enterprise and Forest Clearance is pending. It is proved by Encl: 2 and Encl:3. Thus, any environment clearance process made before forest clearance is illegal and Public Hearing may also be treated illegal. c) As per Section 8(iv) of E.I.A. Notification, 2006 if any information is concealed deliberately, the application should be cancelled. Thus, the abovementioned information pertaining to forest clearance is concealed by Adani Enterprise deliberately to misguide. Hence, their application for environment clearance must be cancelled. d) Why any action is not taken in spite of the complaint (encl.:5) regarding abovementioned point no. 1 is made by me by e-mail on 11/04/2017 to (1) K. C. Mistry, Member Secretary, Gujarat Pollution Control Board, Gandhinagar and (2) Arvind Agrawal, Chairman, Gujarat Pollution Control Board, Gandhinagar, (3) Regional Officer, Gujarat Pollution Control Board, Gandhidham, (4) M. A. Gandhi, Collector, Kutch, (5) M. K. Sing, Joint Secretary, MOEFCC., New Delhi?. Why the process pertaining to Environment Clearance is not stopped? On what basis Public Hearing is arranged?	As the project is proposed by M/s Adani Enterprises Limited in APSEZ land, Forest Clearance has already been applied for this land by APSEZ (erstwhile Mundra SEZ Ltd.). The requirement of OM dated 31.03.2011 is "the proponent should submit the proposal for TOR, only after applying the Stage-I forestry clearance". Hence, this requirement has also been complied as the Forest Clearance was applied much before applying for TOR. At no stage there is any concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application by the project proponent. There is no deviation from the Section 8 (vi) of EIA Notification 2006 also. We do not offer any comment related to point 1(d) of your letter.	

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		2. **Information concealed in Form-1** a) Review Petition is filed on judgment of P.I.L. No.17 of 2011 of the grazing land of Navinal on the land proposed in point no. 16 and 26 of basic information. It is concealed that it is under proceeding. b) The information of Daneshwari River is concealed by Adani in point nos. 2 and 10. But, this river passes through the proposed project. Thus, the information is concealed. Thus, as per Section 8(iv) of E.I.A. Notification, 2006 if any information is concealed deliberately, the application should be cancelled. The abovementioned information is deliberately concealed in Form No.1 by Adani Greenfield Copper refinery. Hence, their application deserves to be cancelled.	2. A) The PIL 17 of 2011 has been disposed by the High Court. The judgment is under review. B) Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. Google Map is provided in EIA Report (Schedule –C 1-6).	2. B) Dhaneshwari, a seasonal river flows the western part of the proposed site. Th flow of the river will be maintained, a shown in the Plant Layout is shown Figure-2.1. The river steam will not b disturbed.
		3. **Deficiencies in E.I.A. report** a) It is declared by Adani in point no. 10 on page Nos. 1-4 of E.I.A. report that there is no archaeologically important place within the radius of 10 km. But, an archeologically place is situated in Navinal Reserve Forest, about 1 km. from the proposed project area. Accordingly, survey of this area is made by archaeologically department of M. S. University. The primary report is attached herewith. Thus, this information is concealed.	3. A complete list of archaeological monuments in the state of Gujarat is available at http://asi.nic.in/asi_monu_alphalist_gujarat.asp. Further, a complete list of excavations is available at http://asi.nic.in/asi_excavations.asp. As on date, there is no Notified Archeological Site located within 10 km from the proposed project site.	3. There is no notified archaeologically site withi 10 km from the proposed project site.
		4. **Violation of Sunita Narayan Committee** a) It is mentioned on page no. 69 of Sunita Narayan	4. The Committee and its report pertain to APSEZ. The points mentioned are not related	4. This is outside the scope of the EIA report f the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Committee Report that fishing port should be made at Bhadreshwar so that people of surrounding villages may make fishing activity there. But nothing such is made there. b) It is mentioned on page no. 69 of Sunita Narayan Committee Report that arrangement of coming and going should be made so that fishermen may move on coast. But nothing such is made there by Adani. c) It is mentioned on page no. 75 of Sunita Narayan Committee Report that collective grazing land should be given back voluntarily so that people may graze their animals. But nothing such is made there. d) It is mentioned on page no. 75 of Sunita Narayan Committee Report that studied till now. So permission for new project should not be granted. e) The committee has mentioned in recommendation no. 7.2.2 that environment permission for north port should be cancelled, because Bocha Island is situated there and mangrove is caused heavy damage there. In spite of that permission is not withdrawn. f) As per the Sunita Narayan Committee report maping of HTL AND LTL should be made and kept in public domain, which is not placed till date. 5. **Issue of land of forest department** a) A demand of land of reserve forest of 8 villages	to the proposed project activity therefore we do not offer any comment. 5. APSEZ has applied for diversion of forest land for industrial purpose. The forest diversion is	5. MoEF&CC (forest conservation division) h granted Stage-1 approval for diversion

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		aggregating to 1576.81 ha is made by Adani on dt. 19th July, 2004. Its forest clearance is under process. Out of 1576.81 ha of demanded land to be used for project, 102.38 Ha of land is of Shiracha Danderi Rakhal (reserve forest). b) According to Forest Privilege Act, 2006 the villagers making use of the land have prior right on it and it cannot be allotted for industrial or other use without permission of the village meeting. c) According to Forest Privilege Act, any community in use of the land for last three generations or earning livelihood from it may have right on it. d) The villagers of surrounding are making use of this forest land of 1576.81 Ha. So this land cannot be allotted for industrial purpose according to Forest Privilege Act. e) Shiracha Gram Panchayat has put it claim before Prant Stariya Van Adhikar Samiti to settle its community rights on the forest land to be used for proposed project. f) Out of the 1576.81 ha of land under demand, 89 ha of land is of Navinal village and Navinal Village Committee has put collective claim on it. g) According to Forest Privilege Act, the villagers have prior right on it. So, its forest clearance cannot be availed and it cannot be used for the project. h) It is the last reserve forest in the area. If it is allotted for industrial purpose, the area will remain without forest and more forest are	under process. All the rules will be complied for forest diversion, as applicable. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.	1576.81 ha of reserved forest land in favc of Adani Ports & Special Economic Zo Limited (APSEZL) vide letter F.No. 04/2016-FC dated 16th November 201 Stage-I FC has been obtained as given Annexure-V. The construction will start or after getting all required statutory clearan from concern department.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		essential for industrial area. 6. **Noncompliance of Environment Clearance of Adani Port and Special Economic Zone** a) As per condition (2) conservation of creeks, rivers mangroves coming within the area is to be made. It can be seen from the photographs of different years taken from satellite annexed herewith that the creeks, rivers mangroves coming within the area are exterminated by Adani. Thus, the condition is violated. b) As per condition of every creek should be kept in comparison with the satellite image, 2005.But, the condition is not followed by the Adani Port and S.E.Z. c) It is directed in Specific Condition (5) that a recent satellite map should be submitted once a year so that it can be compared with the Satellite map of year 2005 and confirmed whether there is any change in creeks, rivers, mangrove and mouth of creek. No such map is submitted by A.P.S.E.Z. till date. Thus, condition compliance is not followed. d) As per condition (6) A.P.S.E.Z. must observe order passed by the Ministry of Environment and Forest considering the report submitted by Sunita Narayan Committee. But, it is not followed by A.P.S.E.Z. e) As directed in condition (12) and (13) NCSCM/NIOT will control and verify the implementation as per action plan approved by Ministry of Environment and Forest. Execution	6. The issues raised are for APSEZ and are not related to the proposed project activity therefore we do not offer any comment.	6. This is outside the scope of the EIA report fc the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Report of Action Plan will be required to be submitted with six monthly monitoring reports. This condition is not complied till date. a) As per condition (15) no change should be made in flow of river. But, The route of river of Kandagara passing through Adani Power is changed.The Kamandwala flow between Navinal and Shiracha is changed. The mouth of Nagmati River is closed. O.C.C.L. Company is established on river of Dhrab. Construction of Adani Hospital is made on Kevdi River. Thus, breach of this condition is made. f) As per condition (18) no development should be made up to 50 meter from mangrove area. But, many constructions are erected by project proponent such as construction of Adani House building. Thus, breach of this condition is made. 7. **Report of Gujarat Ecology Commission.** a) A report is prepared by Gujarat Ecology Commission upon study of effect on mangrove and its ecology due to coal handling. Mundra Port is a part of it. b) According to the report growth of mangrove is affected by coal dust. c) As per the report BOD (Biological Oxygen Demand) was 9.52 in 2010/11 which has reached to 27 in 2012/13 which is the highest in the areas under survey. d) COD (Chemical Oxygen Demand) was also 38 in 2010/11 which reached to 92.65 in 012-13.	7. The Report on Coal Handling and its impacts are not relevant to the proposed project activity therefore we do not offer any comment.	7. This is outside the scope of the EIA report fo the proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		e) DO (Dissolved Oxygen) has reached to 4.92 from 4.8. which is CPCB is higher than permissible line. f) SO (Suspended Solid, blirness in water) has reached to 162 from 56 which is CPCB is higher than permissible line. g) Nitrate 0.313 in 2010-11 has reached to 1.154 in 2012-13. 8. The grazing land of Navinal village will be used for Copper Refinery Project of Adani Enterprise Ltd. The matter of land is sub-juiced. No judgment is passed in favor of any party. 9. In spite of having so many industries, nothing is made for the employment to local people. I.e. 400 Ha of land of surrounding villages is given to Adani Power and fishermen, farmers, cattle breeders are left unemployed. In reward thereof only 500 out of 7000 laborers and 15 out of 1500 employees are local. Consequently, nothing but unemployment and pollution will be available from this project. 10. This is a coastal area. So, C.R.Z. clearance is required so as to make action plan for salvage against earthquake or tsunami.	8. The PIL 17 of 2011 has been disposed by the High Court. The judgment is under review. 9. Details on potential employment is mentioned in Chapter-2 of EIA Report. Preference will be given to local people for employment in this project based on eligibility. There is a plan to set up a Skill Development Centre to improve the employability of local youth. 10. The proposed site is outside CRZ and hence there is no requirement of Clearance under the CRZ Notification. The same is shown in Fig. 1.5 of EIA Report. Risk Analysis and Disaster Management Plan has been prepared to	8. The PIL 17 of 2011 has been disposed by th High Court. The judgment is under review. 9. Employment requirement details durin Construction and operation phases is given i Section-8.4 of Chapter-8 in the EIA report. budget of Rs.8 crores per each year has bee allotted for Enterprise Social Responsibility Corporate Social Responsibility (CSR activities for five years. The CSR details (lik CSR policy, initiatives & activities, CSR Budge expenditure data form 2010 to 2016 Proposed CSR budget plan for next 5 year and CSR implemented photographs) is give in Section-8.5 of Chapter-8 in the EIA Report 10. The prosed project is a Greenfield project an which is outside of the CRZ. The CRZ map i shown in Figure-1.5 of Chapter-1 in the EI report. 		11. 32800 K.L.D. will be utilized by the company and desalination plant will be used for it, which will affect the sea-life adversely. This desalination is connected with the company. But no study of its effect is made.	identify and address the natural disasters, which is covered in EIA Report. 11. There is no separate desalination plant proposed for the project. APSEZ will be supplying water for the proposed project from its approved desalination plant capacity. Therefore there will not be additional impact due to proposed project.	EIA report. 11. The water requirement for proposed projec meet from approved 300 MLD capacit desalination plant of MUPL.
		12. There are two power projects and biggest coal handling port in Asia is situated here but it is not mentioned in E.I.A. report.	12. References of Adani and Tata Power Plants as well as west & south ports of APSEZ are mentioned in Table 1.1 of Chapter 1 of the EIA Report.	12. The list of industries within the 10 km radiu from the project site is given in Table-1.1 c Chapter-1 in the EIA report.
		13. Environment Clearance Compliance of other projects of Adani is not made. So, people in surrounding should not be caused damage by giving permission to new project.	13. Comment being general in nature, we do not offer comment.	13. This is outside the scope of the EIA report fc the proposed project.
		14. The livestock of our villages were grazing on the grazing land of the proposed project. The livelihood is ruined by snatching it. Now there will be no grazing land by giving remaining forest land to new project.	14. As established procedure, forest clearance is recommended by State Government and approved by MoEF&CC only after completion of all requirements and compliance by user agency. Adani foundation is working for Sustainable Livelihood in the surrounding villages through CSR projects.	14. The CSR details (like CSR policy, initiative & activities, CSR Budget expenditure dat from 2010 to 2016, Proposed CSR budge plan for next 5 years and CSR implemente photographs) is given in Section-8.5 c Chapter-8 in the EIA Report.
		15. The hazardous chemical such as sulphuric acid will come out due to copper refinery. The possibility of pollution and acid rain will increase. So, this project should be cancelled.	15. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. Sulphuric Acid is a saleable product from this project. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control	15. The process of extraction of copper meta sulphuric acid is recovered as a byproduc from the off-gases generated from th smelting and converting furnaces. A part c sulphuric acid produced is utilized fc phosphoric acid production and rest will b sold in the market based on marke requirement. The process description of SA is given in Section-2.3.8 of Chapter-2.

		16. The land in surrounding will be washed out due to closure of the river and danger of flood will increase in surrounding villages.	Board (CPCB). Therefore no significant adverse impacts are envisaged. 16. No closure of river is envisaged in the proposed project.	16. Dhaneshwari, a seasonal river flows in th western part of the proposed site. The flo of the river will be maintained, as shown i the Plant Layout is shown in Figure-2.1. Th river steam will not be disturbed.
		17. Old roads will be closed. One of which from Navinal to Kotdi creek will be closed.	17. Proposed project will not affect the access from Navinal to Kotdi Creek.	17. The existing roads will be strengthened b widening or upgrading and extended t approach the proposed site.
		18. Wild animals are living in this area, what about their restoration?	18. Flora and Fauna study has been conducted as part of the EIA and details are provided in the Chapter 3 and management plan is also provided in Chapter 4.	18. There is no wild animal in the project site Conservation Plan for Protection of Peacoc is provided in Section-3.3.9 of Chapter-3 i the EIA report.
35	Shri Vijay U. Gadhavi, President, Kutch Charan Sabha, Mandvi Naliya Road, Mandvi – Kutch	It is humbly submitted that, due to Copper Refinery Project of Adani Enterprise Limited (AEL) proposed to be established in the district of Kutch in the villages of Navinal and Siracha is a serious danger to the local public, local community depending on the forest, fishermen, and environment and coastal ecology. There are many discrepancies, mistakes and wrong information in the draft EIA report. It transpires from the study report that if such a big project is established on the sea shore human health, animal – birds, and coastal life as a whole will be jeopardized seriously and permanently that cannot be compensated. This is such a dangerous pollution emanating project that, the future generations of locals residing in the surrounding villages may be crippled , lame and impotent. Therefore we are objecting establishment of the project at this location. We are submitting our written objection on the basis of the points mentioned below. And we demand to prevent establishment of this project at this location	We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control and environmental protection. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:	

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		as it is not suitable here.		
		1. We object selection of land of reserved forest as project site by Adani Enterprise Limited (AEL). The options selected for the project site are wrong. This project shall be established away from the sea shore. As close pipeline conveyor system for transportation of raw material is already in existence it is possible to establish this project away from sea shore in spite of that the company management has decided to establish it near sea shore. It is not fair. Water and electricity also can be supplied there easily and water disposal being zero there is no problem of water discharge. It is dangerous to establish such an industry on the sea shore. Damaging the environment of the sea and creating land by reclamation using sand and establishing such project on it is harmful. So we object the project under Forest Rights Act 2006 as livelihood of people of village who are dependent on the forest is under risk. Forest lands are reducing so the land of Danderi and Shiracha forest should not be given to the company for other industrial purpose. Cattle of the village graze in this forest. So we are taking strong objection against the use of the forest for the company.	1. The Copper Project is based on the import of Copper Concentrate, which is not available in our country in required quantity. Also, most of the finished products will be dispatched through sea route. These factors were considered as site selection criteria. The site is advantageous in terms of proximity to the port. With all the pollution control measures proposed, the environmental risks and impacts will be mitigated. The project is also based on zero liquid discharge. There are many such plants on coastal locations and have been operating without any significant impact on the coastal ecology. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. The entire process and conditions of forest clearance will be complied, once obtained.	1. The prosed project details are given Chapter-2 in the EIA report.
		2. Adani Company has done permanent damage by cutting the Mangrove trees and filling up the creeks. Sand dune available in the forest on the sea shore of Navinal has been used for development of port. So the whole geography of the coastal area has changed. And as on date our case is pending with Hon. Supreme Court in the matter. During development of APSEZ the damage has been done to the environment, the	2. The para has alleged Adani Group of violations that have not been substantiated. There have been such allegations and legal suits in the past which have been dismissed by the Hon'ble Courts. The points raised do not pertain to proposed project and therefore we do not offer any comments. However, project will be implemented in line with the permissions granted and by implementing environmental	2. The budget allotted for environment protection will be about Rs. 1044 Crores, o of which for Air pollution control systems Rs. 639 Crores, Water pollution contr system is Rs. 360 Crores and oth environmental management systems (lik solid waste, greenbelt, post proje monitoring, gas collection and energ conservation) is Rs. 45 crores. The EM

		sea shore and livelihood of the people, so we object the company and the proposed project. The matter has been proved in the court and the government that the company is establishing industries by damaging environment and coastal life. Therefore considering the company being disputed and its spoiled past this project deserves to be rejected.	safeguards.	budget is given in Table-6.4 of Chapter-6.
		3. Why the details of all survey numbers of land in which the said project is proposed to come up is not mentioned in the report. Please provide the entire detail about the area including the respective villages.	3. The proposed project is located partly in notified SEZ and partly in forest land applied for diversion. The Survey Numbers for notified SEZ have been incorporated in the Form-1 application and its details are: *APSEZ area in Siracha and Navinal villages. Siracha village 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/P, 142/P, 143, 144/1, 144/2, 147/P, 295/1 part, 295/2 (forest land), unsurveyed land, old ACL and diverted Mundra forest land part. Navinal Village 223/P, 224/P, 225/P and old ACL*. Same will also be included in the final EIA Report.	3. The survey numbers of proposed project given in Table-1.1 of Chapter-1 in the EI report.
		4. Please mention plot numbers and its area in respect of APSEZ land given to AEL for the project and also provide plot wise details of land ownership in writing.	4. APSEZ has given in principle approval to transfer/ allot the land in favour of AEL after obtaining due permissions. A copy of letter is provided in the Annexure-III of the EIA report.	4. Memorandum of Understanding (MoU) is place between Adani Ports & Special Econom Zone Limited (APSEZL) and Adani Enterprise Ltd (AEL) for 154.18 ha (381 acres). Lar allotment letter is enclosed as Annexure-III.
		5. Furnish area wise details of all the plots which are with APSEZ at present. Also furnish details of plots sold out and unsold.	5. The land details related to proposed project are provided in the Point No. 3 above.	5. Refer the above point no.-3.
		6. Is the land proposed for the project and owned by the APSEZ, a notified SEZ? Provide the copy of the notification.	6. Part of the proposed project land, 154.18 ha is within the Notified SEZ. A copy of notification is enclosed as Annexure-? And same will be	6. Refer the above point no.-4.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			included in the final EIA Report.	
		7. Is the area of the project that shall be given by APSEZ to AEL, to be considered under the SEZ? Provide the relevant details as per the Government record and status.	7. Part of the proposed project land, 154.18 ha is within the Notified SEZ.	7. Refer the above point no.-4.
		8. Provide the government documents showing the ownership of APSEZ for the land where the project is to be established.	8. Proposed project includes notified SEZ area and the forest land. A copy of notified SEZ area is as per point no. 6 above. APSEZ has applied for forest land diversion and same is under progress. Details of land are provided in the chapter-2 of EIA the report.	8. Refer the above point no.-4.
		9. Provide the details of the land that is illegally encroached by MPSEZ at Shiracha, Danderi forest. Provide the details of the land that is not denotified by the Government of India but has been taken into possession by the company.	9. We do not agree with your observation. AEL has not started any activity at the site and there is no encroachment on any land.	9. The construction will starts after getting all required statutory clearance from concern department.
		10. Provide the date of the submission in case if the APSEZ would have sought approval of SEZ denotification (for AEL project area) from the Government of India.	10. At the moment, there is no requirement of SEZ denotification for the proposed project area.	10. Refer the above point no.-4.
		11. Provide the planning and logic for undertaking project for AEL copper plant while obtaining the land at Shiracha, Daderi forest.	11. Alternative site analysis was carried out. The site selection criteria and the study of alternative sites is detailed in Chapter-5 of the EIA Report.	11. The comparison salient features alternative sites done and details a presented in following Table-5.1 and shown in Figure-5.1 of Chapter-5 in the E report.
		12. Provide the copy of the permission for reclamation provided by the Government of India, if any, to the MPSEZ for forest land and other land.	12. There is no proposal of reclamation in Forest Land. The proposal for diversion of forest land is under process. Other land under the proposed project is notified SEZ area.	12. There is no reclamation in the propose project. Forest land of 102.38 ha (25 acres) is also involved which will t converted for industrial use. MoEF&C (forest conservation division) has grante Stage-1 approval for diversion of 1576.8

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
				November 2018. Stage-I FC has bee obtained as given in Annexure-V. Th construction will start only after getting a required statutory clearance from concer department.
		17. If the forest land proposed to be denotified for other industrial use, then provide the copy of no objection certificates given by local Panchayats in this regard.	17. The Forest Land diversion is under process and all the conditions of the forest clearance will be complied once granted.	17. Refer the above Point no.-16.
		18. Please provide a copy of the certificate given by the district collector under the Forest Rights Act, 2006, stating that private or Government land is not available in this area other than the forest in this area.	18. The Forest Land diversion is under process and the requirements of Forest Rights Act, as applicable, will be complied with.	18. Refer the above Point no.-16.
		19. Provide the information about what is the dispute under the SLP 28788/2016 being heard in the Supreme court and WP (PIL) 12/2011 being heard in the Gujarat High Court against MPSEZ.	19. SLP28788/2016 in the Supreme Court and WP (PIL) 12/2011 at Gujarat High Court are dismissed vide respective orders dated - and -. Therefore, there is no dispute.	19. There no dispute regarding the propose project.
		20. What is the amount of penalty paid by the company to the Government on the basis of the recommendation provided by Sunita Narayan committee to the Forest and Environment ministry? Provide the current status of the penalty and provide the legal information about the same.	20. In the matter of SunitaNarain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015.	20. This is outside the scope of EIA report fo the proposed project.
		21. Apart from the EIA report, please provide the additional details about how many natural rivers, drains are located in the land selected for Project Site and forest land, so that no river, drains would be left to be mentioned in the final EIA report out of knowledge. Our demand is to re-study with more accuracy and the demand is	21. Dhaneshwari, a seasonal river flows in the western part of the proposed site. 				ha of reserved forest land in favour of Adar Ports & Special Economic Zone Limite (APSEZL) vide letter F.No.8-04/2016-F dated 16th November 2018. Stage-I FC ha been obtained as given in Annexure-V. Th construction will start only after getting a required statutory clearance from concer department.
		13. The reserved forest is not mentioned in Form 1 of the project but it is shown in map and EIA report. Why such contradictory information is provided?	13. The details of Forest Land are also shown in Form-I (Basic Information, Sl. Nos. 9, 12, 21 and 23).	13. The details regarding reserved forest hav been mentioned in Section-9 (II Environmental Settings of Form-I and Table 1.1 of Chapter-1 in the EIA report.
		14. The company has to make 30% green belt compulsorily. Therefore 157 hector comes as 30% of green belt of 526 hector. Out of the 526 hector does the company wish to obtain 102 hector of reserve forest and show it as green belt? If yes, from where will the company bring the rest of the 55 hector of reserve forest? Thus, this company wants to encroach the forest illegally.	14. Company has proposed 33% area for Green Belt. The 102.38 ha forest land, once diverted and allotted, will be part of the project area. The Green Belt will be developed in 33% of the total project area of 256.58 ha. There is no illegal encroachment of forest area.	14. As per guidelines and ToR point 33% lan should be allotted for greenbe development. AEL proposing 85.79 (33% land for greenbelt development.
		15. As shown under the EIA report page no. C-3 16, most part of the project falls in Shiracha, Dedari forest land. Is this map false? If so, provide a correct map.	15. As per the map on Page C3-16, the project site also includes part of the Siracha Reserve Forest. Correct map is provided in the EIA report.	15. The details which are incorporated in th EIA report is correct and relevant to th proposed project.
		16. Provide the forest clearance copy that was received by the APSEZ for the above mentioned point.	16. The Forest Clearance is still under process. The details are available on the website of MoEF&CC (File No. 8-04/2016-FC).	16. Forest land of 102.38 ha (253 acres) is als involved which will be converted fc industrial use. MoEF&CC (fores conservation division) has granted Stage- approval for diversion of 1576.81 ha c reserved forest land in favour of Adani Port & Special Economic Zone Limited (APSEZL vide letter F.No.8-04/2016-FC dated 16t

				same. Provision would be made to reclai the disposed copper slag ar phosphogypsum from gypsum pond at later stage for various utilization venture The solid waste generation, wast characterisation and mode of disposal given in **Section-2.4.3** of **Chapter-2** in th EIA report.
		31. Provide the detail as to whether the Navinal forest has been declared as biodiversity heritage place by the Gujarat State Biodiversity Board, or it is being under proposal.	31. There is no notification on Navinal Forest being notified as Biodiversity Area.	31. There is no notification on Navinal Fore being notified as Biodiversity Area.
		32. Whether a study has been conducted to identify carrying capacity of the Navinal- Shiracha coastal area? Provide information if the study is undertaken. Provide information on how much capacity will be left after AEL's project.	32. Carrying Capacity Studies are undertaken by Statutory Authorities. We are not aware of any Carrying Capacity Studies carried out for this area. EIA studies have been conducted for the study area as per TOR granted by MoEF&CC.	32. EIA studies have been conducted for th study area as per TOR granted by MoEF&C(
		33. Provide the information on whether the comparison is made on EIA reports of both projects for the combined impact of air- water pollution caused due to the power plant of Adani and Tata Power, air, water pollution and after AEL's Copper plant.	33. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for Air and Water and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.	33. Refer the above point no. 29.
		34. Provide the information about where the copies of the environmental literature of this project were kept which were translated from English to Gujarati according to the EAC meeting minutes.	34. The Gujarati Summary was placed at all the Gram Panchayats within 10 km of the proposed site in addition to the 7 places- The District Collector, Bhuj, District Kutch, District Development Office, Bhuj, District Kutch, District Industry Centre, Bhuj, District Kutch, Taluka Development Office, Mundra, District	34. The public hearing proceeding details given in Chapter-7 in the EIA report.

			Kutch, Taluka Development Office, Mandvi, District Kutch, The Chief Conservator of Forest, Ministry of Environment, Forests and Climate Change Government of India, Regional Office (West Zone), Kendriya Paryavaran Bhavan, E-5, Arera Colony, Link Road -3, Ravishankar Nagar, Bhopal 462016 and Regional Office, Kutch (East), Gujarat Pollution Control Board, Room No. 215-216, Second Floor, Kandla Port Trust, Admn Building, Sector 08, Gandhidham, Kutch.	
		35. So far, how many ha of Mangrove afforestation is carried out by Adani Group and where is plantation done? Provide the detailed information.	35. This is outside the scope of the EIA Report for the proposed project.	35. This is outside the scope of the EIA Repo for the proposed project.
		36. Will the power transmissions line of APSEZ be moved due to AEL's project? Provide more details.	36. Power Transmission Lines will be retained with some deviation.	36. The details will be given in deta engineering.
		37. The staff required (8 persons) for the Environmental Management Plan of highly polluted Copper Refinery Plant is proper as shown in the EIA report? This is a best example of how serious the Adani group is to the pollution issues.	37. 8 persons are proposed as a part of Environment Cell alone. The Environment Management is not only limited to these 8 persons, but it includes the operations carried out by various departments for the management of environment.	37. The environmental monitoring cell is show in Figure-10.1 of Chapter-10 in the EI report.
		38. Will Adani Port staff also look into environmental and pollution issues in this AEL project? Currently, how many staff are there who serves in the Adani Group and also have contributions in all the projects of the group (port, SEZ, power plant etc.)? Is it appropriate to perform such jobs. Is it legally allowed?.	38. Adani Enterprises Limited will have its own Environment Management Team headed by an environmentalist, capable of handling all the environmental and pollution issues of the Copper Project. Other issues are outside the scope of the EIA Report for the proposed project.	38. Refer the above point no.-37.
		39. Why no information is given in TOR or any other	39. The area under SLF is provided in the Pre-	39. Secured Land Fill (SLF) is proposed ov

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		place about the 30 acres of SLF? Is this plan possible Without TOR?.	feasibility Report, which is a part of the TOR Application.	13.35 ha within the project premises f disposal of ETP waste sludge and spe catalyst. Other Hazardous waste will t disposed through the approved recyclers.
		40. Who will be responsible for destroying surrounding villages located in wind direction by spreading sulfuric acid and other toxic gases and other tons of sulfur dioxide gas from more than 46 chimneys?.	40. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.	40. The SO2 generation is a continuous proce during smelting activity, primary gas strea will be routed to SAP plant and t secondary gas stream will be routed throu scrubber. And, there is no provision in t plant/process for storage of SO2 gases ar will be processed immediately to produ sulphuric acid. Sulphuric acid plant (SAP) has bee installed with highly efficient (Doub Conversion Double Absorption) DCD process to control the SO2 emission to le than 1 kg/t of sulphuic acid produced. T Details of Episodal SO2 Stack Emissions Section-4.2.2.3 of Chapter-4.
		41. If you have studied about the impact of these Toxic Gases on people's lungs, then provide the copy of it and if not, then our demand is that the approval or rejection should be given on the basis of such study.	41. Our reply is same as point no. 40.	41. Refer the above point no.-40.
		42. Does the GPCB have the instruments to measure toxic gases concentration in air? If GPCB is unable to measure concentrations of metals then who will measure the pollution? Provide the	42. The question does not pertain to us, therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to	42. Environmental monitoring duri construction and operation phase is given Table-6.1 & 6.2 of Chapter-6 in the E report.

		detail about it.	the permissions granted.	
		43. Will the effluent of the Smelter project be directly or indirectly discharged in the sea?	43. Proposed project will have zero liquid discharge facility and no treated water will be sent to the sea.	43. The water system, is highly integrated ar is designed for Zero Liquid Discharge (ZLD The water requirement details is given Section-2.2.3. The process details ar schematic flow diagram of ETP is given Section-2.4.2 and Figure-2.23 of Chapter-2
		44. The CEPT design in which industrial waste water will be treated is not mentioned in EIA. So, provide the copy of that design.	44. There is no proposal of tie up with any CETP. AEL will have its own ETP for treatment of wastewater. Details are provided in the EIA report.	44. Refer the above point no.-43.
		45. The information or design of the water recycling plant is also not provided. Provide its information.	45. The Flow Diagram and the Capacities are provided in the EIA Report. Further planning will be carried out during detailed engineering.	45. Refer the above point no.-43.
		46. Provide the copy if the company has done the study of the existing health conditions of the local village people. Provide the details if the local village people have been explained the information in the simple language about this project.	46. EIA report includes details on demographic information about the study area. The Executive Summary of the EIA Report was prepared in local language and made available to all the panchayats within 10 km radius of the proposed site. The Executive Summary in local language was also made available at 5 Government Offices along with EIA Report. Adani foundation is working in the area of community health covering all the villages in the surrounding.	46. The demographic and socio-econom details are given in Section-3.10 of Chapte 3 in the EIA report.
		47. Provide number of total employment given to locals by APSEZ till date.	47. This is outside the scope of the EIA Report for the proposed project. However, local employment will be provided for proposed project based on eligibility and details are provided in the EIA report.	47. This is outside the scope of the EIA Repc for the proposed project.
		48. The number of contracts received by local people	48. This is outside the scope of the EIA Report for	48. This is outside the scope of the EIA Repc

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		established at a distance of more than 10 kms away from the coastal line, there is no logic behind establishing the project on coastal line. Water and electricity also can be made available there. Since zero water discharge, there is no issue of water wastage to be disposal. It is dangerous to establish such project on coast line and establishing such project by harmful of marine life and environment by leveling the area with sand is harmful.	site selection criteria. The site is advantageous in terms of proximity to the port. With all the pollution control measures proposed, the environmental risks and impacts will be mitigated. The project is also based on zero liquid discharge. There are many such plants on coastal locations and have been operating without any significant impact on the coastal ecology. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. The entire process and conditions of forest clearance will be complied, once obtained.	
		2. Please provide us details of survey numbers of land in which the said project is proposed to come up with details of villages under which the said land falls and please include the same in final EIA Report.	2. The proposed project is located partly in notified SEZ and partly in forest land applied for diversion. The Survey Numbers for notified SEZ have been incorporated in the Form-1 application and its details are: *APSEZ area in Siracha and Navinal villages. Siracha village 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/P, 142/P, 143, 144/1, 144/2, 147/P, 295/1 part, 295/2 (forest land), unsurveyed land, old ACL and diverted Mundra forest land part. Navinal Village 223/P, 224/P, 225/P and old ACL*. Same will also be included in the final EIA Report.	2. The survey numbers of proposed project given in Table-1.1 of Chapter-1 in the EI report.
		3. Please mention plot numbers and its area in respect of APSEZ land given to AEL for the project and also mention give plot wise details of persons in whose possession the same and please include the same in final EIA Report.	3. APSEZ has given in principle approval to transfer/ allot the land in favour of AEL after obtaining due permissions. A copy of letter is provided in the Annexure-III of the EIA report.	3. Memorandum of Understanding (MoU) is place between Adani Ports & Speci Economic Zone Limited (APSEZL) and Ada Enterprises Ltd (AEL) for 154.18 ha (38 acres). Land allotment letter is enclosed a Annexure-III.
		4. Furnish area wise details of all the plots which are with APSEZ at present. Also furnish details of	4. The land details related to proposed project are provided in the Point No. 2 above.	4. Refer the above point no.-3.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		in APSEZ and the detail of development activities including examples with name and village. 49. Why nothing has been written in the EIA report about the objections of local village panchayat about the loss of local people and environmental damage? Provide the complete information about it. As the local people, animal-husbandry, health, environment and country may be adversely affected rather than benefits from above mentioned project, hence it is my submission that the project be abandoned. As we do not want to suffer from the pollution in future, we do not want the project and the development from it.	the proposed project. 49. The EIA Report has been prepared as per the Terms of Reference issued by the Ministry of Environment, Forests and Climate Change.	for the proposed project. 49. As per TOR point public hearing i conducted, the minutes of meeting an proceeding with action plan is given i Section-7.1 of Chapter-7 in the EIA report.
36	Shri Usmangani H. Sherseeya (Secretary), Natinal Fisheries Forum, At Post Kancoat, Taluka Vakaner, District Morbi	With respectful regards we have to inform that, National Fisher folk Forum is engaged in welfare of communities residing on coastal areas, fishermen and conservation of marine environment. Fisheries, Marine environment and life shall have serious threat because of proposed copper refinery project of Adani Enterprise Ltd. in Navinal and Shiracha villages of Kutch District. In respect of the same, we have studied Draft EIA Report and on the basis of the same it is observed that such project on costal area, marine life shall have serious and irreparable loss. Hence we oppose the project at the site. We submit our written objections on issues mentioned hereunder and since the project site is not proper, we demand stoppage of the project at the site. 1. Options for selection of project site by Adani Enterprise Ltd. are improper. There is no need to establish such project in coastal area. Since close pipeline conveyer system is available for transportation of raw material, this project can be	We acknowledge the receipt of your representation and have noted your concerns. We are herewith responding para wise to the issues raised by you: 1. The Copper Project is based on the import of Copper Concentrate, which is not available in our country in required quantity. Also, most of the finished products will be dispatched through sea route. These factors were considered as	1. The proposed project details are given i Chapter-2 in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		plots sold out and unsold and please include the same in final EIA Report.		
		5. Is the site for the project owned by the APSEZ a notified SEZ? Provide the copy of the notification. Please include the same in the final EIA report.	5. Part of the proposed project land, 154.18 ha is within the Notified SEZ. A copy of notification is enclosed as Annexure-III and same will be included in the final EIA Report.	5. Refer the above point no.-3.
		6. Is the area of the project that shall be given by APSEZ to AEL, to be considered under the SEZ? Provide the relevant details as per the government record and status. Please include the same in the final EIA report.	6. Part of the proposed project land, 154.18 ha is within the Notified SEZ.	6. Refer the above point no.-3.
		7. Provide the documents showing the ownership of APSEZ for the site at which the project is to be undertaken. Place the same in the final EIA report.	7. Proposed project includes notified SEZ area and the forest land. A copy of notified SEZ area is as per point no. 6 above. APSEZ has applied for forest land diversion and same is under progress. Details of land are provided in the chapter-2 of EIA the report.	7. Refer the above point no.-3.
		8. Provide the details of the land that is illegally siphoned off by MPSEZ at Shiracha, Danderi forest. Provide the details of the land that is not denotified by the government of India but has been taken into possession by the company. Place the same in the final EIA report.	8. We do not agree with your observation. AEL has not started any activity at the site and there is no encroachment on any land.	8. The construction will starts after getting a required statutory clearance from conce department.
		9. Provide the date of the submission in case if the APSEZ would have sought approval of SEZ denotification (for AEL project area) from the government of India. Place the same in the final EIA report.	9. At the moment, there is no requirement of SEZ denotification for the proposed project area.	9. Refer the above point no.-3.
		10. Provide the planning and logic for undertaking project for AEL copper plant while obtaining the land at Shiracha, Daderi forest. Place the same	10. Alternative site analysis was carried out. The site selection criteria and the study of alternative sites is detailed in Chapter-5 of the	10. The comparison salient features alternative sites done and details a presented in following Table-5.1 and

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		in the final EIA report.	EIA Report.	shown in Figure-5.1.
		11. Provide the copy of the permission for reclamation provided by the government of India, in any, to the MPSEZ for forest land and other land.	11. There is no proposal of reclamation in Forest Land. The proposal for diversion of forest land is under process. Other land under the proposed project is notified SEZ area.	11. There is no reclamation in the propos project. Forest land of 102.38 ha (2 acres) is also involved which will converted for industrial use. MoEF&C (forest conservation division) has grant Stage-1 approval for diversion of 1576.4 ha of reserved forest land in favour of Ada Ports & Special Economic Zone Limit (APSEZL) vide letter F.No.8-04/2016-I dated 16th November 2018. Stage-I FC h been obtained as given in Annexure-V. T construction will start only after getting required statutory clearance from conce department.
		12. The reserved forest is not mentioned under project of Form-1 but map and EIA report is shown. Why is this contradictory information provided?	12. The details of Forest Land are also shown in Form-I (Basic Information, Sl. Nos. 9, 12, 21 and 23).	12. The details regarding reserved forest ha been mentioned in Section-9 (I Environmental Settings of Form-I and Tabl 1.1 of Chapter-1 in the EIA report.
		13. The company is to make 30% green belt mandatory. Therefore 157 hector comes as 30% of green belt of 526 Ha. Out of the 526 Ha does the company wish to obtain 102 Ha of reserve forest and show it as green belt? If yes, from where will the company bring the rest of the 55 Ha of reserve forest?	13. Company has proposed 33% area for Green Belt. The 102.38 ha forest land, once diverted and allotted, will be part of the project area. The Green Belt will be developed in 33% of the total project area of 256.58 ha. There is no illegal encroachment of forest area.	13. As per guidelines and ToR point 33% la should be allotted for greenb development. AEL proposing 85.79 (33%) land for greenbelt development.
		14. Is it proper to cut off the ready forest and initiate new plantation? Provide further information as for this in the report.	14. Forest land is part of proposed project area for which all necessary procedure and compliance will be made. Green Belt will be developed around the facilities as per desired norms.	14. The recommended species for greenb development are given in Table-4.12 Chapter-4.
		15. As shown under the EIA report page no. C-3 16, most part of the project is situated on the	15. As per the map on Page C3-16, the project site also includes part of the Siracha Reserve	15. The details which are incorporated in t EIA report is correct and relevant to t

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		Shiracha, Dedari forest land. Is this map false? Therefore, provide a correct map. And place the same in the final EIA report.	Forest. Correct map is provided in the EIA report.	proposed project.
		16. Provide the forest clearance copy that was received by the APSEZ for the above mentioned point. Moreover, place the same in the final EIA report.	16. The Forest Clearance is still under process. The details are available on the website of MoEF& CC (File No. 8-04/2016-FC).	16. Refer the above Point no.-11.
		17. Provide the names of all present directors/owners of APSEZ and AEL project and provide them in the final EIA report.	17. Present list of directors of AEL is enclosed as Annexure-xxx. Same will be included in the final EIA report.	17. List of directors of AEL is enclosed a Annexure-XVI in the EIA report.
		18. Provide the information that what is the dispute under the SLP 28788/2016 held before the Supreme court and WP (PIL) 12/2011 held before the Gujarat High Court against MPSEZ. Place the same in an elaborate manner under final EIA report.	18. SLP28788/2016 in the Supreme Court and WP (PIL) 12/2011 at Gujarat High Court are dismissed vide respective orders dated - and -. Therefore, there is no dispute.	18. There no dispute regarding the propose project.
		19. What is the amount of penalty paid by the company to the government on the basis of the recommendation provided by Sunita Narayan committee to the Forest and Environment ministry? Provide the current status of the penalty and provide the legal information as for the same. Provide the file with remarks as for this issue in writing within the final EIA report.	19. In the matter of SunitaNarain committee report, APSEZ is complying as per directions of MoEF&CC vide their final order dated 18th Sep, 2015.	19. This is outside the scope of EIA report fo the proposed project.
		20. Apart from the EIA report, Please provide the additional details as to how many natural river, drains are located in the land selected for Project Site and forest land, so that no river, drains would be left to mentioned in the final EIA report out of knowledge. Our demand is to re-study with more accuracy. Our demand is to open all closed canals, bays and creeks again. Place	20. Dhaneshwari, a seasonal river flows in the western part of the proposed site. The flow of the river will be maintained, as shown in the Plant Layout on Page C2-3 of EIA Report. Impact Assessment has been carried out covering 10 km area surrounding the project site and it includes water bodies (if any), local residents and villages. There is no proposal of	20. Dhaneshwari, a seasonal river flows in th western part of the proposed site. The rive steam will not be disturbed.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		information in the final EIA report.	closing any creeks.	
		21. Please provide GCZMA approved CZMP copy of the costal area near the AEL project.	21. Gujarat Coastal Zone Management Authority is the custodian of approved Coastal Zone Management Plan. However, authorized CRZ map superimposing project area prepared by authorized agency of MoEF&CC is provided in the Chapter-3 of the EIA report.	21. The prosed project is a Greenfield proje and which is outside of the CRZ. Based c the survey which was carried out by Cent for Earth Science Studies (CES Thiruvanantpuram), which is an authorize agency by MoEF&CC, the proposed proje site is outside CRZ and doesn't attract CR clearance.The CRZ map is shown in Figur 1.5 of Chapter-1 in the EIA report.
		22. Please provide a detailed colour copy of the CRZ map prepared by NIO which readable and understandable.	22. The CRZ Map enclosed is prepared by National Centre for Earth Science Studies and enclosed on Page C3-17 of EIA Report. More clear copy will be included in the final EIA report.	22. Noted and will be incorporated in the fin EIA report.
		23. Keep the difference of mangroves trees that come into the CRZ 1 in close vicinity of the project. And provide a copy of the records required for it.	23. The proposed site is outside CRZ and the minimum distance from existing Mangrove in southern direction is more than 100 m.	23. The Study area and CRZ map are shown a Figure-1.2 and 1.5 of Chapter-1 in the EI report.
		24. Provide information about the number of fishermen residing in the coastal area and about their existing business.	24. The occupational structure of the people in the area is detailed on Page C3-65 of the EIA Report. The main workers account for 90.57% of the total workers. The Work Participation Rate is 56.36%. Fishing is one of the activities. Details on number of fishermen in the study area will be included in the final EIA report.	24. The demography and socio-economic detai are given in Section-3.10 of Chapter-3 the EIA report.
		25. Show the number of fishermen who have become unemployed due to MPSEZ project	25. No fishermen will be impacted due to proposed project.	25. The proposed project is Greenfield projec There is no impacts on fisherman due to th proposed project.
		26. Provide the number of fishermen who do Pagadiya fishing near the project.	26. The details on pagadiya fisherfolk will be included in the final EIA Report.	26. The fisherman details is given in Sectio 3.10.6 of Chapter-3 in the EIA report.
		27. How many roads for commuting are closed for	27. Project will be developed over notified SEZ	27. Refer the above point no.25.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		the fishers due to this project? or has been closed in the past? And update this information in the final EIA report.	area and forest land applied for diversion. APSEZ has created dedicated approach road for fishermen of Navinal and Siracha. Fishermen access roads will not be closed due to proposed project.	
		28. Provide the information on how many animals rely on forests and how people will be affected who use the forests in community by this project. And put it in the final EIA report.	28. There is no resettlement involved in the diversion of 102.38 ha of forest land. Flora and fauna study has been conducted as a part of EIA and management plan is also provided in the EIA report. All the conditions of Forest Clearance, once obtained, will be complied to mitigate the impact due to diversion of the forest land. The forest diversion can be recommended by the State Government after completing all the procedures and granted by MoEF&CC.	28. The anticipated impacts and mitigatio measure to control pollution durin construction and operation phase ar provided in Section-4.1 and 4.2 of Chapte 4 in the EIA report.
		29. To make copper product, provide the information about Sulphur content, mercury and radiation and amount of active metals in raw material. And also mention how much amount of them will be there in slag. And place in the final EIA report.	29. Copper Concentrate will be the principal raw material, which has sulphur and mercury content of 34% and 50 ppm respectively. There is no known Uranium or Thorium content and its radiation in the raw material. Copper slag will contain Sulphur (0.5-1.5%) and mercury (BDL).	29. The process description and raw materi details are given in Section-2.3 and Table- 2.3 of Chapter-2 in the EIA report.
		30. Provide the information on the management of Copper Slag and Phospho gypsum according to the CREP.	30. There are no CREP Guidelines for Copper Smelter & Refinery.	30. There are no CREP Guidelines for Coppe Smelter & Refinery.
		31. According to the CREP, show the steps to follow emissions from the sulfuric acid plant and put it in the final EIA report.	31. There are no CREP Guidelines for Copper Smelter & Refinery.	31. There are no CREP Guidelines for Coppe Smelter & Refinery.
		32. Provide the information about the management of emissions reduction of sulfur dioxide as per CREP.	32. There are no CREP Guidelines for Copper Smelter & Refinery.	32. There are no CREP Guidelines for Coppe Smelter & Refinery.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		33. Make utilization plan for copper slag and Phosphogypsum. And put it in the final EIA report.	33. Details on production quantity of copper slag and phosphogypsum is provided in the EIA report. Copper Slag can be used as a building material (Added in Concrete as well as in ready mix), Road Construction & shot blasting and Phosphogypsum is used for Cement manufacturing, gypsum board Manufacturing andfertilizer. Both the materials will be sold in domestic and overseas market.	33. Hazardous cake and scrubber cake will b stabilized and stored in secured land fill a per guidelines of MoEFCC/ CPCB/ GPCB. A area of around 13.35 ha is identified an allocated. For the initial years of coppe refinery plant operation till sustaine utilization/management of copper slag an phosphogypsum; in the above applicatic areas are developed, as well as fc emergency purpose, copper slag storag area and gypsum pond of around 105 acre would be identified and made available fc intermediate/emergency storage of th same. Provision would be made to reclai the disposed copper slag an phosphogypsum from gypsum pond at later stage for various utilization venture The solid waste generation, wast characterisation and mode of disposal given in Section-2.4.3 of Chapter-2 in th EIA report.
		34. For the implementation of all CREP Guidelines of CPCB, applicable to the smelter, I demand that the specific plan is to be included in this draft EIA report and in the final EIA report, and to be placed before the Ministry of Environment and Forest at the time of approval. A copy of this is to be given to us too. Put the complete information in the final EIA report.	34. There are no CREP Guidelines for Copper Smelter & Refinery.	34. There are no CREP Guidelines for Coppe Smelter & Refinery.
		35. Provide the detail as to whether the Navinal forest has been declared as biodiversity heritage place by the Gujarat State Biodiversity Board, or it is being under proposal. Put information in the final EIA report.	35. There is no notification on Navinal Forest being notified as Biodiversity Area.	35. There is no notification on Navinal Fore being notified as Biodiversity Area.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		36. Whether a study has been conducted about the Navinal- Shariya costal area carrying capacity? Provide information if the study is undertaken. Provide information on how much capacity will be left after AEL's project. Place information in the final EIA report.	36. Carrying Capacity Studies are undertaken by Statutory Authorities. We are not aware of any Carrying Capacity Studies carried out for this area. EIA studies have been conducted for the study area as per TOR granted by MoEF&CC.	36. EIA studies have been conducted for th study area as per TOR granted by MoEF&CC
		37. Provide the information on whether the comparison is made on EIA reports of both projects for the combined impact of air- water pollution caused due to the power plant of Adani and Tata Power, air, water pollution and after AEL's Copper plan. Put this information in the final EIA report.	37. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for Air and Water and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.	37. Refer the above point no. 28.
		38. Provide the information about where the copies of the environmental literature of this project were kept which were translated from English to Gujarati according to the EAC meeting minutes.	38. The Gujarati Summary was placed at all the Gram Panchayats within 10 km of the proposed site in addition to the 7 places- The District Collector, Bhuj, District Kutch, District Development Office, Bhuj, District Kutch, District Industry Centre, Bhuj, District Kutch, Taluka Development Office, Mundra, District Kutch, Taluka Development Office, Mandvi, District Kutch, The Chief Conservator of Forest, Ministry of Environment, Forests and Climate Change Government of India, Regional Office (West Zone), KendriyaParyavaranBhavan, E-5, Arera Colony, Link Road -3, Ravishankar Nagar, Bhopal 462016 and Regional Office, Kutch (East), Gujarat Pollution Control Board, Room No. 215-216, Second Floor, Kandla Port Trust, Admn Building, Sector 08, Gandhidham, Kutch.	38. The public hearing proceeding and actic plan details is given in Chapter-7 in the EI report.

1026

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		39. So far, under the mangrove aforestation Program, in how many total numbers of has mangrove are planted by Adani Group and where are planted? Provide the detailed information along with the map and with the total amount of money spent.	39. This is outside the scope of the EIA Report for the proposed project.	39. This is outside the scope of the EIA Repo for the proposed project.
		40. Will the power transmissions line in APSEZ be moved due to AEL's project? Provide more details.	40. Power Transmission Lines will be retained with some deviation.	40. The details will be given in deta engineering.
		41. The staff required (8 persons) for the Environmental Management Plan of highly polluted Copper Refinery Plant is proper as shown in the EIA report? This pack is a best example of how serious the Adani group is to the pollution issues	41. 8 persons are proposed as a part of Environment Cell alone. The Environment Management is not only limited to these 8 persons, but it includes the operations carried out by various departments for the management of environment.	41. The environmental monitoring cell is show in Figure-10.1 of Chapter-10 in the E report.
		42. Will Adani Port staff also look into environmental and pollution issues in this AIL project? Currently, how many staff are there who serves in the Adani Group and also have contributions in all the projects of the group (port, SEZ, power plant etc.)? Is it Possible legally? Provide the name and his eligibility of the APSEZ's environmental officer and head. Put information in the final EIA report.	42. Adani Enterprises Limited will have its own Environment Management Team headed by an environmentalist, capable of handling all the environmental and pollution issues of the Copper Project. Other issues are outside the scope of the EIA Report for the proposed project. The question does not pertain to proposed project and therefore we do not offer any comment.	42. Refer the above point no.-41.
		43. Why no information is given about TOR or any other place about the 30 acres of toxic waste in the chemical plant? Is this plan possible without TOR? Put information in the final EIA report.	43. The area under SLF is provided in the Pre-feasibility Report, which is a part of the TOR Application.	43. Secured Land Fill (SLF) is proposed ov 13.35 ha within the project premises f disposal of ETP waste sludge and spe catalyst. Other Hazardous waste will t disposed through the approved recyclers.
		44. What will be the effect on coral of Gulf of Kutch and Jamnagar Marine National Park by dissolving sulfuric acid and other toxic gas and other tons	44. The SO2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the	44. The SO_2 generation is a continuous proce during smelting activity, primary gas strea will be routed to SAP plant and t

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		of sulfur dioxide gas in the sea water in the direction of air surrounding marine area from 46 Chimneys ? Provide a copy of it if the study is undertaken about this. Put the information in the final EIA report. If the study is not done, then it is a demand to allow the project after studying and giving us a copy of it.	respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report. There will not be any impact on coral of Gulf of Kutch and Jamnagar due to proposed project activity.	secondary gas stream will be routed throug scrubber. And, there is no provision in th plant/process for storage of SO^2 gases an will be processed immediately to produc sulphuric acid. Sulphuric acid plant (SAP) has bee installed with highly efficient (Doubl Conversion Double Absorption) DCD process to control the SO^2 emission to les than 1 kg/t of sulphuic acid produced. Th Details of Episodal SO^2 Stack Emissions i Section-4.2.2.3 of Chapter-4.
		45. Provide us information about how much this plant will increase coral bleaching and marine acidification. By dissolving in moisture, Sulfur dioxide gets converted into sulfuric acid, how much pH will increase by going that into the ocean?	45. The project is being designed with zero liquid discharge, there is no likelihood of ocean warming or acidification due to proposed project. There will not be any coral bleaching and marine acidification due to proposed project.	45. The water system, is highly integrated an is designed for Zero Liquid Discharge (ZLD The water requirement details is given i Section-2.2.3. The process details an schematic flow diagram of ETP is given i Section-2.4.2 and Figure-2.23 of Chapter-2
		46. Due to the project what will be the increase in global warming?	46. The project is estimated to emit 0.53 Million Tons of CO_2 equivalent of GHG emission per year, which is insignificant in the context of Global Warming.	46. The Anticipated impacts on air an mitigation measures are given in Sectior 4.2.2 of Chapter-4 in the EIA report,
		47. How many billion tons of greenhouse gas will go to Earth's atmosphere by this project? Put information in the final EIA report.	47. The total GHG emission is estimated at 0.53 Million Tons of CO_2 equivalent per year. This information will be added as a part of final EIA Report.	47. Refer the above point no-46 in the EI report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		48. Show the plan to reduce the greenhouse gas in final EIA report.	48. We will be adopting advanced technologies which are having lesser footprint as compared to other existing conventional technologies in the market. However, alternative source of fuel will be explored to minimize the GHG emissions due to project activity.	48. Refer the above point no-46 in the El report.
		49. Provide in the final EIA report, the details of damage to the sea from the gypsum pond and the waste water that would be thrown out of it.	49. The Gypsum produced will have around 20% moisture and same will be stored in the Gypsum storage area proposed over 28.34 ha through dry conveying method. Gypsum storage area will be constructed with HDPE liner to prevent any leaching. Gypsum will be sun-dried and sold to the potential customers. There will not be any discharge of water outside the project premises.	49. Phosphogypsum produced during th process will be sold to cement industries a well as fertilizer and rest will be stock pile Hydro fluro silicic acid generated as a by product will be converted as aluminu fluoride as well as sold in the market.
		50. Provide the details of RO reject if it is to be discharge in the sea.	50. RO Rejects will be taken to Multi-Effect Evaporator. There will not be any discharge into the sea.	50. An integrated water system is proposed, th effluent from the process units is treate and reused to reduce water demand. It also proposed to install a secondary Revers Osmosis (RO) plant to further treat wat from the effluent plant facility for effectiv use. Rejects from the reverse osmosis plai will be sent to Multi Effect Evaporator (ME for further recovery and solids generate will be sent to Secured Land Fill (SLF).
		51. Does the GPCB have the instrument to measure toxic gases from air? If GPCB is unable to provide the measurement of pollution, who shall measure the pollution? What is the integrity and reliability of other agencies?	51. The question does not pertain to us, therefore we do not offer any comment. Environmental monitoring will be carried out as mentioned in the chapter-6 of the EIA report and in line to the permissions granted.	51. Environmental monitoring durir construction and operation phase is given Table-6.1 & 6.2 of Chapter-6 in the El report.
		52. Will the industrial treated water for the entire Smelter project be directly or indirectly discharge	52. Proposed project will have zero liquid discharge facility and no treated water will be sent to the	52. The water system, is highly integrated ar is designed for Zero Liquid Discharge (ZLD

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		in the sea? Provide specific reply in yes or no.	sea.	The water requirement details is given i Section-2.2.3. The process details an schematic flow diagram of ETP is given i Section-2.4.2 and Figure-2.23 of Chapter-2
		53. Will this smelter work on the principle of zero discharge? Therefore provide the further details as to this in the final EIA report at the time of EMP.	53. The entire project will work on the principle of Zero Liquid Discharge. Details are provided in the EIA report.	53. Refer the above point no.-52.
		54. Will this smelter recycle reuse the entire water? Provide the entire reuse plan and the related final EIA report.	54. The project will generate 6468 KLD of wastewater. Entire wastewater will be treated and reused within the plant. The details are provided in the EIA Report.	54. There is no CETP proposal. AEL is proposin ETP for the proposed project.
		55. The CETP design for treatment of industrial waste water coming out from the entire project is not shown in the EIA. Provide the copy of that particular design.	55. There is no proposal of tie up with any CETP. AEL will have its own ETP for treatment of wastewater. Details are provided in the EIA report.	55. Refer the above point no.-52.
		56. The information or design of the water recycling plant is also not provided. Provide its information.	56. The Flow Diagram and the Capacities are provided in the EIA Report. Further planning will be carried out during detailed engineering.	56. The details will be provided in deta engineering.
		57. Provide the copy of the details as to proceedings undertaken by company for the recent judgment passed by the Honorable Supreme Court for preliminary treatment of the waste water. Place it under the final EIA report.	57. The judgement passed by Honorable Supreme Court is in relation to the existing industry and therefore not applicable, however details of the ETP for the proposed project is provided in the EIA report.	57. Not applicable
		The information as for these points has been kept hidden and a serious threat shall be generated for the Gulf of Kutch and Marine National Park along with fisheries. As the loss to people, animal-husbandry, health, environment and country is much more than benefit from the project, it is my submission that the project be abandoned while considering the legal		

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		tangles. It is our appeal to abandon this project that gives benefit of crores of rupees to the company against loss of multi crores to the people and government.		
37	Shri Shri Vijay U. Gadhavi, President, Kutch Charan Sabha, Mandvi Naliya Road, Mandvi –Kutch	We, the undersigned herewith oppose the coming up dangerous copper refinery project of M/s Adani Enterprise Limited. We submit herewith our objection taking petition to your good office with the points shown here under and request you to take suitable action as to with-held the project at the earliest possible:	We acknowledge the receipt of your representation and have noted your concerns. We assure you that all the environmental safeguards will be put into place before operation of the project. We will also be adopting the latest technology for pollution control. The project will be implemented with Zero Liquid Discharge. The Environmental Impact Assessment has been carried out and all the environmental parameters will be within the statutory limits. We are herewith responding para wise to the issues raised by you:	
		1. The site shown by M/s. Adani Enterprise Limited (AEL) under the SEZ shown at Siracha village is a reserved forest and the only sustainability source of our cattle resulting in our only livelihood and income source. This land is still not allotted to the M/s. Adani Enterprise Limited (AEL) or MPSEZ and there still exist a forest land on the Government records which include the village Danderi forest land and is in government possession. Thus as on date no land is in the name of M/s. Adani Enterprise Limited (AEL) but the MPSEZ have proceeded for allotment of this land to the above company for its copper refinery project and have reported to the Government accordingly. So we are taking objection for this proposed project by M/s. Adani Enterprise Limited (AEL) without proper sanction. If the land in question is in the possession of M/s. Adani Enterprise Limited (AEL) they should have shown 7/12 extract to us. Thus the company has not acquired required land from Government and	1. Out of 256.57 Ha of total project area, 154.18 Ha land is notified SEZ and 102.38 Ha fall under forest land. APSEZ has in principally agreed to allot the land for the project to AEL, as per APSEZ letter dated 15th April 2016 which is enclosed in EIA report. Forest Clearance has already been applied for this land by APSEZ (erstwhile MPSEZ Ltd). As the project proponent can submit the proposal for TOR, after applying the Stage-I forestry clearance, this requirement has also been complied with. Part of the project site is forest land, which will be used only after obtaining final approval for diversion of forest land. Forest clearance is recommended by State Government after completion of established process and finally approved by MoEF&CC.	1. The land requirement details are given Section-2.2.1 of Chapter in the EIA report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		yet they are trying to set the project which is ridiculous.		
		2. We are totally against this project as the project will spread most dangerous toxic gas and stinking smell which is dangerous for the health of our children, cattle and other living elements as well as the sea **as its 300 ft high 46 chimneys will spread toxic gas all over the area 24 hours 365 days.**The Sulphur dioxide can even rust the iron, is a deadly gas which will come out from the plant process in lacs of tons and spread over nearby villages and will damage the lungs. Therefore, such project is not agreeable at any cost to us looking to the future of our generation, even if it contains golden features.	2. The SO_2 gases produced during the process is an input raw material for Sulphuric Acid Plant and will be converted to Sulphuric Acid in the respective plant within the project area. The residual gases from the Sulphuric Acid Plant will be released through Chimney after tail-gas scrubbing, meeting the prescribed norms of Central Pollution Control Board (CPCB). Out of 46 Chimneys/Process Vents, 4 Chimneys are proposed with 100 meter (300 feet) height. Impact Assessment has been carried out and the incremental impacts have been superimposed on the baseline data to assess the ground level concentrations after the project is operational. The predicted ground level concentration after the operation of the project will also be within the National Ambient Air Quality Standards and thus not expected to have any long term impact on the surrounding ecosystem. Details are provided in Chapter 4 of the EIA Report.	2. The process description of proposed proje is given in Chapter-2 in the EIA report.
		3. It is feared that the entire area will be affected by residue of the plant and will spread black power over the agricultural crops and affect it with acidic and many other gaseous pollution also. There are many examples in the country that such metal plant has damaged the atmosphere by creating pollution in many ways and hence we oppose the same. We have come to know that the plant organizers have not made demographic survey of connecting area and not shown the negative points involved in their proposed project and also not shown the	3. The project will be developed with all the environmental safeguards as detailed in Environment Management Plan (EMP) in Chapter 9 of EIA Report. There are many such projects in the world, including the developed countries in Europe, America, Asia, etc. The apprehension mentioned by you is not in our knowledge. We are confident of operating this plant with all the safeguards to mitigate the pollution and protect environment. Demographic details are provided in Chapter 3 of the EIA Report. Proposed project will have	3. The anticipated impacts on air quality ar mitigation measure to control pollutic during construction and operation phas are provided in Section-4.1.3 and 4.2.2 Chapter-4 in the EIA report. About Rs. 10 Crores will be spent on environment protection. Environmental monitoring w be conducted on regular basis by AEL assess the pollution level in the surroundir area. The proposed mitigation to t implemented during construction ar operation phase is given in Table-10.1 ar

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		reactions by toxic gas, We cannot say more due to lack of more scientific knowledge. But we come to know that by this plant's gaseous air pollution there will be effect on flowers of crops and it will not develop naturally to yield the anticipated production quality and quantity. This will affect our livelihood and health naturally which the Indian Government should consider sympathetically and save the villages in the interest of public at large.	facility to achieve Zero Liquid Discharge. Pollution control measures will be implemented to achieve emissions as per the prescribed standards by CPCB. Ambient Air Quality is found to be within the prescribed standards after development of the project. There will not be any significant adverse impact on the health of the people. EMP is provided in Chapter 9 of the EIA report.	Table-10.2 of Chapter-10. Tl environmental monitoring duri construction and operation phase is given Table-6.1 & 6.2 of Chapter-6 in the E report.
		4. The company will produce about 50% residue of raw material while making the end product from copper and this residue come to approximately 8-10 lac tons (i.e. 1 lac trucks) and this will affect the entire area of Kutch. In such circumstance there will be no alternate except to leave the village and hence we oppose this project.	4. Copper slag, estimated 8 to 10 Lac Tonnes per year, will be produced from the copper plant as a by-product. Copper Slag is widely used in construction industry, road making, shot-blasting etc. Copper Slag is also known as Ferro-Sand and Iron-Silicate which is used by Cement companies as raw material to produce the green-cement. Efforts will be made to maximize the sale of the Slag generated from the proposed project in domestic as well as in export market.	4. The anticipated impacts on air quality a mitigation measure to control pollut during construction and operation pha are provided in Section-4.1.3 and 4.2.2 Chapter-4 in the EIA report.
		5. There is problem of drinking water in our area and it is a question that how the company will manage for water requirement and if managed and what about effluent treatment?	5. The proposed project is based on desalinated sea water sourced from APSEZ. Proposed project will have facility to achieve Zero Liquid Discharge. Details are given in Chapter 2 of EIA Report.	5. The total water requirement for the proje is about 32,800 KLD (32.8 MLD). The tot desalinated water requirement for t project would be sourced from APSEZ Lt through M/s. Mundra Utility Pvt Ltd (MUPL The water allocation letter is enclosed Annexure-IV. The water requirement a breakup details are provided in Sectio 2.2.3 of Chapter-2.
		6. We have come to know that they are planning to make an hazardous waste plant for this 30 acre plant which will affect the villages.	6. Secured Land Fill (SLF) is proposed to be developed over the area of 30 Acres within the proposed project area. SLF will be constructed	6. An integrated water system is proposed, t effluent from the process units is treat and reused to reduce water demand. It

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
			and operated as per the CPCB guideline for Treatment, Storage & Disposal Facility (TSDF). The SLF, once filled to its capacity will be capped on top and soil cover will be spread and then plantation will be done. Monitoring of environmental parameters will also be carried out.	also proposed to install a secondary Revers Osmosis (RO) plant to further treat wate from the effluent plant facility for effectiv use. Rejects from the reverse osmosis plar will be sent to Multi Effect Evaporator (MEI for further recovery and solids generate will be sent to Secured Land Fill (SLF). Thi water would be utilized to meet the DI water and plant/utility water requirement c proposed project. The water system, i highly integrated and is designed for Zer Liquid Discharge (ZLD).
		7. There are also some problems because of existing power plants in our area by Tata and Adani Group, even though we are going to face a new problem by this new project in the form of hazardous pollution which will affect our children and hence we oppose the project. Due to power plant some agricultural activities like date palm crop are affected but by this project it is sure that gas from copper refinery will affect our health also more make the atmosphere polluted, hence we oppose the project.	7. The impacts due to proposed Copper project have been superimposed on the baseline data to show the cumulative impacts. The predicted impacts after operation of the project are found to be within the prescribed standards for AAQ and hence not expected to have any significant impact on health, agriculture and animal husbandry. Details are available in Chapter 4 of the EIA Report.	7. The solid waste generation an management details are given in Sectior 2.4.3 of Chapter-2 in the EIA report.
		8. The company, M/s. Adani Enterprise Limited (AEL) is assuring about local employment butthe earlier companies like Tata group has not fulfilled such promises.	8. Local people will be given preference in employment as per eligibility. Skill development programme will be implemented to improve the employability of local people.	8. Employment requirement details durin Construction and operation phases is give in Section-8.4 of Chapter-8 in the EI report.
		9. We have come to know that there will be residue of mercury and this is a toxic chemical element which will spread in the air, so we are representing our appeal to the Government to please set up such plant in any non-populated area.	9. Mercury recovery facility is part of the proposed project. Mercury will not be released in the environment. Details are given in Chapter 2 of EIA Report.	9. The details are given in Chapter 2 of EI Report.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		10. We have come to know that there are other materials like gold, silver and platinum are also a by-product of the company yet it is useless activity looking the health problem etc. In view of above we request you to kindly recommend the government to take necessary actions as to cancel this project as we do not need industrial development at the cost of public health.	10. Precious metals like gold and silver will be recovered as part of the process. For development of the local community a budget of Rs. 8.0 Crores per year has been provided under Corporate Social Responsibility. The areas of intervention will be education, health & sanitation, sustainable livelihood and rural infrastructure. The penalty mentioned by you pertains to APSEZ and as informed to us same has been withdrawn. We assure you that all the environmental safeguards will be provided during implementation and operation of the project.	10. The details of products and by-products a given in Table-1.1 of Chapter-1 in the E report.

43	Shri Jadeja Gajendrasinh Bhimaji, Sarpanch, Kapuriya Wadi, Tal: Mundra Kutch	1. Damage caused by Adani Power Plant Project of Adani Enterprise Ltd. a) It is mentioned in point no. 2 of permission granted to Adani Power on dt. 21/10/2008 and point no. 2 of C.R.Z. clearance of Intake and Disposal Facility dt. 29/05/2008 that effluent discharge should be made through pipeline. But	The issues raised are for APL and are not related to the proposed project activity therefore we do not offer any comment.	This is outside the scope of the EIA report for th proposed project.

Sr. No.	Name and address of the Representative	Representations	Chronological Reply given by Representative of Project Proponent	Action Plan after PH
		effluent discharge is made by constructing open channel by Adani Power. Thus, environment permission is violated. b) The ground water has become more salty due to intake channel construction by Adani Power. c) Breach is found in guideline of coal handling. d) It is mentioned in condition no. 7 of CRZ clearance that no trouble someness should be caused to the local community due to Intake Channel and Effluent Discharge pipeline. But the roads are closed by Intake Channel and Effluent Discharge pipeline. The road to approach grazing land is closed for cattle breeders are closed and road to approach religious place on sea shore is closed. e) It is mentioned in condition no. 9 of CRZ clearance that no displacement of house of the people or fishermen should be caused due to project. Hindrance should not be caused due to pipeline in coming and going of fishermen and the officer boats. All those fishermen dwelling on old Kotdi Bandar since long are displaced due to intake channel. Open channel is built in place of pipeline for Effluent discharge and as it passes through Kotdi creek, the movement of boats of fishermen is interrupted. Thus, this condition is violated. f) It is mentioned in condition 21 of the environment permission that half yearly compliance report should be submitted. The compliance thereof is not followed.

7.2 Risk Assessment

Hazard analysis involves the identification and quantification of the various hazards (unsafe conditions) that exist in the plant. On the other hand, risk analysis deals with the identification and quantification of risks, the plant equipment and personnel are exposed to, due to accidents resulting from the hazards present in the plant.

Risk analysis follows an extensive hazard analysis. It involves the identification and assessment of risks on the neighboring population are exposed to as a result of hazards present. This requires a thorough knowledge of failure probability, credible accident scenario, vulnerability of population etc.

In the sections below, the identification of various hazards, probable risks in the proposed copper refinery project, maximum credible accident analysis, consequence analysis are addressed which gives a broad identification of risks involved in the plant. Based on the risk estimation for fuel and chemical storage Disaster Management Plan (DMP) has been prepared.

7.2.1 Approaches to the Study

Risk involves the occurrence or potential occurrence of some accidents consisting of an event or sequence of events. The risk assessment study covers the following:

- Identification of potential hazard areas;
- Identification of representative failure cases;
- Visualization of the resulting scenarios in terms of fire (thermal radiation) and explosion;
- Assess the overall damage potential of the identified hazardous events and the impact zones from the accidental scenarios;
- Assess the overall suitability of the site from hazard minimization and disaster mitigation points of view;
- Furnish specific recommendations on the minimization of the worst accident possibilities; and
- Preparation of broad Disaster Management Plan (DMP), On-site and Off-site Emergency Plan, including Occupational and Health Safety Plan.

7.2.2 Hazard Identification

Identification of hazards in the proposed copper refinery plant is of primary significance in the analysis, quantification and cost effective control of accidents involving chemicals and process. A classical definition of hazard states that hazard is in fact the characteristic of system/plant/process that presents potential for an accident. Hence, all the components of a system/plant/process need to be thoroughly examined to assess their potential for initiating or propagating an unplanned event/sequence of events, which can be termed as an accident. The following two methods for hazard identification have been employed in the study:

- Identification of major hazardous units based on Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989 of Government of India (GOI Rules, 1989); and

- Identification of hazardous units and segments of plants and storage units based on relative ranking technique, viz. Fire-Explosion and Toxicity Index (FE&TI).

7.2.3 Classification of Major Hazardous Units

Hazardous substances may be classified into three main classes namely flammable substances, unstable substances and toxic substances. The ratings for a large number of chemicals based on flammability, reactivity and toxicity have been given in NFPA Codes 49 and 345 M. The fuel and chemical storage for proposed project is given in **Table-7.2** and the hazardous characteristics of the major flammable materials as employed in different process units are listed in **Table-7.3.**

TABLE-7.2
CATEGORY WISE SCHEDULE OF STORAGE FACILITIES

Sr. No.	Material	UOM	Storage Capacity	Classification
1	H_2SO_4 (Sulphuric Acid)	Ton	1,50,000	Corrosive
2	Furnace Oil	Ton	4,000	Flammable
3	HSD	KL	1,000	Flammable
4	LPG	Ton	400	Flammable
5	Oxygen (Liquid)	Ton	1,000	Flammable
6	Coal/pet coke	Ton	100	Flammable
7	Met Coke	Ton	100	Flammable
8	H_3PO_4 (Phosphoric Acid)	Ton	30,000	Corrosive
9	H_2SiF_6 (Hydro Fluro Silicic Acid)	Ton	4,000	Corrosive

TABLE-7.3
PROPERTIES OF FUELS

Chemical	Codes/ Label	TLV	FBP	MP	FP	UEL	LEL
			°C			%	
Furnace Oil	Flammable	5mg/m³	400	338	32.96	7.5	0.6
HSD	Flammable	5mg/m³	369	338	32.96	7.5	0.6
LPG	Flammable	1000 ppm	-	-	104.4	9.5	1.9

TLV : Threshold Limit Value
MP : Melting Point
UEL : Upper Explosive Limit
FBP : Final Boiling Point
FP : Flash Point
LEL : Lower Explosive Limit

7.2.4 Identification of Major Hazard Installations Based on GOI Rules, 1989

Following accidents in the chemical industry in India over a few decades, a specific legislation covering major hazard activities has been enforced by Govt. of India in 1989 in conjunction with Environment Protection Act, 1986. This is referred here as GOI rules 1989. For the purpose of identifying major hazard installations the rules employ certain criteria based on toxic, flammable and explosive properties of chemicals.

A systematic analysis of the fuels/chemicals and their quantities of storage has been carried out, to determine threshold quantities as notified by GOI Rules, 1989 and the applicable rules are identified. Applicability of storage rules is summarized in **Table-7.4.**

TABLE-7.4
APPLICABILITY OF GOI RULES TO FUEL STORAGE

Sr. No.	Chemical/ Fuel	Listed in Schedule	Total Quantity	Threshold Quantity (T) for Application of Rules	
				5,7-9,13-15	10-12
1	Furnace Oil	3 (1)	4000 T	25 MT	200 MT
2	HSD	3 (1)	1000 KL	25 MT	200 MT
3	LPG	3 (1)	400 T	25 MT	200 MT

7.2.5 Preliminary Hazard Analysis (PHA)

A preliminary hazard analysis is carried out initially to identify the major hazards associated with storages and the processes of the plant. This is followed by consequence analysis to quantify these hazards. Finally, the vulnerable zones are plotted for which risk reducing measures are deduced and implemented. Preliminary hazard analysis for fuel storage area and whole plant is given in **Table-7.5** and **Table-7.6.**

TABLE-7.5
PRELIMINARY HAZARD ANALYSIS FOR STORAGE AREAS

Unit	Phase-I	Phase-II	Total Capacity	Hazard Identified
Furnace Oil	2 x 1000 T	2 x 1000 T	4 x 1000 T	Fire/Explosion
HSD	1 x 500 KL	1 x 500 KL	2 x 500 KL	Fire/Explosion
LPG	2 x 100 T	2 x 100 T	4 x 100 T	Fire/Explosion

TABLE-7.6
PRELIMINARY HAZARD ANALYSIS FOR THE PROPOSED PROJECT IN GENERAL

PHA Category	Description of Plausible Hazard	Recommendation	Provision
Environ-mental factors	If there is any leakage and eventuality of source of ignition.	-	All electrical fittings and cables will be provided as per the specified standards. All motor starters will be flame proof.
	Highly inflammable nature of the chemicals may cause fire hazard in the storage facility.	A well designed fire protection including water sprinkler system, dry powder, CO_2 extinguisher will be provided.	Fire extinguisher of small size and big size will be provided at all potential fire hazard places. In addition to the above, fire hydrant network will also be provided.
	If there is any leakage in the duct and eventuality of source of emission SO_2	Periodical check-up of the wear and tear of the ducts and mechanical, Electrical and Instrumentation equipment.	-
	If there is a sudden trip of sulphuric acid plant main blower, the SO_2 gas in between smelter and SAP will become the eventuality of source of emission SO_2	Uninterrupted power supply.	If there is a sudden trip of sulphuric acid plant main blower, smelting will get stopped by trip interlock arrangement with sufficient back up arrangement to handle the gas trapped in the system.

- **Safety Measures in Storage Facilities**

Risk for storage units depends not on the extent of the consequence, but also on the probability of the failure of the safety measures and provisions provided. The safety measures to be provided in storage facilities in the proposed plant are given in **Table-7.7**.

TABLE-7.7
SUBSTANCE STORED AND SAFE GUARD

Substance Stored	Safe Guard
Sulphuric acid	• Bund wall will be constructed around the storage tanks for acid/ alkali spillage containment. • Collection pit / neutralization pit with pumping arrangement. • Buffer tank with equal capacity of maximum capacity of one tank. • Sufficient amount of neutralization agent.
Phosphoric acid	
Furnace oil	Following fire fighting measures will be provided: a) DCP extinguisher; b) AFFF extinguisher; c) Water cum foam monitor; and d) Sand bucket.
High Speed Diesel (HSD)	
Iso Propanol	Following fire fighting measures will be provided: a) DCP extinguisher b) Sand bucket c) Well laid fire hydrant system d) During unloading, tankers will be provided with extinguishers
Liquefied Petroleum Gas (LPG)	1. Hydrocarbon sensors will be provided for continuous monitoring of the flammable vapour in the atmosphere. 2. Medium pressure water sprinkler system will be provided with automatic detection and operation. 3. Water blanketing system will be installed to control outside fire 4. Following fire fighting facilities will be provided: • DCP extinguisher • Sand bucket • Water monitor 4. CO_2 extinguishers will be placed in LPG unloading area and in LPG tankers.
Copper Concentrate Ware house	• Well laid fire hydrant system • Dust suppression system • Mechanised operation • Air conditioned operator cabin • 5 kg DCP extinguisher
Rock phosphate	• Well laid fire hydrant system • Dust suppression /extraction system • Mechanized operation • Air conditioned operator cabin

7.2.6 Maximum Credible Accident Analysis (MCAA)

Hazardous substances may be released as a result of failures or catastrophes, causing possible damage to the surrounding area. This section deals with the question of how the consequences of the release of such substances and the damage to the surrounding area can be determined by means of models. Major hazards posed by flammable storage can be identified taking recourse to MCA analysis. MCA analysis encompasses certain techniques to identify the hazards and calculate the consequent effects in terms of damage distances of heat radiation,

toxic releases, vapour cloud explosion, etc. A host of probable or potential accidents of the major units in the complex arising due to use, storage and handling of the hazardous materials are examined to establish their credibility. Depending upon the effective hazardous attributes and their impact on the event, the maximum effect on the surrounding environment and the respective damage caused can be assessed. The reason and purpose of consequence analysis are many folds like:

- Part of risk assessment;
- Plant layout/code requirements;
- Protection of other plants;
- Protection of the public;
- Emergency planning; and
- Design criteria.

The results of consequence analysis are useful for getting information about all known and unknown effects that are of importance when some failure scenario occurs in the plant and also to get information as how to deal with the possible catastrophic events. It also gives the workers in the plant and people living in the vicinity of the area, an understanding of their personal situation.

- **Selected Failure Cases**

The purpose of this listing is to examine consequences of such failure individually or in combination. It will be seen from the list that failure cases related to storage of Furnace Oil, LPG and HSD have been identified.

7.2.6.1Damage Criteria

The fuel storage and unloading at the storage facility may lead to fire and explosion hazards. The damage criteria due to an accidental release of any hydrocarbon arise from fire and explosion. The vapors of these fuels are not toxic and hence no effects of toxicity are expected.

Tank fire would occur if the radiation intensity is high on the peripheral surface of the tank leading to increase in internal tank pressure. Pool fire would occur when fuels collected in the dyke due to leakage gets ignited.

- **Fire Damage**

A flammable liquid in a pool will burn with a large turbulent diffusion flame. This releases heat based on the heat of combustion and the burning rate of the liquid. A part of the heat is radiated while the rest is convected away by rising hot air and combustion products. The radiations can heat the contents of a nearby storage or process unit to above its ignition temperature and thus result in a spread of fire. The radiations can also cause severe burns or fatalities of workers or fire fighters located within a certain distance. Hence, it will be important to know beforehand the damage potential of a flammable liquid pool likely to be created due to leakage or catastrophic failure of a storage or process vessel. This will help to decide the location of other storage/process vessels, decide the type of protective clothing the workers/fire fighters need, the duration of time for which they can be in the zone, the fire extinguishing measures needed and the protection methods needed for the

nearby storage/process vessels. **Table-7.8** tabulates the damage effect on equipment and people due to thermal radiation intensity.

TABLE-7.8
DAMAGE DUE TO INCIDENT RADIATION INTENSITIES

Sr. No.	Incident Radiation (kW/m^2)	Type of Damage Intensity	
		Damage to Equipment	Damage to People
1	37.5	Damage to process equipment	100% lethality in 1 min. 1% lethality in 10 sec.
2	25.0	Minimum energy required to ignite wood at indefinitely long exposure without a flame	50% Lethality in 1 min. Significant injury in 10 sec.
3	19.0	Maximum thermal radiation intensity allowed on thermally unprotected adjoining equipment	-
4	12.5	Minimum energy to ignite with a flame; melts plastic tubing	1% lethality in 1 min.
5	4.5	-	Causes pain if duration is longer than 20 sec, however blistering is un-likely (First degree burns)
6	1.6	-	Causes no discomfort on long exposures

Source: Techniques for Assessing Industrial Hazards by World Bank.

7.2.6.2 Fuel Storage

The details of storages are given in **Table-7.2**. In case of fuel released in the area catching fire, a steady state fire will ensue. Failures in pipeline may occur due to corrosion and mechanical defect. Failure of pipeline due to external interference is not considered as this area is licensed area and all the work within this area is closely supervised with trained personnel.

7.2.6.3 Modeling Scenarios

There are two plots for storage of LPG and oil fuel, each covering 160 m x 80 m area, one for Phase-I and the other for Phase-II project. Each plot contains two above-ground LPG bullets, two Furnace oil tanks and one HSD tank. Based on the storage and consumption of various fuels and chemicals the following failure scenarios for the proposed Copper refinery project have been identified for MCA analysis and the scenarios are discussed in **Tables-7.9.**

TABLE-7.9
SCENARIOS CONSIDERED FOR MCA ANALYSIS

Sr. No.	Description	Capacity of Storage Tank		Remarks
		Phase-I	Phase-II	
1	LPG Bullets	2 x 100 T	2 x 100 T	Above-ground horizontal cylindrical pressure vessels
2	Furnace oil Tanks	2 x 1,000 T	2 x 1,000 T	Vertical cone roof tanks
3	HSD Tank	1 x 500 KL	1 x 500 KL	Vertical cone roof tank

7.2.6.4 Model Computations

Hazardous Properties of LPG & Oil Fuels

The flammable consequences of LPG release from equipment are mainly the following:

- Jet fire/pool fire/ flash fire
- Vapour cloud explosion

Properties of LPG relevant to this QRA study are as follows:

Composition	:	Mixture of Propane and Butane
Normal Boiling Point	:	(-)6 °C
Lower Flammable Limit (LFL)	:	1.8 % (vol)
Upper Flammable Limit (UFL)	:	9.5 % (vol)
Auto ignition temperature	:	410-580 °C (approx.)

LPG is stored as liquid under pressure. LPG vapours are heavier than air and disperse close to ground level. LPG odorized with ethyl mercaptan is received in the plant so as to provide warning in case of leakage.

High speed diesel (HSD) is Class 'B' petroleum product with minimum flash point of 35 °C. Furnace oil is Class 'C' petroleum product with minimum flash point of 66 °C.

7.2.6.5 Consequence Analysis

Jet/ Pool Fire Radiation

The effect from jet fire and pool fire is thermal radiation intensity on the receptor surface as shown in **Table-7.10**.

TABLE-7.10
DAMAGE EFFECTS DUE TO JET/ POOL FIRE RADIATION

Heat Radiation Intensity (kW/m²)	Observed Effect
4.5	Sufficient to cause pain to personnel if unable to reach cover within 20 seconds; 0% lethality.
12.5	Minimum energy required for piloted ignition of wood, melting of plastic tubing.
37.5	Sufficient to cause damage to process equipment.

- Thermal radiation intensity exceeding 37.5 kW/m² may cause escalation due to damage of other equipment.
- Thermal radiation intensity exceeding 12.5 kW/m² may cause ignition of combustibles on buildings and impairment of escape route.
- Thermal radiation intensity exceeding 4 kW/m² may cause burn injury on personnel injury.

Vapour Cloud Explosion (VCE)

When a large quantity of flammable vapour or gas is released, mixes with air to produce sufficient mass in the flammable range and is then ignited, the result is a vapour cloud explosion (VCE). In the LPG installation large release of LPG from equipment or piping has potential for vapour cloud explosion. The damage effect of vapour cloud explosion is due to overpressure as shown in **Table-7.11**.

TABLE-7.11
VCE OVER PRESSURE LIMIT AND OBSERVED EFFECT

Over-pressure Effect		Observed Damage
bar(g)	psig	
0.021	0.3	"Safe distance" (probability 0.95 of no serious damage below this value); projectile limit; some damage to house ceilings; 10% of window glass broken.
0.069	1	Repairable damage; partial demolition of houses; steel frame of clad building slightly distorted.
0.138	2	Partial collapse of walls of houses.
0.207	3	Heavy machines in industrial buildings suffered little damage; steel frame building distorted and pulled away from foundations.

Consequence Analysis Results

The failure scenario of leak of liquid LPG through 25 mm diameter hole which represents a maximum credible scenario. Results of consequence analysis carried out using Phast software are summarized in **Table-7.12**.

TABLE-7.12
CONSEQUENCE ANALYSIS RESULTS

Recommendations

(1) LPG Storage System

LPG Storage system shall conform to the requirements of OISD Standard 144 and 158.

Above-ground LPG bullets are susceptible to BLEVE/ fire ball hazard if engulfed in external fire. Therefore, all measures are to be taken to prevent leakage and fire. Large leak of LPG has potential to cause vapour cloud explosion.

Fire protection system shall be provided conforming to the requirement of OISD standards. This includes the following:

- Fire/ gas detectors with alarms
- Fire water storage and distribution system with hydrants, monitors and sprinklers

Each LPG bullet shall have a single nozzle at the bottom for liquid inlet as well as outlet. A remote operated shut off valve (ROSOV) shall be provided on this bottom nozzle at a distance of at least 3 meters from the shadow of the bullet. The ROSOV shall be fire-safe and fail-safe type.

Each LPG bullet shall be provided with at least two independent level indicators and one independent level switch. The ROSOV shall automatically close on actuation of alarm from high level switch.

(2) Furnace Oil & HSD Storage System

The storage tanks are to be provided with fixed foam system. Mobile medium expansion foam generators (2 Nos.) should be available to fight dyke fires.

(3) General

In Phase-1 plot plan, it is recommended to consider shifting the block HSE, first aid and fire station to other area to avoid overpressure damage byvapour cloud explosion in case of large LPG leak.

7.3 Disaster Management Plan (DMP)

7.3.1 Disasters

A disaster is a catastrophic situation in which suddenly, people are plunged into helplessness & suffering and, as a result, need protection, clothing, shelter, medical and social care and other necessities of life.

Disasters can be divided into two main groups. In the first, the disasters are resulting from natural phenomena like earthquakes, volcanic eruptions, storm surges, cyclones, tropical storms, floods, avalanches, landslides, and forest fires. The second group includes disastrous events occasioned by man, or by man's impact upon the environment. Examples are armed conflict, industrial accidents,

radiation accidents, factory fires, explosions and escape of toxic gases or chemical substances, river pollution, mining or other structural collapses, air, sea, rail and road transport accidents and can reach catastrophic dimensions in terms of human loss. The plant design will be done considering seismic zone-V as per IS 1893 (part-I)-latest edition as this is a seismically unstable zone. All the design precautions will be taken to address any seismic tremors.

7.3.2 Objectives of Disaster Management Plan

The disaster management plan is aimed to ensure safety of life, protection of environment, protection of installation, restoration of production and salvage operations in this same order of priorities. For effective implementation of the disaster management plan, it should be widely circulated and personnel training through rehearsals/drills.

The disaster management plan shall reflect the probable consequential severalties of the undesired event due to deteriorating conditions or through 'Knock on' effects. Further, the management shall be able to demonstrate that their assessment of the consequences uses good supporting evidence and is based on currently available and reliable information, incident data from internal and external sources and if necessary the reports of outside agencies.

To tackle the consequences of a major emergency inside the factory or immediate vicinity of the factory, a disaster management plan has to be formulated and this planned emergency document is called "Disaster Management Plan".

The objective of the industrial disaster management plan is to make use of the combined resources of the plant and the outside services to achieve the following:

1. Effect the rescue and medical treatment of causalities;
2. Safeguard other people;
3. Minimize damage to property and the environment;
4. Initially contain and ultimately bring the incident under control;
5. Identify any dead;
6. Provide for the needs of relatives;
7. Provide authoritative information to the news media;
8. Secure the safe rehabilitation of affected area; and
9. Preserve relevant records and equipment for the subsequent inquiry into the cause and circumstances of the emergency.

In effect, it is to optimize operational efficiency to rescue, rehabilitation and render medical help and to restore normalcy. To provide guidance to help stake holders take appropriate action to prevent accidents involving hazardous substances and to mitigate adverse effects of accidents that do nevertheless occur. The disaster management plan is shown in **Figure-7.15** and disaster risk management cycle is shown in **Figure-7.16**.

7.3.3 Emergencies

During operational period many near misses and incidents/ accidents may happen. To help industry the emergencies can be categorized into three broad levels on the basis of seriousness and response requirements, namely:

a) Level-1

- Can be effectively and safely managed, and contained within the site, location or installation by the available resources; and
- Has no impact outside the site, location or installation site of the machineries.

b) Level-2

- Cannot be effectively and safely managed or contained at the location or installation by available resource and additional support is alerted or required;
- Is having or has the potential to have an effect beyond the site, location or installation and where external support of mutual aid partner may be involved; and
- Is likely to be danger to life, environment or to industrial assets or reputation.

c) Level-3

This is an emergency or an incident with off-site impact which could be catastrophic and is likely to affect the population, property and environment inside and outside the installation, and management and control is done by district administration. Although the Level-III emergency falls under the purview of district authority but till they step in, it should be responsibility of the unit to manage the emergency.

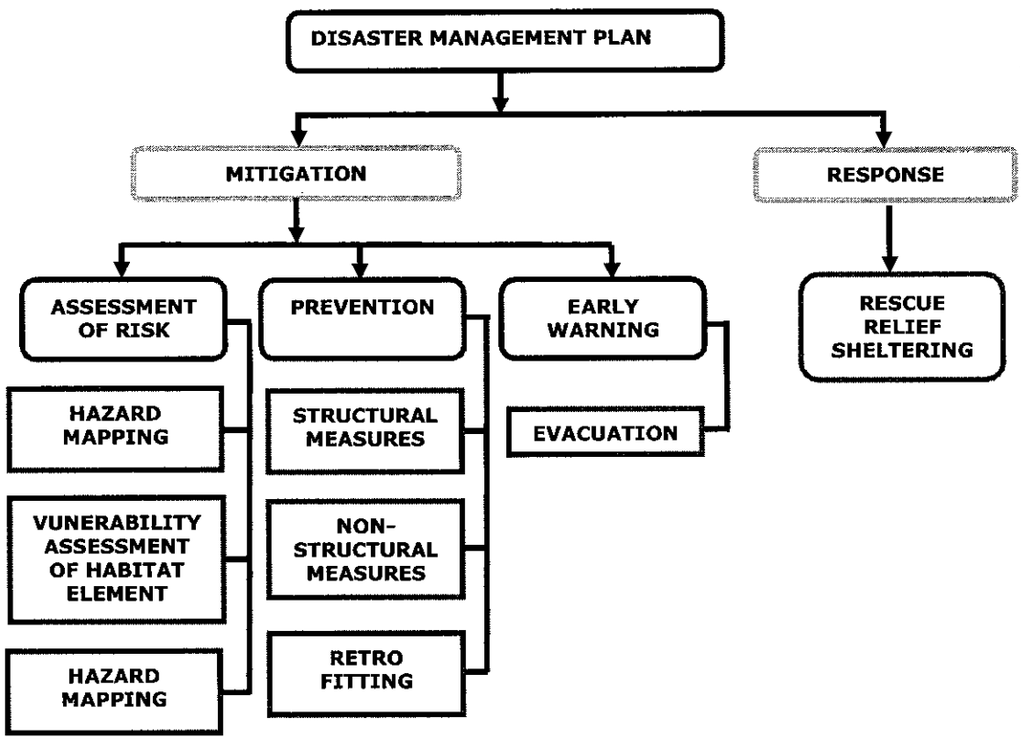

FIGURE-7.15
DISASTER MANAGEMENT PLAN

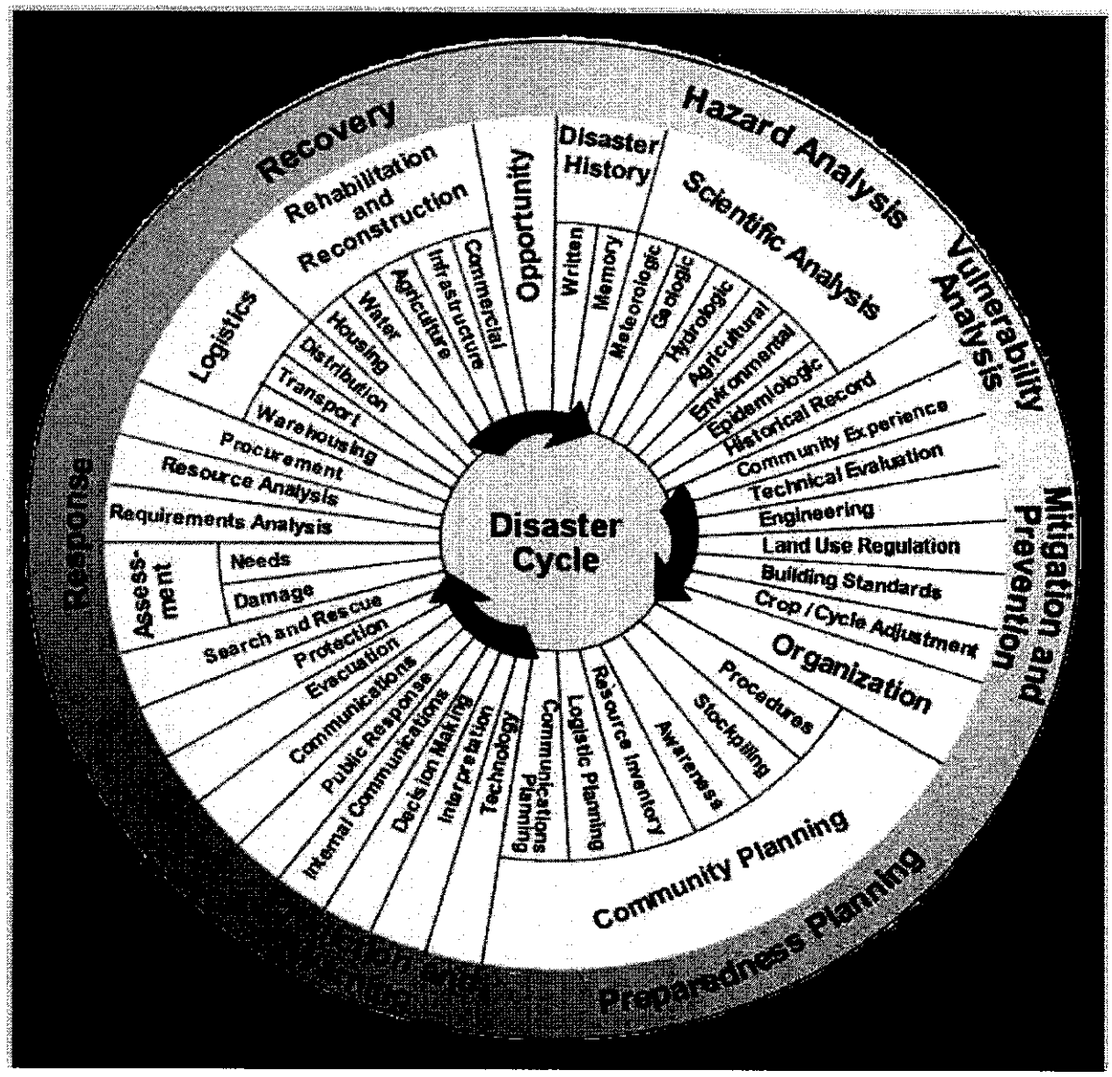

FIGURE-7.16
DISASTER RISK MANAGEMENT CYCLE

7.3.3.1 General and Industrial Emergencies

The emergencies that could be envisaged in the plant and tank farm are as follows:

1. A situation of fire at the tank farm of all storages;
2. Slow isolated fires;
3. Fast spreading fires;
4. Structural failures;
5. Contamination of food/water; and
6. Sabotage/Social disorder.

7.3.3.2 Anticipated Emergency Scenarios

Emergency preparedness and response plan is prepared based on storage facilities, raw materials and products & by products and processes involved. Anticipated emergency situations are given in **Table-7.13.**

TABLE-7.13
ANTICIPATED EMERGENCY SITUATIONS

Sr. No.	*Activity*	Explosion	Fire	Toxic Release	Spill
1	Storage of LPG	-	Fire hazard due to Leakage of LPG	LPG Release	-
2	Storage of FO and HSD	-	Fire hazard due to leakage of oil	-	-
3	Storage of sulphuric acid	-	-	-	Major spills of acid into bund will result in localised formation of acid mist/fumes
4	Storage of phosphoric acid	-	-	-	Major spills of acid in to bund will result in localised formation of acid mist/fumes
5	Transfer of SO_2 gas from smelter to sulphuric acid plant	-	-	Sudden and heavy release of SO_2 gas cloud leads to suffocation	-
6	Escape of fluorine from phosphoric acid plant	-	-	Excessive fluorine release leads to suffocation	-
7	Transformer fire	Explosion of breakers, transformers or capacitor	Possibility of fire due to over heating of transformer oil	Aerosols - smoke and CO	-
8	Fire in cable cellar room	-	Fire	PVC cables emits toxic gases	-
9	Storage of liquid	Explosion	-	-	-

Sr. No.	*Activity*	Explosion	Fire	Toxic Release	Spill
	oxygen	possibility due to poor process control			
10	WHRB	Steam explosion due to poor process control	-	-	-
11	Storage of hazardous waste	-	-	-	Fire & explosion, Land & water contamination
12	Transport of hazardous waste	-	-	-	Spill hazard, Fire & explosion, Land & water contamination
13	Transportation of sulphuric acid and phosphoric acid	-	-	-	Burn injury may occur due to acid splash, tank overflow and acid line leak. Injury may occur while shifting heavy materials. Injury may occur due to tanker movement.
14	WWTP – Sudden release of H_2S	-	-	Excessive H_2S release leads to suffocation	-
15	Over exposure to a source of ionizing radiation	-	-	-	Health Hazard

7.3.4 Onsite Emergency Plan

The preparation of onsite emergency plan is mandatory. The mock drill of the onsite emergency plan shall be conducted at least one in every six months. The main elements of on-site emergency plans are:

- Leadership and administration;
- Role and responsibilities of key personnel;
- Emergency action;
- Light and power;
- Source of energy control;
- Protective and rescue equipment;
- Communication;
- Medical care;
- Mutual aid;
- Public relation;
- Protection of vital records;
- Training; and
- Periodical revision of plan.

The action plan should consist of the following:

- Designated emergency control centre/room; and
- Key personnel.

Facilities to be made available in the emergency control are:

i. Internal and external communication.
ii. Computer and other essential records.
iii. Daily attendance of workmen employed in factory.
iv. Storage of hazardous material records and manufacturing records.
v. Pollution records.
vi. Walky-talky.
vii. Plan of the plant showing:-
    a. Storage area of hazardous materials.
    b. Storage of safety equipments.
    c. Firefighting system and additional source of water.
    d. Site entrance, roadway and emergency exist.
    e. Assembly points.
    f. Truck parking area.
    g. Surrounding location.

viii. Note book, pad and pencil.
ix. List of key personnel with addresses, telephone number etc.

It is recommended to setup an emergency organization headed by senior executive who has control over the affairs of the plant and would be designated as site controller. As per the general organization chart, would be designated as the incident controller. In the case of stores, utilities, open areas, which are not under the control of the production heads, senior executive responsible for maintenance of utilities would be designated as incident controller. All the incident controllers would be reporting to the site controller.

Each incident controller, for himself organizes a team responsible for controlling the incidence with the personnel under his control. Shift In-charge would be the reporting officer, who would bring the incidence to the notice of the incidence controller and site controller.

Emergency coordinators would be appointed who would undertake the responsibilities like fire fighting, rescue, rehabilitation, transport and provide essential and support services. For this purposes, security in-charge, personnel department, essential services personnel would be engaged. All these personnel would be designated as key personnel.

In each shift, electrical supervisor, electrical fitters, pump house In-charge, and other maintenance staff would be drafted for emergency operations. In the event of power or communication system failure, some of the staff members in the office/plant offices would be drafted and their services would be utilized as messengers for quick passing of communications. All these personnel would be declared as essential personnel.

7.3.4.1Emergency Communication

Whoever notices an emergency situation such as fire, growth of fire, leakage etc. would inform his immediate superior and emergency control center. The person on duty in the emergency control centre would appraise the site controller. Site controller verifies the situation from the incident controller of that area or the shift in-charge and takes a decision about an impending onsite emergency. This would be communicated to all the incident controllers, emergency coordinators. Simultaneously, the emergency warning system would be activated on the instructions of the site controller. The onsite emergency plan is shown in **Figure-7.17**.

7.3.4.2 Emergency Responsibilities

The responsibilities of the key personnel are appended below:

➢ *Site Controller*

- On receiving information about emergency he would rush to Emergency Control Center (ECC) and take charge of ECC and the situation;
- Assesses the magnitude of the situation on the advice of incident controller and decides;
- Whether the affected area needs to be evacuated;
- Whether personnel who are at assembly points need to be evacuated;
- Declares emergency and orders for operation of emergency siren;
- Organizes announcement by public address system about location of emergency;
- Assesses which areas are likely to be affected, or need to be evacuated or are to be alerted;
- Maintains a continuous review of possible development and assesses the situation in consultation with incident controller and other key personnel as to whether shutting down the plant or any section of the plant is required and if evacuation of persons is needed;
- Directs personnel for rescue, rehabilitation, transport, fire, brigade, medical and other designated mutual support systems locally available, for meeting emergencies;
- Controls evacuation of affected areas, if the situation is likely to go out of control or effects are likely to go beyond the premises of the factory, informs to district emergency authority, police, hospital and seeks their intervention and help;
- Informs Inspector of Factories, Deputy Chief Inspector of Factories, PCB and other statutory authorities;
- Gives a public statement, if necessary;
- Keeps record of chronological events and prepares an investigation report and preserves evidence; and
- On completion of onsite emergency and restoration of normalcy, declares all clear and orders for all clear warning.

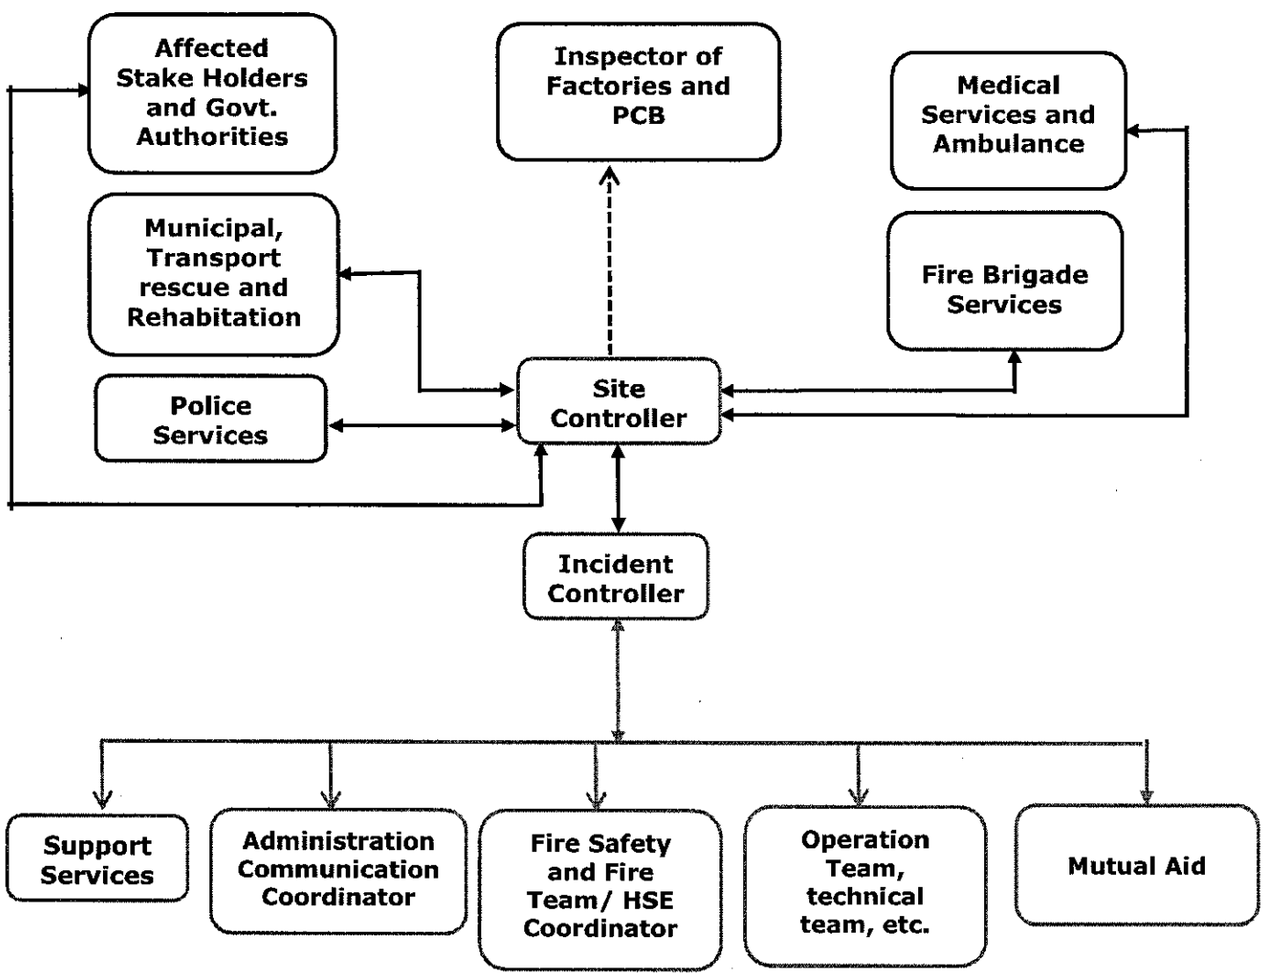

FIGURE-7.17
ONSITE EMERGENCY PLAN

➢ *Incident Controller*

- Assembles the incident control team;
- Directs operations within the affected areas with the priorities for safety to personnel, minimize damage to the plant, property and environment and minimize the loss of materials;
- Directs the shutting down and evacuation of plant and areas likely to be adversely affected by the emergency;
- Ensures that all key personnel help is sought;
- Provides advice and information to the fire and security officer and the local fire services as and when they arrive;
- Ensures that all non-essential workers/staff of the affected areas evacuated to the appropriate assembly points, and the areas are searched for causalities;
- Has regard to the need for preservation of evidence so as to facilitate any inquiry into the causes and circumstances, which caused or escalated the emergency;
- Co-ordinates with emergency services at the site;
- Provides tools and safety equipment to the team members;
- Keeps in touch with the team and advise them regarding the method of control to be used; and
- Keeps the site controller of emergency informed of the progress being made.

➢ *Emergency Coordinator - Rescue, Fire Fighting*

- On knowing about emergency, rushes to Emergency Control Center (ECC);
- Helps the incident controller in containment of the emergency;
- Ensure fire pumps in operating conditions and instructs pump house operator to ready for any emergency with standby arrangement;
- Guides the fire fighting crew i.e. firemen, trained plant personnel and security staff;
- Organizes shifting the fire fighting facilities to the emergency site, if required;
- Takes guidance of the incident controller for fire fighting as well as assesses the requirements of outside help;
- Arranges to control the traffic at the gate and the incident area;
- Directs the security staff to the incident site to take part in the emergency operations under his guidance and supervision;
- Evacuates the people in the plant or in the nearby areas as advised by Site Controller;
- Searches for casualties and arranges proper aid for them;
- Assembles search and evacuation team;
- Arranges for safety equipment for the members of this team;
- Decides which paths the evacuated workers should follow; and
- Maintains law and order in the area, and if necessary seeks the help of police.

➢ *Emergency Coordinator-Medical, Mutual Aid, Rehabilitation, Transport & Communication*

- In the event of failure of electric supply and thereby internal telephone, sets up communication point and establishes contact with the (ECC);
- Organizes medical treatment to the injured and if necessary will shift the injured to nearby hospitals;

- Mobilizes extra medical help from outside, if necessary;
- Keeps a list of qualified first aid providers of the factory and seek their assistance;
- Maintains first aid and medical emergency requirements;
- Makes sure that all safety equipment are made available to the emergency team;
- Assists site controller with necessary data and coordinate the emergency activities;
- Assists site controller in updating emergency plan, organizing mock drills verification of inventory of emergency facilities and furnishing report to the site controller;
- Maintains liaison with civil administration;
- Ensure availability of canteen facilities and maintenance of rehabilitation center;
- He will be in liaison with site controller/incident controller;
- Ensure transportation facility;
- Ensures availability of necessary cash for rescue/rehabilitation and emergency expenditure;
- Controls rehabilitation of affected areas on discontinuation of emergency; and
- Makes available diesel/petrol for transport vehicles engaged in emergency operation.

➢ *Emergency Coordinator - Essential Services*

- He would assist site controller and incident controller;
- Maintains essential services like diesel generator, water, fire water, compressed air/instrument air, power supply for lighting;
- He would plan alternate facilities in the event of power failure, to maintain essential services such as lighting, refrigeration plant etc;
- He would organize separate electrical connections for all utilities and emergency services so that in the event of emergency or fires, essential services and utilities are not affected;
- Gives necessary instructions regarding emergency electrical supply, isolation of certain sections etc. to shift In-charge and electricians; and
- Ensures availability of adequate quantities of protective equipment and other emergency materials, spares etc.

➢ *General Responsibilities of Employees during an Emergency*

During an emergency, especially it becomes more enhanced and pronounced when an emergency warning is raised, the workers if they are in-charge of process equipment should adopt safe and emergency shut down and attend any prescribed duty as essential employee. If no such responsibilities assigned, he should adopt a safe course to assembly point and await instructions. He should not resort to spread panic. On the other hand, he must assist emergency personnel towards objectives of DMP.

7.3.5 Off-Site Emergency Preparedness Plan

Specific information on the incident which has potential to affect areas outside the plant premises need to the informed to the district authorities who will be responsible for preparation and implementation of the off-site disaster plan. The plan would be prepared with the assistance from neighboring industries so that resources can be pooled to face any disaster scenario.

The measures that may be taken into account may embrace the following fields:

- Allocation of duties among the plant fire brigade, city/district fire brigade, police auxiliary forces;
- Co-operation between plant and city fire brigade;
- Setting up of control stations;
- Use of air monitoring vehicles;
- Establishment of danger e.g. determination of extent of a gas cloud;
- Warning of population with sirens, by radio, television or lour speaker;
- Evacuation (only in special cases);
- Setting-up of road-blocks, diversion, direction of traffic;
- Keeping roads clear for operational and rescue vehicles; and
- Arrangement of medical treatment facilities and transport arrangements.

7.3.5.1 Introduction

Off-site emergency plan follows the on-site emergency plan. When the consequences of an emergency situation go beyond the plant boundaries, it becomes an off-site emergency. Off-site emergency is essentially the responsibility of the public administration. However, the factory management will provide the public administration with the technical information relating to the nature, quantum and probable consequences on the neighboring population.

The off-site plan in detail will be based on those events, which are most likely to occur, but other less likely events, which have severe consequence will also be considered. Incidents, which have very severe consequences yet have a small probability of occurrence, shall also be considered during the preparation of the plan. However, the key feature of a good off-site emergency plan is flexibility in its application to emergencies other than those specifically included in the formation of the plan.

The roles of the various parties who will be involved in the implementation of an off-site plan are described below. Depending on local arrangements, the responsibility for the off-site plan shall be either rest with the works management or, with the local authority. Either way, the plan shall identify an emergency coordinating officer, who would take the overall command of the off-site activities. As with the on-site plan, an emergency control center shall be setup within which the emergency co-ordinating officer can operate.

An early decision will be required in many cases on the advice to be given to people living "within range" of the accident - in particular whether they shall be evacuated or told to go indoors. In the latter case, the decision can regularly be reviewed in the event of an escalation of the incident. Consideration of evacuation may include the following factors:

a. In the case of a major fire but without explosion risk (e.g. LPG storage tank), only houses close to the fire are likely to need evacuation, although a severe smoke hazard may require this to be reviewed periodically;

b. If a fire is escalating and in turn threatening a store of hazardous material, it might be necessary to evacuate people nearby, but only if there is time; if insufficient time exists, people shall be advised to stay indoors and shield themselves from the fire. This latter case particularly applies if the installation at risk could produce a fireball with vary severe thermal radiation effects (e.g. LPG storage);

c. For release or potential release of toxic materials, limited evacuation may be appropriate down wind if there is time. The decision would depend partly on the type of housing "at risk". Conventional housing of solid construction with windows closed offers substantial protection from the effects of a toxic cloud, while shanty house, which can exist close to factories, offer little or no protection.

The major difference between releases of toxic and flammable materials is that toxic clouds are generally hazardous down to much lower concentrations and therefore hazardous over greater distances. Also, a toxic cloud drifting at, say 300 m per minute covers a large area of land very quickly. Any consideration of evacuation shall take this into account. Although the plan will have sufficient flexibility built in to cover the consequences of the range of accidents identified for the on-site plan, it will cover in some detail the handling of the emergency to a particular distance from each major hazard works.

7.3.5.2 Aspects Proposed to be Considered in the Off-Site Emergency Plan

Offsite emergency organization chart is shown in **Figure-7.18** and the main aspects, which should be included in the emergency plan are:

- ***Organization***

Detail of command structure, warning systems, implementation procedures, emergency control centers.

Names and appointments of incident controller, site main controller, their deputies and other key personnel.

- ***Communications***

Identification of personnel involved, communication center, call signs, network, list of telephone numbers.

- ***Specialized Knowledge***

Details of specialist bodies, firms and people upon whom it may be necessary to call e.g. those with specialized fuel knowledge, laboratories.

- ***Voluntary Organizations***

Details of organizers, telephone numbers, resources etc.

- ***Fuel Information***

Details of the hazardous substances stored and a summary of the risk associated with them.

- ***Meteorological Information***

Arrangements for obtaining details of weather forecasts and weather conditions prevailing at that time.

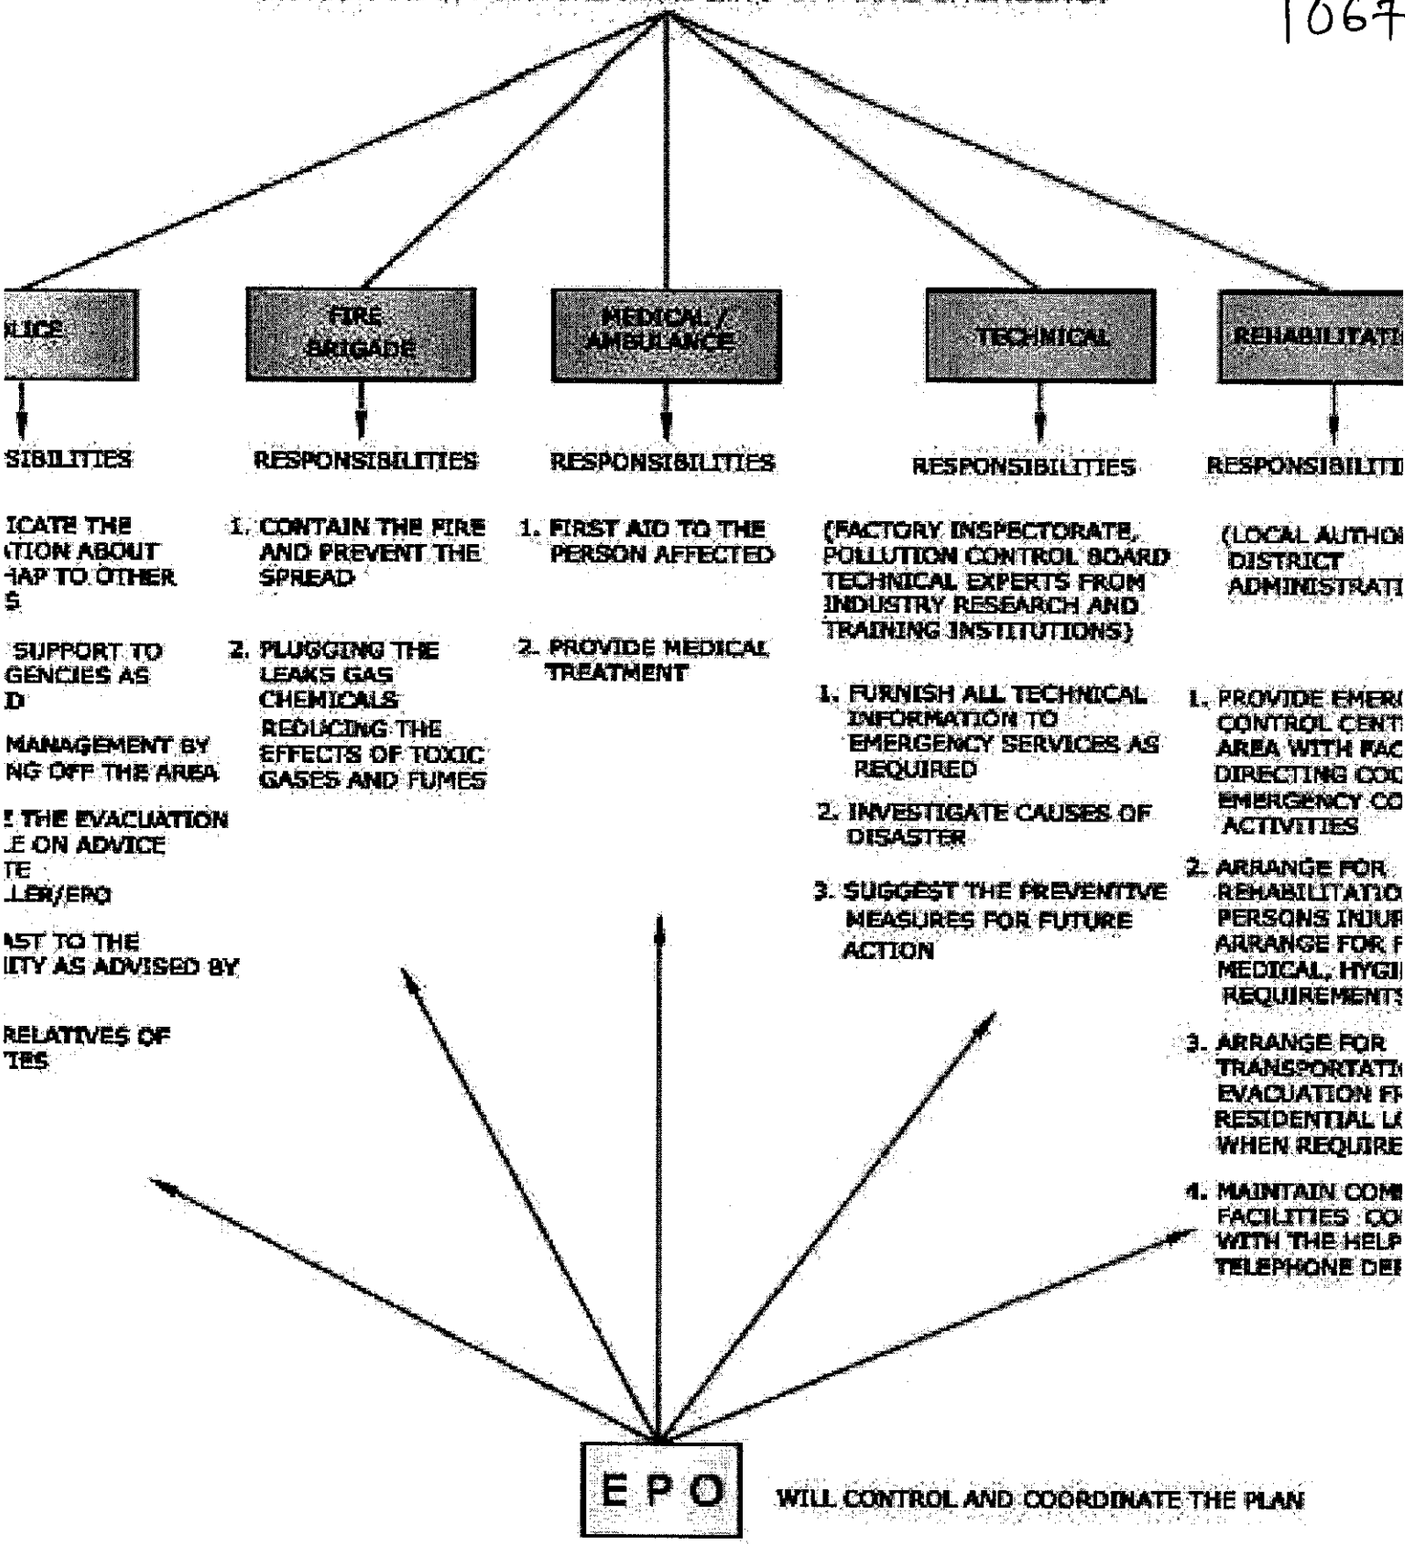
- ***Humanitarian Arrangements***

Transport, evacuation centers, emergency feeding, treatment of injured, first aid, ambulances and temporary mortuaries.

- ***Public Information***

Arrangements for:

(a) Dealing with the media press office;
(b) Informing relatives, etc.



- ***Assessment of Emergency Plan***

Arrangements for:

(a) Collecting information on the causes of the emergency;
(b) Reviewing the efficiency and effectiveness of all aspects of the emergency plan.

1067

ACTION PLAN FOR FIRE HANDLING OFF SITE EMERGENCY

7.3.5.3Roles and Responsibilities

- Role of the Emergency Co-ordinating Officer

The various emergency services would be co-ordinated by an Emergency Coordinating Officer (ECO), who will be designated by the district collector. The ECO would liaison closely with the site main controller. Again depending on local arrangements, for very severe incidents with major or prolonged off-site consequences, the external control would be passed to a senior local authority administrator or even an administrator appointed by the central or state government. The ECO will be equipped with address and phone numbers of important agencies.

- Role of the Local Authority

The duty to prepare the off-site plan lies with the local authorities. The Emergency Planning Officer (EPO) appointed should carry out his duty in preparing for a whole range of different emergencies within the local authority area. The EPO should liaison with the plant, to obtain the information to provide the basis for the plan. This liaison should ensure that the plan is continually kept upto date.

It will be the responsibility of the EPO to ensure that all those organizations which will be involved off site in handling the emergency, know of their role and are able to accept it by having for example, sufficient staff and appropriate equipment to cover their particular responsibilities. Rehearsals for off-site plans should be organized by the EPO.

- Role of Police

Formal duties of the police during an emergency include protecting life and property and controlling traffic movements.

Their functions should include controlling bystanders, evacuating the public, identifying the dead and dealing with casualties, and informing relatives of death or injury.

- Role of Fire Authorities

The control of a fire should be normally the responsibility of the senior fire brigade officer who would take over the handling of the fire from the site incident controller on arrival at the site. The senior fire brigade officer should also have a similar responsibility for other events, such as explosions. Fire authorities in the region should be apprised about the location of all stores of flammable materials, water and foam supply points, and fire-fighting equipment. They should be involved in on-site emergency rehearsals both as participants and, on occasion, as observers of exercises involving only site personnel.

➢ Role of Health Authorities

Health authorities, including doctors, surgeons, hospitals, ambulances, and so on, should have a vital part to play following a major accident, and they should form an integral part of the emergency plan.

For major fires, injuries should be the result of the effects of thermal radiation to a varying degree, and the knowledge and experience to handle this in all but extreme cases may be generally available in most hospitals.

Major off-site incidents are likely to require medical equipment and facilities additional to those available locally, and a medical "mutual aid" scheme should exist to enable the assistance of neighboring authorities to be obtained in the event of an emergency.

➢ Role of Government Safety Authority

This will be the factory inspectorate available in the region. Inspectors are likely to satisfy themselves that the organization responsible for producing the off-site plan has made adequate arrangements for handling emergencies of all types including major emergencies. They may wish to see well documented procedures and evidence of exercise undertaken to test the plan.

In the event of an accident, local arrangements regarding the role of the factory inspector will apply. These may vary from keeping a watching brief to a close involvement in advising on operations.

The action plan suggested for control of the off-site emergencies is given in **Table-7.14.**

TABLE-7.14
OFF-SITE ACTION PLAN

Sr. No.	Action required to be taken to mitigate disaster by aid giving agency	Responsible agencies for taking action	Equipments/material facilities required at site to mitigate emergency
A - 1	Arrangements for evacuation/rescue of persons from zone of influence to predetermined camps	Police Department	Self Breathing apparatus with spare cylinder Chemical gas mask with spare canister Vehicle with PA system Transportation for evacuation of people
2	Caution to public by announcement		
3	Traffic and Mob control by cordoning of the area		
4	Law & order		
5	Request to railway authority for keeping the nearest by railway gate open & to stop the up & down trains at the nearest railway station		
B - 1	Control of fire	District Fire Brigade	Self breathing apparatus with spare cylinders Foam/water fire tenders Gas mask with spare canisters
2	Scrubbing of the flashed off gas cloud with water curtain		
3	To rescue trapped persons		

Sr. No.	Action required to be taken to mitigate disaster by aid giving agency	Responsible agencies for taking action	Equipments/material facilities required at site to mitigate emergency
4	If fire is big, keep surrounding area cool by spraying water		Lime water Neck to toe complete asbestos suit, PVC hand gloves, gumboots, safety goggles Mobile scrubbing system along with suction arrangement.
5	Communication to OSEB to continue or cut off electric supply		
6	Communication to water supply department for supplying water		
C - 1	Medical facilities for affected persons (first aid and treatment)	Hospital and Public Health	Ambulance with onboard resuscitation unit, first aid, stretchers
D - 1	Identification of concentration of gas in zone of influence	Pollution Control Board (OPCB)	Gas detector
E - 1	Removal of debris and damaged structures	Municipal Corporation	Provide bulldozers Provide cranes
F - 1	Monitor the incoming and out going transports	Transport Department	Provide traffic police at site Provide emergency shifting vehicles at site Provide stock of fuel for vehicles
2	Arrange emergency shifting of affected persons and non affected person to specified area		
3	Arrange diesel/petrol for needed vehicles		
G - 1	Give all information related to meteorological aspects for safe handling of affected area for living beings	Meteorological Department	Provide wind direction and velocity instruments with temperature measure Mobile van for meteorological parameter measurements
2	Forecast if any important weather change		
H - 1	Representatives of all departments are in the local crisis group; therefore they are expected to render services available with them. Since it is a group of experts with authority, the mitigating measures can be implemented speedily. The representatives from locals are also there so that communication with local people is easy and quick.	Local Crises Group	Must have all resources at hand, specially disaster management plan and its implementation method. All relevant information related to hazardous industry are generally available with crisis group. News paper editor is a part of the group so that right and timely media release can be done
2	The district emergency or disaster control officer is the president and he is used to mock drill etc. so action can be taken in right direction in time		
I - 1	Collector is the President of District Crisis Group therefore all district infrastructure facilities are diverted to affected zone	District Crisis group	All necessary facilities available at district can be made available at affected zone Control of law and order situation
2	All other functions as mentioned for local crisis group		

7.3.6 District Disaster Management Plan

The DM structure in the state is as per the Gujarat State Disaster Management Act- 2005. Those provisions include designating a Vice Chairman to the GSDMA, constitution of a State Executive Committee, establishment of a District Disaster Management Authority in each district and creation of a District Disaster Response & Mitigation Funds. The state has existing institutional arrangements in place for addressing the roles / responsibilities envisaged through the above provisions and hence does not find it compelling to implement the provisions afresh.

The revenue department of the state is the Nodal Department for controlling, monitoring and directing measures for organizing rescue, relief and rehabilitation. All other concerned line departments should extend full cooperation in all matters pertaining to the response management of the disaster whenever it occurs. The State Emergency Operations Centres (EOC), Emergency Response Centres (ERCs) and other control rooms at the state level as well as district control rooms should be activated with full strength.

Under this State Disaster Management Plan, all disaster specific mechanisms would come under a single umbrella allowing for attending to all kinds of disasters. The existing arrangements therefore will be strengthened by defining this administrative arrangement. This arrangement proposes Chief Secretary as the head supported by the Relief Commissioner through the branch arrangements at the Emergency Operations Centres (EOC), both at State level and at the district levels. There is a formal Incident Response System in the State. The GSDMA Act 2003 empowers Commissioner of Relief to be the Incident Commander in the State and District Collector in the respective districts.

The response to disasters in the district will be organized according to the Incident Command System (ICS) as adopted to conditions in Gujarat State (ICS/GS). The argument for the ICS is that its fundamental elements –unity of command, clarity of objectives and efficient resource use are common to the effective response to any disaster.

In Kutch district, the multi-hazard response plan focused on sector specific action plans unlike the department specific planning approach in the previous plan documents. The disaster response is led by the District Emergency Operation Center (EOC) under the command and control of the district collector. District disaster management organizational structure is shown in **Figure-7.19.**

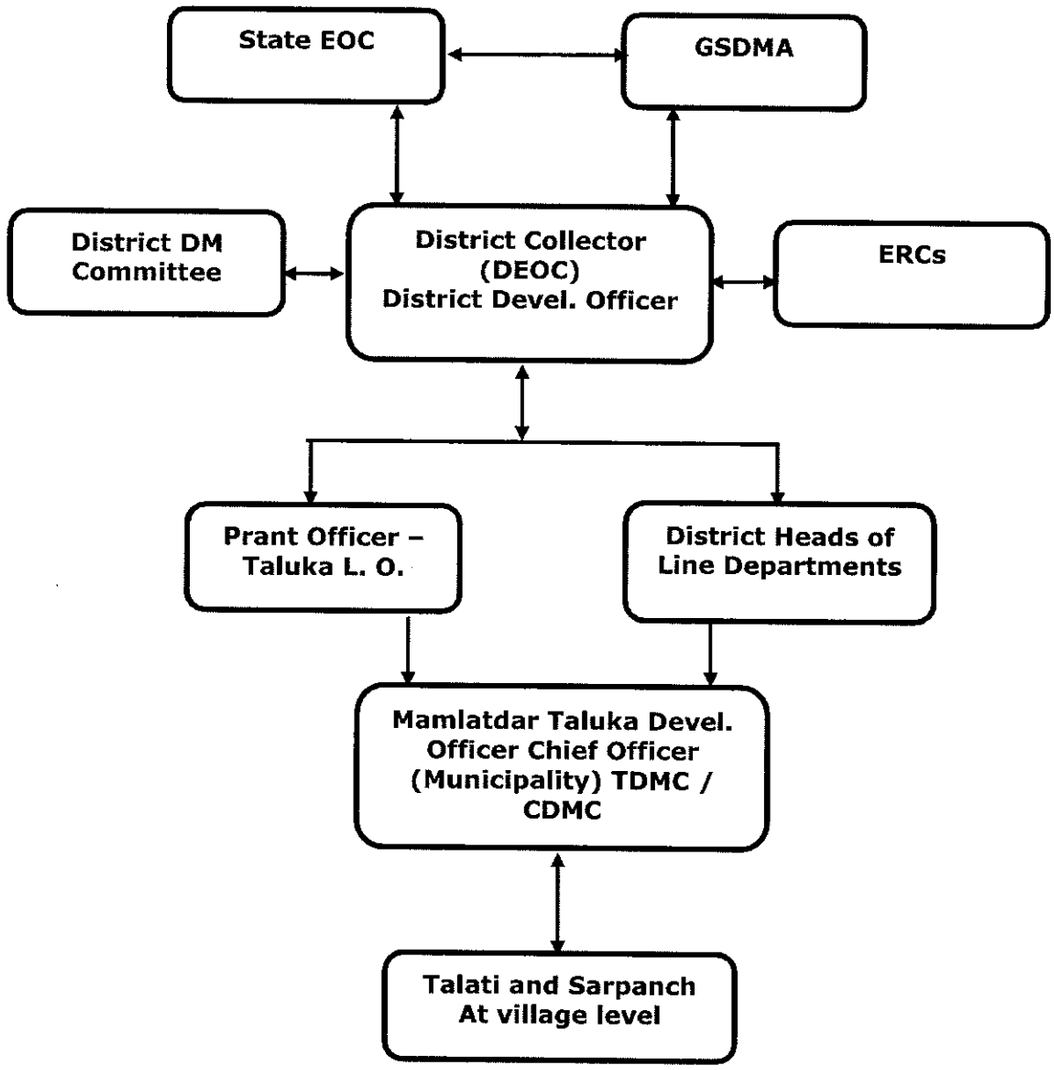


FIGURE-7.19
DISTRICT DISASTER MANAGEMENT ORGANIZATIONAL STRUCTURE

7.3.6.1DDM Roles and Responsibilities

➢ **The Collector**

- Facilitate and, coordinate with, local Government bodies to ensure that pre and post - disaster management activities in the district are carried out.
- Assist community training, awareness programmers and the installation of emergency facilities with the support of local administration, non-governmental organizations, and the private sector.
- Take appropriate actions to smoothen the response and relief activities to minimize the effect of disaster.
- Recommend CoR and State Government for declaration of disaster.

➢ **Local Authority**

- Provide assistance to GSDMA, COR and Collector in disaster management activities.
- Ensure training of its officers and employees and maintenance of resources so as to be readily available for use in the event of a disaster.
- Ensure that all construction projects under it conform to the standards and specifications lay down.
- Each department of the Government in a district shall prepare a disaster management plan for the district. Carry out relief, rehabilitation and reconstruction activities in the affected area within its jurisdiction.

➢ **Private Sector**

- The private sector should ensure their active participation in the pre-disaster activities in alignment with the overall plan developed by the GSDMA or the Collector.
- They should also adhere to the relevant building codes and other specifications, as may be stipulated by relevant local authorities.

➢ **Community Groups and Voluntary Agencies**

- Local community groups and voluntary agencies including NGOs should actively assist in prevention and mitigation activities under the overall direction and supervision of the GSDMA or the Collector.
- They should actively participate in all training activities as may be organized and should familiarize themselves with their role in disaster management.

➢ **Citizen**

It is a duty of every citizen to assist the Collector or such other person entrusted with or engaged in disaster management whenever his aid is demanded generally for the purpose of disaster management.

7.3.6.2ICS Roles and Responsibilities

The basic functional descriptions for key elements in the district Incident command System is described below and the Kutch Incident Command System Organizational Structure is shown in **Figure-7.20.**

➢ **Incident Commander**

Responsible for overall management of an incident based on clearly stated mandate from higher authority and based on focused objectives responding to the immediate impact of the incident.

An Incident Commander, who can be assist by a Dy. Incident Commander, leads the Incident command. In each incident will have as many as many commanders and other staff as there are shifts in the incident operation. Shifts will normally not exceed 12 hours at a time and should be standardized to 8 hours each as soon as possible after the start of the incident.

➢ **Command Staff Units**

A) Safety Unit

Responsible for ensuring the safe accomplishment of all activities undertaken in response to the incident. This task is accomplished through developing incident specific safety guidance documents, reviewing and advising on the safety of plans and monitoring actual operations to ensure safety of personnel and survivors.

B) Protocol and Liaison Unit

Responsible for all official visits as well as liaison between the incident command and organizations providing personnel or material support being used to manage the incident. The first point of contact for NGOs and others coming to the disaster as well as responsible for managing coordination meetings (some of which may actually be held by taskforces or sections).

C) Public Information Unit

Responsible for all media and public information tasks related to the incident. To accomplish its task, the unit can have the following sub units:

- **Public inquiries**: To handle non media requests for information
- **Outgoing public information**: To handle public information dissemination
- **Public opinion feedback**: To collect information from the public (incident survivors and the non-affected)
- **Media center:** To provide a single point of contact for all media involved in the incident.
- **Press release and media access**: Produce all releases and provide a single point of contact to arrange media access to the incident.

- **Monitoring and Feedback:** To monitor media reports and provide feedback to the incident management on coverage of the incident and to also take corrective measures and issue contradictions if required.

➢ **Law and Order Section**

Responsible for assuring the execution of all laws and maintenance of order in the area affected by the incident. The law and order section incorporates law and order task force that may be create to deal with a disaster.

Police Functions: As determined by the normal mandate for and special duties assigned to the police service.

Home Guard: As determined by the normal mandate for and special duties assigned to the home guard.

Volunteers: Supporting police and home guards in non-enforcement tasks, such as patrolling, monitoring and evacuations.

➢ **Operation Section**

Responsible for assuring specific operations according to objectives and plans to address the immediate impacts of the incident. Taskforces under the operation section will deal with specific functional tasks, such as search and rescue, the provision of water or shelter. The composition and size of these taskforces depends on the nature of the incident.

➢ **Planning Section**

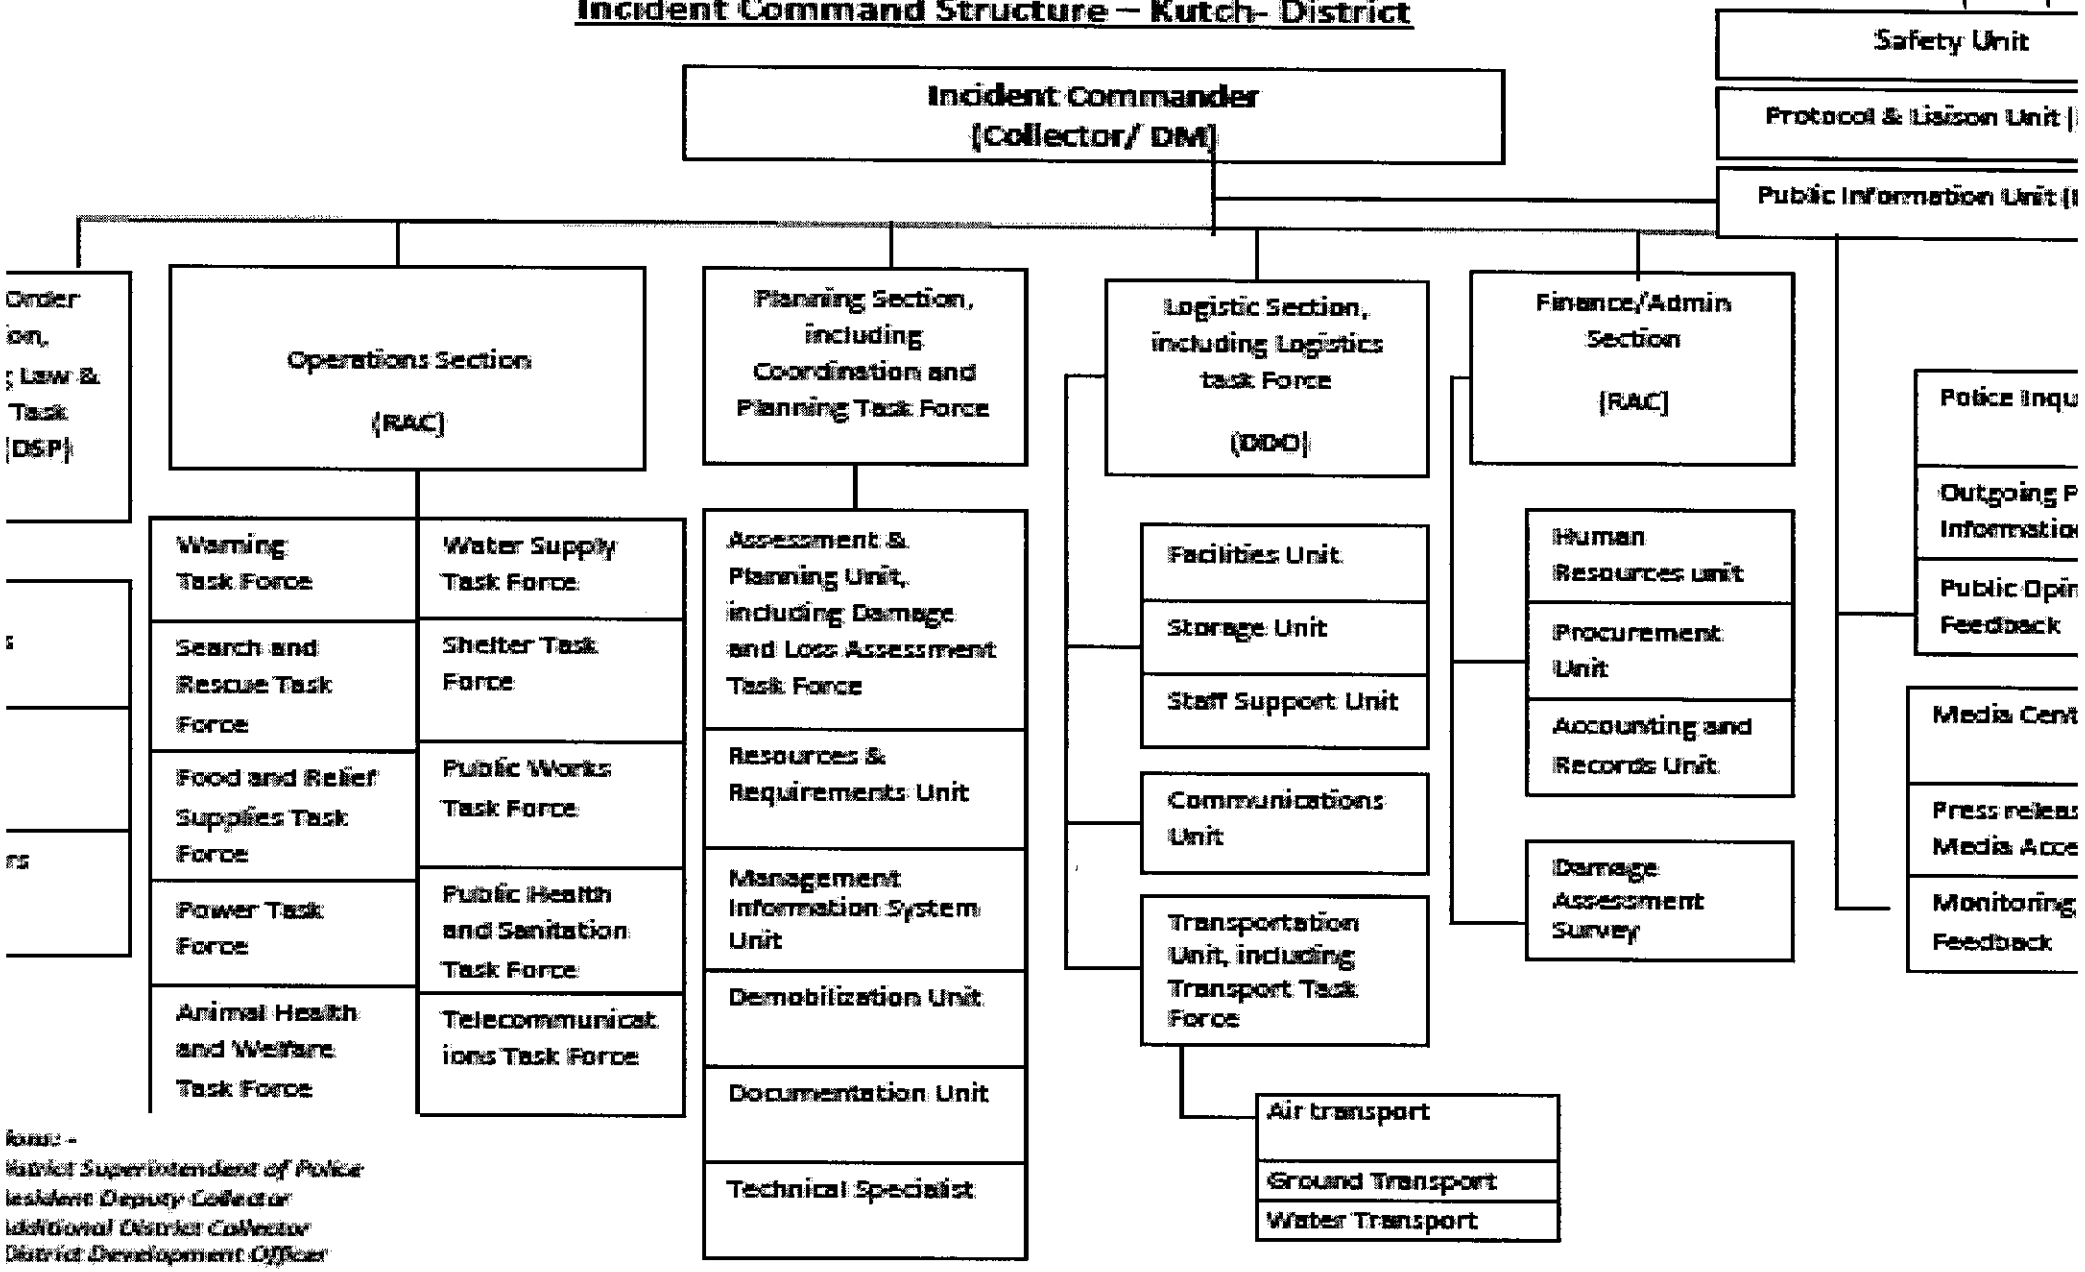
Responsible for collecting and analyzing information and developing plans to address the objectives set to address the incident. The overall work of the planning section will include efforts undertaken by any planning and coordination taskforce which is established as part of the response to a disaster. Units under the section include:

1. Assessment and planning;
2. Resources and Requirements;
3. Management information system;
4. Documentation;
5. Demobilization; and
6. Technical specialists.

➢ **Logistic Section**

Responsible for all task and functions related to provision of material and other resources needed for operations and the physical and material support and operation of the incent management team. This section includes transportation taskforce established to support disaster operations. Logistics tasks are through the following units:

1. Storage and supply;



2. Facilities;
3. Staff support;
4. Communications; and
5. Transportation (include ground, air water).

- **Finance and Administration**

Responsible for managing all financial and administrative tasks related to incident field operations. These tasks may, but would not usually include disbursement of financial aid to those affected by an incident. The task of this section are accomplished through following units:

1. Human resources;
2. Procurement; and
3. Accounting and records.

Incident Command Structure – Kutch- District

ions: -
District Superintendent of Police
esident Deputy Collector
ditional District Collector
District Development Officer
istrict Information Officer

The district administration of Kutch has identified 16 expected task forces for key response operation functions that are described below. Additional taskforces can be added under the operations section as needed by the circumstances of a disaster. Each taskforce is led by one organization and supporter by other organizations. Emergency operation taskforce functions is given in **Table-7.15** and the emergency contact numbers is given in **Table-7.16.**

TABLE-7.15
EMERGENCY OPERATION TASKFORCE FUNCTIONS

Sr. No.	Emergency Operation Taskforce	Functions
1	Coordination and Planning	Coordinate early warning, Response & Recovery Operations
2	Administration and Protocol	Support Disaster Operations by efficiently completing the paper work and other Administrative tasks needed to ensure effective and timely relief assistance
3	Warning	Collection and dissemination of warnings of potential disasters
4	Law and Order	Assure the execution of all laws and maintenance of order in the area affected by the incident
5	Search and Rescue (including Evacuation)	Provide human and material resources needed to support local evacuation, search and rescue efforts
6	Public Works	Provide the personnel and resources needed to support local efforts to reestablish normally operating infrastructure
7	Water	Assure the provision of sufficient potable water for human and animal consumption (priority), and water for industrial and agricultural uses as appropriate
8	Food and Relief Supplies	Assure the provision of basic food and other relief needs in the affected communities
9	Power	Provide the resources to reestablish normal power supplies and systems in affected communities
10	Public Health and sanitation (including First aid and all medical care)	Provide personnel and resources to address pressing public health problems and re-establish normal health care systems
11	Animal Health and Welfare	Provision of health and other care to animals affected by a disaster.
12	Shelter	Provide materials and supplies to ensure temporary shelter for disaster-affected populations
13	Logistics	Provide Air, water and Land transport for evacuation and for the storage and delivery of relief supplies in coordination with other task forces and competent authorities
14	Survey (Damage Assessment)	Collect and analysis data on the impact of disaster, develop estimates of resource needs and relief plans, and compile reports on the disaster as required for District and State authorities and other parties as appropriate
15	Telecommunications	Coordinate and assure operation of all communication systems (e.g; Radio, TV, Telephones, Wireless) required to support early warning or post disaster operations
16	Media (Public Information)	Provide liaison with and assistance to print and electronic media on early warning and post-disaster reporting concerning the disaster

7.4 Occupational Health and Safety

For large industries, where multifarious activities are involved during construction, erection, testing, commissioning, operation and maintenance, the men, materials and machines are the basic inputs. Along with the boons, industrialization generally brings several problems like occupational health and safety.

The industrial planner, therefore, has to properly plan and take steps to minimize the impacts of industrialization and to ensure appropriate occupational health and safety including fire plans. All these activities again may be classified under construction and erection, and operation and maintenance.

7.4.1 Occupational Health

Occupational health needs attention both during construction and erection and operation and maintenance phases. However, the problem varies both in magnitude and variety in the above phases.

- **Construction and Erection**

The occupational health problems envisaged at this stage can mainly be due to constructional accident and noise. To overcome these hazards, in addition to arrangements to reduce it within TLV's, necessary protective equipments shall also be supplied to workers.

- **Operation and Maintenance**

The necessary personal protective equipments shall be given to all the workers. The working personnel shall be given the following appropriate personnel protective equipments.

- Industrial safety helmet;
- Crash helmets;
- Face shield with replacement acrylic vision;
- Zero power plain goggles with cut type filters on both ends;
- Zero power goggles with cut type filters on both sides and blue color glasses;
- Welders equipment for eye and face protection;
- Cylindrical type earplug;
- Ear muffs;
- Canister gas mask;
- Self contained breathing apparatus;
- Leather apron;
- Aluminized fiber glass fix proximity suit with hood and gloves;
- Boiler suit;
- Safety belt/line man's safety belt;
- Leather hand gloves;
- Asbestos hand gloves;
- Acid/Alkali proof rubberized hand gloves;
- Canvas cum leather hand gloves with leather palm;
- Lead hand glove;
- Electrically tested electrical resistance hand gloves; and
- Industrial safety shoes with steel toe.

Full-fledged hospital facilities shall be set up for attending emergency arising out of accidents, if any. All working personnel shall be medically examined at least once in every year and at the end of his term of employment. This is in addition to the pre-employment medical examination.

7.4.2 Safety Plan

Safety of both men and materials during construction and operation phases is of concern. Safety plan shall be prepared and implemented in the proposed refinery plant. The preparedness of an industry for the occurrence of possible disasters is known as emergency plan. The disaster in the plant is possible due to collapse of structures and fire/explosion etc.

Keeping in view the safety requirement during construction, operation and maintenance phases, AEL has formulated Environment, Health and Safety Policy for their other industries, the same will be followed for the proposed refinery project. Environment, Health and Safety policy is given in **Figure-7.21.**

7.4.3 Safety Organization

- ***Construction and Erection Phase***

A qualified and experienced safety officer shall be appointed. The responsibilities of the safety officer include identification of the hazardous conditions and unsafe acts of workers and advice on corrective actions, conduct safety audit, organize training programs and provide professional expert advice on various issues related to occupational safety and health. He is also responsible to ensure compliance of Safety Rules/ Statutory Provisions.

- ***Operation and Maintenance Phase***

When the construction is completed the posting of safety officers shall be in accordance with the requirement of Factories Act and their duties and responsibilities shall be as defined thereof.

7.4.4 Safety Circle

In order to fully develop the capabilities of the employees in identification of hazardous processes and improving safety and health, safety circles would be constituted in each area of work. The circle would consist of 5-6 employees from that area. The circle normally shall meet periodically on scheduled frequency.

adani

ENVIRONMENT, HEALTH & SAFETY POLICY

We at Adani, strive to make our businesses sustainable, that benefits our customers, our employees, our shareholders and society in general. We believe that in addition to integrated infrastructure business, there is a bottom line in performing our operations according to prescribed standards, specifications and regulations on governance, which are safe in working and environmental friendly for the well-being of the working community.

As a responsible corporate, we at ADANI have a firm conviction that the industrial injuries, occupational hazards as well as safety and environmental incidents are preventable. We recognize and trust people as our most important asset and have commitment to provide safe and healthy work environment impacting not only those, who are working in our industry but also community, which is living in the vicinity.

To achieve this objective, we shall

a. Develop, implement, maintain and sustain EHS Management System across the Group to set up new benchmarks for the respective sector of operations, which superimpose the regulatory and statutory requirements.

b. Verify, audit and periodically review EHS performance and set new targets to revise these benchmarks.

c. Formulate EHS objectives and targets for continual improvement and to have a periodic review for ensuring that these are in conjunction with the individual business and corporate levels.

d. Conduct all our operational activities in such a manner as to avoid harm to employees, contractors, stakeholders and community at large.

e. Inculcate safety & health as a personal value through behavioral intervention and recognize it across levels with continuous correction of unsafe behavior.

f. Provide adequate training and resources so as to bring awareness and ability to carry out work safely.

g. Emphasize responsibility and accountability to all employees and contractor workforce for safe performance on the job and encourage safe behavior off the job.

h. Evolve ways to reduce or eliminate the use or release of toxic and hazardous material and prevent pollution by conserving natural resources; recovering and recycling the raw materials for safe, healthy and clean environment.

GAUTAM S ADANI

Date: 01.01.2016

FIGURE-7.21
HEALTH AND SAFETY POLICY

7.4.5 Safety Training

A full-fledged training center shall be set up at the plant. Safety training shall be regularly imparted by the safety officers with the assistance of faculty members called from professional safety institutions and universities. In addition to regular employees, limited contractor labors are to be provided safety training. To create safety awareness, safety films shall be shown to workers and leaflets are to be distributed. Display boards will be positioned across the plant at the appropriate location giving information about the safety Personal Protective Equipments (PPEs) usage and risk available in the respective areas.

7.4.6 Health and Safety Monitoring Plan

The health of all employees shall be regularly monitored once in a year for early detection of any ailment due to exposure to heat and noise.

Worker's health will be evaluated by pre designed format which includes chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-placement and periodical examinations will be conducted giving the details of the same.

7.4.7 Cost Estimate

For initial and periodical medical checkup of employees, budgetary provision of Rs. 1000/employee/year shall be made. The provision at this stage is being made for 2000 skilled/semiskilled/unskilled workers. Besides this provision, health checkups of local people will also be made. Cost estimate for the employees is given in **Table-7.17**.

TABLE-7.17
MEDICAL CHECKUP COST ESTIMATE

Sr. No.	Particulars	Quantity	Unit	Rate (Rs.)	Amount (Rs. in Lakhs)
1	Yearly medical checkup to plant workers for 30 years. 2000*30= 60,000 man year	60,000	Man year	1000	600

7.5 Sodar Study (Site Specific Inversion Study)

A detailed sodar study was carried out by Dr. B S Gera and his team for generation of site specific inversion/mixing height data. Sodar study report is enclosed in **Annexure-XI.**

SODAR was operated continuously during November - December 2016. Data generation was carried out continuous throughout this period using power backup system.

Analysis of the data obtained during the study period shows that inversion height varies from a minimum of 68 m to maximum of 347 m. The averaged inversion level during stable ABL conditions (1800-0600 hours) is seen to be 202±70 m during the study period.

The hourly averaged mixing height pertaining to unstable ABL during the day time (0900-1700 hours) is seen to vary from a minimum of 509 m to a maximum of 1198 m. The average level is seen to be 840±198 m during the study period.

The maximum of day time mixing height around noon (1200-1400 hours) is seen to be more than 1 km on several days which is fairly good for the winter.

The above generated mixing height data has been used in the air dispersion modelling.

7.6 Social Impact Assessment (SIA) Study

As per the additional ToR No.3: The project proponent should carryout Social Impact Assessment of the project as per the Office Memorandum no. J-11013/25/2014-1A dated 11.08.2014 issued by Ministry regarding guidelines on Environment Sustainability and CSR related issues.

In response to the above TOR, detailed Social Impact Assessment (SIA) study has been carriedout. The study report is enclosed as **Annexure-XII**.

Adani group has been the pioneers in enterprise social responsibility/corporate social responsibility and made significant contributions to improve quality of people's life in all the regions they operate in. In Gujarat, APSEZL and AEL have started key initiatives in support of sustainable development. The CSR activity aims at bettering the socio-economic and cultural status of local people. AEL is strictly committed and is going to implement the proposal to uplift the social infrastructure surrounding the copper refinery plant area. AEL allocated Rs. 40 Crores (0.04% on total project cost Rs. 10000/- Crores) for Corporate Environment Responsibility-CER budget.

Chapter-8
Project Benefits

8.0 PROJECT BENEFITS

The proposed project will result in considerable growth of industrial and commercial activities in the state. The small and medium scale industries may be further developed as downstream industries.

The proposed copper refinery project is one of the important projects which would add significant value to Indian economy. The project will not only help ensuring by becoming self-sufficient in terms of copper and sulphuric acid for India but also drive macro-economic growth.

Further, in operation phase, the proposed project would require significant workforce of non-technical and technical persons, which results in enhancement of employment opportunities and associated development in the region.

The series of benefits that the project would reap, may it be strategic or socio-economic are tabulated below:

8.1 Benefits to India and State of Gujarat

AEL has undertaken a cost benefit analysis to ascertain the benefits that would accrue to India and Gujarat in particular from its proposed copper refinery project. The study results show that the copper project would create substantial amount of tax revenue for India over 25 years of project life.

The copper refinery project venture is expected to employ about 5,000 direct and indirect employees.

8.2 Improvements in the Physical Infrastructure

The beneficial impact of proposed project on the civic amenities will be substantial after the commencement of project activities. The basic requirement of the community needs will be strengthened by extending healthcare, educational facilities to the community, building/strengthening of existing roads in the area. AEL is already providing the above amenities and would further strengthen the activities either by providing or by improving the facilities in the area, which will help in uplifting the living standards of communities.

8.3 Improvement in the Social Infrastructure

AEL believes that an effective growth policy must also take into account the fulfillment of basic needs of the masses, especially of those living in rural areas. AEL has one of the best social infrastructure proposals which are based on the implementation already done by APSEZ and APL at Mundra, in the core area of health, education, sustainable livelihood options & women empowerment, community infrastructure, youth sport & cultural activities, calamity management. AEL is strictly committed and is going to implement the proposal to uplift the social infrastructure in the surroundings of the copper plant area.

8.4 Employment Potential

The impact of the project on the economic aspects can be clearly observed. The proposed project activities will provide employment to persons of different skills and trades. The locals will be given preference to employment based on skill set & eligibility requirement as per the job and the vacancies available. Adani skill development centre will be developed and necessary budget will be allotted. The employment potential will ameliorate economic conditions of these families directly and provide employment to many other families indirectly who are involved in business and service oriented activities. In order to increase the potential of the local public, such workshops shall be organized.

The employment of local people in primary and secondary sectors of project shall upgrade the prosperity of the region. This in-turn will improve the socio-economic conditions of the area.

- During construction phase of the project, this project will provide temporary employment to many unskilled and semi-skilled laborers in nearby villages. The proposed project will provide employment to about 2000 – 3000 persons on average per day. This project will also help in generation of indirect employment to those people who render their services for the personnel directly working in the project; and

- During operational phase, considerable number of people will be benefited by provision of various services, such as transportation, technical services, skilled & semi-skilled services and indirectly it will flourish various business activities. The proposed project will provide employment to about 2000 persons direct and 5000 persons indirect employment.

The proposed project women employment will be about 120 persons and proper training will be imparted to the ladies so that their employability will increase.

The trend of out migration for employment, if any, is likely to be reduced due to better economic opportunities available in the area.

8.5 Corporate Social Responsibility (CSR)

Adani group has been the pioneers in enterprise social responsibility/corporate social responsibility and made significant contributions to improve quality of people's life in all the regions they operate in. In Gujarat, APSEZL and AEL have started key initiatives in support of sustainable development. AEL has a separate CSR policy approved by its board of directors and is enclosed as **Annexure-XV.**

The CSR activity aims at bettering the socio-economic and cultural status of local people. The key highlights of some initiatives & activities that AEL is going to undertake at Mundra are:

Sustainable Livelihood Options & Women Empowerment

- Strengthening the community based organizations like self-help groups, farmer federation etc.;

- Capacity building of the underprivileged communities on various market driven skills;
- Establishment of forward & backward market linkages through networking;
- Facilitating the easy reach to the technical institutions for knowledge up gradation; and
- Promotion of livestock health management.

Education Initiatives

- Skill up-gradation through establishment of technical training institution;
- Infrastructural development in the form of school building, teaching & learning equipment and furniture & fixtures etc.;
- Quality teacher support;
- Scholarship for education excellence;
- Promotion of girl child education;
- Incorporation of extra-curricular activities;
- Holistic approach to the education through "Yoga & Art Of Living"; and
- Promotion of functional literacy.

Health Initiatives

- Addressing the mother & child health;
- Support to the nutritional program of mother, child & school goers;
- Control on blindness, malaria, TB, HIV & AIDS, diarrhea etc.;
- Support the district health administration in the community health activities;
- Improvement of villages sanitation through solid-liquid waste management; and
- Knowledge enhancement on preventive health care.

Community Infrastructure & Facilities

- Enhancement of green coverage;
- Protection of wildlife through awareness generation;
- Promotion of renewal energy; and
- Waste management through installation of recycling measures.

Photographs of the CSR activities are shown in **Figure-8.1**. The statement showing the budget expenditure data spent to carry out ESR/CSR activities during the last five years (2011-2016) is given in **Table-8.1** and the budget allocated for the next five years is given in **Table-8.2.**

TABLE-8.1
ESR/CSR BUDGET EXPENDITURE DATA

Sr. No	Year	Expenditure Rs. in Crores
1	2010-11	8.02
2	2011-12	8.58
3	2012-13	14.63
4	2013-14	12.31

Chapter-9
Environmental Cost Benefit Analysis

9.0 Environmental Cost Benefit Analysis

The scope of the EIA/EMP has been prescribed vide the Terms of Reference (TOR) issued by MoEF&CC vide Letter No. F F.No.J-11011/113/2016-IA.II(I) dated 21st June 2016 and is enclosed as *Annexure-I.*

As per SO 1533 dated 14th September 2006, the chapter on environmental cost benefit analysis is to be prepared if prescribed at the scoping stage.

This chapter has to be carried out if specifically required as per scoping. As this is not specifically mentioned in TOR, further detail study is not carried out.

Chapter-10
Environment Management Plan

10.0 ENVIRONMENT MANAGEMENT PLAN

Environment Management Plan (EMP) describes various pollution control systems and other measures envisaged for mitigating environmental impacts identified separately for construction and operation phases.

EMP specifies various technological measures for pollution prevention, waste minimisation, attenuation etc. proposed to be undertaken to mitigate the environmental impacts on each sector of environment during each phase of the project, i.e. construction phase and operation phase.

Apart from mitigation measures, EMP also includes institutional set-up for implementation of various measures, greenbelt development plan and environmental monitoring plan.

10.1 Management Plan for Construction Phase

The impacts of construction activities would be temporary and will reduce gradually with the completion of the construction activities. Various mitigation measures proposed to be implemented during construction phase are described in **Table-10.1.**

10.2 Management Plan for Operation Phase

The impacts of operation phase will be long term in nature. **Table-10.2** describes various mitigation measures, proposed to be implemented during operation phase and **Table-10.3** describes the mode of implementation and allocation of human resources for the same.

TABLE-10.1
PROPOSED MITIGATION MEASURES TO BE IMPLEMENTED DURING CONSTRUCTION PHASE

Proposed Mitigation Measures	Responsibility for Implementation	Targets to Achieve	Risks and Consequence of Failure, if any
Air Pollution Control			
Water sprinkling in vulnerable areas	AEL + Contractor	Control of fugitive dust from construction areas	Increase in PM emissions
Proper maintenance of vehicles & construction equipment	AEL + Contractor	Control of CO & NOx emissions	Increase in gaseous pollutant
Transportation of construction material in covered trucks, wherever possible	AEL + Contractor	Control of fugitive dust during transportation	Increase in PM emissions
Noise Pollution Control			
Proper maintenance of vehicles, equipment and machinery	AEL + Contractor	Control of ambient and site noise levels	Increase in noise levels
Provision of accoustic covers/ enclosures on equipment and machinery, wherever possible	AEL + Contractor	Control of ambient and site noise levels	Increase in noise levels
Provision of earmuffs/ earplugs to the workers in high noise areas and enforcement of its use	AEL + Contractor	Protection of workers	Health effects on individual workers
Water Pollution Control			
Channelization and construction of temporary sedimentation tanks for effluents from construction area through network of drains.	AEL + Contractor	Control of suspended solids and oil & grease in effluents from construction area	Increase in total suspended solids and oil & grease in effluents
Socio-Economic Environment			
Provision of environmentally safe camping area for the migrant laborers	AEL + Contractor	To provide clean & healthy living environment to work force	Unhealthy living conditions, spread of diseases
Arrangements for water supply and sanitation	Contractor	To reduce stress on surrounding population	Stress on existing utilities, conflicts with local people
Solid Waste Management			

Proposed Mitigation Measures	Responsibility for Implementation	Targets to Achieve	Risks and Consequence of Failure, if any
Disposal of surplus earth and construction debris	Contractor + AEL	Control of pollution	Air/ water pollution
Reclaiming of un-built area with appropriate vegetation/ land scaping	AEL	Create a good visual environment. Aesthetics improvement.	Unpleasant surroundings

TABLE-10.2
PROPOSED MITIGATION MEASURES TO BE IMPLEMENTED DURING OPERATION PHASE

Mitigation Measures Proposed	Responsibility for Implementation	Targets to Achieve	Risks and Consequence of Failure, if any
Air Environment			
Tail Gas Scrubber	AEL	Treat the gases and mists before venting to the atmosphere	Increase in gaseous emissions
Provision of Online SO_2 analyzer	AEL	Control of SO_2 emissions	Increase in SO_2 emissions
Adequate stack height for all the units	AEL	Wider dispersion of emitted air pollutants	Increase in ground level concentration of pollutants.
Appropriate design of access roads to avoid traffic jams to reduce air pollution	AEL	Control of CO and NOx emissions	Increase in gaseous emissions
Water Environment			
Sewage Treatment Plant	AEL	Removal of suspended solids, oil and grease and organic matter to conform to regulatory standards for discharge of effluents into inland surface waters	Increase in concentration of pollutants especially biological parameters.
Effluent Treatment Plant	AEL	To conform to regulatory standards for discharge of effluents into inland surface waters	Contamination of water
The storm water from the paved and	AEL	Recharge the ground water	Flooding of Plant

Mitigation Measures Proposed	Responsibility for Implementation	Targets to Achieve	Risks and Consequence of Failure, if any
unpaved areas shall be routed to the rainwater harvesting structures		table	
Noise Environment			
Provision of acoustic enclosures/ barriers/ shields to reduce noise	AEL	Attenuation of noise in source receptor pathway	Increase in ambient noise levels
Provision of personal protective equipment like ear plugs and ear muffs	AEL	Protection of sensitive receptor	Health impact on workers in high noise areas
Solid Waste Management			
Domestic solid waste	AEL	Environmentally safe disposal of municipal waste from township	Air and water pollution, spread of disease vectors
Hazardous waste	AEL	Shall be disposed to secured land fill/ recycle through authorized recycles.	Soil contamination
Others			
Afforestation and greenbelt development	AEL	Ecological improvement Attenuation of air pollutants (PM, SO_2 and NOx) and noise in source receptor pathway	Reduction in aesthetics and living space. Higher pollutants in the ambient air.
Disaster management plan	AEL	Safety	Increased risk of fire and explosion

Implementation Schedule of Mitigation Measures

The mitigation measures suggested as above shall be implemented so as to reduce the impact on environment due to the operations of the proposed project. In order to facilitate easy implementation of mitigation measures, the priority of implementation is given in **Table-10.3.**

TABLE-10.3
IMPLEMENTATION SCHEDULE

Sr. No.	Recommendations	Time Requirement	Schedule
1	Air pollution control measures	Before commissioning of respective units	Immediate
2	Water pollution control measures	Before commissioning of the plant	Immediate
3	Noise control measures	Along with the commissioning of the plant	Immediate
4	Ecological preservation and up gradation	Stage wise implementation	Immediate & Progressive

10.3 Institutional Arrangements for Environment Protection and Conservation

Environment Management Cell (EMC) will be headed by a manager and will constitute environmental engineer, safety officer and ecologist/horticulturist. The organizational structure of environment management cell is presented in **Figure-10.1**. The Environment, Health & Safety (EHS) policy is enclosed as **Annexure-XVI**. The list of directors for proposed project is enclosed as **Annexure-XVII**.

The manager (environment) will be responsible for environment management activities in the proposed project. Basically, this department will supervise the monitoring of environmental pollution levels viz. source emission monitoring, ambient air quality, water and effluent quality, noise level either departmentally or by appointing external agencies wherever necessary.

In case the monitored results of environmental pollution found to exceed the allowable limits, the environment management cell will suggest remedial action and get these suggestions implemented through the concerned authorities.

The environment management cell also co-ordinate all the related activities such as collection of statistics of health of workers and population of the region, afforestation and greenbelt development.

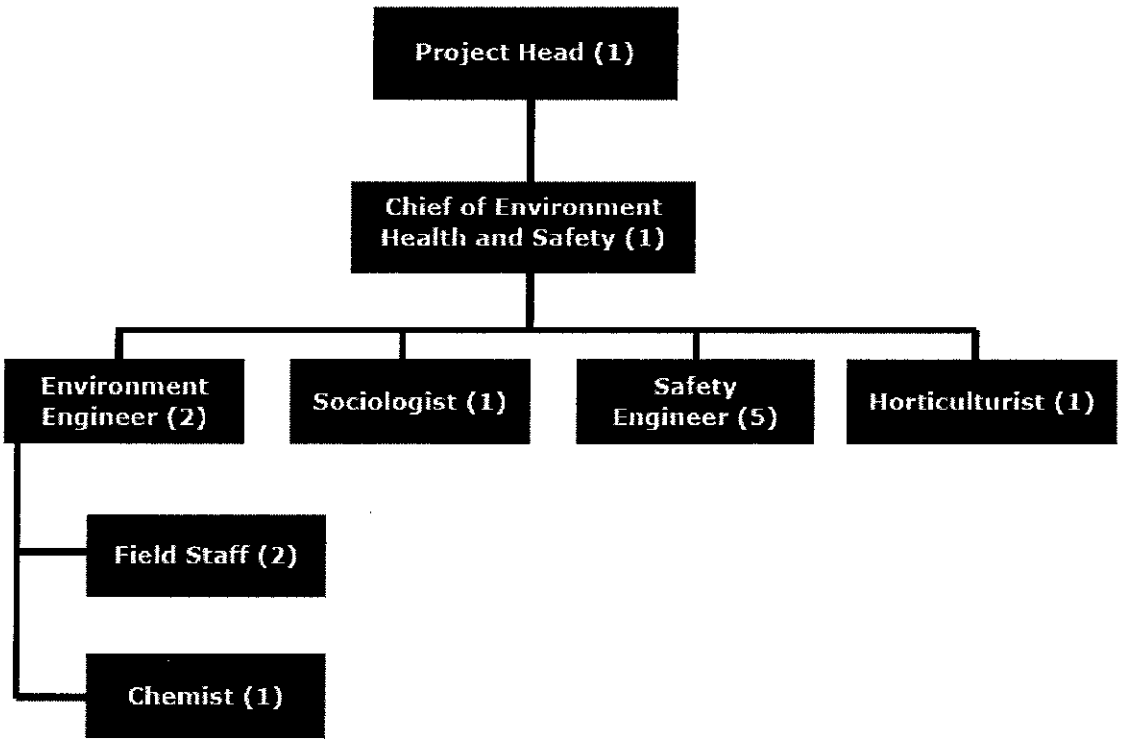

FIGURE-10.1
ORGANIZATIONAL STRUCTURE

Chapter-11
Summary & Conclusion

11.0 SUMMARY & CONCLUSION

M/s. Adani Enterprises Limited (AEL) intends to set up a greenfield copper refinery project at Adani Port Special Economic Zone (APSEZ) land, Mundra taluka, Kutch district, Gujarat state.

The proposed greenfield copper refinery project would require a total land area of 256.58 ha (634 acres) earmarked with state of art environment friendly technology. The estimated cost for the proposed project is about Rs. 10,000 Crores.

11.1 Type of Project

The proposed copper refinery project (phase-I & phase-II) would produce 10 LTPA (1.0 MTPA) of copper cathode; 30 LTPA of sulphuric acid; 5 LTPA of copper wire rod; 96,000 TPM of oxygen plant; 50 TPA of gold; 500 TPA of silver; 5 LTPA of phosphoric acid (as 100% P_2O_5); 30,000 TPA of aluminum fluoride etc. with the state of art environment friendly technology.

It is proposed to adopt pyrosmelting technology and electro refining process to produce copper cathode. The sulphur dioxide generated during the smelting of copper concentrate is converted into sulphuric acid by Double Conversion Double Absorption (DCDA) process. A part of this sulphuric acid is captively utilized for production of phosphoric acid.

The principal raw material for the production of copper metal is copper concentrate blend containing about 25-35% copper, 25-34% sulphur, iron 25-35% and 7-10% moisture. Approximately 3 LTPA copper scrap and electronic scrap is also used as input to proposed copper refinery project and copper scrap melting facility.

The major steps in copper extraction include:

- Blending of different grades of concentrates;
- Smelting of concentrate in smelting furnace to produce an intermediate copper rich product known as "matte" containing 58 - 63% copper;
- Converting of liquid matte to blister copper (98- 99% Cu) in Pierce - Smith converter;
- Fire refining of blister copper to produce anode copper (99.5% Cu) in anode furnace and casting of the anodes; and
- Electrolytic refining of anodes to produce copper cathodes (99.99% Cu).

The major technological units envisaged for the copper refinery project are as given below:

- Raw material handling system;
- Smelting furnace;
- Pierce smith converter;
- Ferro sand cleaning furnace (FSCF);
- Copper scrap melting system;

- Anode furnace & anode casting wheel;
- Off gas handling;
- Sulphuric acid plant;
- Oxygen plant;
- Refinery unit;
- Precious metal recovery plant;
- Continuous cast copper wire rod plant;
- Phosphoric acid plant;
- Aluminum fluoride plant; and
- Effluent treatment plant (ETP).

11.1.1 Environmental Setting of the Site

The proposed project site is located in Siracha and Navinal villages at APSEZ Mundra taluka, Kutch district in the state of Gujarat. The proposed site is well connected by the existing national/state highways and cargo rail link, which is about 2 km away from the Navinal railway station. The nearest airport is at APSEZ, Mundra located at a distance of about 20 km of the project site and another is at Bhuj located at a distance of 50 km from the proposed project site. The nearest railway station is Adipur/Gandhidham, which is about 64 km from project site and nearest town is Mundra which is about 13.9 km from the proposed project site. The national highway NH-8A is passing at about 5 km away from the site. State highway SH-6 is about 0.3 km from the proposed site. The site is well connected with Ahmedabad city located at about 460 km.

11.1.2 Project Features

➢ *Land Requirement*

The total land required for the proposed project (phase-I & pashe-II) is about 256.58 ha (634 acres), out of which 154.19 ha (381 acres) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Memorandum of Understanding (MoU) is in place between Adani Ports & Special Economic Zone Limited (APSEZL) and Adani Enterprises Ltd (AEL) for 154.19 ha (381 acres). Further, forest land of 102.39 ha (253 acres) is also involved which will be converted for industrial use. MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. There is no resettlement and rehabilitation involved in this project.

➢ *Water Source and Requirement*

The requirement of desalinated water for the proposed project has been estimated as 32,800 KLD, which will be sourced from APSEZ Limited and supply through M/s. Mundra Utility Private Limited (MUPL).

➢ *Power Requirement*

The total estimated power requirement for proposed project is 300 MW out of which 40 MW would be generated from internal process steam and balance 260 MW power would be sourced from APSEZ Limited, through M/s. Mundra Utility Private Limited (MUPL).

11.2 Baseline Environmental Status

Baseline environmental status has been established for various environmental attributes within a study area of 10 km radius from the project site. The major environmental disciplines covered in the EIA report includes ambient air quality, water quality, noise, soil, ecology (terrestrial and aquatic), land use, geology, hydrology and demographic & socio-economic conditions.

11.2.1 Soil Characteristics

The soil samples were collected within the study area during post-monsoon and partly winter season of 2016. It has been observed that the pH of the soil in the study area ranged from 7.7 to 8.4. The electrical conductivity was observed to be in the range of 137 to 6,300 µmhos/cm. The nitrogen values range between 4.8 kg/ha to 23.8 kg/ha. The phosphorus values range between 42.2 kg/ha to 154.4 kg/ha. The potassium values range between 178.2 kg/ha to 1,125.3 kg/ha. Soluble chlorides in the region varied from 354.4 mg/kg to 12,400.9 mg/kg. Organic matter concentrations ranged from 0.05% to 0.22%. Organic carbon concentrations ranged from 0.03% to 0.13%.

11.2.2 Climatology and Meteorology

The recorded temperature at site during study period ranges between 9.2°C to 40.6°C and relative humidity ranges in between 47% to 98%. Predominant winds from SSW and SW directions were observed during the study period.

11.2.3 Ambient Air Quality

To establish the baseline status of the ambient air quality in the study area, the air quality was monitored at eight locations during post-monsoon and partly winter season of 2016. The $PM_{2.5}$ and PM_{10} are observed to vary from 19.2 µg/m^3 to 43.9 µg/m^3 and 35.2 µg/m^3 to 84.2 µg/m^3 respectively. The SO_2 and NO_2 are observed to vary from 14.8 µg/m^3 to 42.6 µg/m^3 and 13.1 µg/m^3 to 32.8 µg/m^3 respectively. The CO is observed to vary from 262 µg/m^3 to 412 µg/m^3 respectively. The remaining parameters as per 16th Nov, 2009 CPCB Notification are observed to be within permissible limits.

11.2.4 Water Quality

The baseline water quality status in the region is established by collecting water samples in study area.

➢ *Surface Water Quality*

The analysis results indicate that pH is found to be 7.2 to 8.0, which is well within the specified standard 6.5-8.5. The TDS was observed to be 41,645 to 43,572 mg/l. Dissolved oxygen was observed to be 5.6 to 5.9 mg/l. The chlorides and sulphates were found to be 16,078.9 to 20,915.5 mg/l and 2,139.1 to 2,734.0 mg/l respectively. Bacteriological studies reveal the 5 MPN/100ML. The surface water is observed to be brackish in nature.

➢ *Ground Water Quality*

The analysis results indicate that the *pH* ranges in between 7.3 to 7.8. Total hardness was observed to be ranging from 125.0 to 392.0 mg/l. Chlorides were found to be in the range of 282.6 mg/l to 978.4 mg/l. Sulphates were found to be in the range of 27.8 mg/l to 115.4 mg/l. The Total Dissolved Solids (TDS) concentrations were found to be ranging between 1,372 to 2,930 mg/l.

Fluorides were observed to be ranging between 0.9 to 1.5 mg/l and are found to be within the permissible limit. Nitrates are found to be in range of 8.2 to 22.0 mg/l. Bacteriological studies reveal that no coliform bacteria are present in the samples. The heavy metal contents were observed to be well within the limits except few parameters. It can be observed that the ground water quality is influenced by sea water quality possibly due to sea water ingression.

11.2.5 Noise Level Survey

The noise monitoring has been conducted in the study area. Day time, night time noise levels were found to be varying from 48.5 dB(A) to 56.6 dB(A) and 42.3 dB(A) to 48.8 dB(A) respectively in the study area. The noise levels in general were found within the acceptable levels as per standards prescribed by Central Pollution Control Board (CPCB).

11.2.6 Ecological Studies

Flora and fauna studies were conducted during the study period to assess the existing floristic and faunal components in study area. Floral species are mainly dominated by *Prosopis juliflora and Acacia Senegal.* Primary survey and literature survey reveals that there are no wildlife sanctuaries, national parks and biospheres and no migratory paths of birds and animals in 10 km radius study area. The faunal species were categorized as per conservation status of Wildlife Protection Act, 1972 reveals peacock is the only Sch-I species in the study area. Mangroves are predominantly composed of *Avicenna marina*, Species known for its high tolerance of salinity and other environmental stresses.

11.2.7 Demography and Socio-Economic Profile

The information on socio-economic aspects of the study area has been compiled from secondary sources, which mainly include census data of 2011. The salient features of the demography and socio-economic profile are as follows:

- Total population is 60,525;
- The scheduled castes (SC) are 9.72% and scheduled tribes (ST) are 1.29%;
- Overall literacy rate in the study area according to 2011 census is 67.62%, out of which male literacy is 73.42% while female literacy is 26.58%; and
- The percentage of main workers and marginal workers are 90.57% and 9.43% respectively.

11.3 Anticipated Environmental Impacts and Mitigation Measures

The summary of anticipated environmental impacts due to the proposed project during operation phase and mitigation measures are given below:

11.3.1 Air Environment

Sulphur dioxide (SO_2) and particulate matter emissions will be the main pollutants in the copper refinery complex and there will be no major source of NOx emissions. The incremental ground level concentrations due to proposed project have been estimated by dispersion modeling and are observed to be within the National Ambient Air Quality standards (NAAQ's).

Following air pollution control schemes and techniques are suggested which shall be used to minimize and control the emission of air pollutants as well as their effective dispersion into the atmosphere:

- Sulphur Dioxide (SO_2): High efficiency collection and scrubbing system with lime and caustic;
- Fluorine (F): High efficiency collection and scrubbing system with water to produce hydro fluro silicic acid, which will be the input to aluminum fluoride plant; and
- Particulate Matter: Wet scrubbers, cyclones, electrostatic precipitators, bag filters, vacuum trucks, road vacuum sweepers, etc.; based on the application.

The final gaseous emissions from the copper refinery complex would be well within the permissible limits as prescribed by GPCB/CPCB/MoEF&CC.

11.3.2 Water Environment

No ground water is proposed to be extracted for the proposed project. The total water requirement for the project is about 32,800 m^3/day which will be sourced from desalination plant of M/s. APSEZ Ltd, supply through M/s. Mundra Utility Pvt Ltd (MUPL).

The total wastewater generation from the proposed project will be about 5,432 m^3/day. This will be treated in the effluent treatment plant and the treated waste water will be fully utilized within the plant for process, cooling and other purposes. No wastewater will be discharged outside the plant. Hence, there is no impact on the water regime due to the wastewater generated from the plant complex.

Water Pollution Management and Water Conservation Measures:

- Maximum recycling of treated wastewater into process;
- Provision of appropriate treatment facility to treat domestic sewage from plant;
- Utilization of treated domestic wastewater in greenbelt development and dust suppression;
- Provision of separate storm water system to collect and store run-off water during rainy season and utilization of the same in the process; and
- Treatment of storm water to remove contaminants, if any, before discharging into water streams.

11.3.3 Solid Waste Management

The main solid waste envisaged from the proposed project are:

- Copper slag from copper refinery plant;
- Phosphogypsum from phosphoric acid plant;
- Hazardous cake produced from effluent treatment plant; and
- Scrubber cake from fugitive gas handling scrubbers.

Hazardous cake, ETP waste sludge, scrubber cake, spent catalyst and spent resins (from DM, RO & refinery) will be stabilized and stored in secured land fill of 13.35 ha as per guidelines of MoEF&CC/ CPCB/ GPCB. Further, an area of 18.62 ha and 20.63 ha are identified for the intermediate/emergency storage of copper slag and phosphogypsum.

Provision would be made to reclaim the disposed copper slag and phosphogypsum from gypsum pond at a later stage for various utilization ventures.

The used oil, oil sludge, nickel sludge and arsenic bearing sludge (As-Cu precipitate) will be given to authorized recycler.

11.3.4 Noise Environment

The main noise generating sources from the entire project will be blower, crusher, vibrating screen, pumps, compressors etc. The noise levels at the sources for these units will be in the range of 80-90 dB(A).

The predicted noise levels at the project boundaries are estimated through computer based mathematical model. The predicted noise levels at the boundary due to various activities are found ranging in between 40 to 46 dB(A). It is seen from the simulation results that the incremental noise levels will be well within the CPCB standards.

The following control measures will be implemented for the proposed project:

- High noise generating sources shall be insulated adequately by providing suitable enclosures;
- The air compressor, process air blower, pneumatic valves shall be provided with acoustic enclosure;

- All the design/installation precautions as specified by the manufacturers with respect to noise control shall be strictly adhered to;
- Design and layout of building to minimize transmission of noise, segregation of particular items of plant and to avoid reverberant areas;
- The oxygen plant shall be installed in double wall building and no operator shall be working within the building; and
- Other than the regular maintenance of the various equipment, ear plugs/muffs shall be recommended for the personnel working close to the noise generating units.

11.3.5 Biological Environment & Greenbelt Development

The main sources of air pollution from the project will be from the process stacks. The pollutants from the plant include sulphur dioxide and particulate matter. The air dispersion modeling simulations are done to evaluate SO_2 and PM likely to be contributed by the plant. The incremental concentrations were found to be well within the limits as per NAAQ's. Hence, only marginal impact is envisaged due to copper refinery plant on the terrestrial ecology. Hence, no impact is envisaged on the terrestrial ecology of the area.

Further, the unit will be operating on zero discharge process and no perennial nallahs or streams present in the project area, hence no impact on aquatic ecology is envisaged.

Out of the entire area of proposed copper refinery complex, 33% which is around 85.79 ha of land is reserved for greenbelt/ green cover development as per prevailing guidelines from GPCB/CPCB/MoEF&CC.

11.3.6 Socio- Economics

The requirements of skilled/unskilled manpower during operation will be met from nearby villages as far as possible. The project will also help in generation of significant indirect employment. This will be a positive socio-economic development for the region and general upliftment of standard of living in the region.

AEL is strictly committed and is going to implement the proposal to uplift the social infrastructure surroundings the project area. Positive impact is envisaged on the infrastructure of the region.

11.4 Environmental Monitoring Program

The environmental monitoring program is important in terms of evaluating the performance of pollution control equipments installed in the project. The sampling and analysis of the environmental attributes will be as per the guidelines of CPCB/GPCB. The frequency of air, noise, surface water and ground water sampling and location of sampling will be as per the directives of pollution control board.

The total project cost for the proposed project is about Rs. 10,000 Crores, which may further escalate depending upon the project execution period. Out of this, about Rs. 1044 Crores will be spent on environmental protection.

11.5 Risk Assessment and Disaster Management Plan

Risk assessment has been carried out to quantify the extent of damage and suggest recommendations for safety improvement for the proposed copper refinery project. Risk mitigation measures based on MCA analysis and engineering judgments are incorporated in order to improve overall system safety and mitigate the effects of major accidents.

An effective Disaster Management Plan (DMP) to mitigate the risks involved has been prepared. This plan defines the responsibilities and resources available to respond to the different types of emergencies envisaged. Training exercises will be held to ensure that all personnel are familiar with their responsibilities and that communication links are functioning effectively.

11.6 Project Benefits

AEL has undertaken a cost benefit analysis to ascertain the benefits that would accrue to India and Gujarat in particular from its proposed copper refinery project. The study results show that the copper refinery project would create substantial amount of tax revenue for India over 25 years of project life. The copper refinery project venture is expected to employ about 5,000 direct and indirect employees.

The beneficial impact of proposed project on the civic amenities will be substantial after the commencement of project activities. The basic requirement of the community needs will be strengthened by extending healthcare, educational facilities to the community, building/strengthening of existing roads in the area. AEL is already providing the above amenities and would further strengthen the activities either by providing or by improving the facilities in the area, which will help in uplifting the living standards of local communities.

AEL believes that an effective growth policy must also take into account the fulfillment of basic needs of the masses, especially of those living in rural areas. AEL has one of the best social infrastructure proposals which are based on the implementation already done by APSEZ and APL at Mundra, in the core area of health, education, sustainable livelihood options & women empowerment, community infrastructure, youth sport & cultural activities, calamity management. AEL is strictly committed and is going to implement the proposal to uplift the social infrastructure surroundings the copper refinery project area.

11.7 Conclusions

The proposed copper refinery project of AEL is one of the important projects. AEL believes that the copper refinery project would add significant value to Indian economy. The project will not only help ensuring by becoming self-sufficient in

terms of copper, phosphoric acid and sulphuric acid for India but will also drive macroeconomic growth.

The proposed project would have few adverse impacts on the environment. However, with proper and judicious implementation of the mitigation and environment management measures, the impacts can be minimized and can be maintained well within the permissible limits specified by the regulatory authorities.

Thus, it can be concluded that with the strict implementation of the pollution control and mitigation measures, with proper environment management system in place the proposed project will be beneficial to the society and will contribute to the economic development of the state in particular and the country in general.

Chapter-12
Disclosure of Consultants Engaged

12.0 DISCLOSURE OF CONSULTANTS ENGAGED

12.1 M/s. Vimta Labs Limited-Environment Consultant

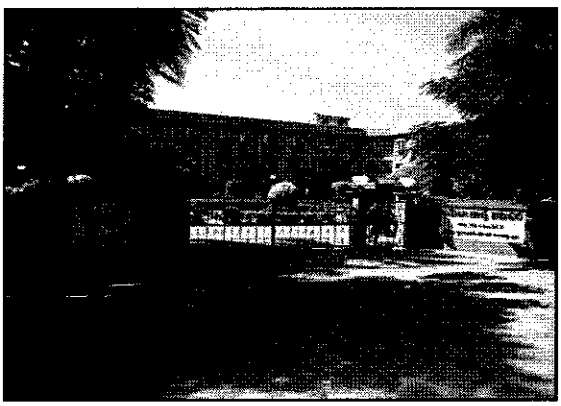
M/s. Vimta Labs Limited is a leading multi-disciplinary testing and research laboratory in India. Vimta provides contract research and testing services in the areas of environmental assessment, analytical testing, clinical research, pre-clinical (animal) studies, clinical reference lab services, advanced molecular biology services and research & development studies.

The **Environment Division** has been in the forefront of its vision to provide better environment through guiding and assisting the industry for sustainable development. A stalwart in the mission to protect and preserve the natural resources on earth for future generations, it offers extensive research and consultancy services in the field of environment. With its rich experience, multi-disciplinary expertise and with the support of its state-of the-art analytical equipment, the services offered by the division are wide ranging and encompasses entire gamut of environment management and monitoring services. With its emphasis on quality services over the years, it has evolved itself into a single reference point in India for comprehensive environmental services.

12.1.1 The Quality Policy

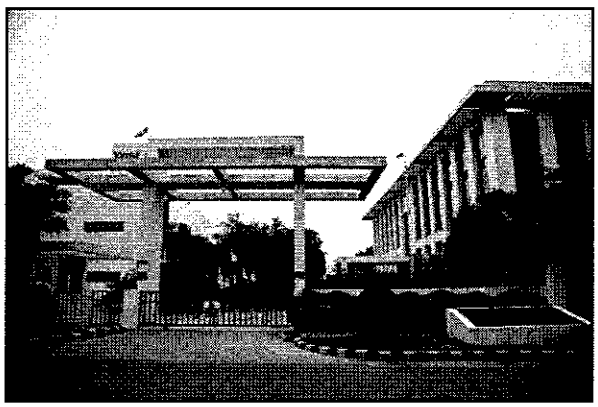
- Vimta is committed to good professional practices and quality of operations in its testing, validation and research services;
- Vimta shall ensure customer satisfaction by maintaining independence, impartiality and integrity in its operations;
- Vimta shall provide the services in accordance with national and international norms;
- Vimta shall implement quality systems as per ISO/IEC 17025 and applicable Good Laboratory Practices (GLPs) & Good Clinical Practices (GCPs), to generate technically valid results/data; and
- Vimta shall ensure that all its personnel familiarize with the policies and procedures of the quality system and implement the same in their work.

12.1.2 Major Milestones and Accreditations



- 1984–Registered with an initial investment of Rs.200,000=00
- 1985–Recognized by ISI (now known as Bureau of Indian Standards)
- 1987–Qualified by the criteria of Ministry of Environment and Forests, India and was notified as one of the first 14 Standard Environmental Laboratories published in the Gazette of India
- 1988–Licensed for carrying out tests on Drugs and Pharmaceuticals
- 1991–Accredited by NCTCF, DST, Government of India (the forerunner of NABL)

- 1995–Accredited by NABL, India under its revised scheme, certified by Standards Australia, Quality Assurance Services as per ISO/IEC Guide 25 and ISO 9002
- 1996–GLP Compliance
- 1998–Accreditation by GOSSTANDART and joint venture for certification of Food Exports with ROSTEST, Russia
- 1998–World Bank Recognition
- 2002–ANVISA Brazil Certification
- 2003–USFDA accepts Vimta Bioequivalence study report. Showcased Vimta at AAPS (USA) and ICSE-CPHI (Germany)
- 2003–Recognized by Saudi Arabian Standards Organization
- 2004–Enters Gulf market-Executes a contract for environmental consultancy in Kuwait
- 2006–Expands its overseas activities. Undertakes environmental assignment in Saudi Arabia
- 2006–Undertakes environmental impact assignment in Tanzania, Africa
- 2008–Has been Pre-Qualified by World Health Organization (WHO)
- 2009–Undertaken environmental impact assessment studies in Cameroon, Africa



12.1.3 Services Offered

Spread over 70,000 sq.ft lush green garden premises at Cherlapally, Hyderabad (India), the scientifically designed and meticulously groomed infrastructural facility of the Central Laboratory of **VIMTA** has the most sophisticated instruments backed by an excellent team of professionals.

Over 150,000 sq. ft. of world class research laboratory is also under operation at Biotech Park-Genome Valley, Hyderabad (India). Having all the facilities under one roof is perhaps the only one of its kind in South Asia in the contract testing and research sector.

VIMTA Central Laboratory, Cherlapally, Hyderabad

VIMTA Life Sciences, Genome Valley, Hyderabad

Vimta offers services under the following specializations:

- Environment;
- Analytical;
- Clinical Reference Lab;
- Clinical Research;
- Preclinical;
- Molecular Biology; and
- Research and Development.

The environment division of VIMTA Labs Limited (VLL) has its presence all over India and other countries including a strong association with international consultants like Japan Bank for International Cooperation (JBIC), Kennametal Inc.-USA, Rudal Blanchard-UK, E&E Solutions-Japan, NAPESCO & Kuwait National Petroleum Corporation-Kuwait, Marafiq and Haif Consultants-Saudi Arabia and others. Vimta Labs Limited has the following credentials:

- Recognition by BIS, India;
- Recognition by Ministry of Environment, Forest & Climate Change (MOEF&CC), Govt. of India and various State Pollution Control Boards (wherever applicable);
- Accredited by QCI/NABET, New Delhi
- Recognition by Department of Science & Technology, Govt. of India (NABL);
- Recognition by Ministry of Defence, Govt. of India;
- Recognition by APEDA, Ministry of Commerce, Govt. of India;
- Recognition by Saudi Arabia Standard Organization (SASO), Saudi Arabia;
- Recognition from NEMC, Tanzania;
- Accreditation by NCTCF;
- Certification from Standard Australia;
- Recognition from ANVISA Brazil;
- Recognition from USFDA;
- Quality Assurance Services as per ISO/IEC 17025;
- Quality Assurance Services as per ICH Guidelines; and
- Recognition by World Health Organization (WHO).

QCI

National Accreditation Board for Education & Training

NABET

Quality Council of India

CERTIFICATE OF ACCREDITATION

M/s Vimta Labs Limited

142, IDA, Phase – II, Cherlapally, Hyderabad – 500051

is hereby accorded accreditation under the QCI-NABET Scheme for Accreditation of EIA Consultant Organizations (Rev. 09, August 2011) for the following scope:

Sl. No.	Name of the Sector	Cat.
1.	Mining of Minerals including Opencast/ Underground mining	A
2.	Offshore and onshore oil and gas exploration, development & production	A
3.	Thermal Power Plants	A
4.	Coal washeries	A
5.	Metallurgical industries (ferrous &non-ferrous) – both primary and secondary	A
6.	Cement Plants	A
7.	Asbestos milling and asbestos based products	A
8.	Synthetic organic chemicals industry (dyes & dye intermediates; bulk drugs and intermediates excluding drug formulations; synthetic rubbers; basic organic chemicals, other synthetic organic chemicals and chemical intermediates)	A
9.	Oil & gas transportation pipeline (crude and refinery/ petrochemical products), passing through national parks/ sanctuaries/ coral reefs /ecologically sensitive areas including LNG terminal	A
10.	Air ports	A
11.	Industrial estates/ parks/ complexes/areas, export processing Zones(EPZs), Special Economic Zones(SEZs), Biotech Parks, Leather Complexes	A
12.	Building and large construction projects including shopping malls, multiplexes, commercial complexes, housing estates, hospitals, institutions	B
13.	Townships and Area development projects	B

Name of approved EIA Coordinators & Functional Area Experts are given in minutes of AC Meeting dated Oct 04, 2013; Oct 15 and Nov 26, 2014 posted on QCI website

Accreditation to the above Sectors is subject to the EIA reports being prepared by the experts (EIA Coordinators & Functional Area Experts) mentioned in the above minutes and compliance to the Terms and Conditions of Accreditation.

Certificate No: NABET/ EIA/ 1316/ RA003 ***Valid up to: Sep. 19, 2016***

C.E.O.

NABET

(Please refer http://nabet.qci.org.in/environment/ for latest status of accreditation)

Note

- ***Subject to continual compliance to NABET Scheme including Surveillance Assessment***
- ***Updated status of accreditation available at www.qcin.org every 5th of the month***

NABET

National Accreditation Board for Education and Training
(Member of Pacific Accreditation Cooperation)

QCI/NABET/EIA/ACO/17/01/0247 January 23, 2017

Vimta Labs Limited
142, IDA, Phase – II, Cherlapally,
Hyderabad – 500051
(Kind Attention: Sh. M. Janardhan)

Sub: Validity of Accreditation as EIA Consultant organisation- Vimta Labs Limited

Dear Madam,

This has reference to the accreditation of your organisation under QCI-NABET EIA Scheme, the validity of M/s Vimta Labs Limited is hereby extended till July 23, 2017 or completion of assessment process, whichever is earlier.

The above extension is subject to the submission of required information/documents related to assessment on time to NABET.

You are requested not to use this letter after expiry of the above stated date.

With best regards,

23/01/2017

A.K Jha
Senior Director | NABET

Quality Council of India

National Accreditation Board for Education & Training

Certificate of Accreditation

Vimta Labs Limited

142,IDA,Phase II,Cherlapally, Hyderabad-500051

are accredited under the QCI-NABET Accreditation Scheme for EIA Consultant Organizations (Version 3) for preparing EIA/EMP reports in the following sectors:

Sl. No.	Sector Description	Sector (as per)		Cat.
		NABET	MoEFCC	
1	Mining of minerals including opencast / underground mining	1	1 (a) (i)	A
2	Offshore and onshore oil and gas exploration, development & production	2	1 (b)	A
3	Thermal power plants	4	1 (d)	A
4	Coal washeries	6	2 (a)	A
5	Metallurgical Industries (ferrous & non-ferrous)	8	3(a)	A
6	Cement plants	9	3 (b)	A
7	Asbestos milling and asbestos based products	12	4 (c)	A
8	Synthetic organic chemicals Industry	21	5 (f)	B
9	Oil & gas transportation pipeline	27	6 (a)	A
10	Air ports	29	7 (a)	A
11	Industrial estates/ parks/ complexes/areas, export processing Zones(EPZs), Special Economic Zones(SEZs), Biotech Parks, Leather Complexes	31	7 (c)	A
12	Building and construction projects	38	8 (a)	B
13	Townships and Area development projects	39	8 (b)	B

Note: Name of approved EIA Coordinators and Functional Area Experts are mentioned in RA AC minutes dated February 03, 2017 posted on QCI-NABET website.

The Accreditation shall remain in force subject to continued compliance to the terms and conditions mentioned in NABET's letter of accreditation bearing no. QCI/NABET/ENV/ACO/17/0285 dated 22 March 2017.The accreditation needs to be renewed before the expiry date by Vimta Labs. Pvt. Ltd., following due process of assessment.

CEO NABET	*Certificate No.*	*Issue Date*	*Expiry Date*
	NABET/EIA/1619/ RA 0043	*Mar. 22, 2017*	*19.05.2019*

NABET is a member of International Accreditation Forum (IAF) and Pacific Accreditation Cooperation (PAC).

National Accreditation Board for Testing and Calibration Laboratories
(A Constituent Board of Quality Council of India)

CERTIFICATE OF ACCREDITATION

VIMTA LABS LTD., LIFE SCIENCES FACILITY

has been assessed and accredited in accordance with the standard

ISO/IEC 17025:2005

"General Requirements for the Competence of Testing & Calibration Laboratories"

for its facilities at

#5, Alexandria Knowledge Park, Genome Valley, Shameerpet, Hyderabad, Telangana

in the field of

TESTING

Certificate Number TC-5418 *(In lieu of T-0047, T-0032 & T-3349)*

Issue Date 31/03/2017 [redacted] **Valid Until** 30/03/2019

This certificate remains valid for the Scope of Accreditation as specified in the annexure subject to continued satisfactory compliance to the above standard & the relevant requirements of NABL.

(To see the scope of accreditation of this laboratory, you may also visit NABL website www.nabl-india.org)

Signed for and on behalf of NABL

N. Venkateswaran
Program Director

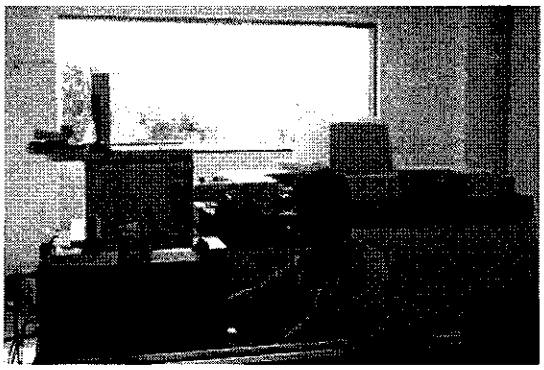
Anil Relia
Chief Executive Officer

12.1.4 Services of Environment Division

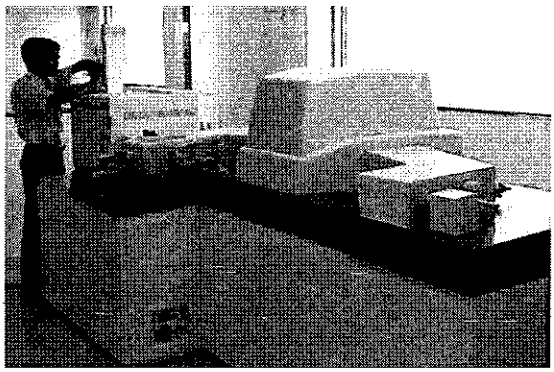
Environment essentially being a multi-disciplinary science, the range of services offered by the division are also comprehensive and caters to the needs of industry, pollution control agencies, regulatory authorities and in a larger pursuit of a green globe. The services under environment include:

- Site selection and liability studies;
- Environmental impact assessments;
- Environment management plans;
- Carrying capacity based regional studies;
- Environmental audits;
- Solid and hazardous waste management;
- Risk assessment (MCA, HAZON, HAZOP) & disaster management plans;
- Occupational health and safety, industrial hygiene;
- Environmental monitoring for air, meteorology, water, soil, noise, ecology and socio-economics;
- Industrial emission source monitoring;
- Offshore sampling and analysis of marine water and sediments;
- Marine ecological studies;
- Marine impact assessment;
- Rehabilitation and resettlement studies;
- Forestry and ecological studies;
- Geological and hydro-geological studies;
- Land use/land cover studies based on remote sensing;
- Socio-economic studies;
- Due diligence studies;
- Industrial epidemiological studies;
- Wasteland management studies; and
- Study on bio-indicators.

The services under Environmental Chemistry include:



- Analysis of water, wastewater, soil, solid waste, hazardous waste as per international codes;
- Source emissions and work zone air/noise quality monitoring;
- Analysis of SVOCs, VOCs, PAH, BTEX, AOX, PCB's, TCLP metals, TOC etc.;
- Categorization of hazardous waste; and
- Pesticide residue analysis.



12.1.5 Facilities of Environment Division

Vimta-Environment Division is located in scientifically designed Central Laboratory with the state-of the-art modern facilities to offer vide range of services in indoor and outdoor monitoring and analytical characterization in the field of Environment. Further, it is ably supported by highly skilled and experienced team of professionals in the fields of science, engineering, ecology, meteorology, social planning, geology & hydro-geology and environmental planning.

Besides the regular monitoring equipment such as Respirable Dust Samplers (RDS), automatic weather monitoring stations, stack monitoring kits, personal samplers, noise meters, portable water kits etc, the other major specialized equipment include:

- Monostatic Sodar–Designed by National Physical Laboratory, GOI;
- Integrated Noise Level Meters–Quest, U.S.A;
- Flue Gas Analyzers–Testo, Germany;
- 113-A Gravimetric Dust Sampler-Casella, London;
- ICP AES–Varian, USA;
- Gas Liquid Chromatographs with FID, ECD & pFPD–Varian, USA;
- Gas Chromatograph with Mass Detector–Varian, USA;
- Atomic Absorption Spectrometer [AAS]–Varian, USA;
- PAS-AFC-123 instrument;
- High Performance Liquid Chromatograph (HPLC);
- Laser Particle Size Analyzer;
- Bomb Calorimeter;
- Polarographs;
- X-ray Fluorescent Spectrometer;
- Flame Photometer;
- Carbon Sulphur Analyzer;
- Computerized Fatigue Testing Machine;
- Electronic Universal Testing Machine;
- Fourier Transmission Infrared Spectroscope; and
- Water Flow Current Meter–make Lawrence & Mayo.

HIGH RESOLUTION GAS CHROMATOGRAPHS

12.1.6 Quality Systems

The basic fact that environment division and its supporting site laboratories are accredited by NABL (IS0-17025) and Ministry of Environment and Forests, India and by other international bodies stand testimony to its emphasis on Quality Systems.

12.1.7 Achievements

Being the first laboratory to be recognized under Environment Protection (EP) Act by Government of India (GOI), environment division with its best mind power and industrial knowledge competency that allows it to compare with the best in the business.

- The environment division till date has executed about 650 environmental impact assessment and environment management studies with risk assessment and disaster management plans for various spectrum of industries and obtained statutory approvals;
- Supported by the strong modern laboratory and experienced hands, environment division is well equipped in conducting due diligence, phase-I and phase-II studies;
- Undertaken specialized studies such as regional environmental impact assessment on carrying capacity principle; upper air meteorological studies using monostatic SODAR for major industrial complexes;
- Associated with prestigious studies such as environmental pollution monitoring around Taj Trapezium (India), pre and post satellite launch studies for Indian Space Research Organisation (ISRO) and monitoring for offshore oil & gas exploration for deep-sea water and sediment sampling;
- The services offered include vide spectrum of industries covering power, chemical, cement, mining, steel & alloys, metallurgical, aluminium refining & smelting, dye & intermediates, bulk drugs, pesticides, agro-chemicals, petro-chemicals, refineries, pulp & paper, oil & gas exploration & production, asbestos, infrastructure such as highways, seaports and airports, river valley, foundries etc;
- Undertaken environmental consultancy for pipeline layout and up gradation of API oil-water separators of various crude oil depots and petrol filling stations of Kuwait National Petroleum Corporation, Kuwait;
- Undertaken performance evaluation and capacity expansion of sewage treatment plant and industrial wastewater treatment Plant for Marafiq, Saudi Arabia;
- Undertaken environmental impact assessment studies for pulp and paper mill expansion of Mufindi Paper Mills, Tanzania, Africa; and
- Undertaken environmental impact assessment studies for bauxite mines in Cameroon, Africa for Cameroon Aluminium Limited (CAL).
- Undertaken environmental monitoring & water testing for River Ganga under Clean Ganga Project, Ministry of Water Resources, New Delhi.

The details of the persons involved in the preparation of present EIA/EMP report are presented below:

TABLE-12.1
DETAILS OF PERSONNEL INVOLVED IN CURRENT EIA/EMP STUDY – VIMTA LABS LTD

Sr. No.	Name	Qualification	Position	Contribution	Expertise/Functional Area	Experience
A	**In House Experts**					
1	Mr. M. Janardhan	M.Tech (Env. Engg)	Vice President & Head (Env)	Co-ordination	EIA Co-ordinator and FAE for AP, AQ, NV & SHW	About 25 years of experience in the field of Environmental Management and Environmental Engineering
2	Dr. B. Chandra Sekhar	M.Sc., Ph.D	Associate Vice President	Co-ordination	FAE for AQ	About 17 years of experience in the field of Environmental Management and Modeling
3	Mr. G. V. Raghava Rao	M.Tech (Env)	Manager	Expert	FAE-AP, ISW & MSW	About 17 years of experience in the field of Environmental Management and Environmental Engineering
4	Ms. BH. Durga Bhavani	M. Sc (Env Science), M.Tech	Group Leader	Expert	FAE – WP, AQ, Team Member SHW	About 12 years of experience in the field of Environmental Management and Environmental Chemistry
5	Mr. Venkatesham	M.S.W	Group Leader	Expert	FAE-SE	About 15 years of experience in the field of social Impact Assessment Studies
6	Mr. S. Kishore Kumar	M.Tech (Env)	Group Leader	Expert	FAE – AP, AQ, NV	About 5 years of experience in the field of Environment Management and Engineering
7	Mr. Rajashekar T	M.Sc., Ph.D	Group Leader	Expert	FAE-EB	About 10 years of experience in the field of Terrestrial and Aquatic Ecology
8	Mr. Suryanarayana K	M.Sc., M.Tech	Sr. Env Engineer	Expert	FAE-LU	About 13 years of experience in the field of Environment Management and Engineering
9	Mr. M. Raja Manohar	M.Tech (Env)	Env Engineer	Expert	FAE – AP	About 5 years of experience in the field of Environment Management and Engineering
10	Mr. Ramakrishna Pullipaka	M.Tech (Env)	Env Engineer	Expert	FAE – AP, AQ	About 5 years of experience in the field of Environment Management and Engineering
11	Mr. K. Rajeshwar	MSC. Geology & Hydrogeology	Scientist	Expert	FAE–HG	About 5 years of experience in the field of geology and Hydrogeology
12	Ms. D. Svega	M.Tech (Env)	Env Engineer	Expert	Team Member	About 4 years of experience in the field of Environment Management and Engineering
13	Mr. Ch. Narendra	M.S.W	Scientist	Expert	FAE-SE	About 3 years of experience in the field of Social Impact Assessment Studies
14	Mr. K. S. Vishnu Teja	M.Tech (Env)	Env Engineer	Expert	FAE-WP & FAA-RH	About 4 years of experience in the field of Environment Management and Engineering

Sr. No.	Name	Qualification	Position	Contribution	Expertise/Functional Area	Experience
15	Mr. J. Sunil Kumar	M.Tech (Env)	Env Engineer	Expert	Team Member	About 3 year experience in the field of Environment Management and Engineering
16	Dr. B. Sreekanth	M.Sc., M.Tech., Ph.D	Env Engineer	Expert	FAE-AQ	About 8 years of experience in the field of Environment Engineering and Management
17	Ms. Ashwani	M.S.C	Trainee Scientist	Expert	Team Member	About 1 year of experience in the field of Environmental Management and Environmental Chemistry
18	Ms. Olive Eunice	M.Tech	Trainee Env Engineer	Expert	Team Member	About 1 year of experience in the field of Environment Management and Engineering
19	Mr. P. Niranjan Babu	B.Com	Dy. Manager	Secretarial Support	--	About 26 years of experience in the field of environmental monitoring and secretarial support

PREFACE

M/s. Adani Enterprises Limited (AEL)

Siracha and Navinal Villages, Taluka Mundra,
District Kutch, Gujarat

ENVIRONMENTAL IMPACT ASSESSMENT

FOR
THE PROPOSED GREENFIELD COPPER REFINERY PROJECT (1.0 MTPA) AT ADANI PORT SPECIAL ECONOMIC ZONE LAND IN VILLAGES SIRACHA AND NAVINAL, TALUKA MUNDRA, DISTRICT KUTCH, GUJARAT

Volume-II
Annexures

For and on behalf of VIMTA Labs Limited

Approved by : **M. Janardhan**

Signed :

Position : **Head & Vice President (Env)**

Date : 6th December, 2018

The report has been prepared inline with the prescribed TORs issued vide letter No.J-11011/113/2016-IA.II(I) dated 21st June 2016 of Ministry of Environment, Forests and Climate Change, New Delhi.

This report has been prepared by **Vimta Labs Limited** with all reasonable skill, care and diligence within the terms of the contract with the client, incorporating our General Terms and Conditions of Business and taking account of the resources devoted to it by agreement with the client.

ENVIRONMENTAL IMPACT ASSESSMENT

CORRIGENDUM

Sub: Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in Village(s) Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat – regarding corrigendum to ToR

Ref: AEL/Copper/Mundra/MoEFCC/Env/Amd/Feb2017/out-1 dated 21.02.2017

This has reference this Ministrys letter of even No. J-11011/113/2016-IA.II(I) dated 21.06.2016 prescribing ToRs for the above mentioned proposal for preparation of EIA/EMP report under the provisions of Environment Impact Assessment Notification, 2006 as amended.

2. The Ministry of Environment, Forest and Climate Change has examined the request. In partial modification of this Ministry's letter of even no. dated 21.06.2016, the following changes are incorporated in the ToR letter.

For	Read as
Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in Village(s) Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat	Greenfield Copper Refinery Plant **(1.0 MTPA)** project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in Village(s) Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat

3.0 All other conditions of the above referred Terms of Reference letter shall remain unchanged

This issues with the approval of competent authority.

Subject: Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in Village(s) Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat - prescribing of ToRs regarding.

Sir,

This has reference to your online application No. IA/GJ/IND/53004/2016 dated 21st April, 2016 along with the application in prescribed format (Form-I), copy of pre-feasibility report and proposed TORs for undertaking detailed EIA study as per the EIA Notification, 2006 for the project mentioned above. The proposed project activity is listed at S.No. 3(a), under category 'A' of the Schedule of EIA Notification, 2006 and appraised at the Central level.

2.0 M/s. Adani Enterprises Limited proposes to install a new manufacturing unit for 10 LTPA copper project. It is proposed to set up the plant for Copper Cathode based on Pyrometallurgical process technology and Electro-refining process. The proposed unit will be located at Adani Port Special Economic Zone (APSEZ) land (Siracha and Navinal Villages), Mundra Taluka, Kutch District, Gujarat State. The proponent has provided 3 sites for the project and proposed to set up the plant at Site-II. The land required for the project is 256.58 ha, out of which 154.18 ha is for industrial use and 102.38 ha is forest land. It has been informed that state government has recommended the forest diversion proposal to the Central Government. The proponent has also informed that the merits for selecting Site-II for the project inter-alia include proximity to west port from where major raw material will be imported, major part of land is within the notified SEZ and also the forest land diversion proposal is forwarded by the State government to Central Government. The proposed site lies between 22°48'55.78" N Latitude and 69°34'32.02" E Longitude. There are no national parks/ wildlife sanctuary within 10 km radius. The project area falls under Seismic Zone V. The estimated project cost is Rs. 10,000 Crore and the estimated environment protection cost is Rs. 900 crores. Employment generation from proposed project will be about 2000 direct employment and about 5000 indirect employment. The proposed capacity for different products for new site area as below:

Name of Unit	No. of Units	Capacity of each Unit	Production Capacity
Copper Smelter plant	2	4.5 LTPA	9 LTPA
Copper Refinery plant	2	5.0 LTPA	10 LTPA

Continuous cast copper rod plant	2/3	2.5/ 1.67 LTPA	5 LTPA
Copper scrap melting facility	2	0.5 LTPA	1 LTPA
Sulphuric acid plant	2	15 LTPA	30 LTPA
Phosphoric acid plant	2	2.5 LTPA (100% P_2O_5)	5 LTPA (100% P_2O_5)
Aluminium Fluoride plant	2	15,000 TPA	30,000 TPA
Selenium Recovery plant	2	144 TPA	288 TPA
Precious metal recovery plant (Gold)	2	25 TPA	50 TPA
Precious metal recovery plant (Silver)	2	250 TPA	500 TPA
Oxygen (industrial) Plant (95% Purity)	2	45,000 TPM	90,000 TPM
Waste heat recovery boiler	2	25 MW	50 MW

3.0 The electricity load required is 300 MW, out of this, 40 MW will be generated from internal process steam by waste heat recovery; whereas the remaining 260 MW power will be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd. Company has also proposed to install 6 DG Set of 1200 - 2000 KVA Each, as a backup facility.

4.0 Proposed raw material requirement for project are Copper concentrate and Rock phosphate. Requirement would be fulfilled by importing as well as from domestic market. Fuel consumption will be mainly Furnace Oil, LPG/NG and Coal for process requirement. Water Consumption for the proposed project will be 32,800 KLD desalinated water and waste water generation will be nil outside the project boundary. Domestic waste water will be treated through Sewage treatment plant and industrial waste water generated will be treated in the Effluent Treatment Plant & through reverse Osmosis plant and reused in the process. ETP Sludge shall be disposed as per applicable hazardous waste management rules.

5.0 The above proposal was considered by the Expert Appraisal Committee (Industry) during its 6th meeting held on 3rd – 4th May, 2016 for prescribing TORs for undertaking detailed EIA/EMP study.

6.0 Based on the information furnished and presentation made by the project proponent, the Committee recommended prescribing following specific TORs for undertaking detailed EIA and EMP study in addition to the generic TOR enclosed at **Annexure I read with additional TORs at Annexure-2.**

i. The Public Hearing for the project should be conducted by Gujarat Pollution Control Board
ii. The issues raised during public hearing and commitment of the project proponent on the same along with time bound action plan to implement the commitment and financial allocation thereto should be clearly provided.
iii. The project proponent should carry out social impact assessment of the project as per the Office Memorandum No. J-11013/25/2014-IA.I dated 11.08.2014 issued by the Ministry regarding guidelines on Environment Sustainability and CSR related issues. The social impact assessment study so carried out should form part of EIA and EMP report.
iv. Plan for management of Arsenic bearing sludge should be submitted.

v. Hazardous management plan for handling of all hazardous material including minerals, products and waste, like H_2SO_4 and Arsenic sludge should be prepared by the project proponent and submitted.

7.0 The undersigned is directed to inform that the Ministry of Environment, Forest and Climate Change (MoEFCC) after accepting the recommendation of the EAC (Industry), hereby decided to accord ToRs for the above project.

8.0 It is requested that the draft EIA Report may be prepared in accordance with the above mentioned specific TORs and enclosed generic TORs and additional TORs and thereafter further necessary action including conduct of public consultation may be taken (if required) for obtaining Environment Clearance in accordance with the procedure prescribed under the EIA Notification, 2006 as amended.

9.0 The TORs are valid for a period of three years from today i.e 21.06.2016 and will expire on 20.06.2019. However, this period could be further extended by a maximum period of one year provided an application is made by the project proponent at least three months before the expiry of the validity period, together with updated Form-I, based on proper justification.

ANNEXURE –I

GENERIC TERMS OF REFERENCE (TOR) IN RESPECT OF INDUSTRY SECTOR

1. Executive Summary
2. Introduction
   - i. Details of the EIA Consultant including NABET accreditation
   - ii. Information about the project proponent
   - iii. Importance and benefits of the project

3. Project Description
   - i. Cost of project and time of completion.
   - ii. Products with capacities for the proposed project.
   - iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.
   - iv. List of raw materials required and their source along with mode of transportation.
   - v. Other chemicals and materials required with quantities and storage capacities
   - vi. Details of Emission, effluents, hazardous waste generation and their management.
   - vii. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)
   - viii. Process description along with major equipments and machineries, process flow sheet (quantative) from raw material to products to be provided
   - ix. Hazard identification and details of proposed safety systems.
   - x. Expansion/modernization proposals:
     - a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Regional Office of the Ministry of Environment and Forests as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental clearances including Amendments shall be provided. In addition, status of compliance of Consent to Operate for the ongoing /existing operation of the project from SPCB shall be attached with the EIA-EMP report.
     - b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.

4. Site Details

   - i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.
   - ii. A toposheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)
   - iii. Co-ordinates (lat-long) of all four corners of the site.
   - iv. Google map-Earth downloaded of the project site.

v. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.

vi. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.

vii. Landuse break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc shall be included. (not required for industrial area)

viii. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area

ix. Geological features and Geo-hydrological status of the study area shall be included.

x. Details of Drainage of the project upto 5km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)

xi. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.

xii. R&R details in respect of land in line with state Government policy

5. **Forest and wildlife related issues (if applicable):**

i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable).

ii. Landuse map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (*in case of projects involving forest land more than 40 ha).*

iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.

iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon.

v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area.

vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife

6. **Environmental Status**

i. Determination of atmospheric inversion level at the project site and site-specific micro-metebrological data using temperature, relative humidity, hourly wind speed and direction and rainfall.

ii. AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests.

iii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min.,

ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 1,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.

x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.

xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.

xii. Action plan for post-project environmental monitoring shall be submitted.

xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan.

8. Occupational health

i. Details of existing Occupational & Safety Hazards. What are the exposure levels of above mentioned hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved,

ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre placement and periodical examinations give the details of the same. Details regarding last month analyzed data of abovementioned parameters as per age, sex, duration of exposure and department wise.

iii. Annual report of heath status of workers with special reference to Occupational Health and Safety.

iv. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers.

9. Corporate Environment Policy

i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.

ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.

iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.

iv. Does the company have system of reporting of non compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report

max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.

iv. Surface water quality of nearby River (60m upstream and downstream) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.

v. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC.

vi. Ground water monitoring at minimum at 8 locations shall be included.

vii. Noise levels monitoring at 8 locations within the study area.

viii. Soil Characteristic as per CPCB guidelines.

ix. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.

x. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.

xi. Socio-economic status of the study area.

7. Impact Assessment and Environment Management Plan

i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be well assessed. Details of the model used and the input data used for modeling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.

ii. Water Quality modelling – in case, if the effluent is proposed to be discharged in to the local drain, then Water Quality Modelling study should be conducted for the drain water taking into consideration the upstream and downstream quality of water of the drain.

iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.

iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules.

v. Details of stack emission and action plan for control of emissions to meet standards.

vi. Measures for fugitive emission control

vii. Details of hazardous waste generation and their storage, utilization and disposal. Copies of MOU regarding utilization of solid and hazardous waste shall also be included. EMP shall include the concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.

viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.

10. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.

11. Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.

12. 'A tabular chart with index for point wise compliance of above TORs.

13. The TORs prescribed shall be valid for a period of three years for submission of the EIA-EMP reports along with Public Hearing Proceedings (wherever stipulated).

The following general points shall be noted:

i. All documents shall be properly indexed, page numbered.
ii. Period/date of data collection shall be clearly indicated.
iii. Authenticated English translation of all material in Regional languages shall be provided.
iv. The letter/application for environmental clearance shall quote the MOEF file No. and also attach a copy of the letter.
v. The copy of the letter received from the Ministry shall be also attached as an annexure to the final EIA-EMP Report.
vi. The index of the final EIA-EMP report must indicate the specific chapter and page no. of the EIA-EMP Report
vii. While preparing the EIA report, the instructions for the proponents and instructions for the consultants issued by MOEF vide O.M. No. J-11013/41/2006-IA.II (I) dated 4th August, 2009, which are available on the website of this Ministry shall also be followed.
viii. The consultants involved in the preparation of EIA-EMP report after accreditation with Quality Council of India (QCI) /National Accreditation Board of Education and Training (NABET) would need to include a certificate in this regard in the EIA-EMP reports prepared by them and data provided by other organization/Laboratories including their status of approvals etc. Name of the Consultant and the Accreditation details shall be posted on the EIA-EMP Report as well as on the cover of the Hard Copy of the Presentation material for EC presentation.
ix. TORs' prescribed by the Expert Appraisal Committee (Industry) shall be considered for preparation of EIA-EMP report for the project in addition to all the relevant information as per the 'Generic Structure of EIA' given in Appendix III and IIIA in the EIA Notification, 2006. Where the documents provided are in a language other than English, an English translation shall be provided. The draft EIA-EMP report shall be submitted to the State Pollution Control Board of the concerned State for conduct of Public Hearing. The SPCB shall conduct the Public Hearing/public consultation, district-wise, as per the provisions of EIA notification, 2006. The Public Hearing shall be chaired by an Officer not below the rank of Additional District Magistrate. The issues raised in the Public Hearing and during the consultation process and the commitments made by the project proponent on the same shall be

x. included separately in EIA-EMP Report in a separate chapter and summarised in a tabular chart with financial budget (capital and revenue) along with time-schedule of implementation for complying with the commitments made. The final EIA report shall be submitted to the Ministry for obtaining environmental clearance.

METALLURGICAL INDUSTRY (FERROUS AND NON-FERROUS)

1. Complete process flow diagram describing each unit, its processes and operations, along with material and energy inputs & outputs (material and energy balance).
2. Emission from sulphuric acid plant and sulphur muck management.
3. Details on installation of Continuous Emission Monitoring System with recording with proper calibration system
4. Details on toxic metals including fluoride emissions
5. Details on stack height.
6. Details on ash disposal and management
7. Complete process flow diagram describing process of lead/zinc/copper/ aluminium, *etc.*
8. Details on smelting, thermal refining, melting, slag fuming, and Waelz kiln operation
9. Details on Holding and de-gassing of molten metal from primary and secondary aluminum, materials pre-treatment, and from melting and smelting of secondary aluminium
10. Details on toxic metal content in the waste material and its composition and end use (particularly of slag).
11. Trace metals in waste material especially slag.
12. Plan for trace metal recovery
13. Trace metals in water

****

Format for Executive Summary

Executive summary of the report in about 8-10 pages incorporating the following:

i. Project name and location (Village, Dist, State, Industrial Estate (if applicable)
ii. Products and capacities. If expansion proposal then existing products with capacities and reference to earlier EC.
iii. Requirement of land, raw material, water, power, fuel, with source of supply (Quantitative)
iv. Process description in brief, specifically indicating the gaseous emission, liquid effluent and solid and hazardous wastes.
v. Measures for mitigating the impact on the environment and mode of discharge or disposal.
vi. Capital cost of the project, estimated time of completion
vii. Site selected for the project – Nature of land – Agricultural (single/double crop), barren, Govt/private land, status of is acquisition, nearby (in 2-3 km.) water body, population, with in 10km other industries, forest , eco-sensitive zones, accessibility, (note – in case of industrial estate this information may not be necessary)
viii. Baseline environmental data – air quality, surface and ground water quality, soil characteristic, flora and fauna, socio-economic condition of the nearby population
ix. Identification of hazards in handling, processing and storage of hazardous material and safety system provided to mitigate the risk.
x. Likely impact of the project on air, water, land, flora-fauna and nearby population
xi. Emergency preparedness plan in case of natural or in plant emergencies
xii. Issues raised during public hearing (if applicable) and response given
xiii. CSR plan with proposed expenditure.
xiv. Occupational Health Measures
xv. Post project monitoring plan

ANNEXURE-I(A)
TOR LETTER AND ITS COMPLIANCE

Sr. No.	Terms of Reference (TOR)	Compliance
A	**Specific TOR**	
i	The Public Hearing for the project should be conducted by Gujarat Pollution Control Board	Public hearing for the proposed project was conducted by Gujarat Pollution Control Board on 29th April, 2017 at Community Premises Centre (Samajwadi), opposite Tunda Primary School, Tunda village, Mundra Taluk, Kutch district in the presence of Resident Additional Collector/Additional District Magistrate.
ii	The issues raised During public hearing and commitment of the project proponent on the same along with time bound action plan to implement the commitment and financial allocation there to should be clearly provided.	The public hearing comments along with time bound action plan and financial allocation is given in Section-7.1 of Chapter-7.
iii	The project proponent should carry out social impact assessment study as per the OM No.J-11013/25/2014-IA.I dated 11-08-2014 issued by the Ministry regarding the guidelines on Environmental Sustainability and CSR related issue. The SIA study so carried out should from part of EIA and EMP report.	The social impact assessment study was conducted and same report is given as Annexure-XII of the EIA Report.
iv	Plan for management of Arsenic bearing sludge should be submitted.	The Arsenic bearing sludge will be recycled within the system and balance of any will be given to authorized recyclers. Hazardous and non-hazardous waste generation, mode of disposal and waste characterisation are given in Section-2.4.3 of Chapter-2. The impacts on waste generation and management details are given in Section-4.2.5 of Chapter-4.
v	Hazardous management plan for handling of all hazardous material including minerals, products and waste, like H_2SO_4 and Arsenic sludge should be prepared by the project proponent and submitted.	
B	**Generic TOR**	
1	**Executive Summary**	The executive summary is enclosed in EIA report
2	**Introduction**	
	i. Details of the EIA Consultant including NABET accreditation	Vimta Labs Limited, a NABET accredited EIA consultant and NABL approved laboratory has been assigned the task for carrying out EIA studies.
	ii. Information about the project proponent	M/s. Adani Enterprises Limited. The details are given in Section-1.2 of Chapter-1.
	iii. Importance and benefits of the project	Details are given in Section-1.3.2 of Chapter-1.
3	**Project Description**	
	i. Cost of project and time of completion.	The total cost for the proposed project is estimated as Rs.10,000 Crores. Implementation schedule for copper project post all relevant approvals and consents will be 36 months.
	ii. Products with capacities for the proposed project	The proposed production details are given in Table-2.2 of Chapter-2.
	iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.	The proposed project is a green field project. Hence, it is not applicable.
	iv. List of raw materials required and their source along with mode of transportation.	The details of raw material requirement and source for the proposed project are given in Table-2.4 of Chapter-2.

ANNEXURE-I(A)
TOR LETTER AND ITS COMPLIANCE

Sr. No.	Terms of Reference (TOR)	Compliance
	v. Other chemicals and materials required with quantities and storage capacities	The fuel consumption quantity and source are given in Table-2.6 of Chapter-2.
	vi. Details of Emission, effluents, hazardous waste generation and their management.	Details of air emissions, wastewater generation and solid waste generation is given in Section-2.4 of Chapter-2.
	vii. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)	The total water requirement for the project is about 32,800 KLD (32.8 MLD). The total estimated power requirement for proposed project is 300 MW out of which 40 MW would be generated from internal process steam and balance 260 MW power would be sourced from APSEZ Ltd. The water and power will be sourced from APSEZ Limited, through M/s. Mundra Utility Private Limited (MUPL). Water balance diagram for phase-I & II are shown in Figure-2.2(A) & 2.2(B) of Chapter-2. During construction phase, about 2000-3000 persons on average per day are required and during the operation phase about 2000 direct employment and about 5000 indirect employment would be generated.
	viii. Process description along with major equipment's and machineries, process flow sheet (quantitative) from raw material to products to be provided	Process description is given in Section-2.3 of Chapter-2.
	ix. Hazard identification and details of proposed safety systems.	Hazard identification has been carried out for the entire plant. Details are given in Table-7.6 of Chapter-7.
	X. Expansion/modernization proposals: a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Regional Office of the Ministry of Environment and Forests as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental clearances including Amendments shall be provided. In addition, status of compliance of Consent to Operate for the ongoing /existing operation of the project from SPCB shall be attached with the EIA-EMP report. b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be	Proposed project is a green field project. Hence, it is not applicable.

	is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)	project site which will be suitably trained.
	xi. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.	The 381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company). Balance 253 acres is forest land for which Stage-I forest clearance has been obtained vide letter No.8-04/2016-FC dated 16th November,2018.
	xii. R&R details in respect of land in line with state Government policy	There is no Resettlement and Rehabilitation involved in the project.
5	**Forest and wildlife related issues (if applicable)**	
	i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable).	Forest land of 102.38 ha (253 acres) is also involved which will be converted for industrial use. MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. The stage-I Forest Clearance (FC) is enclosed as Annexure-V of EIA Report.
	ii. Land use map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha).	Land use map based on 5 m resolution showing the forest land is shown in Figure-3.3.2 of Chapter-3.
	iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted	MoEF&CC (forest conservation division) has granted Stage-1 approval for diversion of 1576.81 ha of reserved forest land in favour of Adani Ports & Special Economic Zone Limited (APSEZL) vide letter F.No.8-04/2016-FC dated 16th November 2018. The stage-I Forest Clearance (FC) is enclosed as Annexure-V of the EIA Report.
	iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon.	There are no National Parks, Sanctuaries, Biosphere Reserves within 10 km radius study area. Toposheet showing the 10 km radius study area map on 1:50,000 scale is shown in Figure-1.2 of Chapter-1.
	v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area.	As per the primary data collected and also from the secondary data sources, Peacock belongs to Schedule-I as per Wildlife Protection Act, 1972. Conservation plan is provided in Section-3.9.9 of Chapter-3.
	vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife.	Not applicable

ANNEXURE-I(A)
TOR LETTER AND ITS COMPLIANCE

Sr. No.	Terms of Reference (TOR)	Compliance
6	**Environmental Status**	
	i. Determination of atmospheric inversion level at the project site and site-specific micrometeorological data using temperature, relative humidity, hourly wind speed and direction and rainfall.	Site specific atmospheric inversion level study has been carried out by using Sodar. The study report is enclosed as Annexure-XI of the EIA Report. The site-specific micro-meteorological data using temperature, relative humidity, wind speed and direction and rainfall details are given Section-3.5 of Chapter-3.
	ii. AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests.	Ambient air quality was monitored during post monsoon and partly winter season of 2016 (October-December, 2016). Details are given in Section-3.6 of Chapter-3.
	iii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with - min., max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.	Raw data of all AAQ measurement for three months is enclosed as Annexure-IX of the EIA Report.
	iv. Surface water quality of nearby River (60m upstream and downstream) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.	Surface water quality has been analysed and the results are given in Table-3.7.2 of Chapter-3.
	v. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC.	Dhaneshwari river also referred as Danesri Nadi (as per Topo sheet no: F42 J9 & 10). Dhaneshwari, a seasonal river which flows in the western part of the proposed site. The river will not be diverted but suitably trained along the boundary. The flow of the river will be maintained, as shown in the Plant Layout in Figure-2.1 of EIA Report. There are no other rivers nearby the proposed plant site.
	vi. Ground water monitoring at minimum at 8 locations shall be included.	Ground water quality in the study area has been analysed and the results are given in section-3.7 of Chapter-3.
	vii. Noise levels monitoring at 8 locations within the study area.	Noise levels were monitored at 8 locations and the details are given in section-3.8 of Chapter-3.
	viii. Soil Characteristic as per CPCB guidelines.	Soil analysis was carried out at 8 locations and the details along with results are given in section-3.4 of Chapter-3.
	ix. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.	Traffic studies have been conducted to know the prevailing traffic volumes in the area, details are given in Setion-3.11 of Chapter-3. It is estimated that the number of additional trucks due to the proposed project is about 700 trucks per day.
	x. Detailed description of flora and fauna	Ecological studies within the study area has been

ANNEXURE-I(A)
TOR LETTER AND ITS COMPLIANCE

Sr. No.	Terms of Reference (TOR)	Compliance
	(terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.	carried out and the details are described in Section-3.9 of Chapter-3.
	xi. Socio-economic status of the study area.	Details of socio-economic status of the study area is discussed in Section-3.10 of Chapter-3.
7	**Impact Assessment and Environment Management Plan**	
	i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be well assessed. Details of the model used and the input data used for modeling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.	For prediction of maximum Ground Level Concentrations (GLC's), the air dispersion modelling software (AERMOD version 7.1.0) was used. Details are given in Section-4.2.2 of Chapter-4.
	ii. Water Quality modelling – in case, if the effluent is proposed to be discharged into the local drain, then Water Quality Modelling study should be conducted for the drain water taking into consideration the upstream and downstream quality of water of the drain.	Not applicable as the unit will be operating on zero discharge process.
	iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail cum road transport or conveyor-cum-rail transport shall be examined.	The major raw material i.e. copper concentrate will be received at Adani west port and will be transported to the plant through pipe conveyor. Impact of traffic on air quality is addressed in Section-4.2.3 of Chapter-4.
	iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under EP Rules.	Wastewater generation, treatment and its management are given in section-2.4.2 of Chapter-2.
	v. Details of stack emission and action plan for control of emissions to meet standards.	Details of stack emissions are given in Table-2.6 of Chapter-2.

ANNEXURE-I(A)
TOR LETTER AND ITS COMPLIANCE

Sr. No.	Terms of Reference (TOR)	Compliance
	vi. Measures for fugitive emission control	Fugitive emission control measures are given in section-4.2.2.1 of Chapter-4.
	vii. Details of hazardous waste generation and their storage, utilization and disposal. Copies of MOU regarding utilization of solid and hazardous waste shall also be included. EMP shall include the concept of waste-minimization, recycle/ reuse/ recover techniques, Energy conservation, and natural resource conservation.	Details are given in Section-2.4.3 of Chapter-2.
	viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.	Not applicable as there will not be any generation of fly ash due to the proposed plant.
	ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 1,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.	About 85.79 ha (212 acres) is allotted for greenbelt/green cover development. Details are given in Section-4.3 of Chapter-4.
	x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.	Rainwater harvesting structures will be provided to recharge the groundwater resources in the region. Details are given in section-4.2.4.4 of Chapter-4.
	xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.	The total cost for the proposed project is estimated as Rs.10,000 Crores. The total capital cost for environmental protection is about Rs. 1044 Crores. The recurring cost/ annum for environmental protection is about Rs. 5 Crores.
	xii. Action plan for post-project environmental monitoring shall be submitted.	Details are given in Chapter-6.
	xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan	Details are given in Section-7.3 of Chapter-7.
8	**Occupational health**	
	i. Details of existing Occupational & Safety Hazards. What are the exposure levels of above mentioned hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of	Detail are given in Section-7.4 of Chapter-7.

ANNEXURE-I(A)
TOR LETTER AND ITS COMPLIANCE

	the workers can be preserved	
	ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-placement and periodical examinations give the details of the same. Details regarding last month analysed data of abovementioned parameters as per age, sex, duration of exposure and department wise.	
	iii. Annual report of health status of workers with special reference to Occupational Health and Safety.	
	iv. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers.	
9	**Corporate Environment Policy**	
	i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.	The Corporate Environment Policy and the list of Board of Directors is enclosed in Annexure-XVI of the EIA Report.
	ii. Does the Environment Policy prescribe for standard operating process /procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.	
	iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.	
	iv. Does the company have system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report	
10	Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.	All infrastructure facilities such as sanitation, fuel, restroom etc. will be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.
11	Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the	Nil

	Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.	
C	**Additional TOR**	
1	Complete process flow diagram describing each unit, its process and operations long with material and energy inputs & outputs (material and energy balance)	Process flow diagram, details of material and energy balance are given in Figure-2.4 to Figure-2.6.
2	Emission from sulphuric acid plant and sulphur muck management	Details of stack emissions for proposed plant are given in Section-2.4 of Chapter-2.
3	Details on installation of continuous emission monitoring system with recording with proper calibration system	Continuous emission monitoring system with recording with proper calibration system will be provided in the proposed plant. The details of emission monitoring system installation is given in the Table-6.4 of Chapter-6.
4	Details on toxic metals including fluoride emissions	The gas clearing systems is given in Section-2.3.9 of Chpater-2.
5	Details on stack height	Details of stack for proposed plant is given in Table-2.7 of Chapter-2.
6	Details on ash disposal and management	There will be no ash generation in the proposed project.
7	Complete process flow diagram describing process of lead/zinc/copper/aluminium etc.	The process flow diagram is shown in Figure-2.3 of Chapter-2.
8	Details on smelting, thermal refining, melting, slag fuming and Waelz kiln operation	The process description in detail is given in Section-2.3 of Chapter-2.
9	Details on Holding and de-gassing of molten metal and smelting of secondary aluminium, materials pre-treatment, and from melting and smelting of secondary aluminium	The secondary off gas will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO_2 before it is discharged to the atmosphere. The process flow diagram of smelter furnace is shown in Figure-2.8 of Chapter-2.
10	Details on toxic metal content in the waste material and its composition and end use (particular of slag)	The process flow diagram of slag cleaning furnace flow sheet is shown in Figure-2.11 and precious metal recovery plant is shown in Figure-2.18 of Chapter-2. The waste generation, mode of disposal and waste characterisation are given in Section-2.4.3 of Chapter-2. The impacts on waste generation and management details are given in Section-4.2.5 of Chapter-4.
11	Trace metals in waste material especially slag	
12	Plan for trace metal recovery	
13	Trace metals in water	

Annexure-II

Methodology for Sampling and Analysis

ANNEXURE-II
METHODOLOGY ADOPTED FOR SAMPLING AND ANALYSIS

1.0 Meteorology

The methodology adopted for monitoring surface observations is as per the standard norms laid down by Bureau of Indian Standards (IS:8829) and India Meteorological Department (IMD).

1.1 Methodology of Data Generation

The Central Monitoring Station (CMS) equipped with continuous monitoring equipment was installed at site at a height of about 10 m above ground level to record wind speed, direction, relative humidity and temperature. The meteorological monitoring station was located in such a way that it is free from any obstructions and as per the guidelines specified under IS:8829. Cloud cover was recorded by visual observation. Rainfall was monitored by rain gauge.

The continuous recording meteorological instrument of Dynalab, Pune (Model No.WDL1002) has been used for recording the met data. The sensitivity of the equipment is as given below Table.

SENSITIVITY OF METEOROLOGY MONITORING STATION

Sr. No.	Sensor	Sensitivity
1	Wind speed Sensor	± 0.02 m/s
2	Wind direction Sensor	± 3 degrees
3	Temperature Sensor	± 0.2°C

Hourly maximum, minimum and average values of wind speed, direction and temperature were recorded continuously with continuous monitoring equipment. All the sensors were connected to filter and then logged on to datalogger. The readings were recorded in a memory module, which was attached to datalogger. The memory module was downloaded in computer through Dynalab software. The storage capacity of memory module was 256 KB. Data was downloaded every fortnight into the computer. The data was recorded continuously. The recovery of data was about 98%. The rest of 2 % data gaps were filled by referring to IMD data and daily weather reports in the local newspapers. However, Relative Humidity and Rainfall were recorded manually.

1.2 Ambient Air Quality

The air samples were analyzed as per standard methods specified by Central Pollution Control Board (CPCB), IS: 5184 and American Public Health Association (APHA).

The techniques used for ambient air quality monitoring and minimum detectable level are given in below Table.

ANNEXURE-II
METHODOLOGY ADOPTED FOR SAMPLING AND ANALYSIS

TECHNIQUES USED FOR AMBIENT AIR QUALITY MONITORING

Sr. No.	Parameter	Technique	Technical Protocol	Minimum Detectable Limit ($\mu g/m^3$)
1	$PM_{2.5}$	Fine Dust Sampler (Gravimetric method)	IS-5182 (Part-IV)	1.0
2	PM_{10}	Fine Dust Sampler (Gravimetric method)	IS-5182 (Part-IV)	5.0
3	Sulphur Dioxide	Modified West and Gaeke	IS-5182 (Part-II)	4.0
4	Nitrogen Oxide	Jacob & Hochheiser	IS-5182 (Part-VI)	10.0
5	Carbon monoxide	FID technique (Gas chromatography)	IS-5182(Part-X)	50
6	Ozone	UV-Vis Spectroscopic Analysis	ASTM-D	2.0
7	Ammonia	UV-Vis Spectrophotometry	ASTM-D	20.0
8	Benzene	GC-MS/GC	IS-5182	0.001
9	Benzo (O) Pyrene	GC-MS/GC	IS-5182	0.01 ng/m^3
10	Arsenic	GC-MS/GC	IS-5182	0.001
11	Nickel	GC-MS/GC	IS-5182	0.001
12	Lead	GC-MS/GC	IS-5182	0.001

1.3 Water Analysis

Samples for chemical analysis were collected in polyethylene carboys. Samples collected for metal content were acidified with 1 ml HNO_3. Samples for bacteriological analysis were collected in sterilized glass bottles. Selected physico-chemical and bacteriological parameters have been analyzed for projecting the existing water quality status in the study area. Parameters like temperature, Dissolved Oxygen (DO) and pH were analyzed at the time of sample collection.

The methodology for sample collection and preservation techniques was followed as per the Standard Operating Procedures (SOP) mentioned in below Table.

STANDARD OPERATING PROCEDURES (SOP) FOR WATER AND WASTEWATER SAMPLING

Parameter	Sample Collect ion	Sample Size	Storage/ Preservation
pH	Grab sampling Plastic /glass container	50 ml	On site analysis
Electrical Conductivity	Grab sampling Plastic /glass container	50 ml	On site parameter
Total suspended solids	Grab sampling Plastic /glass container	100 ml	Refrigeration, can be stored for 7 days
Total Dissolved Solids	Grab sampling Plastic /glass container	100 ml	Refrigeration, can be stored for 7 days
BOD	Grab sampling Plastic /glass container	500 ml	Refrigeration, 48 hrs
Hardness	Grab sampling Plastic /glass container	100 ml	Add HNO_3 to pH<2, refrigeration; 6 months
Chlorides	Grab sampling Plastic /glass container	50 ml	Not required; 28 days
Sulphates	Grab sampling Plastic /glass container	100 ml	Refrigeration; 28 days
Sodium, Potassium	Plastic container	100 ml	Not required; 6 months
Nitrates	Plastic containers	100 ml	Refrigeration; 48 hrs
Fluorides	Plastic containers only	100 ml	Not required; 28 days

ANNEXURE-II
METHODOLOGY ADOPTED FOR SAMPLING AND ANALYSIS

Parameter	Sample Collect ion	Sample Size	Storage/ Preservation
Alkalinity	Plastic/ glass containers	100 ml	Refrigeration; 14 days
Ammonia	Plastic/ glass containers	100 ml	Add H_2SO_4 to pH>2, refrigeration, 28 days
Hexavalent Chromium, Cr^{+6}	Plastic/ Glass rinse with 1+1 HNO_3	100 ml	Grab sample; refrigeration; 24 hrs
Heavy Metals (Hg, Cd, Cr, Cu, Fe, Zn, Pb etc.)	Plastic/ Glass rinse with 1+1 HNO_3	500 ml	Filter, add HNO_3 to pH>2; Grab sample; 6 months

Source: Standard Methods for the Examination of Water and Wastewater, Published By APHA, AWWA, WEF 19th Edition, 1995

1.3.1 Analytical Techniques

The analytical techniques used for water and wastewater analysis is given in below Table.

ANALYTICAL TECHNIQUES
FOR WATER AND WASTEWATER ANALYSIS

Parameter	Method
pH	APHA-4500-H^+
Colour	APHA-2120 C
Odour	IS: 3025, Part-4
Temperature	APHA-2550 B
Dissolved Oxygen	APHA-4500 O
BOD	APHA-5210 B
Electrical conductivity	APHA-2510 B
Turbidity	APHA-2130 B
Chlorides	APHA-4500 Cl^-
Fluorides	APHA-4500 F^-
Total dissolved solids	APHA-2540 C
Total suspended solids	APHA-2540 D
Total hardness	APHA-2340 C
Sulphates	APHA-4500 SO_4^{-2}
Arsenic	APHA-3120 B/ APHA-3114 B/ APHA-3500 As
Calcium	APHA-3120 B/ APHA-3500 Ca
Magnesium	APHA-3120 B/ APHA-3500 Mg
Sodium	APHA-3120 B/ APHA-3500 Na
Potassium	APHA-3120 B/ APHA-3500 K
Manganese	APHA-3120 B/ APHA-3500 Mn
Mercury	APHA-3112 B/ APHA-3500 Hg
Selenium	APHA-3120 B/ APHA-3114 B/ APHA-3500 Se
Lead	APHA-3120 B/ APHA-3500 Pb
Copper	APHA-3120 B/ APHA-3500 Cu
Cadmium	APHA-3120 B/ APHA-3500 Cd
Iron	APHA-3120 B/ APHA-3500 Fe
Zinc	APHA-3120 B/ APHA-3500 Zn
Boron	APHA-4500 B
Coliform organisms	APHA-9215 D
Alkalinity	APHA-2320 B

ANNEXURE-II
METHODOLOGY ADOPTED FOR SAMPLING AND ANALYSIS

1.4 Soil Quality

At each location, soil samples were collected from three different depths viz. 30 cm, 60 cm and 90 cm below the surface and are homogenized. This is in line with IS: 2720 & Methods of Soil Analysis, Part-1, 2nd edition, 1986 of (American Society for Agronomy and Soil Science Society of America). The homogenized samples were analyzed for physical and chemical characteristics. The soil samples were collected and analyzed once in each season.

The samples have been analyzed as per the established scientific methods for physico-chemical parameters. The heavy metals have been analyzed by using Atomic Absorption Spectrophotometer and Inductive Coupled Plasma Analyzer.

The methodology adopted for each parameter is described in below Table.

ANALYTICAL TECHNIQUES FOR SOIL ANALYSIS

Parameter	Method (ASTM number)
Grain size distribution	Sieve analysis (D 422 – 63)
Textural classification	Chart developed by Public Roads Administration
Infiltration capacity	Infiltrometer
Bulk density	Sand replacement, core cutter
Porosity	Void ratio
Sodium absorption ratio	Flame colourimetric (D 1428-82)
PH	pH meter (D 1293-84)
Electrical conductivity	Conductivity meter (D 1125-82)
Nitrogen	Kjeldahl distillation (D 3590-84)
Phosphorus	Molybdenum blue, colourimetric (D 515-82)
Potassium	Flame photometric (D 1428-82)
Copper	AAS (D 1688-84)
Iron	AAS (D 1068-84)
Zinc	AAS (D 1691-84)
Boron	Surcumin, colourimetric (D 3082-79)
Chlorides	Argentometric (D 512-81 Rev 85)
Fluorides	Fusion followed by distillation and estimation by Ion selective electrod.

1.5 Noise Levels

1.5.1 Method of Monitoring

Noise level monitoring was carried out continuously for 24-hours with one hour interval starting at 0030 hrs to 0030 hrs next day. The noise levels were monitored on working days only and Saturdays, Sundays and public holidays were not monitored. During each hour L_{eq} were directly computed by the instrument based on the sound pressure levels. Lday (Ld), Lnight (Ln) and Ldn values were computed using corresponding hourly Leq of day and night respectively. Monitoring was carried out at 'A' response and fast mode.

Parameters Measured During Monitoring

For noise levels measured over a given period of time interval, it is possible to describe important features of noise using statistical quantities. This is calculated using the percent of the time certain noise levels exceeds the time interval. The

ANNEXURE-II
METHODOLOGY ADOPTED FOR SAMPLING AND ANALYSIS

notation for the statistical quantities of noise levels is described below:

- Hourly L_{eq} values have been computed by integrating sound level meter.
- L_{day}: As per the CPCB guidelines the day time limit is between 07:00 hours to 22.00 hours as outlined in Ministry of Environment and Forest Notification S.O. 123 (E) dated 14/02/2000.
- L_{night}: As per the CPCB guidelines the night time limit is between 22:00 hours to 07.00 hours as outlined in Ministry of Environment and Forest Notification S.O. 123 (E) dated 14/02/2000.

A rating developed by Environmental Protection Agency, (US-EPA) for specification of community noise from all the sources is the Day-Night Sound Level, (L_{dn}).

L_{dn}: It is similar to a 24 hr equivalent sound level except that during night time period (10 PM to 07 AM) a 10 dB (A) weighting penalty is added to the instantaneous sound level before computing the 24 hr average. This nighttime penalty is added to account for the fact that noise during night when people usually sleep is judged as more annoying than the same noise during the daytime.

The L_{dn} for a given location in a community may be calculated from the hourly L_{eq}'s, by the following equation.

$$L_{dn} = 10Log \frac{[\sum_{i=1}^{15} 10^{(L_{eq}i/10)} + \sum_{i=1}^{9} 10^{(L_{eq}i+10/10)}]}{24}$$

No. 2315] NEW DELHI, THURSDAY, SEPTEMBER 22, 2016/BHADRA 31, 1938

वाणिज्य एवं उद्योग मंत्रालय

(वाणिज्य विभाग)

अधिसूचना

नई दिल्ली, 21 सितम्बर, 2016

का.आ. 3029(अ).—यत:, केन्द्र सरकार ने भारत सरकार, वाणिज्य एवं उद्योग मंत्रालय (वाणिज्य विभाग) की निम्नलिखित अधिसूचनाओं के तहत गुजरात राज्य के मुंद्रा में विशेष आर्थिक जोन मै. मुंद्रा पोर्ट एण्ड स्पेशल इकोनोमिक जोन लिमिटेड के नाम में अधिसूचित/अनधिसूचित किए थे, अर्थात्:-

(1) सं. का.आ. 1365 (अ) दिनांक 27 मई, 2009;

(2) सं. का.आ. 583 (अ) दिनांक 26 मार्च, 2012;

(3) सं. का.आ. 1443 (अ) दिनांक 31 मई, 2013;

(4) सं. का.आ. 3379 (अ) दिनांक 11 दिसंबर, 2015;

और यत:, दिनांक 27 मार्च, 2012 के अनुमोदन पत्र सं. एफ.1/15/2011-एसईजेड के अनुसार उल्लिखित एसईजेड के नाम को मै. मुंद्रा पोर्ट एण्ड स्पेशल इकोनोमिक जोन लिमिटेड से बदल कर मै. अदानी पोर्ट्स एंड स्पेशल इकोनोमिक जोन लिमिटेड कर दिया था;

और यत: केन्द्र सरकार ने पूर्ववर्ती पैराग्राफ में उल्लिखित तथा इस अधिसूचना के साथ संलग्न का.आ. सं. 1365 (अ) दिनांक 27 मई, 2009; का.आ. सं. 583 (अ) दिनांक 26 मार्च, 2012; का.आ. सं. 1443 (अ) दिनांक 31 मई, 2013; का.आ. सं 3379 (अ) दिनांक 11 दिसंबर, 2015; द्वारा अधिसूचित समस्त विशेष आर्थिक जोनों को प्रशासनिक सुविधा के लिए और विकासकर्ताओं के अधिकारों, दायित्वों और वित्तीय लाभों को प्रभावित किए बिना समेकित करने का निर्णय लिया है;

अत: अब विशेष आर्थिक जोन नियम, 2006 के नियम 8 के साथ पठित विशेष आर्थिक जोन अधिनियम, 2005 (2005 का 28) (जिसे एतद्पश्चात उक्त अधिनियम कहा गया है) की धारा 4 की उप-धारा (1) के द्वितीय परन्तुक द्वारा प्रदत्त शक्तियों का प्रयोग करते हुए और प्रथम पैराग्राफ में उल्लिखित अधिसूचना सं. का.आ. 1365 (अ) दिनांक 27 मई, 2009; का.आ.सं. 583 (अ) दिनांक 26 मार्च, 2012; सं. का.आ. 1443 (अ) दिनांक 31 मई, 2013; का.आ.सं. 3379 (अ) दिनांक 11 दिसंबर, 2015 के अधिक्रमण में, ऐसे अधिक्रमण से पूर्व किए गए कार्यों या किए जाने के लिए विलोपित कार्यों को छोड कर, केन्द्र सरकार इस बात से संतुष्ट होने के बाद उक्त अधिनियम की धारा 3 की उपधारा (8) के अंतर्गत अपेक्षाएं और अन्य संबंधित अपेक्षाएं पूरी हो गई हैं, एतद्वारा प्रथम पैराग्राफ में उल्लिखित अधिसूचनाओं में वर्णित विशेष आर्थिक जोनों के समेकित करती है और निम्नलिखित क्षेत्र को विशेष आर्थिक जोन के रूप में पुन: अधिसूचित करती है जिसमें निम्नलिखित तालिका में उल्लिखित सर्वेक्षण संख्या तथा क्षेत्र शामिल हैं, अर्थात:-

तालिका

अ (बहु उत्पाद)

MINISTRY OF COMMERCE AND INDUSTRY

(Department of Commerce)

NOTIFICATION

New Delhi, the 21st September, 2016

S.O. 3029(E).—WHEREAS, the Central Government had notified/de-notified the Special Economic Zone named M/s. Mundra Port and Special Economic Zone Limited at Mundra in the State of Gujarat under the following notifications of the Government of India in the Ministry of Commerce and Industry (Ministry of Commerce), namely:-

(1) S.O. number 1365 (E) dated 27th May, 2009;

(2) S.O. number 583 (E) dated 26th March, 2012;

(3) S.O. number 1443 (E) dated 31st May, 2013;

(4) S.O. number 3379 (E) dated 11th December, 2015;

AND, WHEREAS, the name of the SEZ was changed from M/s. Mundra Port and Special Economic Zone Limited (MPSEZL) to M/s. Adani Ports and Special Economic Zone Limited vide approval letter No. F.1/15/2011-SEZ dated 27th March, 2012;

AND, WHEREAS, the Central Government has decided to consolidate all the Special Economic Zones notified vide S.O. number 1365 (E) dated 27th May, 2009; S.O. number 583 (E) dated 26th March, 2012; S.O. number 1443 (E) dated 31st May, 2013; S.O. number 3379 (E) dated 11th December, 2015 referred in preceding paragraph for administrative convenience and without affecting rights obligations and fiscal benefits of the Developer(s);

NOW, THEREFORE, the Central Government, in exercise of the powers conferred by second proviso to sub-section (1) of section 4 of the Special Economic Zones Act, 2005 (28 of 2005) (hereinafter referred to as the said Act, read with rule 8 of the Special Economic Zones Rules, 2006, and in supersession of the notification number S.O. number 1365 (E) dated 27th May, 2009; S.O. number 583 (E) dated 26th March, 2012; S.O. number 1443 (E) dated 31st May, 2013; S.O. number 3379 (E) dated 11th December, 2015, referred to the first paragraph, except as respects things done or omitted to be done for such supersession, the Central Government on being satisfied that the requirements under sub-section (8) of section 3 of the said Act and other related requirements are fulfilled, hereby consolidates the Special Economic Zones mentioned in the notifications referred to the first paragraph, and re-notifies following areas comprising following survey numbers given in the table below as a Special Economic Zone, namely:

Adani Enterprises Limited
Adani House
Mithakhali Six Road, Navrangpura,
Ahmedabad -380009
Gujarat, India

Subject – Land requirement for proposed Copper Smelter project.
Reference: Your request for about 650 acres of land for the proposed Copper Smelter project.

Dear Sir/s,

With above reference, we would like to convey that Adani Ports and Special Economic Zone Ltd. (APSEZL) has planned SEZ over land near Siracha and Navinal villages. . This land include part of land has been applied by APSEZL for industrial/infrastructure purpose.

The proposal for subject land (part) is under consideration by the state government. Once necessary clearance has been obtained, approximately 600 to 700 acres of land depending on final requirement of proposed Copper Smelter project after detail engineering will be allotted to AEL for the proposed Copper Smelter project.

Thanking You,

Yours faithfully,
For, Adani Ports and Special Economic Zone Ltd.

Sub: Diversion of 1576.81 ha Reserved Forest Land in favour of Adani Ports and Special Economic Zone Ltd. (APSEZL) for the development of Special Economic Zone (SEZ) and Industrial Park at Village – Siracha, Navinal, Dhrub, Mundra, Baroi, Gorasama, Luni, Bhadreshwar, Tehsil Mundra, under Forest Division and District Kutch, Gujarat (Online Proposal No. FP/GJ/IND/17613/2004):- Reg.

Sir,

I am directed to refer to the APCCF (Land Management) and Nodal Officer, (FCA), Govt. of Gujarat letter No. FCA-1014/10-11/14/S.F-66/F dated 21.01.2016 for seeking prior approval of Central Government under Section-2 of the Forest (Conservation) Act, 1980. The proposal has been examined by the Forest Advisory Committee (FAC) constituted by the Central Government under Section-3 of the aforesaid Act.

2. After careful consideration of the proposal of the State Government of Gujarat and on the basis of the recommendations of the Forest Advisory Committee (FAC), the Central Government hereby agrees to accord *"in-principle"* approval under Section-2 of the Forest (Conservation) Act, 1980 for diversion of 1576.81 ha Reserved Forest Land in favour of Adani Ports and Special Economic Zone Ltd. (APSEZL) for the development of Special Economic Zone (SEZ) and Industrial Park at Village – Siracha, Navinal, Dhrub, Mundra, Baroi, Gorasama, Luni, Bhadreshwar, Tehsil Mundra, under Forest Division and District Kutch, Gujarat, subject to the following conditions:-

(i) Legal status of the diverted forest land shall remain unchanged;

(ii) *The entire forest area being diverted, should not be cleared off the vegetation in one go after diversion. The UA may clear vegetation for the purpose of basic/essential infrastructure to be developed in the SEZ. Thereafter, as and when a specific project / industry is to come up in the SEZ, the corresponding area shall be marked on the ground and cleared off vegetation. Till then the remaining areas shall be maintained as green cover. It shall be ensured that the lease agreement is made within six months of such clearing. A detailed land use for the marked area, on which clearing of vegetation is proposed shall be submitted to the Regional Office of MoEF&CC before start of work on the area, for information. The Regional Office of MoEF&CC shall ensure that the user agency carries out the work which is in conformity with the broad land use submitted by it. It shall be ensured that minimum number of trees are cleared. The user agency shall explore the possibility of trees of 10 cm dia at breast height and above, proposed for felling/clearing are translocated to suitable location within or outside the SEZ in consultation with State Forest department;*

ANNEXURE-V
FOREST CLEARANCE (FC)

(iii) Felling of tress on the forest land being diverted shall be reduced to the bare minimum and the trees should be felled under strict supervision of the State Forest Department;

(iv) *The diverted forest land shall not be proposed to be utilized for Golf Course, Beach Resort, Park or Residential purposes, or any other activity prohibited by FCA 1980, FC Rules and/or guidelines made there under*

(v) *The diverted forest land shall not be used for the construction/expansion of any private Aerodrome. The forest land may be considered, in future on merits, in case of commercial Airport is developed with the approval of DGCA.*

(vi) *The detailed existing land use with maps of all forest land 2008.41 ha (1840ha + 168.41 ha) for which the approval was granted vide letter dated 30.09.2009 and details of complete land use including forest land for the existing private Aerodrome and power plants within the SEZ may be provided for information;*

(vii) *Forest areas proposed within of Mundra survey no. 141/P, Baroi survey no. 207/P, Goversanu survey no. 52/P, Luni survey no. 468/P and Bhadreswar survey no. 733/P are having sea front. 100mt shelter beli/green belt in above villages be included in the Master plan of the SEZ, excluding stretches where use of water front is inevitable;*

(viii) *All the conditions as recommended by the Chief Wildlife Warden shall be complied with the User Agency;*

(ix) *The State Government shall clarify whether any non-forest land situated in and around the SEZ but not forming part of the SEZ at present, can be acquired by/allotted to the APSEZ before Stage-II approval;*

(x) *If 683 ha land of GMB or any other non-forest land is allotted for this SEZ, then the equivalent forest land shall be reduced from the forest land diverted/being diverted for the SEZ;*

(xi) *The State Government and the UA shall make effort to include 122 ha of non-forest land in village Jarapara in the SEZ. Accordingly, it is recommended that 122 ha of forest land in Bhadreswar Block shall be maintained as green belt at the cost of UA;*

(xii) *State government will provide details of lease period, terms and conditions on which the forest land is proposed to be diverted in favour of the Use Agency;*

(xiii) *All other conditions imposed in the approval granted for diversion of 2008.41 ha (1840ha + 168.41 ha) forest land on 30.09.2009 shall be complied;*

(xiv) *Only site-specific activities, permissible under the Rules and guidelines framed under the FC Act, shall be taken up in the forest land to be diverted;*

(xv) *The recommendation of the FAC is subject to the condition that in case of conflicts, the provisions of FC Act, 1980, shall prevail over those of SEZ Act 2005;*

(xvi) *All other conditions/recommendations made by FAC on this proposal in its meeting on 25.01.2018, not in conflict with the recommendation of FAC on 20.09.2018 shall remain unchanged.*

(xvii) *The User agency shall identify suitable land for Compensatory Afforestation over double the forest area being diverted. The land shall be mutated in the name of State Forest Department before the Stage-II approval;*

(xviii) *The User Agency shall deposit in the designated account the estimated amount towards compensatory afforestation to be carrying out by the State Forest Department;*

(xix) The Compensatory Afforestation shall be done over double non-forest land (NFL) i.e *3154 ha* to the forest area proposed to be diverted, as per the recommendation of Government of Gujarat, vide its GR No. FCA-1013/11-10/SF-24/F, dt 12.06.2015. The Compensatory Afforestation shall be done within a period of three years with effect from the date of issue of Stage-II clearance and maintained thereafter in accordance with the approved plan in consultation with the State Forest Department at the cost of the User Agency. CA at rate of 1000 saplings per hectares shall be planted over *3154.00* ha.

1190

ANNEXURE-V
FOREST CLEARANCE (FC)

(31,54,000 plants). If this is not possible to plant these many seedlings in the identified NFL, the balance seedlings will be planted in degraded forest land as per the prescriptions of the Working Plan at the cost of the User agency. In such case CA cost will be revised and duly approved by competent authority and will be deposited online in the Adhoc-CAMPA account of the state concerned;

(xx) The User agency shall identify and mutate in the name of State Forest Department of Government of Gujarat, 3154 ha of suitable non-forest land for CA adjacent to notified Forest for raising Compensatory Afforestation (CA) shall be notified as reserved Forest under Section-4 or Protected Forest under Section-29 of the Indian Forest Act, 1927 or under the relevant Section(s) of the local Forest Act. The Nodal officer must report compliance within a period of 6 month from the date of grant of final approval and send a copy of the notification declaring the non-forest land under Section 4 or Section 29 of the Indian Forest Act, 1927, or under the relevant section of the local Forest Act as the case may be, to this Ministry for information and record;

(xxi) The State Government shall submit a certificate, that site for CA is suitable and free from all encroachments and other encumbrances, under the signature not below the rank of Nodal Officer (FCA) in the State Government;

(xxii) The land identified for the purpose of CA shall be clearly depicted on a Survey of India toposheet of 1:50,000 scale;

(xxiii) *The Compensatory Afforestation land shall be surveyed at the cost of User Agency and the User Agency shall erect pillars and barbed wire fencing or trench under the consultation of CCF, Kutch Circle;*

(xxiv) The User Agency shall deposit the cost of raising and maintaining the compensatory afforestation at the current wage rate in the account of Adhoc-CAMPA of the state concerned through online e-portal only. The scheme may include appropriate provision for anticipated cost increase for works scheduled for subsequent years;

(xxv) The User Agency shall provide additionally 25% of the CA cost towards Soil and Moisture Conservation measures in the proposed CA area as per site requirement and the said amount shall be deposit in the account of Adhoc-CAMPA of the state concerned through online e-portal only;

(xxvi) The User Agency shall deposit, the Net Present Value (NPV) of the forest land being diverted under this proposal, as per the orders of the Hon'ble Supreme Court of India dated 28.03.2008, 24.04.2008 and 09.05.2008 in Writ Petition (Civil) No. 202/1995 and the guidelines issued by this Ministry vide its letter No. 5-3/2007-FC dated 05.02.2009. The requisite funds shall be deposited in the account of Adhoc-CAMPA of the state concerned through online e-portal only;

(xxvii) At the time of payment on the Net Present Value (NPV) at the then prevailing rate, the User Agency shall furnish an undertaking to pay the additional amount of NPV, if so determined, as per the final decision of the Hon'ble Supreme Court of India;

(xxviii) The user agency should ensure that the compensatory levies (CA cost, NPV etc.) are deposited through challan generated online on web portal and deposited in appropriate bank online only. Amount deposited through other modes will not be accepted as compliance of Stage-I clearance;

1191

ANNEXURE-V
FOREST CLEARANCE (FC)

(xxix) The forest clearance will be for a period co-terminus with the lease period specified in the lease agreement. The State Government will submit the lease agreement documents specified in the lease agreement;

(xxx) The User agency shall obtain the Environment Clearance as per the provisions of the Environment (Protection) Act, 1986, if required;

(xxxi) *Complete compliance of CRZ regulations shall be ensured;*

(xxxii) Layout plan of the proposal shall not be changed without the prior approval of the Central Government;

(xxxiii) The User Agency will abide by the applicable recommendations of the State Government including State Forest/Wildlife Departments;

(xxxiv) State Government shall complete settlement of rights, in terms of the Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006, if any, on the forest land to be diverted and submit the documentary evidence as prescribed by this Ministry in its letter No. 11-9/1998-FC (pt.) dated 03.08.2009 read with 05.07.2013 in support thereof;

(xxxv) The user agency shall provide alternate fuels (LPG) to the labourers and the staff working at the site so as to avoid any damage and pressure on the nearby forest areas;

(xxxvi) Boundary of the forest land proposed to be diverted shall be demarcated on ground at the project cost, by erecting four feet high reinforced cement concrete pillars, each inscribed with its serial number, forward and back bearing, distance from pillar to pillar and GPS co-ordinates;

(xxxvii) Any other condition that the concerned Regional Office of this Ministry may stipulate, from time to time, in the interest of conservation, protection and development of forests & wildlife;

(xxxviii) The user agency shall submit the annual self-compliance report in respect of the above conditions to the State Government, concerned Regional Office and this Ministry by the end of March of every year regularly; and

(xxxix) The user agency and the State Government shall ensure compliance to provisions of the all Acts, Rules, Regulations, Guidelines, relevant Hon'ble Court Order (s) and National Green Tribunal (NGT) Order(s), if any, pertaining to this project for the time being in force, as applicable to the project.

3. After receipt of the report on compliance to the conditions stipulated in the paragraph-2 above, from the State Government of Gujarat, Final/Stage-II approval for diversion of the proposed forest land under Section-2 of the Forest (Conservation) Act, 1980 will be issued by this Ministry. Diversion of the proposed forest land to the user agency shall not be effected by the State Government of Gujarat, till Final/Stage-II approval is issued by this Ministry.

Yours faithfully,

1.0 INTRODUCTION

The lower part of the atmosphere, called Atmospheric Boundary Layer (ABL), around us is the domain of life and all human activities. As such emissions and dispersion of pollutants are confined within it. The relative dominance between the two decides the quality of air that we breathe. The continuing Increase of urbanization and industrialization is loading emissions beyond dispersion capabilities of the atmosphere and thereby deteriorating the air quality. Therefore, it is essential to maintain air quality for healthier living. In this context, it is important to understand that pollution loading (emissions) is man made while dispersion of pollutants (ventilation) is governed by naturally occurring atmospheric processes which are not in our control. In fact, the Mother Nature has gifted us with meteorological mechanisms which generate atmospheric processes which, in turn, act as natural means for dispersion of pollutants. These processes provide ventilation to the emissions and natural maintenance of air quality for healthy living. Therefore, unless atmospheric ventilation capability or the pollutants carrying capacity at any site supports the increasing load of emissions, the air quality will go from bad to worse with the growth of industry in that region.

However, the economic interests of the country encourage both the growth of industry etc and the healthy environment. Therefore, In order to strike a balance between the two (industrliasation and air quality management), it is essential to understand and study the working mechanism of atmospheric dispersion processes and use the knowledge to plan strategies of quality management. In this context, interaction of incoming solar radiation and the earth provides basic driving force to generate meteorological mechanisms which control atmospheric stability and thereby act natural means of ventilation for pollutants.

The processes such as radiational cooling of ground after sunset lead to stable ABL conditions, characterized by ground based temperature inversion, and lead to trapping / or accumulation of pollutant. On the other hand processes favoring unstable ABL conditions such as solar heating of the ground after sunrise or strong surface winds provide natural dispersion or ventilation of the pollutants. These processes (stable and unstable ABL) are known to occur alternatively on diurnal scale in accordance with the occurrence of day and night after sunrise and sunset. Thus, the accumulation of pollutants during the night time stable ABL is taken care of in a natural way by the atmospheric ventilation resulting from thermal buoyancy of air due to solar heating of ground during the following day. Pollution problems emerge when the accumulation dominates over the ventilation factor. Such conditions do occur when the local or synoptic weather conditions such as cold winter, dense fog etc. support persistence of inversions for longer periods. Furthermore, as these processes(stable or inversion and unstable ABL) are manifestations of solar heating and nocturnal cooling of the ground, the characteristics of these processes are site specific and show characteristic diurnal and seasonal variations depending upon the underlying topographical features and prevailing local and synoptic weather conditions. Thus, for an effective environment management, it is essential to have an account of said site specific air pollution meteorological aspects for EIA examination and regulation of

pollution concerned activities in accordance with the ventilation or cleaning capacity of the atmosphere in a natural way.

In pursuit of the same, carrying out studies for Environment Impact Assessment (EIA) in respect of setting up new industries, expansion of existing industries, site selection for industrial zone etc. is recommended by the environment protection agencies world wide. In view of the growing industrialization etc., strict environmental laws have been enforced for protection of the environment. In several cases it is now mandatory to seek environmental clearance for specific industries, from the official agencies such as Central / State Pollution Control Boards.

When it comes to undertaking EIA, site specific local study of air pollution meteorological parameters and the characteristics of atmospheric processes/ stability (inversion /mixing height) which govern air quality form vital input parameters of consideration in dispersion modeling for EIA. These parameters are indicators of prevailing ABL stability. The inversion/mixing height practically define the vertical height limit for accumulation and mixing of pollutants. As such it is popularly known as atmospheric inversion/mixing height of pollutants in air pollution meteorological terms.

These needed input parameters for dispersion modeling, are conventionally derived indirectly through radio-sonde temperature profiles pertaining to nearby IMD station and are not the true representations of the site under consideration. With the emergence of sodar technology, it is now possible to have on site real time data of inversion/mixing height needed for EIA.

Although there are several remote sensing and in-situ conventional techniques, with relative merits and demerits which are used to study inversion/mixing height. However, Sodar is considered as the proven meritorious and economical choice, worldwide accepted and recommended by the environment protection agencies (EPA) , including CPCB in India, as air quality meteorological tool to provide site specific continuous data in real time.

Furthermore, longer period Sodar observations have found potential application in air pollution meteorology. It makes possible to define meteorological conditions (ground based elevated inversion layer) responsible for pollution accumulation near the ground. This is a knowledge which is very useful in interpretation of pollution measurement data and particularly so in recognizing the responsibility for pollution episodes (growing emission or meteorology).

In view of above considerations, the CPCB guide lines for air quality dispersion modeling recommended the use of site specific Sodar derived mixing / inversion height data for EIA. In pursuit of the same, Sodar studies of inversion / mixing height have been undertaken by **Vimta Labs Ltd.** for the project site at located at Mundra, District Kutch, Gujarat (India). Study is undertaken for air quality modeling for the proposed Adani Copper Project.

The continuous Sodar data recorded during the period 24th November 2016 to 23rd December 2016 has been utilized to evaluate hourly averaged mixing /inversion height and presented in this report.

2.0 SCOPE OR PRESENT WORK

The present work is focused at site specific Sodar study of the hourly averaged inversion level and mixing height characteristics at Mundra, District Kutch, Gujarat (India).

The work includes site noise survey, site selection for sodar installation, sodar installation, operation, data collection and data processing for inversion studies. Accordingly, Sodar study based on continuous observations pertaining to the study period (24th November 2016 to 23rd December 2016) has been carried out. The observations are analyzed to deliver required information on hourly averaged inversion level / mixing height at Mundra, District Kutch, Gujarat (India).

3.0 SITE LOCATION

The Sodar observational site was located at Mundra, District Kutch, Gujarat (India) (22°49'22"N & 69°33'10"E) is shown in **Figure-1**.

Kutch is virtually an island, as it is surrounded by the Arabian Sea in the west and the Gulf of Kutch in south. The Kutch peninsula is an example of active fold and thrust tectonism. In Central Kutch there are four major East-West hill ranges characterized by fault propagation folds with steeply dipping northern limbs and gently dipping southern limbs. From the gradual increasing dimension of the linear chain of hillocks towards the West along the Kutch mainland fault and the epicenter of the earthquake of 2001 lying at the Eastern extreme of Kutch mainland fault.

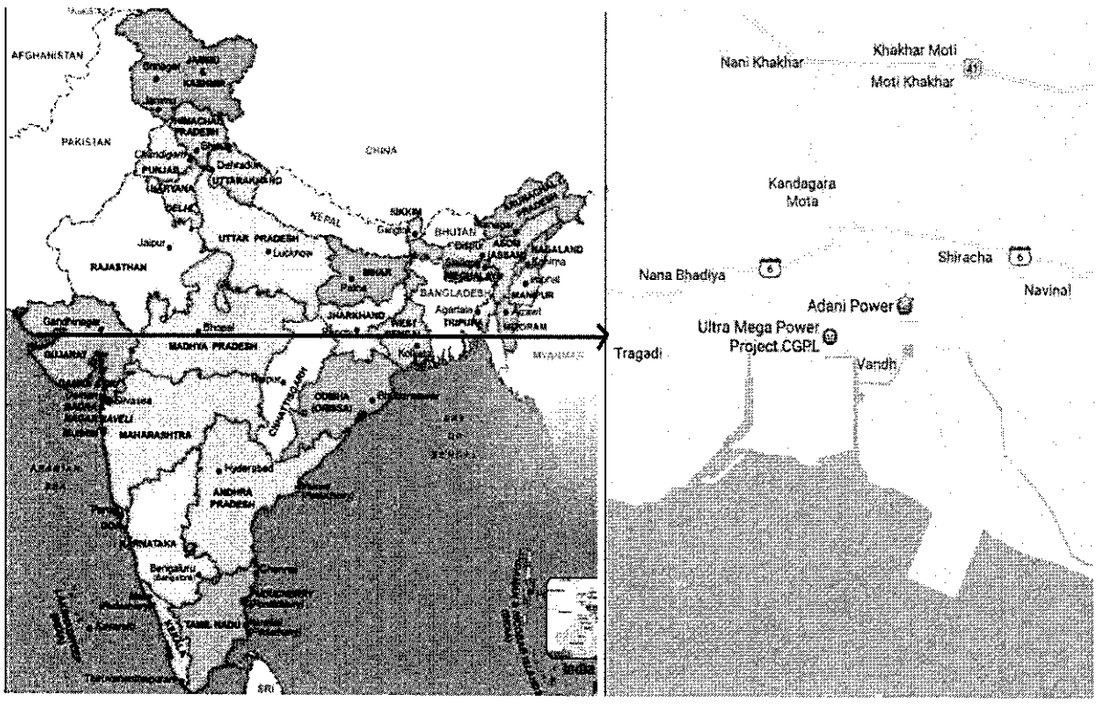

FIGURE-1
MAP SHOWING LOCATION OF SODAR SITE AT MUNDRA, DISTRICT KUTCH, GUJARAT

4.0 SIGNIFICANCE OF SITE SPECIFIC MIXING HEIGHT

The most important significance of mixing height is that it is a single parameter that describes the combined or the integrated effect of several meteorological parameters, which govern the dispersion capabilities of the atmosphere. It defines the ventilation coefficient or the dimensions of the maximum room size offered by nature through interaction or energy exchange between the prevailing meteorological conditions and the under lying topographical features for a particular given site. It practically limits the vertical height up to which pollutants released near the ground can reach or get mixed up along with vertical air currents caused by the turbulence process generated due to free or forced thermal convection. Thus, for given horizontal wind speed, mixing height is an indicator of the mixing volume available for accumulation of pollutants or pollution concentration or in other words mixing height is an indicator of the air quality. Since mixing height is governed by prevailing meteorological conditions, variation in any one of the meteorological parameters such as incoming solar energy due to cloud cover or declination of Sun during course of the day, wind speed, humidity, rain fall etc., causes change in the horizontal or vertical dimension of mixing room size and thereby concentration of pollutants present in the available mixing volume. Therefore, for a given site, mixing height exhibits a typical pattern of diurnal variation trend in accordance with solar heating of the ground starting from sunrise to sun set during the course of the day. Accordingly, under normal clear weather conditions at any site, the maximum mixing height or the best dispersion condition during the day is available around noon when the heat flux near the surface of earth is maximum. Since in actual conditions, synoptic weather conditions such as rain, fog, snow fall, frontal system, etc do modify the local prevailing meteorological condition and accordingly induce short term or long term changes in the normal mixing height variation trends. Thus any meaningful real time dispersion model for now casting or forecasting of air quality calls for real time site specific mixing / inversion height.

It may be pointed out that mixing height is the net result of warming of the earth surface and thus it incorporates in itself the effect of prevailing meteorological conditions and underlying topographical features. Therefore, the effects of sunshine, cloud cover, wind, earth's surface conditions, albedo etc., are embedded in the site specific mixing / inversion height.

4.1 Critical Study Period - Winter (why?)

Mixing / inversion height follows diurnal and seasonal changes related to various cycles of meteorological parameters. Therefore, study for air pollution climatology, for EIA, calls for continuous monitoring of mixing height on round the cloak basis. However, in view of the time constraints involved in prior EIA for setting up an industry, a quick assessment can be taken up via studying the worst scenario period. In this context, winter period is considered as the worst and critical period of the year. During winter, the ground temperature is minimum due to the lowest solar inclination and the duration of sunshine is also the least. Frequently, persistence of inversion is observed for days in succession. Under such situations, mixing height during the day gets significantly curtailed and thereby it offers poor or the worst natural dispersion conditions. Therefore, an effective and rapid EIA

calls for considerations of critical winter period study of mixing / inversion height that ensures satisfactory scenario for the rest of seasonal periods. Thus, winter period is considered as the critical period for studies of air pollution meteorology. However, for comprehensive EIA, continuous studies for a year long period covering all the four seasons are desirable.

In the other situation, it is important to note that since mixing height is associated with ground temperature, it is maximum in local summer. It offers the best dilution to all the pollutants emitted in the atmosphere and the atmospheric carrying capacities are much higher during hot summer than in any other period of the year. However, in local winter, as earth receives solar energy for a limited period and that too at an inclination, the strength of vertical currents is the lowest. Moreover, the radiative cooling of the earth's surface during night is also stronger, which in turn leads to the formation of stronger surface based inversions. Such circumstances result in the poor dispersion conditions and reduced mixing height which may lead to air pollution meteorological hazards, particularly during persistence of dense fog. Thus winter offers worst scenario to study air pollution meteorology with reference to EIA. It is extremely important that both the stability classes and the mixing height are determined accurately for the purpose of assessing the air-pollution dispersion in the atmosphere.

4.2 Sodar Merits for Studying Inversion / Mixing Height

As compared to other conventional techniques Sodar enjoys the credit of useful economical choice with merits of providing site specific continuous data in real time. In fact, the essential progress in ABL research has been brought about by Sodar. It has made possible to define (visualize) meteorological conditions (ground-based inversion layer plus low wind speed) responsible for pollution accumulation near the ground. This knowledge is useful in interpretation of pollution data, recognition of the responsibility for pollution episodes (growing emission or meteorology?) and in pollution forecast. With growing progress in acceptability of Sodar in the air-pollution meteorology, it is becoming an essential integral component of all atmospheric measurements programs all over the world. Sodar systems are progressively used for quantitative and qualitative profile information on the atmospheric structure parameters. The Sodar data allows for deeper investigation and understanding of air pollution characteristics, especially during the transitional periods of the day. The results, reported from the world over, indicate that there is good correlation between the pollutants concentrations and the mixing height especially during pollution episode days. Furthermore, it is indicated that there is a strong dependence between the rate of increase of the mixing height and the concentration levels in the early morning hours as well as during the Atmospheric Boundary Layer (ABL) collapse in the afternoon. These results are of importance for urban air pollution modeling, which has recently attracted the attention of many research groups.

5.0 SODAR TECHNOLOGY

5.1 Operational Principle

Sodar is exactly similar to radar, except that instead of radio waves employed in radar, it employs sound / acoustic waves to interrogate the medium. Therefore it is named SODAR (Sound Detection & Ranging) or AcDAR (Acoustic Detection & Ranging). In this technique, a powerful packet of sound waves (sound burst) is transmitted vertically up into the atmosphere. These sound waves get scattered in all the directions by the temperature and wind fluctuations occurring along the path of propagation in the atmosphere. Theoretical considerations (not discussed here) reveal that the back-scattered energy contains information about thermal turbulence. Therefore, the backscattered component is picked up to derive information about prevailing turbulence or the thermal structure of the atmosphere as shown in Figure.2. A back scattering or monostatic Sodar (with co-located transmitter and receiver) is used to capture back-scattered acoustic signals. The received signal is suitably processed to get desired online information about prevailing meteorological phenomenon and online / offline information about the atmospheric inversion / mixing height levels.

The basic data format is the facsimile representation of dynamics of ABL thermal structures in real time a facsimile display is a real time 3-Dimensional display of the intensity of the turbulence associated with scattering media at various heights / altitudes. It describes dynamics of the prevailing atmospheric meteorological processes. The atmosphere is scanned after every 6 seconds to get probing range right from surface up to an altitude of 1 km. The data is sampled at a range resolution of 1m and plotted in color intensity mode. The different colors indicate the intensity of the scattering medium (turbulence).The echogram structural details are used to derive information about inversion / mixing height. They also deliver information about the onset / dissipation time of the occurrence of atmospheric phenomenon in addition to the duration and height at which it originated. The data can be utilized in variety of applications.

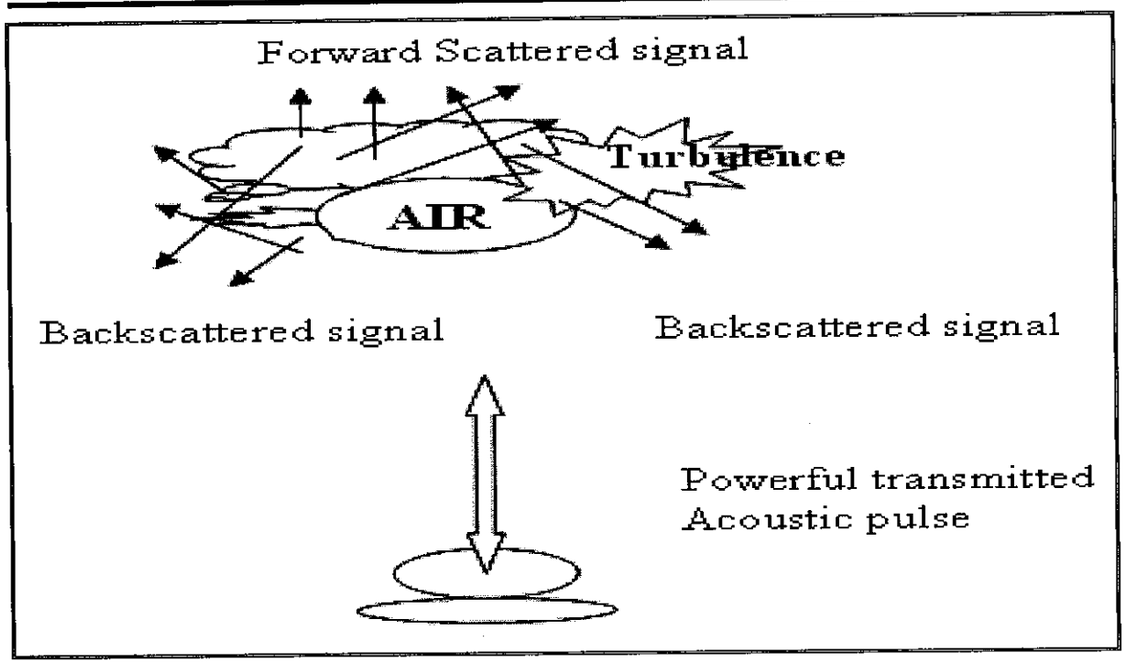

FIGURE-2
SCATTERING OF SOUND FROM AIR IN-HOMOGENEITIES

In a Sodar, the back -scattered part is picked up and amplified to present facsimile pictures of the atmosphere.

5.2 System Description

The block diagram of the mono-static Sodar showing the operation logics and sub-system assemblies is shown in **Figure-3**.

The basic system consists of the following three parts:

i) Antenna assembly and acoustic shield: Its purpose is to direct the energy into the atmosphere and receive back the scattered signals.
ii) The system electronics: Its role is to produce a powerful acoustical pulse for transmission and conditioning of the received signals for further processing to produce a facsimile display or Sodar echograms of ABL thermal structures. An IBM compatible PC is part of system electronics which performs several control functions for the entire system operation and data handling.
iii) Operational software: Its role is to control various operations automatically and through user-friendly software, present data in a user-friendly format.

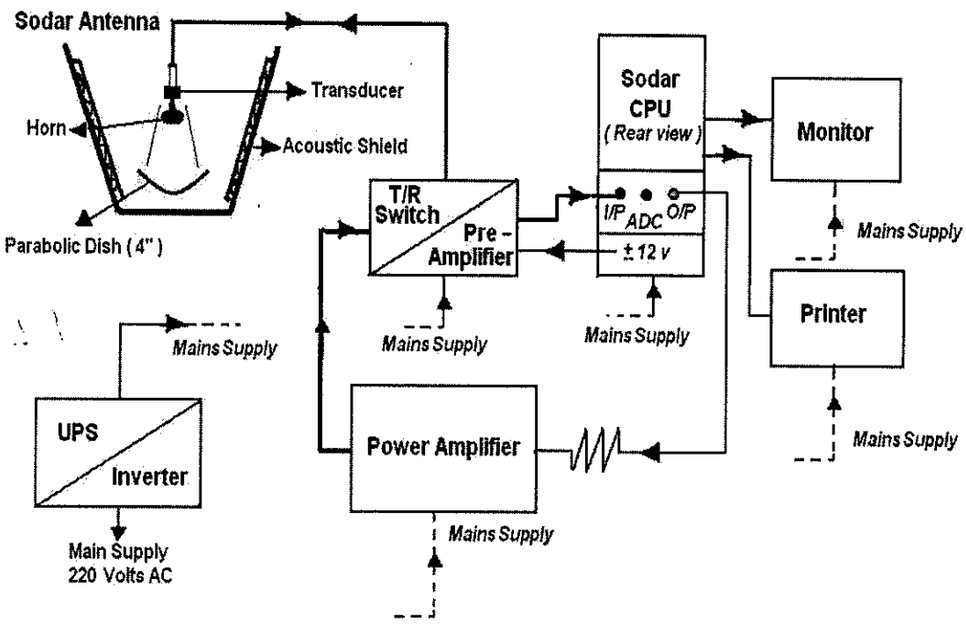

FIGURE-3
BLOCK DIAGRAM OF SODAR

5.3 System Operation

Once the system is switched on, the actual acoustic sounder operation begins at the PC level. Several input operational parameters are selected depending upon the desired application. Particularly, the selectable dead time and the pulse repetition time (between two pulses) are entered through the software. With start of data acquisition, first, the data file name is created in which the received signal will be stored. The PC also provides the burst of desired frequency and duration for transmission during acoustic sounder operation. This output from the computer system is suitably amplified by a power - amplifier and is transmitted through an audio transducer The transducer fitted at the focus of 4 feet parabolic dish (Figure 4), transmits as well as receives the scattered signals. The received signals are suitably conditioned and amplified by a pre-amplifier which is kept very close to the antenna. These signals are further filtered through a band pass filter to suppress the environmental noise. These analog signals are digitized by an ADC card and the digital signal is then processed, recorded and saved / stored in a file. The PC gives the time-height record of the atmospheric structure moving through the antenna beam. The signal amplitude is depicted as a color picture on the video screen. Integration of data scan by scan produces a real time facsimile display on the monitoring screen of PC. It can be printed using any standard printer.

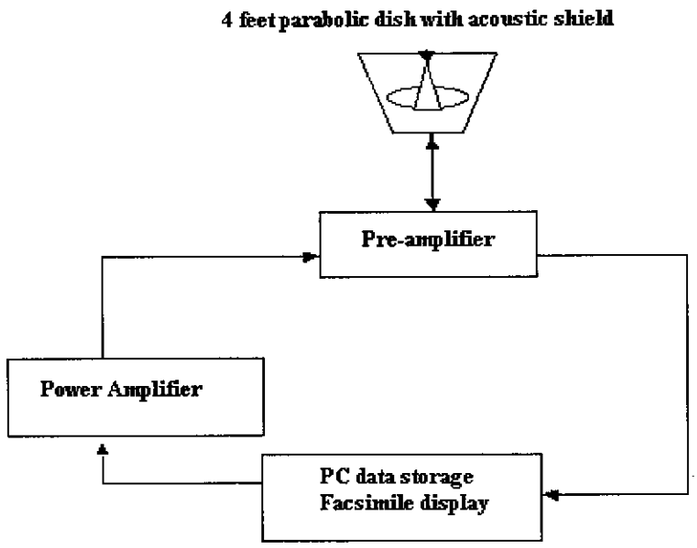

FIGURE-4

BASIC SYSTEM ASSEMBLIES FOR A SODAR

5.4 Technical Specification

The technical specifications of the Sodar system used are listed in **Table-1.**

TABLE-1
SODAR SPECIFICATIONS

Transmit power	Pulsed 100 W
Transmit antenna	4 feet parabolic dish enclosed in an acoustic shield
Transmit frequency	2000 Hz sine wave
Transmit duration	100 m sec
Receiver bandwidth	± 50 Hz
Range resolution	17 m
Probing Range	1 km
Signal display	Color facsimile
Signal printing	Standard Inkjet/ laser Printer
System operation	Nonstop
System software	User-friendly

6.0 DATA FORMAT, NOMENCLATURE & DETERMINATION OF INVERSION / MIXING HEIGHT

The basic data format is the facsimile chart giving three dimensional display of the intensity of atmospheric echoes from various heights in real time. Basically, data comprises of two types of echoes: thermal echoes and shear echoes. Thermal echoes indicating ***thermal convection*** are associated with solar heating of the ground during the day time and the shear echoes representing

stable ABL or ***inversion*** associated with radiational cooling of the ground during night time.

6.1 Thermal Echoes

In the case of thermal convection, during sunny periods (around noon hours), the earth's surface is most heated due to direct solar radiation falling on the earth. With the result, the air close to earth becomes much warmer than the air aloft and thus it rises due to buoyancy. When this parcel of air rises, it expands and interacts with the background air all around its periphery. Thus, as it moves up, it becomes smaller and smaller in its original diameter and on Sodar, a cone shape structure with broad base and tapered column is formed. This typical structure, shown in Fig. 5, is commonly known as ***thermal plumes.*** The thermal plumes induce convective air currents which cause vertical mixing and all the pollutants near the surface of earth are carried up by these vertical currents in the air. Thus, the pollution density on the surface of earth gets reduced. Such thermals can be easily identified through pattern recognition and represent unstable atmosphere. Under thermal convection, the surface air temperature is much higher than the temperature of air aloft up to certain height, later on there is adiabatic fall of temperature.

FIGURE-5
THERMAL PLUMES (ON SODAR) REPRESENTING FREE CONVECTION IN ABL

6.2 Shear Echoes

In the evening, close to sun set, there is no heating of the surface of earth and earth losses its heat energy due to the radiative cooling. Thus a stage reaches when the temperature of air becomes homogenous. The ABL comes in near neutral state and it shows no signature or blank trace on Sodar facsimile chart, showing neutral stability or absence of turbulence in ABL.

With the progress of time after sunset, earth starts losing heat and becomes cooler than the air above it. This results in increase of temperature with height and temperature profile is inverse of what it was previously during solar heating of the ground. As a result, the air-mass close to the surface of earth cools off rapidly. This cool air being heavier than the over lying warmer air can not rise up and it rests, as stable air mass, on the ground surface. This part of the atmospheric layer which is warmer than underlying earth surface but cooler than over lying air mass is known as inversion layer within which the

temperature increases with height or the temperature profile is inverse of day time temperature profile. Hence the name temperature inversion is acquired. On Sodar record it looks as thick band of layer with flat or spiky top and is called *ground based inversion* is shown in **Figure-6**.

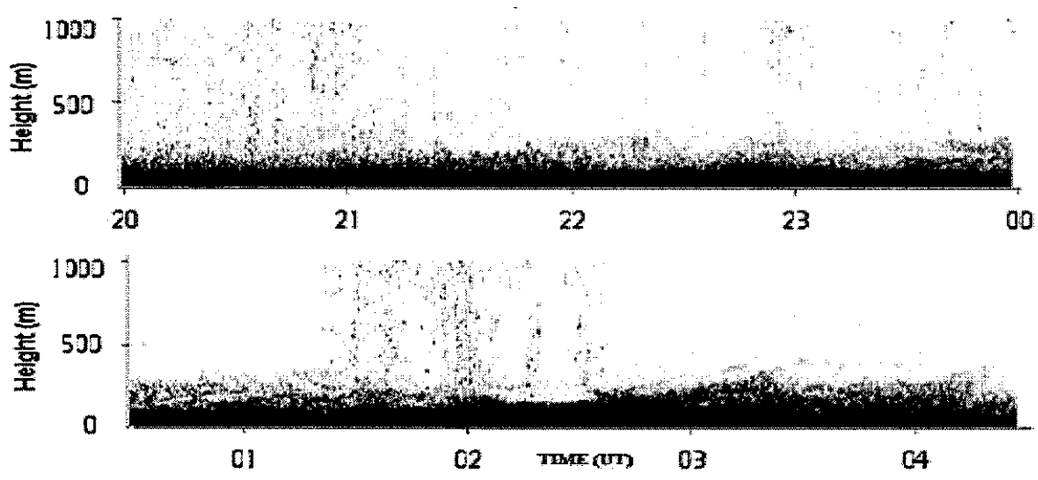

FIGURE-6
SODAR ECHOGRAM OF SURFACE BASED INVERSION DYNAMICS

At times elevated layers in addition to ground based inversion are formed due to wind shear, advection of warm air over the colder region, subsidence associated with frontal passage etc. These inversions lead to suppression of the vertical mixing and thereby leading to the enhancement of pollution below the inversion layer.

6.3 Determination of Inversion / Mixing Height

Sodar structural details of inversion are used to derive online information on nocturnal inversion level of stable ABL and mixing depth of thermal convective unstable ABL during day time solar heating of the ground. In case of Stable ABL, top of the ground based inversion layer gives a fairly good estimate of the inversion level for practical applications in dispersion modeling. This information about inversion level is available with every scan of 6 seconds during Sodar operation. However, hourly averaged value of inversion level, which is indeed required for practical application, can be read directly online from the Sodar facsimile records or can be computed (Offline) through software capabilities using stored digital data files.

In case of thermally convective unstable ABL, mixing height is determined through empirical relationship (Singal et. al., 1982) which is based on Sodar recorded height of the thermal plumes. The relationship: [mixing height = 4.25 x (thermal plume height) +95]: is the result of the R&D efforts of National Physical Laboratory, New Delhi-110012. It may be mentioned that the said

relationship is the out come of detailed year long correlation studies of simultaneous observations made by Sodar and conventional radio sonde at IMD observatory located at Aya Nagar, Delhi. Since Sodar observations are manifestation of the net upward turbulent heat flux taking into account the effect of topographical features, the relationship is said to be embedded with topographical influence on mixing height and is useful for application for different sites. In pursuit of the same the relationship has been re-verified to hold good even for hilly terrain (Singal, 1998). Therefore, the said relationship has been used in the present work to compute mixing height for unstable ABL during the day time solar heating periods.

6.4 Site Survey and Sodar Installation Criterion

Acoustic Sounder (Sodar) installation needs a site survey and noise spectrum study at site before installation. The noise sources near the operational site would certainly affect Sodar performance, as extremely weak signals scattered from higher altitudes may get marked by the noise. Therefore, on site survey noise spectrum is essential before installation to decide the Sodar operational frequency. It needs to ensure that there is no strong noise at the operational frequency. If required, the operational frequency can be changed to avoid the background noise at a particular frequency. In unavoidable circumstances, specially designed acoustic shield may also be used to protect the antenna from surrounding noise.

7.0 MAINTENANCE OF EQUIPMENT

The equipment is basically computer controlled and as such runs trouble free. Once put in operation, system runs automatically and takes care of data saving on power failures and restarts automatically when the power is resumed. As such no special maintenance is required unless there are computer related problems such as frequent power failure, power back up, computer hang up etc. The virus through internet may pose problems. Therefore, use of internet on Sodar PC is not recommended unless essential. One needs to check at times that system is sounding or listen to the sound burst that ensures that system operation is in order. However, certain safety measure points would further ensure proper functioning of the equipment. The points are:

i) Keep antenna clean and wash it with simple water (if required).
ii) Keep computer virus free, as viruses can seriously degrade system performance.
iii) Switch off equipment during rain as no useful data is obtained due to heavy rain noise.
iv) Maintain proper ground or earth in the supply line. If ground is improper, it will allow system to pick up spurious noise and system performance is seriously affected. This part is normally taken care off during installation.

8.0 SODAR APPLICATIONS

Sodar is useful meteorological tool for practical applications in communication, aviation and air pollution. Sodar is being used world wide for low level wind

shear detection at the air ports and as an aid to provide useful air pollution meteorological data needed for dispersion modeling in EIA. Besides Sodar data can be used in variety of ways depending upon the required application such as boundary layer research, analysis of air quality measurements, fixation of stack height, industrial sitting, now-casting / short range forecasting of environmental pollution hazards, EIA etc.

Some of the data application areas, wherein Sodar has proven excellence, are the following:

i) Mixing height characterization.
ii) Ground / elevated Inversions levels and their dynamics.
iii) Gravity waves characterization.
iv) Determination of ABL stability class.
v) Fronts dynamics.
vi) Subsidence characterization.
vii) Sea and land breeze circulation.
viii) Thermal Internal Boundary Layer (TIBL) characterization for coastal pollution management.

9.0 Results and Discussion

From stability class A to F. The occurrence of strong stability condition (stability F) is seen during the post midnight to early morning hours (00-04 hours) during the present study. This indicates inversions gradients to be fairly strong during this period. The various characteristic thermal structures of ABL such as thermal plumes, ground based inversion, elevated inversions, eroding inversion which are normally observed at any site have been also observed at the present site of Mundra, District Kutch, Gujarat (India) is shown in **Figure-7.**

Visual examination of Sodar Echogram details has revealed the occurrence of a widely varying simple to complex meteorological condition with respect to air quality. Inversion stratification and spiky inversion layer associated to wind shear is seen on several days during the observational days. The free thermally convective ABL is seen to be largely influenced by the prevailing wind/ incursion of sea breeze during day time. As a result diffused thermal plume structure is observed on Sodar echograms.

The data pertaining to the observation period (24th November 2016 to 23rd December 2016) has been analyzed for hourly averaged inversion/mixing height values in the interest of air quality dispersion modeling for the site under consideration. The data has been analyzed to know minimum, maximum and average value of stable/unstable ABL.

The analysis of echograms has revealed that onset of inversion formation begins around 1700 hours in the evening during the winter period. This time varies with season and prevailing weather conditions. It marks change of atmospheric stability from unstable to stable ABL.

The break of inversion (fumigation) is seen to start at around 0800 hours in the morning and lasts for about couple of hours. In general, the complete changeover of stability, from stable to unstable ABL takes place by 0930 hours. The fumigation period varies in accordance with prevailing weather conditions and season. The situations of prolonged fumigation are adverse conditions for air pollution dispersion point of view. Such situations are not seen during the present study period. The study of onset and break up of inversion timings reveals availability of a good atmospheric ventilation period of about 7.5 hours (0930-1700 hours) during winter at Mundra. Further, The ABL stability is seen to vary.

The hourly averaged values of nocturnal inversion level and the day time mixing height have been computed based on the observed Sodar structural details on the facsimile records. The day wise averaged hourly data for each observational day is given in the data Table 2. The data pertaining to nocturnal stable ABL (inversion level), day time unstable ABL and fumigation periods is highlighted in different colors. The data marked in red color pertains to day time unstable thermally convective mixing height while data marked in black refers to night time stable ABL (inversion level). The fumigation period, representing inversion breakup after sunrise, is indicated through blue color in the data table.

The examination of data in the table shows variability of inversion/ mixing height in different hours on different days. This variability from hour to hour is associated with variations in the local micrometeorological conditions such as prevailing wind speed, wind direction, cloud cover, sunshine, humidity, incursion of mountain wind, land-sea breeze etc. Sudden increase in the inversion level is generally associated with the variation in the vertical component of increase in the wind speed. Vertical wind component induces mechanical mixing in the stable air mass of inversion and thereby increases the height of inversion level. Therefore, high values of inversion level in certain hours are presumed to be associated with higher wind speed or change in some other meteorological parameter causing increase in the vertical transfer of momentum during those hours. At times increased winds due to coastal fronts, particularly in coastal regions, contribute significantly in inducing upward transfer of momentum flux, causing mechanical mixing of air mass in the ground inversion and thereby lead to increase of inversion height.

The inversion build up is known to starts shortly after sun set due to nocturnal cooling of the ground. The inversion height increases in accordance with increased cooling of the ground with passage of time. Under calm and clear sky conditions it (inversion) attains maximum height during the period of maximum cooling (0300-0500 hours) at night. Therefore, at times the data pertaining to 0300-0500 hours can be analyzed to broadly know the variational trends in the maximum of the monthly averaged height of inversion level.

Further, as per EIA dispersion modeling requirements, the entire data has been analyzed to know hourly averaged inversion/mixing height and is presented in tabular form. Besides the observational data pertaining to the stable boundary layer (inversion) and confined well within periods of inversion formation after

sunset and prior to onset of inversion breakup after sunrise (1800 hours to 0600 hours) has been analyzed to know the maximum, minimum, mean and the probable occurrence of inversion height during the observational period.

The overall observational analysis shows that during the observational, period (24 November, 2016 to 23 December, 2016) the ABL is seen to remain stable during the period 1800-0600 hour and unstable ABL is confined to the period between 0900 hours to 1700 hours. The remaining hours are seen to exhibit transitional phases of stable ABL to unstable ABL in the morning (breaking inversion) and reverse unstable to stable ABL (inversion formation) in the evening.

The height of stable ABL (inversion) is seen to vary from a minimum of 68m to a maximum of 347m during the observational period (1800 hours to 0600 hours). However, the monthly average inversion level is seen to be 202±70 m during the entire study period.

Relative distribution of inversion height in **Figure-7** shows the occurrence probability of 18% for the inversion height to be within 100 to 150m and 23% probability for the inversion height to be within 150 to 200m. The probability for higher height gets progressively reduced. The probability of about 10% only is seen for the inversion being more than 300m.

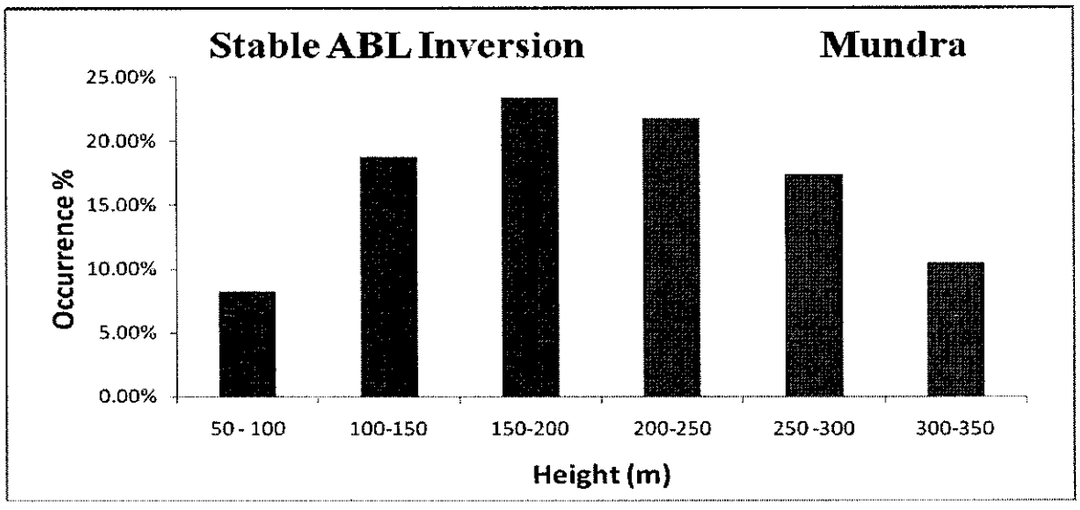

FIGURE-7
RELATIVE OCCURRENCE OF STABLE ABL (INVERSION) HEIGHT AT MUNDRA

The analysis of cumulative occurrence in **Figure-8** shows a probability of 91% for inversion height to be upto 150m, 73% upto 200m, and for 10% of the time it is more than 300m.

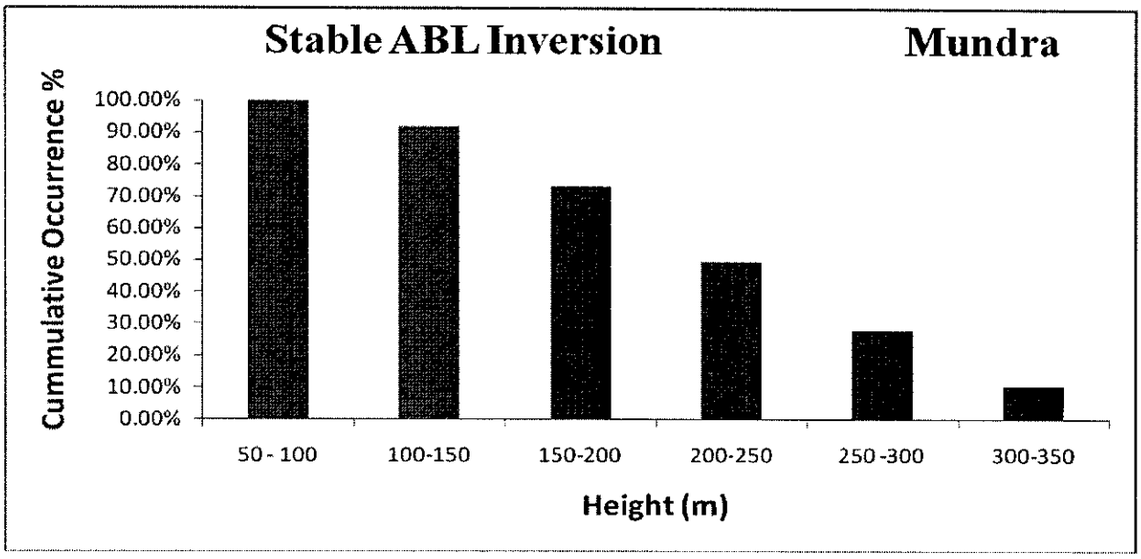

FIGURE-8
CUMULATIVE OCCURRENCE PROBABILITY OF INVERSION HEIGHT AT MUNDRA

Similar analysis of day time unstable ABL shows that the height of unstable ABL (free thermal convection) during course of the day (0900-1700 hours) is seen to vary from a minimum of 509m to maximum of 1198m during the observational period. However, the average mixing height is seen to be 840±198m during the entire study period.

Relative distribution of convective mixing height in **Figure-9** shows a probability of 24% for height to be within 600 to 800m and 37% probability for the mixing height to be within 800 to 1000m. The occurrence for mixing height to be more than 1000m is seen to be about 24%.

The cumulative occurrence probability in Figure-10 shows a probability of 87% for the mixing height to upto 800m and 62% probability for mixing height upto 1000m. The probability for the height to be more than 1200m is seen for about 24% of the observational period.

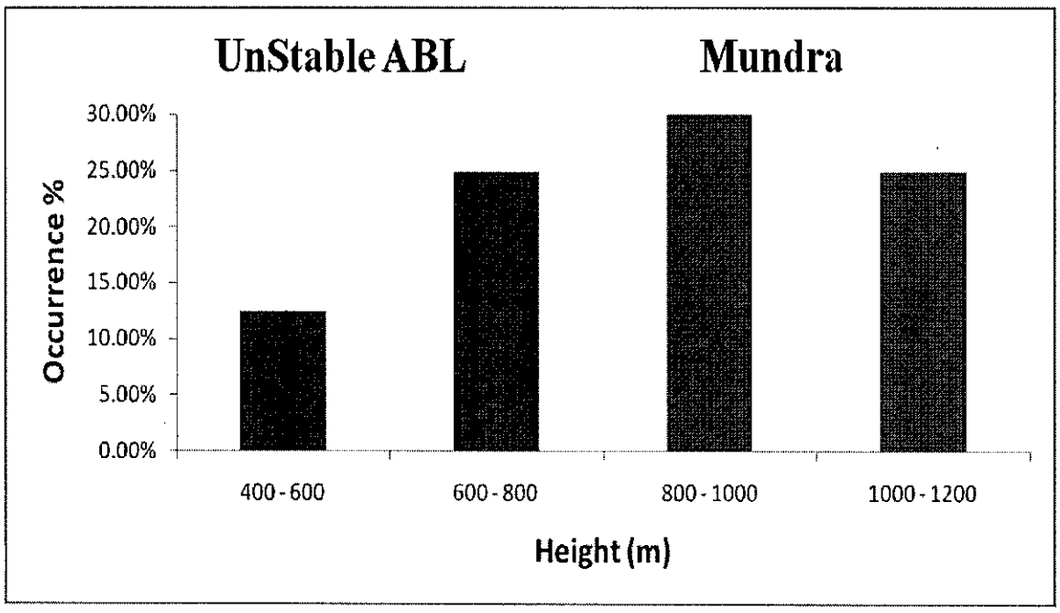

FIGURE-9
RELATIVE OCCURRENCE OF UNSTABLE ABL MIXING HEIGHT (M) AT MUNDRA

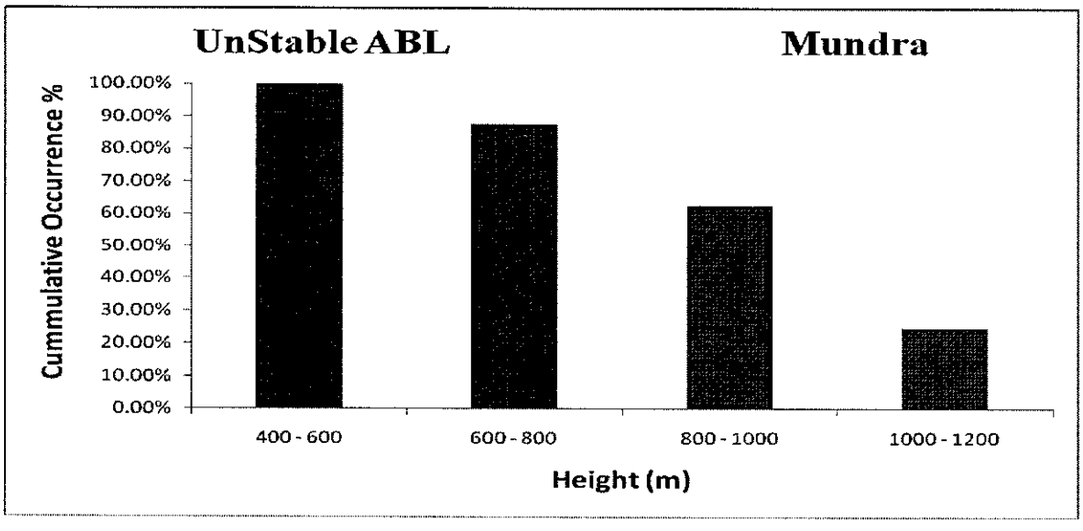

FIGURE-10
CUMULATIVE OCCURRENCE OF UNSTABLE ABL MIXING HEIGHT (M) AT MUNDRA

The results of hourly maximum, minimum and averaged values of inversion/mixing heights pertaining to stable, unstable ABL are summarized below:

TABLE-2
STABLE (INVERSION)/UNSTABLE ABLMIXING HEIGHT (M) DURING WINTER (24 NOVEMBER 2016 – 23 DECEMBER 2016) AT MUNDRA.

ABL	Maximum	Minimum	Average	Standard Deviation
Stable (1800-0600 hours)	347	68	202	±70
Unstable (0900-1700 hours)	1198	509	840	±198

The diurnal variation of ABL mixing height in **Figure-11** further shows that maximum of inversion height is in seen during periods of maximum ground cooling (0300-0500 hours) while maximum of day time maximum mixing height is observed around noon hours (1200-1400 hours) when the ground temperature is also maximum. These observations support the concept of the meteorological considerations that maximum inversion height and mixing heights are observed during periods of maximum cooling and heating of the ground.

Besides fore going analysis, elevated capping inversion layers associated with thermal internal boundary layer and incursion of land-sea breeze and waves are also seen during the observation period. Low lying elevated capping layer limits the vertical mixing height to its own height of occurrence and at times pose environmental hazards for air pollution. Such observations are normally typical of winter fog weather or typical of coastal sites. Such layers, if seen to occur frequently do need a separate focused studies at least for the whole year and preferably over for several years. These are beyond the scope of present study and as such are not discussed here.

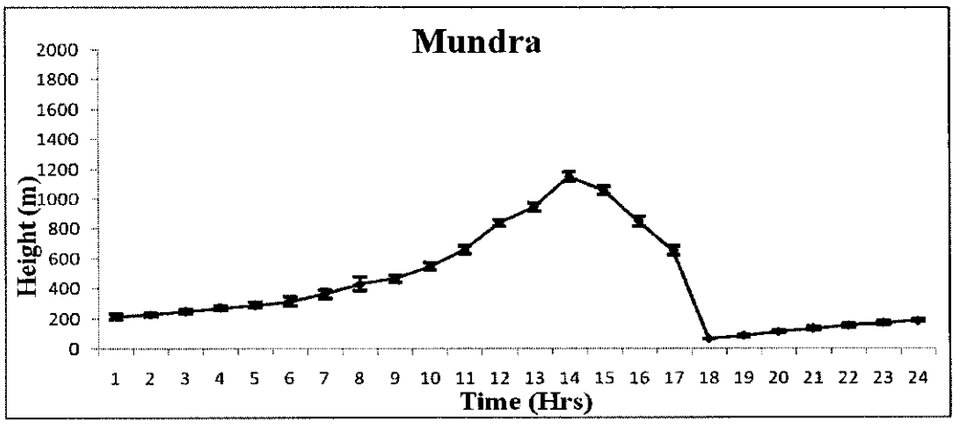

FIGURE-11
DIURNAL VARIATION OF ABL MIXING HEIGHT AT MUNDRA

10.0 Concluding Remarks

Site specific Sodar study, at Mundra, District Kutch (India) for one month winter period of (24 November, 2016 to 23 December 2016) has been successfully completed.

Analysis of the data obtained during *the study period* shows that inversion height varies from a minimum of 68m to maximum of 347m during the study period. The averaged inversion level considering stable ABL conditions (1800-0600 hours) is seen to be 202±70m during the study period.

The hourly averaged mixing height pertaining to unstable ABL during the day time (0900-1700 hours) is seen to vary from a minimum of 509m to a maximum of 1198m. The average level is seen to be 840±198m during the study period.

The maximum day time mixing height, around noon (1200-1400 hours) is seen to be more than 1 Km on several days which is fairly good for the winter.

Besides above, fumigation periods is seen to be more than an hour.

Further detailed comprehensive analysis, covering a year long seasonal sodar study is suggested to investigate the occurrence characteristics of ground/ elevated inversion/ mixing height, fumigation, thermal internal boundary layer etc.

11.0 Some Definitions

Lapse Rate

The rate of which the environmental temperature falls with height is known as Lapse rate. The dry adiabatic lapse rate is 9.8 °K/Km. The atmosphere is termed as stable, unstable and neutral according as the prevailing lapse rate is less than, more than or equal to the adiabatic lapse rate.

Inversion

Atmospheric layer in which temperature increases with height is known as inversion. The inversion may be ground based or elevated depending on the meteorological conditions. The atmosphere under inversion conditions is stable and resists vertical motion or suppresses the prevailing turbulence.

Mixing Height

It is the height of the atmosphere above the earth's surface to which released air pollutants will extend primarily through the action of atmospheric turbulence.

Atmospheric Boundary Layer (ABL)

It is a part of the lower atmosphere (troposphere) which is influenced by the presence of the earth and responds to cooling and heating of the earth. Boundary layer developed during night time stable atmospheric conditions is known as nocturnal stable boundary layer (NSBL).

Annexure-XII
Social Impact Assessment Report

1.0 INTRODUCTION

As per Environmental Impact Assessment (EIA) Notification dated 14th September, 2006, proposed project falls under category-'A' of project activity 3(a) and requires prior Environmental Clearance (EC) to be obtained from Ministry of Environment, Forest & Climate Change (MoEF&CC) before the commencement of ground activity.

The application No: IA/GJ/IND/53004/2016 for prior EC (Form-1 and Pre-Feasibility Report) for the proposed project has been submitted to MoEF&CC on 21st April 2016 and same was reviewed by the Expert Appraisal Committee (Industry-I) held during 4th May 2016 in New Delhi to prescribe Terms of Reference (TORs) for the preparation of EIA/EMP report. TOR has been issued by MoEF&CC vide letter reference F.No.J-11011/113/2016-IA.II(I) dated 21st June 2016.

With a view to assess the environmental impacts arising due to the proposed Greenfield Copper Refinery Project, **M/s. Adani Enterprises Limited (AEL)** has retained the services of NABET accredited EIA Consultant **M/s. Vimta Labs Limited (VLL)**, Hyderabad to prepare EIA report for various environmental components including air, noise, water, land and biological components along with parameters of human interest which may be affected and to prepare an Environment Management Plan (EMP) for mitigating possible adverse impacts and the Social Impact Assessment (SIA) study so carried out should form part of EIA and EMP report.

The public hearing for the proposed project was conducted by Gujarat Pollution Control Board (GPCB) on 29th April 2017 at Community Premises Centre (Samajvadi), opposite Tundra primary school, Tundra village, Mundra taluk, Kutch district, Gujarat, in the presence of Resident Additional Collector/Additional District Magistrate as per the Environmental Impact Assessment Notification dated 14th September, 2006. Based on the proceedings of the public hearing, the draft EIA and EMP report has been updated and finalized report is submitted for consideration for environmental clearance to the MoEF, New Delhi.

The proposed project will be completed within 36 months from the start of the construction activity at project site. The project construction start date will be decided after obtaining all the statutory clearances and tie up of the finance for the project. After receiving Environment Clearance from MOEF&CC, the necessary clearances such as Consent to Establishment (CTE) and Consent to Operate (CTO) from GPCB shall be obtained.

1.1 Need for the Social Impact Assessment (SIA) Study

As per the TOR point 6(III), the project proponent should carry out Social Impact Assessment (SIA) of the project as per the Office Memorandum no J-11013/25/2014-1A.I dated 11.08.2014 issued by the Ministry regarding

guidelines on Environment Sustainability and CSR related issues. The social impact assessment study so carried out should form part of EIA and EMP report;

Generic TOR point 4 (XI): Status of acquisition of Land. If acquisition is not complete stage of the acquisition process and expected time of complete possession of the land;

Generic TOR point 4 (XII): R&R details in respect of land in line with state Government policy;

Generic TOR point 6 (XI): Socio- Economic status of the study area;

General point (X): Include separately in EIA-EMP report in a separate chapter and summarized in a tabular chart with financial budget (capital and revenue) along with time schedule of implementation for complying with the commitments made. The final EIA report shall be submitted to the ministry for obtaining environmental clearance; and

Format for executive summary (XIII) CSR plan with proposed expenditure.

The proposed project site is located in Siracha and Navinal villages at APSEZ Mundra taluka, Kutch district in the state of Gujarat. The total area earmarked for the proposed project is 256.58 ha (634 acres), in which 154.19 ha (381 acres) of land belongs to APSEZ area and 102.39 ha (253 acres) of land belongs to forest area for promoting industrial development.

Adani group have been pioneers in corporate social responsibility and made significant contributions to improve quality of people's life in all the regions they operate in. In Gujarat, APSEZL and AEL have started key initiatives in support of sustainable development. The CSR activity aims at bettering the socio-economic and cultural status of local people. Presently, AEL has invested about Rs. 71.86 Crores in community initiatives for the last year (2010-2016) budget.

- **Community Relations**

The comprehensive aim of the Company is to enhance the living conditions of the communities in which operations are based. CSR activities by always gives prime importance to inclusive growth and equitable development of the community.

- **CSR Philosophy of the Company**

The CSR agenda is planned in consultation with the community through a systematic independent need based assessment, as well as through a Participatory Rural Appraisal (PRA). The inputs are then taken from an Advisory Committee, eminent personalities from the field and senior members from the CSR guiding wing of the company. The CSR agenda is subsequently deliberated upon and after careful consideration, then processed by good leadership. CSR initiatives of the company are also aligned with Sustainable Development Goals (SDGs).

AEL has formed a separate team of committed professionals under the CSR wing to propose, enact and to implement the growth oriented programmes in communities with their support and participation. Further to enable holistic development, the CSR team is working on a number of issues in each community and evaluation of the implemented CSR programmes have been undertaken simultaneously.

The CSR activity aims at bettering the socio-economic and cultural status of local people. The key highlights of some initiatives & activities that AEL is going to undertake at Mundra are:

Sustainable Livelihood Options & Women Empowerment

- Strengthening the community based organizations like self-help groups, farmer federation etc.;
- Capacity building of the underprivileged communities on various market driven skills;
- Establishment of forward & backward market linkages through networking;
- Facilitating the easy reach to the technical institutions for knowledge up gradation; and
- Promotion of livestock health management.

Education Initiatives

- Skill up-gradation through establishment of technical training institution;
- Infrastructural development in the form of school building, teaching & learning equipment and furniture & fixtures etc.;
- Quality teacher support;
- Scholarship for education excellence;
- Promotion of girl child education;
- Incorporation of extra-curricular activities;
- Holistic approach to the education through "Yoga & Art Of Living"; and
- Promotion of functional literacy.

Health Initiatives

- Addressing the mother & child health;
- Support to the nutritional program of mother, child & school goers;
- Control on blindness, malaria, T.B., HIV & AIDS, diarrhea etc.;
- Support the district health administration in the community health activities;
- Improvement of villages sanitation through solid-liquid waste management; and
- Knowledge enhancement on preventive health care.

Community Infrastructure & Facilities

- Enhancement of green coverage;
- Protection of wildlife through awareness generation;
- Promotion of renewal energy; and
- Waste management through installation of recycling measures.

The CSR activities are being executed in the villages falling under the following Grama Panchayat limits:

Sr. No.	Name of Village		Village Code	Name Panchayat
	2011 Census	General		
1	Tunda	Tunda & Vandh	507325	Tunda Juth
2	Shiracha	Shiracha	507326	Shiracha
3	Navinal	Navinal	507344	Navinal

2.0 METHODOLOGICAL APPROACH OF THE STUDY

This part mainly deals with different methods and techniques which are adopted in carrying the study project. Further, it also reveals the gist of information about techniques and methods of the research plan right from beginning to the end.

- **Title of the Study**

Social Impact Assessment (SIA) for the proposed Greenfield Copper Refinery Project (1.0 MTPA) at Adani Port Special Economic Zone Land in villages Siracha and Navinal, Tehsil, Mundra, district Kutch, Gujarat.

- **Objectives of the Study**

The major objective of the study is to understand the socio-economic situation of the respondents within the project area and making a social impact assessment. Further the concentration of the study is based on following specific objectives such as:

1. To study the socio-demographic and economic background of the study population;
2. To understand the educational and health status of the respondents;
3. To study the conditions of employability and livelihood of the respondents;
4. To make an attempt to understand the resource assessment of the household of the respondents;
5. To assess the needs and priorities of the population, resided in the study area;
6. To reveal the information about the existing CSR activities from the respondents; and

7. To suggest remedies and measures for inclusion of all the stakeholders in the developmental spectrum of the setting.

- **Significance of the Study**

Copper application areas cover wide varieties of different disciplines like architectural, electrical, automotive, tube, pipe, fuel gas, industrial, marine and machine products which gives a great demand.

Copper is a strategic metal for development of industry in India. It is considered to be the third most important industrial metal next only to iron and aluminium. Combination of its excellent properties such as high electrical and thermal conductivity, high strength, malleability, easy workability, corrosion resistance and its ability to produce alloys with other metals in an attractive range of colours has made copper a strategic metal for the engineering industry. Specific applications of copper include power cables and wires, jelly filled cables, building wires, air conditioning and refrigeration tubing, telecom, power, construction, transportation, handicrafts, engineering, consumer durable, defence etc.

With Indian economy poised for growth, development in infrastructure and power sector will lead to demand of copper. Dedicated focus by Government of India and various state governments under "Make in India" is an additional driver for growth story of Indian manufacturing, which will further propel the requirement of copper within the country. Prior to setting up of the Greenfield copper refinery project at Mundra by the Company (M/s. Adani Enterprises Limited), the country is a net importer of Copper. Post setting up of the copper refinery plant by the Company, the country will be able to earn valuable foreign exchange and hence improves the Current Account Deficit. AEL proposes Greenfield copper refinery plant (1.0 MTPA), So the attempt has been made by the study agency to thoroughly understand the social, economic, geo-environmental situation in the opinion of respondents, thus making an attempt to propose the different kinds of need based programmes which can help in the development of the project affected population. Further, the study results are going to be used for the action planning of Corporate Social Responsibility (CSR) activities according to the need and priorities of the project area and also the study findings will be utilized in the direction of reducing socio-environmental and economic burdens. Hence, it is required to objectively assess the developmental needs of the local communities and to conduct a socio-economic baseline survey. The outcome of the socio economic assessment would serve as inputs in preparing a Corporate Social Responsibility (CSR) plan for the local population.

- **Nature and Scope of the Study**

The current study is predominantly dependent on the field experience, observation and opinion survey from the study area. The social experts and field investigators team has given opportunity to the concerned respondents to express both the advantage and disadvantage they have anticipated during the construction and operation of the copper refinery plant. Further, it is the duty of the company to consider general population view on developmental initiatives

before putting things into practice. The nature of the study is mainly sample based socio-economic assessment survey. Here each village, communities and random households are considered as the respondent therefore each response which was revealed by the respondent are unique in nature where the values of variables are representing the views of the group of family members. Hence, the study agency has taken keen interest to choose the population in all the stages beginning from the study till finalization of the study report. The present study will be of great help in understanding the socio-economic conditions of the population staying in the surroundings of copper refinery plant and other companies. In addition the study tries to assess the needs of the population in the study area. Lastly the findings of the study are beneficial for the future prospectus and policy making.

- **Focused Group Discussion (FGD)**

Focused Group Discussion (FGD) with village opinion leaders was undertaken to understand the overall scenario of the villages, including the aspirations and desires of the community. An effort was made to cover participants across caste, gender, income and age, so as to get a comprehensive and complete photograph of the area. In the FGD, major issues pertaining to health, nutrition, hygiene, livelihood, income generating activities, access to safe drinking water, education, road connectivity, banking facilities, health facilities, transport facilities, Drainage facilities, and infrastructure etc. were covered.

- **Survey of Village Infrastructure**

Visits were conducted to the Self-Help Groups, schools, anganwadi centers and health sub-centers in the project affected villages to collect detailed information about physical as well as social infrastructure, major areas of intervention required, and to identify specific resource gap prevalent in the institutions of these villages.

- **Public Consultation**

Community consultation is an internationally and nationally proved and implemented practice to build a rapport with host community i.e. the people who are to be affected by the project. This eventually acts as a deterrent towards the development of the project. Therefore, it is absolutely necessary to have consultation with the various stakeholders and project study area people from the planning stage of the project. Community consultation was carried out in this project to the extent possible in order to minimize probable adverse impact of the project on the project study area people which is useful during the stage of data analysis. The Community Consultation process was carried out with the following objectives:

- To ensure enhanced public cooperation due to creation of awareness about purpose and benefits of the project;
- The discussion with the community was through Participatory Rural Appraisal and Focus Group Discussion (FGD) techniques;

- To solicit the views of affected communities/ individuals on social, economic and environment components and the significance of impacts; and
- To serve as an important tool for collecting information about the natural and the human environments, much of which would never be accessible through more traditional approaches of data collection.

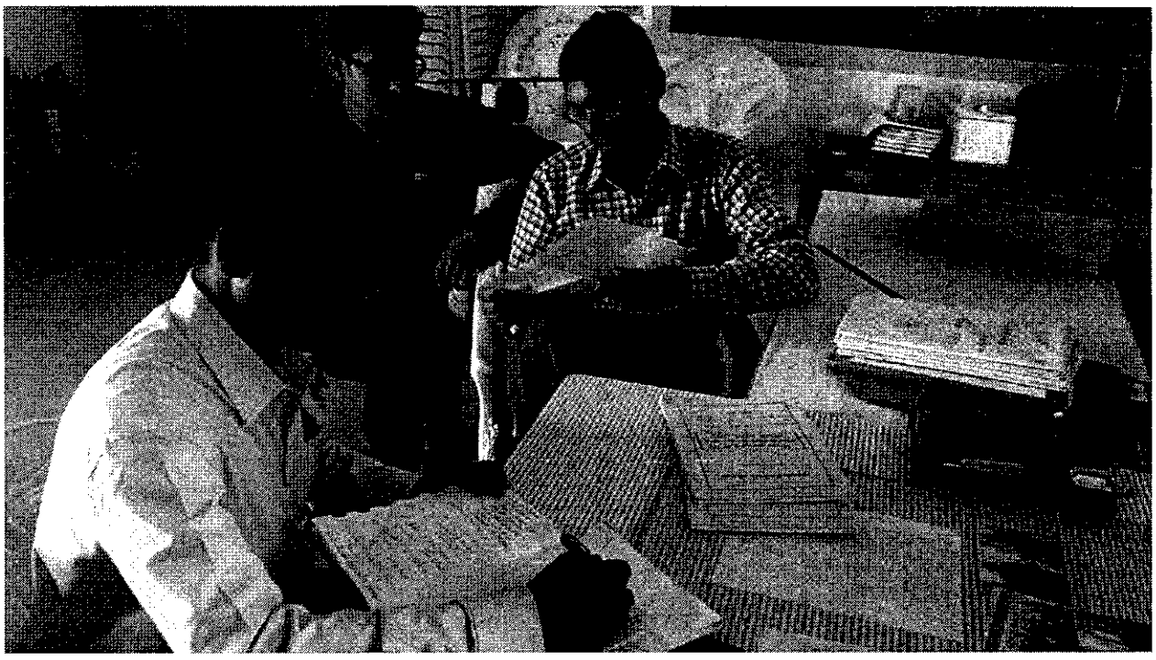
- **Technique used for Community Consultation**

Public Consultation and Disclosure was done in three villages Navinal, Shiracha and Tunda taking into account state and central guidelines. In line with those guidelines notice of disclosure meetings was put on the notice board of the Panchayat buildings and prominent places where people can meet like on the main tree trunk in the village. Moreover for this purpose Sarpanch was informed about the consultation process and permission was sought from each village. The project area people were informed while doing door to door survey to gather in a place decided mainly by the Sarpanch for consultation venue. Technique used for public consultation are discussed below:

- **Questionnaire Survey:** One to One Consultation.
- **Transect Walk:** Along the project boundary with professional from multidisciplinary team;
- **Group Consultations:** Social and gender group wise consultation;
- **On-site Rapid Consultation:** Interaction with village elders, sarpanch, community leaders;
- **PRA Technique:** Participatory Technique of appraisal for identification of problem and potential of project; and
- Communities meeting are playing a key role in consultation.

Level 1-Interaction with Community Groups: The interaction with community groups were conducted in three villages within the project site. The location wise consultations are presented in **Table–1.**

TABLE-1
LOCATION WISE COMMUNITY CONSULTATION



Sr. No.	Name of Village	Date of Consultation	No. of Person	Group Composition
1	Tragadi	11/07/2017	27	Village Sarpanch, Panchayat Members & Villagers, Agricultural & Non-agricultural Labourers, people of the village, Near Cement factory workers.

The focus group discussion in Tradadi village) is shown in **Photograph-1.**

PHOTOGRAPH-1
FOCUS GROUP DISCUSSION IN TRAGADI VILLAGE

Level 2- On-Site Rapid Consultation- On-site rapid consultation was also conducted at Kutch district villages locations throughout the study area villages. The discussions were conducted with the community groups (women and vulnerable groups) in an informal manner. The general conversation and discussion evolved around their social and cultural practices. The basic objective of this type of interaction was to develop a perspective on the quality of life of the people and their general practices. The interaction with asst incharge of Nana Badiya Govt. primary school is shown in **Photograph-2.**

PHOTOGRAPH-2
ON-SITE RAPID CONSULTATION IN NANA BADIYA VILLAGE

- **Analysis of Data**

The following procedure was adopted for the content analysis of the qualitative data.

- Separating: The responses to a particular question were listed to obtain the range of responses for all open-ended questions. The responses that were considered irrelevant under a specific question were moved under the appropriate question for analysis. During this process, important statements were extracted for use in the report as reference material;

- Screening: In the final screening, for every open-ended question, responses were coded according to the domains. Some responses could be placed under more than one domain as a range of views were stated in a single sentence. After scrutiny, the responses found to be irrelevant were discarded; and

- Summarizing: Similar information sought from different stakeholders was triangulated to arrive at a conclusion. The results were then summarized for each issue separately.

- **Study Design**

The design used for the present study is descriptive in nature. The study agency aims to present the information of the study area as it is and in a describing manner, with no intervention made by the project proponent. Hence, the applied design is descriptive design which is apt for the present study. Descriptive research is a study designed to represent the participants in an accurate way. The three main ways to collect this information are: Observational, defined as a method of viewing and recording the participants. Case study, defined as questionnaire interview study of an individual or group of individuals. The sample questionnaire is given in **Annexure-1**, village profile is given in **Annexure-2**.

- **Sample Size and Technique**

With the help of officially published statistical data from Gujarat and Census of India 2011 data, the research agency has chosen sixteen (16) villages on sample basis which comes under the study area. Out of these villages equal importance has been given to choose the sample size in proportionate to the size of household and population size in each village on the basis of proportionate random sampling design. From the sixteen villages the research agency has officially identified thirteen thousand one hundred ninety three (13193) households in which some of the villages have large population as well as households and in other villages both population and households are scattered. Further, the study agency has randomly selected the proportionate number of villages at the rate of five percent (5%) of the total number of villages. With the help of percentage criteria the research agency had chosen 5 selected villages. Out of 16 villages 12 villages are falling Mundra Tahsil and 4 villages are falling in Mandvi tehsil Kutch district of Gujarat state. The village wise population details are given in **Table-2.**

TABLE-2
VILLAGE WISE POPULATION DETAILS

Sr. No.	Name of Village	No. of HHs	Total Male	Total Female	Total Population	SC Population	ST Population	Total Literates	Total Workers	Non Workers
0-3 km Mundra tehsil, Kutch district, Gujarat

- **Tools of Data Collection**

The study is mainly dependent on field data which is considered as first hand or primary information. Hence, it is very essential to seek the information from the respondents for formulating further programs and activities on the basis of their needs. The research agency has utilized the structured interview schedule as tool according to the objectives. Further, the interview schedule had been classified under different sub-parts such as socio-demographic and economic details, household details, educational and health status, information on employability and livelihood, environmental issues and finally existing CSR activities along with the need assessment as the major areas of the interview schedule. The schedule also provided enormous space for the field investigators to record their observations in the process of data collection hence giving a wider scope for qualitative data analysis.

- **Sources of Data Collection**

In any empirical research study it may not be possible to bring all the needed information together with the help of either primary or secondary information itself. Hence, the study agency has inculcated both the primary as well as the secondary sources for the preparation of final research report. But, the study was predominated in terms of empirical in its nature and the primary source has been largely materialized throughout the research and the secondary information has also been used according to the need and relevance of the study. The tools which are used for the collection of primary information were self-structured interview schedule, participatory observation methods, Focus Group Discussion (FGD) and the field experiences of the investigators. In secondary data different sources such as e-sources, census data, district gazetteers and other text books were used for preparation of the report.

- **Ground Truth Collection**

The available secondary data, census of India 2011, land use and demography published data was available from April 2014. As a part in primary survey detailed field observations and investigations were carried out and the differences from secondary data to present conditions of villages of study area is verified for ground truth collection. Both topographic sheets and satellite imagery were taken for field verification and a transverse plan using existing road network was made to cover as many representative sample areas as possible to observe the broad land use features and to adjust the sample areas according to field conditions. As per village administrative atlas Gujarat 2011 census, the villages more than 50% covered 9 to 10 km of the study area the total village land was considered in secondary data, the water bodies' stream/river/tank/reservoir lands were not in counted in secondary data land use classification. So there is difference in primary and secondary land use data. The village wise land use classification is very useful to conduct CSR activities in the project study area. Detailed field observations and investigations were carried out and noted the land use features on the study area. The village wise revenue data was verified with village revenue officers (VROs).

3.0 ANALYSIS AND INTERPRETATION OF DATA

The empirical information collected from the study area was systematically edited and verified on day to day basis then the information was coded, classified and entered into the excel sheets. Further data was compiled into tables by using the excel software in simple percentile manner so as to be understood by the readers easily. The analyzed data were interpreted in accordance to the objectives of the study and inferences were drawn to reach the logical conclusion.

Land Use Studies

Studies on land use aspects of eco-system play important roles for identifying sensitive issues, if any, and taking appropriate actions for maintaining the ecological balance in the development of the region.

Objectives

The objectives of land use studies are:

- To determine the present land use pattern;
- To analyze the impacts on land use due to plant activities in the study area; and
- To give recommendations for optimizing the future land use pattern vis-a-vis growth of plant activities in the study area and its associated impact

Methodology

For the study of land use, literature review of various secondary sources such as District Census Handbooks, regional maps regarding topography, zoning settlement, industry, forest etc., were taken. The data was collected from various sources like district census handbook, revenue records, state and central government offices and Survey of India (SOI) topographic sheets and also through primary field surveys.

Land use Based on Secondary Data

Based on the census report, 10 km radial distance around this copper refinery plant boundary has been considered in the study. These areas were studied in detail to get the idea of land use pattern in the study area. The land use census data 2011 is presented in **Table-3.** The village wise land use data is presented in **Annexure-3**.

TABLE-3
LAND USE PATTERN IN THE STUDY AREA

Sr. No.	Particulars of Land use (in Hectares)	0-3 km	3-7 km	7-10 km	0-10 km	(%)

- ***Forest Land***

  Forest land means land of any description falling with in any area and includes unclassified forests, un-demarcated forests, existing or deemed forests, protected forests, reserved forests, sanctuaries and national parks. The revenue forest land under the study area consists 94.40 ha (0.38%) of the total geographic area.

- ***Land under Cultivation***

  Altogether 12,784.27 ha cultivable land (irrigated, un-irrigated and land under miscellaneous tree crops etc.) was observed in the study area. The irrigated land admeasures to about 2768.90 ha in the study area which works out to be 11.17% of total study area. The un-irrigated land admeasures about 10003.10 ha and works out to about 40.34 % of the total study area. Land under miscellaneous tree crops area admeasures to about 12.27 ha and works out 0.05% of the total study area.

- ***Land not available for Cultivation***

  The land not available for cultivation is 38.42% of the total study area, which includes area of land with scrub, land without scrub, permanent pastures, quarry, mining area, rocky/ stony and barren area.

- ***Cultivable Waste Land***

  All lands available for cultivation whether not taken up for cultivation or taken up for cultivation once but not cultivated during the current year and the last five years or more in succession for one reason or the other. Such lands may be either wholly or partly covered with shrubs and jungles, which are not put to any use. Land once cultivated but not cultivated for five years in succession are also included in this category. The study area comprises about 8.00 % cultivable wastelands.

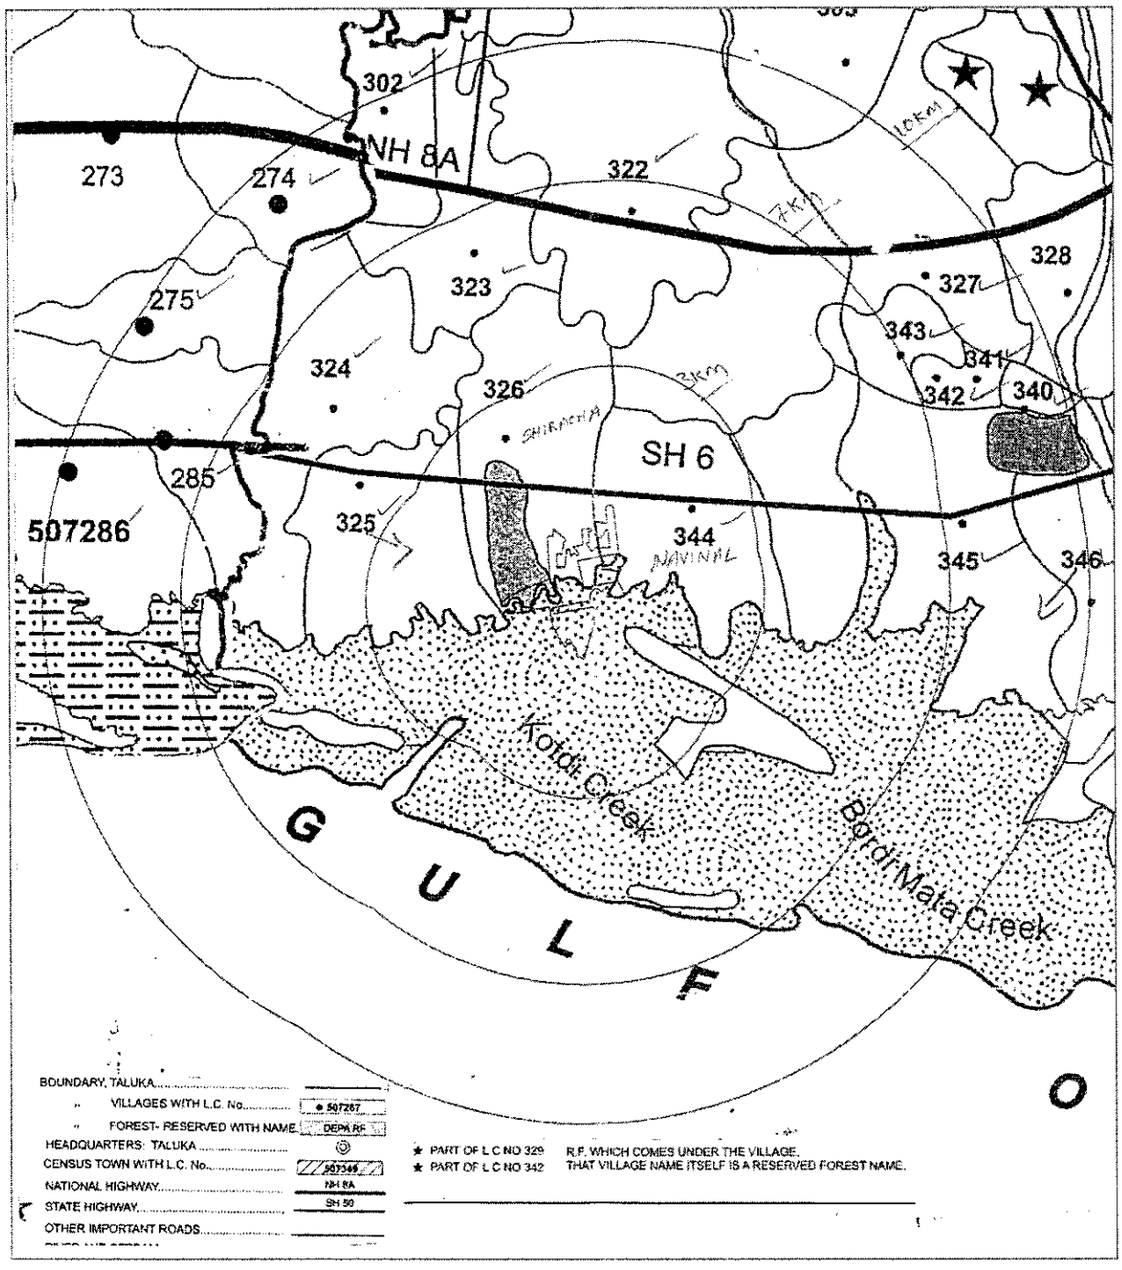

FIGURE-1
VILLAGE ADMINISTRATIVE MAP

- ***Fallows Land other than Current Fallows Land***

  This includes all land which was taken up for cultivation but is temporarily out of Cultivation for a period of not less than one year and not more than five years. The fallows land is 1.65% in the study area.

- ***Sea Area***

  As per the survey of India topographic sheets and village administrative atlas Gujarat More than 25% of the study area is Arabian Sea (Gulf of Kutch).

The land use break up based on satellite imagery data is given in **Table-4.**

Demography and Socio-Economics

The demographic and socio- economic conditions prevailing in the proposed copper refinery project of study area at Siracha and Navinal villages in Mundra tehsil and Mandvi tehsil in Kutch district of Gujarat" is analyzed. The socio-economic data forms the basis for developing a suitable enterprise social responsibility plan to address the needs of the population.

The project proponent is committed to take up the socio-economic development initiatives not only to minimize the negative impact on the population and also to improve the socio-economic status of population living in the block of the area as its sustained effort as part of corporate social responsibility.

Review of Demographic and Socio-Economic Profile-2011

The village wise demographic data of 16 villages falling within the study area as per the 2011 census is given in **Annexure-4**. Some of the area is creek area along with sea in the study area. The salient features of the demographic and socio-economic conditions are analyzed and described in the following sections.

Demography

Distribution of Population

As per 2011 census, the study area consisted of 60,525 persons inhabited in study area. The distribution of population in the study area is shown in **Table-5.**

TABLE-5
DISTRIBUTION OF POPULATION

Particulars	0-3 km	3-7 km	7-10 km	0-10 km
No. of Households	4165	3751	5277	13,193
Male Population	14838	9603	14997	39,438
Female Population	2612	8016	10459	21,087
Total Population	17450	17619	25456	60,525
Male Population (0-6 years)	469	1350	1725	3544
Female Population (0-6 years)	434	1300	1681	3415
Total Population (0-6 years)	903	2650	3406	6959
% of 0-6 years population	5.17	15.04	13.38	11.50
Average Household Size	4.19	4.70	4.82	4.59
% of males to the total population	85.03	54.50	58.91	65.16
% of females to the total population	14.97	45.50	41.09	34.84
Sex Ratio (no of females per 1000 males)	176	835	697	535
Child Sex Ratio (no of females per 1000 males (0-6 years)	925	963	974	964
Density	433	178	234	244

Source: Census of India 2011

- **Average Household Size**

The study area has a household size of 4.59 as per 2011 census.

Sex Ratio

The configuration of male and female indicates that the males constitute to about 65.16% and females to 34.84% of the total population as per 2011 census records. The study area on an average has 535 females per 1000 males as per 2011 census reports. In comparison to the district sex ratio (Kutch 908) the study area has recorded lowest sex ratio. The reason for lowest sex ratio is the study area is male migrants are more in the study area, who came for employment. The work participation rate in the study area 0-3 km is 80.77% which is more than the district (Kutch district work participation rate 37.1%).

Child Sex Ratio

The study area child sex ratio is 964 females for 1000 males in the study area. In comparison adult sex ratio to child sex ratio is more in the study area.

Social Structure

In the study area, as per 2011 census, 9.72% of the population belongs to Scheduled Castes (SC) and 1.29% to Scheduled Tribes (ST). Overall the data of social stratification reveals that the SC and ST % to population is more than 11%. In comparison to the study area proportion of SC population is less than in the district (Kutch district proportion of SC population 12.4%, proportion of ST population 1.2%)

The SC and ST community are marginalized and they are at considered at low level of social strata and calls for a special attention in Social Impact Management Plan for improving their socio-economic status apart from preservation and protection of their art, culture and traditional rights of livelihood.

The distribution of population by social structure is shown in **Table-6.**

TABLE-6
DISTRIBUTION OF POPULATION BY SOCIAL STRUCTURE

Particulars	0-3 km	3-7 km	7-10 km	0-10 km
Schedule caste population	693	2323	2867	5883
Schedule Tribes population	18	474	287	779

Total population	17450	17619	25456	60525

Source: Census of India 2011

Literacy Levels

The data of study area reveals that literacy rate of 76.40% as per 2011 census, which is found to be more than the district rate of literacy (Kutch 60.9%). The distribution of literate and literacy rate in the study area is given in **Table-7.**

TABLE-7
DISTRIBUTION OF LITERATE AND LITERACY RATES

Particulars	0-3 km	3-7 km	7-10 km	0-10 km
Male Population	14838	9603	14997	39438
Female Population	2612	8016	10459	21087
Total Population	17450	17619	25456	60525
Male Population (0-6 years)	469	1350	1725	3544
Female Population (0-6 years)	434	1300	1681	3415

Total Population above 7 years	16547	14969	22050	53566
Male literates (7+ years)	12532	6780	10736	30048
Female literates (7+ Years)	1288	3987	5603	10878
Total literates (7+ Years)	13820	10767	16339	40926
Male literacy rate (%) to the total literates	90.68	62.97	65.71	73.42
Female literacy rate (%) to the total literates	9.32	37.03	34.29	26.58
Average Male Literacy to the total population (%)	75.74	45.29	48.69	56.10
Average female Literacy to the total population (%)	7.78	26.64	25.41	20.31
Total Literacy rate (%) to the total population	83.52	71.93	74.10	76.40

Source: Census of India 2011

The percentage of male literates to the total literates of the study area works out to be 73.42%. The percentage of female literates to the total literates, which is an important indicator for social change, is observed to be 26.58% in the study area as per 2011 census records.

Occupational Structure

The occupational structure of residents of work participation rate in the study area is studied with reference to main workers, marginal workers and non-workers. The main workers include 10 categories of workers defined by the Census Department consisting of cultivators, agricultural laborers, those engaged in live-stock, forestry, fishing, mining and quarrying; manufacturing, processing and repairs in household industry; and other than household industry, construction, trade and commerce, transport and communication and other services.

The marginal workers are those workers engaged in some work for a period of less than six months during the reference year prior to the census survey. The non-workers include those engaged in unpaid household duties, students, retired persons, dependents, beggars, vagrants etc.; institutional inmates or all other non-workers who do not fall under the above categories.

Total work participation in the project study areas is 56.36% and the non-workers constitute 43.64% of the total population respectively. The work participation rate in the study area is more than the district (Kutch district work participation rate 37.1%). The main workers to the total workers are 90.57% and the marginal workers constitute to 9.43% to the total workers. The occupational structure of the study area is shown in **Table-8.**

Marginal workers Household Industry Workers 0-3 months	0	1	9	10	2.43
Marginal workers Other Workers 0-3 months	152	87	25	264	64.23

Main Workers: As per Census of India, all persons engaged in 'work' defined as participation in any economically productive activity with or without compensation, wages or profit are workers. Those workers who had worked for the major part of the reference period (i.e. 6 months or more) are termed as Main Workers.

Marginal Workers: Marginal workers were those who worked any time at all in the year preceding the enumeration but did not work for a major part of the year, i.e., those who worked for less than 183 days (or six months).

Cultivators: A person is classified as cultivator if he or she is engaged in cultivation of land owned or held from Government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation. A person who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a combination of both (agricultural labourer) is not treated as cultivator. Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fibre crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops - tea, coffee, rubber, coconut and betel-nuts (areca).

Agricultural Laborers: A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She or he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which She/he works.

Household Industry Workers: Household Industry is defined as an industry conducted by one or more members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in the household industry consists of members of the household. The industry is not run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act. The main criterion of a Household industry even in urban areas is the participation of one or more members of a household. Even if the industry is not actually located at home in rural areas there is a greater possibility of the members of the household participating even if it is located anywhere within the village limits. In the urban areas, where organized industry takes greater prominence, the household industry is confined to the precincts of the house where the participants live. In urban areas, even if the members of the household run an industry by themselves but at a place away from the precincts of their home, it is not considered as a Household Industry. It should be located within the precincts of the house where the members live in the case of urban areas. Household Industry relates to production, processing, servicing, repairing or making and selling (but not merely selling) of goods. It does not include professions such as a Pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc., or merely trade or business, even if such professions, trade or services are run at home by members of the household. Some of the typical industries that can be conducted on a household industry basis are:Foodstuffs : such as production of floor, fisher folk, milking or dehusking of paddy, grinding

of herbs, production of pickles, preservation of meat etc. Beverages: such as manufacture of country liquor, ice cream, soda water etc., Tobacco Products : such as bidi, cigars, textile cotton, Jute, Wool or Silk, Manufacture of Wood and Wood Products, Paper and Paper Products, Leather and Leather Products, Petroleum and Coal Products : such as making foot wear from torn tyres and other rubber footwear, Chemical and Chemical Products :such as manufacture of toys, paints, colours, matches, fireworks, perfumes, ink etc., Service and Repairing of Transport Equipments : such as cycle, rickshaw, boat or animal driven carts etc.

Other Workers: The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, mining, plantation workers, those engaged in trade, commerce, business, transport, banking, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

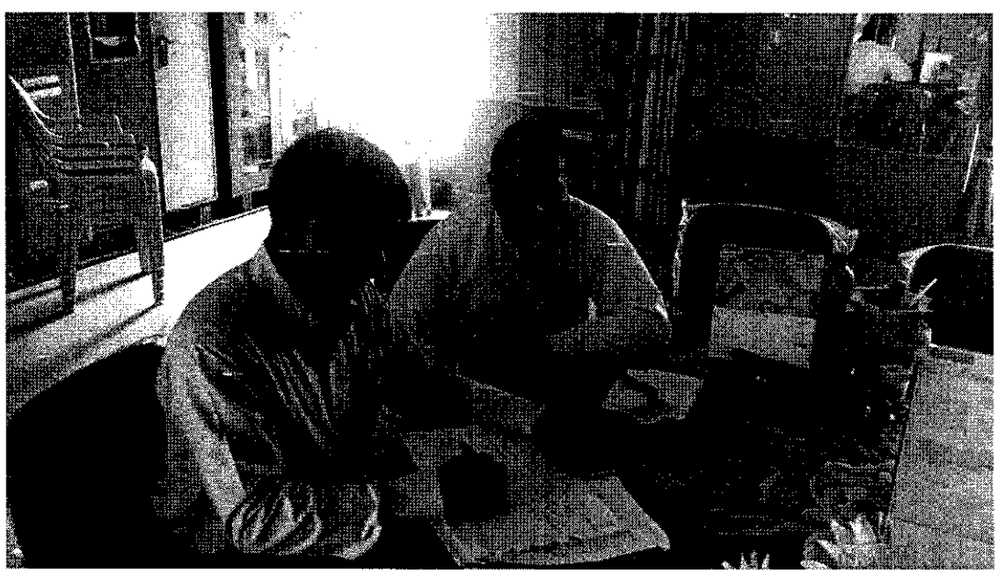
The study area main workers classification is 11.76% of agricultural laborers, 77.15% of other workers, 10.45% of cultivators and 0.64% of household industry workers. The Other Workers is predominant population and Agricultural Laborers are second dominant population. It was observed in primary survey 77.15% of other workers are mostly employed in study area power plants, factories as a factory workers, port, and plantation workers, those engaged in trade, commerce, business and transport.

The study area marginal workers classification is 32.15% of agricultural laborers, 52.96% of Other Workers, 9.69% of Cultivators and 5.20% of Household Industry Workers. The agricultural laborer is predominant population and other workers are second dominant population. It was observed in primary survey 16.55% of other workers are mostly employed in study area power plants as a factory workers, port, plantation workers, those engaged in trade, commerce, business and transport.

The infrastructure and amenities of the proposed Copper Refinery Project Study Area

The infrastructure and amenities of the proposed copper smelter project study area Mundra, Mandvi tehsils in Kutch district of Gujarat" is analyzed. It is observed that infrastructure facilities like education, communication and electrical facilities are moderate and health care and drinking water facilities are poor in the project study area.

A review of infrastructure facilities available in the area has been done based on primary survey available secondary data published in Kutch district primary census abstract, 16 villages are considered for data analysis and assessment within the study area.



Educational Facilities

The educational facilities are found to be moderate in the proposed copper refinery project study area. There are 39 government primary schools, 05 government secondary schools, 01 private secondary school, 01 government senior secondary school, 01 private senior secondary school are available. There are no private primary schools, government middle schools, private middle schools, government and private arts and science degree colleges, government and private engineering collages in the study area. The available educational facilities in the study area are given in **Table-9** and **Annexure.5.**

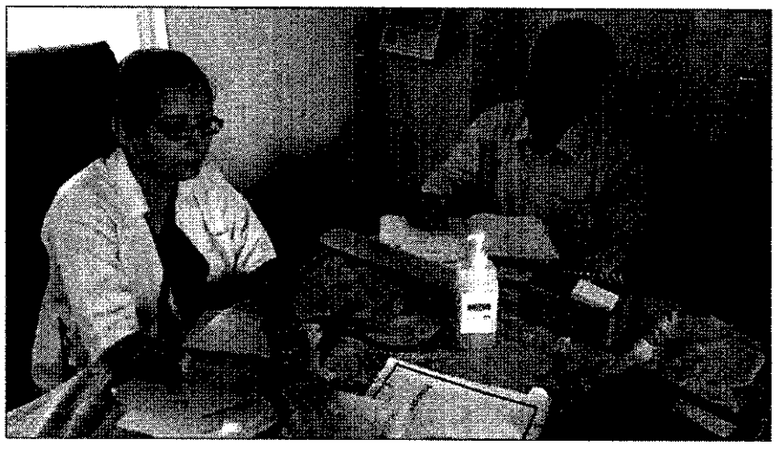
Health Facilities in the Study Area



The national norm for population coverage per sub-center is 3000 for tribal areas and 5,000 for plain areas. Similarly, it is recommended to have a Primary Health Centre (PHCs) for population of 20,000 to 30,000 and CHC (community Health Center) for population in the range 80,000 to 1, 20,000. The number of PHCs served by a CHC is yet another indicator by which the physical accessibility can be judged. As per national norms, 1 PHCs should be served by one CHC.

The types of health facilities available in the study area include, 01 primary health center, 05 primary health sub centers, 03 Maternity and child welfare center, 01 dispensary are available overall 16 villages in the study area. The community health centers, TB clinics, allopathic hospitals, hospital alternative medicine, veterinary hospitals, mobile health clinic and family welfare centers, community health centers are nil as per census 2011, the health facilities are found to be poor in the study area. The available Health facilities in the study area are given in **Table-10** and **Annexure-6**.

Drinking Water Facility in the Study Area

One of the most important factors responsible for the emergence of a settlement is availability of water. Many water sources such as wells, tube well, tank etc. are available in rural areas. In the villages under study, the main source of water is tank, followed by tap. The water from the ponds is generally not used by the villagers except for bathing animals.

Major source of water in the study area are un-treated tap water and tube wells/borehole.

16 villages are covered in the total Study area; the drinking water facilities are found to be poor in the proposed copper smelter project area. Tap-water treated source is not available in the study area as per the census 2011. All villages are having untreated sources, 05 villages are having covered well sources, 13 villages are having tube wells/borehole sources, 06 villages are having Tank/Pond/Lake sources, 01village is having river/canal source. The list of village wise available drinking water sources in the study area is given in **Table-11** and **Annexure7.**

Communication and Transport

Transport is an important part of India's economy but it is poor in comparison with international standards. Since the economic liberalization of the 1990s, infrastructure development has progressed rapidly; today there is a variety of modes of transport by land, water and air. However, India's relatively low GDP per capita has meant that access to transport has not been uniform. Public transport remains the primary mode of transport for most of the livelihood India. Buses take up over 90% of public transport in Indian cities and serve as a cheap and convenient mode of transport for all classes of society. Services are mostly run by state government owned transport corporations. Taxis can either be hailed or hired from taxi-stands. Indian Railways provides an important mode of transport in India, transporting over 18 million passengers and more than 2 million tonnes of freight daily across one of the largest and busiest rail networks in the world.

In the study area 16 villages, 11 villages are having are having sub post office services, all villages are having land line facilities, 14 villages are having Public Call Office /Mobile (PCO), all villages are having mobile phone network courage, all villages are having Internet Cafes / Common Service Centre (CSC). O1 village is having private courier facility, all villages are having Government bus service facilities, 06 villages are having private bus facilities services, 08 villages are having auto/ modified auto services, 08 villages are having taxi services and 04 villages are having van services. Post office services and rail service facilities are not available in the Study area as per 2011 census. The list of communication infrastructure details in Study area is given in **Table-12** and **Annexure-8.**

Electrification in Rural Area

The power supply in the study area is considered be good because power supply for all uses is available in the study area. All villages are having power supply for domestic use, agriculture use and commercial use. All villages are having power supply for all uses. Electricity was supplied for domestic, agricultural, commercial and public lighting purposes. The list of power supply details are given in **Table-13** and **Annexure-9.**

Drainage System

Removing storm water and household wastewater (sometimes called "sullage") is an important environmental health intervention for reducing disease. Poorly drained storm water forms stagnant pools that provide breeding sites for disease vectors. Because of this, some diseases are more common in the wet season than the dry season. Household wastewater may also contain pathogens that can pollute groundwater sources, increasing the risk of diseases such as lymphatic filariasis. Poor drainage can lead to flooding, resulting in property loss, and people may even be forced to move to escape floodwaters. Flooding may also damage water supply infrastructure and contaminate domestic water sources.

Individual health and hygiene is largely dependent on adequate availability of drinking water and proper sanitation. There is, therefore, a direct relationship between water, sanitation and health. Consumption of unsafe drinking water, improper disposal of human excreta, improper environmental sanitation and lack of personal and food hygiene have been major causes of many diseases in developing countries. India is no exception to this. Prevailing High Infant Mortality Rate is also largely attributed to poor sanitation. It was in this context that the Central Rural Sanitation Programme (CRSP) was launched in 1986 primarily with the objective of improving the quality of life of the rural people and also to provide privacy and dignity to women. The study area all villages are not covered in Total Sanitation Campaign (TSC). As per primary survey 04 villages are having closed drainage facilities, 05 villages are having open drainage facilities, Nani Khakhar village is covered with uncovered open pacca drainage, Mota Bhadiya, Tragadi and Nana Bhadiya villages are covered open kaccha drainage facilities, Kandagara Mota, Moti Bhujpar, Jarpara villages from Mundra tehsil and Mota Bhadiya, Tragadi, Nana Bhadiya, Nani Khakhar villages from Mandvi tehsil are having Drain water is discharged directly into water bodies or to sewar plant. The available Drainage facilities in the study area is given in **Table-14** and **Annexure-10.**

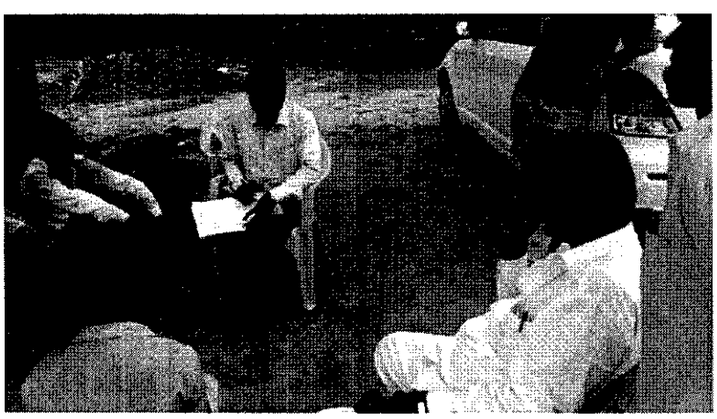
Socio-Economic Status of Fisherman Families in the Study Area

Fisher folk depend on the sea for their very existence; Fishing is their traditional and often the only livelihood occupation. Fisher folk usually venture out into the sea with boats for around 8 months in a year to carry out fishing activities. For remaining 4 months during the monsoon, fishing is prohibited. So fisher man community seeks employment as unskilled labourers during these monsoon months.

Adani Foundation had initiated various schemes for fisherman related to Education, Health, Sustainable Livelihood and Basic infrastructure facilities:

1. VIDYA DEEP YOJANA: Balwadi for the kids of fishermen communities were built to inculcate a sense of awareness health, hygiene, cleanliness, discipline, regularity and importance of education at an early age for the children and among the parents, more than 144 children availed benefits from balwadis every year.
2. MACHHIMAR SADHAN SAHAY YOJANA: Fishing material support was provided by Adani Foundation at Mundra as per the requests of Pagadiya fishermen. According to their needs total 71 fishing nets were provided. Fish market has been designed to hold 40 platforms made for selling purpose, 6 big shops with shed and one sanitation room with toilet facilities. The idea is to provide an appropriate space for sale of fish which will eventually result in fetching of a good price for the fishes
3. MACHHIMAR AWAS YOJANA: A project titled 'Home Sweet Home' made possible appropriate shelters for the fishermen who reside near the coastline all year round except the rainy season. Shelters, equipped with basic facilities of a toilet and pure drinking water have been constructed for living while fishing and to provide a healthy and hygienic residence.
4. BANDAR VISTAR YOJANA: Juna Bandar, Luni Bandar and Bavadi Bandar: Approximately 38559 Sq. m. sand filling of which 18159 sq. m.at Old Bandar 20400 sq. m. at Luni Bandar and was carried out so that fishermen at vasahat have facilities for a smooth routine life
5. SUGHAD YOJANA: Approximately 8 toilets were constructed for cleanliness and sanitation of the fishermen community, especially women. This also helped create awareness related to health and hygiene
6. MACHHIMAR SHUDHH JAL YOJANA: Water tank platforms have been constructed and tanks have been set up in order to provide clean potable drinking water to the community
7. MACHHIMAR AROGYA YOJANA: Mobile Health Care Unit -the mobile dispensaries run by the Foundation since 2009 is available near the coast where the fishermen can avail the facilities as and when needed. Total 10382 fishermen benefitted by Mobile Dispensary this year.
8. Health Card for Senior Citizen Project: This project is for senior citizen popularly known as Vadil Swasthya Yojana and till date 216 senior citizens from Fisher folk community are enrolled in the scheme and getting cash less medical services upto Rs.50,000 for three years. Besides this, follow ups with the card holders is a regular activity.

9. MACHHIMAR AKSHAY KIRAN YOJANA: 79 Solar Light facilities have been installed at fishermen residences on the coast to provide lighting facilities at night.
10. MACHHIMAR SUGAM PATH YOJANA: To facilitate travel route, approach roads were constructed. GSB road, earthen road, metal road etc., were provided and a 13.7 Km approach road was constructed
11. MACHHIMAR AJIVIKA UPARJAN YOJANA: Mangrove plantation was introduced as an alternative source for generating income. Technical assistance was provided by Horticulture Dept. of APSEZ and 100 hectares were given for plantation and more than 100 fishermen families were benefitted.
12. MACHHIMAR KAUSHALYA VARDHAN YOJANA: With the Objectives to empower technical skill in Fisherman and to resolve employment issues in off season of Fisherman community various training programmes for youth were started.



Marine Fishing and Landing Centers in the Study Area

As per 2010 Marine fisheries Census, Gujarat, 6 villages are falling within the study area. Navinal, Jarpara and Dharab villages are from Munda tehsil, Nana Bhadiya, Mota Bhadiya and Tragadi villages are from Mandvi tehsil in Kutch district, Gujarat in **Table-15.**

TABLE-15

PHOTOGRAPH-6
INTERACTIONS WITH FISHERMEN AT TRAGADI VILLAGE OF MANDAVI TALUK

There were 476 traditional fishermen families in the study area with a population of 3065. The maximum number of families was in Mota Bhadiya village (210), the fisherman villages on an average has 843 females per 1000 males in the study area. In Tragadi village 683 females per 1000 males in as per 2010 marine fisheries census, Gujarat. Out of 476 fisherman families, 143 fisherman families are below poverty line (BPL). The average household size of study area is 6.44%, Tragadi village is 7.14% and Nana Bhadiya is 4.10%. The demographic details of the marine fishing villages in the study area are given in **Table-16**.

In Gujarat, 44% of fisher folk (excluding children below 5 years) were educated with different levels of education. About 23% of the fisher folk had primary level of education, 19% had secondary level, 2% had above secondary level and the rest 56 % of the population was unschooled. In comparison with state the fisherman literacy rate, villages under study are having very low literacy rate. As per marine fisherman census 2010, total Literacy rate (%) to the total population of Navinal village is 27.27%, Jarpara village village 19.27%, Dhrab village 7.23%, Nana Bhadiya village 27.19%, Mota Bhadiya village 27.19% and Tragadi village 12.40%. The details of educational status and literacy rate of marine fishing villages' population in the study area is given in **Table-17** and **Table-18.**

In Gujarat, there were 82,901 active fishermen of whom 65,002 were fulltime fishermen, 10,983 part-timers and the rest engaged in fish seed collection. About 68% of fisher folk, excluding children, were occupied with active fishing (42%) and fishing allied activities (26%). There were 51,794 fisher folk engaged in fishing allied activities, such as laborer's (36%), marketing (35%), making/repairing net (16%), peeling (9%) and curing/processing (3%). Women outweighed men in fishing allied activities accounting about 69%. Among the major fishing allied activities, women dominated in marketing (88%) and peeling (87%) as per Marine fisheries Census 2010 Gujarat.

The study area there were 660 active fishermen of whom 654 were fulltime fishermen, 5 were part time fishermen and 1 person was engaged in seed

collection and 561 persons were fish allied activities. Fisher folk excluding children active fishing 54.05% and fishing allied activities such as Marketing of fish 24.73%, Making/Repairing Net 12.94% and Curing /Processing 8.27%. 78.25% of female were engaged in fishing allied activities and 21.75% male population were engaged in fishing allied activities. The details of active fisher folk is given in **Table- 19**, the No. of members involved in fishing allied activities (occupation profile) is given in **Table-20** and gender wise fishing allied activities in the study area is given in **Table- 21**

In Gujarat, Hindus constituted 75% of the total fishermen families and the rest were Muslims. Hindus dominated the fishermen families in all the coastal districts except in Rajkot, Jamnagar and Kutch where Muslims formed the majority. Only 6% of the fisher folk families belonged to SC/ST. In the study area

all families were belongs to Muslims. There is no Hindu and schedule caste (SC) and Schedule tribe (ST) families. The detail village wise religion and community (no. of families) in the study area are given in **Table- 22.**

In Gujarat, there were 16,825 crafts owned by fisher-folk, of which 8,746 were mechanized, 5,583 motorized and 2,496 non-motorized. In the study area 140 mechanized motor boats were available, there was no any non-motorized boats in all villages. The village wise craft owned by fisher folk (full ownership) in the study area as per Marine fisheries Census 2010 Gujarat is given in **Table- 24.**

4.0 MAJOR FINDINGS AND CONCLUSIONS

The present study gives sufficient space to include the respondents both from men and women to equalize gender hierarchy with unbiased perception. Since, most of the respondents were married the responses which are given by them are mostly based on their observations and experiences it has been assumed that the maturity level of the responses were of high standard. Although a marginal proportion of the respondents were illiterate a major portion consisted of people who attended at least the primary education, hence the respondents did not face much difficulty in understanding and responding adequately to the questions. Coming to the occupational status of the respondents, most of them were from the category of main workers other workers, agricultural laborers and this has made them to feel job insecurity which effects on their livelihood. It was also found that, a huge number of the respondents depend on both semi-skilled and unskilled occupations which make their employability level low and results in gaining less income. The selected area for research is a multicultural area where people of different ethnic groups and religious denominations were present with a majority of the people belonged to Hindu religion with consist of Other Backward Classes (OBC) as dominant groups and a visible proportion of the population belonged to the Scheduled Caste (SC) and Schedule Tribe (ST) and it was felt that, the welfare facilities need to be provided for them under corporate social responsibility (CSR) according to the terms of references. Though, the majority of people in study area predominantly speak in Kutchi language sindi, Gujarathi and hindi. The family size is an important variable in planning the CSR activities in any area, and the average size of the family in the research area was found as 4-5 members in a family and less than that. The families consisting above 6 members were of a countable number and very rare. This finding indicates that, the AEL has to plan the CSR activities in the research area very intensively. Selected research area is known for its prosperity in terms of socioeconomic and natural resources. Hence, obviously the majority of households belong to above poverty level families. As per the occupational status is concerned, the more number of respondents belonged to the unskilled, semi-skilled and agricultural casual laborers, factory workers category and their family income was also revealed as meager and seldom. It was also noticed that most of the household's annual income is more than 30000 thousand. Besides the CSR activities by the Company, it understood that Refinery plant shall also generate various opportunities for direct indirect employment and business in the area which shall positively impact the income generation activities for local people. During construction phase, about 2000-3000 persons on average per day will be required and during the operation phase about 2000 direct employment and about 5000 indirect employment would be generated.

Health and hygiene is an important area where lot of CSR activities can be carried out. It was found in the present study an overwhelming majority of the population in the study area was much aware about the health and hygiene and built toilets in their houses and very negligible percent of the populations yet to build the toilets in their houses. The study area all villages are not covered in Total Sanitation Campaign (TSC). As per primary survey 04 villages are having closed drainage facilities, 05 villages are having open drainage facilities, Nani

Khakhar village is covered with uncovered open pacca drainage, Mota Bhadiya, Tragadi and Nana Bhadiya villages are covered open kaccha drainage facilities, Kandagara Mota, Moti Bhujpar, Jarpara villages from Mundra tehsil and Mota Bhadiya, Tragadi, Nana Bhadiya, Nani Khakhar villages from Mandvi tehsil are having Drain water is discharged directly into water bodies or to sewar plant. Hence, AEL can do a lot under CSR activities to generate more awareness and promote the cleanliness and hygiene through Swachh Bharath and Total Sanitation Campaign. The study area on an average has 535 females per 1000 males as per 2011 census reports. In comparison to the district sex ratio (Kutch 908) the study area has recorded lowest sex ratio. The reason for lowest sex ratio is the study area is male migrants are more in the study area, who came for employment. The work participation rate in the study area 0-3 km is 80.77% which is more than the district (Kutch district work participation rate 37.1%). In comparison to the study area proportion of SC population to Kutchchh district less than in the district (Kutch district Proportion of SC Population 12.4%, Proportion of ST population 1.2%). The data of study area reveals that literacy rate of 76.40% as per 2011 census, which is found to be more than the district rate of literacy (Kutch 60.9%).The main workers to the total workers are 90.57% and the marginal workers constitute to 9.43% to the total workers.

16 villages are covered in the total Study area; the drinking water facilities are found to be poor in the proposed cooper smelter project area. Tap-water treated source is not available in the study area a. All villages are having untreated sources, 05 villages are having covered well sources, 13 villages are having Tube Wells/Borehole sources, 06 villages are having Tank/Pond/Lake sources, 01village is having River/Canal source. Majority of the population depend on the panchayat taps for the source of water. Hence the Project Proponent can support the panchayats in the drinking water development activities in the study area.

Majority of the households come under middle income category for them the meeting the expenses of their children's education is one of the heaviest burdens. The study also reveals that the respondents are expecting scholarships for higher education. Hence, awareness generation and linkages between rural masses and agencies who are providing different scholarship should be increased through CSR activities by ael.

The holistic development of the children depends on creative and contended childhood. The study revealed that a meager percentage of children do not participate in sports and cultural activities. But playing games, involvement in sports and cultural activities is an important part in growth and development and a vital activity in shaping child personality. The project proponent can actively involve in promoting inclusive sports and cultural activities through CSR programs.

The component of schooling plays a vital role in building the personality of the children towards constructing a prosperous nation. Therefore providing good amenities in the school is very important. As researched in the study area the respondents were quite happy with all the amenities like, school building, separate toilet facility, drinking water, library and computer lab facility,

playground and furniture equipment and teaching aids. However it is interesting to know that safety measures at schools are not up to the satisfaction of the respondents. Therefore, a special interest can be showed on safety measures along with improving other amenities in local schools through the CSR activities.

01 Primary Health center, 05 primary health sub centers, 03 Maternity and child welfare center, 01 dispensary are available overall 16 villages in the study area. The Community health centers, TB clinics, allopathic hospitals, hospital alternative medicine, veterinary hospitals, mobile health clinic and family welfare centers, community health centers are nil in the study area.

Even after introducing many provisions by the government related to health in different stages such as PHCs, CHCs and district hospitals it is quite interested to know that a sizeable respondents still depended on traditional health practices hence it is advisable that through the CSR activities a modernized health amenities can be made available to the vast Population.

Providing basic amenities to the citizens is the duty of the society and also supplying sufficient nutritious to the children and pregnant women is recommended to extend and enlarge to the maximum number of population. In the research it is identified that a vast number of respondents were not receiving supplementary nutrition from the anganwadi centers. Hence it is suggestible to make separate study to understand the reasons behind not receiving the nutritious food from the stake holders and on the basis of outcomes separate measures can be taken to fulfill the needs.

After making primary health as a major element in the Sustainable Development Goals (SDGs) the monitoring body of UNO has advised to every nation to take amicable health measure in enriching the slogan, health for all under this slogan respective states have taken measures to reach the general population. Through the study it is found that most of the respondents are familiar in accessible of health practitioners but a notable issue is here that the vast number still are not in the condition to reach the health practitioners due to other issues. Hence there is a huge scope for CSR activities to monitor the health practices with the collaboration of concerned authorities.

Since a majority of the respondents have opined that conducting and organizing health camps are beneficial to the people in the vicinity it is suggestible to extend and cover further activities in addition to existing events.

Extending the needed services to the beneficial depends on the level of infrastructure so in the present study as per satisfactory level of amenities it is found that majority of the respondents were satisfied concerned to the following: they are; infrastructure of the primary health center, ambulance services, hygiene in and around the hospital, availability of beds, modern treatment equipment's and specialized health practitioners and finally satisfaction of treatment processes. Though the respondents were satisfied with health amenities there is a scope for improving better than the present.

The study found that although majority of the households have immunized their children a sizeable percentage refrains from immunization. To have a healthy future of the nation immunization of each and every child is necessary. Therefore due steps need to be taken inconsideration while preparing CSR activities.

To have a healthy child, a mother should take care of herself; the research reveals that a vast portion of the sample size did not receive prenatal care prior to the child birth hence priority should be given to prenatal care to the woman.

Though the majority of respondents are well aware there is no meaning in preparing awareness campaigns on the issue of family planning however a portion of the population are unaware regarding the family planning methods hence more can be done in this aspect for the society. This initiative will definitely be of massive help to the families.

The research has highlighted the status of alcoholism in the research area. Alcoholism has been tormenting societies from time long-established and has been responsible in devastating families in all spears of life. A major portion of the society has been in the clutches of alcoholism and it already has caused havoc in their families, although there are households from which there are occasional drinkers and non- drinkers but there is utmost probability that they too become slaves of alcoholism. Therefore there is chance to establish de addiction centers in the surroundings and to create awareness regarding substance abuse.

Water as a source for our routine activities in the research it is found that majority of the population were depending on open wells as source for irrigation, improving the condition of water level is in priority and very marginal portion of the research were utilizing other sources of irrigation such as tube well, monsoon, and river or lake or pond. Hence through the CSR activities separate monitoring methods can be implemented in improving the quality of water for the irrigational purposes. The study found that for agricultural uses 24 hours of power is available for agricultural.

Concern of the population to concern the health condition of the livestock, hence the need of veterinary services so in the study it has been revealed that a vast number of population is haven't the accessibility of veterinary services. The veterinary hospitals are nil in the study area, At this juncture CSR activities can also be enlarged for the vast population in protecting their livestock's to improve their livelihood. Livestock's as the major source for people livelihood it's the prime.

As per the study is concerned the majority of the women in the household are doing household chores and during observation many of the women expressed their desire to involve themselves in some income generating activities whereas a few women expressed that they would like to spend their time in some activities which would help others as well as give recreation and self-satisfaction to them. Such women generally seek guidance from others to fulfill their desires but they

do not have any such guide. Hence the company can utilize this opportunity to involve them in income generation and social service.

The study reveals that many of the respondents were in need of skill based trainings as most of the population has transitioned from their earlier occupations to other occupations. It was also observed that a very negligible percent of the sample has received vocational training. It is recommendable to the CSR wing for taking up special skill based trainings to the project area population as part of income generation activities. Linkage with Pradhan Mantri Kaushal Vikas Yojana (PMKVY) is the flagship scheme of the Ministry of Skill Development & Entrepreneurship (MSDE). The objective of this Skill Certification Scheme is to enable a large number of Indian youth to take up industry-relevant skill training that will help them in securing a better livelihood. Individuals with prior learning experience or skills will also be assessed and certified under Recognition of Prior Learning (RPL), approved for another four years (2016-2020) to benefit 10 million youth Allocated Budget 12,000 Crores.

As revealed in the research report there are a number of Self Help Groups (SHGs) in the project areas and a majority of the members of the households are also the members of the SHGs. Hence suppose the Project Proponent needs to provide and promote any CSR activities can be initiated in these groups and they can become a gateway to the families

As the data reveals that many of the respondents were expecting financial assistance for income generation activities, it may not be possible for the project proponent to monitor the financial assistance extended to the individuals hence it is suggestible to the Project Proponent to collaborate with the SHGs and other local associations to extend financial assistance in income generation activities.

Though the project proponent do not have any direct role in providing assistance with the government schemes, The Company can, through its CSR wing help the beneficiaries to get accessibility towards what they are eligible for; like widow pensions, old age pensions and disability pensions.

The project proponent can be appreciated on the basis of the CSR activities already done in the past as seen in the field by the research team. The project proponent should take action in extending to maximum number of the respondents and to increase the size able number of beneficiaries.

The research agency made an attempt to understand the threats those were perceived by the respondents in anticipation of loss of their land and the question posed, revealed that majority of the respondents felt pollution would lead to face the problem of health, illness and finally it would lead to marginalization and social disintegration of the people.

There were 476 traditional fishermen families in the study area with a population of 3065. In the study area 140 mechanized motor boats were available, there was no any non-motorized boats in all villages. In Tragadi village 56 families were having membership in Fisheries co- operatives. In the study area all families were

belongs to Muslims. There is no Hindu and schedule caste (SC) and Schedule tribe (ST) families. The study area there were 660 active fishermen of whom 654 were fulltime fishermen, 5 were part time fishermen and 1 person was engaged in seed collection and 561 persons were fish allied activities. Fisher folk excluding children active fishing 54.05% and fishing allied activities such as Marketing of fish 24.73%, Making/Repairing Net 12.94% and Curing /Processing 8.27%. 78.25% of female were engaged in fishing allied activities and 21.75% male population were engaged in fishing allied activities. The total Literacy rate (%) to the total population of Navinal village is 27.27%, Jarpara village village 19.27%, Dhrab village 7.23%, Nana Bhadiya village 27.19%, Mota Bhadiya village 27.19% and Tragadi village 12.40%.

5.0 RECOMMENDATIONS AND SUGGESTIONS FOR AEL TO INTRODUCE CSR ACTIVITIES

Section 135 of the Companies Act, 2013 ("Act") provides that a company having net worth of rupees five hundred crores of more or turnover of rupees one thousand crores or more or a net profit of rupees five crores or more must constitute a corporate social responsibility committee ("CSR Committee") consisting of three or more directors, one out of whom must be an independent director. The CSR Rules have been notified on 27 February 2014 and will come into force on 1 April 2014. The CSR Committee is required to formulate a corporate social responsibility policy ("CSR Policy").

Additionally, it is required that the CSR Policy adopted by the company must specify that, any surplus arising out of CSR activities will be re-directed towards CSR Activities and not the business of the company. Further, the board of directors are required to submit a report under Section 134 (3) of the Act, and the relevant portions of the CSR Policy must be disclosed in the said report, also, the relevant portions of the CSR Policy adopted by the Company must be disclosed on the company's website.

A significant addition to implementation partners are companies incorporated under Section 8 (erstwhile Section 25) of the Act.

CSR Activities can now be implemented through the company's own established:

- Registered trust
- Registered society
- Company or its subsidiary or holding or associate company under Section 8.

If such a trust, society or company is not established by the company, then it must have an established track record of three years in undertaking similar projects or programs.

Here is a description of what counts and what doesn't, as per the rules:

Activities included in CSR expenditure:

- Expenditure on programs related to CSR Activities approved by the board of directors, and on the recommendation of the CSR Committee (must be cited in the CSR Policy)
- Expenditure on building capacity of CSR team (up to 5 percent of CSR expenditure), through institutions with an established track record of at least three years
- Contribution to corpus.

Activities excluded from CSR Expenditure:

- Political contribution
  Activities that are solely for benefit of employees and their families
- Activities that are in pursuance of business-as-usual / activities undertaken in pursuance of normal course of business of a company.

- Under the broader scheme of miscellaneous CSR initiatives, AEL has worked towards taking care of the environment wherein it operates as well as contributed towards overall rural development.

- AEL promotes and supports the initiatives taken by district Collectors and Superintendent of Police to adopt districts for their development and growth. As part of the qualitative and quantitative study the research team led by the Principle Investigator visited few selected areas of the sample to understand the ground reality. A reconnaissance survey to the study area was also made and information was gathered from the villagers, agriculturists, traders, and Panchayat officials with the help of FGD and observations. The qualitative information collected was analyzed and has been presented in this report. For the proposed expansion of the cement plant both skilled and semi-skilled employment shall be generated. This employment potential created by the proposed expansion project shall improve the socio economic life of the region and contributes in increase in the GDP as a whole.

- During construction phase, about 2000-3000 persons on average per day will be required and during the operation phase about 2000 direct employment and about 5000 indirect employment would be generated.Further, unskilled workforce required for maintenance and other day to day jobs shall be hired from nearby villages by the contractor. Hence, direct or indirect employment generation potential is envisaged. The following suggestions have been recommended to the Project Proponent under the CSR activities on the basis of qualitative as well as quantitative analysis.

Education:

1. Establishment of new school buildings in near villages to improve strength, support in improving the basic amenities at the schools like adding classrooms, auditorium or distribution of uniforms, science lab and computer labs.
2. Program for skills improvement of teaching staff in the elementary schools.
3. Increase the co-curricular and extra-curricular activities in the schools to

avoid dropouts.
4. Igniting minds of students through exposers to new age technologies and scholarships.

Rural Infrastructure Development:

1. Construction / Repairing of toilet facilities of Schools / Anganwadi / Solar Street Light & other Green Nurturing Programs / Swachch Bharat.
2. Upgrade primary health centers.
3. Support gram panchayats for renovation and expansion of connectivity roads between villages.
4. Create awareness and establish linkage between Government Departments and Local people so that available schemes of the government on solar lamps and solar pumps can be availed in local area.
5. Support village Panchayats to upgrade existing and introduce new public toilets.
6. Launch scheme for support and development of drinking water in the area and support village Panchayats in installation of RO based drinking water
7. Promote bio-gas installation in agri or animal husbandry based families households.
8. Scheme for maintenance of drainage facilities to curb the vector borne diseases and other diseases which spread through unhygienic practices.

Community Health and Sanitation:

1. Mobile Health Care Units.
2. Poor Patient Assistance Programmed and organize medical camps including alcohol de-addiction camps.
3. Provide equipment's for differently abled and disabled in the community such as the disabled, to have an autonomous life
4. Establish and support blood bank in identified villages in collaboration with health centers for the benefit of general public during an emergency.
5. Generating awareness on issues related to tabooed health practices in the society like personal hygiene and menstrual hygiene for ladies and girls.
6. Scheme for psychiatric health in collaboration with the existing health centers.
7. Medical insurance scheme for disabled and tribal population.

Livelihood Development:

1. Vocational and skill development trainings for the local youth and household women as part of income generation activities.
2. Extend assistance to start SHGs to empower women and material and financial support to take up self-employment.
3. Alternate livelihood opportunities creation for the seasonally unemployed people creation of an endowment of Fishermen Welfare Fund to enhance their quality of life through creation of facilities for fish landing platforms / fishing harbour / cold storage, also to provide relief in case of emergency situations such as missing of fishermen on duty due to rough seas, tropical cyclones and storms etc.

4. Different types of fishing nets are produced by the department and that is provided to the fishermen
5. Supply of different types of fresh water fish seeds like spawn, fry, advanced fry, finger lingsana and advanced finger lingsana.
6. Supply of mobile vans to fisherman co- operative societies for Retail sale of fresh water fishes and marine fishes
7. Separate fund for Fisherman Accident Insurance Scheme
8. Support to Government will issue biometric identification to all fishermen
9. Creation of an endowment fund for Tribal population to enhance their quality of life through livelihood generation activities, medical insurance and scholarships for tribal students for primary, secondary and higher education.
10. Special provisions can be introduced for the economic empowerment of vulnerable sections of the population such as the disabled and tribal.
11. AEL CSR team has a moral obligation towards the vulnerable among the population, the Company can employ deserving disabled people in its work force and also try to uplift through supplying disabled aids to the disabled people.

Community Environment:

1. Large scale plantation support scheme (1 Lac Surviving Tree) beyond green belt within 10 km area of the project within project phase in, participatory approach by including stake holders, schools and community based organizations.
2. Organization of Eco-clubs in schools with over 1000 students and teachers as members of the Eco Club in the area focused on creating awareness among children and harnessing their strength for environment protection activities including waste management and plantation.
3. Scheme for promotion of use of solar lamps and energy efficient equipment by community on the line of Government of India LED lamps distribution. Adani - way to Light mitigating part of the CO2 emission.
4. Awareness on rain water conservation and harvesting and Implementation of watershed management with scientific methods.

Donations

1. Contribution to the Prime Minister's National Relief Fund or any other fund set up by Central Government for socio-economic development and relief and welfare of Scheduled Castes, Scheduled Tribes other backward classes, minorities and women;
2. Contributions or funds provided to technology incubators located within academic institutions which are approved by the Central Government;
3. Protection of national heritage, art and culture including restoration off buildings and sites of historical importance and works of art; setting up public libraries; promotion and development of traditional arts and handicrafts;

Tax deductions under Income Tax Act 1961 (Section 80G)

1. Donation to State Government Fund for Medical Relief to the Poor

2. Chief Minister's or Lt. Governor's Relief Fund
3. Donations to government for promoting family planning.

Monitoring and Evaluation of CSR Activities:

1. Strengthening the existing CSR wing of the Project Proponent by increasing and improving the man power.
2. Proper follow-up methods need to be implemented after the completion of every programme.
3. Recognizing NGOs working in various fields and becoming a Partner in their work to fulfill their objectives.
4. The company could adopt villages in the vicinity and provide to their needs by the means of a registered NGO of the company. Such NGO should be open to the suggestions of stake holders in the community and provide need based help to the people.
5. Utilize the assistance of Quality council of India accredited social scientists and practitioners to evaluate and monitor the CSR activities.
6. Conduct regular social audit to know the accountability and transparency level regarding the existing CSR activities.

The proposed CSR activities 2018 to 2023 are given in **Table-25.**

TABLE-25
PROPOSED CSR ACTIVITIES 2018 to 2023 WITH TENTATIVE BUDGET*

Sr. No.	Key Area Identified for intervention through CSR activities by proposed Copper Refinery Plant	Proposed Expenditure in Project Construction Phase (Rs. in Crores)					Total Proposed Expenditure (Rs. in Crores)
		1st Year	2nd Year	3rd year	4th Year	5th Year	
A	**Education Initiatives**						
	• Supporting in creation of assembly halls, prayer hall, classrooms, computer labs, space for mid-day meal, playground, school walls etc. for government school • Igniting mind of students through Science on Wheels, UDAN schemes. • Educational Vocational Guidance Fair (EVGF) for career talk. • Balwadis for the kids of fisher-folk community to provide awareness about education, health, hygiene, and discipline. • Programme for skills improvements of teaching staffs in govt. schools.	1 Crore	1 Crore	1 Crore	1 Crore	1 Crore	5 Crore
B	**Community Health Initiatives**						
	• Senior Citizen Health Card Scheme to address the needs of the senior citizens. • Various health camps organization at regular intervals i.e. Gynaecological care, Blood donation, Health awareness programs, HIV/AIDS, Cataract detection. • Provision of Free Mobile Health Care Units (MHCU). • Promotion of awareness of Malnutrition and Anaemia. • Setting up rural clinics to ensures outreach services.	2 Crore	2 Crore	2 Crore	2 Crore	2 Crore	10 Crore
C	**Sustainable livelihood and Women Empowerment**						

	• Extend assistance to start SHGs to empower women and material and financial • support to take up self-employment • Amenities like equipment support, sanitation facilities, approach roads, fish lending sheds, fisher-folk vasahats (Settlements);training for livelihood, Insurance etc. • Skill Development Centre (SDC) to make the youth for achieving their Goals in life by becoming Skilled Professionals. • Provision of Fodder Support, Promote bio-gas installation in Agri and animal husbandry based families' households. Construction of cattle sheds, Awareness meetings and exposure visits for Animal Husbandry. • Support for Drip irrigation.	**1 Crore**	**1 Crore**	**1 Crore**	**1 Crore**	**1 Crore**	**5 Crore**
D	**Community Rural Infrastructure Development**						
	• To provide facility for Potable drinking water by providing RO Plants, drinking water supply system, overhead tank and underground pump at in villages. • Creation of clean and hygienic environment by proper drainage systems, sewage treatment plants, community led Sanitation Campaign etc. • Construction of various Community centres to facilitate social activities, Upgradation of facility at crematoriums, Gaushala, and creation of bus stands etc. • Conservation of water by construction of check dams and pond. • Upgradation of primary health centres, renovation of roads and expansion of roads, Construction of toilet facilities etc. • Provision of Solar street lighting, green nurturing programs, implementation of Swachchh Bharat initiatives	**4 Crore**	**4 Crore**	**4 Crore**	**4 Crore**	**4 Crore**	**20 Crore**

EXECUTIVE SUMMARY

The present 'Hazard Identification and Risk Assessment' study carried out during December 2016 by Safety Consultancy Services, Ahmedabad for the copper smelter project of Adani group at Mundra Gujarat on the instance of the Management. Present study includes identification of hazards inherent in various plants likely to come up in the proposed project. The methodology used for the hazard identification and risk assessment was by personal discussions with the plant personnel who are aware of all the aspects of the plant or equipment being studied and identification of the hazards in the light of various statutes and standards applicable to the respective plants or equipments. Each identified hazard was also assigned with the risk matrix to indicate the gravity of the problem which is depends on the severity and likelihood of the considered hazardous situation.

The information generated during the study has been presented in the main body of the report under the title Hazard Identification and Risk Assessment Sheets. These sheets includes the hazard, action contemplated by the management to cope up with the hazard, residual hazard if any and suggestion to cope up with the residual hazards also. The recommendations generated during the study have been presented once more in the section "Recommendations".

Basis the available documents and discussions held with the process officials, it is observed the proposed system to provide safety to the personal, Environment and mitigate risk adequate still to ensure the objective make overall safe are here are few recommendations of various types are given in the report. It is not practical to describe each of them in this summary, yet important suggestions are being indicated in the summary.

The concentrate unloading and its transfer to the storage hopper and to designated storage area, involve the dust generation which are being taken care by adequate measures to minimise the dust generation. To minimise hazards involved in belt conveyors the company intends to provide pull chord switches and rolling the belt into pipe form while transferring. Guarding of nip points of the belt rollers has been

1296

suggested to avoid entanglement of the body parts of the workers around. It is suggested the after commissioning of the plant the dust levels should be monitored and if the workplaces are found dusty, the local exhaust arrangements is recommended to extract the dust from each transfer point.

The Sulphur dioxide is generated during the smelting and converting process from furnaces, is collected under negative pressure to avoid release of gas from any system. There is a possibility of failure of the blower and the whole system going under positive pressure and release gas from several places. System is designed such that in such scenario the plant operations will be automatically comes to halt and generation of the gases will stop. Residual gases in the system will be routed to scrubbing system. Keeping this in view the suggestions have been made to keep respiratory protective devices and remedies for the situation. Copper fumes are also likely to evolve. Periodic monitoring of copper fumes is suggested to ensure that the exposures are within the limits.

Working in furnace area involves exposure to thermal stress also. Though all the vessels and ducts are likely to be lagged, it may still be difficult work in some areas for long time. It is suggested that air conditioned rest room should be provided so that the workers are able to get relief from the stress. The workers should be encouraged to increased intake of water and salt during summer. Possibility of localised cool air blowing at the work spots may be considered if the work spots are fixed.

Hot metal from furnace to furnace is transferred by way of launders and ladles. It is suggested that the area where there is possibility of falling of molten metal should be barricaded to avoid short routes. The spillage of molten metal can take place from the ladles also. It is suggested that the route of the ladle should be marked and workers should be advised/warned through display boards about the risks.

The hazards of lightening may exist in all the plants and equipments. It should be ensured that the whole factory should be under the coverage of the lightening arrestors. All the equipments and vessels should be provided with the double earthling. The electrical hazards in each switch room should be adequately handled by providing tested rubber mats in front of panels, danger board on each high voltage panels, exhaust fans to ensure proper ventilation, fire extinguishers, escape routes of adequate size, doors opening outwardly etc. The provisions of Indian Electricity Rules should be strictly followed in transformers, electrical panels, switch yards etc. The methods of artificial respiration should be displayed. Unauthorised persons should not be allowed in the switch rooms. The earth resistances should be checked with adequate records. The rescue rod and discharge rods should be kept available in the switch room. The chances

Safety Consultancy Services AHMEDABAD SCS

1297

of electrocution due to faults in ESP and wet electrostatic precipitator and gas washing area should be avoided.

Melting of the scraps in the furnace involves possibility of entry of water or other liquids which may cause localised blasts furnace leading to splashes of molten metal. Keeping this hazard in view the scrap should be visually examined before allowing to charge in to the furnace. The furnace is operated under negative pressure, and generated SO2 is transferred through a closed ducting to Sulphuric Acid Plant. Fugitive gases from the process are scrubbed in Lime/ Caustic solution. It should be ensured not only pH but also concentration measurement to be monitored to ensure alkalinity. This will give adequate time for doing the make-up of the alkalinity.

Use of chlorine in the plant involves the risk of chlorine release. It is suggested that the chlorine emergency kit and the self contained breathing apparatus should be kept available close to the use point. Ensure that the chlorinator is provided with vacuum valve to stop chlorine flow in case of water flow failure.

The material handling equipments like cranes and lifting tackles play a very important role in total safety of the plant. It should be ensured that only tested & certified equipments by a competent person at prescribed intervals should be allowed to be used. The operators of fork lift trucks and other mobile equipments should have certificate of competency in operating of the such special equipments/vehicles in addition to the driving license for transport vehicles.

There are Pressure Regulating valves in various gases and steam. These devices fail due to diaphragm rupture equalising the pressure at both sides of the regulator. It is suggested that safety valves should be provided in downstream side to present damage of downstream fittings.

Heat exchange surface of the heat exchangers used for cooling the sulphuric acid is subject to develop leakage. The pressure of the acid should be kept higher and the pH of the water should be measured once in a day. Online monitoring of cooling-water pressure and pH to be maintained.

All the flanges in the acid piping should be guarded suitably to avoid the spray release of acid and contact with skin or eyes. Secondary absorption system should be started as soon as SO2 is allowed to be vented through chimney. Sufficient number respiratory protection against acid gases should be kept available in the plant. Provision the dyke walls may be made to hold the spillage of acid within a dyke wall.

The vent of the concentrate sulphuric acid should be provided with the self indicating silica gel column, colour of which should be checked once in a week with record. In case the 75% gel is decolorized the gel should be changed with regenerated

Safety Consultancy Services SCS AHMEDABAD

1298

silica gel. The hazards of all the toxic, flammable, reactive and explosive substances with the control measures and emergency response procedure should be displayed in the language known by majority of workers.

The robot system being provided for handling the Copper Cathodes should be barricaded with door interlocked in such a way that robot cannot start as long as the door is open.

Rock phosphate handling will be generating lot of dust; the same is to be controlled by way of adequate capacity of bag filters. Hydrogen Fluoride generated during manufacturing of Phosphoric Acid is scrubbed in the scrubbers, before it is released through the stack. In case of the failure of the scrubber pumps, the process should get automatically stopped, to prevent further generation of the gases.

It should be ensured that the components of the Oxygen gas manufacture and handling system is free of any grease or oil.LPG Storage, handling and use should be provided with all the safety measure prescribed by the supplier of the system and PESO directives. Usage of the required personal protective equipments as defined in the various processes by Employees to be ensured. Employees to trained, working in the various areas, on the risk involved and mitigation measures to be taken.

1.0 INTRODUCTION:

The present Hazard and Risk Assessment studies were carried out by Safety Consultancy Services, Ahmadabad in order to identify the hazards inherent in proposed copper smelter plant at Mundra, District Kutch, Gujarat at the instance of the Management of Adani Copper Project, Mundra. Objective of the study was to review the operations likely to be carried out in the project. Process details were made available by the management and where ever explanation was required, explanations were sought from the plant officials. As the whole thing is only in plan, the method adopted was brain storming to derive subjective assessment and the precautionary and control measures on the basis of the experience. The scope of the studies was mainly in the process area, as the storages are likely to be covered by another team of experts.

2.0 METHODOLOGY:

The method adopted for carrying out the study was based mainly on the subjective assessment. The processes were first explained to the team by a plant official. The only document that included the processes was, 'pre-feasibility report, for the proposed copper smelter project at Mundra, Kutch District, Gujarat'. Each location or section of the project was considered for identifying the hazards and risk. In each section the equipment and process substances were viewed for their inherent hazards, and the preventive and control measures which the management proposes to include. Any residual hazard that was considered significant by the team members was recorded along with the suggestion to cope with that hazards. In order to record all the points a format as presented below was used. Severity of hazard, extent of likely hood and net risk ranks were ranked with the help an established method being presented below:

2.1 RISK RATINGS:

Based on the subjective ratings of severity (S) and the Likely hood ratings (L) the HAZOP Risk Matrix (R) has been estimated and present along with each item of analysis. The basic criteria used for these ratings are presented below:

2.2 Severity Rating (S):

Event having the potential of fatality:	1
Event having the potential of Recordable/ lost work case/minor fire:	2
Event having the potential of minor injuries:	3
Event having the potential of no injury, minor property/ equipment loss:	4
Event having the potential of recoverable operational problem:	5

2.3 Likely hood (or frequency) Ratings (L):

Probable > 1 per year	1
Possible 10^{-2} to 1 per year	2
Unlikely 10^{-4} to 10^{-2} per year.	3
Very unlikely 10^{-6} to 10^{-4} per year	4
Extremely unlikely < 10^{-6} per year	5

2.4 Risk Matrix (R)

Likely hood (L)	1	4	4	2	1	1
	2	4	4	3	2	1
	3	4	4	4	2	1
	4	4	4	4	3	2
	5	4	4	4	4	4
		5	4	3	2	1
		Severity (S)				

The Risk levels used in table above are defined as below:

SNo.	Risk Level Definition	Definition
1.	**Unacceptable**	Should be mitigated with engineering or administrative.
2.	**Undesirable:**	Should be mitigated with engineering or administrative actions to a risk level of 3 or less within 12 months.
3.	**Acceptable with existing control**	Verify that procedures or controls are in place
4.	**Acceptable as is**	No further mitigation is required

3.0 PROCESS DESCRIPTION:

Raw Material Handling:

To have the raw materials handling as the most environment friendly process, the following are planned:

1. Concentrate transportation from Port to Plant concentrate warehouse by Pipe Conveyor
2. Covered Concentrate warehouse
3. Internal transportation of the concentrate by pipe conveyor to the furnace.
4. Covered bin building for intermediate storage of concentrate
5. Covered Storage for other Raw Material during rainy season.

Concentrate Warehouse:

Concentrate will be imported from across the world. Concentrate will be unloaded from the ship at Port and will be conveyed to plant warehouse in pipe conveyor. The concentrate will be stored separately in different heaps based on the quality of the material. Warehouse will be built to store at least 25 days consumption quantity. This will help to take care of the shipping schedule as well as blending requirement as per furnace feed design.

Flux Storage Area:

Silica Sand, Lime stone and Coal will be required for addition in the concentrate for effective smelting. They will be stored in open space. However a covered storage will be provided for minimum of 15 days storage, which will be required during rainy season continuous operations.

Bin Building:

Bin building will have intermediate storage bins to store different quality of the Copper Concentrate, Flux material along with Coal and Process Reverts. These bins will be equipped with weighing system for effective blending and maintaining the metallurgy of the furnace.

Paddle Mixer

Paddle mixer is a online mixing system to mix effectively different ratio of Concentrate with flux material and will have provision to add moisture to get required mix material, suitable for furnace feed.

Smelting Furnace:

It is proposed to have smelting furnace for production of 9,00,000 TPA of copper anode production. Copper Concentrate blend mixed with flux material is fed to the smelting furnace, where enriched air added with oxygen is fed to furnace. The smelting reaction takes place at furnace temperature around 12000C. Furnace produces Copper Matte (~60% Cu); Copper Slag (~1% Cu) and Sulphur Di-Oxide Gas (SO2). Both Copper Matte (~60% Cu) and Copper Slag (~1% Cu) is tapped to Settling furnace and Sulphur Di-Oxide Gas (SO2) is transferred to Sulphuric acid plant through a closed pipeline. The smelting furnace will be provided with a waste heat recovery boiler to recover the heat from the off gas of the process.

$$CuFeS2 + O2 + Si02 \rightarrow Cu\text{-}Fe\text{-}S + Fe0.Si02 + SO2$$

The purpose is to utilise heat of the gases within the process and also conservation of water. The furnace will be attached with a state of the art, electrostatic precipitator and a high capacity induced draft fan to transfer the gases to Sulphuric Acid Plant. The secondary off gas will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO2 before it is discharged to atmosphere.

Settling Furnace(s) :

Settling Furnace will be provided for Matte and Ferrosand (Copper Slag also called as Iron Silicate) separation. The Copper matte & ferro sand from smelting furnace will be periodically tapped from the tap hole which will be provided with water cooled copper block in the smelting furnace. The tap hole will be opened with a tap gunning

machine. The ferro sand/ matte together will flow by gravity to the settling Furnace for ferro sand and matte settling and separation. Separation of will take place on the basis of the density difference. The temperature around 1250°C will be maintained. The off-gases from the furnace operation will be taken smelting furnace scrubbing system.

Smelting

Ferro sand settled in the settling Furnace will be granulated and will be collected in the collection pond. Ferro sand granulation clear water will overflow into a clear water pond and it is pumped to spray pond for cooling and then recycled back. The granulated ferro sand from settling pond will be collected and discharges the same in a steel bunker. From the steel bunkers ferro sand will be transported to the designed ferro sand dump area and further sale/disposal.

Pierce Smith Converter :

Pierce- Smith Converters will be used to Convert Copper matte to Blister Copper (~98% Cu). Converting is oxidation of molten Cu-Fe-S matte to form molten 'blister' copper(~ 98 % Cu). It entails oxidizing Fe and S from the matte with oxygen-enriched air or air 'blast'. It is mostly done in the Peirce-Smith converter, which blows the blast into molten matte through submerged tuyeres.

The main raw material for converting is molten Cu-Fe-S matte from smelting. Other raw materials include silica flux, air and industrial oxygen. Several Cu bearing materials are recycled to the converter - mainly solidified Cu-bearing reverts and copper scrap. The products of converting are:

(a) molten blister copper which is sent to fire- and electrorefining
(b) molten iron-silicate slag which is sent to Cu recovery, then discard
(c) SO2-bearing off gas which is sent to cooling, dust removal and & H2SO4 manufacture.

The heat for converting is supplied entirely by Fe and S oxidation; i.e. the process is autothermal. The overall converting process may be described by the schematic reaction:

Cu-Fe-S + 02 + Si02 Cuo l+ { 2FeO:SiO2 :Fe3O4 } + SO2

Molten in air and in flux molten slag with Gas matte oxygen some solid Fe304 Primary Gases from these furnace will be routed to Sulphuric Acid Plant. The furnace will be attached with a state of the art, electrostatic precipitator and a high capacity induced draft fan to transfer the gases to Sulphuric Acid Plant. Proper water cooled double hood arrangement and gas cooling system, etc will be installed to collect the secondary fugitive emission. The secondary off gases will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO2. This will enable continuous operation of three converters with one converter on periodical maintenance.

Ferro sand Cleaning Furnace (FSCF) :

The ferrosand (Copper Slag) from converter will be processed in the ferro sand cleaning furnace. Slag-cleaning furnaces process smelting furnace slag as well as slag from Pierce Smith Converters. A reducing agent is often required to reduce Cu oxide in the slag to Cu metal or Cu sulfide. Coal or Metallurgical coke is often added for this reduction.

C + Cu2O CO + 2Cu0

Carbon additions also reduce solid magnetite in the slag to liquid FeO:

C + Fe304(s) CO + 3Fe0

This decreases slag viscosity and improves settling rates. Copper Slag is also called as Iron Silicate as well as Ferro sand. Ferro Sand from Cleaning Furnace will be granulated and will be collected in the collection pond. Ferro sand granulation clear water will overflow into a clear water pond and it is pumped to spray pond for cooling and then recycled back. The granulated ferro sand from settling pond will be collected and discharges the same in a steel bunker. From the steel bunkers ferro sand will be transported to the designed ferro sand dump area and further sale/disposal.

Copper Scrap Melting system

Considering the availability of the Copper scrap getting generated within the country as well as in house; a dedicated Copper scrap melting system will be designed to have a sustainable solution for the country. This will help the various copper scrap producer a sustainable outlet to treat the copper scrap and produce LME Grade A Copper cathode. System is also designed to handle utilization of the imported copper scrap as feed stock as well. A state of art technology will be used for the same. Such facilities are available in various developed countries.

Anode furnace & Anode Casting Wheel:

Anode furnaces will be used to make anode copper (~99.5% Cu) from blister received from Pierce Smith Converters. The molten blister copper from Peirce- Smith converting contains -0.01% S and -0.5% 02 . At these levels, the dissolved Sulfur and oxygen would combine during solidification to form bubbles ('blisters') of SO_2 in newly cast anodes – making them weak and bumpy. In stoichiometric terms, 0.01 mass% dissolved Sulfur and 0.01 mass% dissolved Oxygen would combine to produce about 2 cm3 of SO2 (1083OC) per cm3 of copper. Fire refining removes Sulfur and Oxygen from liquid blister copper by:

(a) air-oxidation removal of Sulfur as SO2 to -0.002% S then:
(b) hydrocarbon-reduction removal of oxygen as CO and H2O(g) to -0.15%

Liquefied Petroleum Gas or Natural Gas is used for doing fire refining. The secondary off gases will be taken to a high capacity secondary gas scrubbing system to scrub the traces of SO2. . The final product of fire refining is molten copper, **-0.002% S,** 0.15% 0, 1180- 12000C, ready for casting as anodes. Most copper anodes are cast in open anode-shaped impressions on the top **of** flat copper moulds. Newly developed latest designed double casting wheel system will be installed with Casting rate of ~100 TPH. The newly poured anodes are cooled by spraying water on the tops and bottoms of the moulds while the wheel rotates. They are stripped from their moulds (usually by an automatic raising pin and lifting machine) after a half rotation. The empty moulds are then sprayed with a barite-water wash to prevent sticking of the next anode. The most important aspect of anode casting, besides flat surfaces, is uniformity of thickness. This uniformity ensures that all the anodes in an electro refining cell reach the end of their useful life at the same time. Automatic control of the mass of each pour of copper (Le. the mass and thickness of each anode) will be used. Anode mass is normally 375-425 kg. Anode-to-anode mass variation in a smelter or refinery is **+2** to 5 kg with automatic weight control.

Recent anode designs have incorporated

(i) Knife-edged lugs which make the anode hang vertically in the electrolytic cell and
(ii) Thin tops where the anode is not submerged (i.e. where it isn't dissolved during refining).

The latter feature decreases the amount of un-dissolved 'anode scrap' which must be recycled at the end of an anode's life. Suitable capacity Twin caster wheel arrangement will be provided to produce Copper anode. The Copper anode will be transferred to Copper Refinery for further processing.

Off gas handling:

We propose to install a Waste Heat Recovery Boiler (WHRB) to recover the entire off gas heat from the smelting furnace before reaching to Sulphuric Acid Plant for production of Sulphuric Acid through suitable ESP, ID fan, ducting and a gas-mixing chamber. b. A suitable dust conveying system for WHRB & ESP will be installed and will be consumed within the process. c. The secondary collection system with Scrubbing System will be ensured to have sufficient capacity to handle all the secondary gas. d. Gases will be charged through required size stack to atmosphere after scrubbing and meeting standards prescribed authorities.

Sulphuric acid plant:

Sulphuric acid plant having capacity of 30 LTPA will be provided to handle the gases from Copper smelter with required capacity of Gas cleaning plant to treat the incoming gases. State of art environment friendly technology of Double Contact Double Absorption will be used for Sulfuric acid plant. Effluent generated from Sulphuric Acid plant will be treated in state of art Effluent Treatment Facility. The sulphurous gases generated during the sulphidic copper concentrate smelting and matte converting operation in a Copper Smelter plant are treated in Sulphuric acid plant for the production of Monohydrate sulphuric acid as a byproduct.

The process of production of sulphuric acid consists of three principal steps, namely:
i. Cleaning of the sulphur dioxide gas from the ISASMELT furnace and PS converters.
ii. Catalytic conversion of the sulphur dioxide (SO2) gas to sulphur trioxide (SO3) gas according to the chemical reaction:

$$SO2 + ½\ O2 = SO3$$

iii. Absorption of the sulphur trioxide (SO3) gas by combining with water (H2O) to form a solution of sulphuric acid (H2SO4) according to the chemical reaction:

$$SO3 + H2O = H2SO4$$

The conversion of SO2 to SO3 is an exothermic, reversible and adiabatic reaction and with increase in temperature the equilibrium constants become more unfavorable with respect to SO3 formations. The other factors, which favour equilibrium conversions, are increase in oxygen concentration in the gases or high pressures but the relative gains are rather small. In contrast to the unfavorable effect of high temperature on equilibrium it is found that the rate of reaction increases rapidly with rising temperature. Consequently
optimum performance requires a balance between the opposing effects of reaction rate and equilibrium. Thus the gases entering the V2O5 catalyst normally are maintained between 400 - 450°C. Therefore, in order to achieve over-all high conversion efficiencies between 99.6% - 99.7%, it is imperative that the converter gases need to be cooled between stages to the above temperature range and also removing the partially converted sulphur trioxide formed normally after 2nd/3rd beds, before returning them to subsequent stages. This process is commonly known as Double Conversion and Double Absorption (DCDA).

Gas Cleaning Systems

Waste gases from the metallurgical process must be treated to reduce the sulphur dioxide emissions to the atmosphere. To achieve this the sulphur dioxide in the gas is converted to sulphur trioxide for the production of sulphuric acid in the sulphuric acid plant. The metallurgical off-gases must be cleaned prior to entering the contact section of the acid plant to enable the plant to produce a product acid of acceptable

quality for use and sale. As well, clean gas is required to prevent plugging of catalyst beds and other detrimental effects on equipment such as corrosion and erosion.

Gas Cleaning Systems

There are four main duties to be performed by the gas cleaning system of a metallurgical sulphuric acid plant:

1. **SATURATION** of the gases and **ELIMINATION** of the coarse and fine particulate matter,
2. **COOLING** of the gases, **CONDENSATION** of the metallic fumes and REDUCTION of the moisture content,
3. Removal of the very fine particulate matter as well as the bulk of the acid mist by **ELECTROSTATIC PRECIPITATION** to produce an optically clear gas which is fed to the acid plant downstream.
4. Specialty processes for removal of specific impurities in the gas (i.e. mercury removal, halogens)

Saturation – Adiabatic cooling and saturation of the gas is done in an open spray tower, low or high pressure drop venturi. Some removal of course particulate is achieved.

Elimination – The nature (type, concentration, size) of the impurity/dust determines the type of cleaning device required. Typically, high pressure drop venturi (fixed or variable throat), reverse jet scrubber (DynaWave), radial flow scrubber, etc. is required if dust loadings are high or particle size is small.

Cooling and Condensation – Removal of water from the gas is required to achieve the plant water balance. Direct contact devices (packed towers, tray scrubbers) or indirect cooling (star coolers, shell and tube condensers) are used to cool the gas and provide some removal of gaseous impurities.

Electrostatic Precipitation – Usually the last stage of gas cleaning before the drying tower. Removes the finest dust particles and acid mist.

Special Process – These include mercury removal (Boliden-Norzink), fluoride scrubbers, sodium silicate systems, etc.

a. Mercury Removal

Three primary Outotec technologies which have since been further developed over the years:

- Outotec Mercury Removal Process – utilizes a chloride scrubber
- Outotec Mercury Removal Process – utilizes a selenium filter
- Outotec Mercury Removal Process – utilizes sodium thiosulfate Outotec's chloride scrubber process has essentially become industry standard process providing these benefits:
- Insensitivity to high incoming values of mercury
- Cost-effectiveness; moderate investment costs and low operating costs, which are practically independent of the mercury level
- Applicability to almost any gases including ones containing SO2
- Proven technology: approx. 40 reference plants
- Option for an additional step involving a specially designed electro-winning cell, in which the calomel produced can be converted to high purity metallic mercury

Process equipment

- Reactor tower and other special vessels
- Chlorination system
- Electrowinning cell for metallic mercury production from calomel
- Process control

Fluoride Removal Process

Hydrogen fluoride in the SO2 gas can cause damage to the sulfuric acid plant and therefore requires removal from the gas. This can be achieved by adding sodium silicate solution to the packed gas cooling tower. The hydrogen fluoride is absorbed

in the gas cooling tower, reacts with the sodium silicate forming a reaction product with low vapor pressure and is finally bled to the waste water treatment plant.

c. Arsenic Removal Process

To avoid contamination to the sulfuric acid, it is necessary to remove as much arsenic in the SO2 gas as possible. Particulate arsenic has already been removed during the hot gas cleaning process. High-efficiency scrubbers with a variable throat for efficient continuous scrubbing for removing most of the arsenic content to wet electrostatic precipitators for the final cleaning of the gas will be used. Gaseous arsenic

condenses in the quench section where the SO2 gas is cooled down to the saturation temperature. Solid arsenic forms here and is ready to be scrubbed out of the gas in the wet gas cleaning plant. The solved arsenic is then transferred to the waste water treatment plant with the weak acid bleed, where the arsenic has to be separated from the bleed.

Alternatively, some of the arsenic can be precipitated out of the weak acid as early as in the wet gas cleaning plant assuming the acid concentration in the quench liquid is high enough. This will allow for the solid arsenic to be separated from the weak acid before it is transferred to the waste water treatment plant.

Conversion of SO2 to SO3

Double Absorption

Also known as Double Contact/Double Absorption

Characterized by two SO3 absorption towers

Double Absorption Plant Arrangements

2/1 Arrangement - 2 catalyst beds before intermediate absorber followed by 1 catalyst bed. Will not meet current emission regulations.

2/2 Arrangement - 2 catalyst beds before intermediate absorber followed by 2 catalyst beds. Used by Lurgi in many plants around the world.

3/1 Arrangement - 3 catalyst beds before intermediate absorber followed by 1 catalyst bed. Standard arrangement for the modern contact sulphuric acid plant for obtaining SO2 emissions of 4 lb/ST (2 kg/MT) or 99.7% conversion.

3/2 Arrangement - 3 catalyst beds before intermediate absorber followed by 2 catalyst beds. Used when high overall conversions (>99.9%)/low SO2 emissions are required. Plants with 3/2 arrangements are required to ensure low SO2 emissions and are considered Best Available Technology (BAT). The optically cleaned SO2 rich gases along with dilution air to the extent required for maintaining the requisite O2 / SO2 ratio are dried in a drying tower with 96% concentrated sulphuric acid in counter current circulation. The dried gases after heating to 400 - 450 ° C passed through converter with cesium promoted vanadium pent oxide catalyst. The converted SO3 gases are absorbed in two absorption towers where 98% concentrated sulphuric acid is circulated to produce 98.5% strength Sulphuric acid product. During the start up and other abnormal operations such as when SO2 content is less than auto thermal point, gases are heated before conversion in converter which helps in low SO2 content in vent gases.

Acid Section

Acid produced is at during the absorption process is given bleed at > 98%. This acid is at a high temperature and need to be brought to the room temperature level say ~< 40 Deg C. Acid coolers are used for the same. Acid coolers are either plate heat exchangers or shell & tube heat changer with anodic protection to protect the cooler. Cooling of the acid is down either by using water or air or combination of the both depending upon the application. Cooled product acid is stored in the storage tanks and supplied for further us in the market as well as in house consumption to produce phosphoric acid.

Oxygen plant:

Oxygen plant with capacity of 90,000 TPM with 95% purity will be provided for Copper smelter plant requirement. To have flexibility in operations 2 Plants of 1500 TPD capacity each with 95% Purity Oxygen plant will be set up.

Refinery Unit:

The anodes produced from the smelter will be refined through electrolysis process to remove the impurities present. A refinery unit capable of handling the smelter capacity will be built. State of art electro refining technology will be used to produce Copper Cathode of LME Grade A from Copper anodes produced in the Copper Smelter. Refinery will have state of art technology to produce value added products from the impurities include Bi, Te, Ni, etc. Copper Anode slime generated during copper electro refining process will have precious metals such as Au, Ag, Pt, Pd, etc. Effluent generated from Copper refinery will be treated in state of art effluent treatment facility.

Electrorefining entails:

a. Electrochemically dissolving copper from impure copper anodes into
CuSO4 –H2SO4 – H20 Electrolyte

b. Selectively electroplating pure copper from this electrolyte without the anode impurities. It serves two purposes:

a. It produces copper essentially free of harmful impurities
b. It separates valuable impurities (e.g. gold and silver) from copper for recovery as by-products.

Application of an electrical potential between a Copper Anode and a metal cathode in CuSO4 –H2SO4 – H20 Electrolyte causes the following:

a. Copper is electrochemically dissolved from the anode into the electrolyte - producing copper cations plus electrons:
Cu0 anode Cu++ + 2e-
b. The electrons produced by above Reaction are conducted towards the cathode through the external circuit and power supply.
c. The Cu++ cations in the electrolyte migrate to the cathode by convection and diffusion.
d. The electrons and Cu++ ions recombine at the cathode surface to form copper metal (without the anode impurities), i.e.:
Cu++ + 2e- Cu0
Cathode
Overall copper electrorefining is the sum of Reactions
Cu0
impure Cu0
pure

Precious Metal Recovery Plant (PMRP):

Copper Anode slime generated in Copper Electro Refining process undergo roasting process to recover Selenium. Selenium is of a commercial grade with purity of 99.5%.

Selenium roasting process

The roasting of copper anode slime with selenium is done in an electrically heated furnace where the temperature is around 500°C. Oxygen and SO2 gas are used as reagents. Selenium compounds react at this temperature forming gaseous selenium dioxide. Selenium dioxide is then sucked from the furnace into an aqueous solution. Elementary selenium and sulphuric acid is generated in the solution at a temperature of 80°C. Selenium crystals are then filtered, washed and dried.

The elementary selenium is of a commercial grade (99.5%) selenium. The attained purity rate is very high and the selenium content of the roaster slime is normally about 0.5%.

Deselenised Anode Slime Smelting

The Outotec® TROF (Tilting Rotating Oxy-Fuel) Converter was originally designed for processing selenium-free copper anode slime, but today the converter can also be adapted for other solutions, such as processing precious metals containing dusts, scraps and bullions. The Outotec® TROF Converter offers smooth tilting and rotating functions thanks to its sophisticated hydraulic system.

The selenium-free slime containing precious metals is mixed with soda and borax. This mixture is smelted in the furnace. The smelting temperature is as high as 1300°C. The slag is poured off by tilting the furnace. The metal is further refined by blowing oxygen and the end product is cast into anodes using casting equipment and called as Dore Anode.

Outotec silver electrolysis tankhouse

Dore Anode is consisting of Ag, Au, Pt, Pd, etc. Dore anode further undergoes electrolysis process to recover the precious metals. The heart of the Outotec Silver Refining Plant process is the silver electrolysis tankhouse, which consists of electro-refining cells, circulation tanks and pumps, sieve tanks, a cooling system, and a pH control and adjustment system. A sophisticated control system monitors and controls the process, making it both easy to operate and highly efficient. With Outotec HCD (High Current Density) silver electro-refining cells, current densities exceeding 1000 A/m2 are possible, depending on the composition of the silver Dore anodes being processed.

The electro-refining process is continuous except when new silver Dore anodes are loaded in the cells and silver anode slime and anode scrap is discharged from the cells at the end of the electrolysis cycle. The anodes continuously dissolve, depositing refined silver on the cathodes. The cell is equipped with an automatic scraper system that removes the deposits – the silver crystals scraped off the cathodes are collected at the bottom of the cells. At the end of the electrolysis cycle, a slurry containing crystals of cathode silver and electrolyte is discharged into a sieve tank. The quality of the silver crystals produced in the electrolytic refining process is ensured by electrolyte circulation. All this helps increase the efficiency of the process, decrease manual work,and increase the amount of silver recovered. The modular design makes it easy to scale the solution for your desired capacity. Silver anode slime containing valuable impurities such as gold and platinum-group metals (PGMs) is also formed during the electrolysis process. The slime is collected inside anode bags surrounding silver Doré anodes and can be further processed using the Outotec Gold Refining process for recovery of gold and PGMs.

The non-dissolved anodes remaining after electrolysis are recycled for smelting and casting of new silver Doré anodes. Spent electrolyte withdrawn from circulation is replaced with fresh silver nitrate electrolyte in order to keep the silver content at a constant level. Outotec silver electrolyte preparation system Some of the silver crystals produced in the silver electrorefining cell are processed in the Outotec silver electrolyte preparation system, where they are dissolved to produce pure silver nitrate solution. The process and equipment design avoids the formation of toxic NOx gases, which improves the safety of the working environment. The system is also available as standalone equipment with its own control system.

Drying of silver crystals

The final product can be either silver bars or silver granules. In both cases the silver crystals are dried using the fully automated Outotec Silver Dryer, which consists of a fan, a heater, and a sieve tank for the silver crystals. The dried silver crystals are then melted using an induction furnace.

Casting and bar processing

Casting of silver bars is performed using an Outotec Silver Bar Casting Wheel for 1000 troy ounce (approximately 31 kg) ingots. The bars are then cooled in a water bath. Further operations, such as polishing, weighing, marking, and stacking can be performed by the Outotec Silver PWMS Robot. The equipment produces silver bars that meet the requirements of the London Bullion Market Association's Good Delivery standards.

Granulation and packing

Outotec Silver Granulation Equipment consists of an induction furnace, granulation equipment and a receiving tank. Granules are dried in the Outotec Silver Dryer and packed using a material-handling system that produces readyto- ship bags that are sealed and marked.

Gold Leaching & Recovery

Outotec has developed a new environmentally friendly chloride leaching process for gold ores and concentrates. The new process combines effective gold leaching with a new type of gold solvent extraction process.

Highly oxidizing power in gold leaching provides very fast leaching kinetics and excellent gold recovery. Gold can be extracted from pregnant leach solutions using an Outotec's patented solvent extractant. Pure gold product is precipitated directly from the stripping solution. Solvent extraction technology enables also direct silver recovery. Effluent generated during the process is treated in state of art effluent treatment facility.

Continuous Cast Copper Wire Rod Plant (CCR):

Copper Cathode produced from Copper Refinery will be melted in a vertical shaft furnace with the help of gaseous fuel like LNG/LPG/ etc and drawn in the form of Copper wire rod on continuous basis from a continuous casting and rolling machine. Rod will be of various sizes as per market requirement such as 8 to 25 mm. The copper rod is manufactured by the modern continuous casting and rolling technology CONTIROD/ South Wire/ Properzi using the machinery supplied by Asarco (USA) – shaft furnace, Hazelett (USA) – twin belt caster/ South wire/ Continuous Properzi Caster, SMS-MEER (Germany)/ Morgan (USA)/ Continuous Properzi (Italy) – rolling mill.

The process of copper rod manufacturing consists of the following main stages:

1. Charging copper cathodes into the shaft furnace by the skip hoist and melting of the metal with gaseous fuel.
2. Preparation of metal for casting in the holding furnace.
3. Continuous casting rectangular/ Trapezoidal shape copper bar on the caster.
4. Rolling of continuously cast in the rolling mill.
5. Cooling and brightening of copper rod.
6. Coating the copper rod with anti-corrosion wax layer.
7. Coiling of the copper rod into coils.
8. Weighing, packing, warehousing, and shipping of the finished product.

Phosphoric Acid Plant:

Phosphoric acid plant of 5LTPA capacity will be set up. This will be value addition to proposed copper smelter project as well as Indian Fertilizer industries . This will be sold to fertilizer companies. Phosphogypsum produced during the process will be sold to cement industries as well as fertilizer and rest will be stock piled. Hydro Fluro Silicic acid generated as a byproduct will be converted as Aluminum Fluoride as well as sold in the market.

The rock phosphate received by conveying system from port and stored in Rock phosphate storage area. The rock phosphate will be taken to reactor (R1) by conveyor and hopper where it is mixed with recycled slurry, which contains mainly P2O5, CaO, SO3 and H20 received from Reactor (R2). Slurry prepared in the reactor (R1) series will be sent to Flash Column to cool the slurry and maintain the required temperature in the reactor compartment. The slurry separated out from flash column will be fed to Reactor (R2) to react with sulphuric acid and form the slurry which will be sent to filter. Phosphoric Acid of 26-27% To 42-43% (Weak Phosphoric Acid) will be recovered based on the process of phosphoric acid is selected. A series of washes has been introduced to recover the P2O5 from the filtered cake, before it is sent Gypsum Pond.

Filtered acid is then sent to Clarification section to trap the solids passed through the filter cloth. Clarified acid is then fed through Evaporation section to enhance the concentration to 48-54% P2O5 (Strong Phosphoric Acid) suitable for fertilizer manufacturer.

During evaporation of the weak Phosphoric acid to strong phosphoric acid, Hydro fluro Silicic acid of 18 -20% concentration is generated. This acid is then partially consumed in house for Aluminum Fluoride manufacturing and rest is sold in the market.

Aluminum Fluoride Plant

Hydro fluro Silicic acid generated from Phosphoric acid plant will be converted in value added Aluminum Fluoride. Aluminum Fluoride plant of 30,000 MTPA capacity will be set up. Aluminum Fluoride produced will be sold to Aluminum manufacturing Companies. Aluminum hydrate will be sourced from local market. Aluminum hydrate will be digested with hydro fluro silicic acid to make Aluminum fluoride in liquid form and silica part will be separated by filtration. Liquid aluminum fluoride will then undergo crystallization process and then Aluminum Fluoride will be filtered and dried with gaseous fuel before sending it to packaging section. Cyclonic separator and bag filters will be installed to recover the Aluminum fluoride, which may get escaped during the drying process.

Effluent Treatment Plant (ETP):

Waste water generated from Copper Smelter, Sulphuric Acid Plant and Copper Refinery will be treated in state of art effluent treatment facility. The Ferric arsenate process is a solution for managing toxic arsenic in process and effluent streams. The process consists of a ferric arsenate precipitation stage followed by neutralization using lime milk. The process is based on easy, robust and understandable precipitation. The treatment of toxic arsenic requires a high level process reliability. This can be guaranteed using the cost effective Ferric arsenate process.

After the ferric arsenate process the treated water has a low arsenic concentration, typically containing 1-3 mg/L arsenic. If an even lower arsenic concentration is required, a polishing step with enhanced arsenic removal can be included. The process comprises the neutralization of acidic streams and the advanced removal of metal impurities, including Ni, Cd, Cu, Sb and Zn. The final product of the ferric arsenate treatment process is treated water that can be safely discharged to the

environment or recycled back for process use. The selection of the arsenic treatment process is governed by residual stability. The residue of the Ferric arsenate process is a stable solid precipitate. Treated effluent will be consumed within the plant operations to maximum extent and rest will be discharged to Sea, ensuring it confirm the discharge standards.

Utilities Requirement:

Water:

The Requirement Water for the plant has been estimated around 32,800 M3/Day. M/s. Adani Ports & Special Economic Zone Ltd (APSEZL) will be supplying the total water requirement for the plant.

Power:

The total estimated power requirement for Copper Smelter Plant is 300 MW out of which 40 MW would be generated from internal process steam and balance 260 MW power would be sourced from Grid/ M/s. Adani Ports & Special Economic Zone Ltd (APSEZL)

Fuel Oil:

Fuel oil storage facility will be built as per requirement in accordance with guidelines from CCOE. Capacity of the system will be based on the design requirement after finalization of the engineering.

LPG/ LNG:

LPG/LNG storage facility will be built as per requirement in accordance with guidelines from CCOE. Capacity of the system will be based on the design requirement after finalization of the engineering

Air Compressor:

A dedicated air compressor station will installed to supply process air as well as moisture free air as Instrument air for operation of pneumatic based instruments. Capacity of the system will be based on the design requirement after finalization of the engineering.

Oxygen Plant:

Oxygen plants each of 1500 TPD Capacity delivering 95% purity Oxygen will be set up for Copper smelter requirement.

Waste Heat recovery based power Plant:

With focus on recovery of heat energy, waste heat recovery based power plant with ~ 50 MW capacity will be installed.

DM Plant

A dedicated DM plant will be set up to fulfill the requirement of Copper Refinery Tank House and Continuous Cast Copper Rod Plant.

Secondary RO Plant:

A dedicated secondary RO plant will be installed at the down stream of the proposed Effluent Treatment Plant. This will help to reuse and recycle the treated water effectively within the plant requirement. Rejects from the secondary RO plant will be discharged to sea through existing APSEZ's desalination plant outfall channel.

4.0 SUMMARY OF RECOMMENDATIONS:

Concentrate unloading from ships and transfer to the plant.	1.	Permit to work system should be used for allowing the operator to go inside the ship hatch with loader or otherwise. Keep watching from outside. Ensure all safety arrangement including ongoing ventilation to avoid build up of the concentration of combustion products of loader engine.
	2.	Only trained crane operators should be employed. Ensure certification of crane and /or other handling devices including tools and tackles is done by competent person.
	3.	Ensure that each support of the belt conveyor should be earthed / bonded. Nip guard should be provided at all the nip points of the belt conveyor
Transfer station from the belt conveyor to the bonded ware house.	4.	SiO2 (Crystalline) concentrations of the concentrates should be evaluated and permissible limit of exposure for the dust should be established. Ensure that the dust concentration as found by periodic evaluation does not exceed permissible limit.
	5.	Some visible signals (blinkers/flickering lights) with audio alarm should be provided to area where the material is going to be poured. Route crane may be predefined and possibly barricaded.
Concentration and flux	6.	SiO2 in the worker's breathing zone should be monitored. The hazards and precautions of SiO2 and coal dust should be displayed.
Paddle mixer	7.	Ensure that the top cover and windows are closed as long as the mixer is working. Emergency stop switch, should be provided close to the inspection window
Smelting furnace	8.	Monitoring of gas/dust release at SO2 gas injection point should be done and based on that the exposures should be controlled.
	9.	Ensure that the operator carrying out the drilling and mud packing are experienced operators. They should put on the protection against molten metal splash, IR radiations from the molten matter, exposure to SO2, metallic copper fumes and heat stress.
	10.	The area under the launders should be barricaded to avoid walking and working there. Conditions of the launders should be checked before taping the molten metal.
	11.	Air cooling system with plenums above the work spot should be provided to avoid thermal stress.
	12.	Use of more water and more salt dishes should be promoted. (A drink with 6% sugar and 0.9% salt is suitable during the summer season.)

	13.	SO2 monitoring should be done for 15 minutes. Each sample to compare the level with STEL-PLE[1]. (Short Term Exposure Limit) and sources of gas should be attended to as early as possible. Arrangement for immediate treatment of exposed workers should be made available.
	14.	Periodic monitoring of Copper fumes should be done to ensure that the exposures are not above the limits prescribed for 8 hours exposure.
	15.	Ensure that the person carrying out the mud plugging operation is experienced. He should put on the protection against molten metal splash, IR radiations from the molten matter, exposure to SO2, metallic copper fumes and heat stress.
	16.	Roof of the melting furnace should be kept leak proof.
	17.	All the tools to be used should be kept in warm conditions.
	18.	Periodic monitoring of SO2 in work room air and ensuring that the levels are below the PLE.
	19.	If the levels are found more general ventilation of the room should be increased.
	20.	Hazards and precautionary measures of SO2 and copper fumes should be displayed in the language known by the majority of employees.
	21.	Cooled air blowing at the work spots should be considered. Minimum rest period every hour should be defined for different hot jobs.
	22.	Marking of the routes of ladle movement should be done and movement of workers on the ladle routes should be prohibited.
	23.	Ensure that level of SO2 and metal fumes are monitored periodically
	24.	Ensure that the systems are under the effective zone of lightening arrestors. Ensure double earthing of the electrical equipments and structures.
Pearce Smith Converter. (Removal of Fe and S)	25.	Inspection of the scraps and the container should be done before feeding to avoid and objects with cavity and moisture.
		The SO2 and fumes Concentrations in Pears Smith converter area should be monitored.
	26.	Proportion of time spent in hot area per hour should be specified to avoid any heat disorders among the workers. The drinks containing 6 % glucose and 0.9 percent salt should be promoted in those areas.
	27.	The noise measurements should be done to ensure that excessive

[1] The short term exposure limits – permissible level of Exposure as prescribed in the Indian Factories Act 1948.

		exposures of the workmen is not more than 90 dB(A) the hearing conservation programme as laid down in the schedule on noise in Gujarat Factories Rules (made under Section 87 of the Factories Act) should be followed.
	28.	The route of the ladle should be marked and possibly barricaded. Alarm should be sounded before transfer by ladle.
Slag Cleaning Furnace	29.	Use of concentration monitoring instead of pH monitor may be considered to ensure that solution is always alkaline. The availability of chemical cartridge respirators for acid gases should be ensured in the area.
	30.	The scrap should be manually inspected to ensure that it does not have any moisture. All hollow object/objects with cavities having even rare possibility of moisture should be broken by cold methods before feeding into the furnace.
	31.	The route of the ladle should be marked and barricaded. Alarm should be sounded before transfer by ladle.
	32.	Ensure to monitor the conditions of bag filter by suitable method and regular analysis.
	33.	Inspection of the scrap should be done to ensure that there is no moisture and objects with cavities to avoid flash release of steam on sudden boiling of water.
	34.	Barricading and display of precautions should be done to avoid persons moving or working under launder.
	35.	All the components of the lifting system should be duly tested at regular intervals by competent persons.
	36.	The workers in the area should be protected by safety shoes to prevent injuries due to falling of heavy objects on the feet.
	37.	Ensure that all forklift truck driver are well trained, certified and having valid driving licence.
	38.	Ensure that safety valve is provided in the downstream of the pressure regulator.
	39.	Discharge rod should be provided to ensure no potential in any object.
	40.	All the protective equipments should be tested to bear the voltage on which the workers have to work.
	41.	Ensure that the persons duly certified by the electric department should be allowed to work in such areas.
	42.	The danger boards (Skull and cross bone) should be suitably placed on the equipment.
	43.	Ensure that running of ID fan is monitored with the help of load monitoring.
	44.	Ensure that redundant ID Fan is provided to use in case of failure of one fan. It should automatically start on failure of the first one. Ensure that dampers to connect the gas line through secondary

		gas scrubber to function in case of failure of sulphuric acid plant are provided.
	45.	It should be ensured that the caustic concentration is maintained by automatic system or on manual basis as long as secondary gas scrubber is used.
	46.	Ensure that the chimney is applied with anti corrosion coatings to prevent their damage due to acid depositions.
Gas cleaning plant	47.	Ensure that water flow is monitored with record in the control room.
	48.	Ensure that indication on pump failure and local flow indicator are also provided.
	49.	Ensure that washing tower outlet gas temperature is interlocked with SO2 blower trip.
	50.	Earthing resistance should be monitored at fixed intervals and record of testing should be kept. Ground fault current interrupter should be provided.
	51.	The system to discharge the vessel before any work in it, should be provided.
	52.	Proper Chemical cartridge respirator should be kept available in the area.
	53.	Precautions and danger board should be provided at the wet electrostatic precipitator.
	54.	Ensure that the PPE used by the workers are tested for high voltage available in the system.
	55.	Ensure that the pressure is monitored with low pressure alarm with blower interlock.
	56.	Ensure that SO2 stripper is provided to recover the gas before the water is released into the drain.
	57.	Ensure to monitor Temperature and pressure across the star cooler.
	58.	Ensure to monitor the fluorine and mercury concentration at the downstream of fluorine absorber or mercury scrubber.
	59.	The instructions should be displayed to ensure that system is wet before applying the charge. Interlocking should be considered.
	60.	Hazards and precautionary measures for mercury should be displayed. The MSDS of the respective chemical should be readily available.
	61.	Mercury in treated SO2 should be checked periodically.
	62.	Ensure to provide chlorine emergency kit with at least two self contained breathing apparatus. Workers should be trained in use of emergency kit application. (Provision of chlorine sensor with alarm should be considered.)
	63.	Ensure to provide vacuum valve which may stop the flow of chlorine in case of water flow failure.

	64.	Arsenic level of SO2 should be tested periodically / on line to ensure that it has been removed effectively.
	65.	The fact that arsenic forms deadly poisonous arsine gas on contact with mineral acids should be displayed.
	66.	The Solid particulate matter collected in the ESP may contain arsenic. Hence it should not be allowed to come in contact with any acid to prevent arsine gas formation which is highly poisonous.
	67.	Level monitoring dryer should be done with alarm at the site and in control room on high and low levels.
	68.	Ensure that a standby pumps with NRV s provided in auto start mode with alarm in control room.
	69.	The SO2 blower and diversion to stack should be interlocked with the pump failure.
	70.	Ensure that the pressure of acid line is more than the water line.
	71.	pH of the water should be monitored on line with alarm.
	72.	Acid concentration should be monitored on line and fresh acid should be added to maintain the concentration.
	73.	On line monitoring of moisture in acid line should be done.
Sulphuric Acid Plant	74.	A parapet wall with acid proof tiles should be provided to divert the spilled acid to treatment plant.
	75.	All the flanges and pump seals should be provided with flange guards to prevent spray release of the acid.
	76.	If the flanges are above working areas, the catch pots with adequate drain pipe should be provided.
	77.	Ensure that eye wash fountain and safety shower should be provided nearby.
	78.	It should be ensured that the total capacity of the circulation tank should be enough to hold the total acid in the system.
	79.	pH of the water should be monitored to detect any leakage and leaking members of the coil should be replaced/repaired.
	80.	Ensure that a dyke wall of capacity more than total contents of the largest tank within the dyke is provided. The floor of the dyke area should be impervious and acid resistant. Slope of the floor should be diverted to sump provided with a drain pipe. Drain pipe should be provided with a valve approachable from outside the

		dyke. The valve should be kept closed under normal conditions. Whenever required for discharging the rain water the valve should be closed.
	81.	Ensure that vent pipe of adequate dimensions is provided on the top of the tank with protection rain water protection.
	82.	The vent should be cleaned periodically. Wire mesh protection should be provided to prevent entry of birds and insects.
	83.	Self indicating silica gel column should be provided in the vent to arrest moisture ingress. The silica gel conditions should be observed every week and the gel should be replaced with fresh or regenerated silica gel as soon as 75% of the gel is decolorized.
	84.	The overflow pipe should be provided from the upper most point in the tank wall. The pipe end should be kept sealed by dipping into a vessel filled with acid to prevent moisture entry through the overflow pipe.
	85.	Ensure that the drain is provided at the lowest point of the tank. The drain should be provided with two valves in series or one and one blind. Open and close positions of the valve should be visible from a distance.
	86.	Ensure that level indicators with alarm for high and low levels should be provided both in at the site and in control room.
	87.	The tank should be earthed by two or more earthing strips.
	88.	Proper ladder with guarding and independently supported platform with railings and toe guard should be made for approach of the workers to the top fittings of the tank.
	89.	All the flanges should be guarded to prevent spray release. Catch pots should be provided under the flanges above working areas to receive and deliver the acid at safe place.
Oxygen Plant	90.	Ensure that the oxygen is fully evaporated and brought to ambient temperature before transferring it through non cryogenic piping.
	91.	Ensure that only degreased components are used in the vessels and piping.
	92.	The solvent washing of internal spaces should be done with suitable degreasing agent before using the vessel/piping.
	93.	The area should be kept completely free of greasy materials and other combustible substances.
Refinery unit (Copper)	94.	Safety shoes, helmets and canvas gloves with hard toe should be used by all the workers in the area.
	95.	Persons should be provided with complete body protection in such a way that toxic chemicals exposures are avoided.
	96.	Safety Showers & eye wash fountains should be provided nearby.

	97.	Ensure that Acid is poured in dilution water for the sake of dilution.
	98.	Ensure to provide local exhaust system to collect mist from the cells and discharge into the ambient air after suitable treatment.
	99.	Use of tennis balls and anti mist additives may be considered.
	100.	Exhaust system to collect mist from the cells and discharge into the ambient air after suitable treatment.
	101.	Use of tennis balls and anti mist additives may be considered.
	102.	Ensure that the hazards and preventive measures of low voltage high amperage current are displayed in the language known by majority of workers.
	103.	Warning for people using heart pace maker should be displayed.
	104.	Food keeping and eating should not be allowed in the cell house. Adequate hand-washing facilities should be made available.
	105.	MSDS of copper compounds should be kept readily available. All the precautions laid down in MSDS should be used to prevent any intoxication among the employees.
	106.	Concentration of sulphuric acid and copper sulphate should be periodically monitored to ensure that the exposure does not exceed the Permissible Limits of Exposures in Indian Factories Act.
Precious Metal recovery	107.	Ensure to provided impervious hand gloves, safety shoes, face shield and apron should be used by the employees carrying this operation.
	108.	Ensure that the temperature has reduced to safe level before removing the materials from the furnace.
	109.	Ensure double earthing of the furnace.
	110.	Toxic properties of selenium should be displayed along with the precautions.
	111.	Hydraulic system should be tested periodically at the intervals suggested by the technology suppliers.
	112.	The path of ladle should be marked on the floor. Alarm should be sounded while starting the ladle transfer.
Silver refining	113.	Precautions recommended for copper refining should be observed for silver refining also.
Induction furnace	114.	Ensure that water temp both at the inlet and on the outlet should be monitored to ensure integrity of the system.
	115.	The furnace specifications should match with the applicable standards to avoid the weaker material of crucible.

	116.	Furnace should not be allowed to be overheated.
	117.	Ensure that GFCI (Ground fault current interrupter) should be provided.
	118.	Ensure that the furnace is operated as per prescribed current flow by the manufacture. Bridging of the induction furnace should be avoided by checking the inlet and outlets of water and power drawn by the furnace.
	119.	Ensure that the robot area is barricaded from all the sides, the door to approach the area should be provided with interlocking in such a way that the robot cannot perform any task as long as the door is open.
	120.	Ensure that the workers in the area are equipped with adequate hand and feet protection.
	121.	Ensure that area around the Induction furnace operation and granulation is barricaded to avoid entry of any employee to risk zone.
	122.	Concentration of silver in the form of fumes should periodically monitor to ensure healthful work environment.
	123.	Canopy exhaust should be provided to cover top opening of the induction furnace and hot and contaminated air and water vapour generating at the time of pouring on the receiving tray.
	124.	Ensure effective ventilation to allow fresh air at the workplace. (Minimum 6 air changes per hour) or localised air blowing of outside air/conditioned at the work station.
	125.	Silver fumes should be monitored to ensure that the room is free from silver fumes.
	126.	Ensure that all the moving parts of the stitching machine are guarded to prevent injuries.
	127.	MSDS of the solvent should be obtained from the supplier. Hazardous properties of the solvents should be displayed along with the precautionary measures and emergency response procedures
	128.	Ensure that all the electrical motors, tanks and other equipments like drier, induction furnace, crucible heaters & other equipments of the area are earthed at two places.
	129.	Ensure to provide safety shower and eye wash fountain in the area.
	130.	Ensure to provide a stand by exhaust blower in order to meet emergency situations.
	131.	Ensure to provide a stand by circulation pump in order to meet emergency situations.

	132.	Pressure monitoring of the jackets will indicate health of the interface surface.
	133.	Ensure that the vent pipe is resistant to the acidic vapours and high enough to discharge the emissions away from working zone.
	134.	Auto temp monitoring of the drier should ensured.
	135.	Ensure to provide heat resistant hand gloves and leather safety shoes and gauntlets. .
	136.	Ensure that crucible is not cracked and handled with proper tong.
	137.	Only well trained and experienced employees should carry out the pouring operation. Ensure that the mould is dry before molten metal is poured into it.
	138.	Leaks in the line should be detected at early stage by periodic checking of joints and valves with the help of explosive gas meter.
	139.	Possibility of explosion of gas within the lines should be eliminated by provisions of NRVs and flame arrestors in both fuel line and air line.
	140.	The nozzles of the burners should be cleaned at periodically with records. Frequency of cleaning should be decided on the basis of the experience.
	141.	Ensure that the cathodes are free from any moisture. Any other source of water ingress should be avoided.
	142.	The area under the launder should be barricaded with cautionary notice.
	143.	Strict care should be taken to avoid falling of rain water into this and other furnaces.
	144.	Strict maintenance of the launder should be ensured. [There have been several events of bursting of water jacket provided for spraying water on the lower part of the wheel and leading to violent destruction of building due to shock ware generated by the event.]
	145.	Ensure to carry out any work in cooling and coating zone only after closing the extrusion operation.
	146.	Efforts should be made to minimise dust generation and prevent exposure by strict use of protective devices. The workplace should be monitored for rock phosphate dust& ensure that it does not exceed 3mg/M^3. (Computed from Fist schedule of Factories Act assuming silica is 7%.)
	147.	The workers should be provided with dust respirators.
	148.	Dust survey should be done to ensure that the levels are less than 3 mg/M^3.
	149.	Ensure to provide chemical cartridge respirator with special filter

		to remove the HF gas and dust in any.
Aluminium Fluoride Plant.	150.	Choking conditions of exhaust duct on Aluminium Fluoride reactor should be checked and cleaned periodically.
	151.	Ensure that washing facilities are available. Safety shower and eye was fountain should also be provided.
	152.	The work environment should be monitored to ensure that there is no objectionable concentration of the corrosive dust.
Effluent Treatment Plant	153.	Local exhaust arrangement should be provided to extract the dust generation at the lime dissolving point. (It should be kept in view that CaO is highly exothermic on contact with water. A particle entering the eyes will slake the lime generating excessive heat and eye injury.)
Utilities - Electricity	154.	Only authorised person with competency certificates should be allowed to operate the panel/system.
	155.	Earth fault relay, all other relays, equipment and controls should be in healthy conditions.
	156.	Ensure that the lightening arrestors/ earthing pits meet with BIS standard. The Indian Electricity rules should be strictly followed.
	157.	Ensure that all the workers in the substation should be well trained in artificial breathing. The chart of artificial breathing should be displayed in the substation.
	158.	Ensure that discharge rod and rescue rod are kept available in the substation.
	159.	Ensure that personal protective equipments are tested for the voltage in question.
	160.	The first aid box should be kept available with list and phone numbers of the trained first aiders.
	161.	Escape routes at two diagonally opposite direction should be provided in each panel room.
	162.	Ensure to display electric circuit diagram is displayed on the wall of the switch room.
	163.	Ensure that rubber mats are kept in front of all the control panels should be laid with tested rubber mats.
	164.	Ensure that emergency light is as available in the switch rooms.
	165.	All the equipments and cables etc. used is substation should be of required capacities meeting the specific BIS standards.
	166.	Cable trays should be earthed at two separate points.

	167.	A qualified electrical engineer should be declared as Electrical Safety officer to ensure compliance of Indian Electricity rues during construction and maintenance and operation of electrical installation.
	168.	Ensure that substation is well ventilated and adequately illuminated
	169.	Ensure that all the equipment in substation are periodically inspected and maintained.
Utilities - Transformers	170.	Ensure that the earthing resistance is maintained as per Indian Electricity Rules.
	171.	Ensure that only tested PPE are used by the electricians.
	172.	Ensure provision of the followings in each transformers: 1. The conservator tank should be provided with vent having silica gel column. The column should b inspected weekly to ensure its effectiveness. In case discoloration of the 75% of the column the gel should be replaced by regenerated or fresh silica gel. 2. A fire wall of 4 hour fire resistance should be provided between two transformers with oil capacity more than 2000 litres each. 3. Emulsifier should be provided for each transformers having oil storage capacity of 2000 L. 4. Pressure relief valve should be provided in the transformer tank. 5. Thermostat for winding and oil of the transformer should be provided. 6. Transformer should be provided with pressure relief valve and Buchholz relay. 7. The oil pit with drain and collection arrangement is provided for each transformer. 8. Emergency stop buttons should be provided near each transformer and motors. Transformer should be provided with double earthing. 9. The hydrant operating point near transformer should be provided with fire wall. 10. Danger boards should be provided close to the primary and secondary terminal boxes and on the fencing of the transformer. 11. Separate lightening arrestor should be provided on overhead lines.
Utilities - Process Air Compressor	173.	The provision of enclosure on the compressor to prevent propagation of sound may be considered.
	174.	The control room where some employee is likely to remain should be provided with Sound proof room with glass panel for looking into the compressor room.

	175.	The sound levels should be measured at fixed intervals.
	176.	The person going close to the compressor should use adequate ear protection.
	177.	Warnings should be displayed to not allow unauthorised persons.
	178.	All the requirements of Schedule on Noise in Gujarat Factory rules made under section 87 should be complied with.
	179.	Ensure that thickness of the lines and vessels is measured once in a year to ensure that the thickness will be safe till next date of thickness monitoring.
	180.	Ensure that the dehumidification system is maintained in healthy condition.
LPG storage and use.	181.	Ensure that all the requirements of PESO with regard to LPG/LNG are meticulously observed.
Raised platforms	182.	Ensure that all the raised platforms and the landings of stair cases are provided with double railing and toe guards of 10 to 15 cm height with 1 cm gap from the floors.
Water treatment plant	183.	The tank should be provided with dyke wall with acid proof linings in the interior surface The dyke area should be provided with two staircases situated in opposite directions. The dyke wall should be located in such a way that all foreseeable releases from the tank are contained within the dyke
	184.	Tank for hydrochloric acid should be of M S with rubber lining.
	185.	The slope of the floor of dyke should be directed towards a sump having drain pipe. The pipe should be provided with a valve approachable from outside.
	186.	The tank should be provided with vent with water scrubber at the end. The overflow pipe should be kept dipped in water to prevent vapour release from the overflow pipe.
	187.	Arrangement of level monitoring should be provided.
	188.	The tank should be earthed at two points.
	189.	The drain pipe of the tank should be provided with two valves in series or one valve and blind.
	190.	The flanges in the line should be provided with the flange guards in such a way that there is no spray release of the acid in case of leakage.
	191.	No electrical equipments should be located within the dyke wall. Safety Showers and eye wash fountains should be provided nearby.
	192.	The hazardous properties of the hydrochloric acid with precautionary measures and the emergency response procedure

		should be displayed near the tank.
Caustic lye tank(Water treatment Plant)	193.	Tank for Caustic lye should be of MS and should be provided with dyke wall with caustic proof linings in the interior surface.
	194.	The slope of the floor should be directed towards a sump having drain pipe. The pipe should be provided with a valve approachable from outside. The valve should be kept closed under normal condition.
	195.	The dyke area should be provided with two staircases situated in opposite directions.
	196.	The tank should be provided with vent with outer end provided with wire mesh to avoid entry of birds.
	197.	The overflow pipe should be provided at the highest filling level of the tank.
	198.	The dike wall should be located in such a way that all foreseeable releases from the tank are contained within the dyke.
	199.	Arrangement of level monitoring should be provided.
	200.	The tank should be earthed at two points.
	201.	The drain pipe of the tank should be provided with two valves in series or one valve and blind.
	202.	The flanges in the line should be provided with the flange guards in such a way that there is no spray release of the acid in case of leakage.
	203.	No electrical equipments should be located within the dyke wall.
	204.	Safety Showers and eye wash fountains should be provided nearby.
	205.	The hazardous properties of the caustic lye with precautionary measures and the emergency response procedure should be displayed near the tank in the language known by the majority of workers.

1327

Section	No	Location	No	Activity/ Condition	No	Hazard	S[1]	L[2]	R[3]	Existing Controls	Residual hazards	Suggested control
1. Concentrate unloading	1	Ship and port operations	1	Transfer from the ship Hatch to the hopper (Crane operations)	1	Dust while transfer	3	1	2	Material is moist. Arrangement of water sprinkler.		No recommendations, present system is adequate
					2	Entry of persons into the hatch with loader with the risk accidents and smoke build up.	3	3	4		Possibility of worker getting involved in accident	• Use permit to work system for allowing the operator to go inside. Keep watching from outside. Ensure all safety arrangement including ongoing ventilation to avoid build up the concentration of combustion products of loader engine.
					4	Possibility of crane accidents: Possible toppling	3	3	4	Crane is designed to ensure safe operation.	Crane operator ignorance may lead to problem	• Only trained crane operators should be employed. • Ensure certification of crane (and other special vehicle) drivers by a competent agency.

[1] Severity Rating
[2] Likely hood Rating
[3] Risk Rating

11 18

					5	Breaking of boom	2	2	2	Work will be done within Safe working load.		• No recommendations , present system is adequate
					6	Electrocution	1	2	1	No overhead lines in the jetty.	Electrocution can still occur through drive motors.	• Each support of the conveyor should be earthed and bonded.
					7	Wire rope breaking	3	2	2	All the components will be tested as per the statutory norms.		No recommendations
			2	Fire during work	1	Fire in the port	3	2	3	Fire hydrant tem with sprinkler provided in the jetty. Fire extinguishers will be kept.		No recommendations
	2	Hopper to conveyer end	1	Dust Generation	1	Possible hazardous dust release	3	1	2	Inlet point will be covered to prevent release of dust. Material is wet to prevent dust release.		No recommendations
					2	Possible entanglement of body parts with the running belt or rollers.	4	3	4	Pull chord switches will be provided.	Possible entanglement of body parts with running nips.	• Nip guard should be provided at all the nip points of the belt conveyor.

					3	Possible falling of material from the running belt due to belt displacement.	4	3	4	The belt will become tubular after receiving the material.		No recommendations
					4	Possible electrification of the system	1	2	1	Double earthing of the motor and conveyor structure will be provided.		No recommendations
2. Transfer station from the belt conveyor to the bonded ware house.	1	Receiving end of belt conveyor	1	Dust generation at the transfer points.	1	Toxic Silica Dust exposure.	4	3	4	Water spray system will be provided.	Keeping view the possibility of presence of free silica dust monitoring is required.	• If the SiO2 (Crystalline) and copper salts found in the breathing zones are found higher than the Permissible Limits of Exposure, additional control such as local exhaust system should be used to control the dust.
					2	Possible falling of concentrate on the persons in the warehouse.	4	3	4	Hooter/Horn will be sounded to warn the persons before starting a conveyor.	The hooter will not indicate as to where that concntrate will be discharged. T	• Some blinkers should be provided by flickering lights in the area where the material is going to be poured.
					3	Dust in the area. Containing crystalline silica	4	3	4	Dust masks will be provided.	Attempt to avoid exposure	• Periodic monitoring of the dust should be done to ensure that the dust is within the permissible limits of Exposure.

1330

						and copper salts.					should be done.	
3. Concentrate and flux building	1	Addition of flux	1	Generation of dust	1	Possible exposure to harmful SiO2, Coal, lime stone)	4	3	4			• SiO2 in the worker's breathing zone should be monitored. • The hazards and precautions of SiO2 and coal dust should be displayed.
4. Paddle mixer					1	Possible injuries if the top cover and window inspection open.	4	3	4	Enclosed system with a removable top cover. Limit switch will be provided in the top cover	Window provided on the top cover.	• Ensure that the top cover and windows are closed as long as the mixer is working. • Emergency stopping switch should be provided close to the inspection window.
5. Smelting furnace	1	Feeding of raw material			1	Generation of dust and subsequent exposures	4	3	4	The solid inlet is exhausted and the releasing emissions are sent to scrubber system. The exhaust gases are filtered by bag filter before scrubbing.		No recommendations
	2	SO2 Gas injection port	1	Release of flue gases with dust		do	3	2	2	All sources of dust and gas release will be exhausted.		• Monitoring should be done and based on that the exposures should be controlled.
	3	SO2 transfer to H2SO4 plant.			1	Possible exposure	3	2	3	Under negative pressure.		No recommendations

1121

	4	High temperature of the furnace shell	1	Possible failure of brick lining.	1	Possible Failure of metal shell. More radiation of heat.	4	3	4	The external surface of the furnace is cooled by curtain cooler and copper level portion is jacketed to cool. The shell temp will not be allowed to go beyond 300 ^{0}C. The cooling system is provided to prevent damage of the metallic shell. Periodic thermo-graph will be done to assess the brick conditions.		No recommendations
	5	Feeding of concentrate			1	Possible bumping due to steam formation	4	2	4	The material gets dried before it reaches the molten metal.		No recommendations.
	6	Lance pipe damage (Injection of 80% Oxygen and 20% air.)			1	Process disturbance.	4	3	4	One rod is always kept ready. As and when required the pipe is changed.		No recommendations.

1333

	7	Tap hole plugging	1	Drilling and packing	1	Possible splashing of the molten metal.	3	2	3	Persons are allowed to carry out the operation with complete protection against gases and for heat.		• Ensure that the person carrying out the operation is experienced. • He should put on the protection against molten metal splash, IR radiations from the molten matter, exposure to SO2, metallic copper fumes and heat stress.
			2	Falling of molten metal from the launders		Burn hazard	3	3	4			• The area under the launders should be barricaded to avoid walking and working there. • Conditions of the launders should be checked before taping the molten metal.
	8	Thermal stress	1	Radiant and convective heat from the hot surfaces	1	Exposure to thermal stress	3	2	3	AC rest rooms are provided for each operator when there is no work. Air circulators will be provided in the work area also.		• Air cooling system with plenums above the work spot should be provided. • Use of more water and more salt dishes should be promoted. (A drink with 6% sugar and 0.9% salt is suitable during the summer season.)
	9	Release of SO2 and			1	SO2 and copper fumes in work environment	3	2	3			• SO2 monitoring should be done for 15 minutes each sample to compare level with STEL-PLE[4]. (Short Term Exposure Limit)

[4] The short term exposure limits – permissible level of Exposure as prescribed in the Indian Factories Act 1948.

1123

		copper fumes into the work place.										and sources of gas should be attended to as early as possible. • Arrangement for immediate treatment of exposed workers should be kept available. • Periodic monitoring of Copper fumes should be done to ensure that the exposures are not above the limits prescribed for 8 hours exposure.
	10	Preheating of the furnace	1	Heating by LPG	1	Back fire in the mixed gas zone.	3	2	3	NRVs have been provided in both PLG and air lines.		No recommendations.
			2	Maintained at same temperature by electric furnace	1	Generation of SO2 from the molten metal	3	1	2	Canopy type hood with exhaust is provided over the top of the feeding end.		No recommendations.
					2	Electrification of the furnace	1	3	1	Furnace is doubly earthed.		No recommendations.
			3	Possible loss of thickness and furnace failure	1	Spillage of molten copper	3	2	3	The thermo-graph is done at fixed intervals.		No recommendations.

1335

			4	Accidental contact with hot surfaces.	1	skin burns	3	1	2	The hazard of the hot objects will be displayed. Area will be barricaded to prevent contact with hot objects.		No recommendations.
			5	Falling of rain water on the furnace surface	1	The water will be vaporized and possible bumping.	4	3	4	Not much impact is observed.		No recommendations.
			6	Contact of furnace with cold objects	1	Possible local cooling of the molten metal	4	3	4			All the tools to be used should be kept in warm conditions.
			7	Cooling of slag by water	1	Possible bumping if the water added is insufficient and inadequate granulation.	4	3	4	Flow of water is monitored for temp and flow rate and kept within safe zone.		No recommendations.
			8	Release of fumes from the opening	1	Possible contamination of air with the copper fumes	3	3	4	Canopy type exhaust arrangements will be provided.		No recommendations.
			9	Release of SO2 in the work	1	Possible exposure of workers to SO2	3	3	4			• Periodic monitoring of SO2 in work room air and ensuring that the levels are below the PLE. If the levels are found

1125

				environment								more general ventilation of the room should be increased. Hazards and precautionary measures of SO2 and copper fumes should be displayed in the language known by the majority of employees.
			10	More level of the molten metal	1	Possible over flow of molten metal.	3	3	4	40% free area is kept empty in the furnace. Alarm is sounded if the level is rising above the set point. The level of settling furnace and possible rise in the level is pre calculated before starting the settling. Safety margin is always kept.		No recommendations.
			11	Entry of persons into the furnace	1	Possible exposure of the workmen to high thermal stress and SO2. And metal fumes.	2	3	4	Work permit system will be followed for allowing entry of persons into the settler and smelter.		No recommendations..
			12	Radiation and convection of heat from the hot surfaces.	1	Possible exposure of the workers to high thermal stress.	3	3	4	AC room provided for providing rest to the workers after the work.		• Cooled air blowing at the work spots should be considered at the work spot if the spots are fixed.. • Minimum rest period every hour should be defined for different hot jobs.

1337

			13	Ladle handling	1	Possible splashes of molten metal	3	3	4	The routes will be pre-decided. Alarm will be sounded before starting transfer of ladle.		• Marking of the routes should be done and movement of workers on the ladle routes should be prohibited.
			14	Feeding of recycled slag from the converter.	1	Release of copper fumes and SO2 from the opening	3	3	4	The crane operator cabin is air conditioned to ensure that the air is free from any copper fumes.		• Ensure that level of SO2 and metal fumes are monitored periodically.
	11	Molten copper transfer of crude molten copper through ladle.	1	Delay in blocking the tapping hole. Disturbance while handling the filled ladle.	1	Possible splashes while tapping and transfer.	3	3	4	Route of the ladle will be marked and barricaded. Instructions will be displayed to avoid approaching the marked area. The persons carrying out tapping are protected by all possible hazards. Only well trained employees will be engaged in tapping operations		No recommendations.
			2	Lightening of the machinery and equipme	1	Possible damage and injuries	3	3	4			• Ensure that the systems are under the effective zone of lightening arrestors.

1127

				nt								
					2	Electrification of the equipments due to contact with the power	1	2	1			• Ensure double erthing of the electrical equipments and structures.
			3	Keeping and consuming food stuffs in the workplace	1	Possible contamination of food with the copper.	3	3	4	Separate places will be provided for keeping and eating foods.		No recommendations.
6. Pearce Smith Converter (Removal of Fe and S)			1	Mixture of Air and Oxygen is blasted into the molten copper	1	Disturbance due to change in the proportion of the gases.	4	3	4	Online monitoring of the proper ratio of air and oxygen will be done. In case of disturbance the system will stop.		No recommendations.
			2	Blockage of openings to allow air oxygen mixtures.	1	Possible disturbance in the process	4	3	4	Differential pressure will be monitored to recognize blockage of the holes.		No recommendations.
			3	Sudden power	1	Process disturbance	4	3	4	The process will be rescued with the emergency power.		No recommendations.

				failure							
			4	Back fire in the LPG/ air lines.	1	Possible losses and injuries.	3	2	4	NRVs and flash back arrestors will be provided in both LPG and air lines to prevent formation of the explosive mixtures.		No recommendations.
			5	Moisture in the scrap being fed to the furnace.	1	Possible bumping due to sudden formation of the steam.	4	3	4	The moisture gets removed during passing up to the molten metal.		• Inspection of the scraps and the container should be done before feeding to avoid and objects with cavity and moisture.
			6	Release of copper fumes and SO2.	1	Possible health hazard to the exposed employees.	3	1	2	The gases going out are scrubbed and sent to H2SO4 plant.		No recommendations.
					2	Fugitive emissions of SO2 and copper fumes	3	1	2	The fugitive emissions of the furnace are scrubber.		The SO2and fume concentration in Pears Smith converter area should be monitored.
			7	Thermal Stress in the converter area.	1	Radiant heat from hot surfaces and convective heat from hot emission are likely to render the environment uncomfortable from heat point	3	1	2	Air conditioned rooms are provided to facilitate rest of the workers in comfortable environment.		• Proportion of time spent in hot area per hour should be specified to avoid any heat disorders among the workers. The drinks containing 6 % glucose and 0.9 percent salt should be promoted in those areas.

						view.						
			8	Noise	1	Possible hearing loss and annoyance among workers.	3	1	2			• The noise measurements should be done to ensure that excessive exposures of the workmen is not more than 90 dB(A) the hearing conservation programme as laid down in the schedule on noise in Gujarat Factories Rules (made under Section 87 of the Factories Act) should be followed.
			9	Failure to plug the tap hole.	1	Spillage of material and subsequent burn hazard.	2	2	2	Necessary emergency actions will be taken up.		No recommendations.
			10	Shortage of water for granulating the slag	1	Possible bump release of steam in granulation process	5	2	4	Water flow is monitored on water line with alarm of flow failure to stop the plant.		No recommendations.
			11	Transfer of the molten copper to anode furnace through ladle	1	Possible overflow of material from the ladle and subsequent falling of the molten copper.	3	1	2			• The route of the ladle should be marked and barricaded. Alarm should be sounded before transfer by ladle.

					2	Failure to plug the tapping hole may lead to spillage and contact with the molten copper.	2	2	2	Only trained operators with complete body protection against contact with hot metal and inhalation of SO2 will be ensured.		No recommendations.
					3	Accident due to crane failure.	4	3	4	All the components of the lifting machinery will be tested by the competent person as per the frequency prescribed under the applicable rules. The cabin of the EOT crane operator will be AC.		No recommendations.
7. Slag Cleaning of Furnace	1		1	Feeding of matel, coal and Return slag from PS converter from the smelting furnace.	1	Escape of Carbon monoxide in the work room	2	3	3	CO is monitored by CO monitor. Oxygen is introduced with air to ensure that all the CO that is generated is fully oxidised to CO2. The local exhaust arrangements provided.		No recommendations.
			2	Water deficienc y in slag granulato r	1	Inadequate granulation	4	3	4	The flow and temp. of the water is monitored on line and alarm is sounded and plant will be shut down.		No recommendations.

			3	Failure of scrubber efficiency	1	Release of SO2 from the vent.	4	3	4	pH monitoring will be done. Alarm will be sounded then action will be taken. The sample of circulating fluid will be taken for lab analysis once in a day. Action is taken before it falls to 8 pH.		• Use of concentration monitoring instead of pH monitor may be considered to ensure that solution is always alkaline. • The availability of chemical cartridge respirators for acid gases should be insured in the area.
	2	Copper scrap melting furnace.	1	Emission of the SO2 from the copper scrp melting furnaces	1	Gas exposure while feeding	3	3	4	The furnace is maintained under negative pressure.		No recommendations.
			2	Feeding the scrap	1	Possible bumping due to presence of moisture and hollow cavities in the scrap being fed.	4	2	4			• The scrap should be manually inspected to ensure that it does not have any moisture and objects with cavities. If any hollow object is found it should be broken by cold methods before feeding into the furnace.
			3	Flame failure and release of LPG.	1	Possible confined vapour cloud explosion and subsequent damages..	2	2	3	The burners are optically monitored and gas flow is stopped on flame failure.		• No recommendations.

1132

					2	Possibility of entry of gas into air line and /or air into LPG line.	4	2	4	NRV and Flash back arrestors will be provided in both the lines.		No recommendations.
			4	Transfer of the molten copper to anode furnace through launder	1	Possible overflow of material from the ladle and subsequent falling of the molten copper.	3	2	3			• The route of the ladle should be marked and barricaded. Alarm should be sounded before transfer by ladle.
						Failure to plug the tapping hole may lead to spillage and contact with the molten copper.	2	2	2	Only trained operators with complete body protection against contact with hot metal and inhalation of SO2 will be ensured.		No recommendations.
					2	Accident due to crane failure.	3	2	3	All the components of the lifting machinery will be tested by the competent person as per the frequency prescribed under the applicable rules. The cabin of the EOT crane operator will be AC.		No recommendations.
8. Anode Furnace and anode casting			1	Molten matte pouring	2	Splashes of molten copper and subsequent injuries	3	2	3	Trained employees with protection for body, heat resistant clothing, furnace glasses, foot and leg protection, helmets are used while		No recommendations.

wheels										ladle handling and pouring into the furnaces.		
			2	Scrap copper feeding	1	Possible release of SO2 gas and copper fumes and subsequent exposure of workers to them.	3	1	2	The furnace is maintained under negative pressure avoiding release of gases from the opening. The particulate matter is separated with the help of bag filter.		• Ensure to monitor the conditions of bag filter by suitable method and regular analysis.
			3	Possible bumping due to moisture impregnation of the scrap.	1	Process disturbance and possible injuries.	3	2	3			• Inspection of the scrap should be done to ensure that there is no moisture and objects with cavities to avoid flash release of steam on sudden boiling of water.
			4	Removal of the particulate matter by bag filter	1	Possible damage of fabric filter due to high temperature	4	2	4	Mineral wool filter is used that can withstand the high temp of the gases.		No recommendations.
			5	Transfer of molten copper through a launder.	1	Possible overflow of molten copper from the launder and subsequent injuries to persons under launder.	3	1	2			• Barricading and display of precautions should be done to avoid persons moving or working under launder.

			6	Pouring of molten metal to the moulds.	1	Possible spillage of the metal under abnormal conditions	3	1	2	Workers in that areas will be allowed only with adequate protection.		No recommendations.
			7	Presence of moisture in the moulds.	1	Bumping while pouring of the metal	4	1	4			• Ensure proper inspection to avoid moisture before starting pouring.
			8	Mould defective	1	Possible entrapment of moisture and subsequent bumping on pouring.	3	1	4			• Ensure proper inspection to avoid moisture before starting pouring.
			9	Falling of moulds from height during removing of moulds from the system for maintenance work.	1	Possible injuries due to falling	3	1	2			• All the components of the lifting system should be duly tested at adequate intervals by competent persons. • The workers in the area should be protected by safety shoes to prevent injuries due to falling of heavy objects on the feet.
			10	Failure of water for	1	Possible hot castings with	4	2	4	Water flow monitor will be provided with alarm		No recommendations.

				cooling		liquid spill.				on less flow. Parapet walls will be provided to ensure proper management of water cooling system		
			11	Transfer of normal anodes to the refinery tank and rejects to PS converter	1	Possible accidents due to fault in forklift truck driving.	4	2	4			• Ensure that appointment of forklift truck driver should be done only to persons who are well trained, certified and having driving licence for the commercial transport vehicles.
9. Off gas handling	1	Waste heat recovery boilers	1	Over pressure of the boiler	1	Over pressure bursting of the boiler	1	2	1	The integrity of the boiler will be ensured by periodic hydraulic testing as required under Indian boiler act and rules and provision of safety relief valves of adequate settings.		No recommendations.
			2	Overpressure of the system in case of pressure regulator failure by diaphragm		Possible damage of the equipments and instruments on down-stream.	3	2	3			• Ensure that safety valve is provided in the downstream of the pressure regulator.

				rupture.							
	2	Electro static precipi tator	1	Electrific ation	1	Electric shock to the persons	2	2	2	Proper insulations will be provided to ensure that personal electrocution is avoided.		No recommendations.
			2	Static charge on the compone nts when system not in use.	1	Electric shock to persons due to accumulation of charge on the components.	2	2	2			• Discharge rod should be provided to ensure no potential in any object. • All the protective equipments should be tested to bear the voltage on which the workers have to work. • Ensure that the persons duly certified by the electric department should be allowed to work in such areas. • The danger boards (Skull and cross bone) should be provided in the equipment.
					2	Electrification of ID fan.	2	2	2	All the electrical equipments will be doubly earthed.		• Emergency stop button should be provided close to the ID fan and ESP.
			3	Mechanic al Failure of the ID fan	1	No suction in the duct resulting in release of gas from several points.	2	2	2			• Ensure that stand by blower is provided to use in case of ID fan mechanical failure. • Ensure that running of ID fan is monitored with the help of load monitoring.
			4	Electrical failure of ID Fan.	1	do	2	2	2	Fan running will be monitored in control room with alarm on failure.		• Ensure that redundant ID Fan is provided to use in case failure of one fan. It should automatically start on failure of

										A system to bypass the gases to chimney through gas scrubber is provided, which will operate immediately on blower failure. The SO2 will be monitored in the stack and in case of more gas in the stack the efficiency of scrubber will be increased by adding the scrubbing substance.		the first one. • Ensure that dampers to connect the gas line through secondary gas scrubber to function in case of failure of sulphuric acid plant are provided. • It should be ensured that the caustic concentration is maintained by automatic system or on manual basis as long as secondary gas scrubber is used.
			5	Lightening in the plant.	1	Possible damage of structures and building.	3	2	3	The lightening arrestor will be provided in the stack as per BIS standard.		No recommendations.
					2	Striking of stack with aircrafts	3	2	3	The chimney will be provided with aviation light.		No recommendations.
			6	Corrosion of stack.	1	Possible weakening of the stack due to deposition of acid if the temperature drops below dew point.	4	2	4			• Ensure that the chimney is applied with anti corrosion coatings to prevent their damage due to acid depositions.
10. Gas cleaning plant	1	Quenching with high	1	Leakage while quenching	1	Release of toxic SO2 in the work environment	3	2	3	The system is in negative pressure.		• Ensure that water flow is monitored with record in the control room. • Ensure that indication on pump

1349

		efficiency scrubber										failure and local flow indicator are also provided. • Ensure that washing tower outlet gas temperature is interlocked with SO2 blower trip.
	2	Wet Electro static precipitator			1	Possible electric shock and leakage	1	2	1	Tank will be doubly earthed.		• Earthing resistance should be monitored at fixed intervals and record of testing should be kept. • Ground fault current interrupter should be provided. • The system to discharge the vessel before any work in it, should be provided. • Proper Chemical cartridge respirator should be kept available in the area. • Precautions and danger board should be provided at the wet electrostatic precipitator. • Ensure that the PPE used by the workers are tested for high voltage available in the system.
			2	Pressure drop in the gas cleaning system and duct.	1	Possible bucking of the ducts	4	2	4			• Ensure that the pressure is monitored with low pressure alarm with blower interlock.
			3	Release of SO2 dissolved	1	Release of toxic SO2 as soon as the water comes	3	2	3			• Ensure that SO2 stripper is provided to recover the gas before the water is released

1139

				in the process water.		into the drain.						into the drain.
				Inadequate cooling		Process disturbance	5	2	4			• Ensure to monitor Temperature and pressure across the star cooler.
			4	Inadequate fluorine/ mercury removal	1	Process disturbance	4	2	4			• Ensure to monitor the fluorine and mercury concentration at the downstream of fluorine absorber or mercury scrubber.
			5	The wet ESP failure	1	Failure of cleaning operation	4	2	4			• Ensure that plant trips in case of wet ESP Failure.
			6	Short circuiting of electrodes	1	Failure of cleaning operation	4	2	4			• The instructions should be displayed to ensure that system is wet before applying the charge. (interlocking should be considered.)
			7	Exposure to mercury vapour	1	Toxic gas exposure	3	2	3			• Hazards and precautionary measures for mercury should be displayed. The MSDS of the respective chemical should be readily available. • Mercury in treated SO2 should be checked periodically.
	3	Use of chlorine	1	Leakage of chlorine	1	Exposure to toxic chlorine gas	2	2	2			• Ensure to provide chlorine emergency kit with at least two self contained breathing

				in the work environment								apparatus. Workers should be trained in use of emergency kit application. • Provision of chlorine sensor with alarm should be considered.
			2	Chlorine flow in spite of water flow failure	1	Release of chlorine from the discharge point and corrosion of the pipeline.	3	2	3			• Ensure to provide vacuum valve which may stop the flow of chlorine in case of water flow failure.
			3	Presence of arsenic in the gas	1	Process disturbance and possible formation of arsine gas	3	2	3			• Arsenic level of SO2 should be tested periodically / on line to ensure that it has been removed effectively. • The fact that arsenic forms deadly poisonous arsine gas on contact with mineral acids should be displayed. • The Solid particulate matter collected in the ESP may contain arsenic. Hence it should not be allowed to come in contact with any acid to prevent arsine gas formation which is highly poisonous.
	4	Drying Tower	1	Acid circulation tank	1	Spillage from the circulation tank or process	3	2	3			• Level monitoring should be done with alarm at the site and in control room on high and low

				level low and high		disturbance.						levels.
			2	Circulation pump failure	2	Process disturbance and SO2 release into the atmosphere.	3	2	3			• Ensure that a standby pumps with NRV s provided in auto start mode with alarm in control room. • The SO2 blower and diversion to stack should be interlocked with the pump failure.
			3	Leakage of the heat exchange surface in heat exchanger for acid cooling.	3	Transfer of water to the Acid line and subsequent heating of acid.	3	2	3			• Ensure that the pressure of Acid line is more than the water line. • PH of the water should monitor "on line" with alarm.
			4	Too much dilution of the acid.	1	High moisture in SO2.	4	2	4			• Acid concentration should be monitored on line and fresh acid should be added to maintain the concentration.
			5	More moisture in SO2.	1	Process disturbance	4	2	4			• On line monitoring of moisture in acid line should be done.
			6	Acid spillage from the circulatio	1	Spillage of acid and contact with skin.	3	2	3			• A parapet wall with acid proof tiles should be provided to divert the spilled acid to

1353

				n tank.							treatment plant.
			7	Flange leakage of acid	1	Possible injury to skin and eyes due to spray release.	2	2	2			• All the flanges and pump seals should be provided with flange guards to prevent spray release of the acid. • If the flanges are above working areas, the catch pots with adequate drain pipe should be provided. • Ensure that eye wash fountain and safety shower should be provided nearby.
			8	More acid in the system	1	Circulation Tank overflow	3	2	3			• It should be ensured that the total capacity of the circulation tank should be enough to hold the total acid in the system.
11. Sulphuric Acid plant (Common for intermediate absorption tower and final pass absorption tower.)			1	Low temperature of the converter column.	1	No conversion of SO2 into SO3. Leading to SO2 release to atmosphere.	3	2	3			• Minimum temperature at which preheating of the converter will be started should be specified in the SOP. • Arrangements for heating should be kept readily available. • The secondary scrubbing system should be started as long as the unconverted SO2 is released.

1143

			2	Leakage of gases from the duct or heat exchange r.	1	Exposure of the employees to the toxic SO2.	3	2	3			• Sufficient number of Chemical Cartridge Respirators should be kept available for use during such emergencies. Thickness monitoring of duct should be carried out once in a year.
			3	Internal leakage of heat exchange surface	1	Possible release of SO2 from the stack.	3	2	3			• Stack gas should be periodically monitored to ensure that More SO2 is not releasing from the stack.
			4	Leakage of gas from the Intermed iate absorptio n tower	1	Release of SO2 &SO3 and 98% acid from the leakages.	3	2	3			• Ensure thickness monitoring of the column walls.
			5	Leakage of gas from the flanges and duct.		Exposure to highly irritant gases.	3	2	3			• Leakage should be checked up periodically with ammonia torch.
			6	Acid circulatio n tank level low and high	1	Spillage from the circulation tank or process disturbance.	3	2	3			• Level monitoring should be done with alarm at the site and in control room on high and low levels.

			7	Circulation pump failure	2	Process disturbance and SO2 release into the atmosphere.	3	2	3			• Ensure that a standby pumps with NRV s provided in auto start mode with alarm in control room. • The SO2 blower and diversion to stack should be interlocked with the pump failure.
			8	Leakage of the heat exchange surface in heat exchanger for acid cooling.	1	Transfer of water to the Acid line and subsequent heating of acid and process disturb.	4	2	4			• Ensure that the pressure of Acid line is more than the water line. • PH of the water should monitor on line with alarm.
			9	Too much dilution of the acid.	1	High moisture in SO2.	4	2	4			• Acid concentration should be monitored on line and fresh acid should be added to maintain the concentration.
			10	More moisture in SO2.	1	Process disturbance	4	2	4			• On line monitoring of moisture in acid line should be done.
12. Sulphuric Acid Plant			1	Acid spillage from the circulation tank.	1	Skin contamination and acid burns	3	2	3			• A parapet wall with acid proof tiles should be provided to divert the spilled acid to treatment plant.

			2	Flange leakage of acid	1	Possible injury to skin and eyes due to spray release.	3	2	3			• All the flanges and pump seals should be provided with flange guards to prevent spray release of the acid. • If the flanges are above working areas, the catch pots with adequate drain pipe should be provided. • Ensure that eye wash fountain and safety shower should be provided nearby.
			3	Circulation Tank overflow due to more acid in the system	1	Spillage and skin burns	3	2	2			• It should be ensured that the total capacity of the circulation tank should be enough to hold the total acid in the system.
			4	Leakages in the sprinkler with air cooled heat exchangers	1	Possible gas release of toxic gases and risk of exposure of the workers.	2	2	2			• pH of the water should be monitored to detect any leakage and leaking members of the coil should be replaced/repaired.
13. Sulphuric Acid			1	Heavy spillage of acid	1	Possible exposure of workers in the	2	2	2			• Ensure that a dyke wall of capacity more than total contents of the largest tank within the dyke is provided.

1358

Storage						area.						The floor of the dyke area should be impervious and acid resistant. Slope of the floor should be diverted to sump provided with a drain pipe The drain pipe should be provided with a valve approachable from outside the dyke. The valve should be kept closed under normal conditions. Whenever required for discharging the rain water the valve should be closed. • The interior side of the wall should be resistant to acid. • The approach stairs should be provided at two diagonally opposite side of the dyke. • The minimum distance of the dyke wall should be so made that all foreseeable jets from the tank fall within the dyke. • The pump and other electrical fittings should be installed outside the dyke.
			2	Tank not properly vented	1	Flow into and from the tank will be disturbed.	4	2	4			• Ensure that vent pipe of adequate dimensions is provided on the top of the tank with protection rain water protection.

1147

			3	Vent blockage		Do	4	2	4			• The vent should be cleaned periodically. Wire mesh protection should be provided to prevent entry of birds and insects.
			4	Entry of moisture	1	Dilution of acid with moisture and subsequent corrosion of wall and possible hydrogen formation and explosion.	4	2	4			• Self indicating silica gel column should be provided in the vent to arrest moisture ingress. The silica gel conditions should be observed every week and the gel should be replaced with fresh or regenerated silica gel as soon as 75% of the gel is decolorized.
			5	Overflow of acid	1	Possible flow of acid from the vent or other openings with injuries.	3	2	3			• The overflow pipe should be provided from the upper most point in the tank wall. The pipe end should be kept sealed by dipping into a vessel filled with acid to prevent moisture entry through the overflow pipe.
			6	Drain pipe passing	1	Leakage of the acid from the passing valve.	3	2	3			• Ensure that the drain is provided at the lowest point of the tank. The drain should be provided with two valves in series or one and one blind. Open and close positions of the valve should be visible from a distance.
			7	Low or high levels in	1	Process disturbance	4	2	4			• Ensure that level indicators with alarm for high and low levels should be provided both

1360

				the tank								in at the site and in control room.
			8	Electrification of the tank	1	Possible electric shock.	1	2	1			• The tank should be earthed by two or more earthing strips.
			9	Approach to the top of the tank	1	Falling of persons due to weakening of tank top because of corrosion.	1	2	1			• Proper ladder with guarding and independently supported platform with railings and toe guard should be made for approach of the workers to the top fittings of the tank.
			10	Flange leakages	1	Possible injuries to eyes and skin	3	2	3			• All the flanges should be guarded to prevent spray release. Catch pots should be provided under the flanges above working areas to receive and deliver the acid at safe place.
14. Oxygen plant	1	Oxygen Storage tank	1	Tank over pressure	1	Possible bursting due to over pressure	2	2	2	Vessel will be subjected to hydraulic pressure testing as per statutory provisions. Safety valve will be provided to release excess pressure if any.		No recommendations.
			2	Possible cracking of material of vessel	1	Possible failure of vessel or piping.	4	2	4	Only cryogenic steels will be used.		• Ensure that the oxygen is fully evaporated and brought to ambient temperature before transferring it through non cryogenic piping.

1149

				/ piping wall due to contact with cryogenic temperature.								
			2	Contact of oxygen with greasy material		Possible spontaneous burning of grease leading to fire or explosion if the space in confined.	4	2	4			• Ensure that only degreased components are used in the vessels and piping. • The solvent washing of internal spaces should be done with suitable degreasing agent before using the vessel/piping. • The area should be kept completely free of greasy materials and other combustible substances.
15. Refinery unit	1	Handling of heavy anodes.	1	Possible hazard of anodes falling from height	1	Possible injuries due to falling of heavy anode on the feet.	3	2	3	The handling equipments, wire ropes, slings, hooks etc. will be tested as per statutory provisions.		• Safety shoes, helmets and canvas gloves with hard toe should be used by all the workers in the area.
	2	Handling of H2SO4 and copper sulphate	1	Spillage or leaking of acid and CuSO2 solution.	1	Possible skin and eye injuries due to contact with Acid.	3	2	3			• Persons should be provided with complete body protection in such a way that toxic chemicals exposures are avoided. • Safety Showers and eye wash fountains are provided nearby.

		solution									• Ensure that Acid is poured in dilution water for the sake of dilution.
	3	Electrolysing cells	1	Emission of hydrogen with mists containing Acid and copper sulphate from the cells.	1	Possible exposure of workmen to hazardous mist.	3	1	3			• Ensure to provide local exhaust system to collect mist from the cells and discharge into the ambient air after suitable treatment. • Use of tennis balls and anti mist additives may be considered.
			2	Magnetic field hazards	1	Exposure to harmful magnetic field formed bylow voltage high current from the cells.	3	2	3			• Ensure that the hazards and preventive measures of low voltage high amperage current are displayed in the language known by majority of workers. • Warning for people using heart pace maker should be displayed. Conspicuously.
			3	Hygiene considerations	1	Possible food contamination from Copper sulphate.	3	1	3			• Food keeping and eating should not be allowed in the cell house. • Adequate hand washing facilities should be kept available. • MSDS of copper compounds should be kept readily available. All the precautions

												laid down in MSDS should be used to prevent any intoxication among the employees. • Concentration of sulphuric acid and copper sulphate should be periodically monitored to ensure that the exposure does not exceed the Permissible Limits of Exposures in Indian Factories Act.
		4. Precious Metal recovery	1	Contact with acidic slime in the filter	1	Possible skin injuries due to acid in the slime.	3	2	3			• Ensure to provided impervious hand gloves, safety shoes, face shield and apron should be used by the employees carrying this operation.
			2	Drying and treatment	1	Possible contact with high temp surfaces leading to skinburns.	3	2	3			• Toxic properties of selenium should be displayed along with the precautions.
	4	Absorption of selenium dioxide in water and filtration	1	Contact of skin with solution and sludge	1	Possible skin problems	3	2	3	The operators will use proper PPE to avoid all possible contacts.		No recommendations.

1369

	5	Roasting with borax and sodium bicarbonate	1	Possible splash of slag and molten metal while pouring.	1	Possible burn hazard Heat tress	3	1	3	The well trained workers ilbe posted who will be fully protected against the hazards.		No recommendations.
	6	Working with LPG	1	Possible flame failure while starting.	1	Possible damage due to delayed ignition.	3	2	3	The gas ignition process will involve auto closing of gas flow in case the flame is not established within a few seconds.		No recommendations.
			2	Entry of gas into the air line or the air in gas line.	1	Possible firing of the gas in pipeline and bursting of the line.	4	2	4	The NRV s and flame arrestors will be provided in both LPG and air lines.		
			3	Transfer of slag through ladle	1	Possible falling of hot objects and burn injuries.	3	2	3	The ladle will be handled with the help of hoist. Workers will be fully protected against the hazards. Adequate rest pauses in AC rooms will be allowed. Slag cooling area will be marked conspicuously.		• Hydraulic system should be tested periodically at the intervals suggested by the technology suppliers. • The path of ladle should be marked on the floor. Sound alarm will be sounded while starting the ladle transfer. • Ensure proper training and licensing of the fork lift truck drivers.

1153

										Unauthorised persons will not be allowed.		
15.a Silver refining by Electrolysis	7	*Silver refining by Electrolysis*	*1*	• *Observe same precautions as suggested for copper refining.* • *The cell is designed not to generate any toxic NOx.*								
			2	Silver crystal re-drying, melting and making bars	1	Possible electric shock and heat stress,	1	2	1	Double earthing will be provided on the electrical devices and other structures. Sufficient rest times will be provided to avoid heat disorders.		No recommendations.
15.b Induction furnace hazards			3	Induction furnace hazards	2	Possible aperture in the crucible and subsequent contact of the molten metal with electric heating device and short circuiting.	4	2	4			• Ensure that water temp both at the inlet and on the outlet should be monitor to ensure integrity of the system. • The furnace specifications should match with the applicable standards to avoid the weaker material of crucible. • Furnace should not be allowed to be overheated.
			4	Current leakage	1	Possible electric shocks	1	2	1			• Ensure that GFCI (Ground fault current interrupter) should be provided. • Ensure that the furnace is operated as per prescribed current flow by the manufacture. Bridging of the

												induction furnace should be avoided by checking the inlet and outlets of water and power drawn by the furnace.
			5	Management of bullions with the help of Robot.	1	Possible involvement of employees with robot activity.	3	2	3			• Ensure that the robot area is barricaded from all the sides, the door to approach the area should be provided with interlocking in such a way that the robot cannot perform any task as long as the door is open.
			6	Manual handling of bullions.	1	Possible injuries on hands and foot due to falling of heavy objects on the feet.	3	1	2			• Ensure that the workers in the area are equipped with adequate hand and feet protection.
			7	Silver granulation in induction furnace	1	Possible injuries, thermal stress and possibility of burns during induction furnace operation and granulation.	3	1	2			• Ensure that area around the Induction furnace operation and granulation is barricaded to avoid entry of any employee to risk zone. • All the precautions for induction furnace safety as discussed earlier should be adhered to. • Concentration of silver in the form of fumes should periodically monitored to ensure healthful work environment.
			8	Radiation of heat,	1	The thermal stress and possible toxic	3	2	3			• Canopy exhaust should be provided to cover top opening of the induction furnace and

				convective heat from the hot discharge of the furnace and steam generation from the water trays		silver fumes						hot and contaminated air and water vapour generating at the time of pouring on the receiving tray.
	8	Drying of granules and packing	1	Heat tress due to hot air oven	1	Possible thermal discomfort of the employees	3	1	2			• Ensure effective ventilation to allow fresh air at the workplace. (Minimum 6 air changes per hour.) or localised air blowing of outside air/conditioned at the work station. • All the electrical equipments and the structures should be provided with double earthing. • Silver fumes should be monitored to ensure that the room is free from silver fumes. • Ensure that all the moving parts of the stitching machine are guarded to prevent injuries.
	9	Gold leaching refining.	1	Contact of skin or eyes with the highly acidic	1	Injuries to skin or eyes	3	1	2			• MSDS of the solvent should be obtained from the supplier. • Hazardous properties of the solvents should be displayed along with the precautionary measures and emergency

1368

				solvent (Exact compositi on not known)								response procedures.
			2	Acid Fumes from the leaching tanks	1	Possible exposure of employees to acidic fumes and corrosion of the surrounding structures.	3	1	2	The leaching tanks will be exhausted and scrubbed with water to remove the acid fumes.		No recommendations.
			3	Possible electrificat ion of vessels.	1	Possible electrical shock.	1	2	1			• Ensure that all the electrical motors, tanks and other equipments like drier, induction furnace, other equipments of the area. are earthed at two places.
			4	Process disturbanc e due to agitator failure.	1	Process disturbance and confusions.	5	2	4			• The load monitoring of each agitator should be done to ensure proper running of agitators.
			5	Contamin ation of body and eyes of acidic fluid	1	Injuries	3	2	3			• Ensure to provide safety shower and eye wash fountain in the area.
			6	Temperat ure disturbanc e.	1	Process disturbance	5	2	4	Temperatures of each vessel will be controlled with the help of heating or		No recommendations.

1157

										cooling jacket provided in each leaching tank.		
			7	Failure of blower in the exhaust system	1	Release of gas from the openings and exposure to the hazardous fumes.	3	2	3			• Consider to provide a stand by exhaust blower in order to meet emergency situations.
			8	Failure of water flow in the scrubber	1	Release of acidic air from the vent of the scrubbing tower.	3	2	3			• Ensure to provide a stand by circulation pump in order to meet emergency situations.
			9	Leakage of heat exchange surfaces in the jackets	1	Possible disturbance in the process	4	2	4			• Pressure monitoring of the jackets will indicate health of the interface surface.
			10	Contamination of skin with cake in the filter installations.	1	Possible skin injuries.	3	1	2			• Ensure protection against all possible hazards.
			11	Release of steam and HCl fumes from the drier.	1	Exposure of employees and corrosion of the surrounding objects.	3	2	3			• Ensure that the vent pipe is resistant to the acidic vapours and high enough to discharge the emissions away from working zone.

1370

			12	Less/excessive drying.	1	Process disturbance	4	2	4			• Auto temp monitoring of the drier should ensured.
			13	Handling of silver granules tray.	1	Exposure to high temp. May cause burn injuries.	3	2	3			• Ensure to provide heat resistant hand gloves and leather safety shoes and gauntlets. .
			14	Working with crucible heater.	1	Electrical shock from crucible	1	2	1			• Ensure double earthing of the crucible heater. • Ensure that crucible is not cracked and handled with proper tong.
			15	Temperature of crucible	1	Process disturbance	4	2	4	Settings are provided in the crucible induction heater.		No recommendations.
			16	Pouring of molten metal in the mould.	1	Possible spillage of molten metal and subsequent injuries. Possible bump of the crucible due moisture present in the mould.	3	2	3			• Only well trained and experienced employees should carry out the pouring operation. • Ensure that the mould is dry before molten metal is poured into it.
16. Continuous cast copper wire rod plant.	1	Charging the copper cathodes into the furnace by	1	Material Handling accidents due to material falls on the	1	Possible crushing and fractures among the employees.	3	2	3	All the lifting equipments and tackles will be tested as per statutory requirement.		No recommendations.

1159

		the skit hoist.		workers.							
			2	Accidents due to human errors	1	-Do-	3	2	3	Training on safety in material handling will be provided		No recommendations.
			3	LPG related problems	1	Gas leakage and subsequent ignition with explosion	1	2	1	Gas firing system with flame monitoring with auto stoppage of gas flow if the ignition fails within a few seconds.		• Leaks in the line should be detected at early stage by periodic checking of joints and valves with the help of explosive gas meter. • Possibility of explosion of gas within the lines should be eliminated by provisions of NRVs and flame arrestors in both fuel line and air line. • The nozzles of the burners should be cleaned at periodically with records. Frequency of cleaning should be decided on the basis of the experience.
			4	Bumping while melting due presence of moisture or other fluids trapped in	1	Possible bumping in the furnace and with the possibility of furnace damage and injuries	4	2	4			• Ensure that the cathodes are free from any moisture. • Any other source of water ingress should be avoided.

1372

				the material fed into the furnace.								
			5	Tapping and mud plugging	1	Possible injuries of workmen due to spattering of the molten metal.	3	2	3	The tapping will be done by experienced and trained workers under strict supervision.		No recommendations.
			6	Transfer of molten metal from the melting furnace to holding furnace through launder.	1	Possible overflow of molten metal and falling on the ground.	3	2	3			• The area under the launder should be barricaded with cautionary notice.
			7	Falling of rain water due to leakage in the roof.	1	Spattering of metal with possible accident leading to spreading of molten metal.	3	2	3			• Strict care should be taken to avoid falling of rain water into this and other furnaces.
			8	Continuous tapping of molten metal in holding furnace though	1	Possible falling of molten copper from the launder to the water below the casting wheel due to damage of refractory of the	3	2	3			• Strict maintenance of the launder should be ensured. • [There have been several events of bursting of water jacket provided for spraying water on the lower part of the wheel and leading to violent

1161

				launder.		launder. And subsequent sudden release of steam and damage to room and injuries to persons around.						destruction of building due to shock ware generated by the event.]
			9	Hot wire extrusion	1	Risk of burn injuries on contact of body parts with the running hot rod.	3	2	3			• The area around the rod should be barricaded. Hazard and precautionary measures should be displayed.
			10	Electrical motor provided for spool rolling of the rod/wire	1	Possible electric shock.	1	2	1	Motor and other equipment will be provided with double earthing.		No recommendations.
			11	Cooling and coating of the rod	1	Possible exposure to high temp and possible skin burns.	3	2	3			• Ensure to carry out any work in cooling and coating zone only after closing the extrusion operation.
			12	Packing and shipping of the coiled rod.	1	Possible material handling accidents	3	2	3	All the lifting machinery and tackles will be tested as per the statutory requirements.		No recommendations.
17. Phosphoric acid plant.	1	Transport from the port to	1	Dust generation at the conveyor feeding	1	Risk of silicosis among the workers due to presence of free silica in the rock phosphate.	3	2	3	The bins to which the rock phosphate is to be delivered will be exhausted and cleaned with cyclone		• Efforts should be made to minimise dust generation and prevent exposure by strict use of protective devices.

1374

		the storage shed.		point.						separator and bag filters.		
	2	Rock phosphate storage and handling	1	Generation dust while unloading, storage and feeding of the rock phosphate.	1	Exposure of the workers to rock phosphate dust (Rock phosphate is generally consists free silica which renders the dust especially hazardous from silicosis point of view.)	2	2	2	The material is dropped to the belt conveyor which is provided with weighing system after which it is dropped into the slurry mixer.		• The workplace should be monitored for rock phosphate dust and ensured that it does not exceed 3mg/M^3. (Computed from Fist schedule of Factories Act assuming silica is 7%.) • The workers should be provided with dust respirators.
	3	Preparation of rock phosphate slurry	1	Possible dust generation while slurry preparation.		Health hazard	2	2	2	The water is first filled then Rock phosphate is added with the help of a conveyor.		• Dust survey should be done to ensure that the levels are less than 3 mg/M^3.
	4	Mixing of sulphuric acid with the slurry.	1	Generation of irritating and corrosive hydrogen fluoride gas.	1	Toxic exposure of the workers to HF.	2	2	2	The generating gases are collected by local exhaust system and HF and silicon tetra fluoride is are converted in Hydro Fluosilicic acid.		• Ensure to provide chemical cartridge respirator with special filter to remove the HF gas and dust in any.

1163

	5	Filtration of slurry	1	Possible contact of slurry with skin and eyes.	1	Toxic exposure	3	2	3	Strict precautions will be taken to avoid contact with acidic slurry. The generating gases are sucked by canopy hood and sent to HF treatment system. The openings will be provided in the duct to clean the deposited semisolid as and when required.		No recommendations.
	6	Phosphoric Acid evaporation and storage	1	Phosphoric acid fumes while evaporation.	1	Health hazard	3	1	2	Dedicated scrubber will be provided to absorb the HF from the gases emanating from the evaporator.		• Avoid contact with phosphoric acid. • Safety shower and eye wash fountain should be provided.
18. Aluminium Fluoride Plant.	1	Reaction between H2SiF6 and Aluminium hydroxide under	1	Release of toxic and corrosive acidic fumes.	1	Possible exposure of workers to corrosive and irritating gas.	3	1	2	The released gases are exhausted and scrubbed out in a dedicated unit.	Possibility of blocking of duct due to hygroscopic dust.	• Choking conditions should be checked and cleaned periodically.

1376

		steam heater										
	2	Possible contact of slurry while filtration	1	Corrosive slurry	1	Possible exposure of worker through skin contact.	3	1	2	The worker is provided with the complete body protection to avoid exposure.		• Ensure that washing facilities are available. Safety shower and eye was fountain should also be provided.
	3	Crystallisation	1	Generation of irritating fumes from the vent.	1	Possible exposure of irritating gases to the workers.	3	1	2	The vent will be exhausted and neutralised.		• Ensure that washing facilities are available. Safety shower and eye was fountain should also be provided.
	4	SB Filter	1	Possible contact.	1	Possible exposures and contact with skin.	3	1	2	Filters will be provided with hood to extract releasing fumes that will be scrubbed out.		No recommendations.
	5	Flash drier with hot air		No hazard								No recommendations.
	6	Cyclone separator with star	1	Dust while bag filling	1	Dust exposure	3	1	2	Star feeder provided to ensure controlled bag filling.		• The work environment should be monitored to ensure that there is no objectionable concentration of the corrosive dust. If required annular canpy around the starfeeder outlet should be with adequate

1165

		feeder										suction by local exhaut system should be considered.
19. Effluent Treatment Plant	1	Neutralisation	1	Neutralisation with acid may generate Arsine gas.	1	Risk of Exposure to highly toxic arsine gas.	1	5	4	The arsenic is converted into ferric arsenate which is stable compound which will be kept isolated to ensure mixing with any acidic chemical. The display about the hazards of this material will be provided. Leachet of this pond will be taken back to the treatment plant.		• Awareness about the possible generation of arsine gas in the plant should be popularised among the employees by suitable warnings at respective places.
	2	Liquid waste neutralisation at the Effluent treatment plant.	1	The acidic solutions are taken to treatment plant where it is neutralised by lime	1	Possible release of arsine gas in the treatment plant.	1	5	4	The cautionary notices will be displayed at relevant places to prevent Arsine generation chances.		No recommendations.
	3	Preparation of lime slurry for	1	Contact with highly corrosive and	1	Possible skin burns and possible risk of particles entering eyes.	3	2	3	The imported CaO is received in imperious bags, which are as such shifted to the		• Local exhaust arrangement should be provided to extract the dust generation at the lime dissolving point. (It should be kept in view that CaO is highly

		neutralisation of the acidic waste.		irritant lime.						neutralisation area. The alkaline solid waste generated in the plant will be dumped into the special site provided for Ferric arsenate wastes.		exothermic on contact with water. A particle entering the eyes will slake the lime generating excessive heat and eye injury.) • The area should be provided with the safety shower and eye wash fountain.
20. Utilities Requirements	1	Power – incoming substation.	1	Energising of panels	1	Possible electric shock to employees.	1	2	1	Each panel will be doubly earthed. Danger boards (Skull and cross bone) will be displayed on every panel. The building will be protected with lightening arrestor.		• Only authorised person with competency certificates should be allowed to operate the system. • Unauthorised person should not be allowed to enter into the panel room. • Earth fault relay, all other relays, equipment and controls should be in healthy conditions. • Ensure that the lightening arrestors meet with BIS standard. The Indian Electricity rules should be strictly followed. • Ensure that all the workers in the substation should be well trained in artificial breathing. The chart of artificial breathing should be displayed in the substation. • Ensure that discharge rod and rescue rod are kept available in the substation. • Ensure that earthing pits of the

1167

												substation are maintained as per India Electricity Rules. • Ensure that earthing resistance of all the earth pits are maintained as per the rules. • Ensure that personal protective equipments are tested for the voltage in question. • The first aid box should be kept available with list and phone numbers of the trained first aiders. • Escape routes at two diagonally opposite direction should be provided in each panel room. • Ensure to display electric circuit diagram is displae3d in the wall of the switch room. • Ensure that rubber mats are kept in front of all the control panels should be laid with tested rubber mats. • Ensure that emergency light is as available in the switch rooms. • All the equipments and cables etc. used is substation should be of required capacities meeting the specific BIS standards. • Cable trays should be earthed at two separate points. • A qualified electrical engineer should be declared as Electrical

1380

												Safety officer to ensure compliance of Indian Electricity rues during construction and maintenance and operation of electrical installation.
			2	Heat generation leading to hot environment and fire	1	Possible electrical fire and panel bursting.	3	2	3	All the panels will be provided with explosion vent. Fire extinguishers of adequate type and fire bucket filled with dry san will be installed on the panel rooms. Gas mask (for carbon monoxide) and self contained breathing apparatus will be provided.		• Ensure that substation is well ventilated. • The substation should be well illuminated. • Ensure that all the equipment in substation are periodically inspected and maintained. • Ensure that the housekeeping of the substation is kept in good conditions.
	2	Transformers	1	Current leakage	1	Electric shock to employees.	1	2	1	Each of the body of transformer and neutral point of the transformer will be provided with two separate earthing for each.		• Ensure that the earthing resistance is maintained as per Indian Electricity Rules. • Ensure that only tested PPE are used by the electricians.
			2	Short circuiting of transformer due several	1	Possible fire and transformer explosion	4	2	4			• Ensure provision of the followings: • The conservator tank should be provided with vent having silica gel column. The column should b inspected weekly to ensure

1169

				reasons								its effectiveness. In case discoloration of the 75% of the column the gel should be replaced by regenerated or fresh silica gel. • A fire wall of 4 hour fire resistance should be provided between two transformers with oil capacity more than 2000 litres each. • Emulsifier should be provided for each transformers having oil storage capacity of 2000 L. • Pressure relief valve should be provided in the transformer tank. • Thermostat for winding and oil of the transformer should be provided. • Transformer should be provided with pressure relief valve and Buchholz relay. • The oil pit with drain and collection arrangement is provided for each transformer. • Emergency stop buttons should be provided near each transformer and motors. Transformer should be provided with double earthing. • The hydrant operating point near transformer should be provided with fire wall. • Danger boards should be

1170

1382

												provided close to the primary and secondary terminal boxes and on the fencing of the transformer. • Separate lightening arrestor should be provided on overhead lines.
	3	Process Air Compressor	1	Exposure to high levels of noise	1	Possible noise induced hearing loss.	3	2	3			• The provision of Enclosure on the compressor to prevent propagation of sound may be considered. • The control room where some employee is likely to remain should be provided with Sound proof room with glass panel for looking into the compressor room. • The sound levels should be measured at fixed intervals. • The person going close to the compressor should use adequate ear protection. • Warnings should be displayed to not allow unauthorised persons. • All the requirements of Schedule on Noise in Gujarat Factory rules made under section 87 should be complied with.
			2	High pressure	1	Possible bursting of the piping or	4	2	4	Safety valve and high pressure cut out		• Ensure that thickness of the lines and vessels is measured once in a year to ensure that

1171

				in the piping and vessels.		receivers.				switch will be provided on compressor and air receivers. Hydraulic testing of the vessels will be done once in four years. Thickness monitoring of the receivers will be done once in a year. The Safety valves provided in the lines or vessels will be tested once in a year.		the thickness will be safe till next date of thickness monitoring.
	3	Electrical hazard	1	Lack of earthing	1	Possible electric shock	1	2	1	Double earthing will be provided in the compressor set.		No recommendations.
			2	Loss of efficiency of air drier	1	The moisture going to the instrument air of the plant and cause process disturbance.	4	2	4	Molecular sieves type dehumidifier will be provided to render the instrument air moisture free.		• Ensure that the dehumidification system is maintained in healthy condition.
21. LPG storage and use.	1	Storage of LPG in horizontally mounted bullets	1	Decanting, storage and vaporisation of liquefied gas.	1	Possible leakage or release of LPG from the tanker/tank, forming explosive vapour cloud and subsequent vapour cloud ignition leading to shock	1	2	1	Tanks will be mounded to reduce the risk. All the precautions suggested by the supplier of the systems or by PESO will be executed.		• Ensure that all the requirements of PESO with regard to LPG/LNG are meticulously observed.

		(Capacity not known at this stage)				wave destructions and, burn injuries and subsequent BLEVE and fire ball leading to injuries and destructions.						
22. Raised platforms	1	At different places in the plant	1	Falling of persons from height and falling of objects from height and subsequent injuries	1	Possibility of falling of persons from height and falling of objects from height with possibility of getting injured.	2	2	2			• Ensure that all the raised platforms and the landings of stair cases are provided with double railing and toe guards of 10 to 15 cm height with 1 cm gap from the floors.
23. Water treatment plant (HCL)	1	Hydrochloric acid storage	1	Heavy leakage from the tank or tank collapse	1	Hydrochloric Acid exposure and resulting injuries.	2	2	2			• Tank for hydrochloric acid should be of MS with rubber lining. • The tank should be provided with dyke wall with acid proof linings in the interior surface. • The slope of the floor should be directed towards a sump having drain pipe. The pipe should be provided with a valve approachable from outside. • The dyke area should be provided with two staircases situated in opposite directions. • The tank should be provided with vent with water scrubber

												at the end. The overflow pipe should be kept dipped in water to prevent vapour release from the overflow pipe. • The dike wall should be located in such a way that all foreseeable releases from the tank are contained within the dyke. • Arrangement of level monitoring should be provided. • The tank should be earthed at two points. • The drain pipe of the tank should be provided with two valves in series or one valve and blind. • The flanges in the line should be provided with the flange guards in such a way that there is no spray release of the acid in case of leakage. • No electrical equipments should be located within the dyke wall. • Safety Showers and eye wash fountains should be provided nearby. • The hazardous properties of the hydrochloric acid with precautionary measures and the • Emergency response procedure should be displayed near the tank.

1386

24. Water treatment plant (NaOH)	1	Sodium Hydroxide lye storage.	1	Heavy leakage from the tank or tank collapse	1	Sodium Hydroxide exposure and resulting injuries	2	2	2			• Tank for Caustic lye should be of MS. • The tank should be provided with dyke wall with caustic proof linings in the interior surface. • The slope of the floor should be directed towards a sump having drain pipe. The pipe should be provided with a valve approachable from outside. The valve should be kept closed under normal condition. • The dyke area should be provided with two staircases situated in opposite directions. • The tank should be provided with vent with outer end provided with wire mesh to avoid entry of birds.. • The overflow pipe should be provided at the highest filling level of the tank. • The dike wall should be located in such a way that all foreseeable releases from the tank are contained within the dyke. • Arrangement of level monitoring should be provided. • The tank should be earthed at two points. • The drain pipe of the tank should be provided with two

1175

												valves in series or one valve and blind. • The flanges in the line should be provided with the flange guards in such a way that there is no spray release of the acid in case of leakage. • No electrical equipments should be located within the dyke wall. • Safety Showers and eye wash fountains should be provided nearby. • The hazardous properties of the caustic lye with precautionary measures and the emergency response procedure should be displayed near the tank in the language known by the majority of workers.

"Ignited Minds for a brighter future"

- Establish and run our own schools
- Support to the Government anganwadis and schools
- Joining hands with the Government through Public Private Partnership (PPP)

All efforts geared towards improving Quality of Education.

(ii) Primary Health Care:

"Ignited Minds for Healthy Life"

- Rural Clinics
- Mobile Health Care Units
- Joining hands with the Government through Public Private Partnership (PPP)
- Innovative and need based projects such as Anaemia Prevention Program, Health Card to Senior Citizens , etc.
- Medical Education

All efforts will be geared towards Preventive and Primary Health Care.

adani™

(iii) Sustainable Livelihood Developments:

"Ignited Minds for an Empowered Life"

- Support to Fisher Folk community for livelihood enhancement
- Empowering Women for better Livelihood
- Improving Agriculture and Animal Husbandry
- Optimising Natural Resource Utilization in Rural areas and conservation of natural resources
- Encouraging Vocational Skill Development and Entrepreneurial Initiative especially among women, children, elderly and differently abled

All efforts will be geared towards enhancing Socio-Economic Stature.

(iv) Rural Infrastructure Development :

"Ignited Minds for better Living"

Infrastructure related to

- Water conservation and Recharge
- Drinking Water availability
- Upgrading Infrastructure for Education
- Upgrading Infrastructure for primary Health and Hygiene Promotion
- Community Utility Infrastructure

All projects will be geared towards enhancing Rural Civic Amenities .

(v) Rural Sports and Sports Training:

"Ignited Minds for Disciplined Life"

- Training in promotion of Rural Sports
- Creating or upgrading rural sports grounds
- Encouraging sports activities amongst rural youth

All projects will be geared towards promoting Rural Sports.

I. Identification of CSR Projects:

1. CSR Projects need to be identified and planned for approval of the CSR Committee, in particular in Thrust Areas, with estimated expenditure and phase wise implementation schedules.

2. The Company shall ensure that in identifying its CSR Projects, preference shall be given to the local area and areas around which the Company (including its Units) operates. However, this shall not bar the Company from pursuing its CSR objects in other areas.

139

adani

3. As a cardinal principle, the CSR Projects in Thrust Areas shall be identified on th e basis o f a detailed assessment survey.

4. The CSR Officer may engage external professionals/firms/agencies if required for the purpose of identification of CSR Projects.

J. Implementation of CSR Projects:

The Company shall implement the identified CSR Projects by the following means:

I. Direct Method

1. The Company may itself implement the identified CSR Projects presently within the scope and ambit of the Thrust Areas as defined in the Policy;

2. The Company may also implement the identified Projects presently through its Foundation or Society which is involved in CSR activities, within the scope and ambit of the Thrust Areas as defined in the Policy.

3. The CSR Officer may engage external professionals/firms/agencies if required, for the purpose of implementation of its CSR Projects.

4. The Company may collaborate with other companies, including its Group Companies if required, for fulfilling its CSR objects through the Direct Method, provided that the CSR Committees of respective companies are in a position to monitor separately such CSR Projects.

II. Indirect Method

1. The Company may implement the identified CSR Projects through Agencies, subject to the condition that:

   - The activities pursued by the Agency are covered within the scope and ambit of Schedule VII to the Act provided

     - The Agency has an established track record of at least three years in undertaking similar programs or projects, and

     - The Company has specified the Project to be undertaken through the Agency which shall preferably be in Thrust Areas, the modalities of utilization of funds on such Projects and the monitoring and reporting mechanism which shall be at least once in three months.

adani

2. The Company may collaborate with other companies, including its holding and subsidiary Companies and Group Companies if required, for fulfilling its CSR objects through the Indirect Method provided that the CSR Committees of respective companies are in a position to monitor separately such Projects.

K. Monitoring Mechanism:

There will be a review and monitoring committee comprised of Business Site Head, Head Operations, Volunteer Employee and Adani Foundation representative which will meet every quarter. This committee will report to the board through CSR Committee of the business.

Internal Audit and review as well as regular capacity building at all levels of execution/implementing partners and monitoring/review committees will be done on regular basis.

L. Fund allocation and Others:

A. Fund allocation

1. The Company, in every Financial Year, shall endeavor to spend such feasible amount as CSR Expenditure, which shall not be restricted by the statutory limit of a specified percentage of its average net profits of the immediately preceding three Financial Years. However, the aforementioned CSR Expenditure in any Financial Year shall be at least 2% of Company's average Net profits for the three immediately preceding Financial Years.

2. The CSR Committee shall prepare a CSR Annual Plan for the above which shall include:

   a. Identified CSR Projects
   b. CSR expenditure
   c. Implementation Schedules

3. Total expenditure in the CSR Annual Plan shall be approved by the Board upon recommendation by the CSR Committee

4. In case the Company fails to spend the statutory minimum limit of 2% of Company's average net profits of the immediately preceding three years, in any given financial year, the Board shall specify the reasons for the same in its report in terms of clause (o) of sub -section (3) of section 134 of the Act .

1398

adani

iv. The CSR Committee shall place before the Board in April/May every year a responsibility statement of the CSR Committee that the implementation and monitoring of CSR Policy, is in compliance with CSR objectives and Policy of the company for inclusion in the Board's Report.

v. The CSR Committee shall ensure that the CSR Policy and finalized Annual Plan is displayed on the Company's website.

N. Review Periodicity and Amendment:

i. CSR Plan may be revised/modified/amended by the CSR Committee at such intervals as it may deem fit.

ii. The CSR Committee shall review the Policy every two years unless such revision is necessitated earlier.

****

adani

B. Others

1. The CSR Committee shall ensure that major portion of the CSR expenditure in the Annual Plan shall be for the Projects as per CSR objectives . However, there shall not be any preference given to any particular projects for budgetary allocation and it shall be made purely as per the identified CSR Projects on need basis.

2. The Chairman and the Managing Director of the Company are authorized severally to decide on Projects to be implemented within the allocation as per the Annual Plan.

3. Any surplus arising out of the CSR Projects shall not form a part of the business profit of the Company.

4. The Company may build CSR capacities of their own personnel or personnel of Adani Foundation or its Trust or Society, as well as those of the Agencies through institutions with established track records of at least three Financial Years but such expenditure on capacity building shall not exceed 5% of the Approved Budget of the Company in one Financial Year.

M. Duties and responsibilities:

I. Board of Directors

The Board shall include in its Report the annual report on CSR Projects as per the format provided in the Annexure to the Rules.

II. CSR Committee

i. The CSR Committee shall monitor the implementation of the CSR Policy and CSR Plan. For this purpose, the CSR Committee shall meet atleast twice a year.

ii. In discharge of CSR functions of the Company, the CSR Committee shall be directly responsible to the Bo ard for any act that may be required to be done by the CSR Committee in furtherance of its statutory obligations, or as required by the Board.

iii. The CSR Committee shall place before the Board the draft annual report as per the format in annexure to the Rules in Board meeting in April/May of the following year for Board review and finalization.

1399

Annexure-XVI

Environment, Health & Safety Policy

adani™

ENVIRONMENT, HEALTH & SAFETY POLICY

We at Adani, strive to make our businesses sustainable, that benefits our customers, our employees, our shareholders and society in general. We believe that in addition to integrated infrastructure business, there is a bottom line in performing our operations according to prescribed standards, specifications and regulations on governance, which are safe in working and environmental friendly for the well-being of the working community.

As a responsible corporate, we at ADANI have a firm conviction that the industrial injuries, occupational hazards as well as safety and environmental incidents are preventable. We recognize and trust people as our most important asset and have commitment to provide safe and healthy work environment impacting not only those, who are working in our industry but also community, which is living in the vicinity.

To achieve this objective, we shall

a. Develop, implement, maintain and sustain EHS Management System across the Group to set up new benchmarks for the respective sector of operations, which superimpose the regulatory and statutory requirements.

b. Verify, audit and periodically review EHS performance and set new targets to revise these benchmarks.

c. Formulate EHS objectives and targets for continual improvement and to have a periodic review for ensuring that these are in conjunction with the individual business and corporate levels.

d. Conduct all our operational activities in such a manner as to avoid harm to employees, contractors, stakeholders and community at large.

e. Inculcate safety & health as a personal value through behavioral intervention and recognize it across levels with continuous correction of unsafe behavior.

f. Provide adequate training and resources so as to bring awareness and ability to carry out work safely.

g. Emphasize responsibility and accountability to all employees and contractor workforce for safe performance on the job and encourage safe behavior off the job.

h. Evolve ways to reduce or eliminate the use or release of toxic and hazardous material and prevent pollution by conserving natural resources, recovering and recycling the raw materials for safe, healthy and clean environment.

Annexure B

A statement showing issues raised by the participants and responses by the representative of the project proponents during the Public Hearing

As per the Ministry of Environment, Forests and Climate Change, New Delhi, Government of India, Gazette Notification No. S.O.1533 dated 14/09/2006 and its amendments till date, Environmental Public Hearing was scheduled for M/s. Adani Enterprises Limited for proposed Greenfield Copper Refinery Plant (1.0 Million Tonnes per Annum – MTPA), which is covered under category "A" as mentioned in TOR, at Adani Ports and Special Economic Zone (Village Siracha and Navinal, Taluk Mundra, Dist. Kutch, Gujarat).

The Environmental Public Hearing was held on dated 29/04/2017 at 11.00 AM at Community Premises Centre (Samajwadi), opposite Tunda Primary School, Taluk Mundra, District Kutch, Gujarat.

Shri D. R. Patel (GAS), Additional District Magistrate and Resident Additional Collector, Kutch-Bhuj supervised and presided over the public hearing proceedings.

Shri K.B. Chaudhary, Regional Officer Shri, Kutch (East), Gujarat Pollution Control Board and as a representative of member secretary of Gujarat Pollution Control Board welcomed all participants present in the public hearing and with due permission of Additional District Magistrate and Resident Additional Collector initiated the procedure of the public hearing. He outlined about various provisions of E.I.A. Notification 2006 and briefed the procedural details for conducting this public hearing including actions taken by GPCB for wide publicity of this public hearing and the advertisement given in earlier local daily newspapers. He announced that as per the provision of notification, only locally affected persons will be allowed to represent in the public hearing while others having plausible stake may give their representation in writing which would be included in the proceedings.

With the due permission of the Additional District Magistrate and Resident Additional Collector, Regional Officer, Kutch (East), GPCB invited representatives of the project proponent to make the presentation of the proposed project in local Gujarati language.

1434

As the representative of the project proponent started presentation, Shri Naranbhai Gadhavi, Village Zarpara, Taluka Mundra, requested the presiding officer for an original copy of EIA report in English. Regional Officer, GPCB, with due permission of presiding officer, directed the representatives of the project proponent to provide copy of EIA report to Shri Naranbhai Gadhavi. Project proponent provided the said EIA copy to Shri Naranbhai Gadhavi.

After that technical representatives of project proponent of the industry gave an audio visual presentation in Gujarati which included introduction of the company, world statistics of Copper smelters and refinery, Copper plants in the world, use of Copper for the nation, Map of the site, Map of the study area, land use pattern of the study area, layout plan, environmental settings, resources necessary from the local area, process plant flow sheet, air environment, ambient air quality monitoring, mitigating measures for air pollution, water environment, assessment of impacts on water environment and mitigating measures, land environment, sampling locations, mitigating measures, solid waste management, noise environment, measures to attenuate noise, biological environment etc.

After the audio visual presentation by the representatives of the project proponent, Regional Officer, Kutch (East), GPCB, with the permission of the Additional District Magistrate, opened the forum for representations / objections / suggestions from the local affected people.

Regional Officer, Kutch (East), Gujarat Pollution Control Board informed to all the participants that before environmental public hearing written representations have been received from: (1) Shri Ravilal K. Maheshwari, Mundra. (2) Shri P.C. Gadhavi, Ex. President, Taluka Panchayat, Lakhpat, (3) Shri Mahesh Pandya, Paryavaran Mitra, Ahmedabad (4) Shri Gajendrasinh Jadeja, Sarpanch, Navinal (5) Shri Sanjaybhai S. Bapat, Mundra, (6) Shri Naran B. Gadhavi, Kheti Vikas Trust, Zarpara. Reply to these written representations given by the project proponent will be included in the proceedings.

The representations / objections / suggestions / opinions raised by the participants and responses by the representatives of the project proponent during the public hearing are as under:

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
1	Shri Punshibhai Gadhavi Member of Taluka Panchayat, Mandvi Village: Mota Bhadiya Taluka: Mandvi	He represented that, • How many villages of the Mandvi and Mundra taluka are affected in this project? Provide the details about distance. I was a Sarpanch for a period of ten years and I made submissions during that time also but the company did not provide a proper reply. • At the time of making this report, how many numbers of villages have been visited by the company and were the local people present at that relevant point of time? • How does police behave with ladies of our village? The people of Nana Bhadiya, Mota Bhadiya and Kandagra village are sent back.	The representative of project proponent informed about his designation and qualification and then replied that, • The area of this project includes Siracha and Navinal villages. As per the guidelines under EIA Notification of Ministry of Environment, Forests and Climate Change, Government of India 16 villages within the 10 kilometre radius are included. Out of this, the monitoring is done in 8 villages.
2	Shri Dayabhai Viram Gadhavi Village –Mota Kandagra Taluka: Mundra Shri Rambhai Kanani Village –	He represented that, • All our questions shall be replied to in Gujarati language. The project representative does not reply in Gujarati language and therefore this means	The regional officer asked the project representative to translate the replies from Hindi to Gujarati language.

dpala

	Zarpara, Taluka: Mundra	that the local public will not receive employment. The project officer should provide his qualification and identification before giving reply in Gujarati. • How many villages are affected? What is the radius of affected area? How many people were met? How many villages were visited? • At the time of presentation the list of only 8 villages is shown. Why other villages are not included? Why is monitoring done in only 8 villages? Show us the list of 16 villages. Give the proof of 08 villages visited.	Representation of project Proponent replied that, • As per the guidelines under EIA Notification of Ministry of Environment, Forests and Climate Change, Government of India, 16 villages within 10KM radius are included. Names of villages where monitoring is carried out are mentioned in the EIA report. All the villages falling within the 10KM radius are covered as per the EIA notification. The date of lab testing report is also provided in the EIA report. The company has prepared the EIA report as per the guidelines. The EIA report was made available at five places.
		• The laboratory reports should be provided. How old are these reports? At which five places were the sampling done? Which organization has conducted the study? We should be provided with the analysis report of the company. Which laboratory has	• With the due permission of chairman the regional officer informed that the person is asking for monitoring reports and requested the representative of the project proponent to provide the same. Representation of project Proponent replied that,

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		conducted the monitoring? Provide certificate of the same. • At which five places were the EIA reports placed? We have objection to the hearing and proposed project. We have objection as there will be impacts on environment.	• The Chapter no. 3 page no. 43 of the EIA report provides the entire information as to the analysis of air at 8 (eight) places. The monitoring is carried out by Government of India, NABET Accredited M/s VIMTA Labs, Hyderabad. The certificate is provided in the report. • As per the EIA notification of the Government of India, the draft EIA report is made available at following Five offices: 1. District Collector office, Kutch-Bhuj 2. Office of District Development officer, Kutch-Bhuj 3. District Industrial Center, Bhuj-Kutch, 4. Office of the Taluka Development officer, Mundra 5. Office of the Taluka Development officer, Mandvi • The executive summary of EIA report is provided in 14 villages. The monitoring is done in 8 villages. There is no provision as to keep the local public along with us during monitoring. We have come here to

1438

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
			provide the replies to the objections related to the information provided under the EIA report. You will be heard and a proper reply will be provided. This will be included as part of public hearing proceedings and the final EIA report will be submitted to MoEF. • Analysis report will be provided after public hearing is completed.
3	Shri Punsibhai Gadhavi, Taluka Panchayat Member – Mandvi Village – Mota Bhadiya Taluka: Mandvi	• He represented that, when was the report submitted to Mandvi Taluka Panchayat? Is the report provided to community leaders? We oppose this public hearing.	• The regional officer has informed that the copy of report and CD is provided to Mandvi Taluka Panchayat office on 27.03.2017.
4	Shri Vishrambhai Gadhavi, Village – Zarpara Taluka: Mundra	He represented that, • The photographs of place and equipment used shall be shown from where the samples were collected. • You are showing the photographs of your proposed project, show the photographs of the monitoring carried out.	• The representative of the project proponent replied that, we have photographs of 8 locations and these will be provided.
5	Shri Dayabhai Viram Gadhavi Village – Mota	• He represented that the person providing the reply on behalf of	• The representative of the project proponent showed the photo ID-card

	Kandagra Taluka: Mundra	the company must provide the company photo ID card, only then he will be allowed to reply. Our boys are not permitted to enter the company without an ID-card.	on LED screen.
6	Shri Gopalbhai Gilwa Village – Zarpara Taluka: Mundra	He represented that, • Give the information about how much carbon dioxide is emitted from the Thermal Power Plant at Mundra? Provide the figure of Carbon Dioxide that is emitted in 24 hours. • At the time when I went to Mr. Mukesh Saxena for job, he stated that the recruitment of job is done from Ahmedabad. I was kept as apprentice, after a period of 4 months, for duration of 12 months. Thereafter I was given the job as supervisor at the PowerMech Company. I have not been taken on roll in the company. I was shown my social category. The people coming from outside	The representative of the project proponent replied that, • The amount of carbon dioxide is 870 gram/kilowatt hour. 67,525 tonnes of CO_2 equivalent is emitted per day. • The representative of the project proponent replied that, you came directly to me and there was no recommendation for you. We kept you on training for a period of 12 months on apprentice. For this you were given a stipend of Rs. 12000 per month. During the apprentice a limited work and information is provided. The company gives you further work and information at the time when you become an employee from apprentice. You were in a

1440

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		are given direct jobs while I was not kept on permanent job at any place. Therefore I left the job after 6 months and at present I run a shop. • I did not get the job as per my studies and thus provide job. Will I be given job at the new plant? • What is the duty time and salary of on roll employees?	list wherein there were 60 persons and out of which 15 were engineers. We gave you job on contract after the apprentice. You will be provided the list of the resident of Zarpara who have been given employment. • One should not expect that he shall get a job as per his wish. Intention of learning is important for any job. • The employee on contract has a service of 8 hours but the employee has to stay for longer hours when there is additional work load. No discrimination is done in the company. • The local hearing video copy may be provided by presiding officer.
7	Shri Dayabhai Viram Gadhavi, Village- Mota Kandagara, Taluka Mundra	• He represented that; provide video copy of local hearing.	
8	Shri Vishrambhai Gadhavi Village – Zarpara Taluka Mundra	• He represented that a person becomes an engineer by spending lacs of rupees and you give such replies to him!	
9	Shri Gopalbhai Gilwa Village – Zarpara Taluka Mundra	He represented that, • Adani Power has obtained the permission for Phase IV. Why have you installed FGD? The pollution load had increased in Mundra. • At Mundra one tonne Carbon Dioxide is produced per Megawatt. Adani Power and TATA Power emit CO_2 that is	The regional officer stated that, • This public hearing is for the Copper Refinery project and therefore the questions related to that issue only shall be asked. Your representations shall be noted down. Your representations and objections will be included as part of the proceedings. The CD will be submitted along with

Apalle

1441

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		much more than the capacity of Mundra. Then, why do you wish to bring this new plant?	the proceedings to Ministry of Environment, Forests and Climate change of Govt. of India. • The representative of the project proponent replied that, 0.87 Ton carbon dioxide is produced for 1 Mega Watt per hour. The FGD system is installed as per the clearance provided by Ministry of Environment, Forests and Climate change. This is installed for Sulphur Dioxide scrubbing. There is no statutory limit for carbon dioxide emissions.
10	Shri Dayabhai Gadhavi Village – Mota Kadagra Taluka Mundra	• He represented that, why are you not listening to us? Why don't you reply? Are the questions raised by us relevant or not?	
11	Shri Vishrambhai Gadhavi Village – Zarpara Taluka Mundra	• He represented that the company conducted the public hearing for power plant also in this manner. The promises that were made at that time have not been fulfilled and now you wish to establish a new project.	
12	Shri Gopalbhai Gilwa Village – Zarpara Taluka Mundra	• He represented that we have been informed to ask questions related to environment only. Should we not be provided with the platform to make representations on other questions?	
13	Shri Gajendrasinh Jadeja Sarpanch Navinal Village: Navinal Taluka Mundra	He represented that, • You were complained through email for cancellation of the public hearing on 11.04.2017 and a meeting was held with Mr. D R Patel. But no	The representative of the project proponent replied that: • As per the circular of MoEF&CC dated 31.03.2011, if the forest land cannot be avoided, the application shall be filed by project proponent

dpala

1442

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		reply was given for the same. The project proponent has not complied with the terms of reference as per my complaint. How can the public hearing be conducted for this project when the process of forest clearance is still going on?	to obtain forest clearance. After this stage-I application, the project proponent can apply for TOR. • The TOR application is filed after the Stage-I application for forest clearance is applied. Thereafter the MOEF&CC provides the TOR to project proponent. Afterwards EIA can be made. After the entire process of EIA, the MOEF&CC checks the status of the application for forest clearance and the project is approved on that basis.
		• The project proponent has concealed the information in Form-1. As per the S.No. 16 and 26 of Basic Information of Form-1, with reference to the Gochar land, PIL no. 17/2011 judgment, the project proponent has mentioned that there is no pending PIL for this land. This information is not mentioned in Form-1.	• We have not concealed any information. The PIL has been disposed. The judgment is under review. The application is filed for the acquisition of forest land. Under the Form-1, it is stated that the non-forest land is of APSEZ and the application for forest land is under process.
		• In the S.No. 2 and 10 of Form-1, it is not mentioned that the Daneshwari River passes through through the forest land.	• In the EIA Report, maps are provided and Daneshwari river is shown in it.

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
14	Shri Pravinsinh Bhurubha Chauhan Village: Siracha Taluka Mundra	He represented that, • As per the EIA report, you state that no perennial river is present within the project land. There is no perennial river in whole of Kutch. From the 2011, 2013 and the present Satellite image, it is clear that you have diverted the river. • Your hospital is also constructed on the river. It is clear from the Satellite image of year 1991. Show the CD of Satellite image to all. • I wish to show Figure No. 1 from the EIA report. The river is tampered with in the Figure.	
15	Shri Punshi Gadhavi Taluka Panchayat member, Mandvi, Village: Mota Bhadiya Taluka Mandvi Shri Dayabhai Gadhavi, Village: Mota Kandgara Taluka Mundra	He represented that, • What will Adani do for the education, health and fodder for cattle? A written submission is also done for this. • You have not given the reply to the previously asked question of Punshibhai Gadhavi. Provide reply to it.	• The representative of the project proponent replied that Adani Foundation is already carrying out development works in areas of education, health and other social sectors on the basis of the written representation of Punshi bhai. This will also be done for this project. A budget of 8 crores rupees per year is allotted for CSR activities. Particular focus shall be

1444

			given to the villages that are affected.
16	Shri Asariya Lakha Gilwa Village Zarpara Taluka Mundra	• He represented that the company officers should make submissions in the local Gujarati language.	• It is noted down.
17	Shri Bharat Kalyan Sheda Village Zarpara Taluka Mundra	• He represented that the people residing here want clean environment and we don't need any project. Why do you want to establish this project here?	--
18	Shri Gopalbhai Gilwa Village Zarpara Taluka Mundra Shri Vishrambhai Gadhavi Village Zarpara Taluka Mundra	He represented that; • A total 12 crore ton of CO_2 is generated daily. Why is the FGD for phase-IV installed? • This plant will emit 30 lakh tons of Sulphuric acid so why do you want to establish this plant?	The representative of the project proponent replied that: • Adani Power produces 25 million ton of CO_2 per year and around 25 million ton is produced by TATA Power. In this manner the total CO2 produced is 50 million ton. • In the Adani Power Phase-IV, MoEF had stipulated a condition based on which the FGD system is fixed. • Sulphur Dioxide will be produced from Copper Smelter. In the Sulphuric Acid plant, the Sulphur Dioxide will be absorbed and Sulphuric Acid will be produced. The residual amount of Sulphur

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
			dioxide from the proposed project will be within the limits stipulated by CPCB, Government of India.
19	Shri Gopalbhai Gilwa Village Zarpara Taluka Mundra	• He represented that, in one day, a total of 1,25,988 ton of CO2 is emitted in the atmosphere. The average temperature of emitted CO2 is 150 degree Celsius. Why should the new plant be approved even thereafter?	The representative of the project proponent replied that: • The average temperature is 120 to 130 degree Celsius. World level efforts are made to stop global warming. The power plant is based on Super Critical technology and produces lesser amount of CO2 in the atmosphere. Till date it is not found that the level of CO2 would have decreased on world level. The government of India has targeted to reduce CO2 emissions by 30 to 35% in comparison with the year 2005. The power plant that is based on old technology produces 1 to 1.5 Ton CO2 per Megawatts hour, while the plant based on new Super Critical technology produces a total of 0.8 ton CO2 per Megawatt hour.
20	Shri Rambhai Kanani Village Zarpara Taluka Mundra	He represented that, • Our agriculture is adversely impacted. The characteristics of the Male Date Seeds	--

1446

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		seem to be transforming to that of Female Date Seeds. • We do not want this project. EIA report states that there is no living organism and only wild plants are present. No information is provided about river, vegetation and other living organisms. No ground reality is provided. 80% people of this area are dependent on agriculture. We do not want this project.	
21	Shri Vishrambhai Gadhavi Village Zarpara Taluka Mundra Shri Rambhai Kanani Village Zarpara Taluka Mundra	He represented that; • The cases of miscarriage in females and animals have increased. The reproductive system is getting affected. This project should be cancelled. Naranbhai, the president of the Kheti Vikas Seva Trust had made representation before the collector to cancel this public hearing. Then how can the public hearing be conducted? The interest of public is not being taken care at this place. • Whenever such	--.

1447

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		situations arise, it creates a situation of Maoist and Naxalist movements. We will fight for our rights. • We lead a life based on farming and animal husbandry. It is a question of our existence. These people have installed FGD just for namesake.	
22	Shri Vishrambhai Gadhavi Village Zarpara Taluka Mundra	He represented that; • Why is the chimney of Adani Power tilted? What is the height of Chimney? • It rains less due to this. A large amount of difference in rain is seen in Bhadiya and Zarpara village due to this. • Crores of tons of CO2 is emitted daily. Is there any limit to it?	The representative of the project proponent replied that: • The height of chimney of power plant of Adani Power having a capacity of more than 500 megawatts is 275 meters. The height of chimney is kept for the dispersion of gases in the air. There are no norms on limit of carbon dioxide emissions. • The pollution is diluted around 2000 times due to the height of chimney. There is no study done which suggests that due to power plant it would have rained less at any place. Rain is almost found same in both villages. • The estimate of CO2 in atmosphere at world level is around 350 to 400

1448

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
			ppm. There is no statutory limit for this. As per the CAAQMS standard for Sulphur dioxide, the 24 hour average limit is 80 microgram/m^3.
23	Shri Rambhai Kanani Village Zarpara Taluka Mundra	• He represented that the wind direction is shown wrong.	• The representative of the project proponent replied that the wind direction is shown as per the winter season data. It is shown from South South West to North North West.
24	Shri Bharat Kalyan Seda Village Zarpara Taluka Mundra	• He represented that It is submitted that the reply be given in Gujarati	• Point noted
25	Shri Nanji Mithubhai Maheshwari	He represented that; • Show on LED screen the letter with	--

1449

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
	Village: Mota Kandagra Taluka: Mundra	signatures and stamp of Sarpanch and Talati for the 8 affected villages that have been surveyed. • How will employment be provided in this plant?	
26	Shri Bahrat Kalyan Seda Village Zarpara Taluka Mundra	He represented that; Thousands of people are objecting. Show us the photographs of your visit in 16 villages.	--
27	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka Mundra	He represented that; • In the executive summary of page no. 2.1 the nearest village is shown as Mundra. Provide the list of all the affected 16 villages. Why is village Mundra included in affected villages?	The representative of the project proponent replied that: • Through this public hearing, all your representations will be provided to the MoEF. The company will work in a transparent way. Mundra is the closest town to the Project area. The land of Siracha and Navinal villages are covered in this project. • In the EIA report, the Annexure-7 contains demographic report. It contains list of 16 villages. This includes Siracha, Tunda, Mota Kandagra, Moti Khakhar, Nani Khakhar, Moti Bhujpur, Nani Bhujpur, Desalpar, Bharora, Zarpara, Pratapur, Mota Bhadiya, Dhrub, Tragadi, Nana Bhadiya, and

1450

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		• What would be the time limit of this public hearing?	Navinal. In chapter 3 of the EIA report, details of all the villages are provided. The EIA report is made as per the MOEF guideline. • The presentation contains the details of the impacts on environment. Moreover these details are also included in the EIA report. EIA covers study of all the aspects and its management plan is also shown. • The regional officer stated that, the public hearing will be completed after all the representations are heard.
28	Shri Vishrambhai Gadhavi Village Zarpara Taluka Mundra	• He represented that when any company comes, it is required that 33% green belt shall be provided and as part of the same when Sunita Narayan committee visited, the plants were grown on both sides of the road. These plants do not exist at present.	• The representative of the project proponent replied that Respectable Sunita Narayan came in the year 2013. The green belt at present is much more than what was at the time of her visit. Even further plantation will be done.
29	Shri Gadhavi Kalyan Asariya Village Zarpara Taluka Mundra	• He represented that in the past, I came for training in Adani Foundation on behalf of the KSKV University. At that time in the river and other places,	• The representative of the project proponent replied that You both have asked different questions. One relates to village and the other relates to APSEZ.

dpatel

1451

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		around 60 thousand trees were planted but these are not found at present.	
30	Shri Gajendrasinh Jadeja, Sarpanch Navinal Gram Panchayat Village: Navinal Taluka Mundra	He represented that; • The sr. no. 10 on page C1-4 of the draft EIA report states that, there is no archeological place at this site. However, at a distance of around 500 to 1000 meters from the proposed project site, the site of Navinal Archeological site is present. I have the report of the MS University which states that it relates to the Harappa civilization. • The fisheries harbour is not developed at Bhadreshwar. The access roads for the fishermen were closed and are not opened again.	The representative of the project proponent replied that: • There is no mention of such a site on the Archeological Survey of India Website. You shall be provided the list of notified site. • There was no permission to go to the Randh bunder (Bhadreshwar) at the time of Sunita Narayan committee visit. At present Foundation provides various facilities like water, electricity, etc. at that place. • After the visit of Sunita Narayan committee, the fishermen access roads were developed which are open even as on date.
31	Shri Dayabhai Viram Gadhavi Village: Mota Kandagra Taluka Mundra	He represented that; • The road to Bharadi Mata has been opened after a lot of troubles. You did not spare any effort to close down	• The representative of the project proponent replied that the road leading to Bharadi Mata has been kept open. As on date, not just one but two

dpalu

1452

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		the road.	approach roads are available.
32	Shri Valji Bhai Tapariya Village Zarpara Taluka Mundra	He represented that; • In the production of copper plant, Sulphur is to be used and this will have acidic processes. • Environment will be impacted due to this. The effect of this Sulphuric acid is shown in radius of around 10 kilometre. This is around 20 to 25 kilometre as per the opinion of experts. • At a humanitarian level, the GPCB should also take interest in this considering its personal responsibility for longer terms. No one is against development. The effect of Copper Refinery is even more than Power Plant. The plant should be taken away from human population if its place can be moved. In the past, electricity was generated with atoms and this eradicated the entire lineage of people. The fishermen should also not be affected. The	The representative of the project proponent replied that: • No addition in the capacity of the Copper Smelter is envisaged for the refinery after the project approval. • The Copper Concentrate is processed in the Copper Smelter. Sulphur Dioxide is generated from it. It is captured and Sulphuric acid is produced. This Sulphuric acid is converted into Phosphoric Acid • The Sulphuric Acid will be converted to Phosphoric Acid in the Phosphoric Acid Plant. It will used in fertilizer plants. • Other than this, a by-product, Fluoro-Silicic Acid will be made which will be used in the making of toothpaste.

1453

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		government should take proper care and consider that no negative effect is found.	
33	Shri Vishrambhai Gadhavi Village Zarpara Taluka Mundra	He represented that; • Will you make a residential place near the plant and reside at that place? If that is the situation, we do not object. We reside in the farms outside. • Is there any power plant, at any other place, with such big capacity?	The representative of the project proponent replied that: • Many a times our high ranking officers reside at the guest house of power plant. Many copper plants in the entire world are present beside cities. We will also make guest house in our copper plant. • Yes, there are power plants of total 20 thousand Megawatt capacities at Singroli. Angul, Andhra Pradesh has 16 thousand Megawatts capacity power plants. Tuticorin at Tamilnadu has 12 thousand Megawatt capacity of power plants. These all are coal based power plants. Now the government of India approves all big power plants with FGD only.
34	Shri Naran Gadhavi Village Zarpara Taluka Mundra	He represented that • The highest officer of the district was addressed and a letter was written on 27/4/17 and it was mentioned	The representative of the project proponent replied that: • I give an elaborate reply to your question. With respect to the PIL no

1456

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		that the land on which the copper plant is proposed is subjudice matter. The collector has not taken any decision till date. • It is mentioned under it that after the Honorable sitting principal judge and Sunita Narayan committee, two other committees also visited. First of all the committee of the Honorable sitting judge visited. The visit report was submitted to the high court. The report of this committee is subjudice. The second report (dated 05.11.2015 and 01.04.2016) one expert was called from Goa and another from Calcutta on the basis of the order passed by the Honourable Gujarat High Court. • The committee recommended that the 6 thousand acres of land should be returned to the government. No decision till date has been taken in this regard.	12/2011, the committee visited APSEZ and its report was kept on record of the Honorable High Court. The matter was disposed by the Honorable Gujarat High Court on 17.04.2015. • As per previous proceedings the contempt petition (no. 9124) dated 12.07.2011 was filed. Thereafter on 15.10.2015, the order was passed. The matter with reference to the Sunita Narayan committee report, was disposed off in the year 2015. As per the order passed by the Honorable Gujarat High Court there is no contempt order. The report was submitted by the committee including expert from Goa and Calcutta on 08.06.2016. That particular matter is pending before the Honorable High Court of Gujarat. The committee recommended that 100 hectare or more mangroves Plantation should be undertaken. The project area is not part of the disputed land. All the show cause notices have been disposed. The

1457

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		• As for this the contempt of court proceedings shall be held against the competent officer. The map is also shown in the EIA report. Why is the public hearing been done, even if the matter is subjudice? • GPCB is also a party in this matter. On the basis of our complaint, the Sunita Narayan committee provided a report on 17.09.2015 to MoEF&CC, government of India. • Two maps have been submitted to the Gujarat High Court committee. These are on the record of the high court. You submitted the map with Topo sheet. These were for entire land. This includes your project. • As mentioned by you, the forest area is to come under the project. The High court committee has stated that, the land should be taken away from	recommendation is done in the survey by the committee. It is not an order. The company will accept the final order passed by the Honourable High Court. The land of the proposed project does not have any relation with this matter. The land under notified SEZ shall be used for this land. The MOEF will consider the matter that is pending before the High Court. The proposed project does not have any connection with this matter. • The MOEF has provided the direction to the company and the company is working on it. The report for this is submitted to the MOEF every 6 months. The matter you have stated is about the survey of the report of the committee. It is a recommendation and not a decision. The Gujarat High Court will consider the submissions of the company along with the committee report and the company will comply to the guidelines provided by the court thereafter. • The government of India

1458

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		Adani and provided to the government. The 5333 hectares of forest area should be restored. • This matter is under consideration at the Gujarat High Court. Why is this case not mentioned in your EIA report?	will decide further course of action on your matter and our reply. • The representative of the project proponent replied that this proposed project does not have any connection with this case pending before the Honorable Gujarat High court. This is our submission.
35	Shri Bharubhai Ranshibhai Shankra Secretary, Kehti Vikas Seva Trust, Village Zarpara Taluka Mundra	• He represented that: Do thing that would be favorable for the people. Do not leave after taking money. I do not have any objection for the company to either come or not. Do all that is in the interest of people.	–
36	Shri Dayabhai Viram Gadhavi Village – Mota Kandagra Taluka: Mundra	• He represented that we will not let the permission be granted for a new plant. The regulations laid down by the GPCB, CPCB, MOEF&CC are violated by the company and the officers present at this place should inspect the matter. We do not want a new project.	–
37	Shri Bharat Kalyan Shetha Village – Zarpara	• He represented that the people here do not want this project to come. The people here	–

	Village – Navinal Taluka: Mundra	and SEZ should be met and then this project should come.	
45	Shri Rambhai Kanani Village – Zarpara Taluka: Mundra	• He represented that the company has a strategy to bring some hired people after two hours of hearing and these people will take the entire hearing out of track.	--
46	Shri Gandrasinh Jadeja Sarpanch, Navinal Gram Panchayat, Village – Navinal Taluka: Mundra	He represented that • 102 hectare of land of the forest department will be used in this project. Adani had in the year 2004 made a demand of 1576.81 hectare of land but the forest department has not approved it till date. Navinal and Shiracha, both villages have claimed their rights under the Forests Rules. The people of Navinal and Shiracha graze their cattle and obtain livelihood. If this forest is given, where will the wild animals and grazing domestic animals go? And lastly when the remaining forest land, government land and Gochar land is given, where will the people, animals and birds go?	The representative of the project proponent replied that: • You know very well what is the land use of the 102 hectare of forest land and as per the report of the forest department, no major displacement would be required. The 33% green belt will be developed at the time when plant comes. As per the report of the forest department, no major displacement would be required. The land of this area will be used by the company for the development of green belt and specific care will be taken for the animals and birds. The animals shall be provided fodder through CSR activities. • The forest department will take all these aspects into consideration while providing clearance.

1462

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		• This is the last reserve forest of this area. Bharadi Mata is sand dunes. This is coastal and mangrove forest. This area is under the CRZ 1 area. There is no provision for approval of such land.	• Other than this, the Bharadi Mata reserve and coastal forest is situated near the project site. The animals obtain fodder from that place. The project will utilize 111 hectare of Navinal land. While 102 hectare of land of Shiracha will be used for development of green belt.
47	Shri Pravinsinh Bhurubha Chauhan, Village – Siracha Taluka: Mundra	He represented that, • The Dates, Deshi Babool, etc. trees present on the forest department land and located adjacent to the power plant have dried out due to smoke from stack and cooling tower. • Where will the animals like Nilgai, Jackal, fox and others go? They will come at our farms.	The representative of the project proponent replied that: • Even at present the land is under the forest department and the plants that you state are alive. No such thing has occurred. • This is not true and the forest department would have informed us if such a thing would have occurred.
48	Shri Rambhai Kanani Village – Zarpara Taluka: Mundra	• He represented that there is a difference between the EIA report and the presentation. The details mentioned in the Gujarati report are not actually true. There is difference in the description of environment. Under the project area, only Babool and peacock	• The representative of the project proponent replied that, the summary of the EIA report is shown as part of the presentation. The entire EIA report is not to be shown in the public hearing. In case if you have found any discrepancy in the EIA report, you may draw attention as to the same

1463

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		are shown. But the actual situation is different. There are medicinal plants also at this place. The description of the nature is given but it is not ground reality.	in writing and this will be included under the public hearing proceedings and it will also be submitted to MoEF&CC, Government of India. Moreover EIA report is prepared based on the information obtained at that relevant point of time.
49	Shri Vishrambhai Gadhavi Village – Zarpara Taluka: Mundra	• He represented that the company has shown its video during the hearing. All good things are being projected. No information is provided about the side effects, risk, etc. from the project. The video of the person submitting representation shall be shown.	The chairman stated that, • Please submit your CD we will be include the same in proceedings. Note: It was tried to show the video of representor by mobile on LED screen however it could not be run due to any reasons.
50	Shri Pravinsinh Bhurubha Chauhan Village – Siracha Taluka: Mundra	• He represented that, I wish to show the CD related to the scams committed by the Adani Power and SEZ. It is mentioned under the Form-1 that there is no mangrove at this site but as per my view there are mangroves presents.	
51	Shri Rambhai Kanani Village – Zarpara Taluka: Mundra	• He represented that the people are facing problems from your existing plants and therefore people do not welcome your	--

		project.	
52	Shri Usman Gani H Sheraseeya Village – Vakaner Taluka: Morbi	He represented that • How much water will be obtained for this project and from which place will it be taken? • Will you discharge salty water after desalination in the sea?	• The representative of the project proponent replied that, 32800 cubic meters of water will be required for this project which will be used after desalination of the sea water by APSEZ.
53	Shri Devendrasinh Jadeja Village – Mota Kardagra Taluka: Mundra	• He represented that we are in favour for the company to establish this plant. But what is the percentage of local public that will get employment? Provide in writing.	• The representative of the project proponent replied that the company will require around 3000 persons at the time of construction. We will try that maximum unskilled labour is employed from local people.
54	Shri Lakhubhai Rabari Village – Tunda Wandh Taluka: Mundra	He represented that, • The officer present at the time of construction of the project are transferred after the starting of operation of the project and therefore proper solution to our problems are not provided. • What kind of employment will be given to the unskilled people?	The representative of the project proponent replied that, • The feeling of the local public will be considered and problems will be properly solved. Efforts will be made to ensure that local public is provided employment to an extent possible. • Efforts will be made to ensure that unskilled people also get employment.
55	Shri Vishrambhai	• He represented that the company wishes to	• The representative of the project proponent replied

1465

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
	Gadhavi Village – Zarpara Taluka: Mundra	bring project at this place for its own benefit not for the development of the local public.	that the company can establish industry at other place also but the decision to establish project at this place is for the development of Mundra.
56	Shri Valjibhai Tapariya Village – Zarpara Taluka: Mundra	• He represented that in the forthcoming projects and the existing projects, Adani and other voluntarily organizations should make an exchange center, the record of qualified persons should be prepared and the people should be taken on service as per the requirement of the company and their qualifications.	• The representative of the project proponent replied that, we are in process of making Adani Skill development center. Efforts will be made in future to create employment opportunities. Moreover linkages will be established with the employment exchange and the registered persons having appropriate qualification shall be given priority.
57	Shri Hussain Vasu Luhar Village – Tunda Taluka: Mundra	• He represented that how many people of Tunda village serve at Adani? I was also provided employment but was terminated without providing any reason.	• The representative of the project proponent replied that more than 100 persons of the Tunda village serve at Adani company. In the year 2012, a total of 35 persons were given employment on the basis of the representation of the Gram Panchayat. You were given much better salary increments as you were the resident of village. You are not terminated from service as on date.

1466

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
58	Shri Gulabsinh Babubha Jadeja Village – Mota Kandagara Taluka: Mundra	• He represented that we do not have any objection towards this project. Due to company we have progressed.	--
59	Shri Viram Naran Shekhara On behalf of Bharatiya Kisan Sangh Village: Zarpara Taluka: Mundra	He represented that • A large number of objections are represented during public hearing. If the company comes and if there are any chances of environmental degradation, then the government authority should consider it seriously. The work should not remain only on paper. • It should be considered that the local public are not receiving employment. • If the NGT can issue notice to even Shri Shri Ravishankar, then no one is over and above the environment. • Even in the past, before the establishment of the solar plant, the number of jobs were promised but the same is not observed. • The company should work for developing new sources of water.	• The representative of the project proponent replied that, we undertake all kind of work in a transparent manner. We are making efforts so that at least ten persons from each village receive employment. The suggestion of tissue culture laboratory for the development of agriculture is welcome and the relevant process will be considered for the same. We are ready to consider the requirements of the farmers through meeting with their committee, we shall do work on required issues, a 5 year plan will be undertaken with you and such opportunities will be undertaken that the employment opportunities are created through employment exchange. The company will work towards satisfaction of local people. Efforts will be made to provide the Drip Irrigation system for Date

Patel

1467

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		• By ignoring agriculture and developing industries, how many days will we survive? Agriculture development should also take place. • Moreover development of education is also necessary. Also, the Adani Company should establish a laboratory at Mundra for Tissue culture development of date farming. So farmers concerns can be addressed.	farming. As part of CSR activities, provision of eight crores rupees every year has been done separately for this project.
60	Shri Dayabhai Gadhavi Village-Mota Kandagara Taluka: Mundra	He represented that • As per the page no. 8 of the EIA report, the impact of Sulphur Dioxide on environment is negligible. How is it possible? • Why do you not operate the ESP at night in the Adani Power?	The representative of the project proponent replied that, • In order to avoid harmful impacts to environment, concentration of Sulphur Dioxide emissions is regulated by stipulated norms. The emissions of Sulphur Dioxide will be within the prescribed limits after the erection of copper plant. • At the Adani Power, the ESP is always in operation when the plant is in operation.
61	Shri Ranjitsinh Jadeja President, Taluka Panchayat,	• He represented that, I hereby submit as a political leader that due to the establishment of the company,	-

1468

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
	Mundra Taluka: Mundra	employment opportunities will be increased and the local people, taluka, state and entire country will develop.	
62	Mrs. Devalben Gadhavi Village – Shekhadiya Taluka: Mundra	• She represented that, it is submitted that by way of this project, care should be taken that the local ladies and other local public is given employment.	• The representative of the project proponent replied that, as for the employment of ladies, arrangement has been made so that 120 ladies will get employment. Moreover, we will sign an MOU with Welspun Company in order to provide proper training and employment to ladies so that their condition will improve.
63	Shri Ibrahim Turk Village – Dhurb Taluka: Mundra	• He represented that you are portraying this project as a green field project. But around 103 hectare of land of forest department is taken in this project. How can this project be termed as green field project?	• The representative of the project proponent replied that, any new project is stated to be green field project. There is no relation of word 'green field' with vegetation. It is only an English word.
64	Shri Hirabhai Patariya Sarpanch, Deshalpar Kanthi Gram Panchayat, Village – Deshalpar Kanthi Taluka Mundra	• He represented that this project is only 5 kilometers away from our village. Therefore it is submitted that our village should also be given priority in the manner that Navinal and Shiracha are given priority.	• The representative of the project proponent replied that, as discussed earlier, attempts will be made to employ 10 persons from each village.

1469

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
65	Shri Ibrahim Turk Village: Dhurb, Taluka – Mundra	He represented that • You are to take sea water for this project and therefore what would be the impacts of this activity on the marine ecology? Have you conducted any study in this regard? • What will be the impact of salinity ingress on agriculture? • There is increase in salinity and loss to agriculture in the Tunda, Kandagra and other such areas due to cutting of mangroves.	The representative of the project proponent replied that: • The NIO organization has conducted study for the Intake and Outfall channels per the rules and regulations of MoEF&CC. The 11 km long outfall channel will meet the sea near West port and will dilute the quality of outfall. Moreover it is always ensured that the water temperature does not exceed more than 5 degree higher than the sea water ambient temperature and the salinity does not exceed 57 PPT. • We had undertaken a study through M/s Gujarat Institute of Desert Ecology (GUIDE) for assessment salinity of underground water. The salinity in the underground water has increased not only in the project surrounding area but also in the entire Kutch area. This is due to lack of rain and over-drawl of ground water. • The industries of this area are not dependable on ground water.
66	Shri Natubha	• He represented that	--

dpuu!

1470

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
	Jadeja Village: Shiracha, Taluka: Mundra	100 people of my village were employed by Adani Power Company. Hence, my village has received employment. Thus it is our submission that this plant should be established so that the employment is increased and the problem of unemployment of rest of our villagers is resolved.	
67	Shri Bharat Kalyan Seda Village: Zarpara Taluka: Mundra	He represented that • The water to be sourced from sea will be through pipeline of open canal? In case if you dig a canal, the farmers will be impacted. • He represented that a charge of Rs. 200 is levied on trucks at entry gate by Adani Company.	The representative of the project proponent replied that • The water to be used in this project will be obtained from existing intake channel. Thereafter, the desalinated water from APSEZ will be transferred through pipeline to proposed project. • The contractor that works in the area of the company or APSEZ are provided with zero amount gate pass for their trucks and therefore no charge is levied from them.
68	Shri Valji Sumar Gadhavi Village: Zarpara Taluka Mundra	• He represented that, I have been working with the Adani Company since the	--

dpaley

1471

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		last 15 years. My 50 trucks are working for this company. Rs. 200 charge is not charged for my trucks.	
69	Shri Kirtibhai Gor Village: Tunda, Taluka Mundra	• He represented that there was no such public hearing conducted for the solar project. Certain boys have received employment in this project. Around 50% of people from the bio-data sent by me have received employment. The persons that have completed B.E. should receive employment after the completion of apprenticeship and thus what are the plans of the company to employ such persons? Such projects are welcome. We are 100% in favour of the development but not at the cost of environment. I had written to the GPCB officer that large amount of emission is emitted from the chimney. If the emission that is emitted today comes out regularly, then it is acceptable. The letter is written to GPCB for	• The representative of the project proponent replied that for the protection of the environment, latest technology and equipment will be installed and operated in this project. Treatment plants for air and water both will be installed. The entire process will be as per the rules and regulations stipulated by the government so that environment will not be damaged due to this.

1472

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		emission. Also received reply from GPCB. The development should be such that no one suffers due to impacts on environment.	
70	Shri Dayabhai Gadhavi Village: Mota Kandagra, Taluka Mundra	• He represented that the project is entirely chemical based, which will be spread in water, air, noise, land, etc. and it will affect the agricultural land. I feel that such kind of project should be around 20 to 25 kilometers away from the residential area. What are the measures for protection from such kind of project?	• The representative of the project proponent replied that as part of this project, manufacturing of Copper from Copper concentrate will be through smelting and electrochemical process, the polluted water that comes out from this project will be sent to the RO plant after treatment in ETP. Therefore no polluted water will be released outside. Thereafter this water will be used again in the process. The rejects will be treated through multi effect evaporation and thus the water will be removed from it. Flue gases released from the process will be captured and converted to intermediate products through chemical process. It shall be ensured that no storage leakage is possible by performing the risk analysis and hazard identification. Thus, there

1473

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
			will be minimal chances of water and air pollution.
71	Shri Lakhdirbhai Gilwa Village: Zarpara, Taluka Mundra	• He represented that the farming of Chickoo and Dates have suffered a lot due to existing projects. The ground water levels have gone down after establishment of these projects. It has impacted production of Chickoo and Dates and thus the farmers have strong objection against this project.	• The representative of the project proponent replied that: Adani Port and Adani Power do not use ground water. The new project will also not use ground water. Both these projects use sea water.
72	Shri Khengar Gilva Village: Zarpara, Taluka Mundra	• He represented that the plantation from Bhadreshwar to Tunda Vandh was removed after establishment of projects. Due to this reason, the wild animals like pigs and Nilgai enter our farms. Therefore it is our submission that please do something for the protection of the crops.	• The representative of the project proponent replied that prior to this also, support for drip irrigation is provided to the farmers from many villages since last three years. Special attention will be given to provide support for drip irrigation as and when required.
73	Ms. Shital Rajgor Village: Mota Kandagra, Taluka Mundra	She represented that we do not have any objection for the establishment of company. Ladies like us get employment. We are in favour of the company.	--
74	Shri Dayabhai Gadhavi Village: Mota Kandagra, Taluka Mundra	He represented that • What would be the concentration of Sulphur Dioxide and at	The representative of the project proponent replied that: • Sulphur Dioxide will enter the Sulphuric Acid plant

1475

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		what height it will be released? • How sludge will be disposed? • How much quantity of Sulphur Dioxide will be released in air? What will be the density of Sulphur Dioxide?	directly from the Copper smelter. Acid will be made in this plant. After making acid, it will be scrubbed in tail gas scrubber and after that the gas will be released in air which will mainly contain oxygen and nitrogen. Concentration of Sulphur Dioxide will be below the prescribed limits by the Government of India. • Gypsum will be manufactured from gas scrubber using lime. This will be used in the cement industry. The flue gases will be released in atmosphere at a height of 100 meters. • As per CPCB norms, 1 kilogram Sulphur Dioxide will be released per ton of Sulphuric acid produced. The density of the flue gas will be same as the air. It will contain very less amount of Sulphur Dioxide. The same will be around 150 to 200 PPM. We will establish a plant that would be one of the best plants in the world.
75	Shri Ashariya Lakha Gilwa, Village: Zarpara, Taluka Mundra	• He represented that the average temperate keeps on increasing every year. In copper project 300 Megawatt	• The representative of the project proponent replied that there will be no increase in temperature due to this project. It

1476

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		power will be required and you will generate steam that would be capable to produce 40 Megawatt of electricity and thus will this increase the temperate?	would be preferable to use steam for production of electricity instead of releasing it in air. Fuel consumption can be reduced. The electricity will be produced using steam as per rules and regulations. Thus the temperature outside the plant will not increase.
76	Shri Naran Gadhavi, Village: Zarpara, Taluka Mundra	• He represented that the objection is done because the effect of pollution will be same for all. We are talking about the impacts that are found on the environment, ground water, human health, mangroves, fishermen, cattle rearers, Dates crop, children, etc. should be discussed. We do not object to the development. We would welcome the development if proper environmental measures are taken care of. The objection is only against pollution and randomly placed electric lines. CRZ rules have been violated. Water has turned saline and its TDS has become more than 4500.	The representative of the project proponent replied that • Proper attention will be given to your representations. You have raised important points as an NGO and we have undertaken the appropriate actions as well. One should always talk as a responsible citizen. • We will undertake all kinds of development by following the rules and regulations and we hereby give assurance for the same. The guidelines will be considered while development of new plant.
77	Shri Paresh	• He represented that it	• The representative of the

1477

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
	Rajgour Village Tunda, Taluka Mundra	is our expectation that the plant will be established by considering the rules framed by the Government of Gujarat and Central Government as well as considering the public interest.	project proponent replied that the company is responsible for maintaining public interest and environment. The company will operate the plant by considering the public interest and environment.
78	Shri Pravinsinh Bhurubha Chauhan Village: Siracha, Taluka Mundra	• He represented that TATA Power plant took Gochar land. They have entered into agreement to provide either green or dry fodder. Why you do not enter into such kind of written agreement?	The representative of the project proponent replied that: • In your case the Gujarat High Court has ordered to provide fodder for a particular duration and this duration is even now in effect. Thus there is no question of entering into any kind of agreement or contract as the order is passed by the High Court. • We are providing the dry and wet fodder to the villages having requirement on the basis of the order passed by the Honourable High Court. We are also providing fodder voluntarily to the villages from which the people have not gone to the courts.
79	Shri Viram Naran Sankhra (Member of Kishan Sangh)	• He represented that the issue is not limited to fodder, it is a request to maintain	--

1478

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
	Village: Zarpara, Taluka Mundra	positive attitude from your side on permanent basis. So that such a public hearing would not even be required in the years to come. Such kind of submission is done.	
80	Shri Vishram Gadhavi, Village: Zarpara, Taluka Mundra	• He represented that, I am worried about my existence, the existence of my village, the existence of agriculture and therefore I have come to object. It is expected that you undertake your role in an unbiased manner.	--
81	Shri Naran Gadhavi, Village: Zarpara, Taluka Mundra	He represented that • Three reports have been found for the production of copper plant. Out of this 1) Regional Institute of technology, Jamshedpur, 2) Energy Laboratory and department of biology science Cambridge University, London and 3) Public Health report. Which reports contains the details of serious side effects of production of copper. Therefore provide the information that what diseases are possible	The representative of the project proponent replied that: • The reports that you are mentioning are related to plants that are very old. The plants with latest technology are even present in developed countries. The dust from the plant is collected and used in furnace. Moreover, the dust on the road is also collected by vacuum truck. At the places where the workers are required to work in dusty area, they will be provided personal protective equipment

1479

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		due to the dust of copper? • As per the report, hair falls, stomach ache, cancer and other inhalation related diseases, etc. occur due to dust. How you will control the dust? How many teams will you have? How many doctors will be available? • The second question is that, how will you control the air emissions that will be released in the atmosphere? What is the facility that is done by you as for this? • The Sulphur Dioxide that is released in air will damage health and so what steps have been taken by the company?	(PPE). • Copper concentrate material contains 8 to 10% moisture and therefore there is very less chance of dust emissions. Even thereafter, if this dust goes into breathing, the material is inert and therefore there would not be any specific effect. The effect is just like the diseases that are caused by normal dust. • The Sulphur Dioxide will be used as intermediate product, its chemical process will be undertaken and Sulfuric acid will be made from it. Therefore, there is no question of the toxic gases releasing in the atmosphere. • The chemical process of these gases will be done and intermediate product will be developed. It shall be ascertained that no leakage is possible by performing the risk analysis and hazard identification. Thus, there will be minimal chances of air pollution. • After making Sulphuric

dpaley

1480

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
			acid, it will be scrubbed in tail gas scrubber and the gas will be released in air. The lime will be used during the gas scrubbing process and Gypsum will be made. This will be used in cement industry.
82	Shri Dayabhai Gadhavi Village: Mota Kandgara, Taluka Mundra	• He represented that what kind of storage would be done by the company for raw material and how raw material will be transferred?	• The representative of the project proponent replied that the company's copper concentrate storage will be entirely covered. The pipe conveyor will be used to transfer material from port to plant.
83	Shri Valjibhai Tapariya Village: Zarpara, Taluka Mundra	• He represented that with bottom of their hearts, everyone wishes that industries should come. Industries should take corrective actions when there are objections. Industries are welcome with the conservation of environment.	• The representative of the project proponent replied that all points that are represented here will be taken care of. We will also consider the benefits of common public on behalf of the company. We are 100% responsible for the common public as a developer. We will consider that properly.
84	Shri Mayur Aatu Maheswari Village: Tunda, Taluka: Mundra	He represented that • What is number of the employment opportunities provided to the local public by the existing industries? Why are the local people sacked from their jobs? A	• The representative of the project proponent replied that the list of the local persons working in the company will be sent within two days. We undertake the process of employing the local people in consultation

1481

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		committee should be constituted so that the local public gets employment and an open discussion / meeting should be held between the company officers and committee for the purpose of providing employment to local public. This discussion should be done openly not behind closed doors. As per the rules of the government, the local public should receive 85% of employment. • Provide the list showing how many local persons have received employment / work in the existing industries.	with the Sarpanch and Gram panchayat. Even this process will be made further transparent. The main reason for termination of job is that the workers are irregular.
85	Shri Mithu Jakhu Maheshwari Village: Mota Kandagara, Taluka: Mundra...	He represented that • The preservation of water and environment should be made for farming. Farming gets affected due to sea water, Dates do not grow up. Water is not fit for drinking within the radius of 3 KM. Therefore the company should think about this loss. • The work for 3 storage area for Cowsheds is	• The representative of the project proponent replied that Considering your representation, without any pressure, the work will be done and efforts will be made to finish incomplete works.

dpally

1482

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		stopped in Kandagara. The representation has been made to restart the construction work of storage area. • The representation has been made for fair work.	
86	Shri Salu Kumbhar Village: Tunda, Taluka Mundra	• He represented that three Fishermen access roads towards sea have been closed, due to which we have to take 5 KM long route, we do not have vehicles, therefore, the demand has been made to open three routes.	• The representative of the project proponent replied that we will fully cooperate with fishermen and will make sure that no hindrance is made in the route of fishermen, if there is any obstacle, they can approach us any time.
87	Shri Kirtibhai Gor Village: Tunda, Taluka Mundra	• He represented that which water will be used in the upcoming plant?	• The representative of the project proponent replied that in the proposed plant, seawater will be used after removing salt (desalination).
88	Shri Dayabhai Gadhavi Village: Mota Kandagara, Taluka. Mundra	He represented that • As per the notification of Government of Gujarat / Government of India, 85% of people shall be employed from local areas, how many have you employed? • What steps have been taken to develop the unskilled people to give them the right opportunity?	• The representative of the project proponent replied that we are trying to provide employment to the local people to a great extent, but in the initial stage, due to the lack of requisite qualification, the company was facing problem to provide the employment. After the ITI has started and after the training of RTG is provided, the proportion

1483

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
			of local employment has increased and will continue to increase.
89	Shri Hamir Rabari Village: Wandh, Taluka: Mundra	• He represented that one of my two handicapped children who cannot hear and the other one cannot speak. The representation had been made for their job.	• The representative of the project proponent replied that we had employed their children, but they said that one of their boys is working in the Tata Company; and they do not want to join here now.
90	Shri Dosabhai Gadhavi Bhurubha Chauhan, Village - Siracha Taluka: Mundra	• He represented that if the industry comes then damage will be done. We are not against the plant. You will fill the vacancy on contract basis. But, what will you do for farmers like us and our children? TDS analysis been carried out by me in the 2007 and 2012, the TDS was reached up to 2200, which is not fit for drinking. We used to get drinking water for borewell, now we have to buy water bottle. In the last 5 years 800 to 900 TDS has been increased. In fact, nothing has been done for the farmers; we demand that something is done for the farmer and farming. The fruits from our farm are not	• The representative of the project proponent replied that, we will work towards solving problems of farmers. Efforts will be made to open the Kishan School for the children of the farmers. The planning as to how the ground water level can be increased, has been made by Adani Foundation, along with Mr. Yogesh Jadeja to improve the water supply in 10 villages and for the purpose of employment, the children of farmer will be given priority for this purpose.

		worth eating.	
91	Shri Pravin Singh Bhurubha Chauhan, Village - Siracha Taluka: Mundra	• He represented that the power plant's intake channel, the outfall channel, and the water reservoir are *Kuchcha* or *Pucca*?	• The representative of the project proponent replied that, Outfall channel is Stone Masonry Lined, while the Reservoir is Clay Lined and Sheet Piling is done. This question is not about the proposed project.
92	Shri Khimraj Gadhavi Village – Zarpara Taluka: Mundra	• He represented that the people from village used to drink the water with high TDS and the company uses Narmada water for sprinkling on coal piles.	--
93	Shri Pravin Singh Bhurubha Chauhan Village - Siracha, Taluka: Mundra	He represented that • What does High water line, Low water line in the figure No. 1 in the E.I.A. report indicate? • Different CRZ maps are submitted in the Public Hearing for the years 1991, 2008, 2010 and 2017, which is the correct map out of those? If one map is correct out of four then this shows that the other three are false which indicates the	The representative of the project proponent replied that • CRZ maps are prepared by the institution recognized by the Government of India. Project proponent has no authority over it. Projects are approved on the basis of maps prepared by the authorized institution. • The map of proposed project is superimposed on CRZ map of the area prepared by an institution recognized by Government of India in 2011. • CZMP plans are prepared by the Government of India

dpalw

1485

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		Company has violated the rules of CRZ. • The tidal waters were reaching at a place in Siracha, now waters are not reaching there which shows that the company has violated the CRZ Act. • There is no clarification in the report about from where the Conveyor belt, Road, Railway line will pass and how they will be used in the plant. • Three sites in total were selected for the project, site number 2 is selected from that. What is your purpose behind it? • When you already own the site No. 1, why you have selected site No. 2? You have selected site No. 2 to get forest land.	which are not public domain. When any approval is required for CRZ by any project then the CRZ map is submitted to compare with CZMP and on that basis only approval is accorded. We do not agree with your opinion in this matter. • The project is proposed in notified SEZ area and part of the forest land. So the Roads, Railway line falling under APSEZ will be used. Conveyer belt will pass through the existing conveyor corridor; this matter is mentioned on Page No. C 2/6 Point No. 2.2.7 of EIA report. • Detailed information regarding this matter is mentioned in Chapter-5. • For analysis of three alternative sites for project, about 18 factors were examined. The site No. 2 was found to be more suitable, so it is selected. • We have submitted our reasons in EIA report. We do not agree with your view.

1482

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
94	Shri Dayabhai Gadhavi Village - Mota Kandagara Taluka: Mundra	• He represented that we have received report of VIMTA. This VIMTA is a Private organization which is favouring the company. We don't accept VIMTA's report.	• The representative of the project proponent replied that VIMTA is a NABET accredited agency.
95	Shri Vajjibhai Taparya Village – Zarpara Taluka: Mundra	• He represented that what area of land will be affected during Acidic Process in the plant? Where the Acidic Water and Chemicals will be released?	• The representative of the project proponent replied that the process of this Copper plant is not acidic, but along with production of Copper, Sulphur Dioxide will also be produced which will be used for making Sulphuric Acid. And, it will be transported through pipeline of suitable material and there is no possibility of leakage. The Tail Gas will be scrubbed in the scrubber by Lime Stone.

1487

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
96	Shri Dayabhai Gadhavi Village - Mota Kandagara Taluka: Mundra	He represented that • Will waste material be generated from the plant? • What is the arrangement for waste material? • Is there any chance of any kind of blast? • In what manner will the finished product be taken out?	The representative of the project proponent replied that: • Lime will be used in the scrubber process and Gypsum will be made. This will be used in the cement industry. • Certain part of the waste material coming out of the plant will be sent to the CPCB authorized processor and other non-recyclable hazardous waste will stored in secured land field constructed as per guidelines of CPCB. • The finished goods in the form of Copper Plate will be transported in truck or container. Sulphuric acid will be transported in tanker. Chances of blast are not possible.
97	Shri Pravinsinh Bhurubha Chauhan, Village: Shiracha, Taluka: Mundra	He represented that • You have mentioned that you will make road from the waste. So what will do for making road from this waste? • What would be the constituents in raw material that would be stored? • Which chemicals will be contained in the waste that comes out from the plant and will	The representative of the project proponent replied that: • We will not make roads from waste. • The waste material coming out of the plant will contain Calcium, Silica and Arsenic. This waste material will be stored in secure land fill sites. • Mercury product is made from the waste material that contains mercury

1488

Sr. No.	Name and address of the representative	Point Represented	Chronological reply given by representative of project proponent
		mercury come out from this waste?	and material named Calomel is produced. This material will be exported. No process for mercury will be done in this plant.
98	Shri Naran Gadhavi Village: Zarpara, Taluka: Mundra	He represented that • What steps have been taken for reducing emissions and water conservation as per the gazette notification dated 07.12.2015 of MoEF&CC, Government of India? • What effect will this project produce on sea creatures that have direct connection with fishermen?	The representative of the project proponent replied that: • This question does not relate to this project. • No liquid will be discharged from this plant. • A total of 32800 cubic meter of water will be used in the plant and out of that 6448 cubic meters of polluted water will be produced. This will be treated in ETP, the water will be purified by process in RO plant and it will be again used in the plant. The rejects will be treated through the multi effect evaporation process. Therefore there is no question of discharge of any kind of liquid from this project.

1489

The Regional Officer, Kutch (East), Gujarat Pollution Control Board asked again to local affected people present in public Hearing to raise their additional objections or suggestions if any, but no additional objections or suggestions were received.

Then Regional Officer, Kutch (East), Gujarat Pollution Control Board summarized the entire proceedings of Environmental Public Hearing to the people present.

Finally, with due permission of Additional District Magistrate and Resident Additional Collector, Regional Officer, Gujarat Pollution Control Board concluded Public Hearing after expressing Thanks.

પરિશિષ્ટ-બી-૧

લોકસુનાવણીમાં ભાગ લેનાર સહભાગીઓ દ્વારા ઉઠાવાયેલ મુદ્દા અને પ્રોજેકટના પ્રતિનિધી દ્વારા આપવામાં આવેલ પ્રત્યુતર

ભારત સરકારના વન, પર્યાવરણ અને જળવાયુ પરિવર્તન મંત્રાલય, નવી દિલ્હીના જાહેરનામાં ક્રમાંક એસ.ઓ. ૧૫૩૩ તા.૧૪/૦૯/૨૦૦૬ અને વખતો વખત થયેલ સુધારાઓ અન્વયે જણાવવાનું કે, મેસર્સ અદાણી એન્ટરપ્રાઇઝીસ લીમીટેડ, અદાણી પોર્ટસઅને સ્પેશિયલ ઇકોનોમિક ઝોનની જમીન ગામ સિરાચા અને નવીનાળ, તા.મુંદરા, જિ.કચ્છ, ગુજરાત દ્વારા સૂચિત ગ્રીનફિલ્ડ કોપર રીફાઇનરી ૧.૦ મીલીયન ટન પ્રતિવર્ષક્ષમતા ધરાવતા પ્રોજેકટની સ્થાપના માટેની સૂચિત પરિયોજના (પ્રોજેકટ)કેટેગરી "એ"અંતર્ગત તેઓની અરજીના અનુસંધાને તા.૨૯/૦૪/૨૦૧૭ ના રોજ સવારે ૧૧:૦૦ કલાકેકમ્યુનીટી પ્રીમાઇસીસ સેન્ટર (સમાજવાડી) ટુન્ડા પ્રાથમિક શાળાની સામે, ગામ ટુન્ડા તા.મુંદરા જિ.કચ્છ, ગુજરાત ખાતે પર્યાવરણીય લોક સુનાવણી આયોજીત કરવામાં આવી હતી.

સમગ્ર લોક સુનાવણીની કાર્યવાહી શ્રી ડી.આર.પટેલ (જીએએસ), અધિક જીલ્લા મેજીસ્ટ્રેટ અને નિવાસી અધિક કલેકટરશ્રી, કચ્છની સીધી દેખરેખ હેઠળ તથા અધ્યક્ષપણા હેઠળ કરવામાંઆવેલ.

શ્રી કે.બી.ચૌધરી, પ્રાદેશિક અધિકારી શ્રી, કચ્છ (પુર્વ),ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ તથા સભ્ય સચિવશ્રી ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડના પ્રતિનિધીશ્રીએ લોક સુનાવણીમાં ઉપસ્થિત સૌને આવકાર્યો,તેઓએ ઇ.આઇ.એ. નોટીફિકેશન ૨૦૦૬ અંતર્ગતવિવિધ જોગવાઇઓ અને લોક સુનાવણીની પ્રક્રિયા બાબતે સંક્ષિપ્તમાં માહિતી આપી. તેમણે પર્યાવરણીય લોક સુનાવણીની બહોળી પ્રસિધ્ધિ અંગે ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ દ્વારા કરાયેલ કાર્યવાહીની માહિતી આપી અને સ્થાનિક દૈનિક વર્તમાન પત્રોમાં આપેલ જાહેર ખબર વિશે જણાવેલ.તેમણે એમ જણાવ્યું કે નોટીફિકેશનની જોગવાઇઓ અનુસાર સ્થાનિક અસરગ્રસ્ત લોકો આ પર્યાવરણીય લોક સુનાવણીમાં રજુઆત કરી શકશે. જયારે અન્ય વ્યાજબી હિત ધરાવતા વ્યકિતઓ તેઓની રજુઆત લેખીતમાંકરી શકશે જેનો કાર્યસૂચિમાં સમાવેશ કરવામાં આવશે.

ત્યાર બાદ અધિક જીલ્લા મેજીસ્ટ્રેટશ્રીની પરવાનગીથી તેઓએ ઉદ્યોગના પ્રતિનીધીને સ્થાનિક ગુજરાતીભાષામાં સૂચિત પરિયોજના બાબતનું પ્રેઝન્ટેશન કરવા માટે જણાવ્યું.

પ્રોજેકટ પ્રતિનિધિ ધ્વારા પ્રેજન્ટેશન શરૂ થતાં જ શ્રી નારાણભાઈ ગઢવી, ગામ –ઝરપરા, તા. મુંદરા ધ્વારા અધ્યક્ષ સમક્ષ ઈઆઈએ રીપોર્ટની ઓરીજનલ એગ્રેજીમાં કોપી માંગવામાં આવેલ. પ્રાદેશિક

1491

અધિકારીશ્રી ધ્વારા અધ્યક્ષશ્રીની સંમતિથી પ્રોજેકટ પ્રતિનિધિને ઈઆઈએ રીપોર્ટની નકલ શ્રી નારાણભાઈ ગઢવીને આપવા જણાવેલ,જે નકલ પ્રોજેકટ પ્રતિનિધિએ તેમને આપેલ.

ત્યાર બાદ ઉદ્યોગના તકનીકી પ્રતિનીધી દ્વારા કંપનીનો પરિચય,કોપર સ્મેલ્ટર અને રીફાઇનરીના વિશ્વના આંકડા, વિશ્વમાં આવેલ કોપરના પ્લાન્ટ, રાષ્ટ્ર માટે કોપરનો વપરાશ, સ્થળનો નકશો, અભ્યાસ વિસ્તારનો નકશો, અભ્યાસ હેઠળના વિસ્તારની જમીનની વપરાશની પેટન, જમીનનો લે-આઉટ નકશો, પર્યાવરણીય સેટીંગ, સ્થાનિક વિસ્તાર માંથી જરૂર હોઇ તેવા સ્ત્રોતો પ્લાન્ટની ફલોસીટ, વાયુ પર્યાવરણ, એમ્બીયન્ટ એર કવાલીટી મોનીટરીંગ, વાયુ પર્યાવરણ માટેના શમનકારી પગલા, જળ પર્યાવરણ, તેમના નમુનાના સ્થળ, જળ પર્યાવરણ પર અંદાજીત અસર અને તેના નિવારણના પગલા, જમીન પર્યાવરણ, જમીનના નમુના માટેના સ્થળ, જમીન પર્યાવરણ વ્યવસ્થાપન માટેના પગલા, ઘન કચરાનું વ્યવસ્થાપન, ધ્વનિ પર્યાવરણ, ધ્વનિને ઘટાડવાના ઉપાયો, જૈવિક પર્યાવરણ વિગેરેનું સ્થાનિક ગુજરાતી ભાષામાં ઓડિયો વીઝયુઅલ પ્રેઝન્ટેશન આપવામા આવ્યું.

ઓડિયો વીઝયુઅલ દ્વારા પ્રજન્ટેશન પુર્ણ થયા બાદ,પ્રાદેશિક અધિકારી,કચ્છ (પુર્વ) ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડદ્વારા અધિક જિલ્લા મેજીસ્ટ્રેટશ્રીની મંજુરીથી સ્થાનિક અસર ગ્રસ્ત લોકોની રજુઆતો / વાંધાઓ / સૂચનો રજ કરવા માટે મંચ ખુલ્લો મુકવામાં આવેલ.

પ્રાદેશિક અધિકારી શ્રી, કચ્છ (પુર્વ), ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ દ્વારા ઉપસ્થિત જન સમુદાયને જણાવેલ કે, પર્યાવરણીય લોક સુનાવણી અગાઉ અન્ય વ્યાજબી હિત ધરાવતા (૧) શ્રી રવીલાલ કે.મહેશ્વરી,મુંદરા, (૨) શ્રી પી.સી.ગઢવી, માજી પ્રમુખશ્રી, તાલુકા પંચાયત, લખપત, (૩) શ્રી મહેશ પંડયા,પર્યાવરણ મિત્ર, અમદાવાદ, (૪) શ્રી ગજેન્દ્રસિંહ જાડેજા,સરપંચશ્રી, નવીનાળ, (૫) શ્રી સંજયભાઇ એસ. બાપટ, મુંદરા, (૬) શ્રી નારાણભાઇબી. ગઢવી, ખેતી વિકાસ ટ્રસ્ટ, ઝરપરાતરફથી લેખિતમાં રજુઆતો મળેલ છે. આ લેખિતમાં કરેલ રજુઆતોના પ્રશ્નો તથા પ્રોજેકટ પ્રપોનન્ટ તરફથી આપવામાં આવેલ લેખિતમાં જવાબોને આજની પ્રોસીડીંગમાં સમાવેશ કરવામાં આવશે.

પર્યાવરણીય લોક સુનાવણી દરમ્યાન હાજર રહેલ લોકો દ્વારા કરવામાં આવેલ રજુઆતો / વાંધાઓ / સૂચનો / અભિપ્રાયો તેમજ અરજદારના પ્રતિનિધિ દ્વારા આપવામાં આવેલ જવાબ નીચે મુજબ છે.

(૩) તા. ૨૪/૩/૨૦૧૭

પરંતુ ગુજરાત સ્પેશિયલ ઈકોનોમિક ઝોન એકટ ૨૦૦૪ ની કલમ ૨૧ મુજબ SEZ ડેવલપ થઈ ગયા બાદ SEZ ના ડેવલેપર અન્ય યુનિટના માલિક વચ્ચે જયારે લીઝ ઉપર જમીન આપવાનો કરાર થાય તે વ્યવહાર ઉપર સ્ટેમ્પ ડ્યુટી માફ છે. જેનો ખોટું અર્થઘટન કરી જમીન મંજૂરી હુકમો ઉપર આ કંપનીએ જે જમીન ઉપર પ્રોજેકટ આવેલ તેની સ્ટેમ્પ ડ્યુટીની રકમો ભરપાઈ કરેલ નથી. તેનો કંપની વિગતવાર ખુલ્લાસો કરે,કાયદાની જોગવાઈઓ મુજબ ખુલાસો કરે.

૮) આ પ્રોજેકટની અન્ય મહેસૂલની જમીનો ઉપર મહેસૂલ અધિનિયમની કલમ ૬૭ (એ) મુજબ જયારે એક હેતુમાંથી બીજા હેતુમાં જમીન ટ્રાન્સફર થાય એટલે કે બિનખેતીના હેતુમાં ટ્રાન્સફર કરવામાં આવે ત્યારે પ્રતિ મીટરના રૂા. ૬/– લેખે રૂપાંતર વેરો ભરપાઈ કરવાનો હોય છે. જે આ કંપની દ્વારા કલેકટરશ્રી દ્વારા મેળવેલ જમીનો અને તાલુકા વિકાસ અધિકારીશ્રી પાસેથી મેળવેલ બિનખેતીની મંજૂરીઓ ઉપર ટ્રાન્સફરના વ્યવહારની રૂપાંતર વેરાની કરોડો રૂપિયાની રકમો કંપનીએ ભરેલ નથી. જે અંગે સરકારશ્રીના ઓડિટ ડિપાર્ટમેન્ટ કેગ દ્વારા પણ ઓડિટ કરવામાં આવેલ છે અને તે રકમો ભરપાઈ કરવા કલેકટરશ્રીએ કંપનીને અનેક નોટીસો આપેલ છે તેમ છતાં પણ કંપનીએ આ મહેસૂલી લેણાંની રકમ ભરપાઈ કરેલ ન હોઈ તે જમીન ઉપર મહેસૂલી લેણું બાકી હોઈ પ્રોજેકટ ચાલુ થઈ શકે નહી આ બાબતે કંપની વિગતવાર ખુલ્લાસો કરે.

૯) પ્રોજેકટનો ઘન કચરો(જોખમી કચરા વ્યવસ્થાપન નિયમો) અનુસાર કંપની તેની શું વ્યવસ્થા કરશે ?

૧૦) કોપર સ્મેલ્ટર પ્રોજેકટ યોજનના સમયગાળા દરમિયાન કયા કયા વેરા ભરપાઈ કરવામાં આવશે ? અને કરવેરાની વાર્ષિક અંદાજિત રકમ કેટલી રહેશે જે જણાવવું.

૧૧) કોપર સ્મેલ્ટર પ્રોજેકટને કારણે પાંચ હજાર કઈ કઈ નોકરીઓનો સર્જન થશે તેમાં કેટલી નોકરીઓમાં સ્થાનિક અસરગ્રસ્ત લોકોને નોકરીમાં રાખવમાં આવશે ?

૧૨) સમાજની પ્રાથમિક આવસ્યકતાઓ, સ્વાથ્યસેવાઓ,શૈક્ષણિક સુવિધાઓ,રસ્તાઓની સુવિધાઓ વિગેરેનું કંપનીએ શું આયોજન કરેલ છે ? અરસગ્રસ્ત લોકો/ ગામના સામાજિક માળખાને સુધારવા માટે કંપનીનું આયોજન શું છે તે જણાવાવું.

૧૩) પર્યાવરણ સંરક્ષણ પગલા માટે કંપની કેટલું ફંડ ફાળવશે અને તેનો ઉપયોગ કેવી રીતે કરશે

Gujarat Pollution Control Board RECEIVED ON R.O. Kutch (East) 06 APR 2017-05-06	
2288	50

Subject: With regard to objections for the environmental public hearing for Green Field Copper Refinery Plant-1 MTPA production project Category-A upon the land at M/s Adani Enterprises limited Adani Port and Special Economic Zone village Siracha and Navinad, Taluka Mundra, District Kutch.

Hereby I have been instructed to provide written remarks and objections to the above mentioned advertisement published in the Kutch Mitra daily newspaper dated 26.03.2017, for and on behalf of my clients 1) Aatul Malshi Maheshwari and 2) Damji Malshi Maheshwari, residing at village Tunda, taluka Mundra, district Kutch.

1. My clients are the residence of the village on which the project shall be made and the villages around the project.

2. This project will use hazardous substances and material that will be for the human health/animals/vegetation and water flow as per the rules of the MSIAC and this shall cause a serious effect to environment. What steps will be taken by the company for this and what are the solutions as for this with the company?

3. A serious damage shall occur to the health of humans and animals along with environment of the village around the project as there shall be emission from the plant, there shall be emission or dust from the related construction activities and other such places. What steps shall be taken as per legal in case if any damage

can be done.

4. What are the provisions laid down by the company for protection from blast, liquification, fire, etc. during the production? Provide the details that the company shall take. This is because (prior to this a boiler had blasted in a project of this very company and many humans/workmen had suffered serious injuries) This company has violated the rules for protection prior to this also.

5. The project is planned on the land and out of this the sanction is sought from the government of India and the same is pending before the government by file no. 8-04/2016 for land totaling of 1576.81 heacter and located at the Siracha-Navinal village. This file is returned by the central government to the Gujarat government for the purpose of opinion. It is specifically mentioned in it that this company has been provided with forest land prior to this also. Therefore additional land cannot be given. In this manner the forest land can be given in rare cases and in very serious requirement, as per the forest laws. In this manner the land of the company is not approved and the representative of the common public named Mahesh Mohanlal Desai has submitted objections before the Central government and Gujarat government and it is submitted that the land should not be approved. In short, the forest land is not provided to the company yet the work for project has been started. The company should provide explanation to all points in a detailed manner.

6. Prior to this, the environment department had issued show cause notices to other project of this company and on the basis of the report submitted by Sunita Narayan team, the company was asked to pay penalty of Rs. Two hundred crores i.e. 1% amount of project, for breach of environmental condition. Thus, what is the assurance that this company shall not violate the conditions for environment laid down by the environmental law? Moreover the company has also not paid the amount of penalty. In this manner the company has openly breached the conditions for environment. As for this the environment related approval should not be given. Further the company should give a detailed explanation as for this issue.

7. As for the other revenue land of the project, the amount of stamp duty is pending as per the land approval orders. Meanwhile the company states that, they have exemption. But the fact is that as per the section 21 of the Gujarat Special Economic Zone Act 2004, the exemption on stamp duty is on transaction that is carried out, between the developer and unit owner for lease, after the development of SEZ. This has been wrongly interpreted by the company and thereby the amount of stamp duty payable based on the land approval orders, for the land on which the project is brought, has not been paid. The company should provide a detailed explanation as to this. It should provide explanation as per the provision of law.

8. As for the other revenue land of the project, as per the section 67(a) of the Revenue act, when the land is transferred for other purpose i.e. to non-agricultural purpose,

provided for the land by the collector and taluka development officer. As for this the audit has also been conducted by the CAG being the audit department of government. The collector issues number of notices to the company for paying the above mentioned amount but the company has not paid this revenue amount. The amount of revenue is outstanding for this land and therefore project cannot be initiated. The company should provide a detailed explanation as to this. 154

9. What arrangement will have the company undertake for the hazardous waste (as per Hazardous and Other Wastes Rules) coming from the project?

10. What taxes would be paid during the duration of Copper Smelter Project scheme? What would be the approximate annual tax amount?

11. While kind of five thousand jobs shall be created due to Copper Smelter project? How many local persons shall be employed in these services?

12. What arrangement has the company made for the primary requirement of the community such as health services, educational facilities, roads facilities, etc? What is the preparation of the company for improvement in the social structure of the affected individuals/villages?

13. How much fund would the company allot for environmental conservation and in what manner will it be used?

14. Even prior to this, the company had for another project clearly violated the conditions laid down under the environment clearance and costal regulations zone and thereby had violated the condition of not cutting mangroves and filling creek. The company has been issued show cause notices by the environmental department and penalty has also been paid. Thus even the environmental conditions laid down for this project shall also not be complied with, serious problems as to environment shall emerged around the project area and therefore our clients want that the Examination-in-Chief and NOC along with other approvals should not be provided to the company. Thus my clients have clear objections against this project.

Subject : **Objection application against Proposed Greenfield Copper Refine plant by Adani Enterprise Ltd.**

Respected Sir,

Refer to the newspaper notification published by your department on the Environmental Clearance sought by Adani Enterprise Ltd. to establish 1 unit of Greenfield Copper Refinery plant at Mundra in Kachchh district. Refer to this, a public hearing meeting on environment is scheduled on 29-04-2017 regarding EIA report of the proposed plant. Herewith we request to arrange to take note of our objections and presentations, described point wise as under, and to respond in written.

1. Project is cost of the proposed project is estimated to Rs 10000 crores and Rs.900 crores is allocated towards environment maintenance. Thus less then 10% of the project cost is allocated towards most important & vital subject – Environment. We request to provide us the information that as per norms OR as per the GPCB and Forests Acts what percentage of the project cost should be allocated towards environment mainanance? And it is very important that the proposer should be asked to allocate more amount towards Environment maintenance if the above allocation of Rs.900 crores (9% of the project cost) is less than the regulatory provisions.

2. The land where the project is proposed is owned by APSEZ and APSEZ acquired the land from the government for industrial use long back. President of APSEZ allotted this land to Adani Enterprise Ltd. without any kind of consideration, lease contract or sub-lease. As per the order of the honorable High Court of Gujarat, the ownership should be considered changed when any company transfers the land to other company OR its sister concern to use and stamp duty @ 1% of the market price of the land should be deposited with the superintendent of stamps office. So here, (1) Has company obtained the land by taking due regulatory approvals and (2) Has it paid the stamp duty as per the norms? What actions would be taken if the company defaults in these two matters?

E-mail : pcgadhavi530@gmail.com | M. 98791 81530

1551

4. Some portion of the selected land of proposed project falls under Forests. And is a residence of lots of monkeys, which are declared protected vide the regulations of the Indian Forests Act and is our national animal too. They get feed from nearby agricultural areas in daytime and come back in the land portion in the night time as feel unsecured in nearby areas. None of these measures have also been taken in EIA report of this proposed project and steps to be taken to protect monkeys are also mentioned, but these steps are not much clear and need to be discussed in detail we request to clarify on these preventive steps.

4. It is also mentioned that the daily water requirement of 12.8 MLD for the proposed plant will be supplied from the utilization plant established in APSEZ. So any such utilization plant exists in APSEZ ? And, if yes, what is the capacity and where this water is being used also need to be clarified.

5. It is mentioned that the polluted water generated by proposed plant will be treated and be used to grow trees and to develop green belt. But we have doubts that hazardous chemicals mixes in treated sea water while use in plant and to using such water to grow trees and develop Greenbelt, where proposed greenbelt land is also not saline, needs some more clarification.

6. We request to provide us the map of all the lands of the proposed project and of 209 acres land kept reserved to develop greenbelt. Because we doubt that many natural springs exist in these lands and as per norms land can't be level by handling these natural springs. Greenbelt plantation is not possible in many out of this 209 acres land which is kept reserved for greenbelt plantation. DFCB, in consultation with Forests Dept., should choose the lands for greenbelt plantation where trees really can be grown and greenbelt can be developed and the proposer should be asked to provide decrescent land to develop greenbelt. Because it seems that the company is allocating only those non-usable lands instead of good fertile land to develop greenbelt, like it provides land where trees cant be grown OR where land is now usable due to natural river/spring flow passes OR where old ponds, lakes located. Thus company tries to save its good land and allocating only bad land towards very important & vital issue of Environment.

7. It is also mention that Disaster Management system will be set up in the proposed project and high standard risk emission equipments will be used. This point also should be dealt in detail as the oxygen plant to be established in the proposed project will also be operated automatically and possibility is that this may create risk for local community resides surrounding. So, clarification is also important that as per norms how far such plant should be located from the community AND what type of safety guarantee is given by the company if any accident occurs in future AND whether the company obtained all necessary regulatory permissions to establish such plant ?

8. It is mentioned that the total 256.58 hectors land is required and be used to establish the proposed project. Currently 154.08 hector land is available with APSEZ and rest 102.58 hectors land is of Forests Department, will be used. For this whether the company obtained necessary permissions ? Whether local regulatory offices granted NOC ? Whether the

permission is obtained to use forests land for industrial purpose from the authorized regulatory ? And if the forests land is yet not allotted to the company, how this environment public hearing for environment clearance is called before allocation of land?

9. If the company demanded just 16 hectors forest land, whether the Forests Department demanded for alternate lands for alternate forestation against allocation of above said lands and whether Revenue Department clearly intended to provide alternate land for alternate forestation ? If Forests Department has not demanded alternate land OR Revenue Department has not yet responded positively on alternate forestation land demand, how Forests Department can be linked with proposed project? So, land portion based on anticipation of due forest land permission should be removed from the total land requirement detailed matter of the proposed project.

10. APSEZ president allocated the portion of 154.16 hector of land by written statement for the proposed project, but no details of land demand proposal for the proposed project, by the proponent, is mentioned. So details of land demand proposal should be made public and also inform that why permission is not obtained from the Development Commissioner appointed by the central government for ALL administration purpose at APSEZ?

11. Details of local road development are also mentioned in the EIA report of the proposed project. Internal & external roads for the use of company are developed by APSEZ. Toll booth is established on the state owned highway and toll it being collected from the vehicles entering into APSEZ form this toll booth near Mokha chokdi. It seems that nothing is being done for maintenance of internal rural, panchayat or state roads by the company. Many of these internal rural, panchayat, state roads falling under proposed project area are in very poor condition and need maintenance. It is also important to make clear that among these roads which roads company intend to maintain and what new facilities company intend to develop?

12. Health services provided by APSEZ in last 10 years by adopting hospitals, health sub centers, FSW centers in local Mundra, Mandvi area, if any, should also be provided as details of providing health services in local areas also dealt in the proposed project. Company also should clarify on health service facilities provided in these two talukas or anywhere in Kutch, if any.

13. It is informed that 5000 direct new and many indirect employment chances will be generated by the proposed project. Then separately how many skilled, semi skilled and unskilled jobs will be created and clarity also necessary on how many unemployed will be employed from the affected local area. Whether local youths will be trained and employed permanently in the company is also important because lots of localities work in APSEZ on contract basis or through private work contractors on daily wages.

14. Proposed project is intended to be completed within 30 months. Please clarify that from when these 30 months will be counted, 30 months after this environment public hearing OR 30 months after obtaining all necessary regulatory approvals?

To,
Member Secretary
Gujarat Pollution Control Board
Gandhinagar

Sub: Environmental Public Hearing of M/s. Adani Enterprises Limited Village(s) :Siracha and Navinal, Taluka: Mundra, District: Kutch is scheduled on 27th April 2017

Sir,

We have studied the draft EIA report of the above-mentioned project. Following are our observation/comments/questions regarding project and draft EIA report.

1. What was the previous land use of the land for proposed project? Has Industry obtained NA permission for the land? Please provide the document.
2. How the required land for the project is acquired? Was it a government or private land?
3. When was environmental clearance for this project in Form I applied?
4. What is the status of NOC application to GPCB for this project?
5. What is the status of Forest & CRZ clearance for this project? Please provide a copy of both of these clearances.
6. How many mangrove trees will be uprooted due to this project? What is exact restoration plan for mangrove trees which would be displaced due to this project?
7. What type of precautionary measures are to be taken to avoid negative impact of construction activities on marine environment, water quality, inter tidal and sub tidal habitat and sediment quality ?
8. Please give exact dates of ambient air quality, surface water, ground water, noise monitoring and soil quality monitoring.
9. How will the project proponent plan to get coal – pet coke, met coke as a fuel in regular basis? Please provide any agreement made with the supplier.
10. What is the regular monitoring plan that shall be carried out for odor control by the projectproponent?
11. Please justify domestic water requirement.
12. Please provide complete details of each ETP Units.
13. Is there any cost-benefit analysis carried out for proposed project's benefits vs loss of ecosystem including flora, fauna and vegetation?
14. Please give name of registered recycler to whom nickel sludge, arsenic bearing sludge, used oil and oil sludge will be sent for disposal.
15. How many local people will getemployment through this project?
16. What will be action plan for socioeconomic development of an area by project proponent?

$50 26/4/2017

Subject: Cancellation of public hearing scheduled for 29.4.2017 and rejection of EIA related to Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in MundraTaluka, Kutch, Gujarat

Dear Sir,

This is with reference to the public hearing for the above mentioned copper refinery project scheduled for 29.4.2017 in Mundrataluka, Kutch [Attached as Annexure 1]. We would like to present to you certain facts and request you to immediately cancel the public hearing and reject the EIA on clear legal grounds.

Non compliance of ToR and violation of MoEFCC circular dated 31.11.2011

- Section 5 (i) of the Terms of Reference (ToR) issued for the project on 21st June 2016, clearly indicates that the project proponent has to provide a copy of the*"Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable)."*[Attached as Annexure 2]
- Further as per the EDS by MoEFCC uploaded on the website athttp://environmentclearance.nic.in/auth/FORM_A_PDF.aspx?cat_id=1A/GI/IND/5300 4/2016&pid=Newand accessed on 8.4.2017, it is clearly indicated that "Forest Clearance Under Process". The file is under process in file number 8-04/2016-FC. A copy of this web page is attached with this letter. [Attached as Annexure 3]
- In the EIA report on Page No. AI-14, it has also been stated that the forest clearance is pending at the level of the central government [Attached as Annexure 4]

This clearly indicates the project proponent is yet to obtain forest clearance and **has not complied with the Terms of Reference (ToR)**, making the EIA report liable for rejection.

In this regard we would also like to bring your attention to (attached) to an Office Memorandum of the **MoEFCC dated 31.11.2011** which clearly emphasizes the need for forest clearance prior to either appraising or granting environmental clearance. In the case of greenfield projects like the copper refinery**Section III (iii) of this circular**[Attached as Annexure 5] clearly states that:*"In case of any green field project, which involves diversion of forest land, the project proponents are advised to re-examine the requirement of forestland and submit the proposal without forestland for consideration of the EAC. Otherwise, the proponent should submit the proposal for TORs under the EIA Notification, 2006 only after applying the stage-1 forestry clearance for the forestland involved inthe project."*

As you are aware **Section 8 (vi) of the EIA notification, 2006** clearly states: *"Deliberate concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application shall make the application liable for rejection, and cancellation of prior environmental clearance granted on that basis..."*

We therefore request you to take immediate action by:

1. Cancelling the public hearing scheduled for 29.4.2017 in Mundra
2. Reject the application attracting the Section 8 (vi) of the EIA notification.

We look forward to your immediate action and cooperation in this regard.

Sincerely,

Gajendrasinh Jadeja,
Sarpanch, Navinal Village,
MundraTaluka, Kutch District
Gujarat

Judges Bungalow Road, Bodakdev ,
Ahmedabad, Gujarat-380015.

Subject: Greenfield Copper Refinery Plant (10 MTPA) project of M/s Adani Enterprises Limited located at Adani Port Special Economic Zone Land in Village(s) Siracha and Navinal, Taluka Mundra, District Kutch, Gujarat - prescribing of ToRs regarding.

Sir,

This has reference to your online application No. IA/GJ/IND/53004/2016 dated 21st April, 2016 along with the application in prescribed format (Form-I), copy of pre-feasibility report and proposed TORs for undertaking detailed EIA study as per the EIA Notification, 2006 for the project mentioned above. The proposed project activity is listed at S.No. 3(a), under category 'A' of the Schedule of EIA Notification, 2006 and appraised at the Central level.

2.0 M/s. Adani Enterprises Limited proposes to install a new manufacturing unit for 10 LTPA copper project. It is proposed to set up the plant for Copper Cathode based on Pyrometallurgical process technology and Electro-refining process. The proposed unit will be located at Adani Port Special Economic Zone (APSEZ) land (Siracha and Navinal Villages), Mundra Taluka, Kutch District, Gujarat State. The proponent has provided 3 sites for the project and proposed to set up the plant at Site-II. The land required for the project is 256.58 ha, out of which 154.18 ha is for industrial use and 102.38 ha is forest land. It has been informed that state government has recommended the forest diversion proposal to the Central Government. The proponent has also informed that the merits for selecting Site-II for the project inter-alia include proximity to west port from where major raw material will be imported, major part of land is within the notified SEZ and also the forest land diversion proposal is forwarded by the State government to Central Government. The proposed site lies between 22°48'55.78" N Latitude and 69°34'32.02" E Longitude. There are no national parks/ wildlife sanctuary within 10 km radius. The project area falls under Seismic Zone V. The estimated project cost is Rs. 10,000 Crore and the estimated environment protection cost is Rs. 900 crores. Employment generation from proposed project will be about 2000 direct employment and about 5000 indirect employment. The proposed capacity for different products for new site area as below;

Name of Unit	No. of Units	Capacity of each Unit	Production Capacity
Copper Smelter plant	2	4.5 LTPA	9 LTPA
Copper Refinery plant	2	5.0 LTPA	10 LTPA

1568

Continuous cast copper rod plant	2/3	2.5/ 1.67 LTPA	5 LTPA
Copper scrap melting facility	2	0.5 LTPA	1 LTPA
Sulphuric acid plant	2	15 LTPA	30 LTPA
Phosphoric acid plant	2	2.5 LTPA (100% P_2O_5)	5 LTPA (100% P_2O_5)
Aluminium Fluoride plant	2	15,000 TPA	30,000 TPA
Selenium Recovery plant	2	144 TPA	288 TPA
Precious metal recovery plant (Gold)	2	25 TPA	50 TPA
Precious metal recovery plant (Silver)	2	250 TPA	500 TPA
Oxygen (Industrial) Plant (95% Purity)	2	45,000 TPM	90,000 TPM
Waste heat recovery boiler	2	25 MW	50 MW

3.0 The electricity load required is 300 MW, out of this, 40 MW will be generated from internal process steam by waste heat recovery; whereas the remaining 260 MW power will be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd. Company has also proposed to install 6 DG Set of 1200 - 2000 KVA Each, as a backup facility.

4.0 Proposed raw material requirement for project are Copper concentrate and Rock phosphate. Requirement would be fulfilled by importing as well as from domestic market. Fuel consumption will be mainly Furnace Oil, LPG/NG and Coal for process requirement. Water Consumption for the proposed project will be 32,800 KLD desalinated water and waste water generation will be nil outside the project boundary. Domestic waste water will be treated through Sewage treatment plant and industrial waste water generated will be treated in the Effluent Treatment Plant & through reverse Osmosis plant and reused in the process. ETP Sludge shall be disposed as per applicable hazardous waste management rules.

5.0 The above proposal was considered by the Expert Appraisal Committee (Industry) during its 6th meeting held on 3rd – 4th May, 2016 for prescribing TORs for undertaking detailed EIA/EMP study.

6.0 Based on the information furnished and presentation made by the project proponent, the Committee recommended prescribing following specific TORs for undertaking detailed EIA and EMP study in addition to the generic TOR enclosed at **Annexure I read with additional TORs at Annexure-2.**

i. The Public Hearing for the project should be conducted by Gujarat Pollution Control Board
ii. The issues raised during public hearing and commitment of the project proponent on the same along with time bound action plan to implement the commitment and financial allocation thereto should be clearly provided.
iii. The project proponent should carry out social impact assessment of the project as per the Office Memorandum No. J-11013/25/2014-IA.I dated 11.08.2014 issued by the Ministry regarding guidelines on Environment Sustainability and CSR related issues. The social impact assessment study so carried out should form part of EIA and EMP report.
iv. Plan for management of Arsenic bearing sludge should be submitted.

v. Hazardous management plan for handling of all hazardous material including minerals, products and waste, like H_2SO_4 and Arsenic sludge should be prepared by the project proponent and submitted.

7.0 The undersigned is directed to inform that the Ministry of Environment, Forest and Climate Change (MoEFCC) after accepting the recommendation of the EAC (Industry), hereby decided to accord ToRs for the above project.

8.0 It is requested that the draft EIA Report may be prepared in accordance with the above mentioned specific TORs and enclosed generic TORs and additional TORs and thereafter further necessary action including conduct of public consultation may be taken (if required) for obtaining Environment Clearance in accordance with the procedure prescribed under the EIA Notification, 2006 as amended.

9.0 The TORs are valid for a period of three years from today i.e 21.06.2016 and will expire on 20.06.2019. However, this period could be further extended by a maximum period of one year provided an application is made by the project proponent at least three months before the expiry of the validity period, together with updated Form-I, based on proper justification.

ANNEXURE-I

GENERIC TERMS OF REFERENCE (TOR) IN RESPECT OF INDUSTRY SECTOR

1. Executive Summary
2. Introduction
   - i. Details of the EIA Consultant including NABET accreditation
   - ii. Information about the project proponent
   - iii. Importance and benefits of the project

3. Project Description
   - i. Cost of project and time of completion.
   - ii. Products with capacities for the proposed project.
   - iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.
   - iv. List of raw materials required and their source along with mode of transportation.
   - v. Other chemicals and materials required with quantities and storage capacities
   - vi. Details of Emission, effluents, hazardous waste generation and their management.
   - vii. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)
   - viii. Process description along with major equipments and machineries, process flow sheet (quantative) from raw material to products to be provided
   - ix. Hazard identification and details of proposed safety systems.
   - x. Expansion/modernization proposals:
     - a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Regional Office of the Ministry of Environment and Forests as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental clearances including Amendments shall be provided. In addition, status of compliance of Consent to Operate for the ongoing /existing operation of the project from SPCB shall be attached with the EIA-EMP report.
     - b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.

4. Site Details
   - i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.
   - ii. A toposheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet (including all eco-sensitive areas and environmentally sensitive places)
   - iii. Co-ordinates (lat-long) of all four corners of the site.
   - iv. Google map-Earth downloaded of the project site.

v. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.

vi. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.

vii. Landuse break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc shall be included. (not required for industrial area)

viii. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area

ix. Geological features and Geo-hydrological status of the study area shall be included.

x. Details of Drainage of the project upto 5km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)

xi. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.

xii. R&R details in respect of land in line with state Government policy

5. **Forest and wildlife related issues (if applicable):**

i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable).

ii. Landuse map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (*in case of projects involving forest land more than 40 ha).*

iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.

iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon.

v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area.

vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife

6. **Environmental Status**

i. Determination of atmospheric inversion level at the project site and site-specific micro-metebrological data using temperature, relative humidity, hourly wind speed and direction and rainfall.

ii. AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests.

iii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min.,

1567

max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.

iv. Surface water quality of nearby River (60m upstream and downstream) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.

v. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC.

vi. Ground water monitoring at minimum at 8 locations shall be included.

vii. Noise levels monitoring at 8 locations within the study area.

viii. Soil Characteristic as per CPCB guidelines.

ix. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.

x. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.

xi. Socio-economic status of the study area.

7. Impact Assessment and Environment Management Plan

i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be well assessed. Details of the model used and the input data used for modeling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.

ii. Water Quality modelling – in case, if the effluent is proposed to be discharged in to the local drain, then Water Quality Modelling study should be conducted for the drain water taking into consideration the upstream and downstream quality of water of the drain.

iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.

iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules.

v. Details of stack emission and action plan for control of emissions to meet standards.

vi. Measures for fugitive emission control

vii. Details of hazardous waste generation and their storage, utilization and disposal. Copies of MOU regarding utilization of solid and hazardous waste shall also be included. EMP shall include the concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.

viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.

ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 1,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.

x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.

xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.

xii. Action plan for post-project environmental monitoring shall be submitted.

xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan.

8. Occupational health

i. Details of existing Occupational & Safety Hazards. What are the exposure levels of above mentioned hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved,

ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre placement and periodical examinations give the details of the same. Details regarding last month analyzed data of abovementioned parameters as per age, sex, duration of exposure and department wise.

iii. Annual report of heath status of workers with special reference to Occupational Health and Safety.

iv. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers.

9. Corporate Environment Policy

i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.

ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.

iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.

iv. Does the company have system of reporting of non compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report

1569

10. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.

11. Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.

12. 'A tabular chart with index for point wise compliance of above TORs.

13. The TORs prescribed shall be valid for a period of three years for submission of the EIA-EMP reports along with Public Hearing Proceedings (wherever stipulated).

The following general points shall be noted:

i. All documents shall be properly indexed, page numbered.
ii. Period/date of data collection shall be clearly indicated.
iii. Authenticated English translation of all material in Regional languages shall be provided.
iv. The letter/application for environmental clearance shall quote the MOEF file No. and also attach a copy of the letter.
v. The copy of the letter received from the Ministry shall be also attached as an annexure to the final EIA-EMP Report.
vi. The index of the final EIA-EMP report must indicate the specific chapter and page no. of the EIA-EMP Report
vii. While preparing the EIA report, the instructions for the proponents and instructions for the consultants issued by MOEF vide O.M. No. J-11013/41/2006-IA.II (I) dated 4th August, 2009, which are available on the website of this Ministry shall also be followed.
viii. The consultants involved in the preparation of EIA-EMP report after accreditation with Quality Council of India (QCI) /National Accreditation Board of Education and Training (NABET) would need to include a certificate in this regard in the EIA-EMP reports prepared by them and data provided by other organization/Laboratories including their status of approvals etc. Name of the Consultant and the Accreditation details shall be posted on the EIA-EMP Report as well as on the cover of the Hard Copy of the Presentation material for EC presentation.
ix. TORs' prescribed by the Expert Appraisal Committee (Industry) shall be considered for preparation of EIA-EMP report for the project in addition to all the relevant information as per the 'Generic Structure of EIA' given in Appendix III and IIIA in the EIA Notification, 2006. Where the documents provided are in a language other than English, an English translation shall be provided. The draft EIA-EMP report shall be submitted to the State Pollution Control Board of the concerned State for conduct of Public Hearing. The SPCB shall conduct the Public Hearing/public consultation, district-wise, as per the provisions of EIA notification, 2006. The Public Hearing shall be chaired by an Officer not below the rank of Additional District Magistrate. The issues raised in the Public Hearing and during the consultation process and the commitments made by the project proponent on the same shall be

x. included separately in EIA-EMP Report in a separate chapter and summarised in a tabular chart with financial budget (capital and revenue) along with time-schedule of implementation for complying with the commitments made. The final EIA report shall be submitted to the Ministry for obtaining environmental clearance.

1570

ANNEXURE-2

METALLURGICAL INDUSTRY (FERROUS AND NON-FERROUS)

1. Complete process flow diagram describing each unit, its processes and operations, along with material and energy inputs & outputs (material and energy balance).
2. Emission from sulphuric acid plant and sulphur muck management.
3. Details on installation of Continuous Emission Monitoring System with recording with proper calibration system
4. Details on toxic metals including fluoride emissions
5. Details on stack height
6. Details on ash disposal and management
7. Complete process flow diagram describing process of lead/zinc/copper/ aluminium, *etc.*
8. Details on smelting, thermal refining, melting, slag fuming, and Waelz kiln operation
9. Details on Holding and de-gassing of molten metal from primary and secondary aluminum, materials pre-treatment, and from melting and smelting of secondary aluminium
10. Details on toxic metal content in the waste material and its composition and end use (particularly of slag).
11. Trace metals in waste material especially slag.
12. Plan for trace metal recovery
13. Trace metals in water

****

157

Format for Executive Summary

Executive summary of the report in about 8-10 pages incorporating the following:

i. Project name and location (Village, Dist, State, Industrial Estate (if applicable)

ii. Products and capacities. If expansion proposal then existing products with capacities and reference to earlier EC.

iii. Requirement of land, raw material, water, power, fuel, with source of supply (Quantitative)

iv. Process description in brief, specifically indicating the gaseous emission, liquid effluent and solid and hazardous wastes.

v. Measures for mitigating the impact on the environment and mode of discharge or disposal.

vi. Capital cost of the project, estimated time of completion

vii. Site selected for the project – Nature of land – Agricultural (single/double crop), barren, Govt/private land, status of is acquisition, nearby (in 2-3 km.) water body, population, with in 10km other industries, forest , eco-sensitive zones, accessibility, (note – in case of industrial estate this information may not be necessary)

viii. Baseline environmental data – air quality, surface and ground water quality, soil characteristic, flora and fauna, socio-economic condition of the nearby population

ix. Identification of hazards in handling, processing and storage of hazardous material and safety system provided to mitigate the risk.

x. Likely impact of the project on air, water, land, flora-fauna and nearby population

xi. Emergency preparedness plan in case of natural or in plant emergencies

xii. Issues raised during public hearing (if applicable) and response given

xiii. CSR plan with proposed expenditure.

xiv. Occupational Health Measures

APPENDIX I

(See Paragraph-6)

FORM 1

Note : If space provided against any parameter is inadequate,Kindly upload supporting document under 'Additional Attachments if any' at the last part of the Form1. Please note that all such Annexures must be part of single pdf document.

(I) Basic Information

S.No.	Item	Details
	Whether it is a violation case and application is being submitted under Notification No. S.O.804(E) dated 14.03.2017 ?	No
1.	Name of the Project/s Brief summary of project Proposal Number Project Cost (in lacs)	Proposed 10 LTPA Copper Project Annexure-Brief summary of project IA/GJ/IND/53004/2016 1000000
2.	S. No. in the schedule Project Sector	3(a) Metallurgical industries (ferrous & non ferrous) Industrial Projects - 1
3.	Proposed capacity/area/length/tonnage to be handled/command area/lease area/number or wells to be drilled	Proposed Production Capacity: a. Copper Smelter Plant - 9 LTPA b. Copper Scrap Melting Facility - 1 LTPA c. Copper Refinery Plant - 10 LTPA d. Continuous Cast Copper Rod Plant - 5 LTPA e. Sulphuric Acid Plant - 30 LTPA f. Phosphoric Acid Plant - 5 LTPA g. Aluminum Fluoride Plant - 30,000 TPA h. Selenium Recovery Plant - 288 TPA i. Precious Metal Recovery Plant i. Gold – 50 TPA ii. Silver – 500 TPA j. Oxygen (Industrial) Plant – 90,000 TPM (95% Purity) k. Waste Heat recovery boiler b ha,
4.	New/Expansion/Modernization	New
5.	Existing Capacity/Area etc.	-1 ha.
6.	Category of project i.e. 'A' or 'B'	A
7.	Does it attract the general condition? If yes, please specify	No
8.	Does it attract the specific condition? If yes, please specify	No
9.	Location of the project Shape of the project land Uploaded GPS file Uploaded copy of survey of India Toposheet Plot/Survey/Khasra No. Town / Village State of the project	Mundra, Gujarat Block (Polygon) Annexure-GPS file Annexure-Survey of india toposheet APSEZ area in Siracha and Navinal villages. Siracha village 125/1, 125/2, 126, 129, 135, 137, 138/1, 140, 141/P, 142/P, 143, 144/1, 144/2, 147/P, 295/1 part, 295/2 (forest land), un-surveyed land, old ACL and diverted Mundra forest land part. Navinal Village 223/P, 224/P, 225/P and old ACL Siracha and Navinal Gujarat

Details of State of the project

1573

S.no	State Name	District Name	Tehsil Name
(1.)	Gujarat	kutch	Mundra

10.	Nearest railway station along with distance in kms	Adipur/Gandhidham, 65 km
	Nearest airport along with distance in kms	Bhuj, 55 km
11.	Nearest Town/City/District Headquarters along with distance in kms	Mundra , 22 km
12.	Village Panchayats, Zila Parishad, Muncipal Corporation, Local body (Complete postal address with telephone nos. to be given)	
13.	Name of the Applicant	Santosh
14.	Registered Address	Adani House, Near Mithakali Circle, Navrangpura, Ahmedabad 380009, Gujarat
15.	**Address for correspondance:**	
	Name of the Company	ADANI ENTERPRISES LTD
	Name of the Applicant	Santosh
	Designation (Owner/ Partner/ CEO)	Head Env and Authorised Signatory for AEL
	Pin code	380015
	E-mail	prasad.suryarao@adani.com
	Telephone No.	079-26565555
	Fax No.	079-25555500
	Copy of documents in support of the competence/authority of the person making this application to make application on behalf of the User Agency .	NIL
16.	Details of Alternative Sites examined, if any. Location of these sites should be shown on a toposheet	Yes
	Uploaded details	Annexure-Uploaded details
17.	Whether part of Interlinked projects?	No
18.	Whether separate application of Interlinked project has been submitted?	N/A
19.	If Yes, MoEF file number	N/A
	Date of submission	N/A
20.	If No, Reason	N/A
21.	**Whether the proposal involves Approval/ Clearance under: if yes, details of the same and their status to be given**	
	(i) Whether the proposal involves approval/clearance under the Forest (Conservation) Act,1980?	Yes
	Status	Forest Clearance Under Process
	MoEF file number	8-04/2016-FC
	MoEF file number	1576.81ha.
	(ii) Whether the proposal involves approval/clearance under the wildlife (Protection) Act,1972?	No
	(iii) Whether the proposal involves approval/clearance under the C.R.Z notification, 2011?	No
22.	Whether there is any Government Order/Policy relevent/relating to the site?	No

15+4

1362

23.	Whether any Forest Land Involved? Area of Forest land Involved (hectares)	 N/A
24.	Whether there is any litigation pending against the project and/or land in which the project is proposed to be set up?	No
	(a) Name of the Court	N/A
	(b) Name of the Sub court	N/A
	(c) Case No.	N/A
	(d) Orders/directions of the court, if any and relevance with the proposed project	N/A

(II) Activity

1 Construction, operation or decommissioning of the Project involving actions, which will cause physical changes in the locality (topography, land use, changes in water bodies, etc.)

S.No	Information/Checklist confirmation	Yes/No	Details there of (with approximate quantities/rates, wherever possible) with source of information data
1.1	Permanent or temporary change in land use, land cover or topography including increase in intensity of land use (with respect to local land use plan)	Yes	381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Permanent change in land cover and topography will occur due to construction of the proposed industry. Further, forest land of 253 acres (102.38 ha) is also involved which will be converted for industrial use. Forest Clearance is under pursuance, file number is 8-04/2016-FC.
1.2	Clearance of existing land, vegetation and buildings?	Yes	Some shrubs / weeds (mainly prosopis juliflora) present at the site shall be cleared.
1.3	Creation of new land uses?	Yes	381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company) and is already designated for industrial purpose as per the local land use plan. Permanent change in land cover and topography will occur due to construction of the proposed industry. Further, forest land of 253 acres (102.38 ha) is also involved which will be converted for industrial use. Forest Clearance is under pursuance, file number is 8-04/2016-FC.
1.4	Pre-construction investigations e.g. bore houses, soil testing?	Yes	Will be done prior to construction
1.5	Construction works?	Yes	Construction of manufacturing plants and related ancillary facilities will be carried out
1.6	Demolition works?	No	Not envisaged
1.7	Temporary sites used for construction works or housing of construction workers?	Yes	The temporary labour colony will be constructed for construction workers.
1.8	Above ground buildings, structures or earthworks including linear structures,cut and fill or excavations and fill or excavations	Yes	Construction of manufacturing plants and related ancillary facilities will be carried out.
1.9	Underground works including mining or tunneling?	No	Not envisaged
1.10	Reclamation works?	No	Not envisaged

1576

1.11	Dredging?	No	Not envisaged
1.12	Offshore structures?	No	Not envisaged
1.13	Production and manufacturing processes?	Yes	Covered in Pre-feasibility report
1.14	Facilities for storage of goods or materials?	Yes	There will be storage of Copper Concentrate and Rock Phosphate in covered sheds, storage and handling area, other required raw materials & chemical, Furnace Oil, LPG/ NG for process requirement and HSD for DG set as power backup.
1.15	Facilities for treatment or disposal of solid waste or liquid effluents?	Yes	Solid waste management and effluent treatment will be provided and the details are given in the Pre-Feasibility Report.
1.16	Facilities for long term housing of operational workers?	No	About 2000 operation workers will be employed. No separate township has been planned for Copper complex. The house for O&M personnel would be provided at APSEZ existing township by augmenting the township, which is around 30 km away from the proposed Copper Complex.
1.17	New road, rail or sea traffic during construction or operation?	Yes	New approach road will be constructed.
1.18	New road, rail, air water borne or other transport infrastructure including new or altered routes and stations, ports, airports etc?	Yes	New approach road will be constructed. In addition, conveyor belt for transfer of Copper Concentrate and Rock Phosphate from existing Adani West Port to the site will be built.
1.19	Closure or diversion of existing transport routes or infrastructure leading to changes in traffic movements?	No	Not anticipated.
1.20	New or diverted transmission lines or pipelines?	Yes	New transmission line shall be constructed for construction and operational power tapping from APSEZ Ltd through M/s. Mundra Utility Pvt Ltd.
1.21	Impoundment, damming, culverting, realignment or other changes to the hydrology of watercourses or aquifers?	No	Not envisaged
1.22	Stream crossings?	Yes	Natural drainage passing through the site will be suitably trained and maintained. There will not be any diversion. Further, conveyer for Copper Concentrate and Rock Phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required.
1.23	Abstraction or transfers of water from ground or surface waters?	No	Desalinated water will be supplied by APSEZ Ltd.
1.24	Changes in water bodies or the land surface affecting drainage or run-off?	No	Not envisaged
1.25	Transport of personnel or materials for construction, operation or decommissioning?	Yes	Existing approach road to site shall be initially used for movement of personal and transport. For permanent and long term movement of personal and transport of material, new approach road construction or strengthening of existing approach road shall be done as submitted above in Sr. No. 1.17. During operational phase, Copper Concentrate and Rock Phosphate supply will be through conveyor belt and transportation of products through Trucks/ Trailers and tankers etc.
1.26	Long-term dismantling or decommissioning or restoration works?	No	Not envisaged
1.27	Ongoing activity during decommissioning which could have an impact on the	No	Not envisaged

	environment?		
1.28	Influx of people to an area in either temporarily or permanently?	Yes	Approximately 3000 persons will be employed during construction phase and about 2000 people will be employed during operation phase.
1.29	Introduction of alien species?	No	Not envisaged
1.30	Loss of native species or genetic diversity?	No	Not envisaged
1.31	Any other actions?	No	Not envisaged

2 Use of Natural resources for construction or operation of the Project (such as land, water, materials or energy, especially any resources which are non-renewable or in short supply):

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
2.1	Land especially undeveloped or agricultural land (ha)	Yes	The total land required for Copper project is 634 acres (256.57 ha). Identified land area is not an agricultural land but part of land already designated/recorded as Industrial Land under APSEZ and presently undeveloped. Remaining part of the above land is reserve forest land (253 acres (102.38 ha)), which has been applied for forest clearance.
2.2	Water (expected source & competing users) unit: KLD	Yes	Total 32,800 KLD desalinated water will be sourced from APSEZ Ltd.
2.3	Minerals (MT)	Yes	Total Copper Concentrate consumption for Copper plant is about 32 LTPA and will be imported from Chile/ Brazil/ Canada/ Australia, etc. and also from domestic market as available. Total Rock Phosphate consumption for Phosphoric Acid Plant is about 17.5 LTPA and will be imported from Morocco/ Jordan/ Egypt/ Australia, etc. and also from domestic market as available.
2.4	Construction material – stone, aggregates, sand / soil (expected source – MT)	Yes	Construction material such as sand, steel, aggregates, etc. will be used. However, the quantification of these materials will be done during detailed engineering stage. These materials will be sourced from local areas.
2.5	Forests and timber (source – MT)	No	Not envisaged
2.6	Energy including electricity and fuels (source, competing users) Unit: fuel (MT),energy (MW)	Yes	Construction phase: The construction power need of around 20 MW would be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd. Operational phase: The estimated power demand for the Copper Smelter plant is 300 MW. Out of this, 40 MW will be generated from internal process steam by heat recovery. Whereas, the remaining 260 MW power will be sourced from APSEZ Ltd. through M/s. Mundra Utility Pvt Ltd.
2.7	Any other natural resources (use appropriate standard units)	Yes	Silica Sand – 320,000 TPA Quartz – 144,000 TPA Limestone – 80,000 TPA

3 Use, storage, transport, handling or production of substances or materials, which could be harmful to human health or the environment or raise concerns about actual or perceived risks to human health

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate

			quantities/rates, wherever possible) with source of information data
3.1	Use of substances or materials, which are hazardous (as per MSIHC rules) to human health or the environment (flora, fauna, and water supplies	Yes	A detailed risk assessment will be done for the hazardous installations as per applicable Acts and Rules and Emergency plan will be drawn up.
3.2	Changes in occurrence of disease or affect disease vectors (e.g. Insect or water borne diseases)	No	Not envisaged
3.3	Affect the welfare of people e.g. by changing living conditions?	Yes	Approximately 3000 persons will be employed during construction phase and approx. 2000 people will be employed during operation phase and it would generate employment opportunities for local people and indirect employment also.
3.4	Vulnerable groups of people who could be affected by the project e.g. hospital patients, children, the elderly etc.	No	Not envisaged
3.5	Any other causes	No	Not envisaged

4 Production of solid wastes during construction or operation or decommissioning (MT/month)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
4.1	Spoil, overburden or mine wastes	No	
4.2	Municipal waste (domestic and or commercial wastes)	Yes	Canteen waste will be vermi-composted and used as manure for green belt development. Other municipal waste, if any, will be properly collected and disposed off as per the provision of Municipal Waste Rules.
4.3	Hazardous wastes (as per Hazardous Waste Management Rules)	Yes	The hazardous waste such as spent oil, batteries etc. will be generated which will be disposed as per HW rule. Sludge from ETP will be disposed as per Hazardous waste management rule. Details are mentioned in the PFR Report
4.4	Other industrial process wastes	Yes	Approx. average 5,500 TPD Copper Slag (Iron Silicate/ Ferro Sand) from Copper Smelting Process will be generated. Approx. average 7,000 TPD of Phospho Gypsum from Phosphoric Acid Plant will be generated. The Copper Slag (Iron Silicate/ Ferro Sand) will be utilized in Road/ Embankment Making, Land development, Cement Manufacturing, Shot Blasting, etc. & Phospho Gypsum will be used largely in Cement Manufacturing and as fertilizer.
4.5	Surplus product	Yes	Covered in Pre-feasibility report
4.6	Sewage sludge or other sludge from effluent treatment	Yes	Sewage sludge will be used as manure and Sludge from ETP will be disposed as per Hazardous Waste Management Rules.
4.7	Construction or demolition wastes	Yes	All the construction waste will be re-used for filling up in low lying areas on which soil cover will be given and will be used for as filler materials in landscaped areas.
4.8	Redundant machinery or equipment	Yes	For each equipment there would be always redundant machinery or equipments to cater during the Break-down/Planned maintenance

1366

4.9	Contaminated soils or other materials	No	Not envisaged
4.10	Agricultural wastes	No	Not envisaged
4.11	Other solid wastes	No	Not envisaged

5 Release of pollutants or any hazardous, toxic or noxious substances to air(Kg/hr)

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
5.1	Emissions from combustion of fossil fuels from stationary or mobile sources	Yes	Exhaust emissions from vehicles and equipment deployed during the construction and operational phases result in marginal emissions of SO2, NOX and CO.
5.2	Emissions from production processes	Yes	The emissions will be reduced with the latest environmental technology and will be well within the permissive levels, as: Sulphur Dioxide (SO2): Wet Scrubbers and dispersed through adequate stack height. Hydrogen Fluoride (HF): Scrubbing and dispersed through adequate stack height. Particulate Matter: Bag Filters, ESP, Wet Scrubbers and Cyclones.
5.3	Emissions from materials handling including storage or transport	Yes	Copper concentrate and Rock phosphate will be transported through closed conveyor system. Bag filters will be installed as required. Other raw material and chemicals required for the production processes will be transported with covered truck to ensure that no dust is generated during transportation.
5.4	Emissions from construction activities including plant and equipment	Yes	Fugitive dust is envisaged from transportation of sand, soil etc. during construction activity. These will be transported with covered truck to ensure that no dust is generated during transportation.
5.5	Dust or odours from handling of materials including construction materials, sewage and waste	Yes	Please refer S. No. 5.4. There will be no odour generation substances.
5.6	Emissions from incineration of waste	No	Not envisaged
5.7	Emissions from burning of waste in open air (e.g. slash materials, construction debris)	No	Not envisaged
5.8	Emissions from any other sources	No	Not envisaged

6 Generation of Noise and Vibration, and Emissions of Light and Heat:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
6.1	From operation of equipment e.g. engines, ventilation plant, crushers	Yes	All the equipment would be designed on enclosure type so that noise level will be restricted within the permissible limit of exposure.
6.2	From industrial or similar processes	Yes	The other sources of noise will be large rotating machines (e.g., compressors, turbines, pumps, electric motors, air coolers, and fired heaters). But regular maintenance of the equipment will help in reducing

			these noise levels. Acoustic enclosures & anti-vibration pads will be provided. Necessary PPEs will be provided to employees. The green belt proposed at the periphery of the plant. General recommendations for noise management are provided in the General EHS Guidelines.
6.3	From construction or demolition	Yes	During construction stage, the noise level would be kept within the permissible limit.
6.4	From blasting or piling	Yes	Blasting is not envisaged. Piling work will be carried out for different foundation requirements. Sufficient protection to workers will be provided. Vibrations are expected during initial construction stage.
6.5	From construction or operational traffic	Yes	The noise levels from traffic will be maintained well within norms specified by CPCB / GPCB. Minor noise will be generated during the construction phase.
6.6	From lighting or cooling systems	No	Not envisaged
6.7	From any other sources	No	Not envisaged

7 Risks of contamination of land or water from releases of pollutants into the ground or into sewers, surface waters, groundwater, coastal waters or the sea:

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
7.1	From handling, storage, use or spillage of hazardous materials	Yes	Minor spills/leakage of liquids occurs on rare occasions, typically during normal maintenance activities. Appropriate system available to route the spills/leakage liquids for treatment. No contamination of land or water because of appropriate flooring.
7.2	From discharge of sewage or other effluents to water or the land (expected mode and place of discharge)	Yes	Treated wastewater from STP and ETP will be reused for Horticulture/Gardening. ETP sludge will be sent to authorized disposal facility.
7.3	By deposition of pollutants emitted to air into the land or into water	No	Not envisaged
7.4	From any other sources	No	Not envisaged
7.5	Is there a risk of long term build up of pollutants in the environment from these sources?	No	Not envisaged

8 Risk of accidents during construction or operation of the Project, which could affect human health or the environment

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
8.1	From explosions, spillages, fires etc from storage, handling, use or production of hazardous substances	Yes	Petroleum Products (e.g. Furnace Oil, Diesel & LPG) and Met Coke & Pet Coke would be stored in plant Battery Limit. Appropriate fire-fighting arrangement would be set up on the site. No other hazardous substances are envisaged to be used including use of explosives in the Copper Smelter Plant projects. Proper approval and design of storage &handling systems as

1581

			per "Indian Explosive Act" would be taken. Risk assessment study will be carried out.
8.2	From any other causes	No	Not envisaged
8.3	Could the project be affected by natural disasters causing environmental damage (e.g. floods, earthquakes, landslides, cloudburst etc)?	Yes	Earthquakes and floods can occur. Earthquake risks: The project site falls in seismic zone-V as per IS 1893 (Part-I): 2002. The plant facility will be designed as per the BIS requirements for earth quake resistant. Flood risk: Chances of occurrence of flood is minimal due to Evacuation of floodwater through natural drainage and drainage system, as the terrain in the study area is flatter with gentle slope towards SW direction.

9 Factors which should be considered (such as consequential development) which could lead to environmental effects or the potential for cumulative impacts with other existing or planned activities in the locality

S.No	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
9.1	Lead to development of supporting utilities, ancillary development or development stimulated by the project which could have impact on the environment e.g.: • Supporting infrastructure (roads, power supply,waste or waste water treatment, etc.) • housing development • extractive industries • supply industries • Other	Yes	The proposed plant will result in considerable growth of service sector, which will lead to supporting and ancillary development in the region. There will be a possibility of extractive and supply industries in the region.
9.2	Lead to after-use of the site, which could have an impact on the environment	No	Not envisaged
9.3	Set a precedent for later developments	Yes	Ancillary industries and extractive industries may develop as a consequence.
9.4	Have cumulative effects due to proximity to other existing or planned projects with similar effects	Yes	Existing Coastal Gujarat Power Ltd. (CGPL) (5x800 MW), Adani Power Limited (4620 MW) and proposed Copper Smelter plant will have cumulative effect. Cumulative impact assessment will be included in the detailed EIA study.

(III) Environmental Sensitivity

S.No	Areas	Name/Identity	Aerial distance (within 15km.) Proposed project location boundary
1	Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or other related value	No	Nil
2	Areas which are important or sensitive for ecological reasons - Wetlands, watercourses or other water bodies, coastal zone, biospheres, mountains, forests	Yes	Reserve Forests: Dandedri RF (within project area) Mundra Mangrove RF (south of project area) Navinal RF (0.5 km, E) Mundra Dhoa RF (0.7 km, SE) Water Bodies Kotri creek (0.5 km, S) Kharl Nadi (1.9 km, W) Gulf of Kachchh (3.9

			km, S) Nagavanti Nadi (4.7 km, E) Phot Nadi (8.7 km, ENE)
3	Areas used by protected, important or sensitive species of flora or fauna for breeding, nesting, foraging, resting, over wintering, migration	Yes	Mundra Mangrove RF (south of project area)
4	Inland, coastal, marine or underground waters	Yes	Gulf of Kachchh (3.9 km, S) Kotri creek (0.5 km, S)
5	State, National boundaries	No	Nil
6	Routes or facilities used by the public for access to recreation or other tourist, pilgrim areas	No	Nil
7	Defence installations	No	Nil
8	Densely populated or built-up area	Yes	Mundra (22 km)
9	Areas occupied by sensitive man-made land uses (hospitals, schools, places of worship, community facilities)	Yes	Hospitals, schools, places of worship and other general community facilities exist in the study area.
10	Areas containing important, high quality or scarce resources.(ground water resources,surface resources,forestry,agriculture,fisheries,tourism,minerals)	Yes	Kotri creek (0.5 km, S) Khari Nadi (1.9 km, W) Gulf of Kachchh (3.9 km, S) Nagavanti Nadi (4.7 km, E) Phot Nadi (8.7 km, ENE)
11	Areas already subjected to pollution or environmental damage.(those where existing legal environmental standards are exceeded)	No	Nil
12	Areas susceptible to natural hazard which could cause the project to present environmental problems (earthquakes, subsidence, landslides, erosion, flooding or extreme or adverse climatic conditions) similar effects	Yes	The project area falls under seismic zone-V as per IS: 1893 (Part-1): 2002.

(IV) Proposed Terms of Reference for EIA studies

1	**Uploaded Proposed TOR File**	Annexure-TOR file
2	**Uploaded scanned copy of covering letter**	Annexure-scanned copy of covering letter
3	**Uploaded Pre-Feasibility report(PFR)**	Annexure-PFR
4	**Uploaded additional attachments(only single pdf file)**	NIL

(V) Undertaking

I hereby give undertaking that the data and information given in the application and enclosures are true to be best of my knowledge and belief and I am aware that if any part of the data and information found to be false or misleading at any stage, the project will be rejected and clearance given, if any to the project will be revoked at our risk and cost.

V. (i)	**Name of Applicant**	Santosh
	Designation	Head Env and Authorised Signatory for AEL
	Name of Company (Applicant Name should not be given here)	ADANI ENTERPRISES LTD
	Address	Adani House, Near Mithakali Circle, Navrangpura, Ahmedabad 380009, Gujarat

ANNEXURE-I
TOR LETTER AND ITS COMPLIANCE

Sr. No.	Terms of Reference(TOR)	Compliance
	green field projects)	
	xi. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.	381 acres (154.18 ha) of identified land for this project belongs to the APSEZ (an Adani Group Company). Balance 253 acres is forest land for which State Govt. has recommended for Forest Clearance (FC) and is at Central Government file number is 8-04/2016-FC.
	xii. R&R details in respect of land in line with state Government policy	There is no Resettlement and Rehabilitation involved in the project.
5	**Forest and wildlife related issues (if applicable)**	
	i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable).	Forest land of 253 acres (102.38 ha) is also involved which will be converted for Industrial use. State Govt. has recommended for Forest Clearance (FC) and is at Central Government, file number is 8-04/2016-FC.
	ii. Land use map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha).	Land use map based on 5 m resolution showing the forest land is shown in Figure-3.3.2 of Chapter-3.
	iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted	State Govt. has recommended for Forest Clearance (FC) and is at Central Government file number is 8-04/2016-FC.
	iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon.	There are no National Parks, Sanctuaries, Biosphere Reserves within 10 km radius study area. Toposheet showing the 10 km radius study area map on 1:50,000 scale is shown in Figure-1.2 of Chapter-1
	v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area.	As per the primary data collected and also from the secondary data sources, Peacock belongs to Sch-I as per Wildlife Protection Act, 1972. Conservation measures are provided in Section-4.2.7.3 of Chapter-4.
	vi. Copy of application submitted for clearance under the Wildlife (Protection) Act,1972, to the Standing Committee of the National Board for Wildlife	Not applicable
6.	**Environmental Status**	
	i. Determination of atmospheric	Report is enclosed as Annexure-VIII.

Annex-5 1584

No. J-11015/200/2008-IA.II(M)
Government of India
Ministry of Environment & Forests

Paryavaran Bhavan,
C.G.O. Complex, Lodi Road,
New Delhi-110003.
Telefax: 24362434

Dated the 31st March, 2011

Office Memorandum

Sub: Consideration of projects for grant of environmental clearance under EIA Notification, 2006 which involve forestland – Procedure to be followed – Regarding.

Ref: Office Memorandum no. J-11013/41/2006-IA.II(I) dated 2nd December, 2009 regarding Procedure for consideration of proposals for grant of environmental clearance under EIA Notification, 2006, which involve forestland and or wildlife habitat.

The issue regarding consideration of proposals especially mining project for grant of environmental clearance under EIA Notification, 2006, which also involve diversion of forestland has been under consideration for quite some time and circulars / guidelines have been issued in the past in this regard from time to time. In this regard, reference is also invited to para 8 (v) of the EIA Notification, 2006 reads as follows:

"Clearances from other regulatory bodies or authorities shall not be required prior to receipt of applications for prior environmental clearance of projects or activities, or screening, or scoping, or appraisal, or decision by the regulatory authority concerned, unless any of these is sequentially dependent on such clearance either due to a requirement of law, or for necessary technical reasons."

According to the above provision, the environmental clearance under EIA Notification, 2006 is independent of other clearances and submission of clearances under other relevant Acts and Rules as may be applicable to a project is not a pre-requisite for obtaining environmental clearance except in specific cases where it is sequentially dependent on such clearance either due to requirement of law or for necessary technical reason. This aspect was earlier discussed and deliberated and the office memorandum dated 2nd December, 2009 referred to above was an outcome of the same.

However, in view of the complexity of the issues involved, the matter has been considered further in the Ministry and in supersession of the earlier instructions, it has now been decided to adopt the following procedure for consideration of such projects.

I. Projects in Pipeline:

(A) Projects received for TORs and yet to be considered by EAC:

In case of the proposals which have been received for prescribing TORs and involve forestland, in part or in full, and are yet to be considered by the EAC, during consideration of such proposals, clarifications will be obtained from the project proponent regarding feasibility of undertaking the project only in non forestland. In case, the project proponent confirms to undertake the project in non forest area only, the proponent may be advised to submit the revised proposal by deleting the forestland involved in the project. In case, it is not possible to undertake the project without involving diversion of forestland, the project proponent will be asked to first apply for stage-I forestry clearance for the forestland involved in the project and thereafter submit the proposal for obtaining terms of reference as per the procedure prescribed under EIA Notification, 2006.

(B) Projects for which TORs have already been prescribed but the proposal for environmental clearance is yet to be submitted:

In case of the proposals, which involve forestland, in part or in full, and for which TORS have already been prescribed, the project proponents are advised to ensure that the requisite stage-I forestry clearance has been granted and its copy is submitted along with their application / proposal for environment clearance. Alternatively, the proponent should delete from their land requirement, the forestland involved in the project and the proposal so amended without any forestland may be submitted for appraisal by the EAC.

In case of projects where forest diversion (Stage I Clearance) has been approved for part of the total forestland involved in the project, the proposal will be considered only for the land for which forest diversion has been approved and the non forestland, if any. For the purpose, the onus of demonstrating that the project activities will be limited to that much area only would lie with the project proponent and necessary supporting documents will be submitted in this regard.

(C) Projects submitted for environmental clearance based on the TORs prescribed by EAC:

The proposals already submitted for environmental clearance will be appraised by the EAC on their merit and in case of involvement of forestland, the proponent will be asked either to delete the forestland and submit the revised proposal or approach the EAC after the stage-I forestry clearance for

1586

the forestland involved in the project has been granted, till which time the proposal will stand delisted.

In case of projects for which diversion of forestland has been granted for part of the forestland, the proposal will be appraised taking into account that much of land only (land for which FC granted + Non forestland) for the project activities and the proponent should demonstrate the viability of the project with requisite supporting documents.

(D) Projects already considered by EAC and recommended for grant of environmental clearance:

In accordance with the recommendations of EAC, such projects will be processed on file for obtaining approval of the MEF for grant of environment clearance. After MEF has approved, a communication will be sent to the project proponent informing that the Competent Authority has approved the project; however, the formal environmental clearance will be issued only after the stage-I forestry clearance for the forestland involved in the project has been obtained and submitted. For the purpose, a maximum time limit of one year will be provided to the proponent during which time the proposal will be kept in abeyance. In case, the formal forestry clearance is not submitted within this time frame, the proposal will stand rejected and the process for obtaining environmental clearance will have to be initiated, de-novo, as per the procedure prescribed under EIA Notification, 2006.

II. Expansion Projects:

(i) Mining Projects involving enhancement of production by increasing the depth and or number of shifts, without any increase in lease area and having already obtained the forestry clearance for the forestland involved in the mine lease, shall be considered on merit and decision taken.

(ii) The Expansion projects involving horizontal spread with additional land requirement will be dealt with as green field projects, if additional forestland is to be diverted.

III. Greenfield Projects:

(i) If any green field project does not envisage any diversion of forest land, it would be considered as per the provisions of EIA Notification, 2006.

(iii) In case of any green field project, which involves diversion of forest land, the project proponents are advised to re-examine the requirement of forestland and submit the proposal without forestland for consideration of the EAC. Otherwise, the proponent should submit the proposal for TORs under the EIA Notification, 2006 only after

applying the stage-I forestry clearance for the forestland involved in the project.

(iii) All cases of grant / renewal of EC for any abandoned mine or sick project under revival etc. would be considered as a green field project for appraisal under EIA Notification, 2006 and the procedure mentioned above will be followed.

This issues with the approval of the Competent Authority.

To,

K. C. Mistry Sir
Member Secretary,
Gujarat Pollution Control Board
Environment Department – Gandhinagar

Subject: Regarding canceling of the public hearing on Adani Enterprise Limited, setting up of Greenfield Copper Refinery Plant.

This is to inform regarding the above mentioned subject that as per the information gathered from the website of Gujarat Pollution Control Board, a public hearing for the Greenfield Copper Refinery Plant, which is being established by Adani Enterprise Limited on 29/04/2017. Some facts regarding the E.I.A. drafted by the company are as follows.

Respected Sir,

A study about the Greenfield Copper Refinery Plant of Adani Enterprise Limited was done only for the three months from October 2016 to December 2016 by M/s Vimta Lab Limited, Hyderabad, and on the basis of it the E.I.A. has been prepared.

There are mainly three seasons in a year and in every season the effect of the industrial activity on the environment, water level, and geography are different. But here the E.I.A. was prepared after the three months study only. Thus, this study of the environmental effects is incomplete/insufficient and faulty.

There are already many industrial projects in this region. Moreover, these projects are close to the coastline so there are possibilities that they can have effects on the coastal environment also. There are mangroves, mudflat, rivers, Navinal Reserve Forest and Siracha forest area in this region. Thus, when a new project is coming up in such an environmentally sensitive region, this three-month study is insufficient. It seems that by completing the study on the future effects of this project, they have tried to hide the facts of the future effects.

In the point no.1 of the official report it has been mentioned that 256.8 hectare land is required for this project. Out of which 154.18 hectare of the land is owned by the APSEZ (Adani Group) and remaining 102.38 hectare is forest land.

In the point no. 2.2 of the EIA report, it has been mentioned that the state government has recommended for the forest land, but this land has not been allotted to the company therefore it is clear that the procedure for obtaining the environmental clearance for this land is being done with incomplete information.

Taking the above mentioned matters in consideration, you are requested that unless and until the requirements are fulfilled, this E.I.A. should be considered incomplete and faulty and the public hearing to be held on 29/04/2017 should be cancelled. "The development that destroys the environment is the sign of the destruction not the development."

Expecting your cooperation,

Sanjay Bapat

શ્રીમાન કલેક્ટર સાહેબ

જય ભારત સાથે ઉપરોક્ત વિષય સાથે જણાવવું કે મેસર્સ અદાણી એંટરપ્રાઇઝીસ લિમિટેડ(A E L) ના દ્વારા મુંદ્રા તાલુકાનાં સિરાચા અને નવીનાળ ગામની 634.12 એકર જમીનમાં ગ્રીનફિલ્ડ કોપર રિફાઇનરી સ્થાપિત કરવાના છે અને આ પ્રસ્થાવિત પ્રોજેકટની પર્યાવરણની મંજૂરી માટે આગામી 29 એપ્રિલના રોજ ટૂંડા મુકામે લોકસુનવણી રાખવામા આવેલ છે.પ્રસ્થાવિત અદાણી ના કોપર રિફાઇનરી પ્રોજેકટ માટે જે E IA રિપોર્ટ બનાવવામાં આવેલ છે અને તેમાં જે પ્રસ્થાવિત પ્રોજેકટ માટે સ્થડ બતાવવામાં આવેલ છે તે અતિ વિવાદિત છે અને આ આખોય વિસ્તાર C R Z એરિયા મા આવે છે તેમજ તેના માટે ભારત સરકાર પાસેથી C R Z ની મજૂરી લેવામાં આવેલ નથી આથી આ કોપર પ્રોજેકટ માટેની લોકસુનવણી રદ કરવામાં આવે.

માનનીય સાહેબ ઉપરોકત સદર્ભ ન.1 સાથે જણાવવાનું કે અમે વર્ષ 2011 મા અદાણી પોર્ટ અને અદાણી પાવર ના દ્વારા જે મુદ્રા તાલુકાનાં દરિયાઈ અને આ વિસ્તાર મા જે પર્યાવરણના કાયદાઓનું ભંગ કરવામાં આવે છે તેની વિરોધ એક જાહેર હિતની અરજી WPPIL-12/2011 નામદાર ગુજરાત હાઇકોર્ટમા કરવામાં આવેલ હતી અને તેમાં અદાણી કંપનીના દ્વારા જે પર્યાવરણ અને માનવીય નિયમોનું ભંગ થાય છે તે અટકાવવામાં આવે તેવી વિનતિ કરવામાં આવેલ હતી અને જેમાં નામદાર હાઇકોર્ટ અદાણી ને મુદ્રા તાલુકા ના દરિયાઈ વિસ્તારમાં આવેલ મેંગ્રો ના જંગલ નું જે નાશ કરવામાં આવતું હતું તે બધ કરવાનું હુકમ કરવામાં આવેલ હતું. ત્યારબાદ પણ અદાણીના દ્વારા આ હુકમનું સતત ઉલ્લગન કરવામાં આવ્યું જેની સામે અમે કોર્ટના હુકમનો અનાદર થાય છે તે બાબતે C A N- 9124/2011 ના નામે એક નવી અરજી દાખલ કરવામાં આવી જેમાં નામદાર હાઇકોર્ટ અનેક પ્રકારના હુક્મો અદાણી ની સામે કર્યા અને ત્રણ સમિતિઓ બનાવીને આ સમગ્ર હકીકતોની તપાસ કરવામાં આવી જેમાં નામદાર હાઇકોર્ટ તારીખ 05.11.2015 ના તેમજ 01.04.2016 ના રોજ અમારી અરજી ઉપર જેના ન.C A 9124/2011 મા ઓર્ડર કરીને એક નિસણાત સમિતિ બનાવવામાં આવેલ હતી જેમાં આ સમિતિમાં ગોવા ના પર્યાવરણવિદ ડો.ક્લોદ અલવરીશ અને કલકતાના ડો.સુબ્રોતો માઇતી નો સમાવેશ કરવામાં આવેલ હતો અને આ સમિતિના T O R પણ નામદાર ગુજરાત હાઇકોર્ટ ના દ્વારા જ નિરધારીત કરવામાં આવેલ હતા જેમાં આખાય અદાણી S E Z નું સ્થડ નિરીક્ષણ કરીને અદાણીના પર્યાવરણ ના ઉલ્લગનનું વિસ્તૃત રિપોર્ટ સોપવાનું કહેવામા આવ્યું આ સમિતિ બે વખત આ વિસ્તારની મુલાકાત લઈને પોતાનો રિપોર્ટ તૈયાર કર્યો અને વિસ્તૃત રિપોર્ટ નામદાર ગુજરાત હાઇકોર્ટઆમા 08.06.2016 ના રોજ રજૂ

1602

આજ જમીન ઉપર સમગ્રલક્ષી રિપોર્ટો નામદાર ગુજરાત હાઇકોર્ટના વિચારધીન છે તે બધી જ હકીકતો અદાણી કંપનીના દ્વારા છુપાવવામા આવેલ છે અને ના તો આ હકીકતો MOEF&CC ને જણાવેલ છે કે ના તો EAC ને જણાવેલ છે જે અતિ ગભીર બાબત છે જેથી આપ આ લોકસુનવણી ના ચેરમેન છો અને જિલ્લાના ડિસ્ટ્રિક્ટ મેજિસ્ટ્રેટ છો એ હોદાની રૂએ અદાણીની આ લોકસુનવણી તાત્કાલિક ધોરણે રદ કરવામાં આવે એવિ અરજ છે અને અમે આપને આ સમગ્ર હકીકતોથી વાકેફ કરીએ છીએ. આમ આ બધીજ હકીકતો નામદાર ગુજરાત હાઇકોર્ટ ના વિચારધીન છે ત્યારે એજ જમીન ઉપર કોપર રિફનરી માટે લોકસુનવણી થાય તે અતિ ગભીર બાબત તો છે જ પણ કાયદાના પણ વિરુદ્ધ અને નામદાર ગુજરાત હાઇકોર્ટ ના કામમાં દખલ સમાન લેખાસે.જેથી આ લોકસુનવણી રદ કરવામાં આવે એવિ નમ્ર અરજ છે.

માનનીયમા સાહેબ ઉપરોકત સદર્ભ ન.૩ સાથે જણાવવાનું કે અમે વર્ષ 2011 મા અદાણી પોર્ટ અને અદાણી પાવર ના દ્વારા જે મુદ્રા તાલુકાનાં દરિયાઈ અને આ વિસ્તાર મા જે પર્યાવરણના કાયદાઓનું ભંગ થાય છે તેની સામે ભારત સરકારના વન અને પર્યાવરણ માત્રાલય મા એક અરજી કરેલ હતી અને તેમાં અદાણી પોર્ટ અને અદાણી પાવરને મુદ્રા વિસ્તારમા ઓધ્યોગિક કામગીરી કરવા માટે વિસ્તૃત સરતો સાથે પરયાવર્ણની મજૂરી આપવામાં આવેલ છે પરંતુ મુન્દ્રામા અદાણી ના દ્વારા મોટા પ્રમાણમા પરયાવર્ણની સરતોનું ભંગ કરવામાં આવતું હોવાથી અમે ભારત સરકાર પાસે રજૂઆત કરેલ હતી અને અદાણીના આ પ્રિજેક્ટ થી થતી હાનિ અટકવવામાં આવે તેવી વિનતિ કરવામાં આવેલ હતી. ત્યાર બાદ ભારત સરકારના દ્વારા જાણીતા પરયાવર્ણવિદ્ધ સુનિતા નારાયણ ના નેતૃત્વમાં એક પાંચ સદ્શ્યોની સમિતિ અદાણીની તપાશ કરવા માટે બનાવવામાં આવી અને આ સમિતિ પોતાનું રિપોર્ટ ભારત સરકારને ૧૮ એપ્રિલ ૨૦૧૩ ના રોજ સોપેલ છે અને અદાણીના દ્વારા મોટા પ્રમાણમા થયેલ નિયમો અને સરતોનું ઉલ્લગન થયેલ છે તેવું પોતાની રિપોર્ટ મા જણાવેલ છે અને અદાણી નું નોર્થ પોર્ટ ની પર્યાવરણ નું લાઈસ્ન્શ રદ કરવાની તેમજ ૨૦૦ કરોડ નું દડ કરવાની અને અનેક પ્રકારની વિસ્તૃત ભલામણો કરવામાં આવેલ છે તેમજ મુદ્રા મા હવે જે કોઈપણ પ્રિજેક્ટ ને મજૂરી આપતા પહેલા આ વિસ્તારની કેરિંગ કેપેસિટી નું અધ્યાન કરવું એ અતિ જરૂરી છે અને આ અધ્યન વગર કોઈપણ પ્રોજેક્ટને મંજૂર કરવામાં આવે નહીં પણ અહી આવા કોઈપણ જાતના અધ્યાન વગર આ કોપર રિફાઈનરીની લોકસુનવણી રાખવામા આવેલ છે જે સમિતિ ની ભલામણો વિરુદ્ધ છે આથી આ લોક સુનવણી રદ

કર્યો. સમિતિ પોતાના રિપોર્ટ માં અદાણી મુન્દ્રા ના દરિયાઈ વિસ્તાર ઉપર જે પર્યાવરણના નિયમોનું ભંગ કર્યો છે એવું સાબિત કર્યો છે અને અદાણીને તેના બદલામાં 200 હેક્ટર જેટલા વિસ્તારમાં મેંગ્રોનું વાવેતર કરવાનું જણાવ્યુ છે તેમજ ગુજરાત સરકારના દ્વારા કપનીને જે 6000 એકર જે જમીન આપવામાં આવેલ છે તે પાછી સરકાર લાઈલે તેમજ આ જમીન આપવામાં નિયમોનું ખુબજ મોટા પાયા ઉપર ઉલ્લગન થયેલ છે જેથી આ બધીજ જમીનો પાછી લઈને સરકાર ખાતે તેમજ જગલ ખાતાને પાછી આપવામાં આવે એવિ ભલામણ કરવામાં આવેલ છે. (રિપોર્ટ આ સાથે સામેલ છે)

કલેકટર સાહેબ નામદાર હાઇકોર્ટને આ સમિતિએ પોતાનું રિપોર્ટ સોપેલ છે તેમાં આ સમિતિ જે જમીન ખાલી કરવાનું કહ્યું છે તેમાં જ અદાણી કંપની પોતાનું કોપર રિફાઇનરી પ્રોજેકટ સ્થાપિત કરવાનું E IA મા જણાવેલ છે તેમજ આ સમિતિની સંમગ્રહ ભલામણો અને આ રિપોર્ટ નામદાર હાઇકોર્ટ ના વિચારધીન છે (સબજયુડિશ) છે ત્યારે આવી જનસુનવણી ગેરકાયદેસર અને ગુજરાત હાઈકોર્ટની કામગીરી મા દખલ સમાન છે જેથી આ સમગ્ર કારયવાહી તત્કાલિક બંધ થાય તેમજ 29.4.2017 ની પર્યાવરણની મજૂરી માટે ની જન સુનવણી રદ કરવામાં આવે. તેમજ જો આ સુનવણી તેના નિર્ધારિત સમય અને તારીખ ઉપર જ ચાલુ કરવામાં આવસે તો આ સમગ્ર બાબત નામદાર ગુજરાત હાઇકોર્ટ નો અનાદર હસે તેની ગભીર નોધ લેવામાં આવે એવિ અમારી આપને વિનતિ છે.

માનનીયમા સાહેબ ઉપરોકત સદર્ભ ન.૨ સાથે જણાવવાનું કે અમે વર્ષ 2011 મા અદાણી પોર્ટ અને અદાણી પાવર ના દ્વારા જે મુન્દ્રા તાલુકાનાં દરિયાઈ અને આ વિસ્તાર મા જે પર્યાવરણના કાયદાઓનું ભંગ નામદાર ગુજરાત હાઇકોર્ટ તારીખ ૦૯.૦૭.૨૦૧૫ ના રોજ નામદાર પ્રિન્સિપલ ડિસ્ટ્રિક્ટ જજ સાહેબને આખેય અદાણી પોર્ટ અને એસઇઝેડ ની વિડીયો ગ્રાફી અને ફોટોગ્રાફી કરીને હકીકત લક્ષી રિપોર્ટ નામદાર હાઇકોર્ટને સોપવા હુકમ કરેલ તેમજ નામદાર પ્રિન્સિપલ ડિસ્ટ્રિક્ટ જજ સાહેબ તારીખ ૨૪.૭.૨૦૧૫ ના રોજ પોતાની રિપોર્ટ અને વિડિઓગ્રાફી/ફોટોગ્રાફી સાથેની સીડી સીલબંધ કવરમાં નામદાર ગુજરાત હાઇકોર્ટ ને સોપેલ છેઅને નામદાર પ્રિન્સિપલ જજ સાહેબ ની રોપોર્ટ મા પણ અદાણીએ નિયમોનું મોટા પ્રમાણમા ઉલ્લગન કર્યું છે તેવું સાબિત કરેલ છે તેમજ જે જમીન ઉપર અદાણી પોતાનું કોપર રિફાઇનરી પ્લાનટ સ્થાપિત કરવા માગે છે તે જમીન ને પણ નામદાર પ્રિન્સિપલ જજ સાહેબ ફોટોગ્રાફી અને વિડીયોગ્રાફી સાથે વિવાદિત છે તેવું જણાવેલ છે તેમજ આ સમગ્ર રિપોર્ટ પણ નામદાર હાઇકોર્ટ ના વિચારધીન (અંદર સબજ્યુડિશ) છે ત્યારે

1603

કરવામાં આવે આવી અપક્ષી ને નમ્ર અરજ છે અને વિસાળ લોક હિત માટે આ લોક સુનવણી રદ થાય તે અતિ જરૂરી છે.

માનનીયમા સાહેબ ઉપરોકત સદર્ભ ન.4 સાથે જણાવવાનું કે ભારત સરકારના વન અને પાયરવર્ણ મંત્રાલય ના દ્વારા .Office Memoranum No J-11013/25/2014-IA.I Government of india Ministry of Environment &Forest Dated-11the August ,2014 ના રોજ મંત્રાલય ઇઆઇએ માટે સૂચનો કરેલ છે અને કંપની એક્ટ 2013 મુજબ ઇઆઇએ રિપોર્ટ મા કોરપ્રેટ સોસિયલ રિસ્પોન્સિબ્લિટી નું ખર્ચ અને ફંડ ના આયોજન નું વિસ્તૃત અહેવાલ હોવું જરૂરી છે પરંતુ અહી અદાણી પોતાના ઇઆઇએ અહેવાલ અહેવાલ મા આવી કોઈ માહિતી આપેલ નથી જે કંપની એક્ટ 2013 અને ભારત સરકારના 11 ઓગ્સ્ટ 2014 ના પરિપત્ર નું ભંગ છે અને EIA Notification અને Section 135 of the Companay Act 2013 deals with corporet social responsibility and Schudule-VII of the Act lists out the activities which may be included by companies in their CSR Policies. And this is also violation of Corporate Social Responsibility Policy Rules, 2014. આમ અદાણી પોતાના અહેવાલ માં હકીકતો છુપાવેલ છે જે હકીકતોનું ઉલ્લેખ કરવું એ કાયદાની રીતે ફરજિયા છે અદાણી કંપની આ બધીજ હકીકતો થી માહિતીગાર હોવા છતાય પણ તમામ માહિતી છુપાવેલ છે આમ કરીને અદાણી ભારત ના કાયદાનું ખુલ્લમ ખૂલા ભંગ કરેલ છે જેથી આ લોક સુનવણી રદ કરવી અતિ જરૂરી છે અને ફરી પાછા કાયદાની હકીકતો પ્રસ્થાપિત થાય તે અતિ જરૂરી છે.

માનનીય સાહેબ આ અદાણીના કોપરા રિફાઇનરી પ્રોજેકટ માટે જમીનની નિચ્ચે મુજબ આવસ્યકતા રહે છે: પ્રસ્તાવીત યોજના માટે કુલ્લ 256.58 હેક્ટર (634 એકર) જમીનની જરૂરીયાત છે જે પૈકી આ યોજના માટે 154.18 હેક્ટર (381 એકર)ની ઓળખ કરાયેલી જમીન APSEZ (અદાણી ગ્રૂપ કુંપની)ની માલિકીની છે અને તેને સ્થનિક જમીન ઉપયોગર યોજના અનુસાર ઔધ્યોગિક હેતુ માટે આગાઉથી આપવવામા આવેલી છે. ઉપરાત, 102.38 હેક્ટર (253 એકર) વન્ય જમીન પણ સાકળવામા આવેલી છે જેને ઔધ્યોગિક ઉપયોગ માટે તબદિલ કરવામાં આવસે અને . રાજ્ય સરકારે વન્ય મુંજૂરી (E C) માટે સૂચિત કરેલ છે અને તે કેન્દ્ર સરકાર પાસે છે [જેના ફાઇલ નબર છે 8-04/2016-FC]. આ યોજના માટે કોઇ જ સ્થળાતર કે પુનસવસવાટની પ્રક્રિયા સંકડાયેલ નથી. વાસ્તવિક રીતે આ લોકસુનવણી જ્યાં અને જે પ્રોજેકટ માટે થવાની છે તેની પાસે હજી સૂનધિ જંગલ ખાતા નિ જમીન મડેલ નથી અને જે 253 એકર જંગલ ખાતાની જમીન માટે અદાણી માગણી કરેલ છે તે તેમને મડેલ નથી અને આ જમીન વન વુભાગ 1980 બાદ પોતાના હસ્તગત કરી હતી જેનો ઉદેશ્ય તેમાં વૃક્ષ્હો નું વાવેતર કરીને ગ્રીન બેલ્ટ ઊભો કરવાનું અને જંગલનો વિકાશ કરવાનું તેમજ આ પ્રકારની કામગરીથી રણને આગડ વધતું અટકાવીને ક્ષાર નું પ્રમાણ ઘટાડવું ,વન્ય પ્રાણિઓને રક્ષણ,આશ્રય અને ચરિયાણ માડી રહે એવું રહેલ હતું .અને આ જગલ આખોય ઘણીબધી ઓશિધીઓ અને દેશી બાવડથી ભરપૂર છે તેમજ

1604

આજુબાજુના પર્યાવર્ણ ને સુધ રાખવામા ખૂબ જ મોટી ભૂમિકા આ જગલ નિભાવે છે. તેમજ આમ કરતાં ગુજરાત સરકાર અને અદાણી કંપની 2006 ના વનઅધિકાર કાયદાનું ભંગ કરેલ છે આ વનધિકાર કાયદામાં ગ્રામ સભાની મજૂરી જરૂરી છે તેવું પ્રસ્થપિત કરવામાં આવેલ છે તેમ છતાયા કંપનીના દ્વારા આ જગલનિ જમીન માટે ગ્રામ સભાની મજૂરી લેવામાં આવેલ નથી જે 2006 ના વન અધિકાર કાયદાનું અને નામદાર સુપ્રીમ કોર્ટ ના ઓરિશા ના વેદનતા કોપર પ્રોજેકટ માટે જે જજમેંટ આપવામાં આવેલ છે તેનું પણ ભંગ સમાન છે જેથી આવા ઉપયોગી જગલ વિસ્તાર નો નાશ કરીને અતિ પ્રદુષિત કોપર રિફાઇનરી સ્થાપિત કરવું એ અતિ નુકશાનકારક અને સ્થાનિક લોકોના હક્કો ઉપર તરાપ સમાન છે. ગુજરાત સરકાર જ્યારે અગાઉ જ અદાણી ને 14 ગામની ગોચર જમીન આપી દીધી છે જેથી આ વિસ્તારના લોકો અને પશુપાલકો પહેલાથી જ ગોચર જમીનના અભાવે તકલીફોનું સામનો કરી રહ્યા છે અને આ પશુપાલકો પોતાના પશુઓને જગલ વિસ્તારની આ જમીનોમાં ચારીને પોતાનું ગુજરાન ચલાવે છે ત્યારે અદાણી આ જમીનો પણ લઈને આ વિસ્તારના પશુપાલકો ઉપર મરણતોલ ફટકો મારવા માંગે છે આ વિસ્તાર ના લોકો મૂળ નિવાશી છે અને મૂળનિવાશી લોકોના અધિકારોનું રક્ષણ થવું જોઇએ તેમજ ભારત સરકાર પણ સાયુકત રાસ્ટ્ર સંગ ના મૂળનિવાશીઓના અધિકારોના રક્ષણ કરવામાં આવસે તે ઘોષણા પત્ર ઉપર સહી કરેલ છે અને અને સયુકત રાસ્ટ્ર સંગના મૂળનીવાશી ચાર્ટર નું અનુમોદન કરવાવાળા દેશોમાં સામેલ છે જેથી આ મૂળનીવાશી લોકો ના અધિકારોનું રક્ષણ થવું જોઈએ એ અતિ જરૂરી છે માટે આ અદાણીના કોપર રિફાઇનરી ની લોકસુનવણી રદ કરવામાં આવે એવિ નમ્ર અરજ છે.

માનનીય સાહેબ સહવિશેસ જણાવવાનું કે આ જે અદાણી કોપર રેફાઇનરી માટેની જમીન પસદકરવામાં આવેલ છે તે જમીન C R Z પૈકીની છે અને તે માટે ભારત સરકારના વન અને પર્યાવરણ માત્રાલય પાસેથી C R Z નું ક્લીરિએન્શ પણ લેવામાં આવેલ નથી અને સીરઆરઝેડ નોટિફિકેશન 2011 મુજબ આ પ્રોજેકટ સીઆરઝેડ એરિયામાં આવે છે જેથી તે માટે સીઆરઝેડ નિ મજૂરી જરૂરી હોય છે પરંતુ કંપની તે માટે કઈ પણ કર્યું નથી અને સીધેસીધું પર્યાવરણની મંજૂરી માગવામાં આવેલ છે જે નિયમો વિરુદ્ધ છે આથી આ અદાણીના કોપર રિફાઇનરી માટેની લોકસુનવણી રદ કરવામાં આવે એવિ નમ્રહ અરજ છે.

આમ ઉપરોકત બધીજ હકીકતોને ધ્યાનમાં રાખીને અદાણીના ગ્રીન્ફિલ્ડ કોપર રિફાઇનરી માટે ની લોકસુનવણી જે આગામી તારીખ 29.04.2017 ના રોજ ટૂંડા ગામ મુકામે યોજવાની જાહેરાત કરવામાં આવેલ છે તે કાયદા વિરુદ્ધ છે અને ગુજરાત હાઇકોર્ટ માં સબજ્યુડિશ મેટર છે તે વિસ્તારમાં થઈ રહેલ છે તેથી આ લોક સુનવણી રદ કરવાં આવે એવિ આપશ્રીને નમ્રહ અરજ છે

Ref. No.

Date: 29/4/2017

To,

The Collector,

Kutch- Bhuj

Subject: For Cancelling the public hearing of Proposed Greenfield Copper Refinery Project at the land of Adani Port Special Economic Zone at the villages Siracha and Navinal, Tal. Mundra, Dis. Kutch

Reference-

1. Final report of the high court's committee on Mangroves as per order dated 5.11.2015 and 01.04.2016 in CA (For Direction) No.- 9124/2011 in writ petition(PIL) No. 12/2011
2. Final report of the high courts committee headed by seating principal District Judge Bhuj Kutch dated 24.7.2015
3. Final report of the Ministries of Environment forest and claimant charge on Adani Port and SEZ (Sunita Narain Report) 2013
4. Office Memorandum No. J-11013/25/2014-IA.I Government of India Ministry of Environment & forest Dated- 11th August 2014

1607

Honourable Collector,

Jaybharat, with reference to the above with due respect it is to state that M/S Adani Enterprises Ltd. (A.E.L) is going to establish Greenfield Copper Refinery in the 634.12 Acre land of villages Siracha and Navinal of Mundra Taluka. A public hearing is being held at village Tunda on next 29th April for Environmental Clearance of the proposed project. The EIA report prepared for the proposed Refinery Project of Adani and site shown in the EIA report for the proposed project are very much disputed and the whole area is covered under CRZ and no permission is obtained from the Government of India for CRZ for the same. Therefore the public hearing for the copper project should be cancelled.

Honourable Sir, With reference to the reference cited at 1 above it is to inform you that we have filed a Public Interest Litigation in the year 2011 bearing No. WPPIL -12/2011 in the Hon. High Court Of Gujarat in protest against the violations of Environmental laws by Adani Port and Adani Power in the Sea area and this areas of Mundra Taluka. And it was requested there in to prevent violations of rules of Environment and Human rights by Adani Company and Hon. High Court was pleased to direct Adani to stop destruction of Mangrow forest situated in the sea region of Mundra Taluka , thereafter also Adani continuously violated this order , for that a new application bearing No. CAN -9124/2011 was filed for contempt of the court order in which Hon. Court issued various orders against Adani and formed three committees and all these issues were investigated and Hon.Court has formed Expert Committee on the basis of orders 05.11.2015 and 01.04.2016 on our application No. CA 9124/2011. Dr. Kalod Alvaris, Environment Expert of Goa and Dr. Subroto Maiti of Calcuttaa were included in the committee. And TOR of the committee was finalized by the High Court of Gujarat itself. In which it was directed to submit the detailed report of violations of environment by Adani after observation of the site of whole ADANI SEZ. This committee had visited this area prepared its report and submitted detailed report before Hon. Gujarat High Court on 8.06.2015.

Committee has proved in its report that Adani has violated the rules of environment on the sea areas of Mundra and it is informed to Adani to grow Mangrow in about area of 200 hector and that 6000 acre land allotted to the company may be taken back by Gujarat Government . And there are rampant violations of rule in allotting this land. So it is recommended that all these lands to be taken back vesting in the government and returned to the Forest Department.(Report is enclosed herewith) .

Hon. Collector sahib, the committee has submitted its report to the Hon. High court. The committee has recommended to vacate the land but in the same land Adani Company is going to establish its Copper Refinery Project as shown in EIA. As all the recommendations and this report being under consideration of the court (subjudice) the public hearing is illegal and interference in the working of High Court of Gujarat. Therefore, these all procedures should stop immediately and the public hearing 29.4.2017 for environmental clearance should be cancelled. In spite of that if the public hearing is held on the pecified date and time these whole matter would be considered contempt of court of Hon. Gujarat High court, it should be seriously noted that. We bring this to your kind notice with request.

1608

Honourable Sir, With reference to the reference cited at 2 above it is to inform you that in the year 2011 for violations of Environmental laws by Adani Port and Adani Power in the Sea area and this areas of Mundra Taluka, Hon.Gujarat High Court has directed on dated 09.07.2015 to the Hon. Principal District Judge to carry out videography and photography of whole Adani Port and SEZ and to submit factual report to the Hon. High Court, and Hon. Principal District Judge has submitted CD of their report and videography/photography in the sealed cover on dated 24.07.2015 to the Hon. High Court. And in the report of Hon. Principal Judge it is proved that there are rampant violations of rules by Adani and also on the land on which Adani is going to establish its Copper Refinery Plant, is informed by Hon. Principal District Judge along with videography and Photography that, is disputed land. And the whole report is pending with (subjudice) Hon. High Court. When overall report of whole the matter is pending with Gujarat High Court all these matters are concealed by the Adani Company. These facts are informed neither to MOEF&CC nor to EAC which is a very serious matter. Therefore you being the Chairman of the Public hearing and the District Magistrate of the district on the basis of these designations it is our prayer that the public hearing may please be cancelled on immediate basis, and we are informing you with all these facts. As such as these facts are under consideration of High Court of Gujarat and if the public hearing for refinery takes place on the same land it is a very serious matter it would not only be against law but would be interference in the working of Hon. Gujarat High Court. Therefore it is our humble request that the public hearing may please be cancelled.

With reference to the reference cited at 3 above it is to inform you that we have filed an application in the department of environment and forest of Government of India in the year 2011 in protest against the violations of Environmental laws by Adani Port and Adani Power in the Sea area and this areas of Mundra Taluka and in which the permission is granted with detailed conditions to AdaniPort and Adani Power to carry out industrial activities in the areas of Mundra but as Adani is violating environmental conditions in large scale we have submitted our representation to the Government of India and has requested to prevent the damages occurring due to the project of Adani. There after a committee of five environment experts was formed by Government of India under the leadership of well known environmentalist Sunita Narayan to investigate Adani and this committee has submitted its report to Government of India on 18 April2013 and have reported and informed in the report that large scale violence's of rules and conditions are done by Adani and various detailed recommendations are made including to cancel the Environmental license of North Port and to impose penalty of 200 crores and before giving any permission to any project in Mundra it is very necessary that study of carrying capacity of this area is undertaken and no project should be sanctioned without this study. But here public hearing for Copper Refinery is held without any such study. Therefore it is our humble request that the Public Hearing may please be cancelled. It is very necessary looking to the Public Interest at large that this public hearing may be cancelled.

Hon. Sir, with reference to the reference No. 4 it is to inform that Environment and Forest Ministry of Government of India has issued instructions vide Office Memorandum No. J-11013/25/2014-IAI Government of India Ministry of Environment and Forest Dated 11th August, 2014 to ministry for EIA and according to Company's Act 2013 it is essential to have detailed report in EIA regarding management of expenses and fund of Corporate Social Responsibility. But Adani has not given any such information in its EIA report which is violation of The Company's Act and circular dated 11th August 2014 of Government of India. And EIA notification and Section 135 of The Company's Act 2013 deal with the corporate social responsibility and Schedule –VII of the Act lists out activities which may be included by

companies in their CSR policies. And this is also violation of Corporate Social Responsibility Policy Rules, 2014. As such Adani has concealed the facts in their report which are essential to be mentioned as per Law . Adani Company was knowing all these facts in spite of that has concealed all these facts. As such Adani has openly violated the law of India, therefore it is very essential that this public hearing shall be cancelled and it is very essential that facts of law are reinstated.

Hon. Sir, for the copper refinery project of Adani, requirement of land is as under.

Total 256.58 Hector(634 Acre) of land is necessary for the project proposed. Out of that land of 154.18 Hector (381 Acre) demarked land is in ownership of APSEZ (of Adani Group Company) and it has been allotted before in the scheme of local land use scheme for industrial purpose .Moreover, 102.38 Hector (253 Acre) forest land is also included which will be converted in to industrial use and state government has proposed for the forest land conversion (EC) and it is lying in the Central Government.(Its file No. are 8.04/2016-FC). There is no process involved for migration or rehabilitation for this scheme.

In fact the public hearing is to be held on the place of proposed project , the land from forest department is not allotted to the company till now. And the land of 253 Acre of forest department which Adani has requested is not granted to them. And this land was occupied by the forest department after 1980 the object was to create green belt growing trees over there and to develop the forest and to prevent the progress of the desert and to decrease salinity by such types of activities, make available protection , shelter and grazing to the wild animals. And this whole forest is full of various herbal medicines and inland Acacia(deshi bawal) and this forest is playing an important role in keeping the Environment clean. And as such Government of Gujarat and Adani Company have violated The Forest Rights Act 2006. In the Forest Rights Act it is established that the approval of Gram Sabha is essential in spite of that approval of Gram Sabha is not taken by the company. It is violation of Forest Rights Act 2006 and also the judgment of Hon. Supreme Court delivered in Vedant Copper Project of Orissa. So, establishing very much polluting copper refinery destroying such useful forest area is very much detrimental to local people and grabbing rights of local people. Government of Gujarat has already allotted **pasture** land of 14 villages to Adani so the people of these areas are suffering difficulties from lack of pasture land and these cattle breeders are getting their livelihood grazing their cattle in these areas of forest. While Adani is willing to give fatal blow on cattle breeders grabbing lands from these areas. These people are indigenous people of these areas and protection must be given to the rights of indigenous people and Government of India has signed charter of UN regarding protection of rights of indigenous people and is one of the country ratifying the charter of indigenous people of United Nations. So rights of these indigenous people must be protected. It is very necessary. Therefore, it is humbly requested that, the public hearing of Copper Refinery of Adani must be cancelled.

Hon. Sir, it is further submitted that the land selected for Copper Refinery Project of Adani is land included in the CRZ. And no clearance is obtained from the ministry of Environment and Forest of Government of India, and according to CRZ notification 2011 this project is coming under CRZ area. So sanction of CRZ is necessary but company has done nothing for that and directly asked for Environmental clearance. It is against the rules. Therefore, it is humbly requested that, the public hearing of Copper Refinery of Adani must be cancelled.

Considering all the above facts, the public hearing of Greenfield Copper Refinery Project of Adani declared to be held on the next date 29.04.2017 at village Tunda is against Law. And the matter is

1610

subjudice in the High Court of Gujarat and hearing is to be held in that area, therefore, it is humbly requested that, the public hearing of Copper Refinery of Adani must be cancelled.

Expecting co-operation,

Signed 29/4/17

President Kheti Vikas Seva Trust

Jarpara Taluka Mundra Kutch

CONSERVATION ACTION TRUST

5, Sahakar Bhavan, 1st Floor, LBS Road, Narayan Nagar, Ghatkopar (W),
Mumbai – 400086
Work: 022 – 25122422/23

Comments, questions and suggestions for the Public Hearing on the 29th April 2017 for "the proposed greenfield copper refinery project at Adani port special economic zone land in villages Siracha and Navinal, taluka Mundra, district Kutch, Gujarat"

1. Please furnish full details of the existing land use of the site proposed for the project.

2. Please furnish the detailed land use of the proposed site as per the approved CZMP.

3. Please furnish a copy of the CZMP of this area approved by MoEF.

4. Has the project proponent carried out mapping of the CRZ area and the HTL – LTL line, buffer area, as well as mud flats, sand dunes, and corals on 1:4000 scale on the CZMP approved by MoEF? If yes, kindly furnish a colour copy.

5. Please furnish a satellite imagery of 1991 of the proposed project area.

6. Please give full land use details and categories of the proposed project area. Please mention how much area is under CRZ I - A, CRZ I, CRZ II, CRZ III and CRZ IV.

7. Does the proposed project area falls under ecologically sensitive and or geomorphologically important area, as per the CRZ Notification 2011?

8. Please specify what are the ecologically sensitive areas and or geomorphologically important areas observed at the proposed site and in the study area, along with the area details (in hectares).

9. Please furnish information on whether mangroves and mud flats are present at the site and the area (in hectares) covered by mangroves and mud flats.

10. Please furnish information at the distance which mangroves and mud flats are observed from the proposed project site.

11. Please furnish details of salt pans and aquaculture ponds within the study area, and their distances from the project site.

12. Please furnish details regarding the fishermen residing and/or fishing in the study area.

13. As per the study area map, the project area not only covers mudflats, it is also falls within the Mundra mangrove reserve forests. It is also in proximity of the Danderi reserve forests, Navinal reserve forest and the Mundra Dhoa reserve forest. Please explain why such an ecologically important area has been selected for this project.

14. As per the information submitted for "Site Alternatives" in the Form I, Site I has no forest area, whereas the proposed Site 2 has 253 acres of forest land that the project proponent has proposed for diversion. Please explain the rationale behind selecting the site which has forest area and explain why the site that does not have forests has not been selected.

15. It is also stated in Form I that mangroves are not present on the site. However, a bare perusal of the google earth images shows that

1613

the mangroves exist along the southern boundary of the proposed project. Also, the proposed conveyor belt from the port to the proposed site passes through the mangroves. This can also be observed from the "FIGURE 3.3.2 Landuse/Land Cover Map Based on Satellite Data" of the draft EIA report. Why has this been not mentioned in the Form I? Please explain.

16. The proposed area has been illegally reclaimed by the APSEZ. Entire land use and land cover has been changed due to this. Please give information on the land use and cover as was during 1991 and also before the SEZ clearances were granted. Please also furnish a copy of the permissions issued by the State and Central Government agencies permitting the reclamation and destruction of mangroves.

17. Is the project proponent going to destroy the remaining mangroves of this area as well?

18. Please explain on what basis is the alternative site 1 rejected.

19. The Table-3.3.2 – "Land use breakup details in 10 km radius" clearly mentions presence of mudflats, mangroves and the reclaimed area in the study area.
As per this table only 5.27% of the land in the study area is built-up, whereas 11% of the study area is wetland. Why is the site being selected for this proposal?

20. Please explain why the land with scrub vegetation has been categorised as wasteland.

21. Item 21 of Form I under Basic Information states that the proposal involves approval/clearance under the Forest (Conservation) Act, 1980. However, under point 23 "Whether any Forest Land Involved? Area of Forest land Involved (hectares)" it is stated as "N/A". The Draft EIA report has mentioned at many instances the presence of 3 reserved forests and the Mundra mangrove forests. Please explain why such misleading information has been provided in Form 1.

22. In form 1, the query under point 24 is "Whether there is any litigation pending against the project and/or land in which the project is proposed to be set up?" The project proponent has replied has "No". It is important to point out here that at-least two court cases are going on the APSEZ land – SLP 28788 of 2016 in the Supreme Court and WP (PIL) 12 of 2011 in the High Court of Gujarat. Please explain why this was not disclosed in the Form 1.

23. What action has been taken by the APSEZ as per the recommendations of the Claude Alvares led "Committee on Mangroves" in the Civil Application 9124 of 2011 under the PIL 12 of 2011? Please furnish the details of the actions taken by the project proponent.

24. The Form 1, under "II Activity" states that no reclamation is envisaged. It is a well-known fact that the entire area has been reclaimed by the Adani group. This has been also stated in the Sunita Narain report. What measures have been taken to restore the area to

its original state? How much mangrove plantation has been undertaken? Please furnish with the location details, along with coordinates and site photographs.

25. The Form 1 also mentions "construction of new approach road". However, the document on Alternative sites state that "Widening of existing Road" would be required for this site. Why is there such discrepancy in the information being provided?

26. Where would this proposed new approach road and / or the widening of the existing road come? Please furnish details along with the map showing the proposed new approach road and or widening of the road.

27. Please furnish details on the impacts and mitigation measures of proposed new approach road and/or widening of the road.

28. The Form 1 also mentions construction of new transmission lines. Please show location of the new transmission lines on colored map. Has the area required for this mentioned in the Draft EIA report? Please mention the impact of the transmission lines and the mitigation measures for same. How much forest land is involved? Are these transmission lines passing through CRZ areas? Why can't the existing transmission lines be upgraded?

29. For stream crossings, the Form 1 mentions that "Natural drainage passing through the site will be suitably trained and maintained. There will not be any diversion. Further, conveyer for Copper Concentrate and Rock Phosphate and acid pipeline will cross over the existing water intake channel available for power plant. Suitable culverts will be built as required." The Adani group has already reclaimed large swathes of mudflats, mangroves and creeks in this area. Now the APSEZ wants to further "suitably train and maintain" the natural drainage. Please furnish details on the impacts of this and mitigation measures of same. Please also explain how this can be permitted in view of the fact that the reclamation has been carried out illegally without valid Environmental, CRZ and Forest Clearances. Please furnish copies of these clearances, if any.

30. Further, there is already pollution in the area due to the coal dust and fly-ash and emissions of the power plant. There have been numerous complaints regarding this from the villagers of this area. Additional conveyor for Copper Concentrate and Rock Phosphate will further deteriorate the environment. Please give details on the impact of and mitigation measures of the conveyor for Copper Concentrate and Rock Phosphate, along with the impacts of the existing power plants.

31. It is mentioned in Form 1 that "Approximately 3000 persons will be employed during construction phase and about 2000 people will be employed during operation phase". Also, please mention if the employment will be given to the locals or to outsiders.

32. What kind of residential and cooking facilities will be provided for the construction workers?

1615

33. What sanitation facilities will be provided for them during the construction phase?

34. How many locals have been employed so far by the APSEZ? Please furnish details. Please furnish how many are temporary and how many with permanent jobs.

35. Under the "Environment Sensitivity", the Form 1 states that "Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or other related value" are not present within 15 kms. However, mangroves are about 167 meters away from the boundary of the proposed project. Moreover, there are 3 reserved forest and the Mundra mangrove forest in the proposed project area. Mangroves are protected as per the Indian legislation. Please explain why this was not mentioned in the Form 1.

36. Moreover, the 15 kms area covers the villages Tragadi. As per some of the reports Tragadi is turtle nesting sites. Why this has not been mentioned in the Form 1? Please explain. Have the impacts of the proposed project and related activities been studied for the turtle nesting? What are the mitigation measures for same? Please furnish full details of same.

37. Please give details on the pagadiya fishing along the APSEZ area. How many fishermen are engaged in this? How many have been impacted due to the APSEZ? Please furnish full details.

38. What compensation has been provided to fishermen who earlier used to fish by this technique, but had to stop due to the APSEZ? Please furnish full details.

39. How many fishing boats are present in the area? Please furnish full details.

40. From where would the sand be obtained for the proposed construction?

41. The proposed TOR document mentions under Land Use that - "The existing land use pattern in the study area of 10 km radius around the project will be established through the literature review of published Census records and latest available satellite imagery. Based on this review, the land use pattern is categorized into the following five categories:

1. Forest;
2. Irrigated and agricultural Land;
3. Un-irrigated agricultural land;
4. Culturable wasteland; and
5. Land not available for cultivation, which includes built-up areas."

Why are the mudflat areas and the mangroves not mentioned? Also, please demarcate the culturable wasteland and share a coloured map of the same.

42. The brief summary as well as the pre-feasibility report mentions

that "There is no significant vegetation or habitation in the project site. The nearest significant features from the project site are 4620 MW Adani Power Plant and Tata Power (Western side of project area), and West Port of APSEZL (South – west direction from project)." Kindly explain why the mangrove vegetation or the three reserve forest areas and mangrove forest areas not significant.

43. The pre-feasibility report also mentions that "Land for different corridors (Power/ Road/ Raw Material Conveyor) would be additional." Please furnish full details of the land required and the existing land use for these corridors. Please furnish the existing land use, whether any eco-sensitive areas, forest lands, mangroves, beaches, etc. exist in these corridors. Please also furnish a coloured map of the proposed corridor area.

44. Why has information on the above-mentioned corridors not provided in the Draft EIA? Please explain.

45. The pre-feasibility report mentions that "From South West to North East majority of area is of APSEZL where west port is also located.. The land is having undulations and minor grading will be required." Kindly provide details on how the grading would be carried. What material would be used for this? From where would it be sourced? Please furnish full details.

46. How many creeks are present in the study area? Please furnish a coloured map and a satellite image showing the creeks.

47. The pre-feasibility report states that "Since the entire land is vacant, hence no displacement and rehabilitation of local population is envisaged". What about the fishermen? How many of fishermen are engaged in fishing in this area? Please furnish full details.

48. How many fisher-folk/local people will be given permanent jobs in the proposed project?

49. What kind of jobs will be given?

50. Will they be imparted appropriate training?

51. Would the job be permanent or temporary?

52. How many salt pans exist in the study area. Please furnish full details.

53. From where will be the coal sourced for "addition in the concentrate for effective smelting"? What will be the ash content, Sulphur content mercury content and radioactivity of the coal proposed to be used? How will it be transported? What is the quantity of the coal envisaged to be stored? What are the ash utilization plan? Please furnish a detailed report on same. What are the mitigation measures for the SOx, particulate matter, arsenic, heavy metals, mercury, radionuclides emissions?

54. Are there any studies conducted on the long-term radioactivity of

1617

the ash? Kindly furnish the same if any. What are the mitigation measures proposed for the same?

55. Please share details of the water circulation system proposed as mentioned in the Pre-feasibility report. Please show the layout on map of this proposed water circulation system. Please also share details of the land cover of this proposed area. Why has this not been mentioned in the Draft EIA?

56. The very first criterion for site selection is "Away from environmentally sensitive areas". However, this project falls under the reserve forest and mangrove areas. Please explain.

57. Under section 6.4.2 "Merits & demerits" of the pre-feasibility report why the presence of reserve forests and mangrove forest not mentioned under "Site-II (East of APL)"

58. How much green belt plantation has been undertaken by APSEZ so far? Please provide with the total area, the co-ordinates and the photographs of same.

59. What plant species have been planted in the green-belt in the APSEZ?

60. Are all the species proposed to be planted for the current proposal indigenous?

61. Where is the sewage treatment plant proposed? Please show the location on the map.

62. Where would the sludge from the sewage treatment plant be disposed of?

63. Is there any facility proposed for the recycling and reuse of the sludge on site? Kindly provide the details along with the location on the map for the same if any.

64. The pre-feasibility report states that the "rejects from the secondary RO plant will be discharged into sea through the outfall channel of APSEZ's desalination plant." Please explain the impacts and mitigation measures of same.

65. What will be the composition of the rejects from the secondary RO plant? Kindly provide the detailed analysis report for the same with the concentration of each constituent.

66. What are the "latest environment technologies" that would be used to treat the gaseous emissions before they are discharged in to the atmosphere?

67. Please furnish a copy of the guidelines on "utilization of Copper Slag".

68. Please furnish a copy of the guidelines on "utilization of Phosphogypsum".

69. Please give full details of the location of the land fill sites for storage of Hazardous Cake and Scrubber Cake as well as a Map

showing their locations.

70. Please furnish area details and location map of ETP cake land fill.

71. As per the draft EIA report almost 40% of the forest area is proposed to be converted to industrial use. Why is forest land required for this project?

72. As per the Draft EIA section 3.9.6 - "Endemic Flora Species and Threatened Flora of Navinal Area - Important threatened plant species reported from the region are Dipcadi erythraeum, Helichrysum cutchicum, Heliotropium rariflorum, Pavonia ceratocarpa, Convolvulus stocksii, Commiphora wightii.

Gujarat State Biodiversity Board proposes to declare the area as Biodiversity heritage site and as the site is close to Mundra SEZ, it deserves more protection." Despite this, please explain why this site is being selected for this project?

73. Isn't it ironical that the project proponent proposes to build the proposed copper refinery with environment friendly technology while destroying 102.38 hectares of forests only for this particular project? The project proponent may please explain the logic behind doing this.

74. The area identified for securing the hazardous cake and scrubber cake has not been specified. Neither has the area identified for intermediate/emergency storage of copper slag and phosphogypsum. As mentioned in the Draft EIA, area of 30 acres and 105 acres respectively has been mentioned for the said activities. Please give the location for these. Please also give the land use category of this areas. Have the clearances for this land been obtained? Please share the Forest, CRZ and environment clearances of same.

75. What will be the composition of the hazardous cake? Kindly provide the detailed analysis report for the same with the concentration of each constituent.

76. As per the table 2.9, ETP Cake contains heavy metals. What will be the impact of its disposal on the ground water table? What are the mitigation measures for the same?

77. Also, the project proponent is proposing to do away with 253 acres of forest area and then develop 209 acres of greenbelt/green cover. Kindly explain this.

78. The draft EIA report states that "The proposed copper refinery project of AEL is a one of the important projects. AEL believes that the copper refinery project would add significant value to Indian economy. The project will not only help ensuring by becoming self-sufficient in terms of copper, phosphoric acid and sulphuric acid for India but will also drive macroeconomic growth." This growth driven approach of Adani has been detrimental to the environment of Mundra. Moreover, the project would be detrimental as it will lead to

air pollution and will impact the health of people residing in the vicinity.

79. The draft EIA report mentions that "The proposed project would have few adverse impacts on the environment. However, with proper and judicious implementation of the mitigation and environment management measures, the impacts can be minimized and can be maintained well within the permissible limits specified by the regulatory authorities." The approach of Adani group and the indifference towards protection and conservation of environment has been reported time and again. The proposed project will not only lead to further reclamation of mangroves and mudflats, it will also be detrimental to the mangroves and the reserve forests in this area.

80. The draft EIA report mentions that the "Mangroves are situated about 4.5 km near Kotri creek area/ SSW direction, distributed along the networks of creek system." The Google earth imagery dated 19.11.2015 clearly shows that mangroves exist at mere 167 metres from the proposed project. Why has this not been mentioned in the Draft EIA report? Please explain. Moreover, the project also falls under the Mundra mangrove forests. This too has been not mentioned here. Please explain.

81. Please furnish with the details of the APSEZ. How much area has been acquired under the APSEZ at Mundra and how much was permitted under the clearances?

82. Please furnish with all the CRZ, EC, Forest and wildlife clearances of the APSEZ, Mundra.

83. Has the APSEZ undertaken any mangrove plantation? Kindly furnish details of each location wherein the mangrove plantation has been undertaken, along with the area under plantation so far, locations' latitude-longitude, site photographs prior to plantation and post plantation, agency implementing the plantation and the compliance so far. Also furnish with the pre and post plantation satellite images of all the locations.

84. Please mention the area details for mangroves that have been destroyed so far for the APSEZ. Please furnish a 1991 and current satellite data.

85. Please furnish with the details of much of mudflats, sand dunes, creek, salt pans have been reclaimed so far.

86. Please furnish with the complaints received for the existing projects, specifically regarding to the destruction of mangroves and violation of the CRZ Notification in the APSEZ area.

87. What action has been taken and what is the status and / or compliance of the show cause notices issued by the MoEF and the GPCB regarding the violation of the environmental clearances and the pollution in the APSEZ? Kindly furnish with the details and relevant documents.

88. Has Cumulative impact analysis been conducted for the proposal on local livelihood? What are the findings of this study? Which all companies/projects have been undertaken under this study?

89. What is the carrying capacity of this area to undertake the proposed project with respect to already existing projects? Has any carrying capacity study been conducted? Details thereof may please be furnished.

90. Have there been any complaints/grievances from the fishing community? Kindly furnish with same.

91. Please furnish full details of the environmental clearance and the CRZ clearance, Environmental clearances, Forest clearances and the Wildlife clearances received for the existing APSEZ, Mundra

92. Please furnish details of the CRZ clearance, Environmental clearances, Forest clearances and the Wildlife clearances received for all the facilities existing in the APSEZ.

93. How much land was reclaimed for the existing APSEZ after 20th February 1991?

94. How has the APSEZ impacted the livelihoods of local fisher folk communities?

95. What will be the impact of the additional transport of raw materials and the finished products on the road, rail and the SEZ infrastructure? Please furnish with details of same.

96. Please furnish details of the transportation – road, railway limes, as well sea borne, impacts and mitigations studies conducted for the proposal.

97. The proposed area falls under Seismic Zone V. What are the mitigations measures to handle the situation due to earthquake?

98. Please furnish full details of the field visits conducted to undertake the ecological study including copies of the field notes. Please mention full details of the team members, their qualifications, and the number of man days spent on the ecological data collection.

99. Has the project proponent carried out Social impact assessment report? If yes please furnish if any.

100. Please furnish the latitude-longitude coordinates of the corners/boundaries of the entire APSEZ, Mundra.

101. What are the existing facilities for the parking, washing, repairs and maintenance of trucks and other heavy equipment?

102. What facilities are provided for the drivers and cleaners?

1621

103. What will be the impact of the water/sewage discharged into the creeks and gulf of Kachchh on the overall salinity of the water? Has any such report been conducted?

104. Please furnish No Objection Certificates, Consents, from the State Pollution Control Board for the projects involving discharge of effluents, solid wastes, and sewage waste under Environmental Protection Act 1986.

105. Has the project proponent carried out mangrove conservation plan? If yes then furnish full details with photographs and maps showing the mangrove conservation areas, along with details of the cost of mangrove conservation.

106. What is the original plot level? What is the proposed plot level? How this will affect the land terrain? Has the proponent conducted any analysis on its impact on the environment? Please furnish details.

107. Please furnish the status of NABET accreditation for all EIA consultants hired with their experience in details as of the period the Draft EIA studies were conducted and published.

108. Have all the ToRs been followed for the preparation of the documents?

109. Has authenticated English translation of all material in Regional languages been provided, as stated in the EAC minutes dated 3th – 4th May 2016?

110. It has been reported that the coastal areas of Mundra harbour mangroves and have mudflats, sand dunes, creek network etc. ecologically important areas. Despite this, projects are being allowed to set-up in this area. Why does Adani group always have to either reclaim the mangroves and mudflats or use a site which they have already reclaimed without proper clearances? Please explain.

Thanking you,

Yours faithfully,

Debi Goenka

પ્રતિ શ્રી,
૧. મેમ્બર સેક્રેટરી
ગુજરાત પ્રદુષણ નિયંત્રણ બોર્ડ, સેક્ટર-૧૦ એ, ગાંધીનગર.

વિષય : અદાણી એન્ટરપ્રાઈઝીસ લી. (જિ.કચ્છ)ની પર્યાવરણીય લોકસુનાવણીના વાંધા સુચનો.

૧. કંપની કન્સલ્ટન્ટના QCI-NABET તરફથી એપ્રુવ્ડ કરેલા ફંક્શનલ એરિયા એક્સપર્ટના નામો તથા તેઓએ કયા કયા એરિયા માટે કામ કરેલ છે તેની વિગત, તેની સમયમર્યાદા તથા તેમના પોતાના સહી સિક્કા સાથે કોપી એમ.ઓ.એમ. મા લેવા વિનંતી.

૨. કંપની કન્સલ્ટન્ટના QCI-NABET તરફથી એપ્રુવ્ડ કરેલા ફંક્શનલ એરિયા એક્સપર્ટ કાયમી પગારદાર અધિકારી છે કે નહિં તેની વિગત.

૩. કંપની કન્સલ્ટન્ટના QCI-NABET તરફથી એપ્રુવ્ડ કરેલા ફંક્શનલ એરિયા એક્સપર્ટ જો બહારથી લીધા હોય તો તેઓ અને કન્સલ્ટન્ટ વચ્ચે થયેલા કરારની નકલ એમ.ઓ.એમ. માં લેવા વિનંતી.

૪. કંપની કન્સલ્ટન્ટના QCI-NABET તરફથી એપ્રુવ્ડ કરેલા ફંક્શનલ એરિયા એક્સપર્ટ જો બહારથી લીધા હોય તો તેઓએ પર્યાવરણીય લોકસુનાવણીના ઈ.આઈ.એ. રીપોર્ટ માટે કઈ કઈ કંપની માટે સહીઓ આપી છે અને કામ કર્યા છે તેની વિગત.

૫. કંપની કન્સલ્ટન્ટના QCI-NABET તરફથી એપ્રુવ્ડ કરેલા ફંક્શનલ એરિયા એક્સપર્ટ જો બહારથી લીધા હોય તો તેઓને કેટલી ફી ચુકવવામાં આવેલ છે તે જણાવશો.

૬. કન્સલ્ટન્ટની પર્યાવરણીય લોક સુનાવણી અને આ પ્રોજેક્ટ બાબતે શું જવાબદારી નક્કી કરવામાં આવેલ છે તેની વિગત.

૭. કંપનીએ કન્સલ્ટન્ટને આ પ્રોજેક્ટ માટે કેટલી ફી ચુકવેલ છે તેની વિગત તથા કંપની અને કન્સલ્ટન્ટ વચ્ચે થયેલ કરારની નકલો એમ.ઓ.એમ.માં મુકવી.

૮. કંપનીના કન્સલ્ટન્ટે ઈ.આઈ.એ. રીપોર્ટની અંદર જે ડોક્યુમેન્ટ એક્રેડીટેશન સર્ટીફીકેટ તરીકે આપવામાં આવેલ છે. તે આજની તારીખમાં વેલીડ હોય તો તેની ખરાઈ કરીને હાર્ડ કોપી પર જવાબદાર અધિકારી દ્વારા સહી સિક્કા કરી એમ.ઓ.એમ.માં લેવા વિનંતી.

૯. NABET - QCI નું વેલીડીટી ધરાવતું એક્રીડીટેશન સર્ટીફીકેટ એમ.ઓ.એમ. મા લેશો.

૧૦. ઈ.આઈ.એ. રીપોર્ટનું પ્રેઝન્ટેશન કરનાર વ્યક્તિનું નામ, હોદ્દો તથા સંસ્થાનું નામ, સરનામું જણાવવું તથા તેનું ઓળખપત્રની ઝેરોક્ષ નકલ એમ.ઓ.એમ.મા લેશો.

૧૧. કન્સલ્ટન્ટે કઈ કઈ કંપની માટે ડ્રાફ્ટ ઈ.આઈ.એ. રીપોર્ટ બનાવેલ છે તે કંપનીના નામની યાદી. (તા.૦૧-૦૧-૨૦૧૫ થી તા.૧૦-૦૫-૨૦૧૭ સુધી)

૧૨. કંપનીના અન્ય એકમમાં ગુજરાત પ્રદૂષણ નિયંત્રણ બોર્ડ તરફથી આપવામાં આવેલ સોકોઝ નોટિસ તથા ક્લોઝર નોટિસ એમ.ઓ.એમ.માં મુકવી.

૧૩. કંપનીના ગુજરાત રાજ્ય બહાર એકમ આવેલ હોય અને તે એકમમાં પ્રદૂષણ નિયંત્રણ બોર્ડ સોકોઝ નોટિસ તથા ક્લોઝર નોટિસ આપેલ હોય તો તેની નકલ એમ.ઓ.એમ.માં મુકવી.

૧૪. સુચિત એકમમાં પર્યાવરણ તથા મનુષ્યને નુકસાન કરનારા કયા કયા જોખમી કેમિકલ વાપરવામાં આવનાર છે તેના નામ જણાવશો તથા તે જોખમી કેમિકલથી પર્યાવરણને કયા પ્રકારનું નુકસાન થઈ શકે છે તે જણાવશો તથા મનુષ્યને કયા કયા પ્રકારના રોગ થઈ શકે છે તે જણાવશો.

૧૫. QCI-NABET નું પેમેન્ટ ચુકવાયેલ હોય તો તેની જમા રસીદની કોપી ઉપર સહી-સિક્કા કરી એમ.ઓ.એમ.માં લેશો.

૧૬. QCI-NABET ના નિયમ મુજબ કન્સલ્ટન્ટે લીધેલા બહારના હંગામી ફંકશનલ એરિયા એક્ષપર્ટ ૧ વર્ષ દરમ્યાન કેટલા EIA રીપોર્ટમાં નામ લખાવી સહી કરી શકે છે તેની વિગત જણાવશો.

૧૭. GIDC ની માંગણી મુજબ આજદિન સુધી કેટલા વૃક્ષો વાવ્યા છે જેની વિગત જણાવશો. વૃક્ષો વાવવા માટે પાણી ક્યાંથી મેળવેલ છે તે જણાવશો. પાણી વેચાતુ લીધું હોય તો તેના બીલ એમ.ઓ.એમ.માં લેશો. વાવવામાં આવેલ વૃક્ષોનો આજની તારીખ સાથેનો ડીઝીટલ ફોટોગ્રાફસ એમ.ઓ.એમ.માં લેશો.

૧૮. SLEAC તરફથી કંપનીને આપવામાં આવેલ TOR નું Compliance નો અમલ સત્ય હકીકત સાથે ૧૦૦ ટકા પૂર્ણ થયેલ છે કે નહીં તે જણાવશો.

૧૯. SLEAC તરફથી કંપનીને આપવામાં આવેલ TOR નું Compliance નો અમલ સત્ય હકીકત સાથે ૧૦૦ ટકા પૂર્ણ થયેલ હોય તો તેની ખાતરી કંપની લેખિતમાં આપે.

૨૦. લેન્ડલુઝર્સના નામ સરનામા એમ.ઓ.એમ. માં લેવા તથા જી.આઈ.ડી.સી.એ આપેલ લેન્ડલુઝર્સનું સર્ટીફીકેટ એમ.ઓ.એમ.માં મુકશો.

૨૧. કંપની શરૂ થયે તમામ કર્મચારીઓના નામ ગેટ બહાર નોટીસ બોર્ડ ઉપર પ્રસિદ્ધ કરવામાં આવે તેવું સૂચન છે. તથા ૮૫ ટકા સ્થાનિક લોકોને રોજગારી આપવામાં આવે.

૨૨. કંપની શરૂ થયાથી કંપનીના અન્ય વિસ્તારના એકમમાં બનેલ આગ અકસ્માત, ગેસ ગળતર તથા કંપની અકસ્માતમાં જો કોઈ કામદાર અથવા તો અન્ય વ્યક્તિનું મૃત્યુ થયું હોય તો તેના નામ, બનાવની વિગત, આપવામાં આવેલ વળતરના પુરાવા એમ.ઓ.એમ.માં મુકશો. ઔદ્યોગિક સલામતી અને સ્વાસ્થ્યની કચેરી તરફથી કંપનીને આપવામાં આવેલ ક્લોઝર નોટીસની નકલ, ૪૦ (૨) મુજબ આપવામાં આવેલ નોટિસ એમ.ઓ.એમ. માં મુકવા વિનંતી. તથા તે અંગે થયેલી કાર્યવાહીની તમામ નકલો એમ.ઓ.એમ.માં મુકશો. તેમજ કંપનીને થયેલ દંડની વિગત એમ.ઓ.એમ.માં લેશો.

૨૩. કંપની શરૂ થયાથી કંપનીના અંકલેશ્વર તથા અન્ય વિસ્તારના એકમને જી.પી.સી.બી. તરફથી ક્લોઝર નોટીસ આપવામાં આવેલ હોય તો કંપનીએ રીવોક કેવીરીતે મેળવ્યું તે જણાવશો. તથા રીવોક મેળવવા માટે કરેલ કાર્યવાહીના તમામ કાગળો એમ.ઓ.એમ.માં મુકશો. તથા સરકારી કચેરીમાં ભરેલ ડીપોઝીટ અથવા દંડની રકમની રસીદની નકલ એમ.ઓ.એમ.માં મુકશો.

૨૪. કન્સલ્ટન્ટે QCI-NABET નું એક્રેડીટેશન સર્ટીફીકેટ મેળવવા માટે કરેલી અરજી અને અરજી સાથે રજૂ કરેલ પુરાવાની નકલો એમ.ઓ.એમ.માં મુકશો.

૨૫. ઈ.આઈ.એ. રીપોર્ટનું પ્રેઝન્ટેશન કરનાર વ્યક્તિએ કઈ તારીખ, માસ તથા વર્ષથી સંસ્થા સાથે જોડાયેલ છે તે જણાવશો.

૨૬. પર્યાવરણીય લોકસુનાવણીમાં તથા આ પ્રોજેક્ટમાં ઈ.આઈ.એ. રીપોર્ટનું પ્રેઝન્ટેશન કરનાર વ્યક્તિની જવાબદારી વિશે જણાવશો.

૨૭. અસરગ્રસ્ત વિસ્તારના કુલ કેટલા લોકો અંગ્રેજી ભાષાના જાણકાર છે તે જણાવશો.

૨૮. અસરગ્રસ્ત વિસ્તારના લોકોની ગામડા દીઠ આંકડાકીય માહિતી જણાવશો.

૨૯. અસરગ્રસ્ત વિસ્તારના લોકોની શૈક્ષણિક લાયકાતની ગામડા દીઠ આંકડાકીય માહિતી જણાવશો.

૩૦. આ પ્રોજેક્ટ થકી અસરગ્રસ્ત વિસ્તારના લોકોને તથા કંપનીના કર્મચારીને પ્રદૂષણ થકી, આગ અકસ્માત થકી તથા ઝેરી ગેસ ગળતર થકી કોઈપણ પ્રકારનું નુકસાન નહીં થાય તેવી બાંહેધરી આપતું નોટરી રૂબરૂ સોગંદનામુ કરી કંપની અથવા જવાબદાર કંપની અધિકારીનું સોગંદનામુ એમ.ઓ.એમ. મા લેશો.

૩૧. આ પ્રોજેક્ટ થકી અસરગ્રસ્ત વિસ્તાર સિવાયના બહારના લોકોને તથા કંપનીના કર્મચારીને પ્રદૂષણ થકી, આગ અકસ્માત થકી તથા ઝેરી ગેસ ગળતર થકી કોઈપણ પ્રકારનું નુકસાન નહીં થાય તેવી બાંહેધરી આપતું નોટરી રૂબરૂ સોગંદનામુ કરી કંપની અથવા જવાબદાર કંપની અધિકારીનું સોગંદનામુ એમ.ઓ.એમ. મા લેશો.

૩૨. આ પ્રોજેક્ટ થકી અસરગ્રસ્ત વિસ્તારના લોકોને તથા કંપનીના કર્મચારીને પ્રદૂષણ થકી, આગ અકસ્માત થકી તથા ઝેરી ગેસ ગળતર થકી કોઈપણ પ્રકારનું નુકસાન થાય તો કન્સલ્ટન્ટની જવાબદારી નક્કી થાય છે કે નહી તે જણાવશો.

ધર્મેશ મિસ્ત્રી

સહી

MOTA BHADIYA GRAM PANCHAYAT

At & post MOTA BHADIYA, Ta. Mandvi- Kutch

Outward No. Date 27.4.2017

Subject: No solution of local problems by the Company

Sir,

This is to inform that in all surrounding villages falling within 15 km radius from the existing project of the company, till date no support if provided for the employment, jobs, fodder for cattle, drinking water, problems relating to agriculture, roads, and public health facilities etc. Further, one more hazardous project which can seriously harm the public health and agricultural corps etc is proposed here which we strongly object.

Sub: Regarding Public Hearing of Copper Refinery Project of Adani Group.

Respected Sir,

It is utmost respectfully said that due to the Copper Refinery Project going to be established by Adani Group in Mundra Taluka, the unemployed youth will get employment and contractors and laborers will get more opportunities to get work and standard of living of the people of the area will rise and from the presentation and video watched by us we can say that it is not harmful to agriculture and health of the people and environment. If this project will be established than other projects will also come, by which the people of Mundra will get more opportunities for employment and professional opportunities.

On establishment of this industry the people will get more opportunities in their profession and business. And we expecting this plant to be established as soon as possible and people get benefited. We welcome this copper refinery plant.

Hoping for your co-operation.

Subject: Regarding Public Hearing of Copper Refinery Project of Adani Group.

Respected sir,

It may be noted that the Adani Group is going to establish copper refinery project by which the people of this Taluka will get employment and laborers will get their labor work which will uplift the standard of living of local people. There is no threat for damage to environment by this project, and many ancillary industrial units will also come with this project which will increase the employment opportunities in villages of our Taluka.

Due to the copper refinery project the people will get more business opportunities and we wish that this project will be established as soon as possible and people will get benefited out of this project. We welcome this copper refinery project.

C-Q-26
Dt. 29/4/2017
Saturday
Applicant; Dahyabhai Gadhvi
At: Kandagara,
Mo.: 9978014986

Subject: Objection of project having poisonous chemicals.

Dear sir,

It is cordially informed that I, Gadhvi Dahyabhai Virambhai Gadhvi, resi. Mota Kandagara, Wadi Area, Mundra Kutch. I hereby expect your favor that the projects established and yet to be established do not take any care of the people from health as well as economic point of view. I hereby oppose the hearing for the plant held here today and aver that this project should not come here at any cost. The health and agriculture whatsoever left in this area will be ruined totally. The agriculture and cattle rearing are affected seriously by dust and polluted air due to establishment of coal based industries. The agriculture production and milk production are reduced to a great extent due it.

The air will be polluted due to such industries, The poisonous chemicals such as sulphur dioxide, Hydrogen fluoride, will be mixed in the air and will pollute the air heavily.

There is high probability of spreading of disease such as cancer, asthma, T.B., and other disease of lungs and skin, blindness and many other diseases due to air pollution. So, this project endangering health and livelihood should not be established here.

There will be water pollution. Lead, chromium, sulphuric acid will be leached to ground water and will come out through irrigation. The cattle rearing and agriculturist class will be affected heavily due to polluted water. It is not possible to use such water for farming. The cultivable land will be affected due to such chemical rich water and consequently cattle rearing will be reduced resulting into reduction in economic activity based on food products based on milk, buttermilk and ghee. So, this project shall not come here.

Such projects should be established in the area having no population in surrounding of 50 kilometer. This is residential area within 2-3 kilometer only where thousands of people are living.

It is to be specifically noted that the industries established here earlier have not at all taken care of the health and employment of the economic scarce local people. The business opportunities are given to only 4-5 selected persons only based on commission. So, we oppose this project.

Yours faithfully,
Sd/- Dahyabhai Gadhvi,
Kandagara Mota

ભારત ની આર્ય પ્રજા ધર્મ-અર્થ-કામ-મોક્ષ આધારીત જીવન પદ્ધતીથી જીવન વિતાવે છે. સમય પ્રમાણે વિકાસ આવશ્યક છે. કચ્છના મુન્દ્રા તાલુકામાં અદાણી ગ્રુપ ના આવવા સ્થાનીક પ્રજાને અધીક ઉપાર્જનની સોનેરી મળી. રોજગારી, ભથ્થા, આરોગ્ય, વગેરે જરૂરીયાત ની સુવિધાઓમાં અદાણી ગ્રુપ તરફથી સારા ગોઠવણ થયેલ છે એની પ્રજા આભારી છે.

આપણો સ્વીકારીએ જ્યારે વિકાસ ત્યારે આપે વિકાસ કરવા રાજ્યો ને અધિકાર આપી ત્રીન ફીલ્ડ ફોપર રિફાઈનરી નું એક પ્રોજેક્ટ અદાણી ગ્રુપ દ્વારા APSEZ માં શરૂ થવાનું ત્યારે ઊપરોક્ત સંસ્થા બુધ્ધ અને પંચાયત પર પ્રેરકાદાયક કાર્ય કરેછે આ સંસ્થા આવ પ્રોજેક્ટના નિયમો નું પાલન કરી કાર્ય થાય ત્યારે આવા પ્રોજેક્ટ ને આવકાર્ય છે. અમ અહકાર રહેશે.

Ref. Dt. 29/04/2017

To,
A.P. S.E.Z. Manager
MUNDRA - KACHCHH.

The Indian ARYA public is spending their lives on the life cycle of DHARMA – ARTHA – KARM - MOKSHA but development is necessary according to time. In Mundra Taluka of Kachchh District the local public has got a golden opportunity for earning income after entry of Adani Group. The people are witness to the improved facilities in the employment, education, health etc. like routine life necessities due to fine arrangements done by Adani Group.
